CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 I. INTRODUCTION

2 Q. Would the members of the Shared Services Panel ("Panel")  
3 please state your names and business addresses?

4 A. Our names are Saddle L. Smith, Manuel Cancel, Richard  
5 Bagwell, Joan Jacobs, Carlos D. Torres, Margaret Jolly,  
6 Michael Haggerty, and Michele Campanella. Our business  
7 address is 4 Irving Place, New York, NY 10003.

8 Q. By whom are the panel members employed?

9 A. We are all employed by Consolidated Edison Company of New  
10 York, Inc. ("Con Edison" or the "Company").

11 Q. Please explain your educational backgrounds, work  
12 experience, and current general responsibilities.

13 A. **(Smith)** I am currently the Vice President of Facilities  
14 and Field Services for the Company. I have been employed  
15 by Con Edison since 1982, holding positions of increasing  
16 responsibility in a variety of support and operating  
17 positions including: Senior Attorney, Law Department;  
18 Director of Equal Employment Opportunity ("EEO") Affairs;  
19 Director of Facilities Management; Vice President, Electric  
20 Operations - Staten Island; Secretary and Associate General  
21 Counsel; and Vice President, Facilities. Effective August  
22 2014, I was elected to my current position, Vice President  
23 of Facilities and Field Services. As Vice President of  
24 Facilities and Field Services, I am responsible for

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 operating and maintaining over 40 facilities (office  
2 buildings and field operations locations/service centers)  
3 within the service territories of Con Edison and Orange and  
4 Rockland Utilities, Inc. ("O&R"), including: planning and  
5 project management; engineering services; environment,  
6 health and safety; and office services. I am also  
7 responsible for all the garages throughout Con Edison and  
8 O&R as well as Automotive Engineering and Fleet  
9 Administration, and for providing tanker support, material  
10 delivery services, and other logistics and emergency  
11 support services for the Company. I am responsible for  
12 approximately 600 employees between both Con Edison and  
13 O&R. I earned a Juris Doctorate from Columbia University  
14 in 1978 and a Bachelor's Degree in Classics from Bowdoin  
15 College in 1975.

16 **(Cancel)** I have been employed by Con Edison since 1981,  
17 holding positions of increasing responsibility in  
18 Engineering, Customer Service, Information Technology  
19 ("IT") and Internal Audit. I was elected to my current  
20 position, Vice President of Information Technology in June  
21 2013. As Vice President of Information Technology, I am  
22 responsible for all corporate information technology  
23 initiatives, including application development, network and  
24 data center operations and cyber security. I hold a

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Masters of Business Administration from Cornell University  
2 and a Bachelor's degree in Management Information Systems  
3 from Baruch College. There are approximately 400 employees  
4 in Information Technology.

5 **(Bagwell)** I am currently the Vice President of Human  
6 Resources ("HR"). I assumed this position in August 2014.  
7 In my current position, I am responsible for various human  
8 resources activities including Benefits, Compensation,  
9 Human Resource Support, Employee and Labor Relations, and  
10 Occupational Health. Specifically, my responsibilities  
11 include developing human resource policies and programs for  
12 the Company; negotiating and administering labor agreements  
13 that are compliant with federal, state and city regulations  
14 for human resource related activities (e.g., Family and  
15 Medical Leave Act ("FMLA"), Employee Retirement Income  
16 Security Act ("ERISA"), Health Insurance Portability and  
17 Accountability Act ("HIPAA")); directing the preparation of  
18 information requested or required for compliance;  
19 establishing wage and salary structure pay policies;  
20 implementing cost containment strategies for health benefit  
21 programs; negotiating administrative fees with health  
22 insurance carriers; recommending alternate benefit  
23 administrators and plan changes; managing a staff of over  
24 100 professionals; and developing, implementing and

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 monitoring all aspects of the Company's executive  
2 compensation.

3 I joined Con Edison in 1973 and have held positions of  
4 increasing responsibility in a variety of operating and  
5 support positions including: Director of Employee and Labor  
6 Relations, Director of Auditing; Director of The Learning  
7 Center; Deputy Corporate Ombudsman; and Brooklyn Queens  
8 Overhead Construction Manager. I earned a BBA in  
9 Accounting from Pace University and an MBA in Finance from  
10 Iona College. I also graduated from the Executive  
11 Management Programs at Wharton Business School and Darden  
12 Graduate School.

13 **(Jacobs)** I am currently the Vice President of Learning and  
14 Inclusion ("L&I"). I assumed this position in August 2014.  
15 In this role, I oversee the Company's training and  
16 conference facility called The Learning Center ("TLC"). I  
17 am responsible for design and delivery of professional  
18 leadership and technical training programs that meet the  
19 training needs of the Company. In addition to training and  
20 development, I am also responsible for engaging the  
21 workforce in fostering diversity and inclusion throughout  
22 the Company. My areas of responsibility include  
23 recruitment and staffing, skills training, leadership and  
24 career development, diversity and inclusion, performance

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 management, and organizational development. I am  
2 responsible for managing a staff of over 200 professionals.  
3 I have over twenty-six years' experience in human resource  
4 management and law. I joined the Company in 2001 as  
5 Director of Talent Management, and have also held the  
6 positions of Director of HR Support Services, Director of  
7 EEO Affairs and Labor Relations Administrator. Prior to  
8 joining Con Edison, I was a labor attorney at New York  
9 Health and Human Services Union 1199. I also worked at the  
10 Ontario Human Rights Tribunal, the Labor Relations Board,  
11 and the Pay Equity Commission, in Toronto. I hold a  
12 Bachelor's degree in political science from McGill  
13 University and a Juris Doctorate from University of Windsor  
14 Law School. I am currently a board member for CORO a  
15 leadership development organization that trains ethical,  
16 diverse civic leaders nationwide. I am also a graduate of  
17 CORO New York.

18 **(Torres)** I am currently the Vice President of Emergency  
19 Management ("EM") for the Company. I have been employed by  
20 Con Edison since 1985. I joined the Company as a  
21 management intern and have held numerous positions of  
22 increasing responsibility throughout my career, including a  
23 Field Engineering supervisor in Gas Operations, an engineer  
24 and manager in Steam Operations, a section manager in both

SHARED SERVICES PANEL

1 Manhattan and Bronx/Westchester Electric Construction,  
2 project manager in Emergency Management, Director of  
3 Electric Operations Emergency Management, and General  
4 Manager of Construction Services. In my current role as  
5 the Vice President of Emergency Management, I am  
6 responsible for overseeing the continued development of the  
7 Company's emergency management program, making sure the  
8 program is consistent with the Corporate Emergency  
9 Management Strategy and for leading 31 Con Edison and  
10 Orange and Rockland Utilities professionals tasked with  
11 handling emergency management functions. Also, as the  
12 Company's lead liaison for Emergency Management, I  
13 facilitate the communication, outreach and cooperation  
14 between Con Edison and the many federal, state, and local  
15 agencies and organizations the Company works with during  
16 events of local, regional, and national concern. I  
17 received a Bachelor of Science degree in Mechanical  
18 Engineering in 1985 and a Master of Science degree in  
19 Engineering Management in 1994, both from the New Jersey  
20 Institute of Technology - Newark College of Engineering. I  
21 also completed the Power Technologies Inc., distribution  
22 engineering course in 2004.

23 **(Jolly)** I am the Director of Research and Development  
24 ("R&D"). I graduated in 1997 with a Bachelor of

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1       Engineering in Mechanical Engineering from The Cooper Union  
2       for The Advancement of Science and Art. I have been  
3       employed by Con Edison since 1997 and have held various  
4       engineering and managerial positions in the Steam business  
5       unit, Energy Policy and Regulatory Affairs, Distribution  
6       Engineering, and R&D. I was appointed to my current  
7       position, as the Director of Research and Development in  
8       December 2013. In this position, I am responsible for  
9       developing new products and processes to enhance the  
10      safety, reliability, efficiency, operational excellence,  
11      and customer engagement for Con Edison. I oversee fourteen  
12      employees, including twelve staff members dedicated to  
13      managing R&D projects to support the Company's Electric,  
14      Gas, and Steam business units. I guide the overall  
15      department strategy and manage the overall R&D budget.  
16      **(Haggerty)** I am currently the Vice President of Supply  
17      Chain. I have been employed by Con Edison since 1983,  
18      holding positions of increasing responsibility in a variety  
19      of support and operating positions including: Construction  
20      Management, Gas Operations, Human Resources, The Learning  
21      Center, Central Field Services, and Corporate Environment,  
22      Health and Safety ("EH&S"). As Vice President of Supply  
23      Chain, I am responsible for the procurement and the  
24      delivery of approximately \$1.8 billion in materials and

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 services for Con Edison and O&R. I earned an MBA from  
2 Fordham University and a Bachelor's degree in Civil  
3 Engineering from Manhattan College.

4 I am responsible for approximately 280 employees between  
5 both Con Edison and O&R. Approximately 80 Supply Chain  
6 employees are responsible for procuring materials and  
7 services, including construction services, for operations  
8 and support departments such as within Shared Services.  
9 Approximately 200 employees handle, store, manage and  
10 deliver material to Operations.

11 **(Campanella)** I am the Director of Corporate Security. I  
12 graduated from Clarkson University with a Bachelor of  
13 Science degree in Accounting in 1978 and from New York Law  
14 School with a Juris Doctor degree in 1989. I am an active  
15 member of the Security Committees for both the American Gas  
16 Association and the Edison Electric Institute. I am also a  
17 member of the Domestic Security Alliance Council, which is  
18 a collaboration between the Federal Bureau of Investigation  
19 ("FBI"), Department of Homeland Security ("DHS") and  
20 private industry. Prior to Con Edison, I was a Special  
21 Agent of the FBI from 1980 to 2008. Among other duties, I  
22 served as the Assistant Special Agent in Charge ("ASAC") in  
23 the Washington Field Office, a position that included  
24 oversight of the Security Branch. As the ASAC, I was

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 responsible for the protection of the Attorney General of  
2 the United States and the Director of the FBI, the physical  
3 security of the properties within the Washington Field  
4 Office territory, and the investigative services related to  
5 personnel security, including polygraphs, background  
6 investigations, and clearances. Since September 2008, I  
7 have been the Director of Corporate Security for Con  
8 Edison. As the Director of Corporate Security, I formulate  
9 and direct security policies, practices, and procedures for  
10 the Company. I direct the investigative and security  
11 related activities of thirty-six investigators and staff;  
12 act as a liaison with Federal, State, and local law  
13 enforcement agencies; advise senior executives on security-  
14 related matters; direct physical security surveys of  
15 Company facilities; and make and implement security  
16 recommendations throughout the Company. In addition, I  
17 develop specifications, monitor the performance of contract  
18 guard services and implement training requirements for  
19 Company security personnel.

20 Q. Have any panel members previously submitted testimony in a  
21 proceeding before the New York State Public Service  
22 Commission ("PSC" or the "Commission")?

23 A. All witnesses, with the exception of Mr. Haggerty, have  
24 either previously submitted testimony or testified before

SHARED SERVICES PANEL

1 the Commission. Ms. Jacobs has testified before the New  
2 York State Attorney General's office.

3 **II. PURPOSE OF TESTIMONY**

4 Q. Please explain the purpose of the testimony and the  
5 relationship of Shared Services efforts to the Company as a  
6 whole.

7 A. Shared Services is a support organization, performing a  
8 number of different support functions. These support  
9 functions include logistical support activities; business  
10 software development; maintaining and improving computing,  
11 communications, and the supply chain infrastructure  
12 throughout the Company; providing human resource services  
13 and support to employees and retirees; hiring and training  
14 employees and, where necessary, contractors; and  
15 maintaining the Company's properties. All of the projects  
16 and programs discussed in our testimony are common to the  
17 Company's Electric, Gas and/or Steam businesses and, in  
18 many cases, to O&R. The Company's Accounting Panel  
19 explains how these costs are allocated to Con Edison's  
20 electric, gas and/or steam service and, where applicable,  
21 O&R.

22 Q. Please summarize the Panel's testimony.

23 A. We describe numerous Shared Services efforts needed to  
24 support programs throughout the Company. Our testimony

SHARED SERVICES PANEL

1 also discusses various efforts that Shared Services  
2 undertakes to reduce risk and enhance public and employee  
3 safety, increase operational performance and flexibility,  
4 and enhance the customer experience by engaging our  
5 customers, in order for the Company to continue to provide  
6 utility services in a safe, reliable, and cost-efficient  
7 manner.

8 **First**, we explain the Company's capital request for general  
9 equipment.

10 **Second**, we discuss the major planned IT-related capital  
11 investments and IT Operating and Maintenance ("O&M")  
12 expenses.

13 **Third**, we explain the need to modernize, upgrade, and  
14 improve various equipment, systems and infrastructures  
15 associated with the various buildings coming under  
16 Facilities' responsibilities. We also explain the  
17 projected capital and O&M costs associated with maintaining  
18 our fleet and providing fuel to our vehicles.

19 **Fourth**, we discuss Corporate Security capital projects, an  
20 advanced security platform and its associated O&M costs,  
21 and the replacement of obsolete closed-circuit television  
22 ("CCTV") cameras throughout the Company. We also discuss  
23 O&M expenses associated with cyber forensic investigative  
24 activities.

SHARED SERVICES PANEL

1 **Fifth,** we discuss EM's initiatives aimed at improving the  
2 Company's effectiveness in response to emergency events.

3 **Sixth,** we address three new capital program initiatives  
4 within HR, including the Occupational Health Department  
5 Integrated Data Management Platform, the HR Help Desk  
6 application, and an upgrade to our HR Payroll application.  
7 We also address O&M costs associated with strike  
8 contingency preparations.

9 **Seventh,** we describe a capital program within L&I for the  
10 PeopleSoft Recruitment Module. We also explain an O&M  
11 program related to the corporate wide Diversity and  
12 Inclusion training program.

13 **Eighth,** we explain the forecasted level of Electric and Gas  
14 R&D expenditures, excluding Company labor, and discuss our  
15 past successes along with projects being undertaken in the  
16 Rate Year.

17 **Finally,** we discuss the Company's need for additional  
18 resources to support Gas Operations.

19 Q. What period does this testimony cover?

20 A. The Panel will present the projects and programs planned  
21 for the 12 month period ending December 31, 2017 ("Rate  
22 Year" or "RY1"). While, as discussed by the Company's  
23 Accounting Panel, the Company is not proposing a multi-year  
24 rate plan in this rate filing, the Company is interested in

SHARED SERVICES PANEL

1 pursuing, through settlement discussions with Staff and  
2 interested parties, a multi-year rate plan. Accordingly,  
3 we address certain capital plant additions and other  
4 programs and initiatives in the two years following the  
5 Rate Year. For the sake of convenience, we will refer to  
6 the twelve month periods ending December 31, 2018 and  
7 December 31, 2019 as "RY2" and "RY3," respectively.

8 **III. GENERAL EQUIPMENT**

9 Q. Please explain the Company's category of capital  
10 expenditures known as General Equipment.

11 A. General Equipment represents specific categories of capital  
12 equipment, defined below, that are classified under the  
13 Uniform System of Accounts as General Plant. In general,  
14 these items have a purchase cost equal to or greater than  
15 \$500 and have a life expectancy of more than one year, as  
16 detailed in the Company's Corporate Instruction CI-610-2.

17 Q. Do you have an exhibit entitled "Shared Services - General  
18 Equipment" that includes Corporate Instruction CI-610-2 and  
19 a white paper for each category of General Equipment?

20 A. Yes.

21 Q. Was it prepared under the Panel's direction and  
22 supervision?

23 A. Yes, it was.

24 MARK FOR IDENTIFICATION AS EXHIBIT \_\_ (SSP-1)

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Q. What are the categories of General Equipment?

2 A. General Equipment consists of nine main categories of  
3 capital plant or "tools." Each is commonly referred to as  
4 an XM, which is a unique budget reference coding for the  
5 Company's General Equipment. The following is a list of  
6 the Company's XMs.

- 7 • Office Furniture (XM-1)
- 8 • Transportation Equipment (XM-2/XM-13)
- 9 • Stores Equipment (XM-3)
- 10 • Shop Equipment (XM-4)
- 11 • Laboratory and Test Equipment (XM-5/XM-15)
- 12 • Tools & Work Equipment (XM-6)
- 13 • Miscellaneous Equipment (XM-7)
- 14 • Communication Equipment (XM-8)
- 15 • Computer Equipment (XM-10)

16 Q. Please generally describe the nature of and need for  
17 General Equipment.

18 A. General Equipment represents the tools and work equipment  
19 necessary and critical for employees to perform their day-  
20 to-day job functions. It includes, among other items,  
21 desks for offices, bucket trucks for overhead operations,  
22 shelving for store rooms, equipment for testing before  
23 entering manholes, jack hammers to break the street to  
24 locate underground equipment, safety hoists for entering

SHARED SERVICES PANEL

1 underground structures, and radio frequency ("RF")  
2 equipment for employees to communicate as well as the  
3 computer used to prepare this testimony.

4 More specifically, the following example illustrates the  
5 vital role General Equipment plays and how it is interwoven  
6 into the Company's daily operations from the standpoint of  
7 reliability, efficiency and safety. An underground  
8 splicing crew requires, in addition to splicing equipment  
9 such as a propane torch, a van (XM-2) to deploy the crew to  
10 the site. A mandatory rescue device (XM-7) is setup for  
11 employee safety before entering the structure. The actual  
12 work of splicing the cable requires the mechanic to use  
13 various cutter and crimper equipment (XM-6) to install the  
14 new section of cable. The work is recorded into the work  
15 management system through a computer or tablet (XM-10).  
16 Replacement for General Equipment is driven by normal wear  
17 and tear, changing operational requirements, and changes in  
18 technology, among other factors, and is intended to provide  
19 Company employees the tools necessary to complete their  
20 tasks in a safe and efficient manner.

21 Q. Do you have exhibits that explain each category of General  
22 Equipment in more detail?

23 A. Yes. This information is included as part of Exhibit \_\_  
24 (SSP-1).

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Q. Please discuss the manner in which General Equipment  
2 requirements are developed.

3 A. To begin, the Company has identified organizations that act  
4 as Control Agencies to meet corporate standards for quality  
5 and compatibility for this equipment and also provide for  
6 economies of scale in purchasing this capital equipment.

7 The Control Agencies are:

- 8 • Facilities and Field Services' Automotive  
9 Engineering/Fleet Administration
  - 10 o Vehicles (XM-2/XM-13)
- 11 • Facilities and Field Services' Operations Services
  - 12 o Office Furniture (XM-1)
  - 13 o Stores Equipment (XM-3)
  - 14 o Laboratory and Test Equipment (XM-5/XM-15)
  - 15 o Tools & Work Equipment(XM-6)
  - 16 o Safety & Miscellaneous Equipment(XM-7)
- 17 • Maintenance and Construction - Van Nest Shops
  - 18 o Shop Equipment (XM-4)
- 19 • Information Technology
  - 20 o Communication Equipment (XM-8)
  - 21 o Computer Equipment (XM-10)

22 Q. Please explain how the General Equipment budgeting process  
23 works.

SHARED SERVICES PANEL

1 A. On an annual basis, each Control Agency develops projected  
2 costs for each XM category for which it is responsible.  
3 With the exception of XM-2/XM-13 (which is explained later  
4 in this testimony), the projected spending levels are based  
5 on the Company's historical needs for such equipment, as  
6 modified during the budget review process in which each  
7 organization forecasts their future capital equipment needs  
8 for the upcoming period. During the budget process, each  
9 Control Agency requests that user organizations provide  
10 expected equipment needs. An equipment list, which  
11 includes prices, is provided to user organizations to  
12 assist them in developing their expected General Equipment  
13 requirements.

14 The user organizations notify their respective Control  
15 Agencies of their expected needs by XM category for the  
16 upcoming period. The appropriate Control Agencies review  
17 the submissions and compile all the requests.

18 Q. What occurs once the Control Agencies have developed the  
19 overall XM budget?

20 A. Projects are prioritized via a Capital Optimization  
21 methodology that identifies an optimal portfolio of  
22 projects that closely align with the Company's strategic  
23 goals. The Company has established a set of strategic  
24 drivers, each with relative weights based on long-term

SHARED SERVICES PANEL

1 objectives, which are used to prioritize all projects on a  
2 consistent basis. Each project is measured by the  
3 strategic drivers and therefore aligned to the Company's  
4 strategic objectives. The strategic assessment of each  
5 project is then presented to each organization's Capital  
6 Optimization Team for approval. After approval of the  
7 assessment of all projects, a prioritization analysis is  
8 performed utilizing optimization software and an optimized  
9 portfolio is generated.

10 Q. Once the portfolio is optimized, what occurs next?

11 A. For the "Common" capital budget, which is essentially all  
12 the XMs as well as the many other projects discussed in  
13 this testimony, plus some IT projects discussed in other  
14 testimonies and exhibits of other Company witnesses, the  
15 projects are reviewed by another group, the Common  
16 Governance Committee ("CGC").

17 Q. What does the CGC do?

18 A. The CGC is comprised of officers that oversee Common  
19 capital expenditures. They review the initial budget and  
20 meet monthly throughout the year to review the status of  
21 all the projects in the Common portfolio. The CGC reviews  
22 and approves projects included in the Common budget,  
23 including XMs, before it is formally incorporated into the  
24 budget. During the year, if there are projects below

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 budget, the below budget amounts can be re-allocated to  
2 projects that may need additional funding or emerging  
3 projects.

4 Q. When is the final budget approved?

5 A. A final budget, including the XM budgets, is approved for  
6 the upcoming one calendar-year period each November. Other  
7 operating needs, such as unplanned or emergent events, may  
8 cause variations in the General Equipment expenditures  
9 during the year. As recognized by the terms of the  
10 Company's rate plans, the Company maintains the ability to  
11 re-prioritize or reallocate funds for projects that arise  
12 during each year.

13 Q. Turning back to the budget process, once the list of needed  
14 equipment is finalized, what do the Control Agencies do?

15 A. Each Control Agency issues purchase requisitions for the  
16 category of General Equipment for which it is responsible  
17 throughout the year. The Control Agency is required to  
18 standardize the equipment purchased to maintain quality,  
19 reliability and the safety of the employees using the  
20 equipment. This function also involves the aggregation of  
21 General Equipment purchases to allow for the most  
22 competitive pricing. For example, Facilities and Field  
23 Services provides a listing of transportation equipment  
24 that can be purchased, such as cars, trucks, and mini-vans.

SHARED SERVICES PANEL

1 Q. Does the Control Agency also have a monitoring function for  
2 the XM budget under its responsibility?

3 A. Yes. The Control Agency monitors commitments and  
4 expenditures in an effort to avoid exceeding the  
5 authorization levels established in the approved XM Budget  
6 for each user organization.

7 Q. What is the Company projecting for General Equipment  
8 expenditure levels over RY1 through RY3?

9 A. We project to expend the following:

- 10 • RY1 - \$83.4 million
- 11 • RY2 - \$81.3 million
- 12 • RY3 - \$76.0 million

13 Q. Have you prepared an exhibit entitled "General Equipment  
14 Request" detailing projected expenditures for XM General  
15 Equipment?

16 A. Yes.

17 Q. Was this exhibit prepared under your direction and  
18 supervision?

19 A. Yes, it was.

20 MARK FOR IDENTIFICATION AS EXHIBIT \_\_\_ (SSP-2)

21 Q. What does this Exhibit show?

22 A. This Exhibit shows the expenditures for each category of  
23 General Equipment from RY1 through RY3.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Q. Please explain the Company's 2015 and 2016 General  
2 Equipment expenditure levels.

3 A. In 2015, we expended approximately \$96.3 million for  
4 General Equipment. In 2016, we project spending \$71.6  
5 million for General Equipment.

6 Q. Why is the 2015 General Equipment expenditure level higher  
7 than the 2016 budget?

8 A. Three major drivers were responsible for the higher level  
9 of 2015 expenditures. First, approximately \$1.6 million  
10 was spent in 2015 under the XM-2/XM-13 Vehicle equipment  
11 budget to upgrade the existing fleet of vehicles with the  
12 installation of "fuel rings," which allow Company vehicles  
13 to transmit information from the onboard computers to the  
14 new state-of-the-art card reading fueling authorization  
15 systems that are being installed as a part of the Gasoline  
16 and Diesel Fuel Station Upgrades capital project explained  
17 later in the testimony. The 2015 expenditures include the  
18 installation costs for the majority of the existing fleet  
19 and, because this is a one-time cost, it will not have a  
20 significant impact for their installation on new vehicles  
21 in future years.

22 Q. Please continue.

23 A. Second, approximately \$12.7 million of equipment purchases  
24 were advanced from 2016 into 2015. During its budgeting

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 process, the Company re-evaluated the annual expenditures  
2 for the Common capital budget, and funding was shifted  
3 within some projects and programs to balance the overall  
4 capital spending in the Common portfolio. As a part of  
5 these shifts, funding for three General Equipment  
6 categories was shifted into 2015, which was used to  
7 accelerate the purchase of equipment required for 2016.

8 The breakdown of accelerated expenditures is:

- 9 • \$6.2 million for XM-2/XM-13 - Transportation Equipment
- 10 • \$1.0 million for XM-6 - Tools and Work Equipment
- 11 • \$5.5 million for XM-10 - Computer Equipment

12 Of the \$5.5 million for XM-10, \$3.5 million was used  
13 specifically to address computer obsolescence, discussed  
14 next.

15 Q. Please continue.

16 A. Third, a total of approximately \$6.0 million was spent in  
17 2015 (which includes the \$3.5 million above in acceleration  
18 amounts) to address computer obsolescence. This was double  
19 the amount spent on average in prior years for XM-10  
20 obsolescence and replacement and was required due to the  
21 funding of other priorities that limited funding in this  
22 area during the previous years. This resulted in the  
23 purchase of the following equipment which is intended to

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 cover XM-10 requirements for new employees, devices damaged  
2 beyond repair, and obsolescence needs:

- 3 • 535 desktops
- 4 • 2,460 laptops
- 5 • 1,361 tablets
- 6 • 39 MDTs
- 7 • 282 printers and plotters

8 In 2017-2020, the XM-10 budget includes approximately \$15.4  
9 million in total for PC, laptop and mobile device  
10 replacements.

11 Q. Does the 2016 budget reflect any changes relating to Gas  
12 and other work?

13 A. Yes. The budget for 2016 reflects an increase in the  
14 purchase of General Equipment relative to 2015 due to the  
15 Gas Operations expansion explained by the Gas Operations  
16 and Infrastructure Panel ("GIOP"). Approximately \$2.8  
17 million more will be spent in 2016 for Gas Operations for  
18 XM-6 than was spent in 2015. Additionally, there is a  
19 higher amount of projected expenditures in 2016 for XM-4,  
20 XM-5/XM-15, and XM-8 for replacements requested from end  
21 users (operations) and other necessary replacements that  
22 further reduces the difference between 2015 and 2016 by an  
23 additional \$1.8 million.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Q. Please explain the impact of the Gas Operations increases  
2 to the overall General Equipment capital budget.

3 A. Beginning in 2015, Gas Operations began increasing its  
4 workforce, with a plan to continue an increase in hiring  
5 through RY3, as discussed by the GIOP. Based on the  
6 forecasted increases, additional expenditures in General  
7 Equipment are needed to purchase and supply the workforce  
8 with the vehicles, tools, and equipment necessary for them  
9 to meet their needs with an increased workload.

10 Q. Why is it necessary to purchase this additional equipment  
11 for Gas Operations?

12 A. This equipment is necessary to equip the additional  
13 workforce being hired over the next several years with the  
14 proper tools and equipment for them to perform their daily  
15 work in a safe and efficient manner. For example, step  
16 vans are necessary to transport the crews and their  
17 equipment to the field locations where the work must occur.  
18 Backhoes and pneumatic digging tools are necessary to  
19 excavate the street to install and/or replace pipe. Saws,  
20 cutters, tapping, and fusion equipment are needed to cut  
21 and connect pipe to the gas infrastructure. Gas detectors  
22 are necessary for determining proper gas flow and for  
23 detecting leaks. Computers and phones are needed to  
24 coordinate and document the work being done in the field.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Chairs, workstations, and A/V equipment are necessary for  
2 the work environment needed by the supervisors and other  
3 staff to plan and coordinate the work for the field forces.

4 Q. How much in additional funding to the General Equipment  
5 capital budget will this workforce increase require?

6 A. For RY1 through RY3, the impact to the various General  
7 Equipment budgets is as follows:

- 8 • RY1 - \$13.5 million
- 9 • RY2 - \$10.2 million
- 10 • RY3 - \$3.3 million

11 As Gas Operations' hiring plan has smaller levels of  
12 incremental additions in the later years, lower levels of  
13 additional equipment purchases are required in RY2 and RY3.

14 Q. Have you prepared an exhibit entitled "General Equipment  
15 Forecasts for Gas Operations' Increase" detailing the  
16 projected expenditures of General Equipment specifically to  
17 address the increased workload for Gas Operations?

18 A. Yes.

19 Q. Was this exhibit prepared under your direction and  
20 supervision?

21 A. Yes, it was.

22 MARK FOR IDENTIFICATION AS EXHIBIT \_\_\_ (SSP-3)

23 **XM-1, XM-3, XM-5/XM-15, XM-6 and XM-7**

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Q. Please describe the categories of equipment controlled by  
2 Facilities and Field Services' Operations Services.

3 A. Facilities and Field Services' Operations Services is the  
4 Control Agency for Office Furniture (XM-1), Stores  
5 Equipment (XM-3), Laboratory Equipment (XM-5/XM-15), Tools  
6 and Work Equipment (XM-6), and Miscellaneous Equipment (XM-  
7 7).

8 The XM-1 budget category purchases chairs, desks,  
9 workstations, modular office partitions, and other general  
10 office furniture.

11 The XM-3 budget category replaces warehouse and material  
12 handling equipment, including storage bins, pallet racks,  
13 pipe racks, shelving, and strapping/wrapping equipment.

14 This equipment is used in the central warehouse/  
15 distribution facility and regional storerooms to operate  
16 and maintain materials and supplies for distribution to  
17 operating groups, and other Company organizations. The  
18 Company maintains a central warehouse to provide materials  
19 needed in the routine maintenance and construction of the  
20 Company's transmission and distribution systems and  
21 infrastructure. It also operates approximately 15 smaller  
22 satellite locations at various major workout centers. Some  
23 of the key satellite locations are located at Van Nest  
24 (Bronx), College Point Boulevard (Queens), Third Avenue

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Yard (Brooklyn), and Neptune Avenue (Brooklyn). All these  
2 facilities are linked via work-processes and computer  
3 systems to facilitate the effective use of inventory and  
4 critical spare components. Materials are moved to and from  
5 the main warehouse as well as to field locations, such as a  
6 specific street job or a substation.

7 Q. Please continue.

8 A. The XM-5/XM-15 budget category replaces both laboratory and  
9 testing equipment.

10 Q. Please describe laboratory and testing equipment.

11 A. Laboratory and testing equipment includes volt meters, gas  
12 detectors, recorders, test boxes, and pressure gauges.  
13 These devices are used by field forces to test and evaluate  
14 electric and gas system components, including gas levels in  
15 the atmosphere when a worker descends into a manhole or  
16 around excavations.

17 Q. What is in the XM-6 budget?

18 A. The XM-6 budget category is designated for the replacement  
19 of tools and equipment, including portable pumps, chain  
20 saws, and hydraulic jacks, pneumatic hammers, parts  
21 washers, and tire repair equipment. These devices are used  
22 by field forces to assist in the installation, repair and  
23 maintenance of system components as well as for the repair  
24 of fleet vehicles.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Q. Please continue.

2 A. The XM-7 budget category represents the Company's  
3 miscellaneous equipment, such as cafeteria and kitchen  
4 equipment, safety and training equipment, fire protection,  
5 and A/V and photographic equipment, including security  
6 cameras and recorders.

7 Q. What is the procedure or process associated with the  
8 replacement requirements for XM-1, XM-3, XM-5/XM-15, XM-6,  
9 and XM-7 categories?

10 A. Items covered under these categories are typically replaced  
11 when they are deemed un-repairable or beyond economical  
12 repair. Tools and equipment are also replaced due to  
13 procedure and/or specification changes. These changes are  
14 usually initiated by the operating departments due to  
15 operating or work practice changes and can be related to  
16 new tasks, or improvements in safety, quality and/or  
17 productivity.

