Rebuttal Testimony of Elizabeth D. Arangio

1 **I. Introduction**

2 **Q. Please state your name and business address**

3 A. My name is Elizabeth D. Arangio. My business address is 40 Sylvan Road,
4 Waltham, Massachusetts 02451.

5

6 **Q. Are you the same Elizabeth D. Arangio who previously submitted direct**
7 **testimony in these proceedings?**

8 A. Yes, I am. The defined terms in my direct testimony have the same
9 definitions in my rebuttal testimony.

10

11 **II. Purpose of Testimony**

12 **Q. What is the purpose of your rebuttal testimony?**

13 A. The purpose of my rebuttal testimony is to respond to the gas supply-related
14 recommendations of the Department of Public Service Staff Gas Policy and
15 Supply Panel, Richard L. Levitan and Alexander J. Mattfolk on behalf of the
16 Long Island Power Authority (“LIPA”) (hereafter “the LIPA Panel”), Orlando
17 Magnani on behalf of Direct Energy Services LLC and Ronald G. Lukas on
18 behalf of Great Eastern Energy. Specifically, I will address the Gas Policy
19 and Supply Panel’s recommendations concerning (i) the balancing provisions
20 applicable to electric generation customers, (ii) the allocation of peaking
21 service costs to Temperature-Controlled (“TC”) customers, (iii) the penalties

Rebuttal Testimony of Elizabeth D. Arangio

1 associated with energy service companies' ("ESCOs") failure to deliver a
2 minimum of 98 percent of their daily requirement as determined by the
3 Companies, (iv) the development of a standard interconnection agreement
4 between the Companies and providers of renewable natural gas ("RNG"), and
5 (v) the terms under which the Companies purchase bundled peaking services
6 for system supply. I will also address the LIPA Panel's recommendation
7 concerning changes to KEDLI's SC-14 tariff, Mr. Magnani's claims
8 concerning (i) the allocation of interstate pipeline capacity between KEDNY
9 and KEDLI, and (ii) the allocation of the Companies' capacity on Tennessee
10 Gas Pipe Line LLC ("Tennessee") to ESCOs, and Mr. Lukas'
11 recommendations concerning (i) the allocation of interstate pipeline capacity
12 to ESCOs that increase their loads during the winter period, (ii) proposed
13 credits for ESCOs on days when the Companies utilize pipeline firm
14 transportation ("FT") capacity that is normally used to transport storage gas to
15 instead transport flowing supplies, (iii) the provision of credits arising from
16 certain asset management agreements to ESCOs, and (iv) certain gas supply
17 related issues associated with the Companies' service to TC customers.

18

19 **Q. Do other of the Companies' witnesses address certain of the issues that**
20 **are addressed in your rebuttal testimony?**

Rebuttal Testimony of Elizabeth D. Arangio

1 A. Yes. Many of the issues associated with the rates and services provided to
2 electric generation customers, TC customers and ESCOs are also addressed by
3 the Companies' Rate Design Panel and Shared Services Panel.

4

5 **Q. Do you sponsor any exhibits as part of your testimony?**

6 A. I am sponsoring Exhibit ____ (EDA-1R), which was prepared under my
7 direction and supervision and sets forth data concerning electric generator
8 imbalances between January 2011 through May 2013 and June 2013 through
9 December 2015.

10

11 **III. Electric Generation-Related Supply Issues**

12 **Q. The Gas Policy and Supply Panel recommends (at 54-55) that the**
13 **Companies should be required to perform and submit to the Commission**
14 **within 90 days of the Commission's order in these proceedings a detailed**
15 **analysis of the cost to serve electric generators and the contributions**
16 **received from generators. Do you agree with this recommendation?**

17 A. We do not object to preparing the analysis described by the Panel. However,
18 it will take longer than 90 days from the Commission's order in these
19 proceedings to perform a comprehensive analysis of the subjects identified by
20 the Panel. As discussed by the Companies' Rate Design Panel, we believe
21 the study should consider all of the costs imposed on the system by electric

Rebuttal Testimony of Elizabeth D. Arangio

1 generators, including balancing provisions and cash outs. I recommend that
2 the Companies be given time to confer with Staff to determine the precise
3 analysis that should be prepared and, once that determination is made, the
4 Companies should be given at least 150 days to perform the requested
5 analysis. Once the analysis is completed, the Commission should determine
6 the process to be followed to resolve issues raised by the analysis. I also
7 recommend that, with respect to the services presently provided to electric
8 generators, the status quo should be maintained until there has been a
9 complete review of the Companies' analysis and any issues raised by the
10 analysis are ultimately resolved.

11

12 **Q. The Gas Policy and Supply Panel recommends (at 57-58) that the**
13 **Companies' electric generation tariffs should be modified so that the**
14 **Companies balance electric generation accounts back to a 2 percent level**
15 **rather than to 0 percent. Do you agree with this recommendation?**

16 A. No, I do not. Before I explain the reasons why I disagree with the Panel's
17 recommendation, I will describe how the balancing provisions of the
18 Companies' electric generation tariffs operate.

19

20 The balancing provisions of the Companies' electric generation tariffs are
21 designed to encourage electric generation customers to balance their deliveries

Rebuttal Testimony of Elizabeth D. Arangio

1 of gas to, and takes of gas from, the Companies' distribution systems as
2 closely as possible. The reason for this is, as recognized by the Gas Policy
3 and Supply Panel, that electric generators can create significant risk for the
4 Companies' distribution systems if they take more gas from the system than
5 they deliver to it. While underdeliveries of gas by electric generators
6 represent the most serious risk to the systems, overdeliveries are also
7 discouraged because they require the Companies to use their balancing
8 capabilities in unanticipated ways to manage the excess gas.

9

10 Under the Companies' electric generation service classifications, daily
11 imbalances are cashed out at prices that reflect the market price of gas in the
12 terminal zones of the pipelines that directly serve the Companies' service
13 territories – Transcontinental Gas Pipe Line, LLC (“Transco”), Texas Eastern
14 Transmission, LLC (“Tetco”) and Iroquois Gas Transmission System, LLP
15 (“Iroquois”). These prices are adjusted in a manner that is less favorable to
16 electric generation customers as the size of the customer's imbalance
17 increases. Under KEDLI's tariff, electric generation customers in certain
18 areas of the distribution system are permitted to balance on an aggregated
19 basis to mitigate daily imbalances. Imbalances are cashed out back to 0
20 percent, meaning that the customer's entire imbalance quantity is purchased or
21 sold each day at the applicable daily prices.

Rebuttal Testimony of Elizabeth D. Arangio

1 Prior to May 28, 2013, much of the generation that LIPA provides natural gas
2 for was managed under an agreement that had no cash out mechanism.
3 Instead, a rolling balancing account was maintained for these facilities. When
4 this agreement was in effect, positive and negative imbalances of between 5
5 percent and 20 percent were routinely created. With increasing load on
6 KEDLI's system, it was necessary and reasonable to modify the service
7 provided to LIPA to ensure that imbalances created by electric generators
8 were minimized. SC-14 has been very effective in achieving this goal. The
9 majority of imbalances are now less than 2 percent. This is demonstrated by a
10 comparison concerning the imbalance percentages and volumes of similar
11 balancing pools for the June 2013 through December 2015 period and the
12 January 2011 through May 2013 period. This data is set forth on Exhibit ____
13 (EDA-1R).¹ The reduction in the volume of imbalances is quite striking. It is
14 clear that following the implementation of the modified SC-14 tariff,
15 imbalance levels declined significantly.

16
17 The premise of the Gas Policy and Supply Panel's proposal to modify the
18 daily balancing provisions to cash out imbalances back to a 2 percent

¹ The Jan 2011 – May 2013 pool included steam units at Port Jefferson, Northport and Barrett as well as Barrett GTs, while the June 2013 – December 2015 pool includes these same units plus 8 additional GT sites (Bayswater Far Rockaway, Bethpage Energy Center, Caithness LIPA, Freeport Equus, Glenwood Energy Center, Pinelawn Power, Port Jefferson Energy Center, PPL Global/Pilgrim).

Rebuttal Testimony of Elizabeth D. Arangio

1 threshold instead of 0 percent is that balancing a generation customer's
2 account back to 0 percent does not give the customer the ability to use the
3 balancing services paid for through the Daily Balancing Demand Charge. I
4 disagree with this claim. The fact that a generation customer is able to create
5 an imbalance means that the customer is using the balancing services it pays
6 for. However, unless the customer is cashed out each day, the Companies are
7 either lending to, or borrowing gas from, the customer until its imbalance
8 quantities are either cashed out or balanced later in the month. Under the
9 Panel's recommendation, customers within the 2 percent tolerance would not
10 be cashed out until the end of the month, presumably at some average monthly
11 price.

12
13 The daily balancing provisions of the Companies' electric generation tariffs
14 are designed to encourage electric generation customers to minimize daily
15 imbalances. The changes proposed by the Gas Policy and Supply Panel
16 would reduce that incentive. Moreover, it is possible that the proposed
17 changes would impose costs incurred to manage electric generation
18 customers' imbalances on other customers. In my view, there is no
19 compelling reason why the balancing provisions of the electric generation
20 service classes need to be modified immediately; in fact, the data presented in

Rebuttal Testimony of Elizabeth D. Arangio

1 Exhibit ____ (EDA-1R) provides a compelling reason to maintain the status
2 quo.

3

4 **Q. The Gas Policy and Supply Panel further recommends (at 58) that**
5 **cashouts beyond the 2 percent level should not occur unless there is a**
6 **systematic imbalance for the entire generator pool. Do you agree with**
7 **this recommendation?**

8 A. No, I do not. This proposal assumes, among other things, that, for example,
9 positive imbalances in one geographic area of the system can be offset by
10 negative imbalances in a completely different part of the system. This is not
11 always the case. In addition, if cashouts beyond the 2 percent level are not
12 imposed, then conceivably a party could accumulate a daily imbalance up to
13 the 1.99 percent level each and every day, and then, at the end of the month,
14 the Companies would need to cash this party out at a monthly price that may
15 or may not compensate other customers for the costs imposed on the
16 distribution system each day. As I discussed previously, KEDLI's tariff
17 already gives generators in certain portions of the distribution system the
18 ability to aggregate imbalances. Nonetheless, this is another subject that can
19 be explored through the study I discussed previously for addressing electric
20 generation-related issues.

