NIAGARA MOHAWK POWER CORPORATION Response to Staff's First Set of Information Requests Electric Utilities

Request:

Capital and O&M Programs

- 60. For each electric, common and O&M program change in the current year and subsequent four calendar years, provide:
 - a) a detailed description of program;
 - b) the actual and budgeted expenditure amounts for the last five historic years by program;
 - c) both actual and planned units of work completed on annual basis for the last five years;
 - d) a justification for the program change;
 - e) a cost breakdown, and;
 - f) the planned units of work to be completed in future annual periods.

Response:

- (a) See EIOP testimony pp. 65-81 of 116 for detailed descriptions of electric O&M program changes.
 - (i) Distribution Inspection Program pp. 66-67;
 - (ii) Underground Network Inspection pp. 67-69;
 - (iii) Transmission Tower Painting pp. 76-78;
 - (iv) Transmission Footer Inspection and Repair pp. 76-78; and
 - (v) Sub-transmission ROW Widening pp. 79-80.
- (b) See Attachment 1, "IR-60 Attachment 1," for actual and historic expenditure amounts for programs and activities with spending during the prior five years.
- (c) See Attachment 2, "IR-60 Attachment 2," for actual and historic units for programs and activities with spending during the prior five years.
- (d) See response to (a), above.
- (e) See Exhibit __ (EIOP-12), for a summary of known and measureable O&M program cost changes from the Historic Test Year to Rate Year.
- (f) See response to (a), above.

NIAGARA MOHAWK POWER CORPORATION

Case No. 12-E-0201 and 12-G-0202 - Niagara Mohawk Power Corporation d/b/a National Grid - Electric and Gas Rates

Request for Information

FROM:

Denise Gerbsch

<u>TO</u>:

Revenue Requirement Panel (RRP)

SUBJECT:

Accounting Manual

Request:

- (1) Please provide the Company's accounting manual, and any instructions that accompany it, that was in effect during the historic year 2011. This should include all billing pool and allocation code listings and descriptions for the National Grid USA and KeySpan Service companies.
- (2) Please provide all updates to the accounting manual, and any instructions that accompany it, subsequent to December 2011 that have been implemented. This should include all updated billing pool and allocation code listings and descriptions for the National Grid USA and KeySpan Service companies.

Response:

- (1) Please see Attachment 1 for the Niagara Mohawk accounting manual that was in effect during the Historic Test Year. This manual includes the bill pools that were in effect from April 1, 2011 March 31, 2012 (page 323). Bill pools in effect from January 1, 2011 March 31, 2011, can be found in Attachment 4 (page 28). In addition, please see Attachments 2 and 3, respectively, for the accounting policies in effect for the Historic Test Year for the service companies serving, primarily, legacy National Grid and legacy KeySpan companies. Attachment 5 contains the KeySpan allocation codes that were in effect during the Historic Test Year.
- (2) Please see Attachment 4 for the bill pools for fiscal years 2011, 2012, and 2013. In addition, please see Attachment 5 for the KeySpan allocation codes for fiscal years 2011, 2012, and 2013.

- Note 1 Budget data for FY2008 through FY2012 for this program are not presented because the Company does not maintain the requested budgets at this level of detail. The 2010 Electric Rate Case rate allowance for this program was \$11,745 million.
- Note 2 Budget data for FY2008 through FY2012 for this activity are not presented because the Company does not maintain the requested budgets at this level of detail. Actual spending for this activity is not tracked at this level of detail. FY2012 Spend is estimated based on the number of network vaults inspected, estimated manhours per unit inspected, and applicable wage and overhead rates. Note that \$0.219 million is a corrected amount and the \$0.301 million HTY estimate reflected in the EIOP testimony (pp. 67-69) and Exhibit ___ (EIOP-12) is incorrect.
- Note 3 Budget data for FY2008 through FY2012 for this activity are not presented because the Company does not maintain the requested budgets at this level of detail.

Note 1 - Number of "units" not applicable for distribution inspection program.

Note 2 - Planned and Completed units not tracked at this level of detail. FY2012 units completed for UG Network Inspections estimated based upon total number of vaults for East and West and 20% of Central.

NIAGARA MOHAWK POWER CORPORATION Response to Staff's First Set of Information Requests Electric Utilities

Request:

Customer Service Issues

Electric 85. For the last three rate years, state separately the annual electric expenditures on core outreach and education activities (i.e., activities not related to retail choice). Briefly describe the core outreach and education activities undertaken in each rate year, including, but not limited to the following: customer rights and responsibilities, use of life support equipment, gas and electric safety (including Call Before You Dig), tree maintenance, infrastructure investment, what to do in an emergency, what to do during an outage, access to storm information and tracking and service restoration times, how to lower utility bills, how to get help paying bills/assistance programs, seasonal campaigns (e.g., summer electric demand reduction /keeping cool), renewable energy/green power,, and energy efficiency. Explain the reasons for any large variations (i.e., differences of greater than +/- 20%), either in total or in any individual activity, in the expenditures from year to year.

Response:

Please see Attachment 1 which provides a summary of outreach and education expenditures separated for Electric and Gas, calendar years 2009-2011. The expenditures were developed by including all charges to the Marketing Department's work units involved with the core outreach and education activities. National Grid does not track detailed outreach and education expenses by program for either electric or gas.

The main driver of variances in Attachment 1, page 1, total electric costs are due to:

Calendar year 2009- 2010 variances are largely due to creative service agency fees and advertising placement costs charged to electric for National Grid's "3%" campaign. This campaign helped educate customers on the programs offered by National Grid to help save energy costs.

Calendar year 2010-2011 variances are largely due to creative agency fees and extensive customer analysis to help National Grid understand and develop more effective methods to communicate and educate our customers. This resulted in our current strategic direction of regionalizing our processes and communications to speak much more "locally" to our customers, adopting our new "Here with you. Here for you." outreach and education culture.

The main driver of variances in Attachment 1, page 2, total gas costs are due to:

Calendar Year 2009-2010 variances are largely due to 2009 media (newspaper, television and radio) advertisement purchases throughout National Grid's upstate NY territory to directly support the "3%" campaign. These outreach and education activities helped educate customers on the programs offered by National Grid to help save energy costs.

Calendar year 2010 – 2011 variances are largely due to National Grid's execution of the previous year's media buys in 2010, which significantly decrease 2010's expenses. As mentioned above, expenses in 2011 rose largely because National Grid worked with creative agencies to develop more effective methods to communicate with and educate our customers, resulting in our adoption of our new "Here with you. Here for you." outreach and education culture.

NIAGARA MOHAWK POWER CORPORATION Response to Staff's First Set of Information Requests Gas Utilities

Request:

Customer Service Issues

171. For the last three rate years, state separately the annual gas expenditures on core outreach and education activities (i.e., activities not related to retail choice). Briefly describe the core outreach and education activities undertaken in each rate year, including, but not limited to the following: customer rights and responsibilities, use of life support equipment, gas safety (including Call Before You Dig), infrastructure investment, what to do in an emergency, what to do during an outage, access to service restoration times, how to lower utility bills, how to get help paying bills/assistance programs, seasonal campaigns (i.e., winter natural gas prices/staying warm), renewable energy/green power,, and energy efficiency. Explain the reasons for any large variations (i.e., differences of greater than +/- 20%), either in total or in any individual activity, in the expenditures from year to year.

Response:

Please see the Company's response to Electric question 85.

Name of Respondent: Iliana Williams

Date of Request: May 4, 2012 Request No. DPS-5(RMD-5)

NIAGARA MOHAWK POWER CORPORATION

Case No. 12-E-0201 and 12-G-0202 - Niagara Mohawk Power
Corporation d/b/a
National Grid - Electric and Gas Rates

Request for Information

FROM:

Richard Davi

TO:

Revenue Requirements Panel

SUBJECT: Productivity Adjustment

Request: Page 161 of Book #12 identifies a rate year productivity adjustment of \$5.516 million for electric and \$0.987 million for gas. Relative to this line item please provide the following:

- A. Brief overview of how the Company calculated the rate year productivity adjustment.
- B. Does the productivity adjustment proposed in this rate case differ from the calculation in the Company's most recent electric (C. 10-E-0500) and gas cases (C. 08-G-0609)?
- C. If yes to either in question B. what is the basis for the change?
- D. Identify what components of labor, benefits and payroll taxes are included in the Company's rate year productivity adjustment.
- E. Supporting calculation for the rate year productivity adjustment for both electric and gas.