18 Q. Can you provide an example of these changes?

19 A. Yes. One example is the replacement of retrieval devices.  
20 The retrieval devices are included in the XM-6 budget and  
21 are used as rescue and material handling apparatus for our  
22 field crews that work in enclosed spaces. The units are  
23 positioned over manholes and vaults and are used as lifting  
24 devices. The existing devices were improved based upon

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 feedback from the field by making specification changes to  
2 the unit. The new devices offer improved ergonomics and  
3 durability over the present units.

4 Q. Please explain the ramifications if the Company is unable  
5 to acquire and have available the replacement tools,  
6 equipment and furniture in these categories.

7 A. The current inventory of tools, equipment and furniture  
8 would need to be uneconomically maintained beyond their  
9 useful life and, in many cases, personnel would be using  
10 outdated equipment. In addition to increased maintenance  
11 and repair costs on older equipment, the use of outdated  
12 equipment would result in potential delays to the operating  
13 organizations and adversely affect efficiency and  
14 productivity.

15 Significantly, the XM-7 equipment category includes devices  
16 that are critical to the life and safety of our employees,  
17 such as the safety lifting devices that allow employees who  
18 are overcome in a confined space to be lifted out by fellow  
19 employees from above, and Self-Contained Breathing  
20 Apparatus ("SCBA") and Respirators with Escape Bottles to  
21 allow employees to enter underground structures and  
22 confined spaces when the atmosphere is suspect in  
23 supporting human life.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 In addition, if the Company is unable to acquire tools and  
2 equipment with technology improvements, such as noise  
3 reduction and ergonomics, this could potentially have an  
4 adverse effect on employee safety. For example, certain  
5 employees, due to their medical conditions, require  
6 ergonomic furniture to be able to perform their duties.

7 Q. Do the projected spending levels included in this case  
8 reflect any efforts by the Company to minimize expenditures  
9 for these tools, equipment and furniture?

10 A. Yes. Tools, equipment, and furniture are evaluated before  
11 being replaced; only those that are deemed un-repairable or  
12 uneconomic to repair are replaced, except when the  
13 replacement equipment is purchased due to operating or work  
14 practice changes justifying a new type of device. As a  
15 general practice, desks, chairs, and office partitions are  
16 reused within the Company whenever possible. In addition,  
17 the majority of contracts utilized to purchase new tools,  
18 equipment and furniture are competitively bid, and where  
19 possible, orders are consolidated to take advantage of  
20 volume discounts.

21 Q. What is the projected spending in RY1 through RY3 for these  
22 General Equipment categories, XM-1, XM-3, XM-5/XM-15, XM-6,  
23 and XM-7?

SHARED SERVICES PANEL

1 A. The projected spending levels for these General Equipment  
2 categories are \$18.7 million in RY1, \$17.0 million in RY2,  
3 and \$15.1 million in RY3. The spending levels for each  
4 separate category are listed in Exhibit \_\_ (SSP-2).

5 Q. Why are the projected spending levels for these General  
6 Equipment categories decreasing from RY1 through RY3?

7 A. As mentioned earlier in this testimony, we project our  
8 spending to decrease over the course of the rate years  
9 consistent with the scheduled decline in the projected  
10 number of Gas Operations employee additions. Excluding the  
11 additional Gas Operations-related equipment, which is  
12 detailed in Exhibit \_\_ (SSP-3), the forecasted expenditures  
13 for these General Equipment categories are essentially the  
14 same, approximately \$13.8 million for each of RY1 and RY2,  
15 and \$14.0 million for RY3.

16 **XM-2/XM-13**

17 Q. Please discuss the next category of XM equipment.

18 A. The next category is items covered in General Equipment XM-  
19 2/XM-13, Transportation Equipment. XM-2/XM-13 provides for  
20 the purchase of fleet vehicles and equipment, such as  
21 trucks, cars, cranes, construction equipment and forklifts  
22 used throughout our operations. Through XM-2/XM-13, the  
23 Company owns approximately 4,000 over-the-road self-  
24 propelled vehicles, including passenger vehicles, bucket

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 trucks and tractor-trailers. Factoring in other pieces of  
2 mobile equipment, like backhoes, aerial devices, forklifts,  
3 and trailers used to move equipment and materials, the  
4 Company owns over 5,000 pieces of rolling equipment. This  
5 figure includes highway, non-highway powered equipment,  
6 trailers and mounted equipment for tracking purposes.  
7 Exhibit \_\_ (SSP-2) sets forth projected XM-2/XM-13  
8 expenditures related to the replacement of existing  
9 equipment.

10 Q. Please describe how XM-2/XM-13 is budgeted.

11 A. The Company selects for replacement fleet vehicles and  
12 equipment based on age, maintenance, and reliability. This  
13 methodology, referred to as the lifecycle model, utilizes  
14 factors related to capital cost, residual value, cost of  
15 maintenance and utilization over the life of a  
16 representative asset to determine an appropriate point at  
17 which it makes financial sense to replace such asset. The  
18 Company maintains a database of these assets and their  
19 associated operating costs. Annually, the Company  
20 identifies vehicles and other equipment that are at or  
21 beyond lifecycle for the specified budget year. The  
22 Company uses actual (historical) and expected maintenance  
23 data, as well as vehicle utilization data, to determine the  
24 most economical point to replace an asset rather than

SHARED SERVICES PANEL

1 endure increasing maintenance costs and reduced reliability  
2 that would adversely impact our ability to respond to the  
3 maintenance needs of the T&D systems. The lifecycle model  
4 also takes into account the change in maintenance costs as  
5 the asset ages. This optimizes the Company's overall cost  
6 to own and maintain these assets, and serves as a starting  
7 point for vehicle replacement decisions. The Company also  
8 utilizes its judgment and experience, as well as case-by-  
9 case evaluations of certain assets, in making replacement  
10 decisions.

11 Q. How is that analysis used to budget from year to year?

12 A. The Company maintains a table of various asset-types and  
13 their ideal/economic replacement age. This is a starting  
14 point and is further refined by looking at the specific  
15 assets chosen as candidates for replacement. Based on that  
16 review, the Company may either retain an asset that has  
17 performed better than its peer group, or accelerate the  
18 replacement of an asset that is performing below its peer  
19 group. For instance, the current expected life-cycle  
20 analysis for utility trucks indicates it is advantageous to  
21 replace these types of assets roughly every eight years.  
22 That analysis, as well as those performed for other classes  
23 of assets, is based on nearly 30 years of accumulated

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 maintenance data from the Company's Vehicle Management  
2 System.

3 Q. Do all fleet vehicles have an eight year life-cycle?

4 A. No. Life-cycles can vary depending on location, vehicle  
5 usage, application, etc. For example, a utility truck in  
6 Manhattan used for three shifts, seven days a week could be  
7 replaced before an older vehicle in Westchester that has  
8 two shifts of five day usage in a typical week.

9 Q. What would be the ramifications of not meeting the purchase  
10 requirements in XM-2/XM-13?

11 A. The cost to operate fleet vehicles and equipment beyond its  
12 economic life compounds if not replaced at an optimal point  
13 in its life-cycle. Over time, we have found that the cost  
14 to maintain this equipment can rise substantially in a  
15 short period of time if the replacement of equipment is  
16 deferred or delayed (based on the lifecycle model).

17 Reduced spending on replacement equipment would result in  
18 older and less reliable fleet vehicles and equipment being  
19 kept in service. Vehicle availability may also be  
20 impacted, and in some cases, equipment would age beyond our  
21 ability to purchase replacement parts. The consequence of  
22 this would be the introduction of an adverse effect on  
23 operating personnel's ability to respond to emergencies and  
24 to perform routine maintenance and necessary construction

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 projects. The Company cannot operate vehicles, such as red  
2 wagons, flush trucks, or bucket trucks that are not road  
3 worthy or capable of performing their functions. If  
4 adequate numbers of vehicles are not available, responses  
5 to system equipment failures, storm and weather related  
6 events and other emergent conditions could adversely affect  
7 customer restoration time.

8 While some vehicles can feasibly be maintained longer than  
9 the life-cycle would suggest with "average" performance,  
10 some critical equipment can begin to suffer structural  
11 failures due to age. The catastrophic mechanical failure  
12 of bucket-trucks, cable-pulling equipment, heavy trucks and  
13 cranes, for example, could result in injuries to equipment  
14 operators and the public.

15 Q. Do the projected spending levels include any cost reduction  
16 efforts?

17 A. Yes, in addition to the vehicle replacement process  
18 described, Transportation employees have worked with  
19 manufacturers and engineers to improve maintenance designs  
20 and remove common failures. For instance, in 2013,  
21 Transportation's engineers improved upon the design of its  
22 bucket truck body. The improved design, which incorporated  
23 lighter material, allowed for the purchase of a lower gross  
24 vehicle weight rated ("GVWR") chassis and reduced the

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 overall vehicle purchase cost. We also expect to see  
2 reduced maintenance costs as a result of this change.

3 In addition, in 2014, Transportation's engineers piloted an  
4 improved flush truck design that eliminates several high  
5 priced components, incorporates a simpler more efficient  
6 water heating system and hydraulic drive system which  
7 reduces the overall purchase cost. With these improved  
8 designs, we also expect to see reduced maintenance costs by  
9 eliminating known high maintenance components.

10 And finally, by competitively bidding large contracts to  
11 multiple vendors, negotiating volume discounts with the  
12 major Original Equipment Manufacturers and establishing  
13 multi-year agreements, the Company leverages its buying  
14 power, reducing the up-front cost of the equipment.

15 The department also employs qualified mechanics, with the  
16 appropriate technology to effectively diagnose and repair  
17 equipment. These factors reduce initial cost and  
18 maintenance, all of which translate into being able to  
19 prolong the life of our assets and/or maximize the effect  
20 of our capital replacement programs.

21 Although we are increasing our vehicle levels due to the  
22 Gas Operations expansion, we continue to monitor and  
23 analyze the fleet size and seek fleet reduction  
24 opportunities where feasible.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Q. Are there any factors that may increase the initial  
2 purchase cost of Transportation assets?

3 A. Yes, the United States Environmental Protection Agency  
4 ("EPA") continues to require diesel-emission engine control  
5 equipment for new vehicles such as greenhouse gas and fuel-  
6 efficiency Phase 1 standards, which took effect in 2014 and  
7 will continue through 2019. In previous years, these  
8 diesel emissions components added approximately \$15,000 to  
9 the purchase price of every diesel vehicle. However, the  
10 additional cost of meeting this regulatory standard through  
11 2019 is not known at this time. The budget for these costs  
12 includes the existing component cost since the Company  
13 cannot reasonably predict the costs for any new engine  
14 upgrades to meet these efficiency standards. The Company  
15 annually purchases about 150 diesel-powered vehicles that  
16 are affected by these regulations.

17 Q. What is the projected spending from RY1 to RY3 for XM-2/XM-  
18 13?

19 A. We project to spend \$48.1 million in RY1, \$49.1 million in  
20 RY2, and \$46.0 million in RY3.

21 Q. Please explain the spending levels in RY1, RY2, and RY3.

22 A. The spending in those years is primarily attributed to the  
23 Gas Operations expansion program which includes the  
24 purchase of approximately 80 additional vehicles and pieces

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 of equipment in RY1, 70 in RY2 and 20 in RY3, which equates  
2 to \$8.1 million in RY1, \$6.7 million in RY2 and \$2.1  
3 million in RY3.

4 Q. What is the projected spending from RY1 through RY3 without  
5 the additional vehicles for the Gas Operations expansion?

6 A. The projected spending without the additional Gas vehicles  
7 would be approximately \$40.0 million in RY1, \$42.4 million  
8 in RY2, and \$43.9 million in RY3. In comparing these  
9 levels to Exhibit \_\_ (SSP-2), these XM-2/XM-13 expenditure  
10 levels, absent the Gas Operations' needs, are slightly  
11 higher than in prior years. This increase is due primarily  
12 to the timing of replacement lifecycles.

13 **XM-4**

14 Q. Please describe the category of equipment known as XM-4.

15 A. This is the Shop Equipment category. The equipment  
16 includes floor grinders, lathes, milling machines, welding  
17 equipment, drill presses, jib cranes and hoists, and  
18 specialized equipment to repair network transformers and  
19 switch gear equipment.

20 Q. Please describe how the budget is designed for XM-4  
21 equipment and what the basis is for the equipment  
22 requirement and use.

23 A. The XM-4 Budget replaces Shop Equipment at the Van Nest  
24 Shops Operations Facility, the Transformer Shop in Astoria,

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 and the Electric Operations Metering Facility located at  
2 Van Dam Street in Long Island City. The equipment  
3 requirement is based upon workload, including emergency  
4 fabrication of specialized parts, such as obsolete motor  
5 and pump seals, wear rings for pumps, and bushings;  
6 substation bus bars, bushings, tap changer items, bus duct,  
7 and disconnect switches; and gas CNG bypass equipment,  
8 cutting and taping tools, and regulator stations. The  
9 three facilities mentioned above support Electric and Gas  
10 Operations. For example, under XM-4, there have been  
11 repairs to feeder pipe lines, fabricating gas regulating  
12 stations, and repairs to disconnect switches and circuit  
13 breakers.

14 Failing to perform this support work could have an adverse  
15 impact on delivery time of repairs and fabricating new  
16 parts, and returning generation/distribution equipment to  
17 service.

18 Q. What are some of the planned equipment replacements for Van  
19 Nest's Shop Operations from RY1 through RY3?

20 A. Some of our major equipment purchases under this category  
21 will include a pipe bender, Faro Arm, hydraulic shear, and  
22 heavy duty bending Brake.

23 Q. Please describe the types of equipment expected to be  
24 purchased in XM-4 in RY1-RY3.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. We expect a mix similar to prior years to continue in the  
2 years RY1 through RY3. For example, in 2014, we purchased  
3 \$500,000 of equipment comprised of Flow Jet and machining  
4 equipment, whereas in 2015, we spent approximately \$600,000  
5 on a hydraulic heavy press break and a hydraulic shearing  
6 machine.

7 Q. How much do you plan to spend from RY1 to RY3 for XM-4?

8 A. We expect to spend approximately \$400,000 annually from RY1  
9 through RY3 for XM-4.

10 Q. Do the projected spending levels included in this case  
11 reflect any efforts by the Company to minimize expenditures  
12 for this equipment?

13 A. Yes, the equipment purchased with the XM-4 budget is  
14 procured through the Company's Supply Chain organization,  
15 which employs a bidding process for vendors on pricing  
16 pieces of specialized equipment. This process can yield  
17 lower prices for equipment, and in some cases, cost savings  
18 can be acquired through combining the purchase of multiple  
19 pieces of equipment through a single vendor.

20 **XM-8 and XM-10**

21 Q. Please describe the categories known as Communication  
22 Equipment (XM-8) and Computer Equipment (XM-10).

23 A. The equipment in XM-8 and XM-10 provide the means for  
24 Company employees to communicate and access business

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 systems, including the Customer Information System ("CIS"),  
2 Outage Management systems, electric and gas monitoring and  
3 control systems as well as financial, human resource, and  
4 legal systems.

5 XM-8 "Communication Equipment" is capital communications  
6 equipment, which is mostly carrier-grade, including fiber  
7 optic cables, electronic and optical communications  
8 protocol components, transmitters, receivers, amplifiers,  
9 reflectors, towers, radios, telephones, vehicle mounted  
10 radios, walkie-talkies, telephone switches and microwave  
11 equipment.

12 XM-10 "Computer Equipment" is computer equipment used  
13 throughout the Company and includes servers, storage,  
14 Uninterruptable Power Supplies ("UPS"), mainframes,  
15 printers, plotters, computer network equipment often  
16 referred to as routers, and switches as well as laptops,  
17 tablets, desktops, and mobile data terminals ("MDTs").

18 Computers are essential to conducting the Company's day-to-  
19 day business functions and the needs for this equipment  
20 have grown in criticality as the Company becomes more  
21 automated and the use of sophisticated business systems has  
22 grown. There are approximately 500 business applications  
23 accessed via the Company computers and the number grows  
24 each year. E-mail, contact lists, and calendaring

SHARED SERVICES PANEL

1 functions are essential communication and time management  
2 tools for employees. Computers purchased through XM-10  
3 provide access to the information and control of the  
4 Company's energy management systems, financial systems,  
5 work management systems, and customer billing information.

6 Q. What is the process associated with the replacement  
7 requirements for the XM-8 and XM-10 categories?

8 A. XM-8 equipment has an extended life and is replaced at  
9 eight to ten year increments.

10 Items covered under XM-10 are normally replaced on industry  
11 standard practice of five years or as business requirements  
12 dictate new technology specifications.

13 Q. Under XM-10, please provide a summary of the approximate  
14 number of PCs, Servers, and Networks within Con Edison.

15 A. As of December 1, 2015, Con Edison had:

- 16 • Tablets - 1,299
- 17 • MDTs - 1,896
- 18 • Laptops - 4,342
- 19 • Desktops - 7,688
- 20 • Total Servers - 2,660

21 Note: This table does not reflect the 2015 XM-10 purchases  
22 discussed earlier. This equipment is scheduled for  
23 deployment in early 2016.

SHARED SERVICES PANEL

1 With respect to number of Networks, Con Edison has one  
2 Logical Corporate Information IP network used for  
3 enterprise business applications including email, intranet,  
4 and file resources. There are also operating control  
5 networks that are separated from the Corporate Network by  
6 firewalls. Firewalls are devices that provide security  
7 between networks. The control networks are located in our  
8 control centers and use a combination of Company-owned and  
9 public carrier communications circuits to communicate to  
10 field assets. The network which connects the control  
11 centers and substations is called SCADANet, discussed later  
12 in this testimony.

13 Q. How many computer devices are purchased on a yearly basis?

14 A. Since approximately 2011, the total number of laptops and  
15 desktops has stabilized and purchases are mostly limited to  
16 address obsolescence and repairs. As computers are retired  
17 and replaced, employees are moving to laptops and tablets  
18 and away from desktop PCs to allow for mobility. This  
19 trend is expected to continue and the overall number of  
20 devices increases marginally as field devices (tablets)  
21 become more prevalent for the work force. Specifically, we  
22 expect to see growth in the newer tablet market where field  
23 crews can use less expensive and more functional devices  
24 than the traditional MDTs.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Improvements in technology have enabled access to systems  
2 and information from any computer or tablet. This allows  
3 employees to use personal devices and eliminates the need  
4 for employees to have multiple Company devices to  
5 facilitate remote access, allowing the Company to maintain  
6 a lower total number of devices. Our mobile operating  
7 workforce requires immediate access to maps and procedures  
8 to perform their jobs wherever their work takes them.

9 Q. How much do you plan to spend in RY1 - RY3 for these XM  
10 categories?

11 A. In RY1, we expect to spend \$3.3 million and \$12.8 million  
12 on XM-8 and XM-10, respectively. In RY2, we expect to  
13 spend \$2.8 million and \$11.9 million on XM-8 and XM-10,  
14 respectively. In RY3, we expect to spend \$2.8 million and  
15 \$11.7 million on XM-8 and XM-10, respectively.

16 Q. How much of this funding is attributed to the increases in  
17 the Gas Operations Department?

18 A. The additional equipment needed for Gas Operations  
19 increases the XM-8 in all three rate years by a de minimus  
20 amount and XM-10 budgets by \$409,000 in RY1, \$288,000 in  
21 RY2 and \$94,000 in RY3.

22 Q. Please explain the ramifications for the Company if it is  
23 unable to meet its projected needs in XM-8 and XM-10.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. In XM-8, failure to perform upgrades and expansion to the  
2 Company's communication systems would result in an  
3 increased failure rate and limit performance and capacity  
4 of communication services affecting energy delivery  
5 systems, voice communications, and feeder protection  
6 circuits. Reliable communications systems and distribution  
7 automation systems are required to support field  
8 restoration activities and the automation of the  
9 distribution systems that maintain electric service. Con  
10 Edison operates a wireless communication system that is  
11 used by Electric Operations to manage the electric  
12 distribution network. The system provides radio coverage  
13 to pole tops and is used to operate switching devices to  
14 minimize outage duration and provide more rapid restoration  
15 during system disturbances, like storms and feeder trip-  
16 outs due to peak loading and faults. Con Edison also  
17 operates a single master site wireless communication system  
18 for voice service supporting Electric and Gas business  
19 units. The system provides on-street radio coverage for  
20 Con Edison's operations personnel throughout its 660-square  
21 mile service territory. It incorporates a man-down safety  
22 feature that alerts control center personnel to a potential  
23 safety situation affecting a field operator and is  
24 essential to Con Edison's public utility services in both

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 routine and emergency situations. This equipment also  
2 improves system reliability by allowing for communications  
3 between the control center and substations even during  
4 events that affect public carrier communications.

5 If the needed equipment in the XM-10 category is not  
6 available, the Company's ability to provide reliable access  
7 to all Company computing systems would be adversely  
8 impacted. This equipment is necessary and essential to the  
9 operations, maintenance, and expansion of the electric and  
10 gas systems, and is also an integral part of other  
11 infrastructure and business systems used by the rest of the  
12 Company including Customer Operations, Finance, and  
13 Transportation. The equipment includes items such as  
14 server hardware and software, storage, network switches,  
15 and routers, as well as PCs, tablets and laptops.

16 Q. Do the levels included in the XM-8 General Equipment  
17 category reflect any cost reduction efforts by the Company?

18 A. Yes. Within XM-8, all equipment purchases are made through  
19 competitively bid contracts. We have also been successful  
20 in re-using communication huts that have been  
21 decommissioned by external carriers, such as at our Queens  
22 Boulevard location. We consider smaller and less expensive  
23 environmentally sound cabinets where they can be used,  
24 instead of a standard communications hut, saving

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 approximately \$50,000 per cabinet. To support our radio  
2 systems, we look for opportunities to use transmission  
3 towers as cell sites, as opposed to incurring lease costs  
4 at private locations. We have also been successful in  
5 deploying mobile generators when needed rather than  
6 installing permanent units at each cell site.

7 Q. Do the levels included in the XM-10 General Equipment  
8 category reflect any cost reduction efforts by the Company?

9 A. Yes. The RY1 capital expenditure for this category is  
10 lower than it otherwise would have been. For example, IT  
11 has initiated programs to optimize its mainframe costs.  
12 One such program leverages IBM hardware and software  
13 products against non-IBM vendors suggesting suitable IBM  
14 replacement products and uncovers duplicate functionality  
15 between software products as well as products not being  
16 utilized. For required tools of which there are no  
17 suitable IBM replacements, IT has been utilizing in its  
18 contract negotiations best practices obtained from an  
19 industry consulting expert for price and duration of  
20 contracts. In addition, IT has been attempting to improve  
21 the run time efficiencies of several of the largest  
22 production batch jobs. Based on these practices, the  
23 Company has saved over \$500,000 in total during the past  
24 three years.

SHARED SERVICES PANEL

1 Con Edison has also instituted the use of virtual servers  
2 and Storage Area Network ("SAN") technology, which allows  
3 more efficient use of computer hardware and reduces costs.  
4 Server virtualization allows multiple logical servers to  
5 reside on a single physical server. During 2015, the  
6 server virtualization program achieved a rate of  
7 approximately 79% virtualization, which has reduced the  
8 need for over 2,000 physical servers. This also improves  
9 disaster recovery by migrating electronic virtual server  
10 images from one server farm to another, and also reduces  
11 the power and cooling necessary for physical servers. Cost  
12 savings are realized by avoiding the need to acquire as  
13 many physical servers and house those servers in server  
14 farms with the appropriate cooling and power capacity.  
15 Each virtual server saves approximately \$10,000 in avoided  
16 capital costs, a \$3.75 million savings in 2015 alone based  
17 on 375 servers. As a result of these efforts, we have been  
18 able to defer building a new Company-owned server farm to  
19 host servers from 2014 to 2018, as discussed in the IT  
20 portion of this testimony.

21 **IV. INFORMATION TECHNOLOGY**

22 Q. Please describe the IT organization and its organizational  
23 structure.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. IT supports the various corporate information technology  
2 initiatives. The organization is comprised of four  
3 sections: (1) Application Services, (2) IT Planning, (3)  
4 Technology Services, and (4) Quality Assurance/Contract  
5 Administration/Operation Support.

6 Q. What are the functional responsibilities of the four  
7 sections?

8 A. (1) Application Services provides and maintains computer-  
9 based applications for Con Edison. This group facilitates  
10 change and improvement of business practices and processes  
11 through the use of enabling technologies, and information  
12 and application software.

13 (2) IT Planning establishes hardware and software standards  
14 for the computing and communications infrastructure;  
15 introduces new technology into the architecture; and is  
16 responsible for cybersecurity policy. IT Planning also  
17 provides planning and operations support for the Corporate  
18 Communication Transmission Network ("CCTN"), a private  
19 communications network, as well as multiple Company-owned  
20 radio and telephone systems.

21 (3) Technology Services provides the organizational support  
22 and operations for the Company's IT in the areas of data  
23 and visual communication, equipment, and disaster recovery.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 (4) Quality Assurance/Contract Administration/Operation  
2 Support assures quality for IT processes in areas of  
3 operational security and audit management. The group  
4 provides administrative services for corporate computing  
5 and telecommunications contracts.

6 Q. How are the overall information technology needs of the  
7 Company addressed?

8 A. IT assigns employees to work with operating and/or support  
9 organizations to assist with those organizations'  
10 technology needs. IT staff and the business area  
11 organizations work together to determine the needs and  
12 develop proposed solutions for those needs. For example,  
13 the Electric Infrastructure and Operations Panel ("EIOP")  
14 testimony describes a number of IT projects aimed at  
15 improving outage and storm response, distribution  
16 automation, and work management improvements whereas the  
17 GIOP testimony explains its technology plan to improve the  
18 Company's work and asset management processes. IT is  
19 responsible for all corporate information technology needs  
20 associated with these types of activities.

21 Q. How does IT work to support the Company?

22 A. The Company's IT organization works closely with the  
23 Company's various operating and support organizations. IT  
24 forecasts and plans future technology needs, develops

SHARED SERVICES PANEL

1 standards, and assesses and influences product roadmaps for  
2 technologies. It also establishes vendor selection  
3 criteria so that technology may be maintained and best fit  
4 solutions to future needs may be obtained to mitigate  
5 technology risks.

6 Q. What measures is the Company taking to enhance management  
7 of its IT portfolio?

8 A. We are developing a Company-wide approach to technology  
9 choices (standardization) to the greatest extent possible.  
10 The Company's technology components, such as programming  
11 languages, database management systems, reporting tools,  
12 and vendor applications need to be upgraded and changed  
13 periodically. Every component also requires varying levels  
14 of knowledge in order to utilize the capabilities. With  
15 thousands of choices in technology components,  
16 standardization will help the Company to manage both costs  
17 and risks in the long term.

18 In addition to standardization, on-going oversight of the  
19 IT portfolio helps the Company avoid repeated upgrades to  
20 the same applications. The Company is attempting to reduce  
21 these iterative upgrades by planning bundled component  
22 upgrades.

23 Q. Please discuss IT's role in large IT projects with Company-  
24 wide implications.

SHARED SERVICES PANEL

1 A. IT, working with all corporate organizations and senior  
2 management, contributes to the staging of technology  
3 initiatives. As explained in more detail below, the  
4 Company has a number of major technology initiatives  
5 planned over the next few years, including implementing:

- 6 • Advanced Metering Infrastructure ("AMI"),
- 7 • Digital Customer Experience ("DCX"),
- 8 • Gas Work and Asset Management ("Gas WAM"),
- 9 • Reforming the Energy Vision ("REV"),
- 10 • Distribution System Implementation Plan ("DSIP"), and
- 11 • Customer Service System ("CSS").

12 These are all significant undertakings intended to improve  
13 the effectiveness and the range of services that we are  
14 able to offer to our customers. Undertaking any major  
15 technology project is inevitably complex and must be  
16 carefully managed. Implementing multiple major technology  
17 projects at the same time adds to the overall project  
18 complexity, especially when the projects are related. The  
19 Company, therefore, tries to strategically stage such  
20 projects.

21 Q. Has the Company recently implemented Company-wide systems?

22 A. Yes. Over the past decade, the Company has implemented a  
23 new Human Resource and Payroll System, a new Finance and  
24 Supply Chain platform, a new enterprise electronic card

SHARED SERVICES PANEL

1 access system linking all aspects of physical security into  
2 the Security Operations Center ("SOC"), and a new work  
3 management platform in Electric Operations. Additionally,  
4 as discussed by other Company witnesses in their testimony,  
5 Con Edison is implementing the DCX solution, is planning  
6 implementation of an AMI system, and is identifying  
7 technology opportunities to support the Commission's REV  
8 strategy.

9 Q. When the need for a Company-wide system is identified, what  
10 is the Company's process for developing such a system?

11 A. Generally, when the need for a new core utility system is  
12 identified, a team is formed to study the options, costs,  
13 and benefits. This team works to develop requirements and  
14 perform what is commonly referred to as an implementation  
15 study (also known as a Phase 0 study).

16 Q. What is an implementation study?

17 A. An implementation study is a pre-requisite for the  
18 implementation of major IT business projects. Con Edison  
19 has completed implementation studies prior to installing  
20 and implementing major corporate systems. Most recently,  
21 implementation studies were completed for most of the  
22 projects described above.

23 Q. Why is an implementation study performed?

SHARED SERVICES PANEL

1 A. For two reasons. First, the implementation study is  
2 intended to assist the Company in determining the scope of  
3 the project. Second, because the study details the scope  
4 of the project, the steps necessary to undertake and  
5 complete the project as well as the necessary associated  
6 labor, the study provides the Company with a detailed cost  
7 estimate. These two steps are important to controlling the  
8 project and its costs.

9 Q. Please describe how the implementation team is comprised  
10 and the team's function.

11 A. The team includes a project manager, business area subject  
12 matter experts and IT personnel. The team also typically  
13 includes resources from an IT consulting firm that has  
14 experience with implementing the target technology. The  
15 deliverables from the analysis include a detailed  
16 implementation plan with rollout schedules. Key components  
17 needed to develop this plan include:

- 18 • a summary of business requirements, including which  
19 functions need to be developed and implemented;
- 20 • a detailed project schedule with:
  - 21 o implementation options,
  - 22 o necessary resources, and
  - 23 o a fully developed cost estimate;
- 24 • a comprehensive data conversion plan;

SHARED SERVICES PANEL

1           • a complete testing plan;

2           • a rollout plan; and

3           • change management plans.

4 Q.   How long does it generally take to develop an  
5       implementation plan?

6 A.   Typically, for a major system, it takes six to nine months  
7       to complete the implementation plan.

8 Q.   What happens next?

9 A.   After the implementation plan is completed, the executive  
10      sponsor of the project seeks approval from senior  
11      management. Once the project is approved, the  
12      implementation team is compiled as well as an executive  
13      steering committee which guides and monitors the  
14      implementation process.

15 Q.   How does the Company determine what corporate-wide IT  
16      initiatives will be undertaken?

17 A.   IT works with business areas to establish priorities and a  
18      technology strategy designed to achieve our business  
19      objectives. Senior management also guides and governs the  
20      process. As a result, the Company performs a strategic  
21      planning process to develop a technology roadmap and  
22      evaluate whether or not to undertake projects considering,  
23      among other items, value to customers, risk mitigation,

SHARED SERVICES PANEL

1 cost benefit and rate impact and resources required to  
2 complete the projects.

3 Q. Has IT developed a plan for maintaining and supporting the  
4 Company's computing infrastructure needs as well?

5 A. Yes. IT has established a comprehensive plan for the next  
6 five years to continue to support the Company's IT  
7 environment, control costs, and enable new systems and  
8 technology. These investments also provide support for new  
9 business IT projects. The plan contains many initiatives  
10 and includes a combination of new program changes (O&M  
11 expenses) and capital projects. Two of these initiatives,  
12 Cybersecurity and the Server Farm plan, contain elements of  
13 both capital investment and program changes.

14 Q. Before discussing the IT programs, please generally explain  
15 the nature of the Company's relationship with software  
16 vendors.

