# New York Implementation Standard

## For **Standard Electronic Transactions**

TRANSACTION SET

**814** Change (Account Maintenance)

Ver/Rel 004010

May 17, 2006October 23, 2014 Version 1.45

### NY 814 Change Request & Response - Draft Revisions for 8/22/2014 Meeting

|                               | Summary of Changes   |
|-------------------------------|--|
| November 1, 2001              | Initial Release  |
| Version 1.0                   |  |
| April 16, 2002<br>Version 1.1 | Version 1.1 Issued   |
|                               | Notice of Correction   |
|                               | Max Use of the REF*TU segment is revised from 1 to $>1$ .  |
| August 7, 2002<br>Version 1.2 | Version 1.2 Issued   |
|                               | Added new REF segment (REF*AJ) to accommodate exchange of a Utility Account Number for the ESCO/Marketer   |
|                               | Inserted updated Field Descriptions Guideline Page   |
|                               | Modified the segment notes for the N1*8R and N1*BT segments to clarify that an N1  |
|                               | segment is required in an N1 loop when other segments are sent in that loop.   |
|                               | Modified the element notes for REF03 in the REF*65 (Meter Cycle Code) and REF*BF (Bi   |
|                               | Cycle Code) segments to indicate it is only required when the REF02 data in each segment   |
|                               | insufficient for the recipient to determine when, or how frequently, a customer's meter is read or the account is billed. (See October 2, 2001 clarification).   |
|                               | Modified the segment notes for the REF*BLT (Bill Presenter) and REF*PC (Bill Calculator<br>segments to remove the parenthetical reference to RG&E regarding Single Retailer since<br>National Fuel will also offer Single Retailer.  |
|                               | Modified the Front Matter Notes regarding 'Request Transactions' to indicate that changes<br>bill option may not be processed when the customer is not yet active with the E/M initiating<br>the Request transaction. (See June 21, 2002 order adopting EDI standards for Utility Rate<br>Ready Consolidated Billing).   |
|                               | Modified the segment notes for the AMT*DP segment to remove the parenthetical relating RG&E in favor of a more generic note. Both RG&E and National Fuel Gas offer single Retailer Model.  |
|                               | Added text to the segment notes for the REF*MT (Measurement Type and Reporting<br>Interval) segment and REF02 element to indicate that this segment must be accompanied by<br>REF*TU segment in some instances in order to adequately describe the measurement<br>period(s) or time intervals associated with specific service end points.   |
|                               | Modified the use attribute for REF*TD (Reason for Change – Account Level) segment at position 030 from Required to Conditional. This segment is only required when a change i account level data is being reported.  |
| March 17, 2004                | Version 1.3 Issued   |
| Version 1.3                   | Corrected the 'Max Use' attribute for the REF*TD (Reason for Change – Meter Level)   |
|                               | segment in the NM1 loop to >1.An element note is added to clarify the use of the LIN01 identifier in a Response transaction  |
|                               | Added two codes (AMT9M & AMT9N) to the REF*TD (Reason for Change – Account<br>Level) segment to enable ESCOs to transmit information about changes in customers tax ray<br>when the customers bill option is Utility Rate Ready Consolidated billing.  |
|                               | Added AMT*9M and AMT*9N segments to enable ESCOs to transmit changes in custome tax rate information when the bill option requested is Utility Rate Ready consolidated billin and the Utility requires ESCOs to provide this data. When different tax rates are applicable portions of the customers service <u>i.e.</u> when a REF*RP (Portion Taxed Residential) segment was present in an Enrollment Request transaction, it will be necessary to send both the 9M (residential tax rate applicable to a portion of the service) and the 9N segment (commercial tax rate applicable). |
|                               | Corrected the segment notes for the NM1 Loop to indicate that transmitting an NM1 Loop i<br>a Response transaction is 'Optional' rather than "Not Used'.   |
|                               | Corrected sample transaction 2.A. (E/M Change Request) to delete the DTM007 (Effective Date of Change) segments which are not applicable to the change being reported in this example.   |
|                               | Modified sample transactions 4.A. & 4.B. to add segments for a change in the customer's ta rate coincident with the change to Utility Rate Ready billing.  |