Response:

Part A. The productivity adjustment proposed by the Company was calculated by applying a 1% annual reduction to total labor and payroll tax expense for the years beginning with the Historic Test Year through the Rate Year ending March 31, 2014 and Data Years ending March 31, 2015 and 2016. The 1% reduction is cumulative such that the reduction to labor and payroll tax in the years following the first year is greater than 1% due to the cumulative effect of the previous year's reductions.

Part B. The 1% cumulative productivity adjustment proposed in this case was calculated using the same model used to calculate the 1% cumulative productivity adjustment in the electric case 10-E-0500. The productivity adjustment calculated in the gas case 08-G-0609 did not use the same

model but applied the same calculation of a 1% cumulative reduction to total labor and payroll tax.

Part C. n/a

Part D. The productivity adjustment was calculated on total labor, including base pay, overtime, premiums and upgrades, variable pay and miscellaneous pay. The productivity adjustment also used total payroll tax expense calculated on total labor expense from Exhibit ____ (RRP-3), Schedule 31.

Part E. Exhibit _____ (RRP-11), Workpaper to Exhibit _____ (RRP-3), Schedule 36, Workpaper 1 (Book 18 pg 251), provides the calculation of the proposed productivity adjustment. Lines 1 – 85 of the workpaper calculates the 1% productivity adjustment on labor and lines 86 – 102 calculate the 1% productivity adjustment on payroll tax. Attachment 1 to DPS- 5 (RMD-5) to this response provides a copy of Exhibit _____ (RRP-11), Schedule 36, Workpaper 1, with more descriptive line notes showing exactly where the labor amounts are located in Exhibit _____ (RRP-3), Schedule 31, and where the tax amounts are located in Exhibit _____ (RRP-11), Workpaper to Exhibit _____ (RRP-5), Schedule 2.

The productivity adjustment calculation starts with total expense labor by Provider Company, as shown on the lines labeled "Unadjusted Labor" (taken from Exhibit ____ (RRP-3), Schedule 31, pgs 20, 24, 28 and 36, line 8, as noted). The workpaper then calculates the "Labor Adjusted for Productivity" amount in the year ending March 31, 2013 by reducing the Unadjusted Labor amount by 1% of the Historic Test Year amount. For the Rate Year ending March 31, 2014 and Data Years 2015 and 2016, the Labor Adjusted for Productivity is calculated by taking the rate of increase from year to year for unadjusted labor, subtracting 1% from that rate, and applying the resulting rate of increase to the previous years Labor Adjusted for Productivity. The 1% productivity adjustment dollar amount for each year is calculated by taking the difference between the Unadjusted Labor amount and the Labor Adjusted for Productivity amount for each year. This same calculation is applied to payroll taxes to get the 1% productivity adjustment on payroll taxes.

Please note that the Rate Year 2014 payroll tax amount used in calculating the productivity adjustment is different by approximately \$0.470 million for electric and \$.068 million for gas from the amounts on Exhibit ____ (RRP-11), Workpaper to RRP-5, Schedule 2. This will be corrected in the Company's Correction and Updates filing and will result in an increase in the productivity adjustment of approximately \$.005 million in electric and \$.001 million in gas.

NIAGARA MOHAWK POWER CORPORATION

Case No. 12-E-0201 and 12-G-0202 - Niagara Mohawk Power Corporation d/b/a National Grid - Electric and Gas Rates

Request for Information

FROM:

Lisa Rosi

TO:

Charles Willard

SUBJECT:

SIR costs

Request:

- 1. On page 3 of 19, company witness Willard states the open sites include 44 active former MGP sites, 9 active company operating sites and 13 sites owned by third parties where the company shares some level of responsibility; (a) Provide a detailed list of each of these sites, describe the costs being incurred and the circumstances that led up to these costs being incurred. (b) Provide workpapers and other support that detail the site expenditures for investigation or remediation related activities for each of the sites listed in (a).
- On page 14 of 19, company witness Willard discusses the company forecasts total SIR spend to be a combined \$42 million. Provide the workpapers and other support for how the costs projections are determined for each site.

Response:

1(a). The detailed list of each of the sites referenced in company witness Willard's testimony, including total to date spend (up to March 31, 2012), is provided as Attachment 1 to DPS-12. The sites were also provided, along with a description of the current status, in Exhibit (CFW-1). The costs being incurred for these sites are associated with investigation and remediation costs ("response costs") for the former manufactured gas plant ("MGP") sites and the operating sites. In the context of the sites owned or operated by third parties, Niagara Mohawk has an alleged historical nexus to the sites and is identified as a potentially responsible party ("PRP" sites). At such sites, the Company typically does not have lead responsibility and is either a member of a PRP group which is formed to implement the DEC or EPA-required investigation and remediation, is evaluating the possibility of negotiating a settlement, or is defending an action in litigation. Prior to agreeing to join a PRP group or to settle, Niagara Mohawk evaluates its alleged nexus to the site and attempts to negotiate a fair and equitable outcome, in the context of the Comprehensive Environmental Response, Compensation, and Liability Act ("CERCLA" or "Superfund").

REDACTED VERSION

The circumstances that led up to these costs being incurred are as follows: 1) in the case of the MGP sites - Consent Orders; 2) in the case of the operating sites - DEC and the Company entering into agreements (spill file numbers or Resource Conservation and Recovery Act [RCRA] Corrective Measures) to evaluate and remediate potential impacts associated with Company operations; and 3) in the case of the PRP sites — evaluating Niagara Mohawk's alleged nexus to the site, negotiations, participating in discussions with PRPs, contributing its allocated share of response costs, and/or defending CERCLA claims.

- 1(b). The workpapers and other support for the Company's obligations regarding investigation or remediation related spending for the sites listed in (a) are provided in Attachment 2 to DPS-12. Due to the size of the files, a CD containing Attachment 2 is being provided via overnight mail.
- 2. The \$42 million forecasted total SIR spend identified in company witness Willard's testimony is prepared based on the DEC schedule as presented in the testimony as Exhibit (CFW-5) for the MGP sites. As presented in the testimony, the estimated cost for the work anticipated by the DEC for the rate year exceeds \$100 million. The estimate is based on an estimated average spend per year per SIR phase for each site listed in the DEC schedule. For example, Remedial Investigations are estimated at \$250,000 per year, Feasibility Studies and Remedial Designs are estimated at \$100,000 per year. Specific spending was used for remedial construction forecasts, based on the costs presented in a Record of Decision (ROD) or engineer's estimate. The forecast for company operating sites and PRP sites is also included in the \$100 million forecast and is based on an estimated average spend per year. The estimated average spending was developed based on historical costs and the experience of the site project manager in consultation with outside consultants and/or legal counsel (where applicable). As mentioned in Willard's testimony, the \$100 million forecast was adjusted down to \$42 million considering the Company's spending in previous years and after consideration of potential delays (such as regulatory review/approval and obtaining access to third party properties) and also adjusted for inflation.

Request for Information

FROM:

Gerald Wojcinski

<u>TO</u>:

Shared Services and Customer Panel (SSCP)

SUBJECT:

Uncollectibles

Request:

Testimony of SSCP

- 1. Please refer to Exhibits (SSCP-4) and (SSCP-5), both exhibits includes two pages. Beginning with January 2012, provide for every month to present and continue to update for every month thereafter, the latest 12-months-to-date information in a similar format for both exhibits and both pages in each.
- 2. Page 22 of the SSCP discusses the "Transfer-to-Active Project" that reinstated previously written —off accounts and transferred the unpaid balance to active account. During the period 2010 through 2011 what was the total increase in recoveries from this project? Also include the per month recoveries.
- 3. Page 22 SSCP also discusses, how the project significantly increased recoveries and reduced write-offs, however the testimony does not address the impacts to future periods from writing off these amounts again. Please quantify the impact to net-write offs and the impact to the uncollectible rate if the Transfer-to-Active Project was not implemented. Such impacts should be in the format as shown on exhibits SSCP-4 and SSCP-5 for both pages in each exhibit, beginning with January 2012, for every month to present and continue to update for every month thereafter, the latest 12-months-to-date information.