17 A. Computing companies' business strategy is based on two  
18 items: (1) releasing new versions of their systems, perhaps  
19 addressing prior issues with the old version of the system  
20 or adding enhancements to the system; and (2) having a  
21 license contract where the consumer must buy upgrades and  
22 support for a certain time period. Many of these upgrades  
23 are necessary to maintain pace with technology as well as

SHARED SERVICES PANEL

1 address cyber security vulnerabilities that may be exposed  
2 over time for the product.

3 Q. Does the Company have to upgrade systems and procure  
4 licenses?

5 A. Yes. And we are seeing more vendors adopting this type of  
6 strategy. In fact, in these rate filings, there are  
7 funding requests for upgrading systems or for license fees  
8 due to the billing structure of the contracts. Not  
9 upgrading or maintaining licenses can leave those  
10 technologies vulnerable to security threats. There are  
11 currently approximately 500 software applications supported  
12 by our IT organization. These applications are operated on  
13 numerous hardware and communication systems acquired at  
14 different times for particular purposes. The software,  
15 hardware and communications infrastructure may also become  
16 obsolete. The Company must engage in a regular program of  
17 technology replacement and upgrades that generally require  
18 data conversion and full testing of the upgraded  
19 technology.

20 The potentially costly and extensive effort required for  
21 upgrades requires careful IT project and portfolio planning  
22 to manage project risks.

SHARED SERVICES PANEL

1 Usage of vendor software and cloud platforms requires  
2 comprehensive license management. The Company must comply  
3 with license requirements.

4 **IT Capital and O&M Expenditures**

5 Q. What is the forecasted level of capital and O&M  
6 expenditures for IT?

7 A. For capital, we are projecting approximately \$29.6 million  
8 in expenditures in RY1, approximately \$51.2 million in  
9 expenditures in RY2 (including \$30 million for the new  
10 server farm), and approximately \$21.2 million in  
11 expenditures in RY3.

12 For O&M, we are projecting program changes for \$8.3 million  
13 in incremental expenditures in RY1, \$4.0 million in in RY2  
14 and \$1.3 million in RY3, exclusive of escalation.

15 Q. Have you prepared exhibits entitled "Information Technology  
16 - Cybersecurity Programs" and "Shared Services -  
17 Information Technology White Papers" detailing the projects  
18 and programs for the IT organization?

19 A. Yes, we have.

20 Q. Were these exhibits prepared under your direction and  
21 supervision?

22 A. Yes, they were.

23 MARK FOR IDENTIFICATION AS EXHIBITS \_\_ (SSP-4, SSP-5)

24 Q. What is the forecasted aggregate level of expenditures?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. In total, for capital (excluding XM-8 and XM-10) for RY1  
2 through RY3, the capital expenditure will be \$102 million.  
3 For O&M, we are projecting approximately \$13.6 million of  
4 incremental costs for the three rate years, excluding  
5 escalation.

6 Q. Please list the categories of IT expenditures that are  
7 discussed.

8 A. We sponsor capital and O&M requests for the following  
9 projects:

- 10 • Cybersecurity
- 11 • Server Farm Expansion and Infrastructure

12 We sponsor O&M requests for the following projects:

- 13 • Cloud Computing IaaS
- 14 • Cloud Computing SaaS
- 15 • Application Architecture
- 16 • Frame Relay Decommissioning
- 17 • Data Analytics
- 18 • Electric Ops Support
- 19 • Gas Ops Support
- 20 • Mainframe Software Maintenance
- 21 • Software Maintenance

22 We sponsor capital requests for the following projects:

- 23 • Five CCTN Projects

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

- 1 • SCADANet
- 2 • Application Monitoring and Management
- 3 • BSS Database Plan
- 4 • BSS Server OS Plan
- 5 • Business Systems Sustainability Desktop OS Plan
- 6 • CCAS (Computer Enhancements)
- 7 • Collaboration Tools
- 8 • Data Center Renovation NOC
- 9 • Desktop Infrastructure
- 10 • Enterprise Applications
- 11 • IT Asset Management (IRIS)
- 12 • New Technology

13 **Cybersecurity**

14 Q. Turning to your first program, please describe the  
15 Company's cybersecurity initiative.

16 A. Cybersecurity is the process of maintaining the  
17 confidentiality, integrity and availability of computing  
18 resources against attacks from hackers and malicious  
19 software. It is important because of the risks to both our  
20 critical infrastructure and customer information, including  
21 personally identifiable information ("PII"). A successful  
22 cyber attack could, for example, have safety and/or  
23 reliability consequences for our customers, our employees

SHARED SERVICES PANEL

1 and the general public. And, there continue to be more  
2 successful cyber attacks against various companies.

3 Q. Please continue.

4 A. The Company has identified cybersecurity as one of its top  
5 corporate risks and addressing this risk is being  
6 incorporated into every aspect of our business. While many  
7 steps have already been taken to design and implement a  
8 security perimeter to defend Company cyber resources, new  
9 risks are identified each day and new techniques are needed  
10 to stay secure, improve our defenses, and stay ahead of  
11 malicious actors. Attack vectors change and responses to  
12 them must be swift and definitive. The risks from cyber  
13 attacks include operating failures of control systems,  
14 damage to transmission and distribution assets, the loss of  
15 sensitive data and employee and public safety.

16 Q. Are there other initiatives that affect the nature of the  
17 Company's actions to address cybersecurity?

18 A. There are several initiatives/rules that affect our  
19 actions. They include:

20 1) this Commission's recommendations, in Case 13-M-0178,  
21 for utilities to handle, protect, secure and dispose of  
22 customer PII,

23 2) North American Electric Reliability Council's ("NERC")  
24 Critical Infrastructure Protection standards ("CIPv5"),

SHARED SERVICES PANEL

1 which contain federally enforceable cyber security rules  
2 for the bulk electric system,

3 3) National Institute of Standards and Technology ("NIST")  
4 framework, which contains a voluntary framework for cyber  
5 security standards, and

6 (4) potential legislation at both the federal and state  
7 level regarding cybersecurity, including data breaches.

8 Q. How has the Company been addressing the cybersecurity  
9 challenge?

10 A. The Company continues to address cybersecurity from three  
11 main vantage points: (1) preventing and educating, (2)  
12 monitoring, detecting and alerting, and (3) responding to  
13 incidents, including recovery/mitigation. These three  
14 areas are described below.

15 Q. What does the Company mean by prevention and education?

16 A. Prevention is aimed at avoiding any attacks on our system.  
17 Education provides employees with information on their role  
18 in preventing cyber intrusions.

19 Q. Please explain some of the prevention-related steps the  
20 Company undertakes?

21 A. Under prevention, there are many steps that the Company  
22 undertakes to protect its systems. For example, the  
23 Company:

SHARED SERVICES PANEL

- 1 • protects the perimeter and internal IT assets with the  
2 latest firewall and intrusion prevention technology;
- 3 • deploys technologies on the internal network to either  
4 detect or prevent malicious traffic (the downloading  
5 of viruses);
- 6 • performs proactive vulnerability scanning using the  
7 latest tools to identify risks and exposures, and  
8 mitigate risks through aggressive patching and  
9 configuration policies;
- 10 • installs intrusion prevention systems to protect  
11 servers that contain PII and has acquired tools to  
12 identify PII in our environment and detect PII leaving  
13 the Company network;
- 14 • established standards and policies to secure and  
15 protect Company systems, such as a new policy  
16 requiring two-factor authentication for all server  
17 administrative access; and
- 18 • engaged an external security expert to perform  
19 penetration tests on the Company's system and perform  
20 an overall vulnerability assessment.

21 Q. How does the Company educate its employees regarding cyber  
22 risks?

23 A. The Company uses several methods to do this. First, Con  
24 Edison has established a "CyberAware" brand and regularly

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 publishes advisories and best practice information to  
2 employees. Bulletins are provided to employees when there  
3 are potential threats that employees can assist in  
4 detecting or the threat may affect their Company or  
5 personal equipment.

6 Second, the Company performs phishing tests three times  
7 annually for all employees to raise awareness regarding  
8 potential phishing type of emails. Phishing test results  
9 are shared with Company employees so employees understand  
10 the risk of clicking on inappropriate links.

11 Third, each year, a segment of the Company's Standards of  
12 Business Conduct training is dedicated to cyber security.  
13 One year, the segment was on social engineering and  
14 phishing, another year, the focus was on PII.

15 Q. Turning to the second step, detection, what does the  
16 Company do?

17 A. The Company has a 24x7 Network Operations Center ("NOC"),  
18 which monitors our entire computing network to detect  
19 threats and vulnerabilities. Once detected, the NOC alerts  
20 the necessary personnel of potential vulnerabilities or  
21 attacks. The NOC also receives any unclassified,  
22 information-sharing related alerts from government  
23 agencies. Once this information is received, the NOC  
24 reviews the information contained in the alerts and checks

SHARED SERVICES PANEL

1 to determine any indicators of compromise on our system.  
2 Appropriate responses are identified and undertaken if  
3 compromises are detected either due to alerts or monitoring  
4 information. For example, the NOC reviews system activity  
5 logs to determine if malicious code has entered into the  
6 system.

7 We also work with external entities that provide the  
8 Company with information on potential threats on a real  
9 time basis. The monitoring includes working with other  
10 utilities and federal entities to gain information on both  
11 the risk profile as well as review of the Company's network  
12 traffic and having this information analyzed on almost a  
13 real-time basis.

14 Q. Please explain your third cybersecurity area: Incident  
15 Response and Recovery/Mitigation.

16 A. The Company has designed its network to minimize the impact  
17 of a breach. The Company has also developed plans and  
18 procedures to respond to cyber attacks and data breaches.  
19 In addition, the Company's has developed procedures so that  
20 its response to any incident includes using forensics to  
21 determine what occurred, how to address the issue and then  
22 correcting the issue. We have forensics experts in both IT  
23 and Corporate Security (discussed later in this testimony).

24 Q. Is there more work to do in the cybersecurity area?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. Yes. While Con Edison has invested in people, process, and  
2 technology to implement a security strategy and program  
3 highlighted by applying layers of defense, given the rise  
4 in the volume of threats, especially in the energy sector,  
5 and the increased complexity of threats, we must continue  
6 to implement technology to improve detection, resiliency,  
7 and recoverability.

8 Q. How are you addressing the continued work?

9 A. To stay ahead of the threats that exist, we must have the  
10 technology in place to prevent and detect threats and  
11 upgrade these technologies as new or upgraded versions  
12 becomes available. Cybersecurity risks today are evolving  
13 into advanced persistent threats ("APTs"), which are  
14 unlikely to be detected using dated technology. In  
15 addition, as noted earlier, the Company must continue to  
16 pay license and upgrade fees for both new and upgraded  
17 technologies, so that we can have the latest intelligence  
18 and are not affected by a zero-day incident.  
19 Staying ahead of the threats means continuing many of the  
20 items we have mentioned above. The Company will also  
21 continue to work with outside experts on security and  
22 threat monitoring.

23 Q. Describe the O&M program changes relating to cyber  
24 security.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. The O&M program changes are approximately \$7.6 million  
2 starting in RY1 and continuing through RY3. The annual  
3 amounts are \$1.0 million in RY1 and \$3.3 million in each of  
4 RY2 and RY3.

5 The total projected capital costs are \$13.2 million. The  
6 annual amounts are \$4.4 million in each of RY1 through RY3.  
7 These initiatives are described in Exhibit \_\_ (SSP-4),  
8 which are being submitted on a confidential basis.

9 Q. Are there additional, unanticipated expenditures to address  
10 cyber security threats that may be necessary?

11 A. Yes. As mentioned above, there are on-going initiatives  
12 and legislation that may affect the programs the Company is  
13 undertaking. For example, in the REV proceeding, Staff is  
14 considering implementing the Department of Energy Voluntary  
15 Code of Conduct for protecting customer information.  
16 Implementation of this Code of Conduct could have  
17 significant costs.

18 Equally important, new cybersecurity vulnerabilities and  
19 subsequent exploitation of these vulnerabilities could  
20 occur, leaving us exposed to serious risks. In these  
21 cases, the Company would take any actions necessary to  
22 implement protections immediately. Addressing these risks  
23 would assume very high priorities within the Company  
24 process for allocating additional investment.

SHARED SERVICES PANEL

1                                   **Server Farms and Cloud Computing**

2    Q.    Please explain server farms.

3    A.    The use of computers, computer systems and business  
4            applications require servers and storage capacity.  
5            Business systems and applications enable critical business  
6            functions for the Company and include financial systems,  
7            customer systems and control systems. A server is large  
8            and powerful computer that hosts business systems or files  
9            and services requests from PCs or other servers. A server  
10           farm is a facility that houses the servers in a secure and  
11           equipped (power, cooling, cabling) environment.

12   Q.    What is cloud computing?

13   A.    Cloud computing is an architecture where servers are  
14           deployed in an environment that is scalable and reliable  
15           with large capacity and high availability schemes,  
16           including load balancing and automatic failover to protect  
17           against loss of data. Cloud computing could be deployed  
18           within a private company's environment or purchased as a  
19           service from a cloud provider. The major benefit of using  
20           a cloud provider is that the physical server farm is  
21           managed and supported by the provider, allowing a company  
22           to concentrate on its core business IT needs.

23   Q.    Please describe the Company's plan for Server Farms and  
24           cloud computing.

SHARED SERVICES PANEL

1 A. The Company has established a five-year plan that uses both  
2 private and provider cloud computing environments to enable  
3 the continued operation of the IT environment and have the  
4 capacity to meet the need for new systems. This is  
5 commonly referred to as a "Hybrid Cloud."

6 Q. Please explain a hybrid cloud in more detail

7 A. Critical and sensitive IT systems and information will  
8 reside in the private Company server farms while test and  
9 development servers and certain files systems can be moved  
10 to a public cloud. The advantage to this approach is that  
11 the large costs associated with building server farms can  
12 be reduced and deferred, such as the Company's decision to  
13 defer one server farm from 2016 to 2018.

14 Q. You mentioned the need for hybrid clouds to support new  
15 systems. What systems were you referring to?

16 A. Future systems include plans for AMI and other systems such  
17 as Meter Data Management System ("MDMS"), Gas WAM and  
18 systems that would support REV.

19 Q. Please further explain your cloud computing plan.

20 A. There are four programs associated with this plan: two  
21 capital related to server farms (Server Infrastructure and  
22 Server Farm Expansion); and two O&M that are related to  
23 cloud computing (Software as a Service ("SaaS") and  
24 Infrastructure as a Service ("IaaS")).

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Q. Please describe the Server Infrastructure capital project

2 A. The Server Infrastructure project provides for upgrades to  
3 server farms.

4 Under this program, the Company plans to spend \$1.2 million  
5 in RY1 and \$1.5 million in each of RY2 and RY3. Work to be  
6 performed in this program includes, among other items,  
7 upgrading power, cabling, and HVAC systems to support  
8 storage arrays and server capacity, replacing batteries at  
9 various units, upgrading power infrastructure at various  
10 units, and adding fiber capacity at various units.

11 Q. Why is there a need to upgrade the server farms?

12 A. The server farms need to be upgraded based on the projected  
13 volume of computing needs. Systems like AMI, DCX, Electric  
14 and Gas WAM, MDMS as well as existing systems require  
15 additional computing space. As we grow in systems and  
16 systems grow in complexity, this increase will continue.

17 Q. Please describe the Server Expansion capital project.

18 A. The Company's server farm expansion project is a multi-year  
19 project intended to address the need to decommission the 4  
20 Irving Place data center, which must be relocated elsewhere  
21 in order to maintain operations. The 4 Irving Place Data  
22 Center contains both mainframes and servers.

23 Q. How is the Company addressing this need?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. First, during 2015-2016, the Company is expanding the  
2 existing server farm at Van Nest to support relocation of  
3 the mainframe and servers from the 4 Irving Place data  
4 center. As part of this relocation, the Van Nest server  
5 farm will be expanded with network, server and storage  
6 capabilities. The cost of the Van Nest project is  
7 approximately \$13.0 million during 2015-2016.

8 Second, the Company will construct a new server farm at  
9 Worth Street in 2017-2018 for use in 2018. The Worth  
10 Street server farm allows the Company to plan for future  
11 computing storage needs for the computing initiatives  
12 mentioned earlier, like AMI, MDM, REV and Gas WAM. The  
13 availability of the Worth Street server farm will assist  
14 with providing available space and computing resources for  
15 those initiatives. Under this capital program, the Company  
16 plans to spend \$10.0 million in RY1, \$30.0 million in RY2  
17 and \$1.5 million in RY3, with expenditures for Worth Street  
18 comprising approximately \$40 million.

19 Q. Is there another component to the server farm plan?

20 A. As explained below, in conjunction with these server farm  
21 expansions and additions, the Company intends to use cloud  
22 computing to provide additional storage and server  
23 capability, explained later.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Q. To be ready for the hybrid cloud, has the Company  
2 undertaken other projects?

3 A. During 2015, at a cost of approximately \$2.0 million, the  
4 Company acquired tools to monitor and manage storage and  
5 server capacity and to automate provisioning.

6 Q. Please discuss the cloud computing and hybrid cloud  
7 projects.

8 A. Starting in 2015, Con Edison began incorporating public  
9 cloud services and plans to steadily increase the use of  
10 the cloud services over the next few years through multiple  
11 cloud providers. There are two types of cloud services we  
12 plan to deploy, SaaS and IaaS.

13 Q. What is SaaS?

14 A. SaaS is a subscription/service with a monthly or annual  
15 cost and does not require a capital investment for hardware  
16 and server software. SaaS requires the purchase of a  
17 license to use software, as opposed to purchasing the  
18 software itself. Under SaaS, when upgrades are made on  
19 software, it is automatically received by the user, as  
20 opposed to the user needing to install it.

21 Q. How will the Company use SaaS?

22 A. The Company plans to deploy the next version of office  
23 products, such as Word, Excel and/or PowerPoint, to  
24 employee computers using cloud services based on the

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 subscription model. Services available today provide up-  
2 to-date software for office systems including e-mail,  
3 spreadsheets, documents, and presentations located in  
4 secure repositories within the cloud for offsite storage  
5 and, as a result, are accessible from any location. We  
6 expect this initiative to be more cost effective than  
7 purchasing the software licenses in the traditional fashion  
8 and installing the software on 15,000 computers. The plan  
9 calls for a phased rollout to the SaaS model over a three-  
10 year period. In 2015, the Company deployed this technology  
11 to 600 employees. In 2016, the number will increase to  
12 approximately 1,000 employees. For RY1, the Company will  
13 spend \$900,000 for 7,500 users. By RY2, the rollout will  
14 be complete, with all users, approximately 15,000 in total,  
15 receiving subscriptions at an annual cost of \$1.8 million.

16 Q. Please explain IaaS.

17 A. The Company plans to engage and contract with IaaS cloud  
18 service providers for data center capacity to expand  
19 resources and improve reliability. The cloud service would  
20 be securely connected to the Company's network and provide  
21 multiple benefits. IaaS is also deployed with a monthly or  
22 annual subscription model, as opposed to a capital  
23 investment of a server farm and associated server and  
24 storage hardware.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Q. What does IaaS do?

2 A. IaaS services, which will be combined with our own private  
3 server farm capacity and referred to as a hybrid cloud,  
4 offers scalable solutions that are designed to quickly  
5 provision servers and storage. The IaaS services would be  
6 deployed in such a way as to provide mobility between the  
7 service providers and Company facilities offering Con  
8 Edison granular control over workload location. The use of  
9 these services will reduce and defer capital expenditures  
10 that would have been otherwise required to construct data  
11 centers and purchase network and server hardware. While  
12 there are projects to expand Van Nest and build a Worth  
13 Street server farm, absent the IaaS solution, the Company  
14 would have been accelerating and increasing projects for  
15 additional server farms to meet existing and projected  
16 computing needs.

17 Q. What is the projected O&M cost for IaaS?

18 A. In 2016, we expect to procure this service at a cost of  
19 \$500,000 and increase to \$1.0 million in RY1, \$1.5 million  
20 in RY2 and \$2.0 million in RY3.

21 Q. Are there cost benefits associated with IaaS?

22 A. Yes, IaaS pricing is structured in a way that only charges  
23 for computer cycles in use. By deploying a hybrid  
24 environment, the Company can use IaaS cloud services to

SHARED SERVICES PANEL

1 host workloads that are not required on a 24x7 basis and,  
2 therefore, only pay for those services when used. Two  
3 examples where we intend to use this technology include  
4 test and development servers and remote access servers,  
5 where server capacity must be increased during Company  
6 events to support additional remote employee access to  
7 systems.

8 Q. Why are these cloud computing and server farm projects  
9 important to Con Edison and its customers?

10 A. Computer systems and business applications require servers  
11 and storage capacity. Business systems and applications  
12 enable critical business functions for the Company and  
13 include financial systems, customer systems and control  
14 systems. Servers also provide access to Company data in  
15 the form of email, files and maps. The ability to access  
16 these systems and resources is critical to the Company.  
17 The amount of electronic data has grown ten-fold over the  
18 past five years and the rate is expected to continue.  
19 These projects are designed with redundancy, diversity, and  
20 provide a secure and reliable environment for resources for  
21 the next decade. The Worth Street server farm will also  
22 present opportunities to deploy systems faster and access  
23 resources faster and more reliably than today by deploying  
24 private cloud automation. Ultimately, the hybrid cloud

SHARED SERVICES PANEL

1 environment will facilitate an efficient and flexible  
2 operation, which would be able to be expanded as needed for  
3 planned business systems as well as provide the necessary  
4 performance and reliability.

5 **Remaining IT O&M Programs**

6 Q. Please describe additional planned IT O&M programs.

7 A. We have several O&M programs. The first four programs  
8 planned describe the need for incremental IT support staff  
9 and the remaining three programs involve equipment.

10 Q. Can you please explain the first four programs involving  
11 additional human resource support?

12 A. Yes. These projects, which are described in more detail in  
13 Exhibit \_\_ (SSP-5), are:

14 • Enterprise Data Analytics: This program requests funding  
15 for eight technical FTEs to support a new analytics  
16 organization. Different organizations throughout the  
17 Company look to access volumes of data and for the  
18 capability to use advanced analytics that combine data  
19 from the enterprise systems, legacy systems and external  
20 sources. Given the large volumes of data collected, the  
21 Company intends to develop a centralized group with core  
22 skills, tools and solutions for data analytics. This  
23 information could also be used to support departmental  
24 projects. Analytics allows the quick use of multiple

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 data sets to provide information to employees for  
2 business decisions. This initiative comprises the (1)  
3 acquisition and/or training of data architects, data  
4 scientists and data analysts, and (2) acquisition of data  
5 analytical modeling and development platforms and tools.  
6 The key to analytics technology is that it requires high  
7 speed computers to index and search large data  
8 repositories at high speeds. The Company plans to  
9 increase its spending by \$1.7 million in each of RY1-RY3  
10 to meet the Company's growing needs for this type of  
11 data.

- 12 • Electric Operations Support: As described in Exhibit \_\_\_  
13 (SSP-5), this program will add three technical developer  
14 FTEs as part of the business systems sustainability  
15 initiative for Con Edison's Distribution Electric Control  
16 Center's ("DECC") application portfolio. Con Edison  
17 plans to increase the IT support staff to assist in  
18 maintaining electric systems, such as work management and  
19 outage response systems. These three people will handle  
20 the growing number of electric system applications  
21 beginning in RY1 and the increase in spending is \$360,000  
22 in each of RY1, RY2 and RY3.
- 23 • Gas Operations Support: This program adds two experienced  
24 IT developers to support the Gas application portfolio.

SHARED SERVICES PANEL

1 The need for this work is similar to the electric support  
2 explained above as well as in Exhibit \_\_ (SSP-5). The  
3 cost associated with the FTEs is \$240,000 in each of RY1,  
4 RY2 and RY3.

- 5 • Application Architecture: This program is needed to add  
6 two technical architects to guide application decisions  
7 for commodity and business shared service IT portfolios.  
8 They will assist in decision-making regarding the  
9 implementation, replacement or extension of new and  
10 existing applications, employing software, such as  
11 reporting or web components, and building technology  
12 services that would be used for new commodity or business  
13 shared service applications. The need for these  
14 positions is described in Exhibit \_\_ (SSP-5). The cost  
15 for the FTEs is \$240,000 in each of RY1-RY3.

16 Q. Please continue with the remaining three O&M program  
17 changes.

18 A. These projects, which are more fully described in Exhibit  
19 \_\_ (SSP-5), include the decommissioning of frame relay  
20 public carrier circuits, increased software maintenance and  
21 increased hardware maintenance and are described below:

- 22 • Decommissioning of Frame Relay Carrier Circuits: Verizon  
23 announced during the fourth quarter of 2012 that its  
24 frame relay service will be decommissioned by December

SHARED SERVICES PANEL

1 2015, but was extended to June 2017. Multiple  
2 organizations within the Company use this frame relay  
3 service for numerous critical applications, including  
4 SCADA systems. This critical technology provides  
5 operating areas with communications from control centers  
6 to assets at substations and other field locations. AS  
7 explained in Exhibit \_\_ (SSP-5), all 823 frame relay  
8 circuits must be replaced with an alternative technology,  
9 Multiprotocol Label Switching ("MPLS"), by the time  
10 Verizon decommissions its frame relay service. Of those  
11 823 circuits, 778 are 56kb circuits that will cost an  
12 additional \$77 monthly. The Company has investigated  
13 various technologies to replace the frame relay service  
14 and MPLS technology is the best fit for the Company. As  
15 of December 2015, 306 circuits have been converted. The  
16 total additional cost will be about \$700,000 each year,  
17 beginning in RY1, as all relays would be converted by the  
18 beginning of RY1.

- 19 • Increased Software Maintenance and Increased Hardware  
20 Maintenance: As explained in Exhibit \_\_ (SSP-5), these  
21 two projects involve additional software and hardware for  
22 new systems and cyber security initiatives. These two  
23 projects include maintenance increases for both the  
24 mainframe and the distributed computing environments. As

SHARED SERVICES PANEL

1 explained earlier, Con Edison makes many technology  
2 investments each year for the continued operation of the  
3 computing and network environment in place and, in many  
4 cases, we must pay for maintenance, licensing fees and  
5 upgrades.

6 Generally, the Company purchases technology solutions  
7 through capital investments that include a negotiated  
8 maintenance period. As explained earlier, the increased  
9 software and hardware maintenance program change is for  
10 costs for these systems once warranties and initial  
11 maintenance expire. For mainframe technology as well as  
12 hardware and software, \$1.8 million in RY1, nearly \$2.0  
13 million in RY2, and \$2.4 million in RY3 is required for  
14 these patches, upgrades and new releases.

15 **Other IT Capital Projects**

16 Q. Other than cybersecurity and server farm/cloud computing  
17 projects, please explain the additional capital programs  
18 sponsored by IT.

19 A. The Company is sponsoring 17 additional IT capital projects  
20 over RY1-RY3. These projects total approximately \$43.3  
21 million, with approximately \$14.0 million in RY1,  
22 approximately \$15.4 million in RY2, and approximately \$13.9  
23 million in RY3.

24 Q. What are the major projects in the plan?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. We have a number of projects that are listed below and  
2 explained in Exhibit \_\_ (SSP-5):

- 3 • Five CCTN Projects
- 4 • SCADANet
- 5 • Application Monitoring and Management
- 6 • BSS Database Plan
- 7 • BSS Server OS Plan
- 8 • Business Systems Sustainability Desktop OS Plan
- 9 • CCAS (Computer Enhancements)
- 10 • Collaboration Tools
- 11 • Data Center Renovation NOC
- 12 • Desktop Infrastructure
- 13 • Enterprise Applications
- 14 • IT Asset Management (IRIS)
- 15 • New Technology

16 Q. Please explain CCTN.

17 A. CCTN is the corporate backbone for all communication  
18 services for the foreseeable future. It services SCADA and  
19 provides data services to critical substations. It  
20 provides the Company with a high-speed, reliable and cost  
21 effective alternative and complement to public carriers.  
22 Con Edison owns and operates CCTN at over 120 Company  
23 locations. CCTN enables computing resource consolidation,

SHARED SERVICES PANEL

1 disaster recovery, and the reduction of public carrier  
2 costs. It requires capital projects to improve diversity  
3 and capacity.

4 Q. What projects will the Company be undertaking for CCTN  
5 during RY1 through RY3?

6 A. The Company will be undertaking five projects:

- 7 • Upgrade and expand CCTN fiber spans
- 8 • Maintain and upgrade existing equipment
- 9 • Migrate CCTN from Lucent systems
- 10 • Wireless Mobile Access - Upgrade CCTN Radio system
- 11 • Develop a CCTN Mapping system

12 These projects are described in more detail in Exhibit \_\_  
13 (SSP-5).

14 Q. What is the cost of these five planned CCTN projects?

15 A. The total cost is \$15.9 million. The annual amounts are  
16 \$4.9 million in RY1, \$5.5 million in RY2 and \$5.5 million  
17 in RY3.

18 Q. Please discuss the project relating to the CCTN fiber  
19 spans.

20 A. During RY1 - RY3, we plan to upgrade CCTN fiber spans for  
21 six fiber runs, as well as installing a new fiber span  
22 between East River Generating Station and the new Gold  
23 Street communications hut in Brooklyn. The six upgrades  
24 include:

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

- 1 • Dunwoodie and Sprainbrook (RY1)
- 2 • Sprainbrook and Eastview (RY1)
- 3 • Eastview and Pleasantville (RY2)
- 4 • Murray Hill and West End Ave (RY2)
- 5 • Pleasantville and Millwood (RY3)
- 6 • Millwood and Buchanan (RY3)

7 Q. Why is the Company undertaking these projects?

8 A. The above fiber spans were installed more than 20 years ago  
9 and have been experiencing gradual degradation due to  
10 continual exposure to the elements and must be upgraded.

11 Q. Why is the Company installing a new fiber run between East  
12 River and Gold Street?

13 A. The existing fiber run is operating at near capacity and  
14 does not have sufficient bandwidth for our ongoing  
15 communication requirements.

16 Q. What are the costs for upgrading and expanding fiber spans?

17 A. The cost of these projects total \$3.5 million in RY1 - RY3,  
18 with \$750,000 in RY1 and approximately \$1.4 million in each  
19 of RY2 and RY3.

20 Q. Please explain the CCTN project relating to maintaining and  
21 upgrading existing equipment.

22 A. The Company plans to maintain and upgrade the support  
23 equipment at the locations where CCTN communication  
24 equipment resides. Replacing this support equipment, which

SHARED SERVICES PANEL

1 in some cases has been in service for 15-20 years, helps to  
2 keep the equipment in service, which is necessary given the  
3 extent of the CCTN system. This includes upgrading HVAC  
4 equipment, modernizing cable spans, replacing power backup  
5 and battery systems as well as remediating grounding  
6 exposures.

7 Q. What is the cost of this work?

8 A. The expected cost to maintain and upgrade the equipment is  
9 \$533,000 in RY1 and \$550,000 in each of RY2 and RY3.

10 Q. Please explain the third CCTN project, migrating the CCTN  
11 communications equipment to a new technology.

12 A. The Company expects to migrate the existing CCTN  
13 communications equipment from legacy Lucent equipment  
14 (which no longer supports such equipment) to our new  
15 standard equipment and increase the bandwidth of this  
16 equipment. In later years, the Company plans to convert  
17 this equipment to Multi-Protocol Label Switching ("MPLS")  
18 technology, similar to the technology described in the  
19 Frame Relay program.

20 Q. Why is this project necessary?

21 A. There are over 120 Company locations, which host the CCTN  
22 equipment, called CCTN nodes. These CCTN nodes are  
23 equipped with communications equipment, which must be  
24 upgraded (1) to move to the new equipment provider and (2)

SHARED SERVICES PANEL

1 to move to a more secure standard. The conversion process  
2 started several years ago and, through the end of 2015, 95%  
3 of the Lucent equipment has been replaced. The next step  
4 is to upgrade the standard.

5 Q. What is the fourth CCTN project?

6 A. Wireless Mobile Access which includes upgrading radio  
7 systems. CCTN includes multiple radio systems to support  
8 voice to field crews and connectivity for the man-down  
9 radio systems and energy SCADA Systems which require  
10 wireless communication from control systems to field  
11 assets.

