EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1

**INTRODUCTION**

2 Q. Would the members of the Earning Adjustment Mechanisms  
3 ("EAMs") Panel ("Panel") please state your names.

4 A. Charmaine Cigliano, Kristen M. Barone and Michael  
5 McGuire.

6 Q. Have you previously submitted testimony in this  
7 proceeding?

8 A. Yes. We submitted direct testimony as the Panel on  
9 behalf of Orange and Rockland Utilities, Inc. ("Orange  
10 and Rockland," "O&R" or the "Company").

11 Q. What is the purpose of the Panel's rebuttal testimony?

12 A. The purpose of this rebuttal testimony is to respond  
13 to the direct testimonies of the following parties:

- 14 • Department of Public Service Staff ("Staff")  
15 Earning Adjustment Mechanisms Panel ("Staff  
16 EAMP");
- 17 • Utility Intervention Unit EAM and Customer  
18 Service Panel ("UIU EAMP"), and;
- 19 • Mr. Robert Wyman.

20

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 EAM STRUCTURE

2 Q. Please summarize Staff EAMP's recommendations related  
3 to the overall structure of the Company's proposed  
4 EAMs.

5 A. Staff makes five recommendations on the overall  
6 structure of the Company's EAMs. First, Staff  
7 recommends that EAM basis point ("BP") values be  
8 expressed in terms of absolute dollars once O&R's  
9 capital structure, allowed rate of return, equity  
10 ratio, and net plant in service targets are known.  
11 Second, Staff recommends establishing a gas EAM metric  
12 related to the Company's gas energy efficiency ("EE")  
13 program. Third, Staff recommends an EAM related to  
14 higher adoption of environmentally beneficial  
15 electrification ("EBE") technologies in the Company's  
16 service territory. Fourth, Staff recommends a  
17 reduction in incentive levels for the Company's  
18 electric EAMs from a maximum of 100 BPs to 50 BPs.  
19 Staff recommends up to 10 BPs for the Company's Gas  
20 EAM. Fifth, Staff recommends that EAM metrics,  
21 targets, and financial incentives be set for three-

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 years regardless of whether this proceeding results in  
2 a one-year or multi-year rate plan. However, Staff  
3 recommends that the EAM targets be reconsidered as  
4 part of a collaborative in the event that the  
5 Commission authorizes significant new programs or  
6 substantial increases to the budgets for existing  
7 programs as a result of ongoing statewide policy  
8 proceedings.

9 Q. Does the Company agree with the Staff EAMP's first  
10 recommendation that BPs should be expressed in  
11 absolute dollars?

12 A. Yes. The Company supports conversion of incentive BPs  
13 to absolute dollars once the capital structure and  
14 rate base are determined in these rate proceedings.  
15 However, in the interim the Panel will continue to  
16 express incentives in terms of BPs throughout this  
17 rebuttal testimony.

18 Q. Does the Company agree with Staff's second  
19 recommendation related to establishing a Gas EAM?

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 A. Yes. However, the Company proposes to modify Staff's  
2 approach in developing the Gas EAM targets. We discuss  
3 these modifications later in this rebuttal testimony.

4 Q. Does the Company agree with Staff's third  
5 recommendation related to establishing an EAM for  
6 encouraging EBE technologies?

7 A. Yes. While Staff put forth only illustrative targets,  
8 the Company has proposed targets for the electric  
9 vehicle ("EV") portion of the EBE EAM that we discuss  
10 later in this rebuttal testimony.

11 Q. Was Staff's recommendation for an EBE metric proposed  
12 by any other party?

13 A. Yes. Mr. Wyman proposed splitting the Distributed  
14 Energy Resources ("DER") Utilization metric to form an  
15 EBE metric consistent with Staff's proposal.

16 Q. Does the Company agree with Staff's fourth  
17 recommendation on the revised EAM incentive BPs?

18 A. The Company supports Staff's recommended Gas EAM  
19 incentive of up to ten BPs. However, the Company  
20 opposes Staff's proposed reduction in incentives for  
21 electric EAMs. The Company continues to support

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 maximum incentives of 100 BPs for its proposed  
2 electric EAMs. As discussed in the Panel's Direct  
3 Testimony (p. 12), the Company's proposal of  
4 incentives of up to 100 BPs is consistent with the  
5 Commission's guidance in the REV Track Two Order<sup>1</sup> that  
6 EAM incentives should be "financially meaningful and  
7 structured such that they encourage enterprise-wide  
8 attention at the utility and encourage strategic,  
9 portfolio-level approaches beyond narrow programs." To  
10 support the achievement of EAM targets, the Company  
11 has proposed initiatives that achieve market outcomes  
12 through innovation and collaboration with stakeholders  
13 including third-party DER developers. The Company  
14 believes that earning opportunities of up to 100 BPs  
15 provides the Company with incentives to pursue these  
16 initiatives and go above and beyond the traditional  
17 business model to achieve REV objectives and customer  
18 benefits in a rapidly evolving market.

---

<sup>1</sup> Case 14-M-0101, *Proceeding on Motion of the Commission in Regard to Reforming the Energy Vision* ("REV Proceeding"), Order Adopting a Ratemaking and Utility Revenue Model Policy Framework (issued May 19, 2016) ("REV Track Two Order") (p. 68).

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 Q. Has the Company updated its proposed allocation of BPs  
2 to EAM metrics?