| Y 814 Change Request    | & Response – Draft Revisions for 8/22/2014 Meeting  |
|-------------------------|---|
|                         | Notes regarding the attributes of "R" elements are added to the Front Matter notes.           |
|                         | Coding for the REF*GC (Gas Capacity Assignment/Obligation) has been corrected (from           |
|                         | Yes/No to Y/N) to be consistent with the coding for the same segment in the Enrollment        |
|                         | Standard.   |
| May 17, 2006            |   |
| May 17, 2006            | Version 1.4 Januar  |
| Version 1.4             | Version 1.4 Issued  |
|                         | Any references to Niagara Mohawk or NMPC throughout the document were revised to refe         |
|                         | to National Grid.   |
|                         | References to RG&E's use of the Single Retailer Model have been deleted. This model is no     |
|                         | longer offered in Rochester's service territory. A new example replaces Scenario #4 in the    |
|                         | previous Implementation Guide.  |
|                         | A PER segment is added to the N1 (Customer) Loop (N101=8R) to enable parties to               |
|                         | communicate changes in a customers telephone number where the telephone number was            |
|                         | initially sent in an Enrollment Accept Response transaction in an N1 (Customer) Loop. A       |
|                         | change in the customer's telephone number coincident with a change in mailing address         |
|                         | should be reported in an N1 (Name for Mailing) Loop in the Single Retailer model (see         |
|                         | scenario 2 in the examples).  |
|                         | The N1*8R (Customer) segment note is revised to delete extraneous text and to reflect the     |
|                         | addition of a PER segment in the N1 (Customer) Loop.  |
|                         | The LIN segment notes are revised to clarify the looping structure at the header and detail   |
|                         | levels when multiple changes are being sent in a Request transaction.                         |
|                         | The REF*11 (ESCO/Marketer Customer Account Number) segment note is changed to                 |
|                         | indicate that this segment must be sent when the Utility is the bill presenter and there is a |
|                         | change in the account number.   |
|                         | The REF*12 (Utility Account Number) segment note is changed to reflect the correct line       |
|                         | number reference in the data dictionary.  |
|                         | A REF03 element is added to the REF*12 segment (Utility Account Number) for use in            |
|                         | Change Requests sent to, or received from, Orange & Rockland Utilities when the reported      |
|                         | change pertains to the un-metered portion of a customers electric service when both metered   |
|                         | and un-metered service are present on the same account.                                       |
|                         | The REF*AJ (Utility Assigned Account Number for ESCO/Marketer) segment note is revis          |
|                         | to indicate that this segment is Not Used in a Response transaction.                          |
|                         | A REF*LF (E/M Late Fees) segment is added at the account level to enable E/Ms to              |
|                         | communicate a change in late fee policies for customers receiving a Rate Ready consolidate    |
|                         | bill from National Fuel Gas.  |
|                         | An AMT*B5 (E/M Budget Plan Installment Amount) segment is added for use in National           |
|                         | Fuel Gas service territory. The AMT*B5 segment is used in that service territory to           |
|                         | communicate a change in the customers budget plan installment amount for E/M charges          |
|                         | when the bill option is Rate Ready consolidated billing and the payment option is Pay-As-     |
|                         | You-Get-Paid.   |
|                         | Additional codes were added to the REF*TD (Reason for Change – Account Level) segmer          |
| 0 / 1 - 00 - 001 /      | to accommodate the new segments (PERIC, REFLF, and AMTB5).                                    |
| <u>October 23, 2014</u> | Manian 1.5  |
| Version 1.5             | Version 1.5   |
|                         | New Change Reason Codes added at the account level and new segments from Case No.             |
|                         | <u>12-M-0476</u>  |
|                         | REFIJ – Change Industrial Classification Code   |
|                         | REFSG – Change Utility Discount Indicator   |
|                         | REFTDT – Change Account Settlement Indicator  |
|                         | REFTX – Change Tax Exempt Status  |
|                         | REFYP – Change NYPA/Recharge New York   |
|                         | Utility specific notes are generalized, as appropriate, and designated for relocation         |
|                         | to/reference within Utility Maintained EDI Guides, as necessary.                              |
|                         |   |
|                         |   |
|                         |   |
|                         |   |
|                         |   |

