Metrics based upon measurements collected between 7pm – 11 pm from 10/1/2016 through 10/31/2016. Charter uses multiple methods to measure the performance of its products. Data was collected from the SamKnows FCC Measuring Broadband America panel where possible. Tiers that were not included in the Measuring Broadband America panel had data collected from an internal SamKnows panel. Download and upload speed metrics are produced for each individual tier. Latency and packet loss given minimal variation across tiers are based on measurements across all tiers.

Charter Internet customers can check the speed performance of their current Internet connection using the Charter Speed Test on Charter.com or Charter.net, which tests the speed that they are receiving on Charter's network to the end user device. These tests are dependent on a variety of factors, including the customer's home network configuration, modem, and Internet connected devices, and the time of day, and therefore do not reflect the performance of the Charter network only.