3 A. Yes. The Company has updated the proposed allocation  
4 of BPs based on the benefit-cost analysis ("BCA")  
5 conducted for the Company's revised EAM proposal  
6 presented in this rebuttal testimony in Exhibit \_  
7 (EAMP-4R).

8 Q. Does the Company agree with Staff's fifth  
9 recommendation on setting the EAM metrics, targets,  
10 and incentives for three years?

11 A. Yes, the Company supports establishing EAM metrics,  
12 targets, and incentives for three years. The Company  
13 also agrees that the EAM targets should be  
14 reconsidered as part of a collaborative if the  
15 programs supporting the EAMs are significantly  
16 impacted by Commission decisions in ongoing statewide  
17 proceedings. However, as noted in the Panel's direct  
18 testimony (p. 50), regardless of the ongoing statewide  
19 proceedings, the Company has proposed to perform an  
20 evaluation and review of the EAMs by June 1, 2020 to

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 determine if any changes or modifications to the EAMs  
2 may be warranted.

3 Q. What is the rationale behind Company's proposal for  
4 the evaluation and review of EAMs by June 1, 2020?

5 A. As discussed by the Staff EAMP (p. 13), there are  
6 risks involved in setting multi-year EAM metrics,  
7 targets, and financial incentives. For example, there  
8 is a substantial risk that the EAM targets, especially  
9 related to outcome-based metrics, may be set too  
10 strictly for the utility, such that the utility is  
11 unable to achieve such targets regardless of its  
12 efforts due to constraints beyond the Company's  
13 control. While Staff proposes to mitigate this risk  
14 through the target setting process, the Company finds  
15 it more practical to conduct an evaluation and review  
16 midway through the three-year term to share lessons-  
17 learned, and propose modifications to EAMs, if  
18 necessary.

19 Q. Is there any additional recommendation by the UIU EAMP  
20 or Mr. Wyman that the Panel wishes to address before  
21 separately discussing each EAM metric?

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 A. Yes. The Panel wishes to address Mr. Wyman's proposal  
2 to establish a Managed Decapitalization EAM that  
3 incentivizes the Company for retirement of its gas  
4 business assets at an accelerated rate and conversion  
5 of gas customers to beneficial electric use.

6 Q. Does the Company support Mr. Wyman's proposed Managed  
7 Decapitalization EAM?

8 A. No. The Company does not support Mr. Wyman's proposed  
9 Managed Decapitalization EAM. The Company finds this  
10 EAM to be inconsistent with Commission's guidance in  
11 the REV Track Two Order. In addition, Mr. Wyman's  
12 proposal is fundamentally inconsistent with the  
13 Company's obligation to provide gas service, as  
14 discussed in the rebuttal testimony of the Company's  
15 Policy Panel.

16

17

**System Efficiency EAM**

18 Q. Please restate the metrics related to the Company's  
19 proposed System Efficiency EAM ("SE EAM").

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 A. The Company proposed three SE EAM metrics: (1) MW Peak  
2 Load Reduction; (2) Distribution Circuit Peak Load  
3 Reduction; and (3) DER Utilization.

4

5 **MW Peak Load Reduction**

6 Q. Please summarize Staff's recommendations on the MW  
7 Peak Load Reduction metric.

8 A. Staff proposes that the MW Peak Load Reduction metric  
9 be an outcome-oriented metric measuring reduction  
10 based on the Company's weather-normalized peak load  
11 coincident with New York Independent System Operator's  
12 ("NYISO") designated Zone G-J Locality (instead of the  
13 overall New York Control Area ("NYCA") peak). Staff  
14 developed its recommended minimum, mid-point, and  
15 maximum targets for the MW Peak Load Reduction metric  
16 based on Staff's proposed targets for Solar  
17 Photovoltaic ("PV"), demand response, and EE programs.  
18 Staff also recommends that the demand reductions  
19 related to Energy Intensity and Time-of-Use ("TOU")  
20 Rate Enrollment metrics be included in the MW Peak  
21 Load Reduction targets.

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 Q. How did Staff develop targets for the peak reduction  
2 metric?

3 A. Staff developed revised targets for peak reduction  
4 metrics in five computational steps. First, Staff  
5 developed a baseline forecast by applying the ten-year  
6 Compound Annual Growth Rate ("CAGR") for NYISO Zone G-  
7 J to the Company's historical 2017 weather-normalized  
8 Zone G-J Locality peak demand. Staff also adjusted the  
9 baseline forecast for the impacts of Company's current  
10 Efficiency Transition Implementation Plan ("ETIP") EE  
11 programs, forecasted incremental solar installations,  
12 and current Demand Response ("DR") program enrollment.  
13 Second, Staff calculated the peak demand impacts of  
14 the Staff's recommended targets for the Solar PV,  
15 Incremental EE, and Energy Intensity metrics. Third,  
16 Staff revised the Company's DR targets based on the  
17 last five years' experience from Consolidated Edison  
18 Company of New York, Inc.'s ("Con Edison") CSRP  
19 enrollment data. Fourth, Staff calculated the peak  
20 reduction impacts of increased TOU rate enrollment  
21 based on the Staff's proposed participation targets.

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 Fifth, Staff subtracted the peak demand impacts  
2 developed in steps two through five from the baseline  
3 peak demand forecast developed in step one to  
4 determine the minimum, mid-point, and maximum peak  
5 demand MW targets.

6 Q. Does the UIU EAMP make any recommendations regarding  
7 the MW Peak Reduction metric?

8 A. Yes. The UIU EAMP also recommends that the peak load  
9 reduction metric should be completely outcome-  
10 oriented.