12 Q. What work does the Company intend to perform on this  
13 system?

14 A. The Company plans to upgrade the back-end radio console  
15 technology on these portions of the system and make  
16 investments in wireless radio systems that will allow the  
17 Company to have all its wireless systems on one IP based  
18 system. In 2017, we plan to begin replacing the existing  
19 800 MHZ radio system to incorporate new data requirements  
20 for field applications as well as maintain voice  
21 capability.

22 Q. Why is this work necessary?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. To maintain communications and improve operational  
2 capability between the control center and field workers.  
3 It has safety and reliability impacts and benefits as well.

4 Q. What is the cost of this work?

5 A. The cost of this project is \$3.25 million in each of RY1-  
6 RY3.

7 Q. Please describe the CCTN Mapping System project.

8 A. The Company has been developing a mapping system for CCTN,  
9 since the system contains over 475 miles of fiber optic  
10 cable. The mapping system will be used to provide asset  
11 inventory and circuit layout records so that a disruption  
12 on the fiber network can be quickly identified and the  
13 impact immediately known. This will also facilitate a  
14 timelier repair. The mapping system will provide an  
15 electronic repository of the CCTN locations, which includes  
16 specific locations of the CCTN and will allow the Company  
17 to track the location and disposition of CCTN assets, which  
18 is a critical system.

19 The mapping system will be upgraded to include capability  
20 for managing the thousands of circuits provided in the CCTN  
21 network.

22 Q. What is the cost of this work?

23 A. The cost is \$125,000 in each of RY1 - RY3.

SHARED SERVICES PANEL

1 Q. Turning to the next capital project, please explain what  
2 SCADANet is and why it is important.

3 A. The electric industry is undergoing a radical change in the  
4 use of technology. Field components are equipped with  
5 microprocessors and the capability to collect power quality  
6 and load data. Con Edison is currently designing and  
7 implementing multiple new systems including distribution  
8 automation, AMI, REV, and Smart Grid applications.  
9 SCADANet is a computer network that provides a secure  
10 transport for energy delivery systems. SCADANet provides  
11 secure communications and reduces risk. SCADANet  
12 infrastructure supports the following initiatives:

- 13 • Sectionalized Switching for electric distribution;
- 14 • Secondary Model validation;
- 15 • Gas RTU monitoring;
- 16 • Transformer Monitoring;
- 17 • Distributed Generation; and
- 18 • AMI.

19 Q. On a topic related to systems such as SCADANet and CCTN,  
20 please describe how Con Edison is using carrier wireless  
21 networks to save costs and to support its future  
22 distribution automation projects.

23 A. Con Edison has worked with Verizon Wireless to develop a  
24 private carrier solution that allows the Company to

SHARED SERVICES PANEL

1 securely communicate with field assets such as remote  
2 switches and remote metering points using Verizon Wireless'  
3 network. This is accomplished by using network addressing  
4 that allows only devices in the Company network to  
5 communicate with the remote devices, without using the  
6 Internet. Con Edison has established a connection into  
7 Verizon Wireless' network that allows it to communicate  
8 directly with these devices. This solution provides a cost  
9 effective means of supporting remote smart grid  
10 applications in a secure manner and does not require  
11 capital expenditures on behalf of the Company to connect  
12 these devices. By using private carriers in conjunction  
13 with CCTN and SCADANet, the Company mitigates the costs  
14 otherwise associated with extending fiber optic cable  
15 (estimated at \$150,000 per mile in the underground network)  
16 to each field device.

17 Q. Please describe the SCADANet project.

18 A. The SCADANet project will construct a computing network  
19 transport for machine-to-machine communication. The  
20 network is isolated and protected from risks associated  
21 with public and corporate networks and runs energy delivery  
22 systems controlling the electric, gas, and steam systems.  
23 This is needed primarily for cybersecurity reasons, but it

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 also improves the performance of the applications by  
2 isolating critical operational traffic from PC users.

3 Q. Is this network able to use carrier communications?

4 A. Yes, the network is designed to allow for any number of  
5 "last mile" connections including carrier wired or  
6 wireless, private wireless or private fiber. In fact, we  
7 have established a private wireless network with Verizon  
8 Wireless that allows any SCADA application to securely  
9 connect to the control centers and eliminate any concerns  
10 about the Internet. A second carrier option is planned to  
11 be available in 2016.

12 Q. Please describe the plans for SCADANet under this capital  
13 project?

14 A. The Company plans to expand the existing SCADANet to  
15 additional substations as well as the network management  
16 components for securing, alerting and monitoring the  
17 network for electric, gas, and steam systems.

18 Q. What is the projected cost for this SCADANet project?

19 A. The projected cost over RY1 - RY3 is \$2.3 million. The  
20 annual amounts are \$750,000 in each of RY1-RY3.

21 Q. Are there any additional capital projects for IT?

22 A. Yes, there are 11 additional projects totaling \$25.1  
23 million over the three year period, with \$8.4 million in  
24 RY1, \$9.1 million in RY2, and \$7.6 million in RY3.

SHARED SERVICES PANEL

1 Q. Can you please provide a brief description of these  
2 additional capital projects, which are more fully explained  
3 and described in the white papers contained in Exhibit \_\_  
4 (SSP-5)?

5 A. Yes. These projects are:

- 6 • Business Systems Sustainability is comprised of three  
7 different projects investing in sustaining the server OS,  
8 database, and PC software. The three projects in total  
9 will spend \$3.6 million in RY1, and \$4.0 million in each  
10 of RY2 and RY3.
- 11 • New Technology is a project that allows the IT planning  
12 team to track and pilot the latest technologies and  
13 introduce solutions to solve business problems. The cost  
14 of the project is \$750,000 in RY1 and \$900,000 in each of  
15 RY2 and RY3.
- 16 • Enterprise Applications focuses on implementing new, and  
17 upgrades to, infrastructure applications that support the  
18 enterprise in a variety of functions such as secure file  
19 exchange, electronic faxing, accessing Intranet  
20 applications, and security for user accounts,  
21 infrastructure management, and enterprise operations  
22 management. Enterprise applications are used by all  
23 employees and enable standard processes resulting in  
24 operating efficiencies for core business functions as

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 well as information technology functions. The cost of  
2 this project is \$525,000 in RY1, \$325,000 in RY2, and  
3 \$326,000 in RY3.

- 4 • Information Resources Inventory System ("IRIS") focuses  
5 on providing a single relational repository for IT  
6 assets. Upgrades in this system will focus on linking  
7 servers and storage assets to applications and automating  
8 the recovery of applications from one server farm to  
9 another. The cost of this project is \$281,000 in RY1,  
10 \$225,000 in each of RY2 and RY3.

- 11 • The Advanced Application Monitoring and Configuration  
12 Management project provides a more consistent, holistic  
13 approach to managing the Company's IT portfolio. This  
14 project provides visibility into the vendor components  
15 that are used within each application and the  
16 corresponding commitments from vendors for support. The  
17 cost of this project is \$1.5 million in RY1 and RY2.

- 18 • Desktop Infrastructure focuses on the Company's "Desktop  
19 of the Future" strategy aimed at providing access to  
20 computing resources anywhere from any device.  
21 Investments include virtualizing applications and virtual  
22 desktops. The cost of the project is \$782,000 in RY1,  
23 and \$703,000 in each of RY2 and RY3.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

- 1       • Collaboration Tools is a project to improve employee  
2       collaboration using IT resources. Investments include  
3       social media technologies and team collaboration portals.  
4       The cost of the project is \$251,000 in RY1, and \$901,000  
5       in each of RY2 and RY3. The increase in the last two  
6       rate years is expected as a result of a new SharePoint  
7       version and the anticipated integration into the email  
8       and desktop environment.
- 9       • Computer and Communications Accounting System - This is  
10      an enhanced application to monitor, track, and manage  
11      billing and inventory for all wireless and landline  
12      communication devices. The enhancements will allow for  
13      better cost control for using organizations. The program  
14      requires \$113,000 in RY1.
- 15     • Data Center Renovation for the Network Operations Center  
16     ("NOC") - As explained earlier, the Company has a NOC  
17     which monitors critical communications and computing  
18     resources for potential issues. The NOC plans on  
19     implementing a number of new technologies to assist in  
20     its mission of providing computing and communications  
21     information to the Company. Some of these changes  
22     include a software module to assist business users when  
23     they have issues, service level measurement and other

SHARED SERVICES PANEL

1 items. We expect to expend \$600,000 during each of RY1  
2 through RY3.

3 Q. Are there any cost savings initiatives associated with  
4 these projects?

5 A. All equipment purchased for these projects is competitively  
6 bid to manage costs. Most of the cost savings initiatives  
7 have been described in the XM-8 and XM-10 testimony  
8 sections above and the savings are already reflected in the  
9 revenue requirement in terms of costs lower than they  
10 otherwise would be.

11 **V. FACILITIES AND FIELD SERVICES**

12 Q. Please explain the services provided by Facilities and  
13 Field Services.

14 A. Facilities and Field Services is a support organization  
15 comprised of three major groups:

- 16 1. Facilities, which provides logistical support  
17 activities and maintains the Company's properties;
- 18 2. Transportation Operations, which provides maintenance  
19 and repairs to the corporate fleet and manages the  
20 fleet vehicle replacement program; and
- 21 3. Astoria Operations, which provides crane and rigging  
22 services, tanker support, technical services, material  
23 delivery service Company-wide, and manages and  
24 operates a hazardous waste storage facility in

SHARED SERVICES PANEL

1           Astoria. There are no requests for additional funding  
2           for Astoria Operations in this filing.

3           Facilities and Field Services provide logistical and  
4           support services during contingencies and other  
5           emergencies.

6    Q.    What projects and programs are Facilities and Field  
7           Services sponsoring in this testimony?

8    A.    Facilities and Field Services are sponsoring 13 capital  
9           projects and programs, which can be grouped into two  
10          separate categories: Eight capital projects and programs  
11          associated with our Facilities group, and five projects  
12          associated with Transportation Operations. In addition,  
13          there are two O&M projects associated with the Facilities  
14          group.

15   Q.    Have you prepared an exhibit titled "Shared Services -  
16          Facilities and Field Services White Papers" that discusses  
17          these projects and programs?

18   A.    Yes, we have.

19   Q.    Was this exhibit prepared under the Panel's direction and  
20          supervision?

21   A.    Yes, it was.

22                    MARK FOR IDENTIFICATION AS EXHIBIT \_\_\_ (SSP-6)

SHARED SERVICES PANEL

1 Q. What are the forecasted capital and incremental O&M  
2 expenditures for Facilities and capital expenditures for  
3 Transportation Operations during RY1 through RY3?

4 A. The Company expects to spend approximately \$72.8 million in  
5 RY1, \$124.8 million in RY2 and \$80.2 million in RY3 for  
6 Facilities Capital projects and programs. For the  
7 incremental Facilities O&M projects, the Company forecasts  
8 expenditures of approximately \$1.5 million for RY1, \$2.6  
9 million for RY2, and \$1.1 million for RY3, exclusive of  
10 escalations.

11 For Transportation Operations Capital projects, the Company  
12 expects to spend \$15.0 million in RY1, \$9.5 million in RY2,  
13 and \$2.5 million in RY3.

14 **Facilities Projects and Programs**

15 Q. Please explain the activities of the Facilities group.

16 A. Facilities plans, directs, and controls the maintenance of  
17 all building systems and the day-to-day building and yard  
18 operations at Company-owned and leased office buildings and  
19 service centers. With the assistance of Central  
20 Engineering - Facilities Engineering, we perform periodic  
21 assessments and inspections of all buildings and, if  
22 necessary, prepare corrective action plans, so that  
23 critical building systems are operated and maintained  
24 appropriately.

SHARED SERVICES PANEL

1 Q. What projects are in the Facilities capital spending plan?

2 A. The capital spending plan contains the following projects:

3 • Facilities Compliance Projects (which includes Local

4 Law 26 (that has an O&M component));

5 • Critical Infrastructure - Short Term Priority Projects

6 and Program projects;

7 • Roof Projects;

8 • Irving Place Window Replacement Project;

9 • Flood Mitigation Projects;

10 • Service Center Renovation Projects; and

11 • Sherman Creek Work Out Center (also O&M).

12 The white papers for each of these projects and programs

13 are included in Exhibit \_\_ (SSP-6).

14 Q. Is there also an O&M project that is discussed?

15 A. Yes. In addition to the O&M for the Sherman Creek Work Out

16 Center, we have one additional O&M project entitled Irving

17 Place Exterior Landmarks Preservation Metal Component

18 Restoration.

19 Q. Please discuss the projected Facilities capital spending

20 level and why it is necessary to modernize, upgrade, and

21 improve the Company's facilities.

22 A. Most of the Company's facilities are over 20 years old.

23 Certain buildings, such as at 4 Irving Place, Cleveland

24 Street, Rye Service Center, and various auxiliary buildings

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 at the 3rd Ave Yard site, were constructed over 60 years  
2 ago. Projects set forth in Exhibit \_\_ (SSP-6) are  
3 necessary either to: correct potentially unsafe conditions,  
4 address environmental issues, comply with local, state or  
5 federal regulatory requirements/building codes, maintain  
6 the structural integrity of the buildings, and/or improve a  
7 building's overall condition. Also, various equipment and  
8 systems required to operate these facilities have reached  
9 the end of their useful lives and are no longer economical  
10 or practical to operate. For example, HVAC equipment in  
11 many locations, such as Irving Place, Van Nest, the  
12 Cleveland Street Service Center, and Bruckner Boulevard,  
13 are close to or over 20 years old and need to be replaced  
14 due to age and wear and tear. When these systems are  
15 replaced, the Company intends to use efficient systems that  
16 contain environmentally friendly refrigerants. Similarly,  
17 emergency generators, electrical systems, bathrooms and  
18 locker rooms, exterior facades, sidewalks, drainage  
19 systems, and paved areas at certain locations are aging,  
20 and, in some places, are in a state of disrepair. Exterior  
21 windows and doors need to be replaced due to age and wear  
22 and tear, and will be upgraded to meet present day energy  
23 standards. In light of security concerns, security fencing  
24 and access improvements are required at certain locations.

SHARED SERVICES PANEL

1 Q. What does Facilities do to minimize costs?

2 A. Facilities minimizes costs in two ways; both relate to the  
3 proper identification and then strict monitoring of  
4 projects and their associated costs. With the assistance  
5 of Facilities Engineering, Facilities identifies its  
6 projects via periodic programmatic assessments, such as the  
7 Facilities Roof Inspection, Steel/Concrete/Façade  
8 Inspection, Emergency Diesel Generator and Electrical  
9 System, Bathroom/Locker Room, and HVAC Evaluation Programs,  
10 which are performed approximately every five years. In  
11 addition, the Engineering Service Request ("ESR") process,  
12 which evaluates a particular problem, assesses various  
13 solution options and provides a conceptual scope of  
14 work/budgetary order of magnitude cost estimate.  
15 Facilities uses this information to then prioritize  
16 projects according to the following categories:  
17 "compliance," "critical infrastructure - short-term  
18 priority or programs," "roof," "windows," "flood  
19 mitigation," or "service center renovation." By studying,  
20 evaluating, and assessing the condition of its equipment  
21 and systems, developing work scopes and cost estimates, and  
22 categorizing and prioritizing its projects accordingly,  
23 Facilities develops an understanding of where to allocate  
24 its project funding and resources. This method had

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 generally identified "compliance" projects as targets for  
2 funding in the short-term, with projects categorized as  
3 "critical infrastructure - short-term priority or  
4 programs," "roofs," "windows," and "service center  
5 renovations" being deferred until later years.

6 Q. Do you have an example of how Facilities Engineering  
7 studies, evaluates and assesses the condition of equipment,  
8 and then develops an efficient work scope to address a  
9 problem?

10 A. Yes. One example of the process described above is the Rye  
11 Generator Replacement Project for the location at Theodore  
12 Fremd Avenue. Facilities Engineering evaluated a like-in-  
13 kind replacement option (which would only have fed  
14 approximately half the building load) and an option that  
15 fed the entire building electrical load in the event of a  
16 power outage. The analysis determined that the full size  
17 generator was the best overall option and thus the project  
18 has proceeded in that direction.

19 Q. Have you prepared an exhibit entitled "Facilities Capital  
20 Budget Plan" detailing these programs and your projected  
21 capital expenditures?

22 A. Yes, we have.

23 Q. Was this exhibit prepared under the Panel's direction and  
24 supervision?

SHARED SERVICES PANEL

1 A. Yes, it was.

2 MARK FOR IDENTIFICATION AS EXHIBIT \_\_ (SSP-7)

3 **Facilities Capital Compliance Projects**

4 Q. Please explain the first category of capital projects,  
5 compliance projects.

6 A. Compliance projects are required to address potentially  
7 unsafe conditions and environmental issues, as well as to  
8 comply with local, state or federal regulatory requirements  
9 and building codes.

10 Q. What are the projected costs of all of the compliance  
11 projects that you have addressed?

12 A. The estimated capital costs for this category of projects  
13 are \$41.5 million in RY1, \$21.5 million in RY2, and \$5.0  
14 million in RY3. The RY1 and RY2 expenditures are primarily  
15 for a project to comply with Local Law 26 ("LL26"), which  
16 must be completed by July 2019.

17 **Local Law 26 Compliance**

18 Q. Is there one project that accounts for much of the spending  
19 in the compliance category?

20 A. Yes. In terms of expenditures and time, the largest  
21 regulatory requirement project involves compliance with New  
22 York City Department of Buildings ("DOB") LL26. LL26  
23 requires full sprinklering, which is a water-based fire  
24 suppression system. It applies to office buildings 100

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 feet or more in height. Under this law, water-based  
2 sprinkler systems are required by no later than July 1,  
3 2019, in all office areas and other areas such as  
4 electrical closets, mechanical/fan rooms, computer/LAN/UPS  
5 rooms, and tower stages of buildings. LL26 is based on  
6 recommendations made by the World Trade Center Building  
7 Code Task Force in February 2003, and signed into law by  
8 then-Mayor Bloomberg on June 24, 2004.

9 Q. Has the Company discussed LL26 in prior rate proceedings?

10 A. Yes, rate plans adopted by the Commission in the Company's  
11 past Electric, Gas, and Steam rate cases reflect  
12 expenditures to comply with LL26.

13 Q. To which Company facilities does LL26 apply?

14 A. LL26 applies only to the Company's headquarters at 4 Irving  
15 Place because it is the only facility taller than 100 feet.

16 Q. What steps are necessary for the Company to timely satisfy  
17 the LL26 requirement?

18 A. The Company has determined that the most efficient means  
19 for meeting the LL26 requirement is to continue to install  
20 the required sprinkler systems for a certain number of  
21 floors each year until completed.

22 When the Company renovates a floor, the Company, pursuant  
23 to its "restacking" program, temporarily relocates, as

SHARED SERVICES PANEL

1 needed, the affected employees to another part of 4 Irving  
2 Place, or outside of the building.

3 Q. Is the Company moving forward to meet the deadline?

4 A. Yes. In order to meet LL26's 2019 deadline, the Company  
5 needs to continue on its current renovation schedule. We  
6 would note that an interim report is required to be  
7 submitted on July 1, 2018, to explain the progress of the  
8 program at Irving Place, and a final affidavit report is  
9 required to be filed by July 1, 2019.

10 Q. Please discuss the need to move employees during the LL26  
11 process.

12 A. When the Company renovates a floor, it temporarily  
13 relocates, as needed, the affected employees to another  
14 part of 4 Irving Place or outside of the building. This is  
15 because it is logistically difficult or practically  
16 impossible to maintain employees in their current work area  
17 during the renovation process. This is due to the physical  
18 arrangements of ceilings and other building infrastructure  
19 and the presence of environmentally sensitive materials  
20 (such as lead and asbestos) that need to be addressed  
21 during the renovation process.

22 Q. Please detail the issues associated with performing  
23 renovations while floors are occupied.

SHARED SERVICES PANEL

- 1 A. It would be neither safe nor practical or efficient to  
2 perform the required renovation and sprinkler installation  
3 during off-shifts, when personnel have vacated the space,  
4 and allow the affected personnel to return to work during  
5 their normal work hours (thereby requiring a set-up and  
6 take-down of the work area daily). Most importantly, the  
7 safe removal of any environmentally sensitive materials,  
8 while the area is occupied, is logistically difficult.  
9 Having personnel completely vacate the space until the  
10 renovation (and any required abatement) is finished enables  
11 the Company to completely abate the environmentally  
12 sensitive materials in a safe and efficient manner.
- 13 Q. Can sprinklering be accomplished absent full floor  
14 renovations?
- 15 A. No. To install sprinklers, one must remove all the  
16 asbestos and other materials from the ceiling, which serves  
17 as the structural support base for the sprinkler pipe.  
18 Thus, this project basically requires the complete  
19 renovation on the respective floors as there is no  
20 practical manner to install sprinklers without doing  
21 extensive ceiling renovation work.
- 22 Q. If the Company follows its current renovation schedule,  
23 will it be in compliance with the LL26 requirement by 2019?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. Yes. At the current rate of floor renovations (*i.e.*, two  
2 to three floors per year) which has been provided in the  
3 Restacking Plan schedule, and dictated, in part, by  
4 available temporary space, the Company expects to comply  
5 with LL26 by the 2019 deadline.

6 Q. What is the status of the plan?

7 A. Currently, office renovation and associated sprinklering  
8 projects have been mostly completed on the following twenty  
9 three floors: basement, 2nd, 3rd, 4th, 5th, 6th, 7th, 8th,  
10 9th, 10th, 11th, 12th, 13th, 15th, portions of the 17th,  
11 20th, 21st, 22nd, 23rd, 24th, 25th, 26th, and 27th floors  
12 and the stages.

13 Five un-renovated floors currently remain - 14th, 16th,  
14 17th, 18th, 19th and the first floor mailroom/Lobby.

15 Q. What is the plan for addressing these remaining floors?

16 A. The remaining schedule through 2018 is as follows:

- 17 • 2016 - Complete the 16th, 17th and 19th floors
- 18 • 2017 - Complete the 14th and 18th floors and the 1st  
19 floor mailroom and Lobby.
- 20 • 2018 - Complete all remaining miscellaneous electrical  
21 and mechanical equipment rooms and project closeout  
22 (*i.e.*, receiving final agency inspections/certificate of  
23 completion).

SHARED SERVICES PANEL

1 Q. What are the costs associated with completing these six  
2 floors?

3 A. The estimated cost to finish the LL26 program is \$39.0  
4 million in 2016 and RY1 each, and \$19.0 million in RY2.

5 Q. What impact does this program have on the temporary  
6 relocation of employees?

7 A. Some of the affected personnel have been relocated from 4  
8 Irving Place until the project is complete due to space  
9 limitations.

10 Q. What are the O&M costs associated with LL26 compliance?

11 A. The O&M costs associated with this project are for the  
12 lease of approximately 16,000 square feet at 111 Broadway,  
13 Manhattan. The rent prices consist of a base lease and  
14 infrastructure rents, which include fiber leases, cooling  
15 surcharges and building management charges. The leasing  
16 expense associated with the temporary relocation of  
17 personnel is projected to continue at approximately  
18 \$600,000 annually until the LL26 program is completed.

19 **Other Compliance Projects**

20 Q Are there other regulatory compliance projects that need to  
21 be undertaken?

22 A. Yes. The white paper entitled "Facilities Buildings and  
23 Yards - (Safety Environmental Regulatory)", included in  
24 Exhibit \_\_ (SSP-6), contains additional examples of capital

SHARED SERVICES PANEL

1 compliance projects. These projects are generally required  
2 for compliance with the Occupational Safety and Health  
3 Administration ("OSHA"), the New York State Department of  
4 Environmental Conservation ("NYSDEC") and other regulatory  
5 agencies.

6 Q. Do you have examples of some of the projects included in  
7 this category?

8 A. Yes. These projects include:

- 9 • Installation of Fall Protection/Guardrails on the Roofs of  
10 Various Regional Buildings of Facilities, estimated to be  
11 \$1.5 million in RY1, \$587,000 in RY2 and \$2.0 million in  
12 RY3. The Company's EH&S personnel have identified roofs  
13 and elevated working locations and platforms that do not  
14 have adequate protective guardrails (which are for fall  
15 protection and generally consist of a raised wall on the  
16 roof). There are approximately 25 buildings that require  
17 full roof protection. The Manhattan and Queens locations  
18 were addressed in 2013/2014, the Bronx/Westchester  
19 locations (including Rye Headquarters and Eastview Service  
20 Center) were completed in 2015, Van Nest Service Center is  
21 being addressed in 2015/2016, and Brooklyn/Staten Island  
22 locations such as Flatbush, Neptune Avenue and Cleveland  
23 Street will be addressed in 2016 and 2017. Each roof has  
24 a different scope of work and cost depending upon the

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 amount of work to be done. For example, the system used  
2 at Rye Headquarters and Cleveland Street is a parapet  
3 mounted guardrail system, which is relatively simple to  
4 install with a price of approximately \$500,000. A more  
5 complicated system, such as that installed at Van Nest,  
6 includes the crane and roof flexible lifeline system and  
7 fall arrest anchor system (which needs to be supported  
8 from building structural members) with a projected cost of  
9 approximately \$1 million.

- 10 • Fire Alarm/Sprinkler Alarm Improvement Program is based on  
11 the Fire Department of New York ("FDNY") Technical  
12 Management Bulletin 03/2012, which discusses the process  
13 for obtaining letters of approval ("LOA") for fire  
14 alarm/sprinkler systems for New York City buildings. The  
15 program will upgrade systems at Astoria, Irving Place,  
16 Bruckner Blvd., Van Nest, and College Point Blvd. Service  
17 Centers to add smoke detectors, horns/strobe  
18 audible/visual notification devices, tamper and flow  
19 switches and will bring the locations in compliance with  
20 the appropriate fire codes. The cost of the program is  
21 estimated to be approximately \$1.0 million in RY1, \$1.9  
22 million in RY2 and \$1.0 million in RY3.
- 23 • Replacement of an oil-filled Pad Mounted Transformer at  
24 Van Nest to prevent potential oil spills to the sewer at a

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 capital cost of \$735,000 in RY3. This project will  
2 install a new 480V dry type transformer to feed equipment  
3 that is currently connected to the oil-filled transformer.  
4 The project will not only reduce the size of the existing  
5 transformer but also relocate it inside of the building.  
6 The new 480V distribution system will include new  
7 disconnect switches, a new 800A distribution switch, local  
8 disconnect switches and wiring.

9 Q. Are there other projects in this category?

10 A. Yes. The three mentioned above are examples of larger type  
11 projects in this category. There are smaller cost  
12 projects, such as upgrading the room 165 Tech Lab  
13 ventilation at Van Nest at a cost of \$75,000 and bracing an  
14 office ceiling at Cleveland Street at a cost of \$35,000.  
15 These projects are all described in Exhibit \_\_ (SSP-7).

16 Q. Do you expect other similar projects to be required in RY2  
17 and RY3?

18 A. Yes. Projects of this type must be addressed as they  
19 arise. For example, changes to laws and regulations may  
20 occur, and if they do, new compliance projects may be  
21 required in the next several years.

22 Q. What are the projected costs associated with the other  
23 compliance category in RY1 - RY3?

SHARED SERVICES PANEL

1 A. We plan to spend approximately \$2.5 million in each of RY1  
2 and RY2, and \$5.0 million in RY3.

3 **Critical Infrastructure -**  
4 **Short Term Priority Projects and Programs**

5 Q. Are there additional categories of projects to be  
6 undertaken?

7 A. Yes. There are two categories of work performed under  
8 Facilities Buildings and Yards - Critical Infrastructure  
9 Short Term Priority, or Critical Infrastructure. These  
10 projects are listed in a white paper included in Exhibit \_\_  
11 (SSP-6).

12 Q. Please describe the projects under Critical Infrastructure  
13 - Short Term Priority.

14 A. These are projects that have been initiated because they  
15 are deemed necessary to maintain the structural integrity  
16 of the Facilities' buildings, to allow them to operate as  
17 designed, or to protect critical equipment (e.g., HVAC  
18 systems, LAN Room AC Installations, Chiller Steam turbine  
19 condensate drain enhancements, building water supply  
20 rehabilitations). Critical Infrastructure Short Term  
21 Priority projects may be added to the list as ESRs are  
22 completed, equipment nears failure, or programmatic  
23 assessments are performed and deem these projects as high  
24 priority. Despite planning and other preventative  
25 maintenance actions, projects of this nature and type are

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 generally identified when systems, equipment, and  
2 components are at or close to failure. These types of  
3 projects usually need to be completed in a quick time  
4 frame.

5 Q. Are there any costs for this category in the Rate Years?

6 A. No. There no projects currently listed in this category  
7 for the rate years, but past history has shown that  
8 projects will arise and need to be undertaken on an  
9 expedited basis. We expect that during the rate years, we  
10 may need to shift funding into this category.

11 Q. Please describe programs under Critical Infrastructure.

12 A. These capital programs are intended to maintain and improve  
13 the overall conditions at the buildings and yards and  
14 maintain the facilities. The program addresses facility  
15 improvements, including efficiency improvements and/or  
16 equipment modernization or upgrades and projects, that are  
17 evaluated/prioritized based on facility assessments. These  
18 projects generally involve yard paving/resurfacing, roof  
19 replacements identified in the Facilities' roof inspection  
20 program, HVAC systems nearing the end of their expected  
21 useful life, general office renovations for buildings other  
22 than 4 Irving Place, and elevator upgrades.

23 Projects are listed in the Critical Infrastructure -

24 Programs Category either as a result of a completed ESR or

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 program assessment or based on engineering or historical  
2 knowledge of the systems and equipment (e.g., since the  
3 expected life of a Freon-based HVAC system is approximately  
4 20 years, units that are 15 years or older are listed in  
5 the five year plan). A completed ESR provides a scope of  
6 work and budgetary order of magnitude cost estimate  
7 required to address a particular system problem.

8 Q. Please provide some examples of this type of capital work.

9 A. There are currently over two hundred projects currently  
10 identified in the Programmatic Site Improvements category,  
11 which are listed in Exhibit \_\_ (SSP-7). These include:

- 12 • 3rd Ave Yard Expanded Cable Area - \$320,000 in 2017
- 13 • Astoria - Salt Bulk Storage Area - \$535,000 in 2017
- 14 • Cleveland Street - Yazaki Absorption Unit Replacement  
15 - \$1.5 million in 2017
- 16 • Astoria Chem Lab HVAC - \$820,000 in 2017
- 17 • Irving Place - Building Management System Upgrade -  
18 \$1.0 million in 2016/2017
- 19 • Irving Place - Load Bank for Emergency Diesel  
20 Generator Testing- \$1.5 million in 2017
- 21 • Irving Place - Emergency Diesel Generator Automatic  
22 Transfer Switch Monitoring System - \$1.5 million in  
23 2018

SHARED SERVICES PANEL

- 1 • Astoria - Transportation Building 2nd Floor
- 2 Renovation/HVAC upgrade - \$1.3 million in 2016/2017

3 Q. How much is the Company planning on spending in this  
4 critical infrastructure category for short term priority  
5 projects and other programs during RY1 through RY3?

6 A. We plan on spending \$12 million in RY1, \$15.0 million in  
7 RY2 and \$17.5 million in RY3. The increase in costs in RY2  
8 and RY3 is attributed to the wind-down of the Irving Place  
9 LL26 program, which allows funds and capital expenditures  
10 to be directed to this program, whose projects list  
11 continues to grow from ESRs, customer needs and  
12 programmatic assessments. Since the Company has been  
13 focusing expenditures to complete the LL26 renovations,  
14 many of these projects have been placed on hold. Exhibit  
15 \_\_\_ (SSP-7) shows the projects to be completed during the  
16 rate years.

17 **Roofs Replacement Program**

18 Q. What is the Company planning to do for roof replacements?

19 A. Facilities Engineering inspects each roof on a periodic  
20 basis and recommends critical repairs or roof replacements  
21 as required. A roof generally has a life-span of 20 to 25  
22 years, provided that repairs are made based on the five-  
23 year inspection reports.