|   | Notes pertaining to the use of this document   |
|---|--|
| Purpose   | • An 814 Change transaction is used to communicate changes in customer account information between market participants. The 814 Change Standards are based on the ASC X12 Ver/Rel 004010 standard and related UIG guidelines.  |
| One account per 814                                     | • Each change transaction may contain only one account for one commodity (i.e. electric, gas, etc.).   |
| Cross referencing<br>Request & Response<br>Transactions | <ul> <li>The BGN02 element in the BGN segment received on a request must be returned in the BGN06 element of the BGN segment sent on the response.</li> <li>The LIN01 element is used to cross-reference each individual LIN response with its corresponding request.</li> </ul>   |
| Validation Field  | • In New York, the validation field is the customer's utility account number (with check digit, if included).  |
| Request<br>Transaction                                  | <ul> <li>An 814 Change transaction can accommodate more than one change request per commodity per account.</li> <li>Each change request pertaining to data transmitted at the account level must be sent in a separate LIN loop. Account level items include all segments listed on page 1 of this guide under "Heading" as well as those segments listed under "Detail" that are NOT part of the NM1 loop. For example, if changing from dual billing to utility consolidated billing, it would be necessary to request a change in bill presenter as well as bill calculator. Each change request in this example would be sent in a separate LIN loop.</li> <li>Customer name changes are sent in the N1*8R segment. Changes to the name for mailing address are sent in the N1*BT segment. Changes in the customer's telephone number should be sent in the N1 (Customer) Loop (N101=8R) if the information originated in that Loop.</li> <li>At the meter level, all change requests are grouped by meter in individual LIN loops. If a change is made to all meters on a multi-metered account, the data should be reported in a single NM1 loop and the literal "ALL" sent in the NM109 element. Changes related to a single meter, such as changes to both Utility Rate Class and Utility Load Profile Group code, are sent in one LIN Loop. Change requests for different meters are grouped in separate LIN loops. For example, if different Utility Rate Code should be reported in a separate LIN loop for each meter.</li> <li>E/M initiated Requests to change a customer's bill option (Bill Presenter and/or Bill Calculator segments) may not be processed for accounts that are not yet active with that E/M (i.e. enrollment is pending but not yet effective) at the data are constant.</li> </ul> |
| NM1 loop  | <ul><li>at the time the change Request was received.</li><li>Changes to meter information are communicated in the NM1 loop. Each</li></ul>   |
| structure   | NM1 loop may contain all changes for a particular meter, all changes<br>affecting the un-metered service on the account or a single change that<br>pertains to all metered or un-metered service points on the account. Each<br>NM1 loop is sent within a single LIN loop. If multiple changes are being<br>requested, the changes pertaining to each meter or un-metered service are<br>sent in separate NM1 loops. Each NM1 loop may be associated with only<br>one LIN loop.  |

