

BEFORE THE  
STATE OF NEW YORK  
PUBLIC SERVICE COMMISSION

---

In the Matter of  
  
Consolidated Edison Company of New York, Inc.  
  
Cases 13-E-0030, 13-G-0031, and 13-S-0032  
  
May 2013

---

Prepared Testimony of:  
Staff Accounting Panel

Jane Wang  
Public Utility Auditor 3

Claude Daniel  
Public Utility Auditor 2

Mike Summa  
Public Utility Auditor 3

Kevin Higgins  
Supervisor, Utility Accounting  
and Finance

Office of Accounting, Audits  
and Finance  
State of New York  
Department of Public Service  
Three Empire State Plaza  
Albany, New York 12223-1350

90 Church Street  
New York, New York 1007

1 Q. Would the members of the Staff Accounting Panel  
2 please state your names, employer, and business  
3 addresses.

4 A. Jane Wang, Claude Daniel, Michael Summa and  
5 Kevin Higgins. We are employed by the New York  
6 State Department of Public Service (DPS or the  
7 Department). Our business addresses are Three  
8 Empire State Plaza, Albany, New York 12223 and  
9 90 Church Street, New York, New York 10007.

10 Q. Ms. Wang, what is your position at the  
11 Department?

12 A. I am employed as a Public Utilities Auditor 3 in  
13 the Office of Accounting, Audits and Finance.

14 Q. Please describe your educational background and  
15 professional experience.

16 A. I graduated from Tsinghua University, Beijing,  
17 China in 1985 with a Bachelor of Science degree  
18 in Electric Power Engineering. I also received  
19 a Master's degree in Electric Power Engineering  
20 from Tsinghua University in 1988. I received a  
21 Master's in Business Administration from Union  
22 College, Schenectady, New York in 1997. Prior  
23 to joining the Department in April 2005, I  
24 worked at General Electric Company as a cost

1 engineer and at Time Warner Cable as a Staff  
2 Accountant.

3 Q. Please briefly describe your responsibilities  
4 with the Department.

5 A. My responsibilities include routine examination  
6 of accounts, records, policies and procedures of  
7 regulated utilities and review of cost of  
8 service, rate of return, and other accounting  
9 matters in utility rate proceedings.

10 Q. Ms. Wang, have you previously testified before  
11 the Commission?

12 A. Yes, I submitted testimony in Case 05-S-1376,  
13 Con Edison - Steam Rates, Case 06-G-1332, Con  
14 Edison - Gas Rates, Case 07-E-0523, Con Edison -  
15 Electric Rates, Case 07-S-1315 Con Edison -  
16 Steam Rates, Case 08-E-0539 - Con Edison  
17 Electric Rates, Case 09-W-0731, United Water New  
18 York - Water Rates

19 Q. Mr. Daniel, what is your position in the  
20 Department?

21 A. I am employed as a Public Utilities Auditor 2 in  
22 the Office of Accounting, Audits and Finance.

23 Q. Please describe your educational background and  
24 professional experience.

1 A. I graduated from Hunter College of the City  
2 University of New York with a Bachelor degree in  
3 Accounting and joined the Department in 1986.

4 Q. Please describe your responsibilities with the  
5 Department.

6 A. I routinely examine accounts, records,  
7 documentation, policies, and procedures of  
8 regulated utilities. I have also reviewed  
9 numerous petitions filed by Con Edison seeking  
10 authority for asset transfers, deferrals,  
11 reconciliations and refunds.

12 Q. Mr. Daniel, have you previously testified before  
13 the Commission?

14 A. Yes, I have prepared cost of service exhibits  
15 and offered testimony on various operating and  
16 maintenance (O&M) expense, taxes other than  
17 income taxes and rate base adjustments in  
18 previous Con Edison Electric, Gas and Steam Rate  
19 cases. I also testified regarding rate base  
20 items in rate cases involving New York Telephone  
21 Company.

22 Q. Mr. Summa, what is your position in the  
23 Department?

24 A. I am employed as a Public Utility Auditor 3 in

1 the Office of Accounting, Audits and Finance.

2 Q. Please describe your educational background and  
3 professional experience.

4 A. I graduated from the State University of New  
5 York at Plattsburgh and have Bachelor of Science  
6 degrees in Accounting and Business. I have been  
7 employed by the Department since early 2004.  
8 Previous to this, I was employed as a Senior  
9 Auditor at the State Education Department for  
10 three years.