21

Rebuttal Testimony of Elizabeth D. Arangio

1 **Q. The Gas Policy and Supply Panel further recommends (at 58) that any**
2 **imbalance opposite of the system wide imbalance should be applied to the**
3 **customer's Monthly Imbalance Account. Do you agree?**

4 A. No. Once again this proposal would weaken the incentive that customers
5 currently have to minimize imbalances. The Companies' current balancing
6 provisions are operating effectively and should not be changed without further
7 analysis of all the issues identified by the Panel.

8

9 **Q. The LIPA Panel (at 10, 70-71) recommends a number of changes to**
10 **KEDLI's SC-14. Do you agree with those recommendations?**

11 A. No, I do not. At the outset, however, I recommend that the process that I
12 discussed earlier in my testimony should be the vehicle for considering the
13 changes to SC-14 recommended by the LIPA Panel. As discussed previously,
14 the Companies do not object to preparing a comprehensive report concerning
15 electric generation rates and services issues and using that report as the basis
16 for consideration of changes to KEDLI's SC-14 and other tariff provisions
17 that govern the services the Companies provide to electric generators.

18

19 However, in evaluating such changes, the Commission should recognize that
20 the Companies' current electric generation service tariffs have enabled the
21 Companies to provide services to electric generators in a manner that has not

Rebuttal Testimony of Elizabeth D. Arangio

1 resulted in a disruption of service to firm customers. As I have stated
2 previously, the primary purpose of the balancing provisions of the
3 Companies' electric generation tariffs is to encourage generators to minimize
4 imbalances so as to ensure that the services that the Companies provide to
5 electric generators do not disrupt or increase the cost of other services. The
6 Companies' current electric generation tariffs have accomplished and are
7 continuing to accomplish that goal.

8

9 **Q. The LIPA Panel recommends (at 70) that the Tetco M3 price should be**
10 **excluded from the cashout calculation under SC-14. Do you agree with**
11 **this recommendation?**

12 A. No, I do not. While the LIPA Panel is correct that Tetco does not physically
13 connect to KEDLI's distribution system, KEDLI does hold firm transportation
14 contracts on Tetco and is able to access a considerable quantity of gas from
15 that system. Moreover, when operating conditions permit, electric generators
16 served by KEDLI are permitted to deliver gas on Tetco. The pricing indices
17 in the cashout provisions of the SC-14 tariff are intended to reflect gas prices
18 on the pipelines where KEDLI would buy or sell gas on a daily basis to
19 manage imbalances. Tetco M3 is one of those points and therefore it should
20 be included as one of the pricing indices in the cashout mechanism.

21

Rebuttal Testimony of Elizabeth D. Arangio

1 **Q. The LIPA Panel recommends (at 70) that KEDLI should eliminate the**
2 **\$10 per dekatherm (“dth”) charge that is added to the cashout price when**
3 **electric generation customers underdeliver by more than 10 percent. Do**
4 **you agree with this recommendation?**

5 A. No, I do not. In making this recommendation, the LIPA Panel fails to provide
6 any meaningful reason why a change should be made to a provision that
7 effectively discourages electric generation customers from underdelivering
8 gas by more than 10 percent. Moreover, the LIPA Panel has not provided any
9 meaningful reason why a generation customer cannot stay within a 10 percent
10 tolerance and avoid the charge. Once again, the imbalance provisions of the
11 SC-14 tariff are designed to encourage customers to avoid imbalances and the
12 most difficult imbalance that the Companies encounter is one in which the
13 generation customer underdelivers gas, forcing the Companies to obtain
14 additional supplies for their firm customers. An under delivery of 10 percent
15 or more could pose serious risk to KEDLI’s system.

16
17 **Q. The LIPA Panel compares KEDLI’s SC-14 to electric generation tariffs**
18 **of other utilities. Do you have any comments concerning those**
19 **comparisons?**

20 A. While I am certainly willing to examine the operating practices of other
21 utilities, I assume that each of these utilities have designed their electric

Rebuttal Testimony of Elizabeth D. Arangio

1 generation tariffs to meet their needs and operating circumstances. These
2 operating circumstances may be far different from those faced by KEDLI.
3 For example, the LIPA Panel (at 51-52) discusses the balancing provisions of
4 KEDLI's regulated local gas distribution affiliates' tariffs in Massachusetts
5 and Rhode Island and concludes that they are "less harsh." However, in
6 making this comparison, the LIPA Panel ignores the fact that there is no
7 significant level of generation on either of these systems that the local
8 distribution company is responsible for balancing.

9

10 While the operating circumstances and tariff provisions of other utilities are
11 something that should be considered as the Companies move forward with the
12 process I have discussed, there is no basis to require KEDLI to make
13 immediate changes to SC-14 merely because there are differences between
14 SC-14 and other utilities' tariffs.

15

16 **Q. The LIPA Panel recommends (at 71) that all overdeliveries of gas to**
17 **KEDLI's system when an operational flow order ("OFO") is declared**
18 **should be cashed out at 100 percent of the LIPA Panel's recommended**
19 **cashout price. Do you agree?**

20 A. No, I do not. Imbalances that result from overdeliveries can create adverse
21 operating conditions and should not be encouraged. During OFO conditions,

Rebuttal Testimony of Elizabeth D. Arangio

1 the Companies need their electric generation customers to balance receipts
2 and deliveries of gas as closely as possible.

3

4 **Q. The LIPA Panel recommends (at 71) that balancing penalties and premia**
5 **should be reduced in the summer and shoulder seasons. Do you agree**
6 **with this recommendation?**

7 A. No, I do not. During the summer and shoulder seasons, KEDLI's flexibility to
8 manage electric generation imbalances is reduced as a result of the fact that
9 less gas is in the distribution system and KEDLI is using its upstream pipeline
10 transportation capacity to fill storage in accordance with storage injection
11 rules that require close adherence to a schedule of daily injections. The table
12 below shows the KEDLI peak day, generation summer peak day (maximum
13 gas burned by all Long Island generators), average winter day and average
14 summer day as compared to the total generation load on the same days for the
15 November 2014 – October 2015 period. On an average summer day, the
16 generation load can be more than two times that of the KEDLI Sendout (total
17 firm customer load). On a peak summer day for generation load, the total
18 generation load can be more than six times that of the KEDLI firm customer
19 load.

Rebuttal Testimony of Elizabeth D. Arangio

2014-15 Daily Gas Load Data				
	Peak	Peak	Average	Average
	Winter	Summer	Winter	Summer
Category	Day (dt)	Day (dt)	Day (dt)	Day (dt)
KEDLI Sendout	950,707	99,104	534,846	142,931
LI Power/Cogen	147,353	601,949	237,992	300,105
*Peak day occurred on 2/15/15				
**Peak summer day occurred on 7/29/15

6

7

8

IV. ESCO Issues

9

Q. The Gas Policy and Supply Panel recommends (at 48) that transportation customers that fail to deliver 98 percent of their forecast quantity should be assessed a penalty of \$25 per Dth for underdeliveries during non-OFO events and \$50 per Dth during OFO events. Do you have any comments concerning this recommendation?

10

11

12

13

14

A. I have no objection to this recommendation, which should strengthen the incentive for transportation customers to comply with the Companies' delivery requirements.

15

16

17

Rebuttal Testimony of Elizabeth D. Arangio

1 **Q. Direct Energy Witness Magnani claims (at 7) that KEDLI allocates**
2 **ESCOs insufficient transportation and storage capacity, forcing ESCOs**
3 **to purchase peaking supplies at higher temperatures. Do you have any**
4 **response to this claim?**

5 A. On page 7 of his testimony, Mr. Magnani describes the Companies'
6 methodology for allocating assets to KEDNY and KEDLI ESCOs. The
7 allocation used is not static; rather assets are released according to the relative
8 design day needs of all KEDNY ESCOs and all KEDLI ESCOs. Because
9 each ESCO has a different load factor, the temperature at which peaking
10 supplies are required will vary.² While Direct Energy required peaking
11 supplies to serve its KEDLI customers on six days during the 2014/15 winter,
12 the Companies actually dispatched peaking supplies for eight days during the
13 same season.

14
15 **Q. Mr. Magnani further asserts (at 8) that ESCOs should receive an**
16 **allocation of interstate pipeline capacity on Tennessee. Do you agree?**

17 A. The Companies presently do not allocate capacity on Tennessee to ESCOs
18 because the delivery point between the pipeline and the New York Facilities
19 System is operated by Consolidated Edison Company of New York, Inc.

² For the 2014/15 winter season, the KEDLI base/slopes were incorrect due to an error in the Companies' billing system. This error has since been corrected.

Rebuttal Testimony of Elizabeth D. Arangio

1 (“Con Ed”). Each day the Companies receive an allocation of capacity from
2 Con Ed at the White Plains delivery point of between 0 dth and 90,000 dth.
3 The Companies currently have 160 ESCOs operating on their systems. To
4 allocate a quantity of capacity that can change daily among 160 ESCOs would
5 pose a considerable administrative challenge and would, on many days, result
6 in a *de minimis* allocation of capacity to individual ESCOs.

7

8 As the Gas Policy and Supply Panel recognizes, the Companies are currently
9 preparing to begin releasing physical storage to ESCOs. This is a complex
10 undertaking. Once it is completed and it is confirmed that releasing storage
11 will not jeopardize system reliability, the Companies would be willing to
12 examine whether there is an administratively practical way to make Tennessee
13 capacity available to ESCOs.

14

15 **Q. Great Eastern Energy witness Lukas asserts (at 12) that the Companies’**
16 **practice of assigning ESCOs long haul capacity on Transco when the**
17 **ESCO loads increase during the winter period is “discriminatory.” Do**
18 **you agree?**

19 **A.** No. During the winter the Companies need an administratively practical way
20 of adding and subtracting capacity as ESCOs’ loads change. Using Transco
21 long haul capacity as the marginal source of capacity is fair to all ESCOs

Rebuttal Testimony of Elizabeth D. Arangio

1 because it best ensures that the source of marginal capacity will remain
2 constant throughout the winter. It is also an optimal way to assign capacity
3 from an administrative perspective. There is nothing “inherently
4 discriminatory” in assigning capacity in the same way to all ESCOs.