SHARED SERVICES PANEL

1 We plan to address the various roof replacements at  
2 facilities throughout the system. As noted earlier, many  
3 of our buildings are at least 20 years old and the useful  
4 life for the roof has expired. Some of the roofs are  
5 already leaking and, in other cases, the roof project will  
6 address an issue before there is a leak to avoid facility  
7 damage. Examples of where we will be replacing roofs  
8 include the Astoria Transformer Shop, Van Dam, Van Nest,  
9 Eastview, Neptune Avenue, and The Learning Center - as  
10 indicated in Exhibit \_\_ (SSP-7). In most cases, aging  
11 black roofs will be replaced by white roofs and may also be  
12 replaced by green roofs. These roof projects will allow  
13 for water tightness in the buildings and are a pre-  
14 requisite to performing any interior or façade related  
15 projects (*i.e.*, office renovations, painting, carpeting,  
16 etc.).

17 Q. How much do you plan on spending on the roof replacement  
18 project?

19 A. For roof replacement and other anticipated work as a result  
20 of the ongoing roof inspection program, we project spending  
21 approximately \$3.0 million in RY1, \$10.0 million in RY2,  
22 and \$11.0 million in RY3. Like compliance projects, the  
23 increase in budgeted costs in RY2 and RY3 is attributed to  
24 the wind-down of the LL26 program, which allows funds and

SHARED SERVICES PANEL

1 capital expenditures to be directed to the roof program.

2 The capital exhibit shows the associated roof projects that  
3 are being requested (*i.e.*, approximately thirteen over the  
4 three rate years).

5 **Irving Place Window Replacement**

6 Q. What is the Company planning to do for Irving Place  
7 Windows?

8 A. As described in Exhibit \_\_ (SSP-6), the Company plans to  
9 remove and replace approximately 2,100 windows assemblies  
10 throughout the building envelope, with the exception of the  
11 courtyard and tower stage area facades and the windows  
12 along the first three floors on the street elevations.

13 Q. Please continue.

14 A. No existing window framing will be removed as the new  
15 windows will be retrofitted onto the existing support  
16 system and secured in place. All windows will be American  
17 Architectural Manufacturers Association designated and  
18 approved tilt-in thermal aluminum and glass architectural  
19 window models.

20 Q. Please explain the need for this project.

21 A. The existing single pane windows assemblies are 85 to 100  
22 years old and lack most of the energy saving and noise  
23 attenuation/reduction features found in modern windows.  
24 Thermal imaging of the building facade conducted during a

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 recent energy audit identified the windows as a major  
2 source of heat loss. This, in addition to high ambient  
3 noise from street and vehicular traffic below, can affect  
4 employee productivity. The Company accordingly will  
5 replace the windows.

6 Q. Please explain how this project will address these  
7 findings.

8 A. This project will provide an energy efficient double pane  
9 window system that will reduce the building's carbon  
10 footprint, improve interior comfort levels by reducing  
11 temperature differentials/air current flows between the  
12 windows and floor occupants, produce an 80% reduction in  
13 heat conduction and air infiltration, a 60% reduction in  
14 solar heat gain coefficient, and overall reduction in steam  
15 usage.

16 Q. How much do you plan on spending on the Irving Place Window  
17 Replacement project?

18 A. The estimated project cost based on detailed design  
19 drawings is \$30.0 million. The project will be phased over  
20 four years and starting in RY2 with an approximate  
21 expenditure of \$5.0 million and \$7.5 million in RY3. The  
22 remaining work will carry over into 2020 and 2021.

SHARED SERVICES PANEL

1 **Facilities Flood Mitigation**

2 Q. Are there Company facilities that have been affected by  
3 storms?

4 A. Yes. We would note that many of the facilities that  
5 require storm hardening were addressed through the  
6 Facilities storm hardening projects that are planned to be  
7 completed in 2016. Two locations remain to be addressed -  
8 Eastview Service Center in Westchester County and the  
9 basement of TLC.

10 Eastview Service Center experienced its most severe  
11 flooding events during heavy rain events such as Hurricane  
12 Irene, although not during Superstorm Sandy, and is  
13 naturally prone to flooding because of its topography and  
14 proximity to the Saw Mill River.

15 As has been explained in Case 13-E-0030, *et al*, TLC has  
16 also experienced significant flooding. The Company's storm  
17 hardening program addressed many of TLC's issues except for  
18 the basement. At TLC, there are areas that house critical  
19 mechanical, electrical and life safety equipment, and that  
20 were not addressed during the Hurricane Hardening program,  
21 which primarily reinforced the perimeter of the building to  
22 mitigate the effects of water infiltration.

23 Q. What work will be done at these two properties as part of  
24 the Flood Mitigation Program?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. As explained in Exhibit \_\_ (SSP-6), the Flood Mitigation  
2 program will harden portions of the buildings at Eastview  
3 that are subject to flooding from the adjacent Saw Mill  
4 River as well as the critical areas located in the lower  
5 level at TLC.

6 Q. Please explain what will be done at Eastview.

7 A. This effort will include similar measures that have been  
8 undertaken in the Storm/Hurricane Hardening program (e.g.,  
9 waterproofing and/or hardening walls and installing storm  
10 resistant doors, storm drain backflow preventers and sump  
11 pumps systems). The work includes hardening, waterproofing  
12 and sealing existing interior and exterior concrete walls  
13 for equipment rooms to protect critical equipment,  
14 replacing existing doors/windows and sealing wall  
15 penetrations/concrete slabs.

16 Q. What work will be done at TLC?

17 A. The major work remaining to be done is primarily  
18 waterproofing the areas and installing flood resistant  
19 doors.

20 Q. Does the Company have an estimate of costs?

21 A. The cost estimate is \$2.0 million for Eastview and \$3.0  
22 million for TLC, both of which will be completed in RY1.

SHARED SERVICES PANEL

**Facilities Service Center Renovation Program**

3

Q. Please explain your Facilities Service Center Renovation Program.

4

5

A. Facilities plans to perform renovation projects each year to maintain and improve on overall conditions at various buildings and yards. This program will renovate various office spaces throughout the Facilities Regional Headquarter Buildings and Service Centers.

6

7

8

9

10

Q. Please explain the need for such a program.

11

A. Many locations have not been renovated since the building's original construction. Interior offices, in certain cases, do not meet current space-use, NYC or Westchester Building Code, or present day industry life-safety standards. Con Edison's policies emphasize open communication and working in teams, and the open plan concept reflects and supports this management approach. The renovations to be undertaken will bring the floors to Company standards for new office buildings.

12

13

14

15

16

17

18

19

20

Q. Please explain the issues that this program addresses and the associated benefits.

21

22

A. As explained in Exhibit \_\_ (SSP-6), the focus of this

23

program is to provide a productive work environment that is

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 easy to maintain and will require no additional investment  
2 for many years.

3 Much of the infrastructure at our buildings and yards is  
4 outdated. The air conditioning is essentially unchanged  
5 since it was installed and as such has inefficient controls  
6 and comfort levels in the buildings are unsatisfactory. As  
7 part of the renovations, all the distribution ductwork back  
8 to the source and the controls will be replaced.

9 Similarly, lighting will be completely replaced with an  
10 energy-efficient system that responds to a central  
11 controller and dims at the perimeter to respond to  
12 available daylight. All renovated floors will have  
13 wireless access.

14 Q. Does the Company have an estimate of costs?

15 A. An estimated cost of approximately \$300/Square Foot ("SF")  
16 is required for a full renovation, which includes new  
17 lighting, HVAC systems, carpeting, power & communication  
18 equipment, fire protection and furniture. A typical  
19 service center ranges from 25,000SF (Victory Blvd & Neptune  
20 Ave) to 75,000SF (Bruckner Blvd). Facilities requests  
21 approximately \$5.0 million in each of RY2 and RY3. The  
22 exhibit shows the associated office renovation projects  
23 being requested in the rate years beginning in RY2. These  
24 include:

SHARED SERVICES PANEL

- 1       • Eastview Service Center Renovation for \$5.0 million in  
2       RY2.
- 3       • The Bronx/Westchester Alternate Control Center Renovation  
4       for \$1.5 million in RY3.
- 5       • 28<sup>th</sup> Street Service Center 2<sup>nd</sup> Floor Renovation for \$2.0  
6       million in RY3.
- 7       • College Point Blvd. 2<sup>nd</sup> Floor Renovation for \$1.5 million  
8       in RY3.

9                               **Sherman Creek Work Out Center**

- 10    Q.    Is the Company considering developing a new Work Out  
11       Center?  If so, why?
- 12    A.    Yes.  The GIOP explains its need to increase its workforce  
13       significantly in the next several years to complete  
14       additional gas main replacement, gas leak repair, oil-to-  
15       gas conversion and new business projects.  In addition,  
16       there is increased congestion at the existing Manhattan and  
17       Bronx service centers.  Given the increase in staffing and  
18       the pre-existing congestion, the Company believes that a  
19       new service center will address both issues as is explained  
20       in Exhibit \_\_ (SSP-6).
- 21    Q.    Please explain what you mean by increased congestion at the  
22       existing work out locations.
- 23    A.    The existing Manhattan service centers are currently  
24       operating at 17% over-capacity.  They regularly experience

SHARED SERVICES PANEL

1 congestion in getting in and out of the yards, which is  
2 impacting pedestrian and vehicular safety, while also  
3 affecting crew response times and productivity. Also, the  
4 existing 28<sup>th</sup> Street service center is affected by continued  
5 development in the surrounding area, which includes the  
6 Hudson Yards development. In addition, construction of the  
7 Gateway tunnel over the next decade will exacerbate the  
8 congestion and related issues.

9 This congestion is expected to increase as the Gas  
10 Operations work force grows over the next five years, by  
11 approximately 500 people (a 50% increase).

12 Q. Where does the Company intend to locate this new Service  
13 Center?

14 A. The Company owns land at Sherman Creek in the Inwood  
15 section of Northern Manhattan, which is the location best  
16 suited to build this service center.

17 Q. What is the Company looking to build at Sherman Creek?

18 A. While detailed engineering plans have not yet been  
19 developed, the Company anticipates that the new service  
20 center would entail the development of two buildings to  
21 house office and field support space as well as warehouse,  
22 storage and vehicular parking for Company passenger and  
23 heavy duty trucks and other equipment. Engineering studies

SHARED SERVICES PANEL

1 are underway to refine and finalize the size and layout of  
2 the proposed service center.

3 Q. Are there alternatives to constructing the new service  
4 center?

5 A. The Company evaluated its owned properties in Manhattan and  
6 elsewhere as part of an effort to de-load and optimize  
7 operations at the existing Manhattan service centers and to  
8 address the need to accommodate the additional Gas  
9 personnel and vehicles. The existing service centers,  
10 Sherman Creek, 59th Street Generating Station, 74th Street  
11 Generating Station, East River Generating Station and  
12 various substation sites were amongst those considered.  
13 In addition, real estate personnel worked with commercial  
14 brokers to identify whether there were any suitable  
15 privately owned properties available either for purchase or  
16 leasing. Given the robust development market in New York  
17 City, particularly Manhattan, few industrial zones sites  
18 were identified as available either for purchase or lease  
19 and all were cost prohibitive, particularly when  
20 development costs are taken into consideration.  
21 Of all the sites reviewed, the available Sherman Creek  
22 parcels hold the most promise because of their size and  
23 lack of building structures.

24 Q. What are the forecasted capital costs for this project?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. As explained in Exhibit \_\_ (SSP-6), the estimated project  
2 cost based on engineering conceptual estimates is \$113.6  
3 million. The project will be phased over three years and  
4 spending is estimated at approximately \$11.3 million in  
5 RY1, \$68.3 million in RY2, and \$34.0 million in RY3.

6 Q. Are there any O&M costs associated with the proposed  
7 Sherman Creek Workout Center?

8 A. Once built, this new facility will require maintenance  
9 associated with the Capital project.

10 Q. What is the maintenance associated with Capital for this  
11 location?

12 A. The maintenance associated with Capital costs will be  
13 incurred in the final phase and post-construction in 2018-  
14 2020. These expenses include: swing space rental and  
15 associated setup cost and relocation costs for employees  
16 and equipment that will be moved into the new building.

17 Q. What are the forecasted maintenance costs for this project  
18 during the Rate Years?

19 A. The forecasted maintenance associated with Capital costs,  
20 described in Exhibit \_\_ (SSP-6), will be approximately \$1.1  
21 million each year in RY2 and RY3. Based on the findings  
22 from a feasibility study, which is expected to be completed  
23 in April 2016, the Company will provide an update if  
24 available at the time of the update.

20  
21  
22  
23  
24  
25

Q. Please explain the O&M project named Irving Place Exterior Landmarks Preservation Metal Component Restoration project.

A. This project will repair and restore the Irving Place historical decorative cast iron components and the storefront windows/canopies. The project includes scraping, painting, sealing and re-caulking type maintenance work and is further described in Exhibit \_\_ (SSP-6).

Q. Please explain further.

A. The exterior Landmarks Preservation metal components along the Irving Place street elevations and associated storefront windows have deteriorated from aging as well as exposure to the elements. The major defects are characterized by flaking paint, open seams, bowed window sashes and disintegrated metal components.

Q. What is the overall goal of this work?

A. This work will seal the building so that it is water-tight and repair the deteriorated parts. Because the building is landmarked, any repairs to the façade must identify and catalog all elements, followed by careful dismantling and packaging of each piece. Each will then be shipped offsite for repair or replication and returned for re-installation.

Q. Please describe the restoration work to be done.

SHARED SERVICES PANEL

1 A. The existing cast iron components, such as the columns,  
2 seams, and aprons, will be restored and sealed, including  
3 replacing any missing items, such as screws as well as  
4 repairing open seams.

5 Q. Why is this work necessary?

6 A. This restoration work will make the building envelope  
7 water-tight by extending the life of the metal components.  
8 The presence of de-icing salts has corroded the cast-iron  
9 aprons along the street elevation, making it possible for  
10 water to flow directly into the sub-basement resulting in  
11 heat loss from the building. Failure to address these  
12 issues can cause severe structural damage to the basement  
13 structure as the surrounding environment is highly  
14 corrosive from de-icing salts.

15 Q. What is the total cost of this project?

16 A. The O&M cost is \$3.0 million. The planned costs are \$1.5  
17 million in each of RY1 and RY2.

18 **Transportation Operations**

19 Q. Please explain the activities of the Transportation  
20 Operations group.

21 A. Transportation Operations provides automotive engineering  
22 and fleet support for the Company, including managing fuel  
23 deliveries to Company fueling stations, creating  
24 specifications for new vehicle and equipment purchases,

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 administering parts and service contracts for fleet vehicle  
2 support, and managing the XM-2/XM-13 capital budget.

3 Q. What does Transportation do to minimize costs?

4 A. In addition to the cost minimization items described  
5 earlier in the General Equipment section as well as earlier  
6 in this section, Transportation continues to purchase clean  
7 Alternative Fuel Vehicles ("AFVs") that reduce gasoline and  
8 diesel fuel consumption. We are also introducing bucket  
9 trucks that use electric power to operate the boom. In  
10 addition, we are committed to looking at ways to reduce the  
11 fleet size (vehicle pooling, etc.) and we continue to use  
12 our relationships with suppliers and manufacturers to  
13 obtain skills training for our staff of mechanics.  
14 Improved skills have allowed Transportation to maintain a  
15 diverse fleet with no staffing increases. And finally, we  
16 also work with Supply Chain to leverage better pricing  
17 initiatives by establishing multi-year vehicle contracts  
18 and by consolidating parts and service contracts.

19 Q. Please describe the capital projects Transportation is  
20 planning to undertake.

21 A. Transportation has five capital projects planned between  
22 RY1 and RY3:

23 • The first four projects address fueling of vehicles:

SHARED SERVICES PANEL

- 1           o upgrading the existing gasoline and diesel fuel
- 2           stations;
- 3           o upgrading existing Company Compressed Natural Gas
- 4           ("CNG") fueling stations;
- 5           o the construction of one new CNG fueling station; and
- 6           o installing electric vehicle charging stations at
- 7           multiple sites.
- 8           • The fifth project is to replace the existing fleet
- 9           vehicle management systems.

10 Q.   Are these projects detailed in Exhibit \_\_ (SSP-6)?

11 A.   Yes, they are.

**Fuel Station Projects**

13 Q.   How does the Company currently provide fuel for the vehicle

14       fleet?

15 A.   Currently, the Company has 12 gasoline/diesel fueling

16       stations and eight CNG fueling stations. Generally,

17       Company vehicles refuel at these locations using the

18       Company-issued gas card system.

19 Q.   Does the Company have an on-going program to upgrade these

20       fuel stations?

21 A.   Yes. As explained below, there is an on-going program to

22       upgrade the gasoline/diesel stations and another program to

23       upgrade the CNG stations.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Q. In addition to these two programs, does the Company have  
2 any other plans to address vehicle fueling?

3 A. Yes. The Company plans to add one new CNG station and  
4 develop electric vehicle charging stations.

5 Q. Is there a reason the Company is pursuing using alternate  
6 fuels?

7 A. The U.S. Department of Energy ("DOE"), as required under  
8 the Energy Policy Act of 1992 ("EPAct"), has developed a  
9 program aimed at reducing the Country's petroleum  
10 consumption through the use AFVs or other methods.

11 This Alternative Fuel Transportation Program requires fleet  
12 owners and gasoline suppliers to purchase AFVs, such as  
13 CNG-powered, hybrid or plug-in vehicles, as replacements  
14 for a portion of its light-duty fleet. The fleet owner can  
15 meet its requirements based on either a Standard Compliance  
16 formula, which would require all new fleet vehicles under  
17 8,500 pounds to be an AFV, or through an Alternative  
18 Compliance formula. The Company has decided to comply with  
19 the Alternative Fuel Transportation Program through the  
20 Alternative Compliance formula, which allows the Company to  
21 implement petroleum-reduction measures.

22 Q. How much petroleum is the Company required to reduce under  
23 the Alternative Compliance formula?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. On an annual basis, we are required to submit a petroleum-  
2 reduction offset plan to the DOE for the next vehicle Model  
3 Year. It is based on projected use of alternative fuels  
4 such as CNG, plug-in electric power and bio-diesel fuel  
5 usage. For 2016, we estimate our DOE fuel offset  
6 requirement to be approximately 225,000 Gasoline Gallon  
7 Equivalent ("GGE"). The DOE annually calculates the fuel  
8 offset requirement for the subsequent model year. Our GGE  
9 for RY1 is unknown at this time.

10 Q. How is the Company meeting its EPAAct petroleum reduction  
11 obligations?

12 A. We intend to meet this reduction through the continued use  
13 of Bio-Diesel fuel and the purchase of AFVs, which helps to  
14 reduce the amount of gasoline used.

15 Q. What AFV options are available in the marketplace for fleet  
16 vehicle purchases?

17 A. Based on marketplace availability, the Company purchases  
18 approximately 10-20 vehicles per year powered by CNG and  
19 another 5-10 light-duty electric-powered vehicles.  
20 Currently, the Company operates 312 CNG powered vehicles,  
21 135 hybrid electric vehicles and 13 plug-in electric  
22 vehicles.

23 Q. Are there other benefits that result from using AFVs?

SHARED SERVICES PANEL

1 A. Yes. Purchasing and operating AFVs results in lower  
2 emissions, fewer toxic contaminants and contributes to  
3 lower "greenhouse gases." Expanding the Company's clean  
4 AFV fleet contributes to reducing negative impacts on the  
5 environment, air quality, global warming and public health.

6 Q. How will you address the fueling station projects?

7 A. We will discuss the gasoline and diesel fuel station  
8 project, followed by the CNG upgrade project and the CNG  
9 expansion project and complete the discussion with the  
10 plug-in vehicle project.

11 **Gasoline and Diesel Fuel Project**

12 Q. Please describe the fuel station upgrade project.

13 A. This project funds the replacement of deteriorating and  
14 aging equipment at the Company's twelve vehicle fueling  
15 stations that provide gasoline and bio-diesel fuel. The  
16 underground equipment at three of the stations is over 30  
17 years old and the underground equipment at the remaining  
18 nine stations ranges from 20 to 25 years old. All of the  
19 stations will receive new fuel islands and dispensers. The  
20 Company is deploying a state-of-the-art card reading  
21 fueling authorization system which was discussed in the  
22 General Equipment section. In addition, the Company will  
23 replace existing underground fuel storage tanks and  
24 associated piping at three stations. Additional details

SHARED SERVICES PANEL

1 can be found in the Fuel Station Upgrades white paper in  
2 Exhibit \_\_ (SSP-6).

3 Q. Is there a need to upgrade these stations?

4 A. Yes. Due to the obsolescence of the equipment at these  
5 locations, replacement parts are becoming difficult to  
6 obtain and, as a result, the stations are more subject to  
7 potential outages. In addition, a recent engineering study  
8 recommended, based on the age of the single wall tanks in  
9 Rye, Eastview and Yonkers that the tanks be replaced with  
10 double-wall fiberglass underground storage tanks that meet  
11 current fuel station regulations. This will also reduce  
12 the potential for an environmental incident resulting from  
13 a tank/component failure.

14 Q. Are there potential issues if even one of these stations  
15 was not available?

16 A. Yes. If a major failure were to occur at a station, the  
17 station could be out-of-service for a considerable amount  
18 of time until repairs are completed. This would impact the  
19 ability to fuel Company vehicles at the site, resulting in  
20 the use of more costly retail fueling sites. For example,  
21 after Superstorm Sandy, three of our stations were  
22 inoperable for two months, requiring crews to obtain fuel  
23 at other Company locations or other retail sites.

24 Q. What is the current status of this project?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. As of December 31, 2015, the Company has completed the  
2 above ground upgrades (fuel dispensers, card readers, etc.)  
3 for eleven of the fueling stations. Of these eleven  
4 stations, two required complete tank, piping and associated  
5 equipment replacements which have yet to be completed. The  
6 remaining station, Eastview, requires both above ground  
7 upgrades and complete tank, piping and associated equipment  
8 replacements as well.

9 Q. What stations require additional renovations and what is  
10 their status?

11 A. Of the three stations that require additional renovations,  
12 the Rye and Yonkers locations only require complete tank,  
13 piping and associated equipment replacements, since the  
14 above ground work has already been completed. These  
15 stations will be completed in RY2.

16 The Eastview Station requires both above ground and  
17 complete tank, piping and associated equipment replaced.  
18 Work at Eastview will be performed contemporaneously with  
19 the CNG upgrade, which, as discussed next will be completed  
20 in 2016.

21 Q. What is the cost of this project?

22 A. The fuel station upgrade project will cost \$15.7 million in  
23 total, of which \$5.0 million has already been expended.

SHARED SERVICES PANEL

1 The project will be completed in RY1. The planned amounts  
2 are \$6.4 million in 2016 and \$4.3 million in RY1.

3 **CNG Station Upgrade**

4 Q. How many vehicles in the Company's fleet currently use CNG?

5 A. There are presently 312 CNG-fueled vehicles in the  
6 Company's fleet, and we plan to continue purchasing 10 - 20  
7 CNG-fueled vehicles (as vehicle replacements) annually over  
8 the next several years.

9 Q. How are these vehicles fueled?

10 A. The Company currently has eight CNG fueling stations  
11 providing CNG for the Company fleet as well as outside  
12 customer fleets.

13 Q. Please explain the CNG Station Upgrade Project.

14 A. This capital project upgrades the existing stations,  
15 including replacing obsolete and deteriorating equipment  
16 and increasing the operating pressure. Additional details  
17 can be found in the CNG Fuel Station Upgrades white paper  
18 in Exhibit \_\_ (SSP-6).

19 Q. What work will be performed at these stations?

20 A. The CNG fueling stations will receive new dispensers,  
21 storage vessels, piping, associated valving, control  
22 panels, electronic control units and card reader systems.  
23 As explained below, these upgrades will enable an increase  
24 to the pressure of the CNG provided to vehicles.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Q. Why do the Company's CNG stations need upgrades?

2 A. There are two primary reasons for these CNG upgrades.

3 First, these CNG stations have been in-service over 20  
4 years. Replacement parts are becoming obsolete and  
5 difficult to obtain and if a major failure were to occur at  
6 a station, it is possible the station would be out of  
7 service for a considerable amount of time until repairs  
8 could be made.

9 Second, in order to align with current automotive industry  
10 protocol for the operation and fueling of CNG vehicles,  
11 station operating pressures should be increased from 3,000  
12 psi to 3,600 psi output. Current vehicle technology  
13 requires higher pressure to achieve the manufacturer's  
14 mileage ratings. This project will provide higher PSI  
15 output, resulting in additional vehicle range and increased  
16 throughput at our stations. The higher pressure and  
17 current technology will allow for increased use of CNGs.

18 Q. What is the current status of this project?

19 A. As of December 31, 2015, upgrades to two stations in  
20 Manhattan and one in Brooklyn have been completed, leaving  
21 five stations remaining to be upgraded.

22 Q. What stations remain to be completed?

23 A. The five stations that remain to be upgraded are Eastview,  
24 Rye, Astoria, College Point, and Van Nest.

SHARED SERVICES PANEL

1 Q. What is the status of each of these five upgrades?

2 A. The Rye, Eastview, and Astoria CNG stations are scheduled  
3 to be completed in 2016, and the College Point and Van Nest  
4 stations are scheduled for completion in RY1.

5 Q. What is the estimated cost of the CNG station upgrades?

6 A. The total project cost is \$7.5 million, with approximately  
7 \$1.4 million spent to date. The project will be completed  
8 in RY1, with \$3.3 million to be spent in 2016 and \$2.8  
9 million in RY1.

10 **New CNG Station Installation**

11 Q. Please explain the new CNG station construction project at  
12 Bruckner Blvd.

13 A. This capital project funds the design and construction of a  
14 new CNG station located at the Bruckner Blvd. Service  
15 Center in the Bronx.

16 Q. Please explain why this CNG station is needed.

17 A. With the continued purchase of CNG vehicles (as replacement  
18 vehicles), this project will provide the Company with an  
19 additional necessary fueling station. As explained  
20 earlier, the Company uses CNG to help comply with the DOE's  
21 EPAct requirements for offsetting petroleum usage.

22 In recent years, the Company has seen an increase in the  
23 public vehicles being fueled at the Van Nest station, which  
24 in addition to Eastview, are the only two Company-publicly

SHARED SERVICES PANEL

1 available CNG stations in the Bronx-Westchester areas. The  
2 public use of this station can sometimes slow down the  
3 Company use at the station. Since we expect to continue to  
4 grow the CNG fleet, building another station at this  
5 location would alleviate some of these congestion issues.

6 Q. What is the cost of this project and what is the  
7 anticipated in-service date?

8 A. The new CNG station is estimated to cost \$5.0 million. The  
9 costs are \$1.0 million in RY1, \$1.5 million in RY2, and  
10 \$2.5 million in RY3.

11 **Electric Vehicle Charging Station Project**

12 Q. Please describe the Electric Vehicle Charging Station  
13 Infrastructure Project.

14 A. This capital project funds the design and construction of  
15 infrastructure for new charging stations at nine locations  
16 throughout the service territory. These stations are  
17 required to re-charge plug-in vehicles.

18 Q. Please describe an electric vehicle charging station.

19 A. An electric vehicle charging station consists of multiple  
20 components such as electric service infrastructure,  
21 electric vehicle supply equipment ("EVSE") units, metering  
22 devices, and ancillary equipment used to support all levels  
23 of charging station devices.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Q. Please explain why is it necessary to install electric  
2 vehicle charging stations at the nine locations?

3 A. In order to continue to expand our AFV strategy and to  
4 assist complying with EPA's regulations by reducing  
5 petroleum usage, we plan to replace 15 to 20 fleet vehicles  
6 annually with vehicles that include plug-in electric  
7 technology ("plug-in vehicles"). In addition, an ancillary  
8 initiative is to evaluate a Workplace Charging program that  
9 will allow employees to use the proposed charging  
10 infrastructure during hours where the chargers would  
11 otherwise not be used. Finally, it is important to have  
12 these charging stations operational as electric-powered  
13 vehicles are placed into service. Without the  
14 infrastructure to charge in place, we cannot purchase or  
15 use electric vehicles.

16 Q. Please describe the Company's electric plug-in vehicle  
17 plan.

18 A. In 2016-2019, the Company's plan includes the purchase of  
19 15 to 20 vehicles per year that include plug-in electric  
20 technology. These vehicles will vary in size from light  
21 duty to medium-heavy duty trucks. In addition, the Company  
22 recently accepted delivery of eight bucket trucks with  
23 booms powered via plug-in technology.

24 Q. How many plug-in vehicles does the Company currently have?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. The Company currently has 13 plug-in vehicles.

2 Q. How are these vehicles currently recharged?

3 A. These vehicles are recharged at three Company locations, 4  
4 Irving Place, Astoria and Van Nest, utilizing two Level 2  
5 chargers (described below) at each site.

6 Q. Where does the Company plan to locate the new charging  
7 stations?

8 A. The Company plans to locate these stations throughout its  
9 service territory - three in Manhattan (East 16<sup>th</sup> Street,  
10 West 28<sup>th</sup> Street and East 110<sup>th</sup> Street), two in Queens  
11 (College Point and Astoria), one each in Brooklyn (Third  
12 Avenue), Bronx (Van Nest), Staten Island (Victory  
13 Boulevard) and Westchester (Eastview).

14 Q. Are there different types of designs for these plug-in  
15 charging stations?

16 A. Yes. Each one of these nine stations will initially have  
17 five charging units installed, with the ability to add  
18 additional charging units. The charging units will provide  
19 the Company with the ability to charge the vehicles at  
20 three different charging levels. The charging levels are:  
21 Level 1 - (> 8 hrs.); Level 2 - (4 - 6 hrs.); and DC Fast  
22 Charger (< 1 hr.).

23 Q. What are the projected costs of this project and what are  
24 the anticipated in-service dates?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. This project will cost \$10 million as shown below:

- 2 • Astoria Site \$1.10 million
- 3 • College Point Site \$1.90 million
- 4 • Van Nest Site \$0.90 million
- 5 • Third Avenue Site \$1.95 million
- 6 • West 28<sup>th</sup> Street Site \$0.85 million
- 7 • East 16<sup>th</sup> Street Site \$0.70 million
- 8 • East 110<sup>th</sup> Street Site \$0.75 million
- 9 • Eastview Site \$0.85 million
- 10 • Victory Blvd. Site \$1.00 million

11 Because of varying conditions at each location, the design  
12 and build time can vary between sites; however, we expect  
13 to complete three sites per year as follows:

- 14 • 2016 - West 28<sup>th</sup> Street, East 16<sup>th</sup> Street and East 110<sup>th</sup>  
15 Street for a total of \$2.3 million
- 16 • RY1 - Victory Blvd., Third Ave. and College Point for a  
17 total of \$4.85 million
- 18 • RY2 - Astoria, Eastview and Van Nest for a total of \$2.85  
19 million

20 **Fleet Management System**

21 Q. Does Transportation have another capital program to  
22 discuss?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. Yes. Transportation intends to upgrade its existing Fleet  
2 Management system after performing a review of its existing  
3 systems and what systems are available.

4 Q. Please describe the current systems used for fleet  
5 management.

6 A. Transportation manages its fleet through primarily three  
7 systems:

8 • The core system is the Vehicle Management System, and  
9 is a mainframe COBOL-based system that was implemented  
10 in 1981;

11 • A user-friendly front end, EZ-VMS, was built in 1997  
12 that has both a day-to-day transaction system and an  
13 administration system; and

14 • A separate system, AutoEase, is used to inventory and  
15 track vehicle parts.

16 Q. Is there an issue with continuing to use these three  
17 systems going forward?

18 A. Yes. The current systems have basic and limited  
19 functionality. While the system records vehicle inventory,  
20 repairs and associated labor data, they lack the ability to  
21 determine the optimal replacement schedule of vehicle  
22 classes, as well as specific vehicles. This work is  
23 currently done offline downloading data into spreadsheets.

24 Q Please continue.

SHARED SERVICES PANEL

1 A. Yes. The main system, EZ-VMS, is a custom program written  
2 by a small vendor that is staffed by two individuals and  
3 support for this product going forward is questionable.  
4 Additionally, functionality to produce fleet analytics and  
5 reporting is not readily available through the existing  
6 systems.