11 Q. Please describe your responsibilities with the  
12 Department.

13 A. My responsibilities include the examination of  
14 accounts, records, documentation, policies and  
15 procedures of utilities that are regulated by  
16 the Commission and the development from that  
17 information of various analyses and  
18 recommendations to the Commission.

19 Q. Have you previously testified before the Public  
20 Service Commission?

21 A. Yes. I testified before the Commission in the  
22 following Central Hudson Gas and Electric  
23 Corporation's rate proceedings: Cases 09-E-0588  
24 09-G-0589, 08-E-0887, 08-G-0888, 05-E-0934 and

1           05-G-0935. I also testified in the rate filing  
2           made by Jamestown Board of Public Utilities in  
3           Case 04-E-1485.

4   Q.   Mr. Higgins, what is your position at the  
5           Department?

6   A.   I am employed as a Utility Supervisor in the  
7           Office of Accounting, Audits and Finance.

8   Q.   Please describe your educational background and  
9           professional experience.

10  A.   I am a graduate of the State University College  
11           of New York at Oneonta with a Bachelor of Arts  
12           degree in Business Economics. I have also  
13           earned an Associate degree in Accounting from  
14           Morrisville State College. I joined the  
15           Department in June 1987.

16  Q.   Please describe your responsibilities with the  
17           Department.

18  A.   My work as a Public Utility Auditor and Utility  
19           Supervisor has included the examination of  
20           accounts, records, documentation, policies and  
21           procedures of regulated utilities so as to  
22           develop issues for electric, gas,  
23           telecommunications and water rate proceedings,  
24           financing petitions, rate of return studies and

1 other general accounting matters.

2 Q. Mr. Higgins, have you previously testified  
3 before the Commission?

4 A. Yes, most recently in Case 07-S-1315 Con Edison  
5 - Steam Rates, Case 08-E-0539 - Con Edison  
6 Electric Rates, and Case 09-E-0428 Con Edison  
7 Electric Rates.

8 Q. Panel, what is the purpose of your testimony?

9 A. Our testimony addresses accounting and  
10 ratemaking aspects of Con Edison Company of New  
11 York Inc.'s (Con Edison or the Company)  
12 electric, gas and steam rate filings. We will  
13 summarize Con Edison's electric, gas and steam  
14 filings from a revenue requirement perspective.  
15 We will also summarize Staff's electric, gas and  
16 steam revenue requirement recommendations. In  
17 addition, we will discuss our adjustments to the  
18 Company's rate year electric, gas and steam  
19 forecasts.

20 Further, we discuss Con Edison's proposal  
21 to continue its Smart Grid surcharge mechanism  
22 for certain Smart Grid project costs and our  
23 recommendation to discontinue it and transfer  
24 all of the Company's Smart Grid project costs to

1 base electric rates. Finally, we will discuss  
2 the Company's request for deferral accounting  
3 for a number of its costs.

4 Q. Is the Panel sponsoring Exhibits?

5 A. Yes, we are sponsoring seven Exhibits.

6 Q. Would you please describe your Exhibits?

7 A. Yes. Exhibit\_\_\_SAP-1 is Staff's electric cost  
8 of service presentation. Exhibit\_\_\_SAP-2 is  
9 Staff's gas cost of service presentation.  
10 Exhibit\_\_\_SAP-3 is Staff's steam cost of service  
11 presentation. We describe these exhibits in  
12 greater detail later in our testimony.

13 Exhibit\_\_\_SAP-4 is Con Edison's letter to  
14 the Commission regarding the sale of its John  
15 Street property to Brooklyn Bridge Park  
16 Development Corporation. Exhibit\_\_\_SAP-5 is  
17 Staff's proposal for sharing the gain resulting  
18 from the sale of the property.

19 Exhibit\_\_\_SAP-6 shows the changes in Con  
20 Edison's employee headcount between December  
21 2008 and December 2012.

22 Exhibit\_\_\_SAP-7 lists the Company's costs,  
23 by service, which Staff recommends be subject to  
24 reconciliation in the rate year.

1           Exhibit\_\_\_SAP-8 contains a number of  
2           responses to Staff Information Requests (IRs)  
3           that were produced during the discovery phase of  
4           this proceeding and Company supplied supporting  
5           work-papers that we refer to, or otherwise rely  
6           upon in the determination of Con Edison's  
7           electric, gas and steam revenue requirements.

8           **Overview of Con Edison's Electric Rate Filing**

9   Q.    Would you summarize Con Edison's January 25,  
10       2013 electric filing from a revenue requirement  
11       perspective for the rate year ending December  
12       31, 2014?