Response:

- Please see Attachment 1 GRW-1 (Jul12 updt) for electric and Attachment 2 GRW-1 (Jul12 updt) for gas. [Note that the uncollectible 12-month rates on the 2nd page of each attachment will not differ from the 1st page for months after January 31, 2012. The 12 month period ending February 29, 2012 is after the completion of the manual phase of the Transfer to Active project that ran from November 2010 through February, 2011.]
- Please see Attachment 4 GRW-1 (Jul12 updt) for electric and Attachment 5 GRW-1 (Jul12 updt) for gas. The 2nd page of both attachments indicates the impacts of removing both the manual phase of the transfer to active project that

occurred from Nov'10 through Mar'11 and the manual test phase of this project (alluded to in the response to #2 of GRW-1 submitted May 21) that occurred from mid-Feb'10 through mid-Apr'10. Furthermore, as indicated in the May 21 response to #2, the Company has assumed the full increment of the reinstatements that occurred from Feb'10-Apr'10 over those that happened from Feb'09 – Apr'09 as being project related. (However, account level detail is not available for this time period. Assumptions based on a high-level study conducted on all reinstated customers was used to allocate these dollars from the 1st quarter of 2010.) The analysis is conservative in that it only focuses on the impacts to net write-off and does not consider the payments received on the newly established active accounts since these are not technically recoveries, but reductions to accounts receivable and arrears. Also, since the automated phase of the transfer to active project sets a new norm, the analysis focuses only on the manual implementation of this project.

- Beginning Jan'11, the electric-gas net write-off allocation was changed from 72%-28% to 65%-31% per the outcome of the NIMO electric rate case 10-E-0050
 For the mo's beginning NoV11, the electric gas net write-off allocation was changed from 64%-31% to 75%-30% per the outcome of the new annual assessment completed after the OcV11.
 ILCAP Arrairs forgiveness is imbedded within the net write-off row and allocated between electric and gas assessment or (1.0 % C) above. as noted in (1) & (2) above.
- (4) For the month of Sept '09, total electric & gas net write-off has been normalized by runoving about \$4.1 million that had been inadvertently accelerated to write-off due to a system issue. These amounts would have been written off during Oct '09 and Nov '09.
- (5) For the months of Oct&New '99, total electric & gas not write-off has been increased by the affocated portion of the \$4.1 million that had been inadvertently accelerated in Septit9 due to a system issue. Also, written off during Oct '10 was another \$1.5 accelerated amount that should have gone to Nov'09. Both Oct09 & NovO9 have been normalized by the additional figure.

(6) The marmal phase of the transfer to active project increased recoveries by a total of \$8,954,239 for both electric and gas for the months of NoV10 through FeV11. This decreased the net write-offs in the rolling 12-mo analysis for each of the 12-mo periods ending NoV10 through far 12. The figures below have been updated following a more precise study of the data conducted in preparation for the response to GRW-1 #3. The total of \$3.9 million remains the same, however the Uncollectible Rotes above have been adjusted alightly compared to pg 2 of Exhibit. (SSCP-4) to accommodate this new cashflow.

The revenue months (not-rolling 12-mo's) were impacted by this project as follows:

| | | | | (\$06 | OO's) | | | | | |

- (1) Beginning Jan'11, the electric-gas not write-off allocation was changed from 72%-28% to
- (1) beginning ann 11. the electric-gas not write-off allocation was changed from 1.2* − 2* − 10 of 69* − 31* por the outtoom of the NIMO electric site case 10 € −0.050 (
 27) For the mo's beginning Nov'l 1, the electric gas not write-off allocation was changed from 69% −31* s to 70° −30° por the outcome of the new annual assessment completed siter the Oct 11.

 28) LICAP Arran forgiveness is imbedded within the not write-off row and allocated between electric and gas as noted in (1) & (2) above.
- (4) For the month of Sept '09, total electric & gas net write-off has been normalized by removing about \$4.1 million that had been inadvertently accelerated to write-off due to a system issue. These amounts would have been
- that had been individually acceptance to white-our due to a system rane. I need amounts would have our written off during Oct 109 and Nov 199.

 (5) For the months of Oct &Nov 199, I total electine & gas net write-ouff has been increased by the allocated portion of the \$4.1 million that had been inadvertenify accelerated in Sept709 due to a system issue. Also, written off during Oct 109 was another \$1.5 accelerated another that should have gone to Nov 109. Both Oct 109 & Nov09 have been normalized by the additional figure.

(6) The manual phase of the transfer to active project increased recoveries by a total of \$8,954,239 for both electric and gas for the months of Nov10 through Feb*11. This decreased the net write-offs in the rolling 12-no analysis for each of the 12-no periods ending Nov10 through 1sof12. The figure below have been updated following a more precise study of the data conducted in preparation for the response to GRW-1#3 The total of \$8 9 million creatains the same, however the Uncollectible Rates above have been adjusted slightly compared to pg 2 of Exhibit __(SSCP-5) to accommodite this new eachflow.

The revenue months (not-rolling 12-mo's) were impacted by this project as follows

- Beginning Jan'11, the electric-gas net write-off allocation was changed from 72%-28% to 69%-31% per the outcome of the NIMO electric rate case 10-E-0050.
- (3) LICAP Arrears forgiveness is inheded within the net write-of-frow and allocated between electric and gas
- (3) LICAP Arrears forgiveness is imbedded within the net write-off row and alineated between electric and gas as noted in (1) & (2) above.
- (4) For the month of Sept '09, total electric & gas net write-off has been normalized by removing about \$4.1 million that had been insubvertently accelerated to write-off due to a system issue. These amounts would have been written off during Oct 10 and Nov '09.
- (5) For the months of Oct&Nov '09, total electric & gas net write-off has been increased by the allocated portion of the \$4.1 million that had been madvertently, accelerated in Sept190 due to a system issue. Also, writing off during Oct '09 was another \$1.5 accelerated mount that should have gone to Nov '09. Both Oxt09 & Nov09 have been pormulized by the additional figure.

- (6) The manual phase of the transfer to active project increased recoveries by a total of \$8,954,239 for both electric and gas for the months of NoV10 through FeV11. This decreased the net write-offs in the rolling 12-mo analysis for each of the 12-mo periods ending NoV10 through Jan12. The figures below have been updated following a more precise study of the data conducted in preparation for the response to GRW-1 #3. The total of \$8.9 million remains the same, however the Uncollectible Rates above have been adjusted slightly compared to pg 2 of Exhibit __(SSCP-4) to accommodite this new cashflow.
- (7) It is assumed for this illustration that the test phase of the manual project involved the full incremental dollars indicated in Attachment 3 GRW-1 for the months of Feb10 through Apr10 vs. those for the same mouths in 2009. As indicated in that attachment, a total of 37,454,403 between electric electric and gas affected Feb11 turu Apr10.

- (1) Beginning Jan' I I, the electric-gas net write-off allocation was changed from 72%-28% to 65%-31% per the outcome of the NIMO electric rate uses 10-E-0050.

 (2) For the mo's beginning Nov' I I, the electric gas net write-off allocation was changed from 65%-31% to 70%-10% per the outcome of the new annual assessment completed after the Oct | 3
- (3) LICAP Arrears forgiveness is imbedded within the net write-off row and allocated between electric and gas
- (4) For the month of Sept '09, total electric & gas not write-off has been normalized by removing about \$4.1 million that had been inadvertently accelerated to write-off due to a system issue. These amounts would have been
- written off during Oct 19 and Nov '95.

 (5) For the months of Oct 8Nov '95 total electric & gas net write-off has been increased by the allocated portion of the 541. Thillion that had been nadvertenily accelerated in Septi09 due to a system issue Also, written off during Oct '09 was another \$1.5 accelerated amount that should have gone to Nov '09. Both Octo9 & Nov09 have been normalized by the additional figure.

- (6) The manual phase of the transfer to active project increased recoveries by a total of \$8.954,239 for both electric and gas for the months of Nov10 through Feb/11. This decreased the net write-offs in the rolling 12-mn analysis for each of the 12-mn persons ending Nov10 through Jan'12. The figures below have been updated following a more precise study of the data conducted in preparation for the response to ORW-1#3. The total of SR 9 million remains the same, however the theoderchie Rates above have been adjusted slightly compared to pg 2 of Exhibit_(SSCP-5) to accommodite this new each/low
- (7) It is assumed for this illustration that the test phase of the manual project involved the foll incremental dollars indicated in Attachment 3 GRW-1 for the months of Feb 10 through April 0 vs. those for the same months in 2009. As indicated in that attachment, a total of \$7.454,403 between electric electric and gas affected Feb 1- thru April 0.