| D  |  |
|--|--|
| Response                                 | • There must be one response LIN for each request LIN.   |
| Transaction                              | • Requests are accepted or rejected at the LIN level.  |
|  | • Responses may be created and sent at different times in different 814  |
|  | transactions, but the response for each request must be sent within 2 business   |
|  | days.  |
|  | The Change Response Transaction has been structured as follows:  |
|  | <ul> <li>The transaction containing an Accept Response may contain the</li> </ul>  |
|  | REF*TD(s) from the request transaction, at the option of the sender,   |
|  | but will not contain or echo back the segment that was changed.  |
|  | • The transaction containing a Reject Response will contain the rejection  |
|  | reason (REF*7G) and, may contain, at the option of the sender, the   |
|  | REF*TD(s) from the Request Transaction and/or the segments that  |
|  | were in error.   |
| Use of REF*TD                            | • The REF*TD segments are used to indicate to the receiver the type of change  |
| segment                                  | that is being requested. At least one REF*TD is required on a Request  |
|  | transaction. The REF*TD(s) may be echoed back on the Response  |
|  | transaction at the option of the sender.   |
|  | <ul> <li>REF*TD segments are located at the account (LIN) or meter (NM1) level</li> </ul>  |
|  | within the document.   |
|  |  |
|  | • Each data element that is being changed at the Account (LIN) level   |
|  | must be associated with a REF*TD segment in the LIN loop.  |
|  | <ul> <li>For a meter addition, a REF*TD code of NM1MA must be present, and<br/>all new data reported in a single NM1 loop.</li> </ul>                        |
|  | <ul> <li>For a meter exchange, a REF*TD code of NM1MX must be present,</li> </ul>  |
|  | and all data for the new meter is reported in a single NM1 loop (a   |
|  | REF*46 segment, containing the old meter number, is returned in the  |
|  | same NM1 loop).  |
|  | <ul> <li>For a meter removal (not an exchange), an NM1 segment and a</li> </ul>  |
|  | REF*TD segment with a code of NM1MR must be present. No other  |
|  | segments or elements are required.   |
|  | <ul> <li>For other changes at the meter level, an NM1 segment, the applicable</li> </ul>   |
|  | REF*TD segment, and the segment containing the change must be  |
|  |  |
| Conditional                              | present.   |
| Segments                                 | • A change in one data segment may necessitate changes in dependent data   |
| Segments                                 | segments. For example, when there is a change in billing option, some  |
|  | dependent data segments may also be subject to change. For example, when<br>abanging from dual billing to Utility rate ready consolidated billing in         |
|  | changing from dual billing to Utility rate ready consolidated billing, in<br>addition to the changes in Bill Presenter and Bill Calculator segments, it will |
|  | addition to the changes in Bill Presenter and Bill Calculator segments, it will be percessery to send other data segments (such as E/M Commodity Price)      |
|  | be necessary to send other data segments (such as E/M Commodity Price,<br>E/M Eived Charge, or E/M Pate Code, Percent Tay Exempt, Portion Tayad              |
|  | E/M Fixed Charge, or E/M Rate Code, Percent Tax Exempt, Portion Taxed  |
|  | Residential, Current Budget Billing Status, etc.) in order for the Utility to be able to calculate the customer's bill.                                      |
| Changes to Litility                      |  |
| Changes to Utility<br>Account Numbers or | • When updating or correcting existing Utility account numbers or meter  |
| Meter Numbers                            | numbers, the Change Request transaction must contain the new (or corrected)  |
| WIELEI MUIIIDEIS                         | and old number.  |
|  | • For the Utility account number, the new, or corrected, account number is sent  |
|  | in a REF*12 segment. The old account number is sent in a REF*45 segment.   |
|  | • For meter numbers, the new, or corrected, meter number is sent in an NM1   |
|  | segment. The old meter number is sent in a REF*46 segment.   |