5

6 **Q. Mr. Lukas recommends (at 13-14) that ESCOs should receive a financial**
7 **credit when the Companies use FT capacity that is normally used to**
8 **transport storage gas to transport flowing supplies. Do you agree?**

9 A. No. This proposal would be extremely complicated to track and administer
10 and Mr. Lukas has not demonstrated that the alleged harm to ESCOs justifies
11 this administrative burden. In addition, it should be recognized that it is the
12 Companies’ sales customers, not the Companies, that benefit when the
13 Companies use storage-related transportation to transport flowing supplies.
14 Furthermore, when the Companies use storage transportation to inject gas into
15 storage, and in so doing, reduce the weighted average cost of gas in storage,
16 the ESCOs realize a benefit that they can access by nominating Retail Access
17 Storage.

18

19 **Q. Mr. Lukas also recommends (at 15) that ESCOs should receive a benefit**
20 **from certain asset management agreements that the Companies have**

Rebuttal Testimony of Elizabeth D. Arangio

1 **entered to maximize the value of their upstream capacity for the benefit**
2 **of their customers. Do you agree?**

3 A. Asset management agreements generally create value through transactions
4 that involve sales of both upstream capacity and commodity. While there may
5 be merit in Mr. Lukas' suggestion that ESCOs should receive a portion of the
6 proceeds from asset management agreements, further study is necessary to
7 determine whether it makes sense to do so, and if so, how such proceeds
8 should be fairly allocated.

9

10 **Q. Mr. Lukas recommends (at 15) that gas supply issues that affect the rates**
11 **and services available to TC and interruptible customer should be**
12 **considered in the TC collaborative. Do you agree?**

13 A. Yes.

14

15 **V. RNG Standards Terms**

16 **Q. The Gas Policy and Supply Panel recommends (at 62-63) that the**
17 **Companies develop a standard interconnect agreement between the**
18 **Companies and RNG providers. Do you agree?**

19 A. We do not object to this proposal, but we would ask that the Companies be
20 given 150 days to develop and submit this agreement as part of the Gas
21 Transportation and Operating Procedures Manual.

1 **VI. Peaking Supply Issues**

2 **Q. The Gas Policy and Supply Panel claims (at 39) that TC customers utilize**
3 **peaking assets and therefore should pay demand charges that reflect an**
4 **appropriate level of peaking costs. Do you agree that TC customers**
5 **benefit from the use of peaking assets?**

6 A. That has been the case in the past and, as discussed by the Rate Design Panel.
7 TC customers are currently allocated a portion of peaking costs that the
8 Companies view as appropriate. However, this issue should be addressed in
9 the TC collaborative.

10

11 **Q. The Gas Supply and Policy Panel (at 79) recommends that the Companies**
12 **should ensure that any peaking supply be backed up with primary point**
13 **capacity. Do you agree?**

14 A. Yes. The Companies' practice has been to require suppliers of peaking
15 service to attest that they have primary point capacity to the Companies' city
16 gates. The Companies plan to continue this practice.

17

18 **Q. Does this conclude your rebuttal testimony?**

19 A. Yes, it does.

Rebuttal Testimony of the Rate Design Panel

1 **I. Introduction**

2 **Q. Please identify the members of the Rate Design Panel.**

3 A. The Rate Design Panel consists of Pamela B. Dise, Dawn M. Herrity, and
4 Howard S. Gorman and is testifying on behalf of KEDNY and KEDLI. This
5 is the same Panel that submitted direct and corrections and updates testimony
6 in these proceedings. The terms defined in the Panel’s direct testimony have
7 the same definitions here.

8
9 **Q. What is the purpose of your rebuttal testimony?**

10 A. The Panel’s rebuttal testimony will address and/or rebut issues raised with
11 respect to either KEDNY or KEDLI, or both Companies, by Staff and other
12 intervenors in their respective testimonies filed in these proceedings on May
13 20, 2016.

14
15 **Q. Is the Panel offering any exhibits?**

16 A. Yes, the Panel offers the response of the Utility Intervention Unit of the
17 Department of State (“UIU”) to IR BULI-1 RDP-1 UIU-001 as
18 Exhibit___(RDP-1R).

19
20 **Q. How is the rebuttal testimony organized?**

Rebuttal Testimony of the Rate Design Panel

1 A. To the extent possible, the testimony proceeds by topic, rather than by party,
2 to keep the positions of the parties on each issue together.

3

4 **II. ECOS Studies**

5 **Q. Did Staff or any of the intervenors comment on the ECOS studies?**

6 A. Yes. The ECOS studies were discussed in the testimonies of the Staff Gas
7 Rates Panel (“SGRP”), UIU, and the City of New York (“NYC”) Witness
8 Richard A. Baudino.

9

10 **Q. Please summarize Mr. Baudino’s comments regarding the ECOS studies.**

11 A. Mr. Baudino recommended that the Commission accept the Companies’
12 ECOS studies. He stated that the ECOS studies provide a reasonable basis for
13 cost and revenue allocation and are consistent with prior decisions of the
14 Commission. He also agreed with the classification of distribution mains as
15 both demand-related and customer-related, as presented in the Companies’
16 ECOS studies.

17

18 **Q. Please summarize the SGRP’s comments regarding the ECOS.**

19 A. The Companies used future Rate Year data in preparing the ECOS, but Staff
20 would have preferred that the Companies used historic data. Regarding the
21 classification of distribution mains as both demand-related and customer-

Rebuttal Testimony of the Rate Design Panel

1 related, Staff stated that it did not necessarily agree with the zero intercept
2 method because allocating a portion of mains as customer related in the
3 classification step may not identify the minimum customer costs for each SC.

4

5 **Q. Does the Panel agree with the SGRP regarding the use of historic data in**
6 **preparing the ECOS?**

7 A. The Panel believes it is acceptable to prepare the ECOS using either historic
8 data or future Rate Year data. The SGRP would have preferred using historic
9 data because that approach does not rely on assumptions. The Panel agrees
10 that if historic year data are used, the account balances are known. However,
11 the Panel believes that using historic data has certain disadvantages that
12 outweigh this benefit. Specifically, historic allocator values may not reflect
13 normal weather and historic costs may be different in amount and type from
14 the costs that will actually be recovered in rates. By using future Rate Year
15 data in the ECOS, the Companies avoided these potential weaknesses. The
16 Panel notes that the ECOS based on Rate Year data can easily be rerun to
17 reflect the final revenue requirement, thereby reflecting the actual amounts to
18 be recovered in rates.

19

20 In summary, the Panel believes that although either method is acceptable, the
21 use of future Rate Year data is preferable, especially if future year costs and

Rebuttal Testimony of the Rate Design Panel

1 allocators, which are used for setting rates, differ meaningfully from the
2 historic year.

3

4 **Q. Please comment on the SGRP's discussion regarding the classification of**
5 **distribution mains as both demand-related and customer-related.**

6 A. First, a minimum system study, not a zero intercept study, was used to
7 separate the demand-related and customer-related components of distribution
8 mains.

9

10 Second, the Panel agrees that the customer-related component of mains is not
11 usually included in the minimum customer costs for each SC. In fact, the
12 Panel did not include those costs in computing the customer charge costs, as
13 can be seen from Exhibit___(RDP-3) Schedule 4 for each Company. No
14 portion of mains or the O&M costs related to mains are reflected in those
15 schedules. The Panel believes the SGRP's concern is fully addressed in the
16 Companies' ECOS studies.

17

18 **Q. Did the SGRP rely on the Companies' ECOS for any of its analysis?**

19 A. Yes. The SGRP used the ECOS to review the proposed MFCs and to aid in
20 revenue allocation and rate design. The Panel understands that the term

Rebuttal Testimony of the Rate Design Panel

1 “revised ECOS studies” at page 44 of the SGRP’s testimony refers to the
2 ECOS studies filed by the Companies.

3

4 **Q. Please summarize UIU’s comments regarding the ECOS.**

5 A. UIU recommended that the Commission reject the Companies’ ECOS studies
6 because the studies allocate a portion of distribution mains on a customer
7 basis, and UIU asserted that the costs of distribution mains do not vary
8 directly with number of customers. UIU argues that distribution mains should
9 be allocated based entirely on demand (*i.e.*, peak requirements).

10

11 **Q. Are the assertions of UIU correct?**

12 A. No. The number of customers is an important consideration in planning and
13 installing distribution mains. In fact, UIU acknowledged that the minimum
14 cost of mains depends on the miles of streets served by the system. The miles
15 of streets, and therefore the miles of main, is clearly affected by the number of
16 customers served, among other factors (principally customer density).

17 Therefore, there is no dispute that a causal relationship exists between the
18 number of customers served on the one hand and the miles of street covered
19 by distribution mains and the miles of distribution mains on the other hand.

20

Rebuttal Testimony of the Rate Design Panel

1 **Q. What reasons did UIU give for recommending that the Commission**
2 **allocate distribution mains based entirely on peak demand?**

3 A. UIU offered no affirmative reason why the entire cost of distribution mains
4 should be allocated based on peak demand. Having rejected the Companies'
5 method of allocating the minimum portion of mains (based on number of
6 customers), UIU simply applied the demand allocator (which UIU and the
7 Companies agree is appropriate for the non-minimum portion of mains) to the
8 entire mains cost. However, by UIU's own testimony, the minimum system
9 does not reflect demand. Rather, it reflects the miles of street served, which is
10 causally related to the number of customers served, as the Panel explained
11 above.

12
13 **Q. UIU submitted its own ECOS studies (Exhibit___(URP-1) Schedules 2**
14 **and 3, and (Exhibit___(URP-2) Schedules 2 and 3). What weight should**
15 **the Commission give these studies?**

16 A. These studies should not be relied on for several reasons. One of UIU's
17 ECOS studies allocates the minimum system component based on peak
18 demand, and the other based on winter throughput. UIU provided no
19 evidence, however, and does not even assert, that the minimum system is
20 causally related either to peak demand or to winter throughput. There is no
21 justification for allocating the minimum system on anything other than the

Rebuttal Testimony of the Rate Design Panel

1 factor to which it is causally related: the number of customers served.

2 Therefore, the Commission should disregard UIU's ECOS studies because
3 they are not based on cost causation.

4

5 **III. Revenue Allocation**

6 **Q. Please explain how the Companies initially proposed to allocate revenue**
7 **per class for KEDNY and KEDLI.**

8 A. KEDNY proposed a uniform increase of 31.5 percent of delivery-only
9 revenue for SC 1A, SC 1B, SC 1B-DG, SC 2-1, SC 2-2 and SC 3. Somewhat
10 smaller increases were proposed for SC 4A, SC 4A-CNG, SC 4B, SC 6C-C,
11 SC 6C-G, SC 6C-M, SC 7, and SC 21, which are producing above-average
12 returns at present rates. See KEDNY Exhibit____(RDP-4).