7 Q. Are there benefits associated with this project?

8 A. Yes. There are several. First, a commercial package  
9 system can integrate GPS data from vehicles, improve repair  
10 analytics, and cost analytics for vehicle parts.  
11 Second, commercial package systems also integrate with our  
12 corporate systems such as the Oracle ERP Financial and  
13 Supply Chain system.  
14 Third, the current front-end system, EZ-VMS, is maintained  
15 by the vendor that created it and requires significant  
16 upgrade efforts in order to work with supported versions of  
17 Windows operating systems and standardized middleware. A  
18 commercial package would provide regular releases that  
19 provide both functional improvements as well as keeping  
20 current with new versions of desktop and server  
21 technologies.

22 Q. What are the costs of this project and the anticipated  
23 completion date?

SHARED SERVICES PANEL

1 A. The Fleet Management Solution project will be completed in  
2 RY2 at a cost of \$4.0 million in each of RY1 and RY2.

3 **VI. CORPORATE SECURITY**

4 Q. Please explain the responsibilities of Corporate Security.

5 A. Corporate Security's core mission is to develop a  
6 comprehensive security program that provides for a  
7 proactive partnership with both our operating and support  
8 organizations along with external law enforcement, and  
9 governmental and regulatory agencies.

10 To meet our mission, we have developed comprehensive  
11 security processes to protect critical infrastructure.  
12 These processes encompass a wide array of functional  
13 responsibilities including: policies and procedures,  
14 electronic security systems, physical security measures,  
15 central station monitoring, compliance with governmental  
16 and regulatory initiatives and standards, and security  
17 awareness training. We also provide oversight and guidance  
18 to both Facilities and operating organizations regarding  
19 their physical security measures and contract guard  
20 services at the various Company locations for which these  
21 organizations are responsible.

22 Q. What are the security-related projects that the Company is  
23 proposing?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. The Company is continuing two capital projects and three  
2 O&M projects. The capital projects are: (1) an advanced  
3 security platform, and (2) the replacement of obsolete CCTV  
4 cameras throughout the Company.

5 The Company is proposing O&M program changes associated  
6 with: (1) the advanced security platform (explained in the  
7 capital section); (2) cyber forensic investigative  
8 laboratories; and (3) expanding the staff of cyber forensic  
9 investigators.

10 Q. What are the planned capital and O&M expenditure levels for  
11 Security programs?

12 A. For capital, the Company plans to spend approximately \$7.7  
13 million in RY1, \$5.7 million in RY2, and \$1.0 million in  
14 RY3. Planned O&M expenditures are approximately \$1.1  
15 million in RY1, and \$1.4 million in each of RY2 and RY3,  
16 exclusive of escalation.

17 Q. Do you have exhibits entitled "Shared Services - Corporate  
18 Security White Papers" and "Corporate Security - Cyber  
19 Forensics" detailing these projects and programs?

20 A. Yes, we have.

21 Q. Were these exhibits prepared under the Panel's direction  
22 and supervision?

23 A. Yes, they were.

24 MARK FOR IDENTIFICATION AS EXHIBITS \_\_\_ (SSP-8, SSP-9)

SHARED SERVICES PANEL

1                                   **Enterprise Security Platform**

2   Q.   Turning to the capital projects, please explain the  
3        advanced security platform, also known as the Enterprise  
4        Security Platform ("ESP").

5   A.   Con Edison provides an important public service to New York  
6        City and Westchester County. To adequately safeguard its  
7        facilities, Con Edison continues to incorporate  
8        comprehensive security processes to protect the Company,  
9        its employees and its physical assets, such as generating  
10       stations and substations. Electronic physical security  
11       mitigation measures already implemented consist of CCTV,  
12       intrusion detection, card access and DVR equipment. We  
13       continue to add facilities where we have these systems into  
14       our SOC, where they are monitored 24x7. This provides a  
15       central point for coordinating response protocols for  
16       security events and alarms. Some of these mitigation  
17       measures are run on an independent system, which does not  
18       provide a completely accurate depiction of events as they  
19       transpire. To solve this problem, Corporate Security  
20       purchased an advanced ESP providing real-time monitoring of  
21       ingress and egress points within Con Edison facilities.  
22       This means operators at the SOC will be able to react to an  
23       emergent situation immediately.

24   Q.   What does the system do?

SHARED SERVICES PANEL

1 A. The system incorporates Con Edison's current platforms  
2 including intrusion detection, video management, visitor  
3 management, access control, fire alarms, burglar alarms,  
4 and biometrics into one system for real-time monitoring on  
5 a system-wide basis.

6 Q. How will this enhance security at Con Edison?

7 A. This new technology will maximize the benefit of  
8 centralized security monitoring at the SOC. The  
9 integration of systems enables Con Edison to assess a  
10 security condition as it transpires to determine what type  
11 of response, if any, is needed.

12 Q. Why does the Company need this new ESP system?

13 A. There are several reasons. The first is that the old card  
14 access system, deployed in 2005, is designed for a smaller  
15 platform. Since 2005, we have increased our locations with  
16 card access by over 500%. The card systems now support 110  
17 locations with 1,623 readers, whereas we initially started  
18 with 26 locations and 224 readers. In addition, some of  
19 the old software is no longer supported by the initial  
20 vendor, and although we have frequently upgraded the  
21 system, the old system's capabilities are limited.

22 As mentioned earlier, another reason for the new ESP is  
23 that the majority of our current physical security  
24 mitigation systems are independent and do not communicate

SHARED SERVICES PANEL

1 with each other. For example, approximately 1,400 cameras  
2 at 85 Company locations are monitored at the SOC, but they  
3 were not connected to the card access system. Without  
4 integration to access control, we lack the ability to  
5 provide a real-time, instant view of the physical security  
6 conditions at each facility, which can make it difficult  
7 for Security to react to an emergent situation.

8 Third, under NERC CIPv5 requirements, there are specific  
9 standards for certain facilities that must be met, which we  
10 could not meet without this new system. Under these  
11 requirements, utilities must meet standards for certain  
12 assets, among other items, including physically securing  
13 access to substations, enhancing physical security plans,  
14 securing data, and having an audit capability at those  
15 locations.

16 Q. What has been accomplished to date on the ESP?

17 A. We worked with IT and outside contractors to implement a  
18 security platform. This provides Con Edison with an  
19 integrated platform of access control, video management,  
20 and visitor management as the primary security tools for  
21 the entire Company.

22 Q. In addition to implementing a system, what other work has  
23 been completed on this as of year-end 2015?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. At year-end 2015, ten locations were connected to the  
2 system's access control panels.

3 Q. What do you expect to complete during 2016?

4 A. By the end of 2016, we expect to have migrated an  
5 additional 44 of the 110 sites to the system's access  
6 control panels.

7 Q. After 2016, what work will remain to complete this project?

8 A. In 2017 and 2018, the remaining 56 sites will be migrated  
9 to the new access control panels. In addition, seven large  
10 Company locations currently without access control panels  
11 will be outfitted with this system.

12 Q. What are the projected capital costs for the ESP?

13 A. The projected capital cost is a total of \$30 million.

14 Q. Can you please provide the annual amounts?

15 A. We expect to spend \$7.9 million in 2016, \$6.7 million in  
16 RY1, and \$4.7 million in RY2. To date, \$10.6 million has  
17 already been spent on this project.

18 Q. Please describe the O&M requested for the ESP.

19 A. The ESP will be supported through three components: (1)  
20 additional technical operators at the SOC to review  
21 incoming information, (2) an ESP support agreement with the  
22 manufacturer, and (3) ongoing technical support from IT.

23 Q. Please describe the need for contract security technical  
24 operators at the SOC.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. As we implement the ESP, the amount of information to be  
2 reviewed in the SOC will increase, including adding  
3 additional sites and cameras for full-time monitoring.  
4 Correspondingly, the number of event triggering alarms will  
5 increase, as the systems communicate with each other. The  
6 number of contract security technical operators who  
7 currently monitor data and alarms at the SOC is two per  
8 shift, 24 hours per day, 365 days per year, which equates  
9 to six operators per 24 hours.

10 Q. What do these security technical operators do?

11 A. These security technical operators parse and analyze data,  
12 and communicate the information quickly so that any  
13 response, whether it requires law enforcement and/or  
14 internal forces, appropriately addresses the situation.

15 Q. Why will more security technical operators be needed?

16 A. As the ESP is implemented, it will be necessary to augment  
17 the SOC with two additional contract security operators per  
18 eight hour shift (which equates to an addition of six  
19 operators per 24 hours) for RY1, RY2 and RY3, for a total  
20 cost of \$450,000 per year to meet the growing information  
21 that the ESP provides. In 2016, we expect to have one  
22 additional operator per eight hour shift (three employees)  
23 and have the remaining operator in RY1 (three employees).

24 Q. Please continue with the second category of ESP O&M costs.

SHARED SERVICES PANEL

1 A. The ESP will need a service support agreement with the  
2 vendor providing the Company with periodic software  
3 upgrades, a direct connection with vendor technical  
4 support, and 24/7 vendor support. We expect to spend  
5 \$430,000 annually starting in RY2 after the initial  
6 warranty expiration. As explained in the IT testimony,  
7 service agreements are necessary to maintain systems like  
8 this one.

9 Q. What is the third O&M component for the ESP program change?

10 A. Corporate Security will require IT maintenance and support  
11 of the system. IT will need to dedicate resources to  
12 provide continual system availability, which includes the  
13 necessary support for any maintenance such as patching,  
14 reporting, upgrading, enhancing, and customizing. This  
15 support will begin in RY1 at a cost of \$240,000 per year.

16 Q. What is the total O&M ongoing cost for these three  
17 programs?

18 A. Aggregating these three elements of expense, the O&M cost  
19 in support of the ESP is anticipated to be \$700,000 in RY1,  
20 and \$1.1 million in each of RY2 and RY3.

21 **Company Wide Camera Rollout Program**

22 Q. Please explain the second capital project being requested.

23 A. Corporate Security is systematically replacing outdated  
24 digital cameras with Internet Protocol ("IP") cameras,

SHARED SERVICES PANEL

1 which will increase clarity and resolution for  
2 investigative purposes. The second capital project  
3 replaces old and obsolete CCTV cameras and increases the  
4 number of cameras at critical locations. Prior to the  
5 centralization of technical security at Con Edison, many of  
6 the organizations had CCTV cameras installed after  
7 September 2001, and some have had their cameras as far back  
8 as in the 1990s. Many of these cameras are outdated, parts  
9 are unavailable, and the equipment is no longer supported  
10 by their manufacturer.

11 Corporate Security is responsible for standardizing and  
12 providing subject matter expertise on the CCTV cameras to  
13 be installed. As cameras fail or require more servicing,  
14 they lose their capability of capturing quality video and  
15 even experience total video loss.

16 Q. Please continue.

17 A. Replacement of these cameras in an on-going program. We  
18 are replacing analog cameras with the more expensive,  
19 better functioning IP cameras, which results in about 60-65  
20 cameras being replaced annually.

21 Q. Why are IP cameras more expensive?

22 A. IP cameras, which produce sharper quality images than  
23 previously utilized analog cameras, require a different,  
24 more expensive, type of cabling and switches. Both

SHARED SERVICES PANEL

1 internal and external labor associated with installing  
2 these new types of cameras are higher than for analog  
3 cameras.

4 Q. How many cameras did you replace in 2014-2015?

5 A. 126 cameras were replaced during that time frame.

6 Q. What are the projected costs for this program?

7 A. The projected capital cost for the replacement and/or  
8 enhancement of old/outdated CCTV cameras is \$1 million  
9 annually in RY1, RY2 and RY3.

10 **Cyber Forensics**

11 Q. Please discuss O&M funding for Cyber Forensics.

12 A. In addition to the support for the ESP discussed earlier,  
13 Corporate Security is sponsoring two O&M program changes:  
14 (1) for the addition of two cybersecurity forensic  
15 investigators, and (2) for support necessary to maintain  
16 the investigatory tools and the education of the cyber  
17 forensic team.

18 Q. Do you have an exhibit explaining the addition of the  
19 cybersecurity forensic investigators and the support  
20 associated with these employees?

21 A. Yes. These programs are discussed in further detail in  
22 Exhibit \_\_ (SSP-9). This Exhibit is submitted on a  
23 confidential basis so as not to compromise the Company's  
24 cybersecurity efforts by potentially disclosing our

SHARED SERVICES PANEL

1 strategies to persons that may seek to do harm to the  
2 Company. These exhibits explain the need for additional  
3 resources and training for forensic cybersecurity experts.

4 **VII. EMERGENCY MANAGEMENT**

5 Q. Please provide a brief description of the EM organization.

6 A. EM's mission is to meet our Company's emergency response  
7 needs by partnering with our stakeholders to provide  
8 effective risk assessment, mitigation, preparedness,  
9 response, recovery, and communications. We strive to  
10 utilize effective emergency management principles that  
11 enhance the Company's ability to provide safe and reliable  
12 energy services, and its ability to communicate in times of  
13 emergency timely and accurate information to our customers,  
14 employees, and other stakeholders by:

- 15 • Implementing comprehensive emergency preparedness  
16 programs;
- 17 • Conducting effective risk assessments for operating and  
18 business functions;
- 19 • Developing appropriate prevention or risk mitigation  
20 strategies;
- 21 • Responding with appropriate resources to address the  
22 emergency;
- 23 • Recovering from events expeditiously; and

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

- 1       • Communicating with customers and other stakeholders with  
2           timely and accurate information using voice, internet,  
3           media, and other appropriate methods.

4 Q.   Please describe the initiatives that EM is undertaking.

5 A.   During RY1, RY2 and RY3, we propose to undertake four  
6   projects:

7       • Emergency Operation Center ("EOC") Incident Information  
8           Management System (capital);

9       • System Emergency Assignment ("SEA") Module Development  
10           (capital);

11       • SEA Software Annual Fee (O&M); and

12       • Enhancing New Risk Planning, Training, and Exercise  
13           Program (O&M).

14 Q.   Have you prepared an exhibit entitled "Shared Services -  
15   Emergency Management White Papers" detailing these projects  
16   and programs?

17 A.   Yes, we have.

18 Q.   Was this exhibit prepared under your direction and  
19   supervision?

20 A.   Yes, it was.

21           MARK FOR IDENTIFICATION AS EXHIBIT \_\_ (SSP-10)

22 Q.   How much does the Company intend to spend on these four  
23   initiatives?

SHARED SERVICES PANEL

1 A. For the two capital projects for EM, the Company plans to  
2 spend approximately \$500,000 in each of RY1, RY2, and RY3.  
3 For the two O&M programs for EM, the Company projects to  
4 spend approximately \$300,000 in each of RY1, RY2, and RY3.

5 Q. What steps does EM take to control costs?

6 A. EM controls costs by leveraging technology and its  
7 available resources to operate as efficiently as  
8 possible. EM and Supply Chain already have signed  
9 contracts with vendors that provide key services or other  
10 resources (e.g., staging area/base camp services, hoteling,  
11 rental cars, electrical contractors to support mutual  
12 assistance needs, etc.) in the event of a large-scale  
13 incident response, achieving better pricing, response time,  
14 and terms than would be obtained otherwise.

15 **EOC Incident Information Management System**

16 Q. Please describe the capital program entitled EOC Incident  
17 Information Management System.

18 A. Over a decade ago, the Company implemented a document  
19 manager software program, called CERCdocs, for its EOC  
20 intended to record appropriate items during emergency  
21 response events. CERCdocs has been used for Corporate  
22 emergencies, when the Corporate Emergency Response Center  
23 ("CERC") is opened because there is an on-going situation  
24 where there is a potential to have, or there may be, a

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 significant number of customers out of service. For  
2 example, CERC events have been declared for periods of  
3 extended heat in the summer as well as severe weather  
4 events, such as Tropical Storm Irene and Superstorm Sandy.  
5 During a CERC event, the Company establishes the CERC and  
6 staffs positions at the Center following the Incident  
7 Command System ("ICS") structure that includes an Incident  
8 Commander (the individual in charge of handling/responding  
9 to the event), and other appropriate Officers and senior  
10 management. This ICS structure is used because it provides  
11 an effective model to manage incidents of any size.  
12 CERCDocs is a shared-folder software to store event  
13 documents and information produced or collected by the ICS  
14 staff.

15 Q. Has the Company used CERCDocs in the past and, if so, what  
16 has been your experience?

17 A. Yes, we have. The system has been useful in past  
18 incidents. However, in benchmarking with other utilities  
19 as well as emergency response agencies, there are software  
20 programs available that provide a greater range of options.  
21 Our benchmarking has determined that CERCDocs has limited  
22 functionality and is obsolete when compared to the  
23 capabilities of today's EOC software. For example,  
24 CERCDocs is a tool to store documents, whereas today's

SHARED SERVICES PANEL

1 newer systems are comprehensive systems that help  
2 organizations manage emergencies.

3 Q. What do these newer systems include?

4 A. These software systems have the ability to manage workflow,  
5 including handling requests between organizations, provide  
6 event reporting, and improve communications among employees  
7 staffed at both internal and external operations centers.  
8 Having these capabilities will facilitate communications,  
9 responsibilities, and actions of ICS staff to develop,  
10 coordinate, and implement restoration efforts in response  
11 to events and emergencies. The enhancements to workflow,  
12 coordination, communications, and documentation retention  
13 will improve the information available and useable for  
14 after-action reviews and reporting.

15 Q. What is the Company's plan for selecting such a newer  
16 system?

17 A. The Company is planning to evaluate, procure, and implement  
18 an emergency response EOC software product that not only  
19 has the up-to-date features and functionality necessary to  
20 meet our current incident management needs, but also has  
21 the ability to add or modify functions as needs may change  
22 or expand in the future.

23 Q. Has the Company identified any particular software?

SHARED SERVICES PANEL

1 A. The Company has identified several potential EOC software  
2 products and is evaluating which one would match our  
3 requirements.

4 Q. Will the Company need to customize this software?

5 A. Yes. To achieve the functionality needed and realize the  
6 synergies from the software, the Company will customize the  
7 software for items such as integrating its emergency  
8 response plans ("ERPs"), customized ICS positions, and  
9 multiple commodity organizational structure within this  
10 software.

11 Q. Please provide a cost summary for the EOC Software.

12 A. The capital cost associated with this project is  
13 approximately \$125,000 in each of RY1 through RY3. This  
14 estimate includes customization costs.

15 **SEA Program**

16 Q. Turning to your next project, SEA Module Development,  
17 please explain what a SEA is and the Company's SEA program.

18 A. In order to most effectively and efficiently respond to an  
19 emergency event requiring a corporate response, such as  
20 Superstorm Sandy, the Company has developed a process  
21 whereby all employees are pre-assigned to SEA positions, to  
22 support the Company's event response when the need arises.

23 Q. Please provide examples of SEAs.

SHARED SERVICES PANEL

1 A. For example, employees may be moved from their normal jobs  
2 as accountants or attorneys to roles that may include: site  
3 safety, where employees secure the area around downed wires  
4 until the wires are addressed; damage assessment, where  
5 employees perform inspections and provide damage reports to  
6 the local control centers and/or Restoration Planning  
7 teams; and municipal liaison, where employees coordinate  
8 between local municipality officials and Company operating  
9 departments for road clearing and restoration.

10 Q. How do employees get notified to report to their SEA?

11 A. In the event that a SEA mobilization is implemented, the  
12 employees receive a notification from a callout system,  
13 which advises the employees to report to their SEA role.

14 Q. Are you looking to enhance the existing callout system used  
15 for the SEA program?

16 A. Yes. The current callout system sends notifications to  
17 employees by utilizing the Company's employee contact  
18 information and making automated phone calls to employees'  
19 designated phone lines (e.g., home, work, work cell phone,  
20 or personal cell phone).

21 Q. What features does this software currently include?

22 A. Software features currently include:

- 23 • Warehousing employees' information;  
24 • Creating and maintaining employees' storm roles; and

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 • Contacting employees via automated call-outs.

2 Q. Are there any drawbacks to the current system being used?

3 A. Yes. The current system has limited scheduling and  
4 reporting capabilities, and requires manual configuration  
5 of reports from different systems.

6 Q. What enhancements is the Company looking for?

7 A. The Company would like to enhance the current system to  
8 include the following functionalities:

- 9 • improve software graphics and functions to be more  
10 intuitive and user-friendly;
- 11 • develop a scheduling and callout structure for all ICS  
12 functions;
- 13 • develop and implement a callout to check on employees  
14 before, during, and after an event - creating an "Are you  
15 okay?" process;
- 16 • create interfaces for individual scheduling;
- 17 • create a mobile application for individual employee  
18 interface to all functions;
- 19 • create a real-time dashboard to provide real-time data on  
20 employees' status; and
- 21 • enhance capabilities so that organizations can access  
22 their employees' current status and location.

23 These enhancements will provide the Company with additional  
24 capabilities that generate real-time information for

SHARED SERVICES PANEL

1 organizations, and will provide senior management with  
2 information as to the SEA process.

3 Q. What are the costs associated with these software  
4 enhancements?

5 A. The planned software enhancements will be developed and  
6 implemented over the course of three years requiring  
7 capital expenditures of approximately \$345,000 in each of  
8 RY1 through RY3.

9 Q. Is there an annual maintenance fee associated with the SEA  
10 software?

11 A. Yes. The software is a third-party, vendor-hosted service  
12 and a subscription/maintenance fee is required on an annual  
13 basis.

14 Q. How is the annual maintenance fee currently funded?

15 A. Thus far, the fee has been funded through the initial  
16 development project, which expires in March 2016. As noted  
17 in the IT portion of this testimony, maintenance fees are  
18 like licensing fees, and they must be paid or risk having  
19 the product miss updates.

20 Q. Please provide a cost summary for the SEA Software Annual  
21 Fee.

22 A. The ongoing annual maintenance fee commencing in 2016 is  
23 \$69,000 and this amount will be needed in each of RY1-RY3.

24 **Enhancing New Risk Planning, Training, and Exercise Program**

SHARED SERVICES PANEL

1 Q. Turning to the next O&M program, please explain the  
2 Enhancing New Risk Planning, Training, and Exercise  
3 Program.

4 A. This project will improve the Company's emergency  
5 preparedness through a two-pronged approach. First, we  
6 intend to enhance our response plans to include newer non-  
7 weather type events. Second, we intend to modularize our  
8 plan into an overall "all-hazards" style plan.

9 Q. Please explain the first prong of the effort.

10 A. The first prong is to enhance preparedness planning,  
11 training, and exercise programs by further addressing  
12 newer, non-weather-related risks, like cyber attacks,  
13 physical attacks on utility infrastructure, loss of  
14 communications, and emerging public health crises. The  
15 Company has developed initial response plans to address  
16 such risks, but as these risks have evolved, the planning,  
17 training, and exercises associated with these newer risks  
18 need to be enhanced. These enhancements are in addition to  
19 the continuous improvements being made to the Company's  
20 existing response plans, and their associated training and  
21 exercises. For example, the Company needs to review,  
22 update, and/or enhance our initial response plans to  
23 address lessons learned, and incorporate corrective actions  
24 as new events/risks occur, such as cyber attacks that are

SHARED SERVICES PANEL

1 increasing in frequency, sophistication, and impact. Some  
2 enhancements may include creating new roles, procedures,  
3 and actions required to address these issues.

4 Q. Please describe the second prong of this effort.

5 A. The second prong will improve our emergency response plans  
6 through modularization. Currently, the Company develops  
7 response plans to address each risk on a stand-alone basis.  
8 As time has evolved, managing the process on a risk-by-risk  
9 basis has become cumbersome and inefficient since the  
10 number of risks is growing.

11 Q. What will you do to improve this?

12 A. The Company will work with consultants to take the existing  
13 and newly incorporated risks, and modularize them to be an  
14 "all-hazards" style plan that focuses on response actions  
15 rather than each risk.

16 Q. Please explain what you mean by modularized.

17 A. By modularized, we mean that the plan will address the  
18 different responses that each area would have to the  
19 differing risks. As time has passed and these plans have  
20 evolved, we have discovered that, in the end, there are  
21 only so many responses available and, while they may vary  
22 slightly from risk to risk, there are still only a limited  
23 number of actions that can be taken. For example, if there  
24 were a fire in the Company's headquarters or a breakout of

SHARED SERVICES PANEL

1 the pandemic flu, the answer for many office workers may be  
2 the same, *i.e.*, work at an alternate work site, or stay at  
3 home and work remotely as best you can through remote  
4 access. By consolidating and reorganizing the plans in  
5 terms of responses by department or group, the Company and  
6 its employees will focus on the response, rather than the  
7 event categorization.

8 Q. Will this assist in the Company's emergency response?

9 A. Yes. Having a modularized response plan will make the  
10 response plans more usable, and the training more focused  
11 and sustainable. Additionally, this will allow the Company  
12 to more effectively conduct exercises since the focus will  
13 be driven by response actions rather than the risk.

14 Q. What is the overall program plan?

15 A. Over the subsequent years, the Company will work with  
16 consultants to review the impact and response of the newer  
17 risks mentioned above, and to reformat existing plans, such  
18 as the Electric Operations Emergency Response Plan and the  
19 Corporate Coastal Storm Plan, and incorporate newer risks  
20 into a modularized plan. Thereafter, the Company will  
21 enhance the training and exercises, using, but not limited  
22 to, eLearning courses, tabletop, functional, and full-scale  
23 exercises.

SHARED SERVICES PANEL

1 Q. Please explain what the Company will be doing in terms of  
2 enhancing training and exercises.

3 A. These efforts are intended to advance employee proficiency  
4 with the actions that they could/should be taking when  
5 responding to the more familiar risks, such as weather-  
6 related events, as well as the newer risks discussed above.  
7 The Company will increase the number of training exercises  
8 currently performed to include conducting one functional  
9 exercise, three tabletops, and three drills. Additionally,  
10 the Company also plans to incorporate different/new types  
11 of training into its training program, which may include  
12 the development of eLearning modules, checklists, practice  
13 sessions, job aids, and more just-in-time guides.

14 Q. Please provide a cost summary for these program  
15 enhancements.

16 A. The annual total O&M cost to enhance planning, training,  
17 and exercises is \$175,000 in RY1, \$200,000 in RY2, and  
18 \$225,000 in RY3.

19 **VIII. HUMAN RESOURCES**

20 Q. What is the HR organization responsible for?

21 A. The HR organization consists of the following groups:  
22 Benefits, Compensation, Employee and Labor Relations, HR  
23 Support and Occupational Health ("OH"). The mission of HR  
24 is to "Advance workplace solutions, safety, and services

SHARED SERVICES PANEL

1 through our commitment to excellence, innovation,  
2 engagement and wellness." Our priorities of Ensuring  
3 Operational Excellence through Process Improvements,  
4 Productivity and Compliance and of Improving Safety support  
5 this mission and continue to be the basis for our  
6 initiatives, programs, services, and performance measures.  
7 HR is focused on the services and support these departments  
8 provide to the employees and retirees.

9 Q. What programs is HR sponsoring in this testimony?

10 A. HR is sponsoring one O&M program change: strike  
11 contingency. HR is also sponsoring three capital  
12 initiatives: (1) the OH Integrated Data Management  
13 Platform, (2) an upgrade to our existing HR Payroll  
14 application and (3) a PeopleSoft HR HelpDesk. In addition,  
15 HR is also requesting an additional resource to support Gas  
16 Operations, which is discussed in the "Support for Gas  
17 Operations Workforce" portion of the testimony.

18 Q. Do you have an exhibit titled "Shared Services - Human  
19 Resources White Papers" detailing these programs and their  
20 associated costs?

21 A. Yes.

22 Q. Was it prepared under your direction and supervision?

23 A. Yes, it was.

24 MARK FOR IDENTIFICATION AS EXHIBIT \_\_\_ (SSP-11)

SHARED SERVICES PANEL

1 Q. What are the forecasted expenditure levels for the strike  
2 contingency O&M program change?

3 A. The Company plans to allocate \$450,000 in each rate year  
4 for these costs.

5 Q. What are the forecasted expenditure levels for the three  
6 capital HR programs?

7 A. The Company plans to spend approximately \$2.2 million in  
8 RY1, \$330,000 in RY2 and \$2.4 million in RY3.

9 Q. What steps does HR take to control costs?

10 A. HR controls costs by strengthening business processes  
11 through conducting self-assessments and employing technical  
12 solutions to replace manual processes as reflected in two  
13 of the HR capital projects.

14 **Occupational Health System**

15 Q. Please explain the current state of the OH Department  
16 electronic system.

17 A. OH currently uses paper records and an existing electronic  
18 system, the Occupational Health Administrative System  
19 ("OHAS"). OHAS has limited functionality, and has not been  
20 significantly updated since it was implemented over 15  
21 years ago. As other Con Edison systems have been upgraded,  
22 such as HR Payroll, OHAS has been manually modified to  
23 provide essential data and information on qualified sick  
24 absences to payroll.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Q. Why does the OH Department require an Integrated Data  
2 Management Platform ("IDMP")?

3 A. In order to manage, and produce reports on, employee sick  
4 absences, fitness for duty, federal regulatory requirements  
5 of the Department of Transportation ("DOT") and OSHA, OH  
6 employees must match data across discrete systems and  
7 manually combine the information noted above related to an  
8 employee. For example, for nurses to manage a sick  
9 absence, they must complete several steps. First, the  
10 nurse reviews the employee's absence patterns in the Case  
11 Management System ("CMS"), then logs into the OHAS system  
12 to evaluate previous sick absence diagnoses, enter medical  
13 documentation from the current absence, and schedule a  
14 clinic appointment for the employee. After the clinic  
15 visit, OH employees must log back into OHAS to determine  
16 the outcome of the clinic visit, then log back into CMS to  
17 close the case. This process is unsustainable for  
18 reporting on regulatory requirements, handling quality  
19 reviews, and managing employee sick time.

20 Q. What will IDMP do?

21 A. IDMP will assist with a number of items. First, IDMP will  
22 provide better tracking of federal regulatory compliance  
23 requirements. Second, IDMP will improve OH's business  
24 processes through trend analysis and adherence to industry

SHARED SERVICES PANEL

1 best practices. Third, the platform will integrate data  
2 and reporting across existing legacy systems currently used  
3 to hold medical information and report on lost time.

4 Q. Why is the IDMP important to OH?

5 A. The IDMP platform will integrate paper medical records and  
6 the current legacy medical systems into one electronic  
7 occupational health record for each employee. This health  
8 record will keep all medical (such as sick absences, clinic  
9 visits) and occupational health (such as regulatory exams  
10 and random drug testing) information in one system with  
11 business intelligence capacities to produce reports and  
12 track projects that review employee health or other items,  
13 such as Hearing Conservation, Asbestos, Commercial Motor  
14 Vehicle drivers, and drug testing follow-up.

15 Q. What is the current status of IDMP?

16 A. The Company has performed a Phase 0 study and determined  
17 that an electronic system for managing health records is  
18 needed. This system will provide the Company with the  
19 ability to conduct more advanced analysis, identify trends  
20 and assist in sending and receiving medical information.

21 Q. What is the implementation timeline for IDMP?

22 A. This project will take four years to implement from 2016 to  
23 2019. Full details of the timeline are included in Exhibit  
24 \_\_ (SSP-11).

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Q. What is the cost of implementing this system?

2 A. The implementation of the IDMP is projected to cost of  
3 approximately \$1.9 million in total, broken down into  
4 approximately \$725,000 in 2016, \$745,000 in RY1, \$325,000  
5 in RY2 and \$125,000 in RY3.

6 Q. What work will be done for this system in 2016?

7 A. In 2016, OH will select a vendor and work with the vendor  
8 to: (1) map the OHAS data to populate the new electronic  
9 record system with historical information; (2) develop and  
10 test interfaces between Con Edison systems (such as  
11 Employee Data Warehouse, eTrain, eHire, and HR Payroll) and  
12 external systems (labs, hospitals, and Short Term  
13 Disability vendor), and (3) develop and document new  
14 business rules and processes.

15 Q. What work will need to be completed during the rate years?

16 A. In RY1, the mapping of historical data, and the interface  
17 construction and testing will be completed. In RY2, the OH  
18 staff will be trained and begin using the system. In RY3,  
19 adjustments to the business rules and process will be made  
20 as needed and maintenance of the system will begin.

21 **HR Payroll System**

22 Q. Please explain the second capital project for HR, upgrading  
23 the HR Payroll System.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. The second HR capital project addresses the need to upgrade  
2 the HR Payroll system. As explained earlier in the IT  
3 portion of this testimony, upgrading systems supported by  
4 vendors are critical in staying current on security  
5 patches.