SUBJECT:

Structural Subordination and Holding Company Ratings

Request:

Reference page 47of your Exhibit MAH-3 in which Moody's stated "We then assess the degree of legal and regulatory insulation that a

"We then assess the degree of legal and regulatory insulation that exists between the generally lower-risk regulated entities and the generally higher-risk unregulated entities. The degree of notching (or rating differential) between entities in a single family of companies depends on the degree of insulation that exists between the regulated and unregulated entities, as well as the amount of debt at the holding company in comparison to the consolidated entity. If there is minimal insulation or ring-fencing between the parent and subsidiary and little to no debt at the parent, there is typically a one notch differential between the two to reflect structural subordination of the parent company debt compared to the operating subsidiary debt. If there is substantial insulation between the two and/or debt at the parent company is a material percentage of the overall debt, there could be two or more notches between the ratings of the parent and the subsidiary."

- a. Provide any report from either S&P or Moody's demonstrating that Niagara Mohawk is substantially insulated or ring-fenced from the parent.
- b. Provide any report from either S&P or Moody's demonstrating that Niagara Mohawk's current rating of A- is not linked with the ultimate parent.

Response:

a. Attachment 1 to DPS-27(KXD-10) contains Moody's report from July 22, 2009 reflecting the regulatory ring fencing that insulates Niagara Mohawk from its parent. Specifically, it states:

"We note that strengthened regulatory ring fencing was introduced as required by the NYPSC when it approved the KeySpan acquisition in 2007, which affords additional insulation from the potential need for cash elsewhere within the family. While the ring fencing changes did not contribute to a change in NiMo's rating level, they are viewed as a credit positive, albeit to the possible detriment of creditworthiness elsewhere within the National Grid family"

In its September 22, 2010 credit report (Attachment 2 to DPS-27), S&P states:

"The corporate credit ratings of the two New York distribution companies KeySpan Delivery New York (KEDNY) and KeySpan Delivery Long Island (KEDLI) are rated one notch higher than the consolidated corporate credit rating, reflecting the presence of regulatory insulation and their healthier stand-alone financial profiles."

Niagara Mohawk has financial protections in place that are similar to those in place for KEDNY / KEDLI and has pending before the Commission some additional protections. While S&P has not explicitly recognized the financial protections at Niagara Mohawk, the Company has no reason to believe that similar recognition of Niagara Mohawk's financial protections will not be forthcoming.

b. No such report is available from S&P.

Moody's has recognized the ring fencing of Niagara Mohawk from its parent, as described in part (a) above. Neither Moody's nor the Company is claiming that Niagara Mohawk's current rating is not linked with the ultimate parent in any way.

Sound financial performance expected to continue

Significant financial and operational interdependencies within the National Grid family

Corporate Profile

Niagara Mohawk Power Corporation (NiMo), is a wholly-owned subsidiary of National Grid USA (NG USA), which is the United States-based intermediate level holding company for the U.S. regulated utility businesses ultimately owned by National Grid plc, a holding company headquartered in the United Kingdom (UK) for a range of largely regulated T&D businesses in the U.S. and the UK.

NiMo provides electric T&D service in upstate New York and delivers natural gas in eastern, northern, and central New York. NiMo's retail rates are subject to the jurisdiction of the New York Public Service Commission (NYPSC).

SUMMARY RATING RATIONALE

Using the Moody's Rating Methodology for Global Regulated Electric Utilities in concert to some degree with the Rating Methodology for European Complex Holding Company Structures as a framework, NiMo's A3 senior unsecured rating reflects its favorable business and operating risk profile; support provided by the NYPSC which has allowed NiMo to institute a performance-based rate (PBR) plan that provides a means for the utility to receive cash recovery of its significant regulatory assets; key financial metrics in recent periods that are typical of A-rated electric T&D utility peers; and a liquidity position that is viewed as sufficient, albeit taking into account that NiMo has historically supplemented its internally generated cash flow by being an active borrower under the NG USA money pool.

DETAILED RATING CONSIDERATIONS

FAVORABLE BUSINESS, OPERATING, AND REGULATORY RISK PROFILES

NiMo's business activities remain entirely focused on the transmission and distribution of electricity and delivery of natural gas, which contributes to its generally low business risk profile. Since divesting its generation assets, NiMo has been recovering the significant regulatory assets created by the sales under the terms provided by the tenyear merger rate plan, which runs through February 2012. In particular, the rate plan provides for accelerated amortization of the regulatory assets in the latter years, which is apparent in the favorable trend noted for key credit metrics (see Financial Metrics below for more specifics). Also, NiMo is able to retain a portion of excess earnings above the allowed 10.6% return on equity as defined in the agreement.

Meanwhile, NiMo retains the provider of last resort (POLR) role for its electric customers. Supplies have been routinely arranged by purchasing power under long-term purchase power agreements (PPAs) and other open market purchases through the New York Independent System Operator. The arrangements with the NYPSC have been providing for generally timely and virtually full recovery of the costs associated with serving as the POLR. This is a heavily weighted consideration in our overall assessment of the degree of support provided to NiMo by the NYPSC. Since commodity prices can tend to be volatile at times, any shift by the NYPSC to restrict timely and full recovery of these costs could contribute to weaker financial results and downward rating pressure.

Although revenues generated by delivery of natural gas comprised only 20% of NiMo's consolidated revenues for FY'08, it is still important for NiMo to maintain sufficient access to the lowest possible cost supplies in fulfilling its responsibility to meet gas demands of retail customers in its franchise service territory. The company has done reasonably well in this regard, thanks in part to the multiple points of direct connections with interstate pipelines. The future financial performance of NiMo's gas distribution operations is expected to benefit from a recent gas distribution rate case, which resulted in approval of a two-year settlement granting a \$39.4 million rate increase in the first year (new rates effective May 20, 2009) and rate adjustments in the second year to address a variety of changes in costs related to pension and post-retirement plans and environmental remediation, and to true up the actual cost of any new long-term debt. This outcome, resulting in the first gas delivery rate increase since 1996, also included approval of a revenue decoupling mechanism and expanded capital infrastructure investments, among other requests.

We note that strengthened regulatory ring fencing was introduced as required by the NYPSC when it approved the Keyspan acquisition in 2007, which affords additional insulation from the potential need for cash elsewhere within the family. While the ring fencing changes did not contribute to a change in NiMo's rating level, they are viewed as a credit positive, albeit to the possible detriment of creditworthiness elsewhere within the National Grid family.

Prospectively, we anticipate that NiMo will prepare to file a general electric rate case probably towards Q1-2010 in anticipation of expiration of its long-term merger rate plan in February 2012 and to address recovery of capital expenditures that will likely be in excess of recent periods. Our ratings assume that Niagara Mohawk will be successful in these filings, with new rates anticipated to take effect by January 2011, thereby establishing a reasonable opportunity to earn on its utility investments and maintain earnings and cash flow levels to help sustain key metrics at levels commensurate with what is typically seen for regulated utilities at the A3 senior unsecured level. In the event that settlement negotiations are part of the process for future rate filings, we would likely expect

NIAGARA MOHAWK POWER CORPORATION

Attachment 1 to DPS-27
Page 3 of 5

shorter tenors given current market dynamics and a desire to retain more flexibility with respect to timing of future rate cases.

STRONG FINANCIAL METRICS EXPECTED TO BE THE NORM FOR MEDIUM TERM

Profitable utility operations and cash recovery through accelerated amortization of regulatory assets under the tenyear rate plan have resulted in healthy levels of positive free cash flow for NiMo over the past four years. NiMo has used this cash to achieve significant reduction in the utility's gross debt level, which has contributed to corresponding favorable improvements in key credit metrics. For FY 2009, NiMo's cash flow from operations (exclusive of changes in working capital) covered its interest and debt by 6.3x and 31.5%, respectively (subject to potential further adjustments upon clarification of underfunded pension obligations). Also, as of March 31, 2009, NiMo's adjusted debt to adjusted capitalization, calculated in accordance with Moody's Global Rating Methodology for Regulated Electric Utilities (i.e., including non-current deferred income taxes as part of total capitalization) was 30.8% (subject to potential further adjustments upon clarification of underfunded pension obligations). These levels leave NiMo comfortably positioned relative to peers. We note that the ultimate parent has not historically relied upon NiMo for dividends; however, prospectively we would not be surprised to see the parent take dividends from NiMo, consistent with financial strategies to realign the utility's capital structure with an equity level closer to that used as a basis for establishing revenue requirements in rate case proceedings (i.e. 43.7% in NiMo's recently concluded gas rate case). At the same time, it is our understanding that management will manage this realignment process in a credit neutral way and we will be wary of any unexpected change in support provided to NiMo by the NYPSC that might jeopardize achieving this objective.

