NY 814 Enrollment Request & Response – Draft Revisions for 8/299/5/2014 Meeting

NY 814 Enrollment Reque	est & Response – Draft Revisions for 8/299/5/2014 Meeting
	Summary of Changes
7/20/01	Initial Release
August 7, 2002 Version 1.1	Version 1.1 Issued
V CISION 1.1	Added a REF*AJ segment (Utility Account Number for ESCO/Marketer) per
	June 21, 2002 order.
	The Field Descriptions Page was replaced with an updated version.
	The Front Matter Notes regarding 'Effective Date' were changed to reflect the business process rules regarding reinstatement adopted in an order issued on May 29, 2002. The list of documents provided under "Companion Documents' was also expanded to include the Reinstatement Implementation Guide and Business Process documents.  Modified the Front Matter Notes regarding 'Secondary Services' to remove an erroneous reference to a REF*TZ segment and to clarify the use of the NM1 detail loop for an accept response to a secondary request for consumption history/gas profile. An NM1 loop is required an in accept response to an enrollment request (primary request) but is never sent in an accept response to a secondary request for consumption history/gas profile.  Modified the segment notes for the following segments to distinguish between the use of each segment in the 814 transaction sent in response to an enrollment request versus the response to a secondary request for consumption history/gas profile data: N1*8R (Customer), N3/N4 (Service
	Address), N1*BT (Name for Mailing), N3/N4 (Mailing Address), REF*93 (Fee Approved/Fee Applied), REF*11 (E/M Customer Account Number), REF*45 (Previous Utility Account Number), REF*65 (Meter Cycle Code), REF*BF (Bill Cycle Code), REF*BLT (Bill Presenter), REF*PC (Bill Calculator), REF*NR (Current Budget Billing Status), REF*PGC (Partial Participation Portion), REF*SU (Customer on Life Support), REF*VI (Gas Pool ID), REF*GC (Gas Capacity Assignment/Obligation), REF*GS (Gas Supply Service Option), REF*ALC (Human Needs Indicator), REF*SPL (ISO Location Based Marginal Pricing Zones), REF*RP (Portion Taxed Residential), DTM*150 (Assigned Service Start Date), AMT*DP (Tax
	Exemption Percent), AMT*RJ (Commodity Price), AMT*KZ (Electric Capacity Assignment), and all segments contained in the NM1 Loop.  Modified the element notes for REF03 in the REF*65 (Meter Cycle Code)
	and REF*BF (Bill Cycle Code) segments to clarify that this element is required in an accept response to an enrollment request when the data sent in REF02 is insufficient to describe both when and how frequently meters are scheduled to be read and/or bills are scheduled to be rendered per the document issued October 2, 2001.
	Clarified use of the REF03 element in the REF*TU (Use Time of Day) segment and element notes per document issued October 2, 2001.