11 Q. Does the Company agree with Staff's and UIU EAMP's  
12 recommendation for the MW Peak Load Reduction metric  
13 to be completely outcome-oriented?

14 A. Yes. The Company supports the MW Peak Load Reduction  
15 metric to be completely outcome-oriented based on  
16 reduction in the Company's weather-normalized peak  
17 load coincident with NYISO designated Zone G-J  
18 Locality. In addition, the Company supports Staff's  
19 recommendation to include the peak impacts of the TOU  
20 enrollment in the MW Peak Load Reduction metric.

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 Q. Does the Company propose any enhancements in Staff's  
2 first computational step to develop the baseline  
3 forecast for the MW Peak Load Reduction metric?

4 A. Yes. The Company is proposing three enhancements.  
5 First, the Company has provided in Exhibit \_ (EAMP-1R)  
6 revised historical weather-normalized peak data based  
7 on an updated weather-normalization methodology. The  
8 loads provided in the Company's response to Staff  
9 interrogatory DPS-414 were not weather-adjusted, and  
10 should not be used. Second, instead of applying ten-  
11 year annual CAGR of the Zone G peak load forecast or  
12 the Zone G-J Locality load forecast, the Company is  
13 proposing to utilize its coincident peak load for the  
14 baseline forecast. Third, the Company is proposing to  
15 measure the peak load reduction as a percentage  
16 decrease in year-over-year peak load in each of the  
17 three years to determine the annual incremental peak  
18 reduction. This approach is similar to the Energy  
19 Intensity metric. The proposed targets are set forth  
20 in EAMP-2R.

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 Q. Is the Company proposing any revisions to the peak  
2 demand impacts from the Energy Storage technologies  
3 and other DG/CHP?

4 A. Yes. The Company has updated the peak demand impacts  
5 related to Energy storage technologies and other  
6 DG/CHP for the revised targets proposed in this  
7 Rebuttal Testimony. The revised targets of Battery  
8 Storage, and CHP/other DG are in line with the revised  
9 targets of the DER Utilization Metric and the details  
10 are discussed the DER Utilization section of this  
11 Rebuttal Testimony. The Company proposes that the  
12 Energy Storage peak reduction target be given a 20%  
13 discount in order to account for losses and coincident  
14 operation of the storage technologies with the O&R  
15 peak that would not been realized in an outcome  
16 oriented approach as described above.

17 Q. Does the Company support Staff's recommended peak  
18 demand impacts from EE?

19 A. No, the EE peak demand impacts directly corresponded  
20 to the MWH targets, of which the Company is not

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 proposing any changes. Please see the Company's EE  
2 Rebuttal Testimony for details.

3 Q. Does the Company support Staff's recommended peak  
4 demand impacts from Solar PV?

5 A. No, the Company recommends their original targets for  
6 Solar PV peak demand impact. The peak demand impacts  
7 of Solar PV are in line with the targets of the DER  
8 Utilization Metric and the details are discussed the  
9 DER Utilization section of this Rebuttal Testimony.

10 Q. Does the Company support Staff's recommended DR  
11 targets?

12 A. Yes. However, the Company believes that if DR is not  
13 called on the measured peak day, then the average DR  
14 performance on actual events or tests should be  
15 included in measurement of peak load reduction. The  
16 Company notes that current DR enrollment for the 2018  
17 program is 16.5 MW. While this level exceeds Staff's  
18 proposed maximum target of 16.4 MW in 2021, the  
19 current DR enrollment is not a guarantee of future DR  
20 enrollment as customers must re-enroll each year in DR  
21 programs. For example, if numerous DR events are

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 called for in a particular year due to an abnormally  
2 hot summer and it proved to be uneconomical for a  
3 customer who was not anticipating that many events,  
4 that customer may not re-enroll. For another example,  
5 a manufacturing customer may not re-enroll in the  
6 program if its production schedules can no longer  
7 accommodate shedding their committed MW load.

8 Q. Has the Company revised Staff's peak reduction impacts  
9 of increased TOU rate enrollment?

10 A. Yes. The Company revised the TOU participation targets  
11 as part of the TOU Enrollment metric. The revisions  
12 to participation targets are discussed the TOU  
13 Enrollment metric section of this rebuttal testimony.  
14 For each TOU participant, the peak reduction impacts  
15 are estimated to be 0.2 kW.

**Circuit Peak Load Reduction**

16  
17 Q. Please summarize Staff's recommendations on the  
18 Circuit Peak Load Reduction metric.

19 A. Staff does not support the Circuit Peak Load Reduction  
20 metric for three reasons. First, Staff does not find  
21 any indication that overall system load factor is a  
22 reasonable target. Second, Staff favors a relatively

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 small number of metrics with larger BP awards. Third,  
2 Staff states that there are other measures like Non-  
3 Wire Alternatives ("NWAs") that the Company can use to  
4 achieve load reductions on these circuits without the  
5 need for a specific EAM metric.

6 Q. Does the UIU EAMP make any recommendations regarding  
7 the Circuit Peak Load Reduction metric?

8 A. Yes. The UIU EAMP recommends the elimination of the  
9 Circuit Peak Load Reduction metric, because the  
10 Commission has not approved it for any other utility.  
11 The UIU EAMP also raises concerns that the metric may  
12 result in a double incentive as the Company is also  
13 incentivized to reduce circuit peak impacts as part of  
14 its NWA initiatives.