13

14 KEDLI proposed a uniform increase of 26.7 percent of delivery only revenue
15 for SC 1A, SC 1B, SC 1B-DG, SC 2-A, SC 2-B, and SC 3. Somewhat
16 smaller increases were proposed for SC 4, SC 7, SC 12, SC 13, SC 9, SC 15,
17 SC 16, and SC 17, which are producing above-average returns at present rates.
18 See KEDLI Exhibit____(RDP-4).

19

20 The Companies' revenue allocation proposals moved the returns produced by
21 each service class closer to unity (the system average rate of return), while

Rebuttal Testimony of the Rate Design Panel

1 mitigating extreme impacts, a widely-accepted concept known as
2 “gradualism.” To make more progress toward unity would have required
3 increases of 30%-40% or more for some classes, which the Companies felt
4 was not appropriate.

5

6 **Q. Did Staff or any of the intervenors comment on the Companies’ proposed**
7 **revenue allocation?**

8 A. Yes. The revenue allocations were discussed in the testimonies of the SGRP,
9 UIU and NYC Witness Baudino.

10

11 **Q. Please summarize the SGRP’s comments regarding revenue allocation.**

12 A. The SGRP recommended that all firm service classes receive the same
13 percentage increase because of the size of the rate increases in these cases.
14 The SGRP maintained that it is not appropriate to move service classes closer
15 to the system average return at this time in light of the projected bill impacts.
16 The SGRP also recommended that the rates for IT and TC customers be based
17 on discounts from the rates for the corresponding firm classes, and the
18 revenue assigned to these classes be determined accordingly.¹ The Panel

¹ The Panel notes that this approach introduces circularity into development of the revenue allocation, requiring an iterative process to determine the revenue allocation for all service classes.

Rebuttal Testimony of the Rate Design Panel

1 discusses the rate design for TC/IT customers later in the TC/IT section of this
2 testimony.

3

4 **Q. Does the Panel accept the SGRP's recommendation on revenue**
5 **allocation?**

6 A. The Panel accepts the SGRP's recommendation to increase all KEDNY firm
7 service classes by a uniform percentage, and all KEDLI firm service classes
8 by a uniform percentage, subject to resolution of the revenue to be assigned to
9 the TC/IT classes. The Panel notes that the result of the SGRP's revenue
10 allocation proposal would be very similar to that originally proposed by the
11 Companies for most customers.

12

13 **Q. Please summarize UIU's comments regarding revenue allocation.**

14 A. UIU found merit in the Companies' approach to revenue allocation, but
15 disagreed with some aspects, especially the treatment of non-firm customers.
16 UIU also disagreed with the ECOS studies on which the Companies relied for
17 their proposed revenue allocation. UIU recommended that revenue allocation
18 be based on the ECOS study it presented, while also recommending that the
19 ECOS not be used for determining the revenue assigned to IT, TC, Distributed
20 Generation ("DG") or Electric Generation ("EG") customers. UIU also

Rebuttal Testimony of the Rate Design Panel

1 recommended that the revenue allocation should show reasonable progress in
2 reducing large deviations from the system average rate of return.

3

4 **Q Please comment on UIU's testimony regarding revenue allocation.**

5 A. UIU did not present a proposal regarding revenue allocation; it merely made
6 suggestions to move rate classes closer to uniform rates of return while
7 endorsing gradualism. These are the same goals the Companies established
8 and then met in their proposed revenue allocations. As discussed above,
9 UIU's ECOS studies should be rejected by the Commission because they are
10 not based on cost causation.

11

12 **Q. Please summarize NYC Witness Baudino's testimony regarding revenue**
13 **allocation.**

14 A. Mr. Baudino recommended that KEDNY service classes SC 1A, SC 1B, SC
15 1B-DG, SC 2-1, SC 2-2 and SC 3 receive a uniform percentage increase, and
16 all other classes receive no increase. Mr. Baudino did not comment on
17 KEDLI's revenue allocation.

18

19 **Q Please comment on Mr. Baudino's testimony regarding revenue**
20 **allocation.**

Rebuttal Testimony of the Rate Design Panel

1 A. As noted above, the Panel accepts the SGRP's revenue allocation
2 recommendations for KEDNY and KEDLI firm service classes, subject to
3 resolution of the revenue to be assigned to the TC/IT classes. The Panel notes
4 that the result of Mr. Baudino's proposed revenue allocation for KEDNY is
5 similar to that proposed by the Companies and to that proposed by the SGRP.
6

7 **IV. Rate Design**

8 **Q. Please briefly describe the rate design proposed by the Companies in**
9 **their filings.**

10 A. KEDNY proposed no changes to the customer charges for SC 1B, SC 1B-DG,
11 SC 2-1, SC 2-2 and SC 3, and increases for the other service classes. See
12 KEDNY Exhibit____(RDP-4) Schedule 3.
13

14 KEDLI proposed no changes to the customer charges for SC 1B, SC 1B-DG,
15 SC 2-A, SC 2-B, and SC 3, and increases for the other service classes. See
16 KEDLI Exhibit____(RDP-4) Schedule 3.
17

18 Tail blocks were set to approximate the demand-related cost per therm
19 computed in the respective ECOS studies, and other blocks were set to
20 produce the balance of the revenue target for each service class.
21

Rebuttal Testimony of the Rate Design Panel

1 The volumetric rates for TC and IT classes were set equal to the tail block
2 rates for the corresponding firm service classes.

3

4 **Q. Did Staff or any of the intervenors comment on the proposed rate design?**

5 A. Yes. The Companies' proposed rate design for the firm service classes was
6 discussed in the testimonies of the SGRP and UIU. The proposed rate design
7 for other classes (*e.g.*, TC and IT) was also discussed by intervenor witnesses,
8 and the Panel addresses those comments later in this testimony.

9

10 **Q. Please summarize the comments of the SGRP regarding rate design.**

11 A. The SGRP recommended the same customer charges as proposed by the
12 Companies. However, to achieve the revenue target for each service class, the
13 SGRP recommended an equal percentage increase for each block within each
14 service class, except for service classes where the rates are computed by
15 reference to other service classes.

16

17 **Q. Do the Companies accept the SGRP's recommendation regarding rate
18 design?**

19 A. The Companies accept the recommendation of the SGRP to increase all
20 volumetric rates within each service class by the same percentage over present
21 volumetric rates. The Panel believes it is a reasonable approach that meets the

Rebuttal Testimony of the Rate Design Panel

1 goal of producing even bill impacts within each class, although it means
2 foregoing the Panel's goal of aligning the tail blocks more closely with costs.

3

4 **Q. Please summarize the comments of UIU regarding rate design.**

5 A. UIU agreed with the Companies' proposal to leave most customer charges the
6 same, and recommended that increases in revenue be collected by increasing
7 volumetric rates, especially the tail blocks. UIU also believed that customer
8 charges should not include costs related to service connections and that the
9 current customer charges are therefore higher than the customer-charge costs
10 for most classes (Exhibit____(URP-1) Schedule 5 and Exhibit____(URP-2)
11 Schedule 4).² UIU recommended increasing tail blocks to develop a more
12 steeply inclining block structure.

13

14 **Q. Did UIU propose an alternative rate design?**

15 A. No.

16

17 **Q. Please comment on the testimony of UIU regarding rate design.**

18 A. UIU is incorrect in its assertion that the Companies' ECOS studies incorrectly
19 calculate customer-charge costs. First, in developing the customer-charge
20 costs, the Panel excluded the customer component of distribution mains

² This exhibit appears to be mislabeled as Exhibit____(URP-2) Schedule 4.

Rebuttal Testimony of the Rate Design Panel

1 (Exhibit__(RDP-3) Schedule 4 for each Company); this is exactly what UIU
2 recommends.

3
4 In addition, UIU’s contention that service costs should be removed from the
5 customer charge component is incorrect. Although services are sized to meet
6 peak demand, each customer needs to be connected to the distribution system
7 by a service, even if some customers share a service. For customers that share
8 a service, the customer-charge costs developed in the ECOS reflect that
9 sharing, and allocate to each customer only its share of the cost of the service
10 (Exhibit__(RDP-3) Schedule 9I for each Company).

11
12 In its response to IR BULI-1 RDP-1 UIU-001, presented as Exhibit__(RDP-
13 1R) to this testimony, UIU cited a report from the American Gas Association
14 (“AGA”) that stated that utilities recover only a portion of their fixed costs in
15 the customer charge. However, the AGA report includes services in the fixed
16 costs to be considered in the customer charge; the AGA’s issue is not whether
17 service costs should be considered in the customer-charge costs (the AGA
18 includes them), but what portion of total costs are typically included in the
19 customer charge.

20

Rebuttal Testimony of the Rate Design Panel

1 In the Panel's experience, including service costs in the costs considered for
2 recovery in the customer charge is a universal practice.

3

4 **Q. What does the Panel recommend regarding rate design?**

5 A. The SGRP agrees with the monthly customer charges proposed by the
6 Companies. In addition, the Companies have accepted the SGRP's
7 recommendation to increase all volumetric rates within each service class by
8 the same percentage over present volumetric rates. This approach can be
9 applied even with changes in the revenue requirement.

10

11 Regarding the testimony of UIU, the Companies have demonstrated that the
12 objections of UIU are not supported because UIU's ECOS does not reflect
13 cost causation, and UIU's customer-charge costs incorrectly omit the cost of
14 services.

15

16 **V. Merchant Function Charge**

17 **Q. Did the SGRP agree generally with the Companies' MFC proposals?**

18 A. Yes, the SGRP agreed with all of the MFC proposals except for the proposal
19 to charge TC and IT sales customers any components of the MFC. Instead,
20 the SGRP proposed a discounted TC/IT pricing structure and did not believe

Rebuttal Testimony of the Rate Design Panel

1 TC and IT sales customers should be charged the MFC. NYC also opposed
2 charging the MFC to TC/IT customers.

3

4 **Q. Do the Companies accept the SGRP and NYC's proposal to not charge**
5 **the MFC to TC/IT customers?**

6 A. Yes, the Companies accept the recommendation that MFC charges not be
7 applied to TC/IT customers at this time and believe that the Companies should
8 await further direction from the results of the TC/IT collaborative.