NY 814 Enrollment Request & Response – Draft Revisions for 8/299/5/2014 Meeting

NY 814 Enrollment Requi	est & Response – Draft Revisions for 8/299/5/2014 Meeting
	Summary of Changes (Continued)
November 26, 2002 Version 1.2	Added a new AMT segment (AMT*FW) to permit ESCO/Marketers to send fixed charge information as well as rates or rate codes when the bill option requested is Utility Rate Ready consolidated billing.
March 17, 2004 Version 1.3	<ul> <li>Added code values to the 02 element in the REF*TU segment to enable Orange &amp; Rockland Utilities, Inc. and Consolidated Edison of New York, Inc. (or other utilities at their option) to describe in more detail in an Accept Response transaction, the type of electric usage data ESCOs can expect to receive in either an 867HU or 867MU transaction.</li> <li>Added AMT*9M and AMT*9N to enable ESCOs to transmit customer's tax rate information when the bill option requested is Utility Rate Ready consolidated billing and the Utility requires ESCOs to provide this data in an Enrollment transaction. When different tax rates are applicable to portions of the customer's service i.e. when a REF*RP segment is present in a Request transaction, it will be necessary to send both the 9M (residential tax rate applicable to a portion of the service) and the 9N segment (commercial tax rate applicable).</li> <li>Notes regarding the attributes of "R" elements were added to the Front</li> </ul>
	Matter notes.
Version 2.0 May 17, 2006	<ul> <li>The "All meters per Account" section of the Front Matter Notes is revised to indicate that an ESCO/Marketer may separately enroll the unmetered electric service for accounts in Orange &amp; Rockland's service territory where both metered and un-metered electric service are present on the account. To separately enroll the un-metered service the REF03 element must be present in the REF*12 (Utility Account Number) segment.</li> <li>The "Cross Referencing Request and Response Transactions" section of the Front Matter Notes is revised to clarify the use of various segments/elements in an Enrollment Accept Response transaction when this transaction is not preceded by an Enrollment Request transaction sent by the E/M.</li> <li>The "Fees" section of the Front Matter Notes is deleted. Prior to November 21, 2003 fees could be assessed for requests for history data under specific conditions. To accommodate fees, a REF*93 (Fee Approved/Fee Applied) segment was required to be sent in the LIN loop containing requests for historic usage (HU) or a gas profile (GP) to indicate whether the E/M was willing to pay a fee for the data if one was applicable. Under the current Uniform Business Practices fees may no longer be assessed for satisfying EDI requests for consumption history.</li> <li>References to Niagara Mohawk or NMPC throughout the document</li> </ul>
	References to Magara Monawk of NMPC throughout the document were revised to refer to National Grid.

NY 814 Enrollment Request & Response – Draft Revisions for 8/299/5/2014 Meeting **Summary of Changes (Continued)** The element notes for BGN06 in the BGN Segment are revised to indicate that this element may be populated with the text 'MANUAL' in an Enrollment Accept Response transaction when there is no corresponding Request transaction, for example, when a customer participating in an ESCO Referral Program is enrolled by the utility and the Response is being sent to provide the assigned ESCO with the customer's account details. An additional example was also added to the BGN segment notes. An N106 element is added to the N1\*8R (Customer) segment to for use by utilities in Enrollment Accept Response transactions to identify the enrollment as an ESCO Referral Program enrollment. A PER segment is added to the N1 (Customer) Loop to enable utilities that enroll customer's participating in ESCO Referral Programs with an ESCO to transmit the customer's telephone number in an Accept Response transaction. The FNA code (Fee Not Authorized) is deleted from the list of possible reject reason codes in the REF\*7G segment (Reject Response Reasons) and the REF\*93 (Fee Approved/Fee Applied) segment is deleted from the standard. Fees are no longer being assessed for consumption history provided via EDI. A REF03 element is added to the REF\*12 segment (Utility Account Number) for use on Enrollment Requests sent to, or received from, Orange & Rockland Utilities when the transaction pertains to enrolling the un-metered portion of a customer's electric service when both metered and un-metered service are present on the same account. The segment notes for the REF\*BLT (Bill Presenter) and REF\*PC (Bill Calculator) were revised to clarify the content of these segments for the Single Retailer Model in National Fuel Gas' service territory and to omit references to RG&E since Single Retailer is no longer offered in that service territory. The notes for the REF\*NR (Current Budget Billing Status) segment is also revised to omit reference to Rochester Gas & Electric's use of the Single Retailer model. A REF\*LF (E/M Late Fees) segment is added at the account level to enable E/Ms to communicate in Enrollment Request transactions sent to National Fuel Gas whether the utility should calculate and assess late fees on E/M charges for the account being enrolled. This segment pertains to the Utility Rate Ready bill option only. The notes for the REF\*SU (Customer on Life Support) segment is revised to omit reference to Rochester Gas & Electric's use of the Single Retailer model. The REF\*ALC segment (Human Needs Customer) notes are revised to

enrollment requests for non-residential customers.