15 Q. What is the Company's position on its proposed Circuit  
16 Peak Load Reduction metric?

17 A. The Company continues to support it. The Company  
18 designed this metric to achieve significant  
19 reliability benefits to specific areas in its electric  
20 distribution system. The Company selected the circuits  
21 following a detailed analysis of the Company's

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 electric distribution system, and determined that  
2 reducing peak loads in the areas served by these  
3 circuits will result in significant system and  
4 customer reliability benefits. The six selected  
5 circuits are usually in the top 70 worst performing  
6 circuits on an annual basis. Peak reduction on these  
7 circuits allows the Company to operate and manage load  
8 more efficiently to maintain reliability year-round.  
9 Peak reduction also improves the Company's ability to  
10 backup these circuits in the event of a circuit and/or  
11 bank contingency, whereas without these reductions,  
12 back up would not be available.

13 Q. Are the proposed circuit load reductions a reasonable  
14 target for the selected circuits?

15 A. Yes. The proposed circuit load reductions alleviate  
16 operating risks for these circuits under contingency  
17 conditions, and should result in reliability  
18 improvements.

19 Q. Does the Circuit Peak Load Reduction metric result in  
20 a double-count with incentives tied to NWA  
21 initiatives?

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 A. Not necessarily. First, there is no guarantee that the  
2 proposed circuits will be included in an NWA. Second,  
3 even if the proposed circuits are included in an NWA  
4 the potential overlap is likely to be small  
5 considering the scope of the circuit peak load  
6 reduction metric. NWAs have a broader focus of  
7 deferring infrastructure needs through substantial MW  
8 peak reductions over a certain period of time. In  
9 contrast, the circuit peak load metric is designed to  
10 maximize reliability benefits in selected circuits  
11 with much smaller and focused peak reduction. Third,  
12 the Company plans to propose different circuits for  
13 this EAM in future rate cases with additional  
14 reliability risks after completion of this initial  
15 three-year EAM term.

16 Q. Does the Company believe that the Circuit Peak Load  
17 Reduction metric should be eliminated?

18 A. No. The REV Track Two Order (p. 62) provides each  
19 utility the opportunity to present innovative programs  
20 and initiatives in its service territory to achieve  
21 REV policy objectives and customer benefits.

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 Specifically, the Commission states: "...outcome-based  
2 incentives encourage innovation by the utility, as  
3 opposed to merely conforming to plans approved or  
4 ordered by the Commission." The Circuit Load Reduction  
5 metric presents a unique opportunity for the Company  
6 to target certain circuits in Company's system, where  
7 reducing peak load will result in maximum reliability  
8 benefits. The Company is also proposing to increase  
9 the incentive associated with this metric to a maximum  
10 of 5 BPs to allow for a more meaningful incentive.

**DER Utilization**

- 11
- 12 Q. Please summarize Staff's recommendations on the DER  
13 Utilization metric.
- 14 A. Staff agrees with the general framework for the DER  
15 Utilization metric, but proposes several  
16 modifications. First, Staff disagrees with the  
17 inclusion of MWh produced by residential Solar PV  
18 installations, and MWh used for charging purposes for  
19 EVs and energy storage systems in the DER Utilization  
20 metric. Second, Staff proposes to consider EVs in the  
21 newly proposed EBE metric. Third, Staff has proposed  
22 revised targets for the DER Utilization metric.

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 Q. What changes does Staff propose to the Solar PV  
2 targets for the DER Utilization metric?

3 A. Staff proposes to include only non-residential Solar  
4 PV in the DER Utilization metric. Staff states that  
5 the residential solar market is mature and does not  
6 require additional incentives for market development.  
7 Staff considered non-residential Solar PV to be 23.0  
8 percent of total solar installations based on the  
9 historical data provided by the Company in its  
10 response to interrogatory DPS-267. Staff developed the  
11 non-residential Solar PV targets by establishing a  
12 forecast based on second order polynomial trend of  
13 Company's historic Solar PV nameplate MW  
14 installations. The minimum, mid-point, and maximum  
15 targets were set using standard error multipliers of  
16 0.25, 1.0, and 1.75. The MW targets were converted to  
17 MWH using 13.4 percent solar capacity factor.

18 Q. Does the Company agree with Staff's recommendation to  
19 only include non-residential solar in the DER  
20 Utilization metric?

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 A. No. The Company believes that it will continue to play  
2 a substantial role in the development of the  
3 residential solar market. For example, the Company has  
4 the vision for its My ORU Store Marketplace to become  
5 a centralized customer transactional platform,  
6 including for Solar PV installations. To encourage  
7 growth in the residential solar market, the Company is  
8 exploring a unique opportunity to expand upon its  
9 current services by offering a new solar platform that  
10 would educate customers about solar and enable them to  
11 connect with qualified providers in the territory. The  
12 project will increase education and awareness in  
13 Company's customers, and provide tools to make  
14 informed financial decisions.<sup>2</sup> The Commission has also  
15 directed Staff to work with stakeholders to develop a  
16 transition away from Net Metering for mass market  
17 customers, to be in place by January 2020 through the  
18 Value of DER proceeding.<sup>3</sup> The Company has been an

---

<sup>2</sup> For more details, see O&R REV Demonstration Project: Customer Engagement Marketplace Platform Q1 2018 Report, filed April 30, 2018 in Case 14-M-0101 (p. 15)

<sup>3</sup> Case 15-E-0751, *In the Matter of the Value of Distributed Energy Resources*.