#### NY 814 Change Request & Response - Draft Revisions for 8/22/2014 Meeting

| NY 814 Change Request & | k Response – Draft Revisions for 8/22/2014 Meeting   |
|-------------------------|--|
| Use of DTM*007          | • A DTM*007 segment (Effective Date of Change) is used to communicate the  |
| segment                 | effective date for a requested change in the following circumstances:  |
|                         | <ul> <li>Utility Request – required for non-DTM segments</li> </ul>  |
|                         | <ul> <li>Utility Response – may be sent to establish the effective date of an</li> </ul>   |
|                         | E/M requested change   |
|                         | <ul> <li>E/M Requests sent to communicate a change in mailing address</li> </ul>   |
|                         | (required for Single Retailer Model)   |
|                         | • E/M Requests to change the E/M Commodity Price (AMT*RJ), E/M   |
|                         | Fixed Charge (AMT*FW), or E/M Rate Code (REF*RB) when the  |
|                         | Utility is the Bill Presenter and Bill Calculator and has agreed to  |
|                         | process rate or price changes mid-cycle.   |
| Data Element            | • Data elements whose X12 attribute type is 'R' (for example AMT02   |
| Attributes              | elements) are treated as real numbers. Real numbers are assumed to be  |
|                         | positive numbers and a minus (-) sign must precede the amount when a   |
|                         | negative number is being sent. Real numbers do NOT provide for an implied decimal position; therefore a decimal point must be sent when    |
|                         | decimal precision is required. Note that in transmitting real numbers it is  |
|                         | acceptable, but not necessary, to transmit digits that have no significance  |
|                         | i.e. leading or trailing zeros.  |
| Single Retailer         | <ul> <li>There are some differences in the required segments for a Change Request</li> </ul>   |
| Model                   | and/or Response where the Single Retailer Model has been implemented for   |
|                         | Retail Access. These differences have been noted in the notes and gray box   |
|                         | text in the individual data segments in this Implementation Guide as well as   |
|                         | the corresponding data dictionary.   |
| Conditional Data        | • There are minor differences in the extent to which specific data elements are  |
| Segments                | supported by each Utility and/or whether they are applicable to both electric  |
|                         | and gas services. These differences have been noted, for the most part, in the   |
|                         | data dictionary associated with this implementation guide.   |
| Definitions             | • The term Utility is used in this document to refer to the local gas or electric  |
|                         | distribution company, i.e. the entity providing regulated bundled commodity  |
|                         | service. The term ESCO/Marketer (E/M) is used in this document to refer to either a gas or electric supplier.                              |
| Companion               | <ul> <li>All of the applicable business rules for New York are not necessarily</li> </ul>  |
| Documents               | • All of the applicable business fulles for New York are not necessarily documented in this implementation guide. Accordingly, the Account |
|                         | Change Business Process document and/or the 814 Change Data Dictionary   |
|                         | should be reviewed where further clarification is needed.  |
|                         | • In addition, further information on the Change data elements can be found  |
|                         | in the Implementation Guide for the 814 Enrollment Request & Response.   |
|                         |  |

#### NY 814 Change Request & Response – Draft Revisions for 8/22/2014 Meeting This section shows the X12 **Implementation Guideline Field Descriptions** Rules for this segment but the Usage and Max Use fields will also reflect NY **REF** Reference Identification (Utility Customer Account Numb Segment: rules. For Usage, "Optional (Must Use)" means that this **Position:** 050 Loop: segment is Optional for X12, Level: Heading but is required in NY. Optional (Must Use) Usage: "Optional (Dependent)" Max Use: means Optional for X12, but **Purpose:** To specify identifying information use is conditional in NY. The Syntax Notes: 1 At least one of REF02 or REF03 is required. grayboxes below should also 2 If either C04003 or C04004 is present, then the other is required. be reviewed for additional 3 If either C04005 or C04006 is present, then the other is required. NY Rules Semantic Notes: 1 REF04 contains data relating to the value cited in REF02. **Comments:** Notes: Required This section displays the NY Rules for implementation of this The Utility account number assigned to the customer is used for segment. validation and must be present on all transactions. REF~12~011231287654398 One or more examples. **Data Element Summary** Ref Data Element Name X12 Attributes Des. Mand. **REF01** 128 **Reference Identification Qualifier** M/ ID 2/3 **Billing Account** 12 REF02 contains the Utility-assigned acp number for the customer. (Characters each data element: on a bill, for example, should be removed M = MandatoryThis column documents differences between X12 O = Optionaland NY use for each data element: X = ConditionalMand. (Mandatory) - Required by X12 AN = Alphanumeric Must Use - Required by NY N# = Implied DecimalCond. (Conditional) ID = Identification Optional R = RealDT = Date (CCYYMMDD) 1/30 = Minimum 1, Maximum 30