indicate that this segment is required by National Grid only on gas

NY 814 Enrollment Request & Response – Draft Revisions for 8/299/5/2014 Meeting						
		<b>Summary of Changes (Continued)</b>				
		• An AMT*BD (E/M Budget Plan Balance) and an AMT*B5 (E/M Budget Plan Installment Amount) segments are added for use in Enrollment Request transactions sent to National Fuel Gas to communicate a customer's budget plan installment and pre-existing budget plan balance when the customer's bill option is Utility Rate Ready billing and a REF*NR segment is present in the Request transaction.				
		• The AMT*RJ (Commodity Price), AMT*FW (E/M Fixed Charge) and the REF*RB segment notes are revised to accommodate Enrollment Accept Response transactions associated with ESCO Referral Program enrollments initiated by the utility. The AMT*RJ and AMT*FW segments may contain zeros or dummy codes in Response transactions. The usage attribute for the REF*RB (ESCO Rate Code) segment in an				

#### Version 2.1 October 23, 2014

Adding these new segments from Case - 12-M-0476.

enrollments.

- \_REF\*IJ (Industrial Classification Code),
- o REF\*TX (Utility Tax Exempt Status),
- o REF\*TDT (Account Settlement Indicator),
- o REF\*YP (NYPA/Recharge New York),
- o REF\*SG (Utility Discount)
- Utility specific notes are generalized, as appropriate, and designated for relocation to/reference within Utility Maintained EDI Guides, as necessary.

Enrollment Accept Response transaction is changed from 'Not Used' to

Enrollment Accept Response transaction for ESCO Referral Program

'Conditional' so that National Grid may send this segment in an

- Removed references to ESCO Referral Program
- Replaced references to Marketer and E/M with ESCO.

NY 814 Enrollment Request & Response – Draft Revisions for 8/299/5/2014 Meeting

N 1 814 Ellioninent Kequi	esi	& Response – Draft Revisions for 8/299/5/2014 Meeting
		Notes pertaining to the use of this document
Purpose		This 814 Enrollment Transaction Set will be used to enroll or switch a customer, and to request secondary services coincident with that customers' enrollment. These standards are based on the ASC X12 Ver/Rel 004010 standard and related UIG guidelines.
One account per 814		• Each transaction may contain only one account for one commodity (i.e. electric, gas, etc.). If a customer takes both electric and gas bundled service from the utility under a single account number, and the ESCO supplies both electric and gas, two 814 enrollment requests must be submitted – one for the switch of electric service and another for the switch of gas service.
All meters per account		<ul> <li>Except where a utility supports separate enrollment of the un-metered electric service for accounts, when a customer enrolls with an ESCO for their electric service, all electric meters (and/or un-metered electric service) on the customer's account will be enrolled with that supplier. Similarly, an enrollment with the same (or a different) supplier for gas service, will result in the enrollment of all gas meters with that supplier.</li> <li>Where a utility supports separate enrollment of the un-metered electric service for accounts, when both metered and un-metered electric service is present on an account, an ESCO may separately enroll (or drop) the un-metered service on that account by transmitting the REF03 element in the REF*12 (Utility Account Number) segment.</li> </ul>
Multiple requests per commodity per account		• This 814 Transaction Set can accommodate more than one action request per commodity per account. Each request should be in a separate LIN loop but the request for enrollment (LIN05 = CE) is considered the primary request and should be placed first in the transaction. Refer to the LIN segment in this document for a better understanding of primary and secondary services. The secondary requests reflected in this implementation guide are requests for actual history data for the customer being enrolled or a request for a gas profile for a customer being enrolled for gas service.