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 active participant in this process. This new retail  
2 tariff would impact the maturity of DER in mass market  
3 segment. Considering the Company's innovative  
4 solutions for the residential solar market and the  
5 upcoming VDER Phase 2, the residential solar should be  
6 a part of the DER Utilization metric.

7 Q. Are there additional reasons the Company believes it  
8 is inappropriate to include only non-residential PV in  
9 the DER Utilization metric?

10 A. There is not always a clear distinction between  
11 residential and non-residential PV. For example,  
12 Community Distributed Generation ("CDG") projects can  
13 have both residential and commercial subscribers,  
14 which would make these projects difficult to  
15 classify. In addition, the solar market continues to  
16 evolve, thus it is very difficult to project the ratio  
17 between residential and non-residential projects.

18 Q. Does the Company agree with the Staff's target setting  
19 methodology for Solar PV?

20 A. No. First, the Company does not support Staff's  
21 forecast based on a second order polynomial trend.

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 Staff's statistical methodology does not acknowledge  
2 several important factors driving the solar market.  
3 Some of these factors include changing costs, site and  
4 project permitting constraints, and changing tax  
5 credits. The Company recommends that the baseline be  
6 based on the Company's solar forecast that considers  
7 these factors.

8 Second, Staff's proposed standard error multipliers  
9 for target setting reflect unreasonable expectations,  
10 based upon the Company's initiatives to achieve these  
11 targets. The Company proposes to maintain its  
12 recommended standard error multipliers of 0.0, 0.25,  
13 and 0.50 at minimum, mid-point, and maximum target  
14 levels. The Company continues to support their  
15 original Solar PV targets.

16 Q. What changes does Staff propose for the energy storage  
17 targets?

18 A. Staff considers the Company's proposed energy storage  
19 targets for Rate Year 1 (or RY1) (*i.e.*, calendar year  
20 2019) to be reasonable, but those for Rate Year 2 (or  
21 RY2) (*i.e.*, calendar year 2020), and Rate Year 3 (or

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 RY3) (*i.e.*, calendar year 2021) to be unreasonable.  
2 Staff has set the energy storage targets to be  
3 constant for Rate Year 1, Rate Year 2 and Rate Year 3.

4 Q. Does the Company support Staff's proposed energy  
5 storage targets?

6 A. Yes. The Company supports Staff's energy storage  
7 targets.

8 Q. What are the changes proposed by Staff for the other  
9 DG targets?

10 A. Staff agrees with the Company's proposed other DG  
11 targets for RY2 and RY3, but disagrees with RY1 other  
12 DG targets of zero. Staff recommends setting other DG  
13 targets in RY1 as one-half of the RY2 targets.

14 Q. Does the Company support Staff's proposed other DG  
15 targets?

16 A. Yes. The Company support Staff's approach to setting  
17 other DG targets.

18 Q. Does the UIU EAMP make any recommendations regarding  
19 the DER Utilization metric?

20 A. Yes. The UIU EAMP recommends eliminating Solar PV  
21 generation from the DER Utilization metric. The UIU

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 EAMP states that there is no need for Solar PV  
2 incentives, as the amount of installed Solar PV has  
3 already shown significant growth over the last few  
4 years. Furthermore, by including Solar PV generation  
5 in the DER Utilization metric, the Company may be  
6 eligible for double-rewards, as Solar PV is also part  
7 of the MW Peak Reduction metric.

8 Q. Does the Company agree with the UIU EAMP's  
9 recommendation to eliminate Solar PV from the DER  
10 Utilization metric?

11 A. No, Solar PV will continue to play an important role  
12 in achieving New York State's clean energy goals, as  
13 well as system efficiency goals, as outlined in the  
14 REV Track Two Order (pp. 71-77). An EAM based on Solar  
15 PV is appropriate as the Company continues to play a  
16 significant role in solar market development.

17 Q. Does the Company agree that including Solar PV in both  
18 the MW Peak Reduction and DER Utilization metrics  
19 results in a double-reward?

20 A. No. Having Solar PV in both the MW Peak Reduction and  
21 DER Utilization metrics does not result in a double-

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 reward. Rather, these metrics result in providing  
2 incentives for all aspects of Solar PV benefits. For  
3 example, the MWH generation from Solar PV results in  
4 avoided wholesale energy costs and avoided carbon  
5 costs. Achievement of these benefits is incentivized  
6 through the DER Utilization metric. Peak reduction  
7 from Solar PV results in avoided generation capacity  
8 and avoided transmission and distribution  
9 infrastructure benefits. Achievement of these benefits  
10 is incentivized through the MW Peak Reduction metric.  
11 Hence, Solar PV needs to be included within both  
12 metrics.

13 **Energy Efficiency ("EE") EAM**

14 Q. Please restate the metrics related to the Company's EE  
15 EAM.

16 A. The Company's proposed EE EAM consists of two metrics:  
17 MWH Reduction and Energy Intensity. Staff recommended  
18 a third DTH Gas Reduction metric based on the  
19 Company's gas efficiency programs.

20

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 **MWH Reduction**

2 Q. Please summarize Staff's recommendations on the MWH  
3 Reduction metric.

4 A. Staff agrees with the general framework of the  
5 Company's proposed MWh Reduction metric but disagrees  
6 on how the specific targets should be set. Staff has  
7 proposed revised targets based on historic \$/MWH run  
8 rates achieved by the Company from 2012 through 2017.  
9 Specifically, Staff has set the minimum target based  
10 on the average run-rate achieved by the Company of  
11 \$182.53/MWH, maximum target based on the minimum run-  
12 rate achieved by the Company of \$137.41/MWH, and mid-  
13 point targets based on \$159.97/MWH which is the  
14 average of minimum and average run-rates. Staff also  
15 recommends that the Company should be required to  
16 maintain the current Estimated Useful Life ("EUL") of  
17 its electric ETIP portfolio (*i.e.*, 13.2 years) as a  
18 precondition to earning any incentives through this  
19 metric.