9

10 **Q The Staff Accounting Panel recommends that MFC revenue match**
11 **associated expense. Does the Panel agree?**

12 A. Yes. The current methodology consists of (1) calculating the total projected
13 MFC revenues at current rates as shown on Exhibit__(RDP-2); (2) then
14 calculating the total projected MFC revenues at proposed rates as shown on
15 Exhibit__(RDP-6); and (3) reconciling the MFC revenues at current rates to
16 revenues at proposed rates in the Companies' revenue allocation as shown on
17 Exhibit__(RDP-4), Schedule 1.

18

19 As proposed by the Staff Accounting Panel, the Companies will change the
20 MFC revenues to match associated expenses by calculating the total projected
21 MFC revenues at proposed rates on Exhibit__(RDP-2), which will match the

Rebuttal Testimony of the Rate Design Panel

1 total projected MFC revenues on Exhibit___(RDP-6). Therefore, no
2 reconciliation will be needed for the revenue allocation process on
3 Exhibit___(RDP-4), Schedule 1.
4

5 **VI. TC/IT Rates**

6 **Q. Please explain the Companies' proposed modifications to their TC and IT**
7 **service classifications.**

8 A. The Companies proposed to (1) establish a moratorium on new TC customers;
9 (2) apply its TC volumetric threshold for new IT customers; (3) modify the
10 rate design for the TC and IT service classes; and (4) initiate a collaborative to
11 explore future offerings for non-firm service.
12

13 **Q. Did the Staff Gas Policy and Supply Panel agree with the establishment**
14 **of a moratorium on new TC customers?**

15 A. Yes. The Staff Gas Policy and Supply Panel proposed a permanent
16 moratorium on all new TC customers.
17

18 **Q. Did Staff and the other parties agree with the application of the**
19 **Companies' TC volumetric threshold for new IT customers?**

20 A. No party disagreed with the proposal.
21

Rebuttal Testimony of the Rate Design Panel

1 **Q. Is there a need to lower the threshold for IT service to reflect that TC**
2 **service will no longer be offered to new customers?**

3 A Yes, there is. The SGRP did not discuss this but, with the moratorium on TC
4 services, the threshold for IT service will have to be reduced to accommodate
5 customers that would have qualified for TC service.

6

7 **Q. Did the Staff Gas Policy and Supply Panel propose any modifications to**
8 **the class eligibility?**

9 A. Yes, the Staff Gas Policy and Supply Panel suggested three modifications to
10 class eligibility: (1) merging the TC and IT service classifications; (2)
11 allowing all existing TC customers the ability to switch to firm service as soon
12 as firm service can be made available; and (3) allowing TC sales and
13 transportation customers to switch to interruptible notification service.

14

15 **Q. Do the Companies agree with these modifications?**

16 A. The Companies believe that any additional requirements on class eligibility
17 that are not currently allowed should await the guidance and resolution of the
18 TC/IT collaborative and not be implemented at this time.

19

20 **Q. What modifications did the SGRP propose regarding TC/IT rate design?**

Rebuttal Testimony of the Rate Design Panel

1 A. The SGRP recommended that a market price be established at a capped price
2 set below firm rates (20% for TC and 30% to IT), and that both the current
3 revenue imputation (adjusted for the Rate Year) and the 90/10 sharing
4 mechanism continue.

5
6 **Q. Do the Companies agree with the SGRP's recommendation relative to a
7 discount?**

8 A. No. The Companies believe their proposed TC/IT rate design, which sets the
9 entire volumetric rate for TC/IT customers equal to the otherwise applicable
10 firm class tail block rate, provides a sufficient discount to TC/IT customers as
11 the tail block is the least expensive block. In addition, TC sales customers
12 receive a further discount in the demand charge portion of the GAC. The
13 proposed demand charge for firm sales customers is \$2.17 per dth whereas the
14 proposed demand charge for TC sales customers is \$0.34 per dth.

15
16 **Q. Please explain the 90/10 sharing mechanism proposed by the SGRP.**

17 A. The SGRP proposed determining a revenue imputation that is at the midpoint
18 of TC/IT customers priced at the current firm rates and those customers priced
19 at the proposed firm rates. Additionally, the SGRP proposed that any variance
20 from that imputation be shared 90% to customers and 10% to the Company.

21 The SGRP believes that having a revenue imputation and 90%/10%

Rebuttal Testimony of the Rate Design Panel

1 symmetrical sharing will incent the Companies to maximize the TC and IT
2 revenue for the benefit of firm customers.

3

4 **Q. Do the Companies agree with this proposal?**

5 A. No. As explained above, the Companies are not proposing, and do not accept,
6 a market based rate for TC/IT. The Companies believe there should be no
7 incentive to add new TC/IT customers under the current program without the
8 benefit of the guidance of the TC/IT collaborative and in light of the Staff Gas
9 Policy and Supply Panel's recommendation of a permanent moratorium on
10 TCs. Therefore, the Companies are proposing a 100% true up reconciliation
11 of forecast TC/IT revenues.

12

13 **Q. Did the SGRP explain how continuing the imputation and symmetrical**
14 **sharing mechanism will provide an incentive for the Companies to**
15 **maximize the TC and IT revenue?**

16 A. No. Presumably, the SGRP believes that if the Companies have an incentive
17 they will take actions to maximize TC and IT revenue. However, there is very
18 little that the Companies will be able to do to affect TC and IT revenue. For
19 example, if the winter is relatively free of very cold snaps, customers will not
20 be interrupted as much and TC/IT revenue may be enhanced, but weather is
21 certainly out of the Companies' control. Further, a moratorium will restrain

Rebuttal Testimony of the Rate Design Panel

1 any growth. Additionally, the SGRP's proposed method eliminates pricing
2 flexibility, removing another way to affect revenue. Moreover, if customers
3 were moved to firm service as a result of system reinforcements, TC/IT
4 revenue would be further reduced. In short, the SGRP is proposing an
5 incentive for an activity over which the Companies have very little control,
6 and making recommendations that may erode TC/IT revenue, making the
7 Companies more subject to sharing revenue reductions than revenue
8 surpluses. It is far more equitable to adopt the Companies' proposed
9 methodology, using revenue derived from the TC/IT rate design ultimately
10 adopted at appropriate volumes, reflected in base rates, with a true up
11 mechanism that will ensure that neither customers nor the Companies bear
12 costs or benefits unduly.

13

14 **Q. Did the Staff Gas Policy and Supply Panel agree with the Companies'**
15 **proposal for a collaborative?**

16 A. Yes. The Staff Gas Policy and Supply Panel felt the proposed collaborative
17 would be a proper vehicle to bring gas demand response service into the 21st
18 century. The Staff Gas Policy and Supply Panel recommended that the
19 collaborative discuss a TC service class replacement or redesign.
20 Additionally, the Staff Gas Policy and Supply Panel recommended that the
21 Companies report back to the Commission on demand response and non-firm

Rebuttal Testimony of the Rate Design Panel

1 class further rate design as well as operating procedures for interruptions and
2 curtailments.

3

4 **Q. Do the Companies agree with the Staff Gas Policy and Supply Panel**
5 **proposal?**

6 A. Yes.

7

8 **Q. Did the Staff Gas Policy and Supply Panel have any recommendations for**
9 **items that should not wait for the collaborative? If so, what are they?**

10 A. Yes, the Staff Gas Policy and Supply Panel had six recommendations.

11 (i) The TC demand charge should include an allocation of any peaking
12 service demand charges appropriate with the level of peaking service
13 that may be used by the service class.

14 (ii) Switch the use of Central Park temperatures to more appropriate
15 temperature stations in the Companies' territories such as LaGuardia,
16 JFK and Islip airports.

17 (iii) Waiver of the two-strike rule whenever an interruption occurs within
18 48 hours of a previous interruption.

19 (iv) Require the Companies to conduct an additional unannounced test of
20 all non-firm customers within the last two weeks of January.

Rebuttal Testimony of the Rate Design Panel

1 (v) Require all non-firm customers to file affidavits with the Companies at
2 the start of the winter season showing that their oil tanks are full and
3 that refill contracts exist for automatically refilling the tanks during the
4 winter season.

5 (vi) The Companies should update their communication protocols.
6

7 **Q. Do the Companies agree with the Staff Gas Policy and Supply Panel**
8 **proposals for items prior to the collaborative?**

9 A. Yes, with the exception that all non-firm customers file affidavits with the
10 Companies. The Companies believe that the existing penalties for
11 unauthorized use are adequate to ensure compliance. The Companies would
12 also like to clarify that it did allocate what it views as an appropriate portion
13 of the peak day demand costs to TC customers to account for the fact that
14 there are instances where TC customers utilize assets associated with peaking
15 contracts as shown on Exhibit___(RDP-9).
16

17 **Q. What was UIU's position on TC/IT rates?**

18 A. UIU recommended that the Commission increase the non-firm rates to a
19 moderate extent, while maintaining a reasonable discount relative to firm
20 service. UIU also recommended that the Companies continue to use value of
21 service as the primary basis for setting TC/IT rates.

Rebuttal Testimony of the Rate Design Panel

1 **Q Do the Companies agree with UIU's position?**

2 A. No. The Companies believe it is better to move to a cost of service rate as
3 mentioned above. The Companies' proposal would offer non-firm customers
4 a discount relative to the rate they would pay if they were on firm service.

5
6 **Q. Please address NYC's position on TC/IT rates.**

7 A. Mr. Baudino recommended a \$0.30 per therm rate for KEDNY's TC classes.
8 Mr. Baudino further stated that the Companies' rate design does not yield a
9 cost based rate for the TC classes and believes that TC classes are still greatly
10 in excess of the true cost to serve these customers. Mr. Baudino
11 recommended that revenues for KEDNY's TC customers remain constant.
12 Mr. Baudino also recommended that TC customers pay the average
13 commodity cost of gas rather than the incremental cost of gas.

14
15 **Q. Do the Companies agree with NYC's comments?**

16 A. No. The Companies accept the SGRP's rate design proposal, which lowers
17 the rate TC/IT customers will pay by lowering the tail block rate of SC 2 and
18 SC 3 firm customers when compared to the Companies' original proposal.
19 The SGRP's proposed rate design and resulting rates are provided in
20 Exhibit____(SGRP-11) and produce tail block rates at or below the \$0.30
21 proposed by NYC. Also, the Companies currently charge TC customers the

Rebuttal Testimony of the Rate Design Panel

1 average commodity cost of gas, and not the incremental cost of gas as asserted
2 by NYC, which is used only as a floor price.