6 Q. What is the HR Payroll System?

7 A. The HR Payroll system is the application that manages  
8 personnel data, time and labor, payroll, and benefits for  
9 all active employees and retirees for both Con Edison as  
10 well as O&R.

11 Q. Can the Company continue to use the HR Payroll system  
12 without support?

13 A. As referenced in Exhibit \_\_\_ (SSP-11), operating a payroll  
14 system without support is not recommended. Oracle will  
15 stop releasing Internal Revenue Service updates for an  
16 unsupported product version, which means the Company would  
17 not have the latest information for withholding payroll and  
18 other taxes. In addition, failure to upgrade would impact  
19 the Company's ability to apply critical bug fixes and  
20 security patches.

21 Q. Are there two upgrades that need to be done and will you  
22 upgrade them at the same time to reduce the cost of the  
23 project?

SHARED SERVICES PANEL

1 A. There are two Oracle products that must be upgraded - one  
2 for the system itself and another for a supporting system.  
3 Upgrading both products at the same time will avoid  
4 duplication of work, such as software installation,  
5 analysis, build, and testing. For example, system testing  
6 is estimated to take 12 weeks for an upgrade project. By  
7 upgrading together, system testing can be done once for 12  
8 weeks for both products instead of twice if the upgrade was  
9 done separately.

10 Q. What is the expected cost of this upgrade?

11 A. The cost of this upgrade will be \$2.3 million and this  
12 upgrade will be undertaken and completed in RY3.

13 **Human Resources Help Desk**

14 Q. Please explain the third capital project, HR Help Desk.

15 A. Oracle PeopleSoft HR Help Desk is a system to support  
16 employee and retiree HR related requests, such as medical  
17 coverage information, disability information or employment  
18 information on subjects such as promotions or progressions.  
19 The HR Help Desk will replace the current manual process of  
20 tracking and updating employee records for both active and  
21 retired employees.

22 Q. Please describe the current process for employee and  
23 retiree requests.

SHARED SERVICES PANEL

1 A. The Human Resources Service Center ("HRSC") responds to  
2 calls and written requests from active and retired  
3 employees as well as from Human Resource professionals.  
4 The HRSC representatives respond to calls and written  
5 requests by initiating tasks, or communicating with the  
6 requestor, using Microsoft Outlook. This manual process  
7 relies on the HRSC representatives to initiate the task,  
8 complete the task, and document its completion. The HRSC  
9 handles approximately 26,000 requests annually.

10 Q. Are there issues associated with this manual system?

11 A. Yes. There are several issues. To begin, there is no  
12 transparency for the supervisors or customers to monitor  
13 the status of the requests. Additionally, there are no  
14 reports available to monitor the completion of the  
15 requests. Finally, under the Health Insurance Portability  
16 and Accountability Act ("HIPAA"), disclosure of Personal  
17 Health Information ("PHI") must be recorded in the event an  
18 employee or retiree requests such information. Currently,  
19 the disclosure log is maintained manually.

20 Q. What will the HR Help Desk do?

21 A. The HR Help Desk will apply automated workflow for tasks,  
22 inquiries, and requests for all of HR. Employee requests  
23 and questions can be routed to responsible departments and  
24 the status will be maintained within the system in real

SHARED SERVICES PANEL

1 time. The Help Desk will help HR comply with HIPAA,  
2 achieve productivity and cost savings, improve internal  
3 customer experiences and provide self-service for retirees  
4 and employees.

5 Q. Please explain how this system will achieve greater  
6 productivity.

7 A. The system will gather analytics to improve productivity and  
8 enable HR to proactively address employee and retiree  
9 concerns resulting in reduction of calls to the HRSC.  
10 Greater efficiencies can also be achieved for tasks and  
11 requests that need to be coordinated between multiple  
12 sections across organizations, resulting in the reduction  
13 of human resources needed to support the HRSC.

14 Q. Please explain how this savings will be achieved.

15 A. The implementation of this system is expected to result in a  
16 net savings of one management and two union employees in  
17 the HRSC. Staff reductions will occur when efficiencies  
18 gained by automating processes and procedures are  
19 established and stable. However, as noted in the Exhibit,  
20 the savings from staffing reductions will be used to offset  
21 the on-going maintenance costs associated with this system.

22 Q. Are there any other benefits associated with this system?

23 A. As noted above, the system will improve the internal  
24 processing of HR requests and provide self-service

SHARED SERVICES PANEL

1 functionality. Requests can be completed by the HRSC or  
2 routed to the various sections within HR, L&I and Payroll  
3 for more expeditious work processing. A Knowledge Base  
4 will be created that will assist in organizing information  
5 on policy and procedures and deliver self-service answers  
6 which will reduce the call volume. The self-service  
7 application will be available during off-hours and requests  
8 can be submitted at a time that is convenient for the  
9 employee and retiree. This project will also address the  
10 need for self-service functionality for retirees which will  
11 reduce calls and requests that require manual intervention.  
12 Additional details of the project scope and benefits are  
13 included in Exhibit \_\_ (SSP-11).

14 Q. Is this system compatible with other PeopleSoft systems the  
15 Company currently uses?

16 A. PeopleSoft HR Help Desk shares the same architecture and  
17 technology with HR Payroll system so it will be integrated  
18 using existing PeopleSoft PeopleTools framework.

19 Q. What is the cost of the HR Help Desk and how long will it  
20 take to implement?

21 A. The cost of the HR Help Desk system is \$4.2 million. In  
22 2015, funding totaling \$2.7 million was provided for this  
23 project through the Corporate Governance Optimization

SHARED SERVICES PANEL

1 process for hardware and software. The balance of \$1.5  
2 million for the project is planned to be expended in RY1.

3 **Strike Contingency**

4 Q. Please generally describe the Company's strike contingency  
5 efforts.

6 A. The Company and its two local unions, IBEW Local 3 and UWUA  
7 Local 1-2 employees, have collective bargaining agreements.  
8 Local 3's agreement will expire on June 24, 2017 and  
9 assuming a minimum three-year agreement with Local 1-2 is  
10 reached in June 2016, the collective bargaining agreement  
11 could expire as early as June 2019. In the event of a  
12 labor stoppage, the Company has a planned approach to  
13 provide for the continued safe operation of its facilities  
14 and its services.

15 Q. Are there costs associated with these preparations?

16 A. Yes. The Local 1-2 and Local 3 Contingency Programs are  
17 ongoing initiatives that traditionally implemented once  
18 every three or four years to align with the end of the  
19 collective bargaining agreement period. If a three year  
20 rate plan is developed, each of these contracts will  
21 potentially expire during the rate plan. As a result, and  
22 since recent contracts have been for four years, the annual  
23 cost for these initiatives is priced out at one-fourth of  
24 the estimated cost. The estimated cost for union contract

SHARED SERVICES PANEL

1 negotiations is \$1.6 million for Local 1-2, and \$200,000  
2 for Local 3, or a total of \$1.8 million as shown in Exhibit  
3 \_\_ (SSP-11). This is based on our most recent experience  
4 with the contingency planning that occurred in 2012 for  
5 Local 1-2, and in 2013 for Local 3. One-fourth, or  
6 \$450,000, will be included in each rate year. The  
7 Accounting Panel will address the proper allocation of  
8 these O&M costs among Electric, Gas, and Steam.

9 **IX. LEARNING AND INCLUSION**

10 Q. What is the L&I organization responsible for?

11 A. The L&I organization consists of three departments: (1)  
12 Talent Management, (2) TLC, and (3) Diversity and  
13 Inclusion. The L&I organization supports the Company's  
14 talent needs through a series of activities, including,  
15 talent acquisition, leadership development, technical and  
16 safety training, performance management, and succession  
17 planning. It is also responsible for EEO compliance and  
18 fostering a more diverse and inclusive culture throughout  
19 the Company.

20 Q. What programs are L&I sponsoring?

21 A. L&I is sponsoring one capital initiative to implement the  
22 PeopleSoft Recruitment Module. We also have one O&M  
23 program, the continued development of the EEO Compliance  
24 Corporate Training program. There is an additional O&M

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 program request from L&I to address the increase of  
2 training instructors needed to meet the training demand  
3 related to Gas Operations, discussed later in the "Support  
4 for Gas Operations Workforce" testimony.

5 Q. Do you have an exhibit titled "Shared Services - Learning  
6 and Inclusion White Papers" detailing these programs and  
7 their associated costs?

8 A. Yes, the exhibit was prepared for the one capital project  
9 and one O&M Program change discussed in this section.

10 Q. Was it prepared under your direction and supervision?

11 A. Yes, it was.

12 MARK FOR IDENTIFICATION AS EXHIBIT \_\_ (SSP-12)

13 Q. Please summarize the overall capital costs and incremental  
14 O&M costs for rate years.

15 A. For PeopleSoft Recruiting Module implementation, the  
16 Company expects to spend \$5.9 million over the 2015-2017  
17 timeframe, with \$3.1 million being expended in RY1.  
18 For EEO Compliance Corporate Training Program, the Company  
19 expects to spend \$1.5 million, which equates to \$300,000 in  
20 each of RY1-RY3 as well as in 2016 and in 2020.

21 Q. What steps has Con Edison taken to control its training  
22 costs?

23 A. L&I mitigates costs in several ways.

SHARED SERVICES PANEL

1 First, the training staff is optimized through cross  
2 training and restructuring. This cross training effort  
3 allows instructors to be utilized across various  
4 disciplines and avoided an additional \$345,000 in O&M  
5 expenditures in 2015.

6 Second, L&I utilized iPads for one of its leadership  
7 courses, The Business Academy. This allows a cost savings  
8 on purchasing books and printing materials for current and  
9 future offerings of this program. In 2015, we realized an  
10 \$8,000 cost savings which we expect will compound to be  
11 \$48,000 in five years.

12 **PeopleSoft Recruitment Module Program**

13 Q. Please explain the PeopleSoft Recruitment Module program.

14 A. The PeopleSoft Recruitment Module is a recruiting  
15 application that will increase efficiency, improve the  
16 overall hiring experience, and support compliance with the  
17 regulatory requirements for data collection, job posting,  
18 and external sourcing, such as those required by Equal  
19 Employment Opportunity Commission ("EEOC") and Office of  
20 Federal Contract Compliance Programs ("OFCCP"). This  
21 solution offers managers and recruiters easy-to-use  
22 recruiting tools to search for candidates, including  
23 automatically screening resumes and matching candidates for  
24 jobs based on job descriptions. It will also provide

SHARED SERVICES PANEL

1 candidates with a personalized, intuitive, self-service  
2 interface that will improve their hiring experience.  
3 Lastly, it will provide recruitment process improvements,  
4 such as standardized workflows, automated screening,  
5 automated EEOC and OFCCP recordkeeping and tracking, and  
6 reduce the time to fill open positions.

7 Q. Please explain why the PeopleSoft module is needed.

8 A. The Company's existing recruitment system, eHire, lacks the  
9 agility necessary to meet the varying demands of our  
10 stakeholders. Further, the current process involves manual  
11 intervention, resulting in process inefficiencies. The  
12 PeopleSoft module will reduce the time to fill positions  
13 thereby allowing recruiters to focus on strategic  
14 activities. In addition, eHire is supported by several  
15 disparate systems that are costly to maintain and do not  
16 provide real-time business intelligence to effectively  
17 manage recruiting activities related to the screening of  
18 applicants, recruiting costs, and the time to fill  
19 vacancies. Further, eHire does not have a platform to  
20 support interactive technology, which could improve the  
21 applicant experience, and it has limited functionality for  
22 federal and state regulatory reporting, including OFCCP and  
23 EEOC compliance guidelines.

24 Q. What recruitment challenges does the Company face?

SHARED SERVICES PANEL

1 A. To begin, there is an accelerating pace of change in the  
2 utility industry. This includes changing demographics,  
3 increasing competition for technical and skilled workers,  
4 advancing technology as to how energy is distributed,  
5 increasing needs to effectively engage with applicants, and  
6 continued compliance requirements with federal and state  
7 rules and regulations, including OFCCP and EEOC compliance  
8 guidelines.

9 The lack of functionality in our current eHire system  
10 compounds the recruiting challenges for the Company. These  
11 challenges directly impact our ability to effectively  
12 attract and engage talent, screen and process applicants,  
13 and fill job openings in a timely manner.

14 Q. Are the Company's recruiting challenges unique?

15 A. No. The Company's recruiting challenges are not unique in  
16 either the utility industry or other industries.

17 Q. Will the PeopleSoft Recruitment Module help meet these  
18 challenges?

19 A. Yes. The PeopleSoft Recruitment Module will help us to  
20 meet our business needs, providing streamlined process and  
21 metrics to facilitate a more efficient and effective hiring  
22 process. The implementation of a robust recruitment  
23 application will eliminate existing administrative and  
24 transactional tasks and enable the Company to engage in

SHARED SERVICES PANEL

1 strategic hiring practices that include building a  
2 continuous talent pipeline that involves workforce  
3 planning, continuous sourcing, and onboarding. There are  
4 other significant advantages to adopting this application,  
5 including to:

- 6 • increase productivity;
- 7 • reduce time to fill vacancies;
- 8 • facilitate regulatory compliance with federal and state  
9 rules and regulations, including, but not limited to,  
10 EEO, affirmative action programs, and employment law;
- 11 • streamline recruitment process; and
- 12 • recruit higher quality candidates.

13 Q. Has the Company considered any other systems to perform  
14 this function?

15 A. Yes. A preliminary assessment of three recruitment  
16 software systems was conducted. The team looked at the  
17 strengths and weaknesses of the three systems and  
18 determined that an Oracle product best met the Company's  
19 needs.

20 Q. What are the benefits of the PeopleSoft Recruitment Module?

21 A. The benefits include integrated workflows to make the job  
22 opening process seamless, automated tools to screen out  
23 unqualified applicants and route qualified applications to  
24 the appropriate recruiter or hiring manager. The workflow

SHARED SERVICES PANEL

1 functionality saves time, reduces the administrative  
2 burden, and increases the speed of the hiring process. The  
3 candidate gateway provides applicants with an intuitive and  
4 easy to follow application process, and a platform to  
5 facilitate better communication with the candidate  
6 throughout the hiring process. PeopleSoft also provides  
7 seamless reporting and analysis to replace labor intensive  
8 ad-hoc report writing to satisfy reporting needs. These  
9 reporting capabilities will enhance our ability to  
10 effectively manage the recruitment process, from  
11 requisition to hire, revealing opportunities to  
12 continuously improve the overall hiring experience.

13 Q. What is the projected cost of this program?

14 A. The Company expects to spend \$5.9 million for this project  
15 over the 2015-2017 timeframe, of which \$324,000 was  
16 incurred in 2015, \$2.5 million will be spent in 2016 and  
17 \$3.1 million in RY1.

18 **Equal Employment Opportunity Compliance -**  
19 **Corporate Training Program**

20 Q. Please briefly describe the EEO Compliance - Corporate  
21 Training Program.

22 A. The EEO Compliance - Corporate Training Program will help  
23 the Company further its diversity & inclusion ("D&I")  
24 strategy. Our D&I Strategy will foster a culture that

SHARED SERVICES PANEL

1 embraces diversity and advances inclusion through four key  
2 areas of focus:

- 3 (1) Advance Inclusion through Learning
- 4 (2) Connect Inclusion throughout the Organization
- 5 (3) Foster an Inclusive Environment
- 6 (4) Communicate & Engage

7 This program supports the Company's efforts to Advance  
8 Inclusion through Learning. The program will provide  
9 employees with a better understanding of the various  
10 federal, state and local discrimination laws applicable to  
11 them in the workplace.

12 Q. What is the goal of the D&I training?

13 A. The training goal is to reinforce our values of  
14 professionalism and mutual respect in the workplace in the  
15 following ways:

- 16 • Raise awareness about EEO laws and regulations,  
17 including those dealing with sexual harassment
- 18 • Identify protected classes
- 19 • Recognize employment practices and procedures  
20 regarding discrimination and harassment
- 21 • Familiarize employees with all aspects of anti-  
22 discrimination laws and policies
- 23 • Increase employee awareness of, and reinforce, the  
24 Company's policies

SHARED SERVICES PANEL

- 1           • Create self-awareness and personal accountability in  
2           fostering a culture of inclusion and mutual respect in  
3           the workplace and with our customers
- 4           • Develop cultural competence and a deeper understanding  
5           of the benefits and impact of equal treatment, and of  
6           diversity and inclusion for all stakeholders

7 Q.    Why is the effort important?

8 A.    In today's diverse marketplace and workplace, a well-  
9        trained workforce is imperative in order to remain  
10       competitive and to meet our customers' ever-changing needs  
11       and expectations. Developing a training plan is not just  
12       "nice to do." D&I training supports compliance with EEO  
13       laws which require that we maintain a workplace that is  
14       free from discriminatory and harassing behaviors. D&I  
15       training will support compliance with the EEO Laws.

16 Q.    Are there additional outcomes that are anticipated as a  
17        result of this training?

18 A.    In addition to meeting legal requirements, equipping our  
19        employees with the knowledge and skills necessary to  
20        prevent discriminatory behaviors and to build a culture of  
21        inclusion has many advantages. It helps us to avoid costly  
22        and unnecessary legal claims and challenges and helps to  
23        promote a more productive, team-oriented workplace. It

SHARED SERVICES PANEL

1 also helps to prevent employee turnover and low employee  
2 engagement.

3 Q. What information is conveyed in this training?

4 A. The Company intends to provide training that will be  
5 specific to an employee's role in the organization through  
6 a layered approach depending on the employee's level in the  
7 organization. For example:

- 8 • Leading Self - this training focuses on providing  
9 employees with the foundational competencies and  
10 skills needed to promote and foster an inclusive  
11 workplace. Employees will gain an understanding of  
12 their role and expectations so that their individual  
13 behavior is non-discriminatory, inclusive, and  
14 respectful of their colleagues.
- 15 • Leading Others - this training provides employees who  
16 supervise, manage, or lead teams with information to  
17 enhance their leadership competencies and develop a  
18 deeper understanding of the role of the leader. This  
19 class explains that the leader must set clear  
20 expectations for employee behaviors in support of an  
21 inclusive and productive workplace that values the  
22 individual contributions of every team member.
- 23 • Leading the Organization - This training takes a more  
24 in-depth look at developing leadership skill sets and

SHARED SERVICES PANEL

1 the Company's operating and business practices. The  
2 emphasis is on projects that integrate new technologies as  
3 well as reduce risk, enhance public and employee safety,  
4 and facilitate the incorporation of distributed energy  
5 resources.

6 **Introduction of Project and Programs**

7 Q. Why does Con Edison need to develop and demonstrate new  
8 technologies?

9 A. Con Edison's energy systems require continual modernization  
10 and reinforcement at all levels. When assessing new  
11 technologies, R&D projects consider the aspects that are  
12 unique to our system, such as the Company's significant  
13 urban population and geography and energy infrastructure  
14 density. Energy infrastructure density refers to the  
15 significant underground high-load density, large  
16 underground secondary network electric systems and the  
17 multi-layered underground infrastructure of gas and steam  
18 pipes. These features, when combined with their close  
19 proximity to other infrastructure, such as subways and  
20 telecommunications facilities, make system improvements or  
21 repairs complicated and time-consuming.

22 Q. Why must the Company itself undertake R&D?

23 A. It has been the Company's experience that manufacturers are  
24 not willing to unilaterally undertake technology

SHARED SERVICES PANEL

1 development related to the Company's main concerns, such as  
2 our underground infrastructure, that do not have broader  
3 market potential. Therefore, the Company needs to fund  
4 research, often through full-scale demonstrations and pilot  
5 programs, in collaboration with partners where possible, to  
6 prove feasibility for the Company and its customers.

7 Q. Are there other associated consequences to working in New  
8 York City streets that influence R&D projects?

9 A. Yes. New York City prefers that the Company limit street  
10 excavation to periods that are less impactful on  
11 pedestrians, bicyclists, and vehicles. This preference  
12 results in restrictive street access requirements from the  
13 City's Department of Transportation ("DOT"), including  
14 working at night or on weekends, and under heightened noise  
15 restrictions. Also, due to New York City's installation of  
16 bike lanes and expanded pedestrian areas, the reduction of  
17 available vehicular lanes puts even further limitations on  
18 the opening of streets to access the Company's distribution  
19 systems.

20 Q. Were documents, entitled "Shared Services - Research and  
21 Development White Papers" and "Research and Development  
22 Costs" prepared under your direction and supervision?

23 A. Yes, they were.

24 MARK FOR IDENTIFICATION AS EXHIBIT \_\_ (SSP-13, SSP-14)

SHARED SERVICES PANEL

1 **Overall R&D Expenditures**

2 Q. What is Con Edison projecting for R&D expenditures for RY1,  
3 RY2, and RY3?

4 A. The projected R&D expenditure level for each of RY1, RY2,  
5 and RY3 is \$12.9 million for Electric R&D. The projected  
6 R&D expenditure level for Gas R&D projects is \$1.5 million.  
7 The total for Electric and Gas is accordingly \$14.4 million  
8 annually in RY1, RY2 and RY3.

9 Q. Are you predicting additional R&D expenditure for work in  
10 the rate years over recent years?

11 A. Yes. Additional work will be done to allow for an  
12 appropriate focus on Electric REV-related projects with  
13 increased emphasis on modeling tools, smart inverter and  
14 other power converter technologies, configurable protection  
15 designs, communications technologies, researching and  
16 testing of Distributed Energy Resources ("DER")  
17 technologies, and hiring additional staff to support these  
18 projects. We also intend to continue our strong focus on  
19 developing and deploying methane-sensing technologies and  
20 trenchless technologies. Regarding other funding for  
21 Electric and Gas, the general focus and program emphasis  
22 will be similar to prior years while increasing our  
23 emphasis on customer experience.

SHARED SERVICES PANEL

1 Q. Please explain why none of the projects included in the  
2 filing include project detail for RY3.

3 A. Due to the evolution of technology advances and technology  
4 needs, R&D's plan provides more detail by project level for  
5 the first two rate years. Because of the nature of R&D  
6 itself, while we provide an overall spending level, we did  
7 not attempt to predict project details for RY3.

8 **R&D Projects/Programs**

9 Q. How is the R&D portfolio developed?

10 A. The R&D portfolio is developed and prioritized in  
11 conjunction with the operating organizations. R&D's  
12 program is a combination of research undertaken  
13 collaboratively with external entities as well as projects  
14 developed and conducted internally. In addition to  
15 evaluating past successes and/or failures, the portfolio is  
16 continually refined to recognize new challenges to Company  
17 operations - for example, planning and operational needs  
18 for integrating DER.

19 Q. Please explain how Con Edison's R&D portfolio is  
20 established and managed.

21 A. R&D's goal is to match the needs of the Company's  
22 operations to opportunities for solutions using advanced  
23 technology. The first step in the process is to determine  
24 whether a project is considered R&D related, i.e., is it an

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 experiment, design, installation, construction or operation  
2 of a project reasonably related to existing or future  
3 Company business. An analysis of each potential project is  
4 undertaken, with expected advantages reviewed against  
5 financial resources required for successful project  
6 development. The analysis considers:

- 7 (1) The probability of achieving success in a reasonable  
8 time period;
- 9 (2) The benefits of conducting the project(s), both  
10 qualitative and quantitative; and
- 11 (3) The cost of deploying the project if the research is  
12 successful.

13 These and other factors, including the projects effect on  
14 public and employee safety and others, are used to select  
15 and prioritize projects. Electric, Gas, and Steam R&D  
16 activities, and their programs and budgets, are  
17 concurrently developed and reviewed to avoid possible  
18 duplications and to identify potential synergies with other  
19 R&D programs. There are, for example, potential synergies  
20 across commodities for EH&S tools, inspection techniques,  
21 damage assessment, weather impact, sensors and  
22 communications. Emphasis is placed on projects that show  
23 near and mid-term benefits as well as long-term solutions.

SHARED SERVICES PANEL

1       Once complete, the project list is then reviewed and  
2       approved by senior management.

3   Q.   How often is the portfolio reviewed?

4   A.   The R&D portfolio is reviewed on an annual basis to assess  
5       potential projects, both those already authorized and new  
6       concepts.

7   Q.   Have there been successful R&D projects through the years?

8   A.   Yes.

9   Q.   Please describe some recent successful Electric projects  
10       conducted under the current program.

11  A.   Recent successful Electric R&D projects include the  
12       following:

13       1.    An Advance Leak Detection System ("ALDS") for Slow  
14           Circulation and Static High Pressure Fluid Filled  
15           ("HPFF") Transmission Feeders was successfully  
16           demonstrated on a pair of high voltage feeders. The  
17           ALDS simulation model was built using data collected  
18           on these feeders from year 2010 and 2011. In 2012,  
19           the model was tested by conducting a simulated field  
20           leak test on the feeders. The system detected the  
21           occurrence of a dielectric oil leak and also provided  
22           the proximity location of the leak. The next step is  
23           to commercialize the technology. The Static detection

SHARED SERVICES PANEL

1           portion of the project is partially funded by the  
2           Electric Power Research Institute ("EPRI").

3           2.    The Company pilot tested an Automated Damage  
4           Assessment Process which provides efficient, timely  
5           and accurate damage assessment ("DA"). The process  
6           consists of a field assessment application loaded on a  
7           tablet to electronically capture damage information  
8           and transmit it to the local Control Center. A back  
9           office application displays the system map with all  
10          damaged assets highlighted. Pictures taken by damage  
11          assessors in the field can be viewed. A damage report  
12          which shows a map of the damaged area can also be  
13          printed. The process is fully integrated with our  
14          Outage Management System and is the new DA process.

15          3.    Based on a New York State Grid Mitigation of Geo and  
16          Electromagnetic Events study, 14 transformers in our  
17          bulk power system were identified as being vulnerable  
18          to either overheat and fail, or cause voltage  
19          instability due to increased volt-ampere reactance  
20          ("VAR") consumption, which could result in system  
21          problems and/or equipment damage. In 2013, the  
22          Company developed and installed a new monitoring  
23          system on vulnerable transformers. This monitoring  
24          system provides information so that operators can

SHARED SERVICES PANEL

1 remove vulnerable transformers as needed. In 2014 and  
2 2015, R&D work focused on developing, expanding,  
3 refining, and validating the computer model allowing  
4 calculation of geomagnetically induced currents  
5 ("GIC") in our transmission system, along with  
6 adjacent territory. Additionally, this work is  
7 required to satisfy new Transmission Planning  
8 Reliability Standard TPL-007 that was approved by the  
9 Federal Energy Regulatory Commission ("FERC") in 2014.

10 4. The "Characterization of Arcing Fault Signature"

11 Electric R&D project demonstrated that arcing faults  
12 can be detected in networks based on electrical  
13 waveforms analysis. Observed manhole events have been  
14 correlated to arcing signatures detected by dedicated  
15 data recorders. In a few cases, due to this  
16 deployment, secondary network faults were found based  
17 on arcing detected, leading to their repair and  
18 potentially reducing manhole events. We have also  
19 successfully developed an algorithm that has been  
20 implemented in the network protector microprocessor  
21 relay and currently undergoing field demonstration.

22 Q. Please describe some recent successful Gas projects  
23 conducted under the current program.

24 A. Successful Gas R&D projects include the following:

SHARED SERVICES PANEL

- 1           1.    Development of in-line inspection tools, referred to  
2                    as pigs, such as EXPLORER, for pipeline integrity  
3                    assessment.  These robotic tools enable the inspection  
4                    of previously un-piggable transmission mains without  
5                    disruption in service.  Un-piggable mains are those  
6                    that are designed with plug valves and/or complex pipe  
7                    bends that make the use of standard in-line inspection  
8                    tools impossible.  Without these new in-line  
9                    inspection tools, the Company needs to excavate to  
10                   conduct assessments and verify the condition of the  
11                   pipe, which is costly.  The development of these tools  
12                   has been an ongoing collaborative process for 12  
13                   years.
- 14           2.    Development of a prototype Emergency Main Shut-Off  
15                   System ("EMSOS") for a large diameter low-pressure  
16                   metallic main serves as an alternate means to  
17                   installing shut-off valves.  The EMSOS stations will  
18                   be placed in strategic locations in the distribution  
19                   system to provide a lower cost alternative to  
20                   installing isolation valves and will be available to  
21                   provide for main isolation during emergencies.
- 22           3.    Development of a large Cast Iron Sealing Robot  
23                   ("CISBOT") for the sealing of 16-inch to 36-inch cast  
24                   iron joints in live gas mains.  This is a trenchless

SHARED SERVICES PANEL

1 rehabilitation tool that will reduce the costs of  
2 sealing large diameter leaking cast iron joints.

3 Q Are all R&D projects successful?

4 A. No. Because of the nature of R&D, some projects do not  
5 result in a successful product. To address that challenge,  
6 most projects are conducted in phases to reduce the risk  
7 that would be otherwise associated with over committing in  
8 advance to work that reveals itself to be unfruitful at  
9 some point during the course of the project.

10 Q. You mentioned that the Company works collaboratively with  
11 others, please describe the Company's collaborative  
12 research efforts.

13 A. For projects where the Company shares a common interest  
14 with others in the industry, the Company works with various  
15 utilities, industry, government, academia, and private  
16 organizations to conceptualize and develop new products.

17 Q. Please explain some of the groups that the Company  
18 collaborates with in the electric area.

19 A. In the electric area, the Company works with EPRI, New York  
20 State Energy Research and Development Authority  
21 ("NYSERDA"), the Center for Energy Advancement through  
22 Technological Innovation ("CEATI"), the National Electric  
23 Energy Testing, Research & Applications Center ("NEETRAC"),

SHARED SERVICES PANEL

1 and the New York Battery and Energy Storage Consortium  
2 ("NY-BEST").

3 Q. Can you please further describe some of the mentioned  
4 organizations, such as EPRI, CEATI, NEETRAC and NY-BEST?

5 A. EPRI's work focuses on the generation, delivery and use of  
6 electricity for the public benefit. It is an independent,  
7 nonprofit organization that brings together scientists,  
8 engineers, experts from academia and the industry to  
9 address electric challenges.

10 CEATI is a collaborative user-driven organization committed  
11 to providing technology solutions to its electric utility  
12 participants, who act jointly to share and develop  
13 practical and applicable knowledge.

14 NEETRAC is a membership-based center within the School of  
15 Electrical and Computer Engineering at Georgia Tech, which  
16 focuses on electric energy delivery and provides a wide  
17 array of analytical, engineering, research and testing  
18 services to help improve electric grid reliability and  
19 efficiency.

20 NY-BEST positions New York State as a global leader in  
21 energy storage technology, including applications in  
22 transportation, grid storage, and power electronics. It  
23 serves as an important connector for all stakeholders  
24 including manufacturers, academic institutions, utilities,

SHARED SERVICES PANEL

1 technology and materials developers, start-ups, government  
2 entities, engineering firms, systems integrators, end-  
3 users, and policy makers encompassing all stages of energy  
4 storage product development and use.

5 Q. Please provide an example of collaborative research for the  
6 electric sector.

7 A. Con Edison initiated a project with EPRI in 2012 to  
8 establish an engineering approach that would lead to higher  
9 precision in the design of substation structures and  
10 foundations through the use of newly available fiber optic  
11 sensors. Through modeling, lab scale testing, and full  
12 scale testing, a new understanding of the dynamic response  
13 of substation equipment and foundations to short circuit  
14 forces major modifications to substation supporting  
15 equipment design have been developed. As a result of the  
16 information obtained by this test, more efficient designs  
17 for substations, with smaller footprints, are expected  
18 going forward.

19 Q. Please describe the Company's collaborative research  
20 efforts in the gas sector.

21 A. Con Edison works extensively with three research  
22 collaboratives that include other gas companies in the U.S.  
23 and Canada. These collaboratives are NYSEARCH, which began  
24 in New York, and Operations Technology Development ("OTD")

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 and Sustained Membership Program ("SMP"), which are both  
2 part of the Gas Technology Institute ("GTI"). NYSEARCH and  
3 OTD both consist of member gas companies, some of which are  
4 members of both groups like Con Edison. The Company works  
5 with the American Gas Association ("AGA") as well as the  
6 United States Department of Transportation Pipeline of  
7 Hazardous Materials Safety Administration ("US DOT PHMSA").  
8 In addition, R&D maintains regular contact with other  
9 utilities, gas trade groups, universities, and technology  
10 developers as a further source for new ideas.