13   A.   In its initial filing, Con Edison requested a  
14       revenue requirement increase of approximately  
15       \$375 million. Based on its March 25, 2013  
16       preliminary electric update, the Company  
17       increased the amount of electric revenue relief  
18       it originally sought and is now requesting a  
19       revenue increase of approximately \$411.9  
20       million. This increase would result in an  
21       overall electric revenue increase, inclusive of  
22       Con Edison's projected electric supply costs, of  
23       3.5%, or 7.9% on a delivery only revenue basis.

24       **Overview of Staff's Position for Electric Rates**

1 Q. What is the effect of Staff's adjustments on  
2 electric rate of return for the rate year ending  
3 December 31, 2014?

4 A. The adjustments, as shown on Exhibit\_\_\_AP-1,  
5 Schedule 1, increase the electric rate of return  
6 before any proposed rates from 6.33% to 7.37%.

7 Q. What is the rate of return recommended by the  
8 Staff Finance Panel?

9 A. The Staff Finance Panel recommends a 6.76% rate  
10 of return based in part on an 8.70% return on  
11 equity.

12 Q. What is the required change in revenue  
13 requirement to achieve Staff's recommended rate  
14 of return?

15 A. The recommended change in electric revenue  
16 requirement is a \$181.180 million decrease for  
17 the rate year ending December 31, 2014.

18 Q. What are the major electric cost elements Staff  
19 recommends be adjusted?

20 A. The adjustments fall into seven major  
21 categories: sales revenue; other electric  
22 operating revenues including the amortization of  
23 electric regulatory deferrals; operating and  
24 maintenance (O&M) expense; depreciation expense;

1 taxes other than income taxes; income taxes;  
2 and, rate base.

3 Q. Would the Panel indicate the amount of the  
4 adjustments for each of the seven categories?

5 A. Staff recommends that the Commission increase  
6 Con Edison's forecast of rate year electric  
7 sales revenues by \$52.646 million.

8 Staff recommends that the Commission  
9 decrease Con Edison's forecast of rate year  
10 other electric operating revenues by \$17.220  
11 million. The major adjustments are related to  
12 Transmission Service Charge revenues,  
13 Transmission Congestion Charge revenues, and  
14 Purchase of Receivable (POR) discount revenues.

15 Staff recommends that the Commission  
16 decrease the Company's forecast of rate year O&M  
17 expense by \$116.253 million. The major  
18 adjustments are related to the Company's  
19 requests for austerity, Company labor, employee  
20 welfare expenses, and interference expense.

21 Staff recommends that the Commission  
22 decrease the Company's forecast of rate year  
23 depreciation expense by \$105.894 million. This  
24 adjustment reflects Staff's proposed rate year

1 depreciation rates and the results of its  
2 electric depreciation reserve study.

3 Staff recommends that the Commission  
4 decrease the Company's forecast of rate year  
5 taxes other than income taxes by \$3.724 million.  
6 The primary adjustments are to the Company's  
7 forecast of rate year Payroll Taxes and  
8 Subsidiary Capital Tax.

9 Staff recommends that the Commission  
10 decrease the Company's forecast of rate year  
11 rate base by \$142.433 million. Staff adjusts  
12 the Company's forecast of plant-in-service,  
13 accumulated reserve for depreciation, non-  
14 interest bearing construction work in progress  
15 (NIBCWIP), regulatory deferrals, accumulated  
16 deferred income taxes (ADIT) and earning base  
17 capitalization (EBCap). Staff's O&M expense  
18 adjustments also impact the calculation of  
19 working capital reflected in rate base.

20 Finally, these recommended adjustments  
21 impact the calculations of New York State (NYS  
22 or State) and federal income taxes, primarily  
23 due to lower income resulting from the Staff  
24 witness Henry's recommended return on equity.

1 Q. Would you please describe your Exhibit\_\_\_SAP-1.

2 A. Yes. As previously mentioned, Exhibit\_\_\_SAP-1,  
3 is Staff's electric cost of service  
4 presentation. Exhibit\_\_\_SAP-1 contains ten  
5 schedules. Schedule 1 is Staff's projection of  
6 electric operating income, rate base and rate of  
7 return for the rate year ending December 31,  
8 2014, and includes our recommended revenue  
9 requirement. Schedule 1 is supported by  
10 Schedules 2 through 9.