20 Q. Does the Company agree with Staff's target setting  
21 approach?

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

- 1 A. No. The Company continues to support its target  
2 setting methodology. Staff's methodology assumes that  
3 the Company will be able to achieve the \$/MWH run-  
4 rates it has achieved in the past. However, as  
5 discussed in the Direct Testimony of the Company's EE  
6 Panel (pp. 30-33), the Company was able to obtain  
7 lower cost MWh savings in the past because of  
8 Commercial and Industrial customers installing low-  
9 cost lighting solutions. Moving forward, the Company  
10 expects the run-rates to be much higher as the 'low-  
11 hanging fruit' (*i.e.*, lighting upgrades described  
12 above) have already been achieved. Staff's target  
13 setting approach limits the Company's ability to  
14 engage with its customers and move them beyond  
15 lighting to deeper energy savings through newer  
16 technologies, albeit at a higher cost. Please refer to  
17 the rebuttal testimony of the Company's EE Panel for  
18 additional details.
- 19 Q. Has the Company proposed any modifications to the MWH  
20 Reduction targets?

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 A. No, please refer to the rebuttal testimony of the  
2 Company's EE Panel.

3 Q. Does the Company support Staff's proposed requirement  
4 for the Company to maintain the current EUL of its  
5 electric ETIP portfolio (*i.e.*, 13.2 years)?

6 A. No. The Company's current EUL is one of the highest in  
7 the New York State, and trying to maintain it would  
8 limit the Company's new programs with potentially  
9 shorter EULs (*e.g.*, behavioral programs). Please refer  
10 to the Company's Energy Efficiency Panel's rebuttal  
11 testimony for additional discussion regarding this  
12 issue.

13 **DTH Gas Savings**

14 Q. Please summarize Staff's recommendations on the DTH  
15 Gas Savings metric.

16 A. Staff recommends that the Company implement an EAM  
17 employing a DTH Gas Savings metric related to savings  
18 (expressed in MMBtu) achieved by the Company through  
19 its gas energy efficiency programs. Staff has proposed  
20 gas saving targets based on \$/DTH run rates achieved  
21 by the Company from 2012 through 2017. Specifically,

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 Staff has set a minimum target based on the average  
2 run-rate achieved by the Company of \$34.10/DTH, a  
3 maximum target based on the minimum run-rate achieved  
4 by the Company of \$24.98/DTH, and a mid-point target  
5 based on \$29.54/DTH which is the average of the  
6 minimum and average run-rates. Staff also recommends  
7 that the Company should be required to maintain the  
8 current EUL of its gas ETIP portfolio (*i.e.*, 11.0  
9 years) as a precondition to earning any incentives  
10 through this metric.

11 Q. Does the Company agree with Staff's target setting  
12 approach?

13 A. No. The Company does not support Staff's target  
14 setting methodology based on the same reasons noted  
15 above in the discussion of the MWH Reduction metric.  
16 The Company has proposed revised targets for the gas  
17 saving metric based on Company's expectations and  
18 experience with gas efficiency programs. These are set  
19 forth in Exhibit \_ (EAMP-2R).

20 Q. Does the Company support Staff's proposed requirement  
21 that the Company maintain an EUL of 11.0 years?

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 A. No. Similar to the Electric EE programs, the Company's  
2 current EUL for gas savings programs is one of the  
3 highest in the New York State, and trying to maintain  
4 it would limit the Company's ability to implement new  
5 programs (e.g., behavioral programs). Please refer to  
6 the Company's EE Panel's rebuttal testimony for  
7 additional discussion regarding this issue.

8 **Energy Intensity**

9 Q. Please summarize Staff's recommendations regarding the  
10 Energy Intensity metric.

11 A. Staff recommends several modifications to the  
12 Company's proposed Energy Intensity metrics'  
13 methodology. First, Staff recommends using the  
14 weather-normalized MWh usage data employed by the  
15 Staff Electric Forecasting Panel ("SEFP") to develop  
16 the trend line for Residential and Commercial Energy  
17 Intensity. Second, consistent with the SEFP's  
18 approach, publicly available government data sources  
19 should be used to derive the employment series data  
20 used to calculate the Commercial Electric Energy  
21 Intensity metric. Third, any beneficial  
22 electrification should be subtracted from MWh usage

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 data before estimating the trend line. Fourth, the  
2 trend lines used for both the Residential and  
3 Commercial Electric Energy Intensity metrics should be  
4 based on four-quarter rolling average MWh per customer  
5 or employee data beginning in 2011 and continuing  
6 through the first quarter of 2018. Fifth, the energy  
7 intensity targets should be based on Staff's  
8 recommended standard error multipliers of 0.25, 1.0,  
9 and 1.75 at minimum, mid-point, and maximum target  
10 levels, respectively.

11 Q. Does the Company agree with Staff's recommendation for  
12 establishing Energy Intensity targets, including the  
13 use of weather normalized MWH usage data developed by  
14 the SEFP, and publicly available government employment  
15 data to derive Commercial Electric Energy Intensity  
16 metric?

