RE: STOPPING THE ANP PLANT IN TORNE VALLEY

Thank you for giving the public this additional opportunity to speak out. I continue to be very concerned that American National Power's application to build a plant in Torne Valley be rejected, in order to protect Torne Valley. There are many reasons:

- The plant would be situated at a sensitive point on a sole source aquifer, which is already overstressed.
- The site has historic and cultural associations, which should be respected.
- The Valley is a wilderness area, jutting into Harriman Park, which sustains wildlife, such as the eastern timber rattlesnake—a threatened species.
- Torne Brook is one of few remaining native spawning brook trout streams in the whole region.
- The plant would add significant air pollution to a populous area, which already is a non-attainment zone for ozone reduction.

I call on you to use your powers to stop this development. We must stop all industrial development in Torne Valley to preserve this gateway between Ramapo Reservation and Harriman Park for generations to come.
