

ORANGE AND ROCKLAND UTILITIES, INC.

GAS FORECASTING PANEL  
UPDATE/REBUTTAL TESTIMONY - GAS

1 Q. Please state your names.

2 A. Patrick F. Hourihane and Douglas B. Elgort.

3 Q. Have you previously submitted testimony in this  
4 proceeding?

5 A. Yes. We previously submitted direct testimony on  
6 behalf of Orange and Rockland Utilities, Inc. ("Orange  
7 and Rockland," "O&R" or "Company") as the Gas  
8 Forecasting Panel ("Panel").

9 Q. What is the purpose of the Panel's update and rebuttal  
10 testimony?

11 A. First, we are updating our direct testimony to reflect  
12 updated delivery volumes and revenue forecast to  
13 incorporate changes to the large commercial customer  
14 volumes as discussed by the Staff Gas Rates Panel's  
15 ("SGRP") testimony (p.12). The Panel will also update  
16 how the Company plans to determine average weather  
17 conditions based on 30-years of weather data to  
18 forecast sales, as proposed in the testimony of Staff  
19 Gas Program & Supply Panel ("SGPSP"), instead of using  
20 ten years of weather data. The Panel will also rebut  
21 the following intervenor proposals:

ORANGE AND ROCKLAND UTILITIES, INC.

GAS FORECASTING PANEL  
UPDATE/REBUTTAL TESTIMONY - GAS

- 1     • SGRP's testimony regarding its firm sales and  
2       resultant delivery revenue forecast;
- 3     • SGRP's testimony regarding potential residential  
4       growth caused by proposed community development;
- 5     • Staff witness McKenzie Yezzi's application of an  
6       adjustment to residential volumes for either  
7       employment or for personal income; and
- 8     • PACE Energy and Climate Center Witness Rabago's  
9       criticism of the Company's inflating usage, not  
10      including climate warming.

11                                   **UPDATE**

12   Q.   Please the Company's update regarding the adjustment  
13       to large commercial customer delivery volume?

14   A.   The Company noted in its response to Staff  
15       Interrogatory DPS-295 (included in Staff Exhibit  
16       \_\_\_(SGRP-1)), "that in the course of preparing the  
17       calculations to confirm the usage" of its large  
18       commercial forecast that "the Company identified  
19       certain discrepancies that result in a small overall  
20       difference in the forecasted anticipated load. The  
21       primary reasons for these discrepancies include

ORANGE AND ROCKLAND UTILITIES, INC.

GAS FORECASTING PANEL  
UPDATE/REBUTTAL TESTIMONY - GAS

1 misreporting CFH instead of MCF and using a wrong rate  
2 for duty cycle when calculating the usage of backup  
3 generators. The total change in anticipated load from  
4 what originally was filed in the rate case is 8,898  
5 MCF". This update will lower the Company's original  
6 forecast.

7 Q. Please explain Staff's recommendation regarding the  
8 determination of average weather conditions.

9 A. The SGPSP (p. 31) states "we recommend that a thirty  
10 year average be used to normalize the gas sales  
11 forecast". The SGPSP (p. 32) offers the following  
12 rationale for this recommendation: "Both the National  
13 Oceanic and Atmospheric Administration and the World  
14 Meteorological Organization use a 30-year time frame  
15 to define normal weather." The SGPSP failed to note  
16 that the reason the Company is currently using a 10-  
17 year normal is in response to a Staff recommendation  
18 in a prior rate case. Although the Company agrees to  
19 return to a 30-year normal, the Company urges Staff to  
20 maintain a consistent position regarding the weather

ORANGE AND ROCKLAND UTILITIES, INC.

GAS FORECASTING PANEL  
UPDATE/REBUTTAL TESTIMONY - GAS

1 normal it recommends the Company use in future rate  
2 filings.

3 Q. Please explain the results of Staff's recommendation  
4 regarding the determination of using a 30-year average  
5 weather conditions.

6 A. Although the overall number of heating degree days  
7 ("HDDs") increased by using a 30-year normal, the  
8 split of HDDs used to normalize delivery volumes were  
9 lower for the core period (December - April) by 30  
10 HDDs and greater by 46 HDDs during the shoulder period  
11 (which include the months of September, October,  
12 November, May, and June). This resulted in an overall  
13 decrease in delivery volumes of 3,000 MCF compared to  
14 the Company's original forecast.

15 Q. Please explain Exhibit\_\_GFP-4 Schedules 1 through 3.

16 A. Exhibit\_\_GFP-4 Schedules 1 through 3 are similar to  
17 the Company's original Exhibit\_\_GFP-1 Schedules 1  
18 through 3 that list the 12 month ending volumes and  
19 the various adjustments to produce firm delivery  
20 volumes for the Rate Year, the bridging period, and  
21 RY2 and RY3.

ORANGE AND ROCKLAND UTILITIES, INC.

GAS FORECASTING PANEL  
UPDATE/REBUTTAL TESTIMONY - GAS

1 Q. What is the result of the updates to the Company's  
2 original firm delivery volume forecast?

3 A. The updated total firm delivery volumes are 20,959,063  
4 MCF a decrease of 11,898 MCF for the Rate Year. The  
5 firm delivery volume forecast for RY2 and RY3 are  
6 21,153,594 MCF and 21,227,133 MCF, respectively.  
7 Exhibit\_\_GFP-4 Schedule 4 is a comparison of the  
8 Company's firm delivery volumes.