Liquidity

NiMo maintains sufficient liquidity by supplementing its cash on hand and internally generated cash flow from operating activities with borrowings from other NG USA companies through the inter-company money pool. Cash management in the NG USA system is conducted through an inter-company pool, which serves as an investment vehicle for the participants' excess cash as well as a relatively inexpensive short-term liquidity reserve. The quality of alternate liquidity could, however, be improved upon in our opinion by arranging for more substantial committed standalone multi-year bank credit facilities not burdened by a material adverse change clause. Participating regulated utility subsidiary companies contribute their excess cash to the pool. The surplus cash invested in the pool is first used to meet the short-term borrowing needs of eligible subsidiaries. Companies borrowing from the pool pay rates linked to A1P-1 30-day commercial paper rates. Any remaining cash is typically invested into Aaa rated money funds with same day liquidity. As a measure of additional security, NG USA's parent, the UK-based National Grid plc, has the ability to increase the amount of cash in the pool through direct loans to NG USA.

Alternatively, NG USA can also issue commercial paper and medium term notes in lieu of or to supplement direct loans from the UK parent.

NiMo has historically been a borrower under the money pool and, while we expect that it will continue to take advantage of that source of short term funds, we anticipate that NiMo will revert in the near term to issuance of third party long-term debt to repay the large borrowings outstanding under the money pool as of March 31, 2009 and as it moves ahead with its T&D utility capital expenditure plans. At this stage, NiMo has no standalone bank credit facility. It does, however, have \$100 million of sub-limit availability for letters of credit under a joint arrangement among NG USA and several other affiliates in the US, which expires November 29, 2009. We expect that the need for this facility will be addressed within the context of an ongoing consolidated liquidity planning strategy ahead of its expiration date. We are particularly focused on liquidity for corporate rated issuers, particularly in light of current bank market conditions, which make it likely that pricing will increase and tenors will be shortened along with the possibility of stricter covenants and other conditionality. The existing joint arrangement has a traditional material adverse change clause that does not apply beyond closing and does not contain any rating triggers that would result in any acceleration or put of obligations. The arrangement also contains a 65% maximum allowable debt level (as defined) that applies to NiMo. As of March 31, 2009, there was significant headroom versus the 65% level allowed for NiMo and we expect that to remain the norm for the foreseeable future.

As of March 31, 2009, NiMo had about US\$23.1 million of unrestricted cash on hand, while owing about US\$650.6 million to affiliates under the money pool and reporting US\$350 million as the current portion of long-term debt (CPLTD). The significantly higher than typical amount of short term borrowing under the money pool results from use of that source to repay a \$600 million long-term senior note issue that matured in October 2008 and the \$350 million CPLTD relates to \$350 million intercompany note due July 31, 2009. With regard to recent past practices, NiMo has been repaying debt with positive free cash flow or otherwise refinancing with inter-company instead of third party debt. Going forward, we expect NiMo to again begin issuing third party long-term debt once it receives clarification from the NYPSC on its May 2009 decision authorizing NiMo to issue up to \$2.0 billion of long-term debt through March 31, 2012. Although we expect that NiMo will address the impending inter-company note maturity with internal borrowing, we anticipate a long-term debt issue later this year to address repayment of a substantial portion of borrowings under the money pool. In addition to the US\$350 million inter-company note due July 31, 2009, NiMo's next material long-term debt maturity is another US\$350 million inter-company note due June 30, 2010. In considering NiMo's other near term calls on cash, the company is following through on a Reliability Enhancement Program (REP) aimed at improving the utility's overall performance and reliability as well as enhancing opportunities to achieve financial benefits under performance based regulation currently in place. Setting aside long-term debt maturities, but taking into account spending for the REP, which could result in NiMo again making capital expenditures in excess of US\$400 million in FY 2010, and the likely commencement of dividends to be paid to National Grid USA, we anticipate that NiMo will still be cash flow positive, albeit considerably less so than in recent years. As a

NIAGARA MOHAWK POWER CORPORATION Case No. 12-E-0201 and 12-G-0202 - Niagara Mohawk Power Corporation d/b/a National Grid Attachment 1 to DPS-27 Page 4 of 5

off considerably going forward.

Rating Outlook

The stable rating outlook for NiMo mirrors the stable rating outlook for its ultimate parent National Grid plc and all the other rated entities in the group, largely reflecting the significant interdependencies that exist within the National Grid group of companies and our view that on the whole the National Grid Group's credit quality will strengthen during FY 2010, thereby solidifying ratings for NiMo and those of the other rated entities within the family. Under this scenario, we believe that there would be additional headroom within existing ratings, thereby providing a degree of flexibility that does not currently exist.

What Could Change the Rating - Up

Assuming some guidance under the Moody's Rating Methodology for Complex European Holding Company Structures, it is unlikely that the ratings for NiMo will go up in the near future, unless there is a change in the view of the overall group rating for the National Grid plc family. While we do not anticipate upward rating pressure in the near to medium term, ratings would become more strongly positioned if the consolidated National Grid performance improves as expected during FY 2010.

What Could Change the Rating - Down -

NiMo's ratings could go down if there is a downgrade to our assessment of the overall group credit quality for National Grid plc or if there is significant change to the standalone financial metrics resulting from an increase in its dividend obligation. Ratings could also be pressured if National Grid plc decides to increase the leverage at the company as part of its further expansion in the US. For example, ratings could be pressured down if NiMo's coverage of interest and debt by cash flow from operations (exclusive of the effects of changes in working capital) falls below 4.5x and 22%, respectively, for a sustained period.

Table Of Contents

Major Rating Factors:

Rationale

Related Research

Page 2 of 10

Niagara Mohawk Power Corp.

Major Rating Factors:

Strengths:

- Consistent focus on low-risk electricity and natural gas transmission and distribution operations;
- Predictable revenues and cash flows from regulated activities, which account for 95% of operating profits;
- · Operating, market, and regulatory diversity;
- · Relatively supportive regulatory environments; and
- Parent National Grid PLC's proven track record of managing large acquisitions.

Weaknesses:

- Parent's high consolidated financial leverage as a result of previous acquisitions;
- Substantial capital expenditures and dividends that will likely result in negative free cash flows over the medium term;
- · Rate relief needs during time of economic weakness; and
- Exposure to foreign exchange risk and inflation, which add volatility to adjusted credit measures.

Rationale

The ratings on Niagara Mohawk Power Corp. are based on the consolidated credit profile of its ultimate parent, U.K.-based National Grid PLC (NG) and its family of companies. Niagara Mohawk is a wholly owned subsidiary of U.S. –based utility holding company, National Grid USA, a wholly owned subsidiary of NG. Its main U.S.-based operating subsidiaries include Niagara Mohawk, KeySpan Corp. and its units, New England Power, Massachusetts Electric, Narragansett Electric Boston Gas, and Colonial Gas. The corporate credit ratings of the two New York distribution companies KeySpan Delivery New York (KEDNY) and KeySpan Delivery Long Island (KEDLI) are rated one notch higher than the consolidated corporate credit rating, reflecting the presence of regulatory insulation and their healthier stand-alone financial profiles.

NG has an 'excellent' business risk profile (utility business risk profiles are ranked from 'excellent' to 'vulnerable') and a 'significant' consolidated financial risk profile (financial profiles are ranked from 'minimal' to 'highly leveraged'). The ratings on NG and its units reflect the strong and predictable cash flows from the group's low-operating-risk electricity and gas network operations in the U.K. and the U.S.; regulatory regimes in each of those countries that are relatively supportive of credit quality; a consistently applied strategic and financial policy; and a proven track record of managing large acquisitions. These strengths are offset by NG's relatively high financial leverage; a substantial capital expenditure program and unchanged dividend policy that will likely result in negative free cash flows over the medium term; regulatory reset risk in the U.S. and the U.K.; and exposure to foreign exchange risks and inflation, which add volatility to Standard and Poor's adjusted credit measures.