3

4 **Q. NYC opposes the Companies' proposal to close TC to new customers. Do**
5 **the Companies agree?**

6 A. No. The Companies agree with the Staff Gas Policy and Supply Panel that
7 there should be a moratorium on new TC customers until we receive guidance
8 from the collaborative.

9

10 **Q. NYC suggests that the Companies' tariffs be modified to provide TC and**
11 **IT customers the option to pay a surcharge in lieu of a lump sum**
12 **payment for any infrastructure upgrades that are required in connection**
13 **with a request to convert to firm service. Do the Companies agree?**

14 A. No. The Companies believe it is premature to propose tariff modifications
15 regarding infrastructure upgrade payment methods. These types of proposals
16 should be addressed in the proposed collaborative.

17

18 **Q. NYC recommends that KEDNY's bill presentation for TC customers**
19 **have separately stated customer charge, delivery service per therm**
20 **charge and cost of gas per therm charge. Does KEDNY agree?**

Rebuttal Testimony of the Rate Design Panel

1 A. KEDNY does not object to changes to the TC customers' bills. However, it
2 will need time to research and quantify costs as well as the scope of such an
3 effort.

4

5 **Q. Estates NY Real Estate Services LLC ("Estates") indicates that TC and**
6 **IT customers are unable to participate in various energy conservation**
7 **and efficiency incentives administered by the Companies and New York**
8 **State. Would the Panel explain why non-firm customers are not entitled**
9 **to these energy conservation incentives?**

10 A. Most energy conservation incentives are only available to the Companies'
11 firm customers that contribute to the costs of these programs. The System
12 Benefit Charge, which is applied to firm rate classes, is used to fund
13 NYSERDA's Clean Energy Fund, the program used to administer most
14 energy efficiency programs in New York. Because non-firm rates do not
15 include the System Benefit Charge, Clean Energy Fund incentives are
16 generally unavailable to non-firm customers.

17

18 **Q. Estates expresses concern regarding the future of TC service, explaining**
19 **that their current negotiated agreement expires March 31, 2017. Will**
20 **KEDNY continue to serve Estates following expiration of this agreement?**

Rebuttal Testimony of the Rate Design Panel

1 A. Yes. Earlier this year, Estates applied for firm service for 39 of its accounts
2 currently served under the existing TC agreement, and KEDNY is working to
3 process those application and convert the accounts to firm service where
4 possible. While KEDNY has proposed to close TC service to new customers,
5 it will continue to offer TC service to existing customers until such time as an
6 appropriate long-term alternative is developed. Therefore, for all Estate's
7 accounts not converting to firm service, KEDNY will work with Estates on an
8 appropriate extension of the current TC agreement.

9

10 **Q. Estates has proposed a negotiated rate for SC-3 – Multi-family firm rates.**

11 **Does the Panel agree with this proposal?**

12 A. No. KEDNY's tariff does not provide for negotiated rates for firm service
13 classes, as it does with non-firm rates. Unless the tariff is changed to provide
14 for it, KEDNY does not have the ability to negotiate a non-tariff rate.

15 Moreover, Estates' proposal for a negotiated SC 3 rate would necessitate that
16 KEDNY treat similarly situated SC 3 customers differently without a valid
17 reason for doing so. Estates has not presented any reason why a negotiated,
18 discounted rate is appropriate in this case.

19

Rebuttal Testimony of the Rate Design Panel

1 **VII. Gas Rates for Electric Generation**

2 **Q. Please explain the Companies' proposed changes to gas sold for electric**
3 **generation.**

4 A. The Companies proposed to credit 100% of electric generator revenue to the
5 revenue requirement to reduce delivery rates to firm sales and firm
6 transportation customers. Any difference between actual revenue and the
7 amount included in base rates would be reconciled at the end of each rate year
8 and be credited or surcharged to firm sales and transportation customers
9 through the DRA for the 12-month period starting March 1st.

10

11 **Q. Did the SGRP agree with the Companies' proposals?**

12 A. Yes, the SGRP agreed with the Companies' proposals.

13

14 **Q. Did the Staff Gas Policy and Supply Panel make any recommendations**
15 **with respect to gas for electric generation?**

16 A. Yes. The Staff Gas Policy and Supply Panel recommended that the
17 Companies perform a detailed analysis of the cost incurred to serve electric
18 generators to be filed within 90 days of the issuance of an order in these
19 proceedings. The Staff Gas Policy and Supply Panel also recommended
20 changes in the balancing rules for power generators and a number of tariff
21 revisions.

Rebuttal Testimony of the Rate Design Panel

1 **Q. Do the Companies accept these proposals?**

2 A. The Companies agree that a cost of service study should be done to reevaluate
3 the contributions made by the electric generators on the Companies' systems.
4 The Companies' Witness Elizabeth Arangio discusses the time frame
5 necessary to complete this study. The Companies, however, do not agree with
6 the Staff Gas Policy and Supply Panel's proposal to implement changes to any
7 of the electric generator tariff provisions prior to completion of the
8 recommended cost of service study. The Companies believe that changes to
9 the electric generator tariff provisions should be addressed in totality and
10 should be included in the overall evaluation of the cost of service.

11

12 The Companies' Witness Arangio explains the Companies' concerns and
13 positions with implementing changes to the balancing provisions, cash out
14 tiers and penalty provisions. The Companies have no objection to identifying
15 surcharges and discounts involved with the daily balancing cash out tiers as
16 penalties in their tariffs, as recommended by the Staff Gas Policy and Supply
17 Panel.

18

19 **Q. LIPA raised a number of issues regarding KEDLI's electric generator**
20 **rates and the Value Added Charge ("VAC"). Does the Panel have any**
21 **comment?**

Rebuttal Testimony of the Rate Design Panel

1 A. As explained above, the Companies propose that changes to the electric
2 generator tariff provisions be addressed in totality and should be included in
3 the overall evaluation of the cost of service that will be considered outside of
4 these rate cases. Such a global approach will address the issues LIPA has
5 raised in the context of the comprehensive review of rates for electric
6 generators. With regard to LIPA's issues regarding the VAC, there is
7 currently a VAC proceeding in Case 15-G-0469 (Proceeding on Motion of the
8 Commission to Review the Appropriateness of the Value Added Charge for
9 Natural Gas Utilities of New York State) to review the appropriateness of the
10 VAC for natural gas utilities in New York State. That proceeding would be
11 the correct forum to address any changes to the VAC.

12

13 **VIII. Low Income Rate Design**

14 **Q. What was the SGRP's proposal regarding recovery of low income**
15 **program costs?**

16 A. The SGRP recommended that the costs of the low income program be moved
17 from rate design and recovered in base delivery rates following the revenue
18 allocation and rate design process to recover the total revenue requirement
19 approved in this case. Differences between actual and projected low income
20 program costs would be subject to full reconciliation. As discussed in the
21 Revenue Requirements Panels' rebuttal testimony, the Companies accept the

Rebuttal Testimony of the Rate Design Panel

1 SGRP's proposal and have made an adjustment to revenues and O&M
2 expenses.

3

4 **IX. LAUF Gas**

5 **Q. Please summarize the SGRP's position with respect to KEDNY and**
6 **KEDLI's proposed LAUF targets.**

7 A. Staff recommended that KEDLI use a four-year average instead of a five-year
8 average to calculate the LAUF target. For KEDNY, Staff recommended the
9 LAUF target be fixed at the value established in Case 12-G-0544 and the dead
10 band removed. Staff also recommended adjusting the LAUF calculation to
11 remove LAUF associated with inactive accounts older than 60 days and
12 believes that inactive accounts should not be incorporated into usage
13 calculation.

14

15 **Q. Does the Panel agree with the SGRP's recommendation?**

16 A. No, we do not. KEDNY and KEDLI followed the methodology prescribed in
17 Staff's White Paper to calculate their respective LAUF targets. The White
18 Paper provides for the LAUF target to be set at the five-year average LAUF
19 percentage. There are no provisions in the White Paper for arbitrarily
20 removing years or completely ignoring the five-year historic average. There
21 are also no provisions in the White Paper for excluding specific factors that

Rebuttal Testimony of the Rate Design Panel

1 may contribute to the LAUF. Staff's proposal is inconsistent with its own
2 White Paper and is further inconsistent with what the Companies have been
3 required to use for their annual LAUF over/under reconciliations.
4 Accordingly, the SGRP's recommendations should not be adopted.

5

6 **Q. Is the Panel proposing any modifications to the LAUF calculation?**

7 A. Yes. The SGRP is correct in stating that, in accordance with the White Paper,
8 if the standard deviation of the five-year historic average is greater than 0.5
9 percent, the dead band should be limited to plus or minus one percent.
10 KEDNY and KEDLI inadvertently included a standard deviation greater than
11 0.5 percent and propose to correct the respective dead bands as follows:

- 12 • KEDNY's five-year average LAUF equals 2.273% so the upper dead band
13 will be 3.273% and the lower dead band will be 1.273%.
- 14 • KEDLI's five-year average LAUF equals 1.476% so the upper dead band
15 will be 2.476% and the lower dead band will be 0.476%.

16

17 **Q. Do you agree with the SGRP's recommendation for KEDNY that the**
18 **LAUF target be fixed at the value established in Case 12-G-0544 and that**
19 **the dead band be removed?**

20 A. No. Such a recommendation, again, is inconsistent with the prescription in
21 the White Paper for the use of a five-year average and for the calculation of

Rebuttal Testimony of the Rate Design Panel

1 the dead band. Although the SGRP claims that there needs to be a stronger
2 incentive to control losses, it offers no support for this statement. In fact, the
3 Companies incurred substantial penalties over the five-year period using the
4 actual LAUF that Staff is proposing to ignore in proposing modifications to
5 the targets. The LAUF targets set forth in the White Paper are adequate to
6 incent the Companies to minimize LAUF to the extent they are able.

7

8 **X. RDM**

9 **Q. Please generally describe the Companies' proposals to the RDM.**

10 A. The Companies proposed an update to the SC 1B targets, to eliminate the lost
11 revenue recovery mechanisms for SC 2 and SC 3 and to introduce an RDM
12 for SC 2 and SC 3.

13

14 **Q. Did the SGRP agree?**

15 A. To a significant extent, yes. The SGRP proposed one modification to the
16 Companies' RDM proposal to include in the RDM TC or IT customers that
17 migrate to firm service.