11 Q. Please describe the format of Schedule 1.

12 A. Column 1 of Schedule 1 contains the electric  
13 income statement, rate base and rate of return  
14 figures as filed by the Company for the rate  
15 year, before any required revenue increase.  
16 Column 2 contains the Company's preliminary  
17 updates as of March 25, 2013. Column 3 reflects  
18 the income statement, rate base and rate of  
19 return figures as updated by the Company.  
20 Column 4 contains references to the supporting  
21 schedules that present Staff's adjustments set  
22 forth in Column 5. Column 6 presents Staff's  
23 projected rate year figures before any required  
24 revenue increase. Column 7 contains Staff's

1 proposed changes in revenues, and Column 8 is  
2 Staff's forecasted rate year electric income,  
3 rate base and rate of return after its  
4 recommended revenue decrease.

5 Q. What information is shown on Schedules 2, 3, and  
6 4?

7 A. Schedule 2 shows the forecast of rate year other  
8 electric operating revenues including the  
9 amortization of electric regulatory deferrals.  
10 Schedule 3 shows the forecast of rate year  
11 electric O&M expenses by cost element. Schedule  
12 4 shows the forecast of rate year electric taxes  
13 other than income taxes.

14 Q. What information is shown on the remaining  
15 schedules?

16 A. Schedules 5 and 6 calculate rate year electric  
17 state and federal income tax expense,  
18 respectively. The adjustments in these  
19 schedules correspond primarily to adjustments  
20 set forth in other schedules. Schedule 7 shows  
21 the forecast of electric rate base for the rate  
22 year. Schedule 8 shows the details of the  
23 electric regulatory deferrals included in  
24 electric rate base. Schedule 9 shows the

1 details of the allowance for electric working  
2 capital, which is a component of electric rate  
3 base. Schedule 10 is a summary of Staff's  
4 adjustments related to the electric revenue  
5 requirement.

6 **Overview of Con Edison's Gas Filing**

7 Q. Would you summarize Con Edison's January 25,  
8 2013 gas filing from a revenue requirement  
9 perspective for the rate year ending December  
10 31, 2014?

11 A. In its initial filing, Con Edison requested a  
12 revenue requirement increase of approximately  
13 \$25.3 million. Based on its March 25, 2013  
14 preliminary gas update, the Company decreased  
15 the amount of gas revenue relief it originally  
16 sought by a relatively nominal amount. The  
17 Company is now requesting a revenue increase of  
18 approximately \$24.5 million. This increase  
19 would result in an overall revenue increase,  
20 inclusive of the Company's projected supply  
21 costs, of 1.3%, or 2.5% on a delivery only  
22 revenue basis.

23 **Overview of Staff's Position for Gas Rates**

24 Q. What is the effect of DPS Staff's adjustments on

1 gas rate of return for the rate year ending  
2 December 31, 2014?

3 A. The adjustments, as shown on Exhibit\_\_\_SAP-2,  
4 Schedule 1, increase the gas rate of return  
5 before any proposed revenue requirement change  
6 from 7.30% to 8.90%.

7 Q. What is the rate of return recommended by Staff  
8 witness Henry?

9 A. As noted above, he recommends a 6.76% rate of  
10 return based in part on an 8.70% return on  
11 equity. As a result, the recommended change in  
12 gas revenue requirement is a \$126.117 million  
13 decrease for the rate year ending December 31,  
14 2014.

15 Q. What are the major cost elements DPS Staff  
16 recommends be adjusted?

17 A. The adjustments fall into six major categories:  
18 sales revenue; other gas operating revenues  
19 including the amortization of gas regulatory  
20 deferrals; O&M expense; depreciation expense;  
21 taxes other than income taxes; and, rate base.

22 Q. Would the Panel indicate the amount of the  
23 adjustments for each of the six categories?

24 A. Staff recommends that the Commission increase

1 Con Edison's forecast of rate year gas sales  
2 revenues by \$18.440 million.

3 Staff recommends that the Commission  
4 increase Con Edison's forecast of rate year  
5 other gas operating revenues by \$6.164 million.  
6 The major adjustments are related to POR  
7 discount revenues and the amortization of  
8 deferred property taxes.

9 Staff recommends that the Commission  
10 decrease the Company's forecast of rate year gas  
11 O&M expense by \$20.083 million. The major  
12 adjustments are to the Company's requests for  
13 austerity, Company labor, employee welfare  
14 expenses, and interference expense.