## 814 Change (Account Maintenance)

## Functional Group ID=GE

#### Introduction:

This Draft Standard for Trial Use contains the format and establishes the data contents of the Account Maintenance Transaction Set (814) for use within the context of an Electronic Data Interchange (EDI) environment.

#### Notes:

This guideline is limited to defining various account maintenance information that may be exchanged between trading partners.

#### **Transaction Set Notes:**

The N1 loop is used to identify the parties to this transaction. 1.

- 2.
- The LIN loop is used to transmit account level data. The NM1 loop is used to transmit meter level data. 3.

|       |       |                | Used to identify the type of consumpti                                      | on mea       | asured by a    |
|       |       |                | meter and the interval between measure                                      | ements       | s or the       |
|       |       |                | type of consumption and reporting inte                                      | rval ap      | oplicable to   |
|       |       |                | the un-metered service delivery points                                      | on the       | account.       |
| Cond. | REF02 | 127            | Reference Identification  | Х            | AN 1/30        |
|       |       |                | The type and reporting interval for consumption measureme                   | ents are     | e described in |
|       |       |                | a five-character field. The first two characters are used to d              | escribe      | e the type of  |
|       |       |                | consumption. The last three characters describe the reporting               | ng inter     | rval.          |
|       |       |                |   |              |                |
|       |       |                | The literal "COMBO" is sent in the REF02 when the service delivery point(s) |              |                |
|       |       |                | identified in the NM109 is capable of providing different measurement types |              |                |
|       |       |                | and/or providing measurements for more than one time peri                   | od in a      | day. When      |
|       |       |                | the REF*MT segment contains "COMBO" OR usage is bei                         | ng mea       | sured in       |
|       |       |                | timed intervals (e.g. on peak), multiple REF*TU segments a                  | are use      | d to provide   |
|       |       |                | the measurement types and the daily time period(s) for each                 | measu        | arement the    |
|       |       |                | meter will provide, as well as the reporting intervals used for             | r billin     | ng.            |

When only one measurement type is applicable to the metered or un-metered service points identified in the NM109 element, the REF02 in this segment should contain one of the following codes as the first two characters to describe the type of consumption:

K1 Kilowatt Demand (kW) K2 Kilovolt Amperes Reactive Demand (kVAR) K3 Kilovolt Amperes Reactive Hour (kVARH) K4 Kilovolt Amperes (kVA) K5 Kilovolt Amperes Reactive (kVAR) KH Kilowatt Hour (kWh) HH Hundred Cubic Feet (CCF) TZ Thousand Cubic Feet (MCF) TD Therms

The following codes are used in the last three characters of the REF02 to document the interval capabilities for the metered or un-metered service delivery point(s) identified in the NM109. If that capability is not known then the interval that should be reported is the scheduled meter reading interval.

BIM Bi-Monthly DAY Daily MON Monthly QTR Quarterly TOU Time of Use

001-999 - Reporting Intervals (e.g. 015 indicates 15 minute intervals, 060 indicates 60 minute intervals, etc.)

# **EXAMPLES**

These examples are presented for illustrative purposes only. Although they are syntactically correct with respect to the published transaction standard for <u>TS814 Change Request & Response</u>, it should be understood that these examples reflect certain assumptions regarding optional and conditional data segments in this standard. Accordingly, these examples are not necessarily indicative of the manner in which a specific Utility or ESCO/MARKETER would map a specific transaction.