National Grid USA's operations serve about 8 million electric and gas customers in New York, Massachusetts, Rhode Island, and New Hampshire. The 2007 acquisition of KeySpan added about 1,700 MW of generation

Niagara Mohawk Power Corp.

capacity in Long Island, N.Y. National Grid USA's consolidated business risk profile is also excellent, although slightly weaker at KeySpan due to its riskier nonregulated generation operations. National Grid USA's business position is characterized by a focus on relatively low-risk regulated electric and natural gas transmission and distribution operations and regulatory, market, and operating diversification.

Historically, regulation has been reasonably supportive of creditworthiness, but long-term rate plans, rate moratoriums, and regulatory lag have resulted in earned returns that are below the national average in most jurisdictions. In light of the company's heavy capital expenditure phase and escalating cost pressures, timely and sufficient rate relief and alternative cost recovery rate mechanisms or separate tariff provisions, as well as credit supportive action by management will be important to enhance cash flow and earnings protection. Various commissions, however, will be reviewing prospective rate requests at a time of unusual economic weakness, so the subsidiaries' ability to manage regulatory risk will be critical to credit quality.

Pending before the New York Public Service Commission (NYPSC) is Niagara Mohawk's proposed three year rate base plan commencing Jan. 1, 2011 through 2013. Although the company's revenue requirement is \$369 million based upon an 11.1% ROE, the company has proposed to defer some costs and to extend the amortization schedule for recovery of certain fixed stranded costs to offset the total increase in transmission and distribution revenue. The staff of the NYPSC has recommended a \$14.1 million rate cut, which is not binding on the commission. A final order is expected in December 2010. In addition, the Massachusetts gas subsidiaries have filed a request for a total rate increase of \$106 million based upon an 11.3% ROE and include. The filings include a revenue decoupling proposal. Rate Orders are expected to be issued in October 2010.

NG's business risk has not materially changed during the past 12 months, in our view. The group remains focused on owning and operating regulated network assets in the U.K. and U.S., which account for about 95% of consolidated operating profit. NG faces some regulatory reset risk in the U.S. because about 35% of regulated revenues are derived from rate plans that are currently pending decisions. In addition, U.S. revenues remain subject to an element of volume risk, although we expect this to diminish over time as rate plans are renewed that protect NG from fluctuations in volumes sold.

NG's consolidated robust performance in 2009-2010 has resulted in strengthened credit metrics for the group, which in 2008-2009 fell below the level we consider commensurate for the 'A-' long-term corporate credit rating. Reported net operating cash flow in the 12 months to March 31, 2010, increased by 24% to £4.1 billion, while reported net debt was broadly flat at £22.1 billion. Consequently, NG's adjusted funds from operations (FFO)-to-debt ratio increased to 12.8%, which compares with the rating threshold of 12%. In 2008-2009, this ratio had fallen below 11%, mainly due to adverse foreign exchange movements and an increase in the U.S. pension deficit.

In May 2010, NG announced a fully underwritten, £3.2 billion rights issue to support funding for a significant increase in the group's capital expenditure program. The program allows for £22 billion of capital outlays in the next five years, compared with £14 billion in the five years to March 2010. We expect the rights issue to position NG more comfortably within the existing ratings, and to provide a degree of headroom that was previously lacking. In our opinion, the rights issue also underlines NG's unchanged goal of maintaining an 'A' category rating for its U.K. operating subsidiaries.

Page 8 of 10

Niagara Mohawk Power Corp.

Short-term credit factors

The short-term rating on NG, National Grid USA and subsidiaries is 'A-2' and largely reflects the companies long-term credit ratings and our view of the group's 'adequate' liquidity under Standard & Poor's corporate liquidity methodology, which categorizes liquidity in five standard descriptors. Projected sources of liquidity, mainly operating cash flow and available bank lines, exceed projected uses, mainly necessary capital expenditures, debt maturities, and dividends, by over 1.2 times. NG's ability to absorb high-impact, low-probability events with limited need for refinancing, its flexibility to lower capital spending or sell assets, its sound bank relationships, its solid standing in credit markets, and generally prudent risk management further support our description of liquidity as 'adequate'

NG's funding requirements are substantial, at about £3 billion each year, due to ongoing debt maturities and annual negative discretionary cash flows (after capex and dividends) of £1.0 billion-£1.5 billion. The group was, however, able to maintain full access to the bond markets during the financial crisis, and its recent £3.2 billion rights issue was fully underwritten. The rights issue will in our view significantly strengthen NG's liquidity position in 2010-2011.

As of June 30, 2010, NG has approximately £3.94 billion of unrestricted cash, and undrawn committed facilities of £2.7 billion. Against these sources of cash (totaling about £6.6 billion), NG has about £1.7 billion of debt maturing in the next 12 months, and the company expects discretionary cash flow to be negative by about £1.35 billion. Looking forward over a 24-month horizon, we expect debt maturities and negative prefinancing cash flows to be about £3.3 billion and £2.9 billion, respectively. NG aims to keep its committed credit lines undrawn, since they provide backup for commercial paper, the issuance of which is limited to the undrawn committed lines available.

Outlook

The stable outlook on Niagara Mohawk mirrors that of ultimate parent NG and reflects our view that the group's operational and financial performance will continue to be solid. It also reflects our belief that NG will continue to focus on regulated gas and electricity network businesses in the U.K. and the U.S., while maintaining consolidated adjusted FFO to total debt of more than 12%.

A downgrade could occur if NG's financial performance were to deviate materially from our forecasts without the implementation of offsetting measures, or if the group were to undertake a significant acquisition. In that regard, if consolidated FFO to total debt were to decline to 10%-11% due to higher capital outlays and acquisitions and associated debt financing, we could lower the ratings. Although we view the May 2010 rights issue as providing a more comfortable degree of headroom than existed previously at the current rating level, we continue to view an upgrade as unlikely because of NG's ambitious growth plans and expected financial performance.

Request for Information

FROM: Kwaku Duah

TO: Mustally A. Hussain

SUBJECT: Adjustments to Parent's Capital Structure

Request:

Reference page 15 lines 17& 18 that state, "National Grid plc's US GAAP capital structure had a 44.6% equity component as of March 31, 2011." Also, reference page 17 lines 7 to 14 of your direct testimony that states, "Thus, the equity component as determined in accordance with US GAAP must be adjusted to recognize the difference between the RAV and the US GAAP book value of the UK regulated businesses. This is necessary to ensure that National Grid plc's consolidated capital structure reflects the regulatory value of assets in both the US and UK on an equal and consistent basis. The UK to US regulatory adjustment, along with the substantial increase in equity following the National Grid plc rights issue in 2010, results in a 51.1% equity ratio at National Grid plc."

- a. For the parent equity ratio of 51.1% adjusted for RAV or any other adjustments, provide a listing of the Commission's rate case decisions that have accepted such adjustments.
- b. Are you aware of any Commission Order that has accepted such adjustments? If "yes", please provide the following information:
 - i. Commission's Order;
 - ii. Year of rate case:
 - iii. Case number:
 - iv. Original Equity Ratio before the adjustment;
 - v. RAV-adjusted equity ratio
- c. Are you aware of any studies that support the RAV adjustments as well as any adjustment to the common equity ratio of the ultimate parent? If "yes", please provide the studies.

Response:

a. The Commission accepted the RAV adjustment in its May 15, 2009 decision to adopt the terms of a joint proposal in Niagara Mohawk's Gas rate case in Case 08-G-0609. The Company's gas delivery rates were set using a capital structure derived from the Company's parent, National Grid plc as adjusted for RAV. In addition, the Company was required to compute its earnings reports using the parent capital structure, after adjusting for RAV of the parent's UK businesses. On pages 14 and 15, the joint proposal states:

"The Company will calculate its Average Earned Return On Equity using the latest known capital structure of Niagara Mohawk's ultimate parent (National Grid plc) for the fiscal year ended March 31st, adjusted for both US GAAP and the regulatory asset value of National Grid plc's regulated UK businesses, for each Earnings Year" (emphasis added)

b.