]	NY 814 Enrollment Request & Response – Draft Revisions for <del>8/299/5</del> /2014 Meeting					
Cross referencing • In most instances, the id sent in the BGN02 element in the BGN						
	Request and		in a request must be returned in the BGN06 element of the BGN			
	Response		segment sent in a Response transaction. There must be one response			
	transactions		LIN for each request LIN sent. It is possible, for example, to accept an			
			enrollment request (LIN05 = CE) but reject the secondary request for			
			history data (LIN05 = $HU$ ). The response to each LIN loop on the			
			request must be uniquely identified on the response with the same			
			identification sent in the request LIN01. Responses may be created and			
			sent at different times in different 814 transactions, but all LINs must be			
			responded to within the time limits set by the Commission in the			
			Uniform Business Practices.			
			<ul> <li>In Enrollment Accept Response transactions for which there is no</li> </ul>			
		corresponding Enrollment Request transaction, the BGN06 element in				
			the BGN segment will be populated with the word "MANUAL" in lieu			
			of the BGN02 id from a Request transaction.			
	Validation Fields		<ul> <li>Validation field is the customer's utility account number (with check</li> </ul>			
			digit, if included).			

#### Effective Date

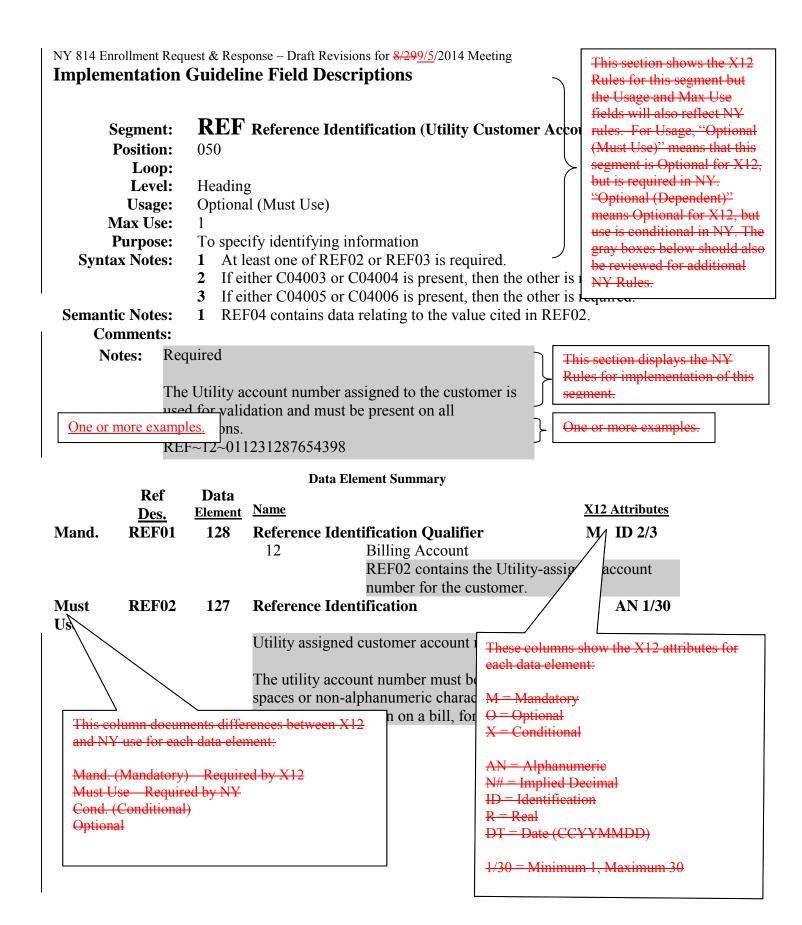

- Enrollment Requests. The effective enrollment date for an account is determined by the Utility and will be returned in an Enrollment Accept Response transaction. Customers will be enrolled with a supplier coincident with the date of the customer's next regularly scheduled meter read date or the first of the month for gas, provided that the suppliers request has been received and processed by the Utility at least 15 calendar days in advance of this date and the customer has not rescinded the pending enrollment.
- Valid enrollment requests that do not comply with the 15 day requirement may not be rejected; the customer may be enrolled on the next succeeding meter read date for that customer or the first of following month for gas (if a special read has NOT been requested) provided that the customer has not rescinded the pending enrollment request. The *Reinstatement Business Process* document should also be reviewed for a description of factors that may affect the determination of the effective date for an enrollment.
- A customer may be enrolled with an ESCO on an off cycle date but these requests are not currently being processed via EDI. Arrangements for an off cycle enrollment date should be made directly with the Utility and will only be granted subject to the requirements of that Utility's tariffs.