17 A. The Company does not agree with Staff's  
18 recommendations. The Company continues to believe  
19 that the trend line should be based on a rolling four  
20 quarter average of the Company forecasted energy usage  
21 from 2019 through 2021. In addition, the Company

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 believes that the performance targets including the  
2 standard error multipliers should be set in a manner  
3 that reflects a reasonable expectation of achieving  
4 the energy intensity targets. Staff's weather  
5 normalized historical sales data and their sales  
6 forecasts are not on the same 10-year normal bases.  
7 While Staff normalized historical sales using the 10-  
8 year normal weather ending 2016, the sales forecasts  
9 were developed using the 10-year normal weather ending  
10 2017. The Company also does not agree with Staff's  
11 recommendation to use the employment data that they  
12 constructed at this time because a statistically  
13 significant relationship between this variable and  
14 electric sales could not be established. Please refer  
15 to the Forecasting Panel Rebuttal Testimony for  
16 additional details

17 Q: Please explain how the historical actuals usage data  
18 should be weather-normalized.

19 A: For consistency in weather normalization bases for the  
20 historical usage data and the sales forecasts, the  
21 Company normalized the historical data using the 10-

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 year normal weather ending 2017 and the updated  
2 coefficients for the Residential and Secondary volume  
3 models developed by the Company's EFP. This puts the  
4 historical actuals on the same weather basis as the  
5 Company's updated sales forecasts, which the EAM panel  
6 also adopted for this purpose. Please refer to the  
7 Forecasting Panel Rebuttal Testimony for additional  
8 details.

9 Q. Does the Company agree that any beneficial  
10 electrification be subtracted from MWH usage before  
11 establishing the trend line?

12 A. Yes.

13 **Interconnection EAM**

14 Q. Please summarize Staff's recommendations regarding the  
15 Interconnection EAM.

16 A. Staff recommends that the survey and related targets  
17 should be developed through the existing proceeding  
18 before the Commission in Case 16-M-0429. A maximum of  
19 five BPs appears to be a reasonable reward, because it  
20 is identical to the number of basis points for Con  
21 Edison's Interconnection EAM.

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 Q. Does the Company agree with Staff's recommendations on  
2 the Interconnection EAM?

3 A. Yes.

4 **AMI Customer Engagement EAM**

5 Q. Please summarize Staff's recommendations on the AMI  
6 Customer Engagement EAM.

7 A. Staff disagrees with the Company's proposed AMI  
8 Customer Engagement metrics, targets, and BP  
9 allocations. As a replacement, Staff recommends that  
10 the Commission adopt a customer enrollment metric,  
11 based on customer enrollment in more advanced time-  
12 varying delivery rates including TOU rates and Smart  
13 Home Rates.

14 Q. How did Staff develop targets for its proposed TOU  
15 enrollment metric?

16 A. Staff's TOU enrollment targets are based on the  
17 Company's current participation rates, as well as  
18 other successful TOU rate programs around the state  
19 and across the country. Staff recommends higher  
20 targets for the Company in recognition of the impact  
21 AMI deployment and the Staff Market and Innovation

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 Panel's recommendation to reduce the customer charge  
2 for TOU rate customers that have had AMI meters  
3 installed.

4 Q. Does the Company agree with Staff's recommendations  
5 related to its AMI customer engagement metrics?

6 A. The Company continues to believe that its proposed AMI  
7 customer awareness, weekly AMI report enrollment, and  
8 high-bill alert enrollment metrics provide significant  
9 customer benefits. The Company would support  
10 eliminating the weekly AMI report enrollment and high-  
11 bill alert enrollment metrics in the context of its  
12 other EAM proposals; however, the Company opposes  
13 elimination of the AMI customer awareness metric  
14 because customer awareness is important to the success  
15 of the AMI program and is consistent with the metric  
16 approved in the Con Edison proceeding.

17 Q. Does the Company agree with Staff's recommendation to  
18 establish a TOU enrollment metric?

19 A. Yes.

20 Q. Is the Company proposing any adjustment to Staff's  
21 proposed TOU enrollment metric?

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 A. Yes. The Company is proposing to exclude enrollment in  
2 Smart Home Rates as part of the TOU enrollment metric.  
3 Smart Home Rates is a demonstration project with  
4 certain limitations that are designed to research and  
5 evaluate Smart Home rates rather than expand  
6 enrollment in TOU rates.

7 Q. Is the Company proposing any modifications to Staff's  
8 TOU enrollment targets?

9 A. Yes. The Company believes that Staff's TOU enrollment  
10 targets reflect a steep ramp up in TOU participation  
11 targets with maximum targets doubling from 7 percent  
12 in 2019 to 14 percent in 2021. The Company has no  
13 experience with such steep ramp up in TOU  
14 participation and thus has adjusted the targets to  
15 reflect a more gradual increase in TOU participation.  
16 The Company's proposed TOU participation targets are  
17 provided in Exhibit \_ (EAMP-2R).