9 Q. What is the revenue result of these updates to the  
10 Company's original forecast?

11 A. Exhibit\_\_GFP-4 Schedule 4 lists the total revenue  
12 associated with the change in the firm delivery  
13 volumes result in a decrease of \$50,000 for the Rate  
14 Year, a decrease of \$59,000 for RY 2, and \$48,000 for  
15 RY3. Exhibit\_\_GFP-5 is the price out of the Company's  
16 updated firm delivery volumes. Exhibit\_\_GFP-6 is a  
17 comparison of the Company's updated revenues and  
18 Staff's revenues from the May 25<sup>th</sup> filing. The result  
19 of the comparison is that the Company's update is an  
20 overall decrease \$86,000.

21

ORANGE AND ROCKLAND UTILITIES, INC.

GAS FORECASTING PANEL  
UPDATE/REBUTTAL TESTIMONY - GAS

1 Q. Please describe Staff's concerns related to the  
2 Company's projected customer growth.

3 A. The SGRP (pp. 9-11) does not propose any adjustments  
4 to the Company's forecast of customer growth for the  
5 Rate Year, but Staff does recommend certain large  
6 scale residential projects be added as incremental to  
7 historic growth beyond the Rate Year.

8 Q. Do you agree with Staff's concern that "historic  
9 growth over such a long period, nearly seventeen  
10 years, would not predict such instant, large scale  
11 residential developments in the next few years"?

12 A. No. The Company consistently has had large scale  
13 residential developments over the past seventeen years  
14 that were reflected in the historical growth.

15 Q. Are there any other reasons to question whether the  
16 addition of large developments in the Company's  
17 service territory are wholly incremental?

18 A. Yes. The two larger scale residential developments in  
19 the Company's service territory described in Company  
20 interrogatory responses included in Exhibit \_\_ (SGRP-  
21 1) have the potential to bring new load to the service

ORANGE AND ROCKLAND UTILITIES, INC.

GAS FORECASTING PANEL  
UPDATE/REBUTTAL TESTIMONY - GAS

1           territory. However, some of the movement to these  
2           residential developments would be from customers  
3           currently residing in the Company's service territory  
4           with existing residential accounts and their movement  
5           will cause vacancies and replacement of existing  
6           residential stock.

7    Q.    Please describe Staff witness Yezzi's proposed  
8           adjustments.

9    A.    Staff witness Yezzi makes price elasticity and  
10           employment adjustments, which result in adjustments to  
11           the Company's delivery volume forecasts.

12   Q.    Do you agree with the changes Staff Witness Yezzi  
13           provided SGRP to adjust the Company's forecast?

14   A.    No. See the Company's Electric Forecasting Panel  
15           Rebuttal testimony regarding Staff witness Yezzi's  
16           model specification where the product of employment  
17           and billing days is used as a single variable. As  
18           explained by the Company's Electric Forecasting Panel,  
19           there is no basis in economic theory to support Staff  
20           witness Yezzi's assertion that a one percent change in  
21           employment has the same effect as a one percent change

ORANGE AND ROCKLAND UTILITIES, INC.

GAS FORECASTING PANEL  
UPDATE/REBUTTAL TESTIMONY - GAS

1 in the number of billing days, *i.e.*, that their  
2 coefficients are equal. The Company's Electric  
3 Forecast Panel Rebuttal testimony discusses the  
4 problem with Staff witness Yezzi's model specification  
5 for price elasticity that was also used in the gas SC  
6 1 Commercial Heating Model.

7 Q. Do you agree with the Staff Witness Yezzi statement  
8 (p. 13) "the Company should rely on income when  
9 modelling the effect of economic growth on residential  
10 volumes instead of employment?"

11 A. No. The Company was able to produce an econometric  
12 model using employment as an econometric variable. In  
13 the Company's model that included weather, price and  
14 employment as variables, all the variables are  
15 statistically significant. Staff Witness Yezzi in  
16 her testimony regarding replacing employment with  
17 income as the economic variable "found the model to be  
18 very unstable" and did not submit a residential  
19 heating model.

20 Q. Do you agree with the PACE Energy and Climate Center  
21 Witness Rabago statement (p. 37) "that the Company

ORANGE AND ROCKLAND UTILITIES, INC.

GAS FORECASTING PANEL  
UPDATE/REBUTTAL TESTIMONY - GAS

1 develops its gas forecast using a weather  
2 normalization adjustment to inflate its forecast of  
3 gas sales”?

4 A. No. The Company uses a weather normal that  
5 establishes what delivery volumes would have been if  
6 weather, which has a large influence on delivered  
7 volumes, were stable (normal). Witness Rabago in his  
8 testimony does not offer an alternate means to  
9 accomplish this.

10 Q. Do you agree with the PACE Energy and Climate Center  
11 Witness Rabago statement (p. 38) “that there is no  
12 evidence the Company evaluated for accelerated climate  
13 warming?”

14 A. No. As noted earlier in this testimony with SGPSP  
15 both the National Oceanic and Atmospheric  
16 Administration and the World Meteorological  
17 Organization use a 30-year time frame to define normal  
18 weather. It should be noted that National Oceanic and  
19 Atmospheric Administration updates the normal once a  
20 decade, with the next update anticipated in 2020. The  
21 Company updated the normal for this filing for the

ORANGE AND ROCKLAND UTILITIES, INC.

GAS FORECASTING PANEL  
UPDATE/REBUTTAL TESTIMONY - GAS

1 year ending 2016 as this was the last full year  
2 available when producing the gas delivery volumes for  
3 the Rate Case. By updating the normal through year  
4 ending 2016, the Company's normal includes six of the  
5 more recent years reflecting any climate warming than  
6 just using a normal through the year ending 2010. As  
7 far as projecting continued climate warming, the  
8 Company is not aware of any acceptable methodology to  
9 project future adjustments to produce a normal weather  
10 that can be used in a rate filing.

11 Q. Does this conclude your rebuttal and update testimony?

12 A. Yes, it does.