#### Secondary Services

- The secondary requests reflected in this implementation guide are a request for history data (LIN05 = HU) or a request for a gas profile (LIN05=GP).
- When the enrollment request (LIN = CE) is rejected, all secondary services requested coincident with that enrollment will also be rejected.
- LIN05 = GP is a secondary service request for a gas profile for the customer being enrolled. A gas profile is a weather-normalized forecast for a twelve-month period for the customer being enrolled. Gas profiles are not supported by all Utilities (see Conditional Data Segments below). When this request is accepted, the ESCO will receive an 814 Accept Response transaction and the gas profile data will be provided in an 867HU transaction.
- LIN05 = HU is a secondary service request for history data for the customer being enrolled. When this request is accepted, the ESCO will receive an 814 'accept' response transaction and summarized data on usage for the most recent 12 month period (or the life of the account, if shorter) for the customer being enrolled in an 867 HU transaction.
- The REF\*MT (Measurement Type and Reporting Interval) and REF\*TU (Use Time of Day) segments in the NM1 loop may be used to describe the type(s) of usage a meter is capable of measuring. An NM1 loop will only be returned in an 814 response transaction accepting the enrollment request.
- The REF\*TU segment would not be used in a response to a gas enrollment request and would only be sent in a response to an electric enrollment request when either the REF03 element in the REF\*MT

NY 814 Enrollment Request & Response – Draft Revisions for 8/299/5/2014 Meeting					
Single Retailer	<ul> <li>segment is "COMBO" or electric usage is being measured for multiple time periods in a day on the account being enrolled.</li> <li>Although data sent in a REF*MT segment may indicate that a meter is capable of measuring usage in intervals, such as 15 or 30 minutes, no interval data will be returned in an 867HU transaction in response to an HU request. Requests for interval data on customer accounts must be sent in a separate 814-request transaction and not as a secondary request on an enrollment transaction. Arrangements for receipt of interval data, and usage data in excess of 12 months, must be made with the applicable utility since this data may not be returned on an 867 transaction.</li> <li>A request for consumption history that is not coincident with a request for enrollment is addressed in another implementation guide (see TS 814 Consumption History Request &amp; Response).</li> <li>There are some significant differences in the required segments for an</li> </ul>				
Model	enrollment request (and related secondary services) and responses where the Single Retailer Model has been implemented for retail access.  These differences have been noted in the notes and gray box text in the individual data segments in this implementation guide.				
Data Element Attributes	• Data elements whose X12 attribute type is 'R' (see the AMT segments for examples) are treated as real numbers. Real numbers are assumed to be positive numbers and a minus (-) sign must precede the amount when a negative number is being sent. Real numbers do NOT provide for an implied decimal position; therefore a decimal point must be sent when decimal precision is required. Note that in transmitting real numbers it is acceptable, but not necessary, to transmit digits that have no significance i.e. leading or trailing zeros.				
Conditional Data Segments	<ul> <li>There are minor differences in the extent to which specific data elements are supported by each Utility and/or whether they are applicable to both electric and gas services. These differences have been noted, for the most part, in the data dictionary associated with this implementation guide.</li> <li>Where a utility provides gas profile data, if the LIN05 = GP and the Utility does not support gas profiles, the Utility will return the default history data, for the account being enrolled, on an 867 (i.e. up to 12 months of usage, or the life of the account).</li> </ul>				
Definitions	<ul> <li>The term Utility or LDC (Local Distribution Company) is used in this document to refer to the local gas or electric distribution company, i.e. the entity providing regulated bundled commodity service. The term ESCO is used in this document to refer to either a gas or electric supplier. The principal parties involved in this Transaction Set 814 implementation guide are:         <ul> <li>The end-use customer (Code 8R)</li> <li>The Utility (LDC) (Code 8S)</li> <li>The Supplier (ESCO or ESCO) (Code SJ).</li> </ul> </li> </ul>				
Rejection vs. Acceptance with Status Reason code	• A warning/informational code is different than a Rejection Reason code. The warning code is used to give additional information to the receiving party (an FYI). If an 814 Request does not contain a segment required by the recipient Utility and/or a segment contains incorrect				