11 Q. Please provide some examples of collaborative research for  
12 the gas sector.

13 A. Working collaboratively with NYSEARCH, fifteen utilities  
14 throughout the nation and several government agencies over  
15 a 12-year period, EXPLORER robots were developed for in-  
16 line inspection of gas transmission mains.

17 Q. Please describe the Company's general internal R&D program.

18 A. Con Edison's internal R&D program primarily focuses on  
19 problems that are unique to the Company's system, as  
20 mentioned earlier. The program also focuses on the  
21 development of selected products that the Company may need  
22 to deploy in a timeframe that is earlier than that required  
23 by others in our industry, such as advanced methane  
24 detectors.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Q. Does the Company have internal programs for Electric and  
2 Gas?

3 A. Yes. Each area has a program that combines the  
4 collaborative groups as well as internal projects. We  
5 describe each internal program below.

6 Q. Please describe how internal project research for Electric  
7 is conducted as part of the current plan.

8 A. The internal Electric research program is broken down into  
9 five main research areas: (1) transmission, (2)  
10 distribution, (3) system operations, (4) substations, and  
11 (5) customer related projects that focus on the Company's  
12 priorities as discussed below:

13 1. Transmission R&D activities in the transmission arena  
14 include: developing techniques and equipment to  
15 expedite detection and location of dielectric fluid  
16 leaks in high-pressure, fluid-filled cables; examining  
17 the present and expected performance of 138-kV and  
18 345-kV cable systems; and implementing state-of-the-  
19 art hardware and software to reduce O&M costs.

20 2. Examples of distribution R&D activities include  
21 developing contact voltage detection and mitigation;  
22 and technologies for manhole event mitigation; and  
23 developing a device to clear underground duct and

SHARED SERVICES PANEL

1 conduit obstructions without the need to excavate  
2 during cable repairs.

3 3. The System Operation R&D program is directed at  
4 automating manual processes that provide advanced  
5 analytic tools as well as integrating and exchanging  
6 data among a variety of different monitoring and  
7 control systems, and addressing physical and cyber  
8 security concerns.

9 4. Substation R&D projects include remote circuit breaker  
10 operation, Substation physical security and improving  
11 operator training. As an example, we are expanding  
12 the Geomagnetic Disturbance ("GMD") projects discussed  
13 earlier to include modeling of impacts of transmission  
14 facilities outside of the Company's system.

15 5. The Customer-related projects focus on proactive  
16 programs that allow for greater customer participation  
17 in DER programs. R&D activities include  
18 demonstrations of microgrid and storage technologies,  
19 streamlining processes for interconnecting DERs, and  
20 two-way communication technologies.

21 Q. Please describe the ongoing Electric R&D projects.

22 A. Some major projects planned for in the Rate Years include:

23 1. Arcing Fault Detection in Network Protector Relays  
24 Field Demonstration is a follow-up effort to the

SHARED SERVICES PANEL

1 Characterization of Arcing Fault Signature discussed  
2 earlier. Most manhole events develop over time and  
3 are caused when an electric arc burns the cable  
4 insulation. These arcing faults occur intermittently  
5 but have unique signatures for which we have developed  
6 recognition algorithms. This project modifies  
7 existing network protector relays using these  
8 algorithms to preemptively recognize arcing faults  
9 before they cause a manhole event. These algorithms  
10 will be evaluated for correlation to actual arc  
11 faulting events and the feasibility of using a network  
12 protector relay for arc fault detection and location  
13 will be evaluated. The Company plans to spend \$50,000  
14 in RY1 and \$150,000 in RY2 on this project.

- 15 2. The Company is actively involved in the development of  
16 Solid State Fault Current Limiters for system fault  
17 current mitigation, area substation duty relief, area  
18 substation up-rating in existing footprint and the  
19 support of Distributed Generation ("DG") and  
20 microgrids. This program involves a modular step-by-  
21 step development, at increasing voltage levels, to  
22 assure limited cost exposure. The manufacture of a  
23 single-phase 1,200 AMP, 15kV class prototype was  
24 completed and testing in an independent high-power,

SHARED SERVICES PANEL

1 high-voltage lab was performed. Next steps are the  
2 design, manufacture and testing of a 3-phase unit,  
3 with 4,000 Amp continuous rating. The Company plans  
4 to spend \$100,000 in each of RY1 and RY2.

5 3. In conjunction with Electrovaya and NYSERDA, the  
6 Transportable Energy Storage System ("TESS") will  
7 develop and demonstrate lithium ion battery  
8 technology. The TESS system will be housed in a  
9 custom-built 40-foot trailer and provide 800 kWhr of  
10 storage capacity. The system will be programmed to  
11 discharge at a fixed rate during the peak hours and  
12 will recharge during non-peak hours. The  
13 demonstration will include monitoring of the system  
14 performance and benefits for a period of 18 months.  
15 In addition, R&D is looking at pursuing other  
16 potential battery and energy storage technologies that  
17 are pre-commercial. We are planning a potential  
18 demonstration of liquid metal battery with Ambri and a  
19 Zinc-Air battery with EOS. The Company plans to spend  
20 \$75,000 in each of RY1 and RY2.

21 4. Dielectric oil leaks are an environmental challenge  
22 for the Company. To eliminate dielectric leaks, the  
23 Company seeks to design and qualify a transition joint  
24 between HPFF and solid dielectric cable for an Extra

SHARED SERVICES PANEL

1 High Voltage ("EHV") feeder in pipe. The transition  
2 joint will allow retrofitting existing EHV HPFF cable  
3 with water-cooled (which therefore does not contain  
4 oil) solid dielectric cable to be done in sections.

5 The Company plans to spend \$105,000 in RY1.

- 6 5. R&D has two on-going projects to reduce dielectric oil  
7 leaks that are related to underground pipe coating  
8 disbondment detection. The first project is the  
9 design and fabrication of a flexible guided wave  
10 transmitter and receiver that utilizes microwave range  
11 frequency to send a microwave frequency wave on the  
12 pipe coating surface to detect any coating anomalies.  
13 The Company completed Phase I in 2014. Phase II,  
14 which started in 2015, will validate the accuracy of  
15 the communication model. A launcher/detector of  
16 excavated Con Edison pipe in the laboratory  
17 environment will be built.

18 The second project will develop a Transmission Line  
19 Model to represent the soil/coating/metallic pipeline  
20 interface based on a deterministic, probabilistic  
21 approach. Phase I has been completed, which included  
22 developing the mathematical model based on AC  
23 impedance variance measurements for the detection of  
24 disbonded coating for buried steel pipes. Phase II,

SHARED SERVICES PANEL

1 which began in 2015, will validate the mathematical  
2 model by running the measurements using Con Edison  
3 pipe and coating in the laboratory environment.

4 The Company plans to spend \$185,000 in RY1 and  
5 \$200,000 in RY2.

- 6 6. The Company is developing a machine to make live-end-  
7 caps ("LECs") on medium voltage underground cable  
8 feeders in manholes, allowing assembly of a LEC  
9 without a splicer in the underground structure.

10 During periods of adverse system conditions, time is  
11 of the essence, and the time required for traditional  
12 feeder processing and repair can contribute to the  
13 risk of cascading outages. A LEC machine will reduce  
14 feeder processing time because safety protection  
15 requirements for a machine will be less than for a  
16 splicer. The Company has engaged a team of vendors to  
17 produce a tabletop working model of a LEC machine to  
18 demonstrate feasibility. Initial component models  
19 were developed and demonstrated in 2015. The Company  
20 plans to spend \$50,000 in RY1 to further demonstrate  
21 the proof of concept and produce a production version  
22 for use on the system.

- 23 7. The Company is working to develop and demonstrate new  
24 devices to clear obstructions in distribution

SHARED SERVICES PANEL

1 conduits. Obstructions that cannot be cleared must be  
2 excavated. In general, excavations are costly and  
3 time consuming. In this project, the Company will  
4 investigate the use of video to inspect conduits and  
5 ducts in order to gain accuracy in determining points  
6 of excavation. The Company also seeks to develop  
7 technology to perform the clearing functions from  
8 within a duct or conduit, eliminating the need for  
9 excavation and the associated costs. The Company  
10 plans to spend \$100,000 in RY1 and \$50,000 in RY2.

- 11 8. The Company has initiated a number of projects to  
12 address cyber and physical security of Company assets.  
13 They include evaluating state-of-the-art solutions in  
14 biometrics, surveillance, and sensor technologies; and  
15 studying and mitigating consequences of intentional  
16 electromagnetic interference ("IEMI") on critical  
17 control infrastructure. IEMI is a man-made attack  
18 using radio frequency that could cause disruption or  
19 destroy operation of electronic equipment such as  
20 relays, computers, switches and communication devices  
21 potentially causing service disruptions to our  
22 customers. The Company projects to spend  
23 approximately \$410,000 in RY1 and \$485,000 in RY2.

SHARED SERVICES PANEL

1           9.    The Company will engage in an engineering study with  
2                    EPRI to support Con Edison's evaluation of some of the  
3                    key design and protection requirements for three  
4                    representative microgrid configurations: 1) Secondary  
5                    network--Several customers carved out of an existing  
6                    secondary network, 2) Overhead area--Customers in an  
7                    overhead area, and 3) MV campus--A campus-style  
8                    microgrid fed at 13 or 27 kV. The study will enhance  
9                    current understanding of the distribution design,  
10                   planning, and protection requirements to integrate and  
11                   operate community microgrids within utility systems.  
12                   Also, the type of DERs (for example, solar-PV, energy  
13                   storage, microturbine, fuel cell systems, etc.) that  
14                   are being considered have been in the form of  
15                   inverter-based technology, as opposed to the more  
16                   traditional rotating machine technology. Because  
17                   inverter technology is relatively new, few models  
18                   currently exist. The main objective is to utilize  
19                   modeling and analysis to provide a better  
20                   understanding of how to evaluate the performance of  
21                   the overall microgrid system and DER assets. This  
22                   will enable more accurate planning and interconnection  
23                   studies by power system engineers. This project is  
24                   part of the Company's EPRI portfolio of projects,

SHARED SERVICES PANEL

1           which is included in expenditures for EPRI on Exhibit  
2           \_\_\_ (SSP-14).

3       10.   Con Edison is working to develop new ergonomic  
4           technologies for use by Company employees. One of the  
5           projects is to test the use of a new lifting  
6           exoskeleton for possible adoption by departments with  
7           employees that engage in heavy work in their daily  
8           activities. Two novel exoskeleton devices have been  
9           identified. One provides feedback to encourage proper  
10          lifting technique and spine posture by engaging the  
11          torso and shoulders. The second project provides  
12          similar feedback along with a load transfer mechanism  
13          that shifts the load from the arms and back to the  
14          shoulders and hips. Con Edison will purchase some  
15          units for workers to test in various locations  
16          including Facilities and Field Services and Gas  
17          Operations. Additionally, there is a pilot under  
18          development on the use of a wearable analytics device.  
19          The wearable analytics device collects data that  
20          assesses the level of risk of injury in each lift or  
21          worker activity. The device can provide real-time  
22          feedback to the worker, post-activity analytics that  
23          can be used during a work shift and for worker  
24          training, characterization of our working conditions,

SHARED SERVICES PANEL

1           and possible insight before an injury or incident  
2           occurs. The Company plans to spend \$50,000 in RY1.

3 Q. Please describe the areas of research conducted by the  
4 Company's ongoing Gas program.

5 A. The Gas research program is divided into two main research  
6 areas: distribution and transmission, and the Millennium  
7 fund program.

8 Q. Please describe each of these areas.

9 A. R&D activities in the distribution and transmission program  
10 include deployment and advancement of trenchless  
11 technologies, and development of techniques and equipment  
12 to expedite detection and pinpoint location of natural gas  
13 pipe leaks that migrate through the soil.

14 Q. Please describe what you mean by trenchless technology.

15 A. Trenchless technology refers to the repair or rehabilitation  
16 of the gas distribution infrastructure without the need to  
17 excavate a trench. An example of a trenchless technology  
18 is Cured-in-Place Lining ("CIPL"), which entails insertion  
19 of a collapsible polyurethane liner into an existing main  
20 via one or two small excavations, and pressurizing the  
21 liner so that it adheres against the host pipe and seals it  
22 from leaking. Another example is a service pulling tool, a  
23 machine that sits in a small excavation and pulls out an  
24 existing steel service while simultaneously pulling in from

SHARED SERVICES PANEL

1 another small excavation on the opposite end of the pipe of  
2 the same diameter or slightly larger diameter  
3 service. These technologies also support work in the  
4 electric and steam systems and avoid the social cost  
5 associated with open trench excavation which is related to  
6 reduced or lost pedestrian traffic for local businesses.

7 Q. Please continue by explaining the Millennium program.

8 A. The second research area is the Millennium program, which  
9 contains projects that are part of the gas  
10 distribution/transmission R&D program and funded through  
11 what is referred to as the Millennium Fund.

12 Q. What is the Millennium Fund?

13 A. In April 2000, the Commission approved a surcharge to be  
14 collected via the Monthly Rate Adjustment Surcharge to  
15 support long-term (greater than two years) gas distribution  
16 research that replaced funding previously supplied through  
17 a FERC surcharge. The Commission requires that over 80  
18 percent of these funds be directed at collaborative  
19 research. Millennium activities include development of  
20 heat shields and processes to be used in conjunction with  
21 the use of CIPL, and researching and testing new in-line  
22 inspection technologies.

23 Q. Please describe the ongoing Gas R&D projects.

24 A. Some major projects planned for in the Rate Year include:

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

- 1           1.    Testing the Picarro mobile methane sensor equipment to  
2                    detect gas leaks.  The Picarro methane sensor  
3                    equipment utilizes a highly sensitive analyzer that  
4                    utilizes Cavity Ring Down Spectroscopy ("CRDS") in  
5                    combination with GPS equipment, anemometers, and a  
6                    proprietary algorithm to detect and locate gas leaks  
7                    much farther from the source when compared to  
8                    traditional gas leak survey equipment.  The Company  
9                    projects to spend \$145,000 in RY1 and \$229,000 in RY2.
- 10           2.    Development of plastic repair sleeves for use on the  
11                   Company's polyethylene ("PE") gas distribution system  
12                   that is leaking.  There currently are no fittings  
13                   available to repair a leaking PE pipe.  Availability  
14                   of a repair fitting will allow for a lower cost repair  
15                   option compared to the current process that interrupts  
16                   gas flow to remove the pipe section.  The Company  
17                   projects to spend \$50,000 in each of RY1 and RY2.
- 18           3.    The remote drip pot monitor project was conceived to  
19                   allow for remote monitoring of a low pressure gas main  
20                   drip pots for water accumulation.  Water that  
21                   accumulates in a drip pot can build up and stop the  
22                   flow of gas to a customer's service, extinguishing  
23                   pilot lights and requiring the Company to re-light the  
24                   pilot of that home's appliances.  The project will

SHARED SERVICES PANEL

1           deploy several field-ready monitoring units.

2           Deployment of drip pot monitors will provide earlier

3           notice that water is collecting in the main. The

4           Company projects to spend \$25,000 in each of RY1 and

5           RY2.

6   Q.   Please describe some of the more significant Millennium

7       Fund efforts that are listed in Exhibit \_\_ (SSP-14).

8   A.   NYSEARCH and OTD each manage a multitude of these projects

9       directed to the Company's needs. Each year, the Company

10      participates in over 40 selected projects that are mid- to

11      long-term in nature. These projects address problems in

12      the areas of pipeline integrity assessment, facility

13      locating, leak detection, pipe materials, repair and

14      rehabilitation of pipes, third-party damage, gas

15      interchangeability, and EH&S.

16      Schedule CE-G-1 of Exhibit \_\_ (SSP-14) lists R&D projects

17      that are underway and associated with the Millennium Fund,

18      to demonstrate the types of projects being undertaken.

19   Q.   What Millennium Fund projects is the Company involved in?

20   A.   The following are examples of some of the more significant

21      Millennium Fund projects included in the exhibit that are

22      not part of the collaborative work with NYSEARCH or OTD:

23      1.   Completion of various Explorer robots and their

24      associated auxiliary equipment, such as bend sensors

SHARED SERVICES PANEL

1 and cleaning tools to be used for transmission  
2 pipeline assessment.

3 2. Methane quantification is a newer area of research and  
4 intends to reduce greenhouse gas emissions from leaks  
5 on the gas distribution system. The project seeks to  
6 develop technology that enables the quantification of  
7 the rate of leakage of natural gas from a type 3 gas  
8 leak. The characterization of leak rate could then be  
9 used to prioritize repairs by those type 3 leaks with  
10 the greatest emissions for earlier repair.

11 3. Development of non-destructive inspection technology  
12 that enables the Company to inspect new or existing  
13 plastic fusions in the gas distribution system. The  
14 project seeks to develop field ready fusion inspection  
15 technologies that can be used by field crews to  
16 provide for a non-destructive inspection of the  
17 fusion, which would be in addition to the current  
18 process of performing a visual inspection. The  
19 technology would provide an immediate pass/fail  
20 response.

21 4. Advancements in residential methane detector  
22 technology continue through multiple efforts in the  
23 OTD program by GTI. There is a need to evaluate  
24 technology that provides a means to protect our

SHARED SERVICES PANEL

1 customers from a gas leak. Although residential  
2 methane detector technology is commercially available,  
3 testing of existing technology identified a gap  
4 between when a consumer with a normal sense of smell  
5 detects odorized natural gas and the standards  
6 prescribing minimum alarm levels that currently  
7 available commercial technology are certified to.  
8 These R&D efforts seek to advance this technology to  
9 alarm at lower levels to provide a greater advance  
10 warning of a gas leak and perform testing to  
11 substantiate the performance of this technology in  
12 residential applications. Efforts include testing  
13 currently available commercial technology in a pilot  
14 program and creating new industry standards, such as  
15 Underwriter Laboratories, that enhance performance of  
16 the current commercial units. This will provide for  
17 such items as lower alarm limits and improvements in  
18 packing that enhance the safe application of the  
19 technology by consumers.

20 Q. How much funding does the Company provide to NYSEARCH and  
21 OTD?

22 A. In each of the rate years, Con Edison will provide \$500,000  
23 to NYSEARCH and \$650,000 to OTD.

SHARED SERVICES PANEL

1 **Reconciliation Mechanism**

2 Q. Does the projected funding level for the Rate Years  
3 represent the total cost to develop and demonstrate these  
4 projects?

5 A. No. Many of the projects are multi-year and the amount  
6 only represents what will be spent during the Rate Year.  
7 In addition, these are estimates of Con Edison's share of  
8 the costs. In many cases, these represent only a portion  
9 of the total costs, with the rest being made up by co-  
10 funding, which we expect will be provided by New York State  
11 (and other) incubator labs, government, industry partners,  
12 or other collaborative partners. Should this expected  
13 funding not materialize as projected, we may need to adjust  
14 development schedules accordingly and shift the funding to  
15 different projects.

16 Q. Is R&D funding currently subject to a reconciliation  
17 mechanism?

18 A. Yes, under the current Gas Rate Plan, Gas R&D funding is  
19 subject to a downward-only reconciliation.

20 Q. Is the Company proposing that Gas R&D expenditures continue  
21 to be subject to reconciliation during the Rate Year?

22 A. No.

23 Q. Please explain why.

SHARED SERVICES PANEL

1 A. Primarily, the Company does not believe that there is a  
2 reasonable basis for subjecting this individual element of  
3 Company expense to reconciliation. It does not fall into  
4 any of the categories of expense discussed by the  
5 Accounting Panel for which a reconciliation mechanism is  
6 warranted.

7 Q. Didn't the Company propose, along with other signatory  
8 parties, reconciliation for Gas R&D expenses as part of the  
9 Joint Proposal made to the Commission in those prior rate  
10 cases?

11 A. Yes. As part of the give-and-take of the settlement  
12 process, the Company agreed to this provision as applicable  
13 to a multi-year plan.

14 Q. Why else do you believe that a reconciliation mechanism is  
15 not warranted in this proceeding?

16 A. There should be no expectation that the Company will  
17 materially underspend its Gas R&D budget in the Rate Year.  
18 Among other reasons, the Company expects that it will incur  
19 additional R&D expense in the near term based on a change  
20 in the definition of service termination points, which we  
21 believe is likely to require additional R&D projects to  
22 identify gas issues within buildings. Also, as described  
23 earlier, Con Edison is developing a means of quantifying  
24 greenhouse gas emissions from natural gas delivery systems.

SHARED SERVICES PANEL

1 Both of these issues may require expenditures that are not  
2 in the R&D budget reflected in the revenue requirement.

3 **XI. SUPPORT FOR GAS OPERATIONS**

4 Q. Will any of the Shared Services organizations be affected  
5 by the increased gas work and number of Gas Operations  
6 employees as explained by the GIOP?

7 A. Yes. The GIOP explains that the Company will be hiring  
8 approximately 500 additional Gas Operations employees over  
9 the next five years to enable a significant increase in  
10 work. This increase will require additional support  
11 personnel from several Shared Services organizations - HR  
12 (1), L&I (8) and Supply Chain (2) - to provide service to  
13 meet the needs of the growing workforce and to enable the  
14 gas work.

15 In addition, as the GIOP testified, these new employees  
16 will need equipment and tools to carry out the work they  
17 are performing. The XM budgets that were explained earlier  
18 include funding for additional equipment and tools.

19 Q. Have you prepared an exhibit that provides further  
20 information on the additional employees?

21 A. Yes. Additional information is shown in the exhibit titled  
22 "Shared Services - Support for Gas Operations."

23 MARK FOR IDENTIFICATION AS EXHIBIT \_\_ (SSP-15)

24 Q. Was it prepared under your direction and supervision?

SHARED SERVICES PANEL

1 A. Yes, it was.

2 **HR Gas Operations Support**

3 Q. How does HR support Gas Operations?

4 A. The existing HR Professional ("HRP") team supporting Gas  
5 Operations performs a multitude of tasks for Gas Operations  
6 employees, including administering the union contract  
7 regarding sick days, benefits and discipline. The HRP  
8 advises managers regarding performance management and  
9 compensation, including performance review preparations for  
10 both management and union employees. The HRP also assists  
11 with conducting internal investigations for the Corporate  
12 Ombudsman, EEO and the Ethics Office.

13 Q. Please explain the need for one additional employee  
14 requested by HR, the employees position and the  
15 justification for this employee.

16 A. Initially, this new position would assist Gas with the  
17 hiring process for the additional employees, including  
18 answering potential employee inquiries and sourcing and  
19 selecting skilled employees to meet the workload  
20 requirements. After the initial hiring is completed, this  
21 employee would be assigned to handle the day-to-day work as  
22 a Gas HRP. The addition of one HRP will enable us to  
23 maintain our current ratio of one HRP to 450 employees.

24 Q. When will the Company hire the additional HRP?

SHARED SERVICES PANEL

1 A. The Company will recruit an individual in 2016 with the  
2 goal to have the HRP hired by January 2017.

3 Q. What is the cost associated with this additional staffing?

4 A. The cost of the additional HRP is \$115,000 per year.

5 **Learning and Inclusion Gas Operations Support**

6 Q. How does L&I support Gas Operations?

7 A. Through TLC, L&I provides the training necessary for all  
8 employees, including Gas employees.

9 Q. Please explain the need for eight new employees for L&I.

10 A. L&I requires eight new full-time employees to meet Gas  
11 training, evaluation and operator qualification testing for  
12 the additional and existing Gas workforce.

13 Q. How did you determine that eight employees were necessary?

14 A. In reviewing the training and testing needs and the planned  
15 hiring levels, there will be a 50% increase in the number  
16 of gas employees requiring training and thus, an increase  
17 in the required training days needed.

18 Q. Please explain the training needs of gas employees.

19 A. Gas employee training differs from other technical training  
20 disciplines in that it requires an on-going training that  
21 continues after an individual is hired. Individuals who  
22 perform work on the gas system receive skills training,  
23 promotional testing and required operator qualification and  
24 requalification each year.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Q. Please explain the overall effect on staffing.

2 A. The chart below reflects the number of required training  
3 instructor days needed each year to meet the projected Gas  
4 training demand in 2016 and in RY1-RY3, based on the career  
5 path technical training and testing requirements,  
6 evaluation and ongoing Gas operator qualification and  
7 requalification testing required for Gas Operations  
8 employees as compared to the number of training days in  
9 2014 and 2015:

| Years:                  | 2014 | 2015 | 2016 | RY1  | RY2  | RY3  |
|-------------------------|------|------|------|------|------|------|
| Required Training Days: | 1338 | 1814 | 2941 | 2523 | 2276 | 2485 |

10

11 The number of Gas training days required in 2016 is 2,941,  
12 which is a 62% increase in the level of training that must  
13 be conducted as compared to 2015. The average annual  
14 number of training days required from 2016 through RY3 is  
15 2,556 - a 41% increase compared to the 2015 training days  
16 provided.

17 Q. Has the Company started to hire these training employees?

18 A. Yes. The Company has hired three additional Gas training  
19 employees. The total number of employees is thirteen as of  
20 January 11, 2016. A fourth new training employee is  
21 scheduled to start on February 1, 2016. The Company  
22 expects to hire the remaining four in 2016.

SHARED SERVICES PANEL

1 Q. What is the cost of this increased number of employees?

2 A. The cost is \$1.1 million for each Rate Year.

3 **Supply Chain Gas Operations Support**

4 Q. How does Supply Chain support Gas Operations?

5 A. Supply Chain supports Gas Operations by procuring  
6 construction services, pipes, valves, fittings and other  
7 materials and services used by Gas Operations and  
8 Construction Services. Supply Chain also manages the  
9 inventory of about 2,000 stock Gas items.

10 Q. Can you please explain the plan to hire two Procurement  
11 Specialists to support the increased gas work?

12 A. Supply Chain will need to hire two new employees to support  
13 the increased procurement of materials and services.

14 Q. How has the increase in workload for Gas Operations  
15 affected Supply Chain?

16 A. Annual contract spend for Gas Construction Services such as  
17 main replacement, oil to gas conversion work, leak repairs  
18 and gas transmission projects has increased year over year  
19 for the period from 2013 through 2015 and is expected to  
20 increase in 2016 and at least remain steady in RY1.

21 Q. Please continue.

22 A. Spending on contracts to support Gas Construction Services'  
23 activities in 2013 was \$164 million, followed by \$193  
24 million in 2014 and \$303 million in 2015. Based on

SHARED SERVICES PANEL

1 forecasted activity, Gas Construction contract spending is  
2 projected to increase by approximately 40 percent again in  
3 2016 to \$425 million.

4 Q. Is there additional work associated with the increased  
5 spending?

6 A. The number of contracts that support Gas has increased from  
7 26 in 2013, to 50 in 2014, and to 82 in 2015. This number  
8 is expected to increase to 105 contracts in 2016. We  
9 expect the levels at least remain steady, if not increase,  
10 in RY1. In the past, one full-time Supply Chain employee  
11 procured and maintained approximately 50 Gas-related  
12 service contracts and supported other ongoing initiatives.  
13 At this time, one person is inadequate to handle this  
14 increased level of work. Employee activities to support  
15 each contract include:

- 16 • procuring, analyzing and negotiating several hundred  
17 unit price line items;
- 18 • modifying existing contracts to support new Gas  
19 requirements and mandates;
- 20 • preparing and issuing award recommendations; and  
21 • monitoring contractor spend and performance.

22 In addition, as the number of contracts has increased, the  
23 Supply Chain employee needs to qualify new Gas vendors,  
24 benchmark with other utility companies for best practices

SHARED SERVICES PANEL

1 and potential process improvements, implement performance  
2 scorecards for each contract, and work with the local  
3 unions to establish training programs.

4 Q. As part of this increased Gas-related work, is the Company  
5 looking to use additional contractors to perform the needed  
6 work?

7 A. As described in the GIOP, Con Edison is also planning to  
8 accelerate the replacement levels of 12 inch-and-under  
9 unprotected steel and cast iron pipe in quantities  
10 sufficient to achieve the elimination of all unprotected  
11 steel and cast iron mains over the next 20 years. Con  
12 Edison currently engages approximately 40 construction  
13 companies, but these companies will not be able to meet  
14 this increased replacement target. Supply Chain,  
15 Construction Management and Gas Operations have been  
16 negotiating with new contractors in order to meet the  
17 accelerated replacement levels of leak prone pipe.

18 Q. What is the Company's plan for new vendors?

19 A. Supply Chain has an on-going initiative to issue contracts  
20 with new high capacity, non-incumbent New York City  
21 contractors that can meet larger volumes of work to assist  
22 Gas in meeting their project-related goals, including the  
23 volumes associated with the accelerated main replacement  
24 projects.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 Q. Please explain what you mean by high capacity vendors?

2 A. On average, a typical construction vendor has approximately  
3 200-300 employees and annual revenues of approximately \$25  
4 to \$50 million. High-capacity vendors have 750 to 1,000  
5 employees and \$500 million to \$750 million in annual  
6 revenues (some exceeding \$1 billion annually). The high-  
7 capacity vendors will supplement the current contractor  
8 resource pool and will be considered for large area type  
9 main replacement solicitations with the expectation that  
10 they will increase resources to support the workload.

11 These vendors have the staff and financial capability to  
12 increase their workforce and are already mobilized and  
13 established in the New York City area.

14 To establish contracts with these new vendors, Supply Chain  
15 will need to undertake all the tasks noted above for each  
16 one of these high-capacity vendors, including obtaining and  
17 negotiating work scopes, terms and pricing with these new  
18 contractors as well as work with operations to qualify  
19 them.

20 Q. Are there any other items that Supply Chain is addressing  
21 to meet the increased Gas Operations' needs?

22 A. The Company has also increased spending on the 2,000 Gas  
23 stock items. There has been an increase in stock items  
24 expenditures for Gas in the last several years. In 2014,

SHARED SERVICES PANEL

1 Gas used \$38.8 million worth of stock items, and in 2015,  
2 they used \$43.5 million. Based on an analysis of the 2014-  
3 2015 expenditures, we project the use of these items to  
4 grow to \$54.4 million in 2016. This is a 40 percent  
5 increase in volume. We project to at least maintain this  
6 level in RY1.

7 Q. What will Supply Chain need to do to meet this growth?

8 A. Supply Chain will need to expend time and resources to  
9 address the additional administrative burden that results  
10 from the increase in stock needed for Gas. For example,  
11 Supply Chain must continually forecast the level of  
12 inventory needed. In addition, as consumption increases,  
13 there are likely to be supplier issues experienced, such as  
14 manufacturing problems at the vendor end, when the  
15 manufacturer is unable to provide us with the product  
16 timely, and extended lead times. To address this, we have  
17 implemented scorecards, which have increased in number and  
18 detail, as well as holding supplier meetings on a more  
19 frequently to address issues and to plan for future  
20 requirements.

21 Q. Please continue.

22 A. Additional resources are being assigned the task of working  
23 with the Gas operating groups to project requirements in  
24 both the short- and long-term horizons. This effort is

SHARED SERVICES PANEL

1 intended to minimize supply chain interruptions that will  
2 negatively impact the ability of Company and third party  
3 resources to install Gas-related materials.

4 Finally, a process to more effectively address quality and  
5 delivery issues is being developed. These issues will be  
6 documented and tracked, and root cause analysis performed  
7 and the generation of a corrective action will be required  
8 of that vendor.

9 Q. How many employees are needed to support this additional  
10 work?

11 A. Two new full time positions are required.

12 Q. Has the Company started to hire these Supply Chain  
13 employees?

14 A. Yes. Since the Gas expansion work is currently underway,  
15 these two new employees will start in February 2016.

16 Q. What is the cost associated with this additional staffing?

17 A. The cost of the additional employees is approximately  
18 \$200,000 per year.

19 Q. Is there any additional capital funding required to support  
20 this expansion?

21 A. Yes, the additional funding for the General Equipment  
22 necessary to support Gas Operations is discussed earlier,  
23 in the General Equipment portion of this testimony.

24 Q. Does this conclude this Panel's testimony?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC.

SHARED SERVICES PANEL

1 A. Yes, it does.