15 Staff recommends that the Commission  
16 decrease the Company's forecast of rate year gas  
17 depreciation expense by \$19.406 million. This  
18 adjustment reflects Staff's recommended rate  
19 year gas depreciation rates and the results of  
20 its gas depreciation reserve study.

21 Staff recommends that the Commission  
22 decrease the Company's forecast of rate year gas  
23 taxes other than income taxes by \$1.722 million.  
24 Our primary adjustments are to the Company's

1 forecast of rate year of Payroll Taxes and  
2 Subsidiary Capital Tax.

3 Staff recommends that the Commission  
4 decrease the Company's forecast of rate year gas  
5 rate base by \$161.064 million. This adjustment  
6 reflects adjustments to Con Edison's forecast of  
7 plant-in-service, accumulated reserve for  
8 depreciation, NIBCWIP, regulatory deferrals,  
9 ADIT and EBCap. Staff's O&M expense adjustments  
10 also impact the calculation of working capital  
11 reflected in rate base.

12 Finally, Staff's recommended adjustments  
13 impact the calculations of state and federal  
14 income taxes.

15 Q. Would you please describe Exhibit\_\_\_SAP-2.

16 A. As previously mentioned, Exhibit\_\_\_SAP-2, is  
17 Staff's gas cost of service presentation.  
18 Exhibit\_\_\_AP-2 contains nine schedules.  
19 Schedule 1 is Staff's projection of gas  
20 operating income, rate base and rate of return  
21 for the rate year ending December 31, 2014, and  
22 includes Staff's recommended revenue  
23 requirement. Schedule 1 is supported by  
24 Schedules 2 through 9.

1 Q. Please describe the format of Schedule 1.

2 A. Column 1 of Schedule 1 contains the gas income  
3 statement, rate base and rate of return figures  
4 as filed by Con Edison for the rate year, before  
5 any required revenue increase. Column 2  
6 contains the Company's preliminary updates as of  
7 March 25, 2013. Column 3 reflects the income  
8 statement, rate base and rate of return figures  
9 as updated by the Company. Column 4 contains  
10 references to the supporting schedules that  
11 present Staff's adjustments set forth in Column  
12 5. Column 6 presents Staff's projected rate  
13 year figures before any required revenue  
14 increase. Column 7 contains Staff's recommended  
15 changes in revenues, and Column 8 is Staff's  
16 forecasted rate year gas income, rate base and  
17 rate of return after its recommended revenue  
18 decrease.

19 Q. What information is shown on Schedules 2, 3, and  
20 4?

21 A. Schedule 2 shows the forecast of rate year other  
22 gas operating revenues including the  
23 amortization of gas regulatory deferrals.  
24 Schedule 3 shows the forecast of rate year gas

1 O&M expense by cost element. Schedule 4 shows  
2 the forecast of rate year gas taxes other than  
3 income taxes.

4 Q. What information is shown on the remaining  
5 schedules?

6 A. Schedules 5 and 6 calculate rate year gas state  
7 and federal income tax expense, respectively.  
8 The adjustments in these schedules correspond  
9 primarily to adjustments set forth in other  
10 schedules. Schedule 7 shows the forecast of gas  
11 rate base for the rate year. Schedule 8 shows  
12 the details of the allowance for gas working  
13 capital, which is a component of gas rate base.  
14 Schedule 9 is a summary of Staff's adjustments  
15 related to the gas revenue requirement.

16 **Overview of Con Edison's Steam Filing**

17 Q. Would you summarize Con Edison's January 25,  
18 2013, steam filing from a revenue requirement  
19 perspective for the rate year ending December  
20 31, 2014?

21 A. In its initial filing, Con Edison proposed a  
22 revenue requirement decrease of approximately  
23 \$5.3 million. Based on its March 25, 2013  
24 preliminary steam update, the Company is now

1 requesting a revenue requirement increase of  
2 approximately \$6.5 million. This increase would  
3 result in an overall revenue increase, inclusive  
4 of the Company's projected supply costs, of  
5 approximately 1.0%, or 1.4% on a delivery only  
6 revenue basis.

7 **Overview of Staff's Position for Steam Rates**

8 Q. What is the effect of Staff's adjustments on  
9 steam rate of return for the rate year ending  
10 December 31, 2014?

11 A. The adjustments, as shown on Exhibit\_\_\_SAP-3,  
12 Schedule 1, increase the steam rate of return,  
13 before any proposed revenue requirement change,  
14 from 6.33% to 7.83%.