NY 814 Enrollment Requ	NY 814 Enrollment Request & Response – Draft Revisions for 8/299/5/2014 Meeting						
	data, some Utilities will reject the transaction while others may accept the transaction and send a warning in their 814 response. Refer to the data dictionary associated with this implementation guide for further clarification.						
Companion	All of the applicable business rules for New York are not necessarily

### 814 Enrollment Request and Response

Functional Group ID=GE

#### **Introduction:**

This standard is for Trial Use contains the format and establishes the data contents of the General Request, Response or Confirmation Transaction Set (814) for use within the context of an Electronic Data Interchange (EDI) environment. This standard can be used to request actions to be performed, to respond to a request for actions to be performed or to confirm information related to actions performed.

#### **Notes:**

This guideline is limited to defining the required and optional information needed to satisfy a request for enrollment, a response accepting the enrollment request, a response rejecting the enrollment request, and the requests and responses for secondary services that may be requested in conjunction with the enrollment request.

Semantic Notes:

1 LIN01 is the line item identification

Notes: Required Response: Required

Request only one action event per LIN Loop. The LIN01 contains a unique identifier for the action event. The LIN03 specifies the product (electric or gas) and the LIN05 specifies the type of service request.

The enrollment request (LIN05=CE) is considered the primary service request when present. "Secondary" action event(s) must be requested in separate LIN loops.

CE Customer Enrollment

Request to enroll this customer for Energy Services. A Request for enrollment is considered the primary

request when present.

GP Gas Profile

Request a 12 month forecasted gas delivery profile.

Valid only when LIN03=GAS.

Gas Profiles are not supported by all utilities. If a Gas Profile request is sent to a Utility that does not support gas profiles, the Utility will return Historic Usage, if available, in the 867 sent in response to the Gas Profile request. When supported, a GP request may still be rejected if there is insufficient data to develop a gas

profile for that customer.

HU Historic Usage

Request for Usage History.

GAS note: Some utilities support a Gas Profile in lieu of actual history and will return a Gas Profile, if sufficient data exists, in the 867 sent in response to the request for Historic Usage.

PC **Production Code** 

Indicates who will calculate billed charges.

**Must Use** REF02 127 **Reference Identification** 

 $\mathbf{X}$ AN 1/30

Each Party Calculates its own charges. **DUAL** 

DUAL applies when:

Each party presents their own bill (Used when

REF\*BLT segment contains DUAL) or

the ESCO is a Single Retailer (Used when REF\*BLT

segment contains ESP), or

the BILL READY method is used for consolidated

billing, e.g.

Utility sends an 810 transaction to the ESCO with bill ready utility charges fully calculated (Used when

REF~BLT segment contains ESP)

ESCO sends an 810 transaction to the Utility with bill ready ESCO charges fully calculated (Used when

REF~BLT segment contains LDC).

LDC The Utility Calculates the ESCO Charges

> RATE READY: The ESCO supplies a rate code or price to the Utility and the Utility calculates the ESCO's

portion of the consolidated bill.

				"UNMETERED" or "ALL".		
Must Use	NM109	67	<b>Identification Code</b>	;	$\mathbf{X}$	AN 2/80

When NM108 = 32, NM109 must contain a meter number When NM108 = 93, NM109 will contain EITHER the literal "UNMETERED" for all un-metered service on the account OR the literal "ALL" for all service delivery points on the account.

All active meters and/or un-metered services on an account will be enrolled and will be included on an Accept Response to an Enrollment request. It may be necessary to send multiple NM1 segments on an Accept Response to describe each metered service delivery point and any un-metered service points on the account being enrolled.

Enrollment Accept Responses: Required
Other Requests/Responses: Not Used.