18

19

20

21

Rebuttal Testimony of the Rate Design Panel

1 **Q. Do the Companies accept the SGRP's recommendation?**

2 A. The Companies accept the SGRP's recommendation provided the Companies'
3 proposal to include forecast TC/IT revenues in base rates and to reconcile the
4 actual revenues to the amount included in base rates is adopted.

5

6 **XI. KEDNY – SC 2 Refunds**

7 **Q. Please explain the SGRP's position on the matter of the SC 2 refunds.**

8 A. In Case 14-G-0091, the Commission determined that KEDNY and KEDLI
9 had improperly implemented provisions in their tariffs for designating non-
10 residential gas customers (SC 2) as heating or non-heating on an annual basis.
11 The Companies were required to refund with interest those customers who
12 were incorrectly charged a more expensive heating rate for each 12-month
13 period between March 2008 and March 2014. KEDLI customers were
14 refunded in December 2015. The appropriate KEDNY refunds, however,
15 were not easily calculated because of the difficulty of obtaining prior years'
16 billing information, which is maintained on microfiche. The manual process
17 of extracting the microfiche data from more than 35,000 individual bills and
18 calculating the refunds would require thousands of labor hours and, therefore,
19 was estimated to cost approximately \$9 million. Alternatively, KEDNY
20 undertook to estimate refunds using available data. Based on an analysis of
21 the impact of this issue on KEDNY's SC 2 customers using electronic data, as

Rebuttal Testimony of the Rate Design Panel

1 well as the actual refunds calculated for similarly situated KEDLI SC 2
2 customers, KEDNY conservatively estimates total refunds of approximately
3 \$2.7 million due to its customers.

4
5 **Q. Did the SGRP propose a resolution of this issue in the current rate
6 proceeding?**

7 A. Yes. The SGRP proposes a one-time credit for KEDNY SC 2 customers of
8 \$9.3 million. Staff proposes to refund SC 2 customers the estimated refund of
9 \$2.7 million plus 80 percent of avoided labor costs (80% of approximately
10 \$8.3 million, or \$6.3 million) to manually calculate the KEDNY refunds. The
11 SGRP contends that the one-time credit is an appropriate resolution of the
12 issue.

13
14 **Q. Does KEDNY accept the SGRP's recommendation?**

15 A. No. KEDNY believes that the estimate of \$2.7 million is the amount that
16 should be refunded to its customers.

17
18 **Q. Please explain why.**

19 A. Although KEDNY does not have the electronic data to calculate the precise
20 refunds for the period April 2008 through March 2013, it has electronic data
21 to calculate the refund for the period April 2013 through March 2014. This

Rebuttal Testimony of the Rate Design Panel

1 resulted in a 0.2 percent error rate affecting just 89 of KEDNY's nearly
2 50,000 SC-2 customers for this period. The affected customers were entitled
3 to refunds totaling approximately \$25,000 or \$280 per customer. In addition,
4 KEDNY was able to recast April 2014 through May 2015 (which was billed
5 correctly) and determined that, if the incorrect methodology was used for the
6 heat/non heat reclassification, KEDNY would have overbilled 501 customers
7 (1.0 percent error rate) by approximately \$108,000 or \$216 per customer.

8

9 **Q. Is KEDNY proposing to use the two years of known data to extrapolate**
10 **the five years of data that resides on microfiche?**

11 A. No. KEDNY is proposing to use the average error rate identified for KEDLI
12 of seven percent and the average refund per customer of \$418. The KEDLI
13 error rate is substantially higher than the 0.2 percent and 1.0 percent identified
14 by KEDNY for 2013 and 2014, respectively, and the refund per customer of
15 \$418 is substantially higher than the \$280 and \$216 calculated by KEDNY for
16 the same periods. Applying an estimate for interest and taxes to all potentially
17 impacted customers equates to a total refund of \$2.7 million. If KEDNY were
18 to use the two years of its known refund information and extrapolate to the
19 five years for which it does not have electronic data, the refund would be
20 approximately \$900,000. KEDNY believes that its proposed refund of \$2.7

Rebuttal Testimony of the Rate Design Panel

1 million is conservative and will more than fairly compensate customers for
2 this issue.

3

4 **XII. NYFS Revenue**

5 **Q. Please describe the Companies' proposed treatment for NYFS costs.**

6 A. The Companies proposed to remove recovery of NYFS costs from base rates
7 and include these costs in a surcharge that would be reset January 1st of each
8 year based on an estimate of NYFS costs for the upcoming calendar year and
9 reconciled to actual costs on an annual basis.

10

11 **Q. Did the SGRP agree with this proposal?**

12 A. No. The SGRP is recommending no changes to the current ratemaking
13 treatment until the new cost methodology is finally negotiated with Con
14 Edison and therefore does not agree to implement a surcharge mechanism at
15 this time. When a new agreement is negotiated, the SGRP recommends that
16 the Companies file a formal petition to the Commission seeking alternative
17 ratemaking treatment for revenues received and costs incurred. The SGRP
18 has reflected an upward adjustment to operating revenue for KEDLI of
19 \$4.299M and a downward adjustment to operating revenues for KEDNY of
20 \$6.493M.

21

Rebuttal Testimony of the Rate Design Panel

1 **Q. Do the Companies accept the SGRP's recommendations and cost**
2 **recovery proposals?**

3 A. No. The Companies are in active negotiations with Con Edison and anticipate
4 that a new NYFS agreement will be finalized in the next few months. If the
5 agreement is finalized during the pendency of these rate proceedings, the
6 Companies believe that any changes should be incorporated in any rate
7 settlement, including cost recovery through either base rates or a surcharge.

8

9 **Q. Does the SGRP propose any other changes to the NYFS costs?**

10 A. Yes. The SGRP also recommends that the Companies be subject to a 0.5
11 percent LAUF factor for gas transported through the NYFS based on the Staff
12 White Paper recommendation that all customers should contribute to system
13 line losses on a throughput basis.

14

15 **Q. Do the Companies agree?**

16 A. No. The Companies do not believe that a 0.5 percent LAUF factor is
17 appropriate for the NYFS because these transmission facilities are not
18 susceptible to leaks, theft of service, billing issues or other factors that
19 generally contribute to LAUF on the distribution systems. While meter
20 accuracy issues may result in some amount of LAUF on the NYFS, a recent
21 analysis by the Companies and Con Edison suggests that the impact of meter

Rebuttal Testimony of the Rate Design Panel

1 accuracy on the ten NYFS metering points is much less than 0.5 percent.
2 Moreover, any changes to the treatment of LAUF on the NYFS must be
3 incorporated in the newly negotiated NYFS agreement. The Companies will
4 work with Con Edison to consider whether a LAUF factor is appropriate in
5 the NYFS agreement.
6

7 **XIII. Miscellaneous Rate Design Issues**

8 **A. *Gas Tariff Provisions***

9 **Q. The SGRP supports expanding the refund period and eliminating the cap
10 on the GAC monthly imbalance, but does not agree with the Companies'
11 proposal to implement a mid-year adjustment to the annual cost of gas or
12 the MFC. Do the Companies accept the SGRP's recommendation?**

13 **A.** Yes, the SGRP's limitation and conditions are acceptable.
14

15 **B. *GSRS***

16 **Q. The SGRP recommends that the Companies revise the allocation to first
17 allocate the revenue to be collected in the surcharge to the service classes
18 based on delivery revenues and then develop a specific rate for each
19 service class. Do the Companies accept the SGRP's proposal?**

20 **A.** Yes, the Companies agree to develop a specific unit rate for each service class
21 based on total delivery revenues collected. This surcharge is unitized for each

Rebuttal Testimony of the Rate Design Panel

1 service class based upon the forecast percentage of each service
2 classification's contribution of total firm sales and transportation delivery
3 revenues (SC 1, 2, 3, 4A, 4A-CNG, 4B, 7 and 21 firm sales and SC 17 firm
4 transportation customers) beginning January 1, 2017.

5

6 **C. Paperless Billing Credit**

7 **Q. Please explain the issues involving the paperless billing credit.**

8 A. The Companies proposed to introduce a paperless billing credit for customers
9 who elect to receive a paperless bill (KEDNY = \$0.49 per service period and
10 KEDLI = \$0.35 per service period). KEDNY also proposed an update to the
11 credit if there was a change to the electronic billing system that would cause
12 the Companies to adjust the KEDNY credit to better reflect the costs. The
13 SGRP agrees with the paperless billing proposal, but disagrees with the
14 proposal to update the KEDNY credit. The Companies would need to file
15 tariff amendments so that the Commission could determine if the change in
16 rates is warranted.

17

18 **Q. Do the Companies accept the SGRP's position?**

19 A. Yes.

20

Rebuttal Testimony of the Rate Design Panel

1 **D. Consumer Power Advocates (“CPA”)**

2 **Q. Witness John Dowling on behalf of Spring Creek Towers (“Starrett”) and**
3 **CPA recommended that all of KEDNY’s IT rates be limited to the**
4 **delivery component of SC 4A - High Load Factor firm service. Does**
5 **KEDNY accept this proposal?**

6 **A.** No, KEDNY does not agree with this proposal. KEDNY believes its current
7 proposal for interruptible delivery rates is reasonable. Furthermore, not all
8 interruptible customers share the characteristics of the SC 4A - High Load
9 Factor class.

10

11 **Q. Mr. Dowling also recommends that delivery rates for all customers using**
12 **distributed generation greater than 1MW have rates equal to the rates set**
13 **for wholesale electric generators. Does KEDNY accept this**
14 **recommendation?**

15 **A.** No. If Staff believes that small generators should be addressed in the study of
16 the cost of serving electric generators that it recommends, KEDNY will work
17 with Staff and the parties in that regard. Furthermore, Mr. Dowling notes that
18 the issue of pricing for small generators is a subject of the REV proceeding
19 (Case 14-M-0101). KEDNY believes that this subject is more appropriately
20 addressed in that case than in the more limited confines of these base rate
21 proceedings.

Rebuttal Testimony of the Rate Design Panel

1

2 *E. Starrett – Eligibility for Electric Generator Rate*

3 **Q. Starrett states that because its gas delivery rate is significantly higher**
4 **than the rates offered wholesale generators, KEDNY has unfairly limited**
5 **Starrett’s opportunities to participate in NYISO markets and in BQDM**
6 **or other distributed energy programs. Do you agree?**

7 A. Under the tariff provisions, Starrett does not qualify for the wholesale
8 generator rate.

9

10 *F. GEE issues*

11 **Q. Does GEE propose any change concerning demand charges for KEDNY’s**
12 **SC 4-A and 4-B high load factor rates and similar KEDLI rate schedules?**

13 A. Yes. GEE proposes that demand charges be updated as overall demand
14 charges change for each year the rates in these cases remain in effect.