18 **Environmentally-Beneficial Electrification ("EBE") EAM**

19 Q. Please summarize Staff's recommendations regarding the  
20 EBE EAM.

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

- 1 A. As discussed earlier, Staff recommends establishing an  
2 EBE metric based on the tons of carbon reduced by  
3 incremental penetration of EBE technologies, such as  
4 ground-source heat pumps ("GSHPs"), air-source heat  
5 pumps ("ASHPs"), and EVs. Staff does not recommend  
6 any specific targets related to the EBE metric.
- 7 Q. Please summarize Mr. Wyman's recommendations regarding  
8 the design of the EBE EAM.
- 9 A. Mr. Wyman recommends that the DER Utilization metric  
10 be split into two distinct metrics. The first metric  
11 would measure the MWh generated from DER technology;  
12 the second metric would measure a broader spectrum of  
13 beneficial uses of electricity, including at a minimum  
14 the electric usage from EVs and heat pumps.
- 15 Q. Does the Company agree with Staff's and Mr. Wyman's  
16 recommendation to establish an EBE metric?
- 17 A. Yes. As discussed earlier, Company agrees with  
18 establishing an EBE EAM metric based on tons of carbon  
19 reduced from EVs, ASHPs, and GSHPs. The Company has  
20 proposed EBE targets for EVs in this rebuttal  
21 testimony.

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 Q. How did the Company develop EBE targets for EVs?

2 A. The Company established EBE targets for EVs based on  
3 the Company's EV forecast.

4 **Benefit Cost Analysis**

5 Q. Please summarize Staff's recommendations related to  
6 the BCA.

7 A. Staff used the Company's BCA model revised to reflect  
8 Staff's EAM targets and updated assumptions. Staff's  
9 updated assumptions included: (a) carbon cost from  
10 \$24.24 to \$21.71 per MWH based on recent Tier 1 REC  
11 price on NYSERDA website; (b) Avoided Generation  
12 Capacity Cost ("AGCC") based on Staff's ICAP model  
13 filed on May 2, 2018 in Case 14-M-0101; (c) discount  
14 rate based on Staff's recommendation (see, the Staff  
15 Finance Panel's direct testimony).

16 Q. Does the Panel agree with these recommendations?

17 A. Yes. The Company agrees with Staff's updated  
18 assumptions in Staff's BCA study, except the discount  
19 rate. The Company continues to use the discount rate  
20 from its direct testimony.

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 Q. Is the Company presenting an updated BCA study based  
2 on its proposal in this rebuttal testimony?

3 A. Yes. The Company has updated its BCA study for this  
4 rebuttal testimony. Specifically, the Company has made  
5 three major updates. First, the Company has updated  
6 the study for the EAM targets that the Company has  
7 included in this rebuttal testimony. Second, the  
8 Company has conducted a BCA for the proposed Dth  
9 Saving metric. The Company leveraged the BCA conducted  
10 for its ETIP filing<sup>4</sup> and used the implied \$/Dth  
11 benefits and costs to estimate BCA results for  
12 Company's Dth savings targets. Third, the Company has  
13 conducted a BCA for its proposed EBE metric. The  
14 Company leveraged Environmental Protection Agency's  
15 Social Cost of Carbon values to estimate the benefits  
16 of avoided metric tons of CO<sub>2</sub>.<sup>5</sup>

17 Q. Please describe the results of the updated BCA  
18 performed by the Company for its EAM metrics.

---

<sup>4</sup> O&R Final Energy Efficiency Transition Implementation Plan 2017-2020  
filed December 22, 2017 in Case 15-M-0252

<sup>5</sup> As provided in Appendix C of *Order Establishing the Benefit Cost  
Analysis Framework* issued January 21, 2016 in Case 14-M-0101

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 A. The Company's updated BCA study shows that the EAMs  
2 continue to provide significant customer benefits at a  
3 societal level. For the Company's electric EAMs,  
4 achievement of maximum targets would result in net  
5 benefits of \$124.7 million with a Benefit-Cost ratio  
6 of 2.0. For Company's Gas EAM, achievement of maximum  
7 targets would result in net benefits of \$1.3 million  
8 with a Benefit-Cost ratio of 1.5. The detailed results  
9 for the BCA are included in Exhibit \_ (EAMP-3R).

10 **Cost Recovery**

11 Q. Please summarize Staff's recommendations related to  
12 the EAM cost allocation and recovery proposed by the  
13 Company.  
14 A. Staff agrees with the general framework for EAM cost  
15 allocation and recovery proposed by O&R. However,  
16 Staff recommends a more granular method for allocating  
17 earned EAM cost recovery among Service Classifications  
18 ("SCs"). First, Staff recommends that the Peak  
19 Reduction metric should be allocated to each SC group  
20 based on the group's transmission demand allocator.  
21 Second, the MWh Reduction metric, Residential Electric

ORANGE AND ROCKLAND UTILITIES, INC.

EARNING ADJUSTMENT MECHANISMS PANEL  
REBUTTAL - ELECTRIC & GAS

1 Energy Intensity metric, Commercial Electric Energy  
2 Intensity metric, and EBE metric should be allocated  
3 to SC groups using the energy allocator. Third, the  
4 DER Utilization metric, Interconnection metric, and  
5 TOU Enrollment metric should be allocated using the  
6 following three allocators: transmission demand, non-  
7 coincident peak demand, and energy, with each carrying  
8 equal weight.

9 Q. Does the Company agree with Staff's recommendation  
10 related to EAM cost allocation and recovery?

11 A. No, the Company does not agree with Staff's  
12 recommendation. Since EAMs would be earned through  
13 the performance of a variety of programs and  
14 initiatives, the Company recommends that the EAMs be  
15 tracked, managed, recovered, and reconciled together.  
16 Allocating the EAM incentives in the more granular  
17 method as proposed by Staff would unnecessarily  
18 complex. We recommend the implementation of the  
19 Company's proposed recovery method.

20 Q. Does this conclude your rebuttal testimony?

21 A. Yes, it does.