This segment is sent to describe the measurement types and reporting intervals associated with the service delivery point(s) identified in the NM109 segment. It may be sent on an Enrollment Request when the bill option is Utility Rate Ready consolidated billing and the ESCO wants to associate different rate codes (see REF~RB) with different measurement types and/or reporting intervals. When an Enrollment Request is being accepted, this segment is used by the Utility to describe the type of consumption and reporting interval for each service delivery point(s) identified in the NM109 segment for the account being enrolled.

REF~MT~KHMON REF~MT~TDMON REF~MT~COMBO REF~MT~KH030 REF~MT~KHTOU

#### **Data Element Summary**

	Ref.	Data		
	Des.	<b>Element</b>	<u>Name</u>	<u>Attributes</u>
Mand.	REF01	128	Reference Identification Qualifier	M ID 2/3

MT Meter Ticket Number

Meter type.

Used to identify the type of consumption measured by a meter and the interval between measurements or the type of consumption and reporting interval applicable to the un-metered service delivery points on the account.

X AN 1/30

The type and reporting interval for consumption measurements are described in a five-character field. The first two characters are used to describe the type of consumption. The last three characters describe the reporting interval.

The literal "COMBO" is sent in the REF02 element of this segment when the service delivery point(s) identified in the NM109 are capable of providing different measurement types AND/OR measurements for more than one time period in a day.

When the REF~MT contains "COMBO" multiple REF~TU segments may be necessary to describe the types of consumption being measured for the service delivery point(s) identified in the NM109 element. A REF~TU segment must also be sent, even when there is only one type of consumption being measured, when multiple time periods are being measured during a day.

When only one measurement type is applicable to the metered or un-metered service points identified in the NM1 segment, the REF02 in this segment should contain one of the following codes as the first two characters to describe the type of consumption:

K1 Kilowatt Demand (kW)

K2 Kilovolt Amperes Reactive Demand (kVAR)

K3 Kilovolt Amperes Reactive Hour (kVARH)

K4 Kilovolt Amperes (kVA)

K5 Kilovolt Amperes Reactive (kVAR)

KH Kilowatt Hour (kWh)

HH Hundred Cubic Feet (CCF)

TZ Thousand Cubic Feet (MCF)

TD Therms

The following codes are sent as the last three characters of the REF02 element to document the interval capabilities of the metered or un-metered service delivery point(s) identified in the NM1 segment. If that capability is not known then the interval that should be reported is the scheduled meter reading interval.

BIM Bi-Monthly DAY Daily MON Monthly QTR Quarterly TOU Time of Use

001-999 - Reporting Intervals. (015 indicates 15 minute intervals, 060 indicates 60 minute intervals, etc.)

Segment:  $\operatorname{REF}$  Reference Identification (Use Time of Day)

**Position:** 130

**Loop:** NM1 Optional (Dependent)

Level: Detail

**Usage:** Optional (Dependent)

Max Use: >1

**Purpose:** To specify identifying information

**Syntax Notes:** 1 At least one of REF02 or REF03 is required.

2 If either C04003 or C04004 is present, then the other is required.

3 If either C04005 or C04006 is present, then the other is required.

**Semantic Notes:** 1 REF04 contains data relating to the value cited in REF02.

Notes: Enrollment Accept Responses: Conditional Other Requests/Responses: Not Used

This segment is NOT applicable to gas enrollments but may be applicable to an electric enrollment when usage for the electric account being enrolled is measured for multiple

consumption types and/or multiple periods in a day.

A REF~TU segment must be sent to describe the types of consumption being measured for the service delivery point(s) identified in the NM109 element, when the REF~MT segment contains "COMBO" OR when multiple consumption periods are being measured during a day (e.g. on peak, off peak, etc.).

#### **EXAMPLES**

These examples are presented for illustrative purposes only. Although they are syntactically correct with respect to the published transaction standard for <u>TS814 Enrollment Request & Response</u>, it should be understood that these examples reflect certain assumptions regarding optional and conditional data segments in this standard. Accordingly, these examples are not necessarily indicative of the manner in which a specific Utility or ESCO would map a specific transaction.