- i. Commission's Order is Attachment 1 to DPS-30(KXD-13)
- ii. Year of rate case is 2008-2009
- iii. Case number is 08-G-0609
- Original common equity ratio of National Grid plc before the RAV adjustment was 36.44%
- v. RAV-adjusted equity ratio of National Grid plc was 43.7%
- c. The Company is not aware of any studies that support the RAV adjustments as well as any adjustment to the common equity of the ultimate parent other than those presented as part of its testimony and exhibits in this case and its prior gas and electric base rate cases. However, the rating agencies take into account the differences in regulatory framework between the US and UK in determining capital structure and refer to that difference in their credit opinions. In its August 9, 2011 report, Moody's states:

"There are important differences: (i) in many states, the system is based on historic rather than prospective costs as in the UK; (ii) returns are determined on a nominal basis in the US but a real basis in the UK; (iii) US regulators take account of the actual rather than a notional capital structure; and (iv) US utilities are able to make full or partial filings as necessary rather than being bound by a fixed regulatory timetable as in the UK."

Mustally A. Hussain

SUBJECT:

RAV-Gearing and Net debt Ratio of Parent

Request:

a. In the 2011 National Grid plc's annual report filed with the Securities And Exchange Commission on Form 20-F, the parent stated on page 71 of the report that "Gearing at 31 March 2011 and 31 March 2010, calculated as net debt expressed as a percentage of net debt plus net assets shown in the balance sheet, amounted to 67% and 84% respectively."

Please confirm if this is the debt ratio. If "yes", confirm if the common equity ratio as of March 2010 and 2011 will be 33% and 16% respectively. If it is not the debt ratio, provide a reconciliation of the March 31, 2011 and March 31, 2010 gearing to the debt ratio.

- b. Reference also a Table on RAV gearing in page 71 of the same report. It indicates a RAV gearing ratio of 54% for National Grid plc for 2011. Does this number also refer to debt ratio? If "yes", confirm whether the common equity ratio is 46%. If not, provide a reconciliation of the gearing ratio to the debt ratio.
- c. If RAV-gearing ratio and net debt to asset +net debt refer to debt ratio, which of these ratios is a superior measure of debt ratio in the US?

Response:

a. This is not a US GAAP debt ratio. The figures referenced in the question are reported on an IFRS basis. Please refer to Attachment 1 to DPS-34(KXD-17) for a reconciliation that shows the debt ratio on an IFRS basis and unadjusted for any regulatory asset values The IFRS figures reported do not include regulatory assets and substantially understate the value of the business and overstate the leverage compared to that determined in accordance with US GAAP.

- b. The RAV gearing ratios referenced on page 71 of the 2011 National Grid plc Annual Report do not refer to gearing ratios for National Grid plc. The figures presented in the table refer to the gearing ratios for National Grid plc's two principal regulated UK entities: National Grid Electricity Transmission plc (NGET) and National Grid Gas plc.
- c. RAV-gearing ratio and net debt to asset +net debt give varying levels of financial information. The RAV-gearing ratio provides a comparison to regulated asset value and net debt to assets compares to certain non-financial assets. Neither ratio is superior to the other in terms of determining the US GAAP definition of debt ratio.

Request for Information

FROM:

Denise Gerbsch

TO:

Revenue Requirement Panel (RRP)

SUBJECT:

Additional Employees

Request:

1. As described in the RRP testimony at pages 40 to 41 (as well as in the HRP at pages 10 to 13), the Company is adding the following to its labor forecast-

- 6 union FTEs for seasonal work

- 32 union employees to reflect minimum staffing levels established in the collective bargaining contract
- 118 management positions to reflect vacancies that have been filled since the end of the HY or are in the process of being filled
- 29 union positions to reflect vacancies that have been filled since the end of the HY or are in the process of being filled
- 26 additional FTEs to provide business support functions for the USFP
- 1 position associated with the distributed generation SIR standards

For each additional position being requested from the number of actually filled positions at the end of the HY to the RY (both new positions and filling of vacancies), please provide the justification and a cost benefit analysis which provides the reason and need for the additional position, along with the overall cost of the position (labor, benefits, etc, each stated separately) and any and all benefits, both quantitative and qualitative, the Company expects to result from the added positions. Please also identify where these costs / benefits can be found in the filing. If some of this information is in the testimony and exhibits, a reference can be made rather than providing the same exact information.

2. Are there additional positions and/or vacancies that are expecting to be filled other than what is listed above that is reflected in the RY? If yes, please provide the additional position information, as well as the justification and cost benefit analysis as requested in question 1 above.

Response:

1. A. Position Justification.

Support for the HTY-end vacancies to be filled by the start of the Rate Year is included in the above-referenced portions of testimony and exhibits of the Revenue Requirements Panel and Human Resources Panel, as well as in the testimony and exhibits of other Company witness panels. The response below and the corresponding attachments provide additional information on the vacancies in the order presented in the request. Cost information follows in part 1.B of this Response.

(a) <u>Six Union FTEs for seasonal gas work.</u>

Support for the six FTEs for seasonal work is provided in the direct testimony of the Gas Infrastructure and Operations Panel, at pages 87-88. The seasonal employees are on the Company's payroll each year to perform leak surveys, atmosphere corrosion inspections and other important O&M work and are a recurring expense. However, because of the typical timing of their positions (generally April – November), they were not reflected in the HTY-end employee complement. To forecast accurate Rate Year labor costs, they must be added to projected labor expense. The calculation to arrive at six full-time equivalents for these seasonal positions is presented in Attachment 1 to DAG-2. Of the six FTEs, two positions are incremental and necessary to perform an increasing amount of work in these areas in the Rate Year.

(b) & (d) Sixty-one electric operations union positions (32 contractually-obligated and 29 others).

In the direct testimony and exhibits of the Electric Infrastructure and Operations Panel ("EIOP"), the Company identified 61 union positions in the operations workforce that were vacant at December 31, 2011, but which the Company plans to fill before the start of the Rate Year. These union vacancies were introduced at pages 92-94 of the EIOP testimony, and identified by position in Exhibit ___ (EIOP-14), p. 2 of 3. Subsequently, the Company discovered that six of the 61 positions were included in error—that is, these six positions were not vacant at the end of the Historic Test Year. The Company will address this error in its Corrections and Updates filing. The remaining 55 positions are needed to support the Company's implementation of the investment and operations plan described in the EIOP testimony. Of these 55 positions, 28 are contractually obligated positions under the Company's union contract.

A listing of the union positions, their respective roles, and their filled or vacant status is provided in Attachment 2 to DAG-2. As of May 18, 2012, the Company has filled 47 of the 55 positions.

(c) One hundred eighteen (118) management positions.

The Company identified 118 vacant management positions at December 31, 2011 which it plans to fill by the start of the Rate Year. The identified positions were from across National Grid's US organization, and filling the vacancies is needed

to support implementation of the Company's plans for the benefit of customers. Of the 118 management positions 91 were determined to be in one of the three provider companies: Niagara Mohawk, National Grid USA Service Co. or KeySpan Service Co., and therefore impact Niagara Mohawk labor expense based on how the Company developed labor costs as described in RRP testimony at pages 36 – 47. Of these 91 positions, there are 39 Operations positions, 14 Network Strategy positions, 15 positions in the Customer area, and 23 positions in other Corporate Functions (e.g., legal, finance, audit). Positions in each area are addressed below:

Operations. Filling the 39 identified operations management positions is vital to successful implementation of the Company's investment and operations plan described in the testimony of the EIOP. Of the 39 Operations management positions, 12 will be Niagara Mohawk employees, 17 will be employees of National Grid USA Service Company (three of which will perform work primarily for Niagara Mohawk, and 14 of which will perform work primarily for other National Grid operating companies), and 10 will be employees of KeySpan Service Company. A listing of the 12 Niagara Mohawk employees and the three Service Company employees working primarily for Niagara Mohawk is included in Exhibit (EIOP-14), p. 1 of 3. A listing of the 39 Operations management positions, their respective roles, and their filled or vacant status is included in Attachment 3 to DAG-2. As described in the testimony of the Revenue Requirements Panel, the Company must forecast and include labor costs of all companies providing services to Niagara Mohawk to develop and allocate accurate Rate Year labor expense for Niagara Mohawk (RRP testimony, p. 41 of 127). Therefore, although employees of the KeySpan Service Company, and National Grid USA Service Company doing work primarily for other operating companies may not charge time to Niagara Mohawk, the costs of these positions must nevertheless be reflected in forecast service company costs. As of May 18, 2012, the Company has filled 34 of the 39 Operations positions.