15

16 **Q. Do the Companies have any comments on this proposal?**

17 A. The Companies anticipate updating the demand rate annually for the
18 following service class groupings:

- 19
- 20 • Firm sales;
 - 21 • High load factor;
 - 22 • Wholesale NGV sales;
 - 23 • Year-round space conditioning;
 - TC;

Rebuttal Testimony of the Rate Design Panel

- 1 • Off-Peak; and
2 • Interruptible sales.

3

4 **G. *URAC Issues***

5 **Q. What issues did URAC raise regarding a customer’s access to factors**
6 **required to do a bill calculation?**

7 A. With regard to heating customers, URAC commented that the Companies
8 apply a weather normalization factor and an internal base and slope method of
9 calculating the bills, but that the information is not filed with the Commission
10 or made available to the public. URAC notes that as a result, customers
11 cannot calculate their weather normalization adjustment on their own.

12

13 **Q. Is URAC’s contention that these omissions violate the PSL a reasonable**
14 **claim?**

15 A. No. URAC notes that PSL §66.12 provides the Commission the right to
16 require KEDNY to provide the weather normalization factor information to its
17 consumers. However, URAC did not demonstrate that the Commission
18 actually has required KEDNY to post such information. Consequently,
19 URAC’s charge is baseless.

20

Rebuttal Testimony of the Rate Design Panel

1 **Q. Are the Companies going to provide the weather normalization factors to**
2 **the Commission?**

3 A. URAC did not demonstrate that publicly providing the information is
4 necessary or advisable. Upon such a demonstration and upon Staff's
5 concurrence that the provision of such information is desirable from a public
6 policy perspective, the Companies would be willing to explore the feasibility
7 of providing this information on their website.

8

9 **Q. Are the Companies going to provide customers with the base and slope**
10 **factors used in calculating the bills?**

11 A. Base and slope factors are in fact customer specific and are recalculated with
12 each bill that uses an actual meter read. It is not feasible to post these factors
13 either on line or on the customer's bill. However, these factors are available
14 upon the customer's request.

15

16 **Q. Is the Panel aware of URAC's contention that KEDNY's initiative to**
17 **transfer residential customers from SC 1A to 1B based on usage violates**
18 **KEDNY's tariff?**

19 A. Yes. On page 11 of its testimony, URAC claims that even though "using an
20 algorithm to identify possible residential heating and non-heating customers is
21 a logical way to locate these consumers, changing their rate based solely on

Rebuttal Testimony of the Rate Design Panel

1 that information, and a non-response to a form letter, is not consistent with the
2 terms of the tariff.”

3

4 **Q. Does the Panel agree?**

5 A. No. URAC’s contention is based on a misinterpretation of the tariff. The
6 tariff, PSC No. 12 - GAS, Leaf 143, states only that “Classification No. 1B is
7 available to customers using gas service to supply the principal residential
8 space heating requirements of any of the following premises....” The tariff
9 does not affirmatively require the verification of the existence of gas heating
10 appliances. Consequently, if KEDNY suspects, based on an increased usage
11 pattern, that a customer has installed gas heating equipment without notifying
12 the Company, KEDNY will contact the customer before switching him or her
13 to the residential heating rate. In this way, the customer is free to dispute the
14 Company’s suspicion and rate reassignment. If, however, the customer fails
15 to respond to the Company’s request, it is assumed that the customer is using
16 gas for heating purposes and the reassignment from SC 1A to SC 1B will be
17 made.

18

19 The SGRP agreed with the Companies’ proposal, stating that if the customers’
20 usage pattern indicates that they are heating customers they should be
21 classified as such.

Rebuttal Testimony of the Rate Design Panel

1

2 **Q. URAC contends that “[c]onversely, KEDNY should also perform the**
3 **opposite review to identify flat usage accounts and affirmatively confirm**
4 **that no heat is being used; requiring the transfer from 1B to 1A.” Do you**
5 **agree?**

6 A. No, the re-categorization of a customer from non-heat to heat is more easily
7 and more accurately identified than the latter. A customer with relatively
8 flatter usage may still be a heating customer and is properly categorized in his
9 or her original, heating sub-class. The notion that KEDNY is attempting to
10 take advantage of the higher customer charge for heating customers is
11 baseless.

12

13 ***H. Consolidated Billing Charge***

14 **Q. Please explain the Companies’ proposed changes to the consolidated**
15 **billing charge.**

16 A. The Companies proposed to update the billing charge from \$0.76 to \$1.42 for
17 KEDNY and from \$0.65 to \$1.76 for KEDLI. In addition, the Companies
18 proposed to charge the consolidated billing charge to TC and IT customers.

19

20 **Q. Please address the issues raised by GEE and Direct Energy Services, LLC**
21 **(“Direct”).**

Rebuttal Testimony of the Rate Design Panel

1 A. Both GEE and Direct had concerns regarding the size of the proposed increase
2 in the billing charge. They propose phasing in the billing charge increase to
3 be consistent with the rate design principle of gradualism being proposed for
4 the phase in of the delivery charges.

5

6 **Q. Do the Companies agree with issues raised by GEE and Direct?**

7 A. Yes, as explained in the Companies' response to IR GEE-42 (RF-42), the
8 Companies do not oppose a phased in approach to the proposed billing charge
9 increase if there is a multi-year settlement. If there is not a multi-year
10 settlement, the proposed charges are cost justified and should be implemented.

11

12 **Q. Please address the issues raised by NYC.**

13 A. NYC Witness Baudino is opposed to charging the billing charge to TC and IT
14 customers. Mr. Baudino contends that the rates paid by TC customers are not
15 consistent with the true cost to serve those customers and he believes that the
16 costs associated with consolidated billing are already being collected in the
17 rates being paid by TC customers.

18

19 **Q. Do the Companies agree with NYC's position?**

20 A. No. The Companies are proposing to assess the billing charge to TC and IT
21 customers because the Companies incur costs to bill TC and IT customers in

Rebuttal Testimony of the Rate Design Panel

1 the same way they incur costs to bill the firm service classes. As explained
2 above, the Companies believe their proposed TC/IT rate design provides a
3 sufficient discount to these customers. The otherwise applicable firm service
4 classifications have variable rate steps, and the Companies are proposing to
5 fix the TC/IT delivery rate at parity to the last step in those service
6 classifications. The billing charges are not included in the firm delivery rates
7 and are therefore not included in the proposed delivery rates for TC and IT
8 customers and must be separately charged to recover the costs.

9

10 **Q. Does this conclude your testimony?**

11 A. Yes, it does.

Request for Information

FROM: KEDNY/KEDLI, Rate Design Panel

TO: UIU Rate Panel

SUBJECT: Customer Charge Computation

Request:

The UIU Rate Panel's testimony (p. 57) asserts "Schedule 5 of Exhibit__ (URP-1) compares KEDLI's customer charges to its customer costs, based on the Company's ECOS study, excluding distribution mains and services." The testimony also cites Schedule 5 (the exhibit is actually labeled Exhibit 4) of Exhibit__ (URP-2) for KEDNY.

1. Why did the UIU Rates Panel exclude services (and related costs) from the calculation of customer charge costs?
2. Is it the position of the UIU Rates Panel that services (and related costs) should be excluded from the calculation of customer charge costs?
3. If the answer to the preceding question is "yes," please cite utilities in New York State or other jurisdictions where the calculation of customer charge costs excludes services (and related costs).
4. Please present the computation of the customer costs shown on Schedule 5 of Exhibit__ (URP-1) and Schedule 5 of Exhibit__ (URP-2).
5. The UIU Rate Panel asserts that the cost of services reflects the cost of connecting the customer, plus the maximum demand volume of gas delivered. However, the panel believes the cost should be recovered in a volumetric rate. Please explain how either of the cost causation factors that the panel acknowledged is related to annual volumes.

Response:

1. Services must be sized for Design Day needs. The cost of a service will vary depending upon the anticipated maximum demand for gas at any given location. The cost of a service line is not necessarily identical for all customers within any given class. A 1:1 relationship does not exist between the number of services and the number of customers, particularly in urban areas. In urban areas the same service is often used to deliver gas to more than one customer. Since multiple customers can share the same service, there is no compelling reason to include services in the analysis of “customer costs” or to recover the cost of service lines on an equal per-customer basis. To the contrary, it is reasonable to attribute more of the cost of service lines to larger customers than to smaller customers within the same class.
2. Yes. This treats small and large customers more fairly and it sends better prices signals to customers to encourage them to use energy more efficiently.
3. We are not aware of the extent to which utilities in New York or other jurisdictions calculate customer charge costs by including or excluding services (and related costs). Furthermore, the same jurisdiction or utility may handle service costs one way for class allocation purposes and another way for rate design purposes. Costs may not be recovered on a per-customer basis to the same extent they are allocated on that basis. This is similar to the recommendations of the UIU Gas Rate Panel in this proceeding, where our recommended cost recovery doesn't necessarily follow our cost allocation across classes. The potential for differences can be gleaned from the May 28, 2015 report by the American Gas Association, which includes service lines in its list of “fixed” costs, but goes on to discuss the fact that utilities often recover only “a portion of these costs through a fixed charge on the customer's bill. This is most often called the “customer charge,” but it is also called minimum bill...” The report goes on to note that cost recovery policies vary widely across utilities and jurisdictions, and concludes that, on average “The customer charge... typically recovers only 46 percent of a utility's actual fixed costs....” While some utilities would prefer to increase that percentage, we believe it is preferable to hold down the percentage of fixed cost recovery through fixed customer charges because this treats small and large customers more fairly and it sends better prices signals to customers to encourage them to use energy more efficiently.
4. Please see attached files:
KEDLI 100% DD Demand - Customer Charge Analysis.pdf
KEDNY 100% DD Demand - Customer Charge Analysis.pdf
5. In a two-part rate design, customers are not charged on the basis maximum demand or peak rate of usage. Instead, the volumetric rate element is used to recover costs that vary with peak demand. Among other reasons why this is a logical, average daily demand (and annual energy usage) are correlated with peak demand.
