Expected Sound Levels - Table 1 - Jan 21 2019 Update

Year-round residences, Non-participating Properties

Object ID	Type	Owner	Participation Status	Feet to Nearest WTG	Updated layout ESL	Original layout ESL	Change in ESL
-----------	------	-------	----------------------	---------------------	--------------------	---------------------	---------------

- 2 ESLs are calculated using CADNA, assuming all WTG sites have a WTG operating at a sound power level of 107 dBA.
- 3 Distance is calculated from the hub of the nearest WTG to a point 1.5m (4.9 ft) above the ground at the approximate center of the receptor.
- 4 Participating owners are those that have signed an agreement with which NTW has signed a wind agreement or in discussions regarding an agreement.

- 1 ESL = Expected Sound Level in dBA
- 2 ESLs are calculated using CADNA, assuming all WTG sites have a WTG operating at a sound power level of 107 dBA.
- 3 Distance is calculated from the hub of the nearest WTG to a point 1.5m (4.9 ft) above the ground at the approximate center of the receptor.
- 4 Participating owners are those that have signed an agreement with which NTW has signed a wind agreement or in discussions regarding an agreement.

- 1 ESL = Expected Sound Level in dBA
- 2 ESLs are calculated using CADNA, assuming all WTG sites have a WTG operating at a sound power level of 107 dBA.
- 3 Distance is calculated from the hub of the nearest WTG to a point 1.5m (4.9 ft) above the ground at the approximate center of the receptor.
- 4 Participating owners are those that have signed an agreement with which NTW has signed a wind agreement or in discussions regarding an agreement.