Network Strategy. The Company identified 14 Network Strategy vacancies at the end of the HTY that will be filled by the start of the Rate Year. As noted in the EIOP's direct testimony, these employees are needed to deliver on the work plan and run the electric business. EIOP, pp. 92-95; and Exhibit __ (EIOP-14), p. 3 of 3. A listing of the 14 Network Strategy positions, their respective roles, and their filled or vacant status is included in Attachment 3 to DAG-2. As of May 18, the Company has filled 13 of the 14 Network Strategy positions.

<u>Customer</u>. The Company identified 15 Customer vacancies at the end of the HTY that will be filled by the start of the Rate Year and impact Niagara Mohawk labor expense. These positions are needed to perform a variety of necessary roles as described in the direct testimony and exhibits

of the Shared Services and Customer Panel. SSCP, p. 79; and Exhibit ____ (SSCP-16). The Company is no longer actively recruiting for one of the Customer positions. This cost will be removed in the Corrections and Updates filing. A listing of the 15 Customer positions, their respective roles, and whether they were filled or vacant is included in Attachment 3 to DAG-2. As of May 18, the Company has filled 12 of the 15 positions.

Other Corporate Functions. The Company identified 23 vacancies in Corporate Functions at the end of the HTY that will be filled by the start of the Rate Year and impact Niagara Mohawk labor expense. These positions are critical to the operation of the functions that support the business. These positions include the following: 4 in Audit, 1 in Corporate Affairs, 4 in Finance, 5 in Human Resources, 2 in Legal, 2 in Regulation & Pricing, 3 in Safety Health and Environment and 2 in Shared Services. The Company is no longer actively recruiting for one of the Finance positions. This cost will be removed in the Corrections and Updates filing. A listing of these 23 Corporate positions, their respective roles, and whether they are filled or vacant is included in Attachment 3 to DAG-2. As of May 18, the Company has filled 17 of the 23 positions.

- (e) Twenty-six (26) USFP business support function positions. The direct testimony of the Information Services Panel ("ISP") describes the basis and need for 26 incremental positions to provide enduring business support following the implementation of the U.S. Foundation Program, scheduled to go live in October 2012. ISP, pp. 32-42. A listing of the 26 positions and their respective roles is provided in Attachment 4 to DAG-2.
- (f) One (1) incremental distributed generation interconnection position. The direct testimony of the SSCP describes the basis and need for one incremental position to support customer requests for distributed generation interconnections. SSCP, pp. 79-82; and Exhibit __(SSCP-17).

1. B. Cost Information.

(a) – (d) Costs for six union FTEs for seasonal work, 61 electric operations union positions (32 contractually-obligated and 29 other), and 118 management positions are reflected in the overall labor expense in Exhibit __ (RRP-3), Schedule 31, the total payroll taxes in Exhibit __ (RRP-5), Schedule 2, and the total productivity adjustment in Exhibit __ (RRP-3), Schedule 36. To determine cost estimates for these positions, the Company applied the same methodology used to develop labor expense for all FTEs, applied an average payroll tax rate and a 1% productivity adjustment. More specifically, regular pay labor for these FTEs is calculated using average salary by salary grade for each position by provider Company, as calculated in Exhibit __ (RRP-3), Schedule 31 workpapers. Variable pay is calculated by provider Company based on the resulting regular pay (and overtime for represented) using the same methodology

applied in Exhibit __ (RRP-3), Schedule 31 workpapers. Regular pay and variable pay are allocated to Niagara Mohawk and to Expense by provider Company using the same ratios applied in Exhibit RRP-3, Schedule 31 workpapers (based on HTY labor charges). Overtime, premium pay and miscellaneous pay are calculated by provider Company by applying the same ratio to regular pay as was applied in Exhibit __ (RRP-3), Schedule 31 workpapers (based on HTY labor charges). Payroll tax is calculated on the total of regular pay, overtime pay, premium pay, variable pay and miscellaneous pay, by applying the average payroll tax rate for each provider Company. A 1 % productivity adjustment is applied to the total labor and payroll tax expense. The estimated Rate Year expense, along with source references to Exhibit __ (RRP-3), Schedule 31 workpapers, is provided as Attachment 5 to DAG-2, and summarized below. Electric/gas allocations for these positions are based on HTY labor accounting by provider-company in the same manner applied to all other FTEs.

- Six FTEs for seasonal gas work: \$0.216 million, electric; \$0.042 million, gas.
- Thirty-two contractually-obligated electric operations union positions: \$1.459 million, electric; \$0.281 million, gas.
- Twenty-nine other electric operations union positions: \$1.435 million, electric; \$0.277 million, gas.
- Ninety-one management positions: \$2.194 million, electric; \$0.363 million, gas.

As described in part 1.A(b)-(d), above, some of the positions initially identified by the Company as vacant at the end of the HTY were either included in error or have subsequently been removed (six electric operations union positions, and two corporate function management positions). The Company will address these changes, including any related labor expense adjustments, as part of its Corrections and Updates filing.

Unlike the other vacancies, the two positions in legal are being filled to achieve and sustain US Restructuring savings for that group. For FY 2009/2010, the average outside counsel rate was \$280/hour which was twice the average fully loaded cost of a company lawyer of \$140/hour. One of the positions is expected to be filled June 4, 2012. This followed the Company's effort in Project Optimum.

It should be noted that a number of attorneys were hired during the Historic Test Year to displace outside counsel expense. Those cost reductions are reflected in US Restructuring savings. Those new hires include bringing attorneys in to the legal department from other departments within National Grid, hiring an attorney previously dedicated to National Grid from a law firm, and other external new

hires. In accordance with discussions with Staff, Staff is not requesting the names of the attorneys at this time.

- (e) Costs for 26 management positions related to US Foundation Program enduring business support are presented in Exhibit __ (RRP-1), Workpapers to RRP-3, Schedule 35, Workpaper 3, and are \$1.063 million, electric; and \$0.182 million, gas for the Rate Year. Note that the allocation of costs to Electric Expense in Workpaper 3 uses the current allocation rate when it should use the post-US Foundation Program allocation rate. This change will also be reflected in the Company's Corrections and Updates filing.
- (f) Costs for one management position related to the processing of distributed generation interconnection requests are presented in Exhibit ___ (RRP-1), Workpapers to RRP-3, Schedule 35, Workpapers 2. The estimated Rate Year expense for this position is \$0.112 million, electric; \$0.023 million, gas.
- 2. The Company experiences a typical level of vacancies throughout the year as part of normal operations. Such vacancies are part of the ordinary course of business and the Company determines how best to address those vacancies as they arise. The positions which the Company identified for funding and which are the subject of this request are not considered among the vacancies that occur in the ordinary course. Rather, these vacancies and positions were created as the result of the Company's major Restructuring initiative in 2011, the implementation of major new systems, regulatory requirements, and the need to implement the Company's proposed investment and operations plans. At this time, the Company has not identified additional positions or vacancies beyond those discussed above.

Case No. 12-E-0201 and 12-G-0202 - Niagara Mohawk Power Corporation d/b/a National Grid - Electric and Gas Rates

Request for Information

FROM:

Rick Schuler

TO:

Human Resources Panel

SUBJECT: Management Hires Listing

Request: Regarding page 14, lines 13-15 of the testimony of the Human Resources Panel, please provide a five year listing of the employers for which new management hires worked prior to joining Niagara Mohawk and to which departing management employees went. For each management employee who left the company during the last 5 years, please indicate the reason the employee left the company (e.g., retirement, transfer to an affiliate, resignation) and the number of years of service the employee had with the company.

Response:

RES-1 Attachment 1 lists the employers that National Grid Management new hires came from during the period 2009 through 2011. For the years 2007 and 2008, this data is not readily available.

In response to the request for a list showing what companies departing management employees went to after they left National Grid, in late 2011 the Company implemented a formal exit interview process. Departing employees are asked if they have obtained a job somewhere else and if so, where. Prior to this, the information was not monitored. The Company contacted 576 former employees (both union and management) who departed in 2011 and later. The response rate was 40% or 228. Of these 228 individuals, only 51 indicated they were moving to another company, and of the 51, only 31 disclosed the company name, of which, 29 are management employees. A list of these companies is provided in Attachment 2.

RES-1 Attachment 3 lists all Management employees who left National Grid during the last 5 years and indicates the reason the employee left the company and the number of years of service the employee had with the company prior to leaving.
