

Case No. 12-M-0476 et al.
EDI Business/Technical Working Groups
Workpaper – 867IU/HIU Development – Responses to questions from 1/13/2017 Meeting
1/27/2017

Responses from Eric Heaton:

Dan Stier (Direct Energy) suggested that an indicator on the 814 should provide a segment indicating that an account is Net Metered, as NYS does not differentiate between the consumption and generation channels. Eric Heaton will speak to Con Ed's IT Backend Department for the best method. An additional message in REF7G (814C) and REF1P (814E) could make the most sense.

- Con Ed has confirmed with their backend IT that the REF7G and REF1P is possible. We will look into how to handle the 814, as we have not reviewed the IG for this yet.

Con Ed has to confirm with our AMI team regarding MD90 meters and if the Interval Usage will be provided in the same manner as non-MD90 meters.

- The MV90 meters will not be immediately installed, but will be the same as the non-MV90 meters.

Con Ed has to confirm what the Intervals for Gas will be.

- Gas usage will be recorded hourly. Kim Wall mentioned in an earlier call that daily would be useful and hourly not necessary. EDI Vendors will check with their clients and have an answer for the next call.

With respect to a potential REFTDT modification, Con Ed needs to determine if accounts will be settled with the NYISO on an Interval basis once they switch to AMI. Con Ed may have to utilize the REFMT segment to indicate Interval Usage.

- The usage will be reported to the NYISO on an interval basis, if the account has AMI.