15 Q. What is the rate of return recommended by  
16 Witness Henry?

17 A. He recommends a 6.76% rate of return based in  
18 part on an 8.70% return on equity. As a result,  
19 the recommended change in steam revenue  
20 requirement is a \$27.997 million decrease for  
21 the rate year ending December 31, 2014.

22 Q. What are the major steam cost elements Staff is  
23 proposing to adjust?

24 A. The adjustments fall into seven major

1 categories: sales revenue; other steam operating  
2 revenues including the amortization of steam  
3 regulatory deferrals; O&M expense; depreciation  
4 expense; taxes other than income taxes; income  
5 taxes; and, rate base.

6 Q. Would the Panel highlight the amount of the  
7 adjustments for each of the seven categories?

8 A. Staff proposes that the Commission increase Con  
9 Edison's forecast of rate year steam sales  
10 revenues by \$1.356 million.

11 Staff recommends that the Commission  
12 decrease Con Edison's forecast of rate year  
13 other steam operating revenues by \$1.795  
14 million. The major adjustments are related to  
15 interdepartmental rent from the electric  
16 department for the East River Repowering Project  
17 and the amortization of deferred property taxes.

18 Staff recommends that the Commission  
19 decrease Con Edison's forecast of rate year  
20 steam O&M expenses by \$4.387 million. The major  
21 adjustments are to the Company's requests for  
22 austerity, Company labor, and employee welfare  
23 expenses.

24 Staff recommends that the Commission

1 decrease the Company's forecast of rate year  
2 steam depreciation expense by \$3.509 million.  
3 This adjustment reflects Staff's recommended  
4 rate year depreciation rates and the results of  
5 its steam depreciation reserve study.

6 We recommend that the Commission decrease  
7 Con Edison's forecast of rate year steam taxes  
8 other than income taxes by \$0.249 million. The  
9 primary adjustments are to the Company's  
10 forecast of rate year Payroll Taxes and  
11 Subsidiary Capital Tax.

12 Staff recommends that the Commission  
13 decrease the Company's forecast of rate year  
14 rate base by \$21.743 million. Staff's primary  
15 adjustments are to the Company's forecast of  
16 plant-in-service, accumulated reserve for  
17 depreciation, NIBCWIP, ADIT and EBCap. Staff's  
18 O&M expense adjustments also impact the  
19 calculation of working capital reflected in rate  
20 base.

21 Finally, Staff's recommended adjustments  
22 impact the calculations of rate year steam state  
23 and federal income tax expense. Except for our  
24 adjustment to the Company's proposed recapture

1 of a 2005 tax deduction, which is discussed in  
2 more detail later in our testimony, the  
3 adjustments in these schedules correspond  
4 primarily to adjustments set forth in other  
5 schedules.

6 Q. Would you please describe Exhibit\_\_\_SAP-3?

7 A. As previously mentioned, Exhibit\_\_\_SAP-3, is  
8 Staff's steam cost of service presentation.  
9 Exhibit\_\_\_SAP-3 contains nine schedules.  
10 Schedule 1 is Staff's projection of steam  
11 operating income, rate base and rate of return  
12 for the rate year ending December 31, 2014  
13 including Staff's recommended revenue  
14 requirement. Schedule 1 is supported by  
15 Schedules 2 through 9.

16 Q. Please describe the format of Schedule 1.

17 A. Column 1 of Schedule 1 contains the steam income  
18 statement, rate base and rate of return figures  
19 as filed by Con Edison for the rate year, before  
20 any required revenue requirement change. Column  
21 2 contains the Company's preliminary updates as  
22 of March 25, 2013. Column 3 reflects the income  
23 statement, rate base and rate of return figures  
24 as updated by the Company. Column 4 contains

1 references to the supporting schedules that  
2 present Staff's adjustments set forth in Column  
3 5. Column 6 presents Staff's projected rate  
4 year figures before any required revenue  
5 increase. Column 7 contains Staff's recommended  
6 changes in revenues, and Column 8 is Staff's  
7 forecasted rate year steam income, rate base and  
8 rate of return after its recommended revenue  
9 decrease.

10 Q. What information is shown on Schedules 2, 3, and  
11 4?

12 A. Schedule 2 shows the forecast of rate year other  
13 steam operating revenues. Schedule 3 shows the  
14 forecast of rate year steam O&M expense by cost  
15 element. Schedule 4 shows the forecast of rate  
16 year steam taxes other than income taxes.

17 Q. What information is shown on the remaining  
18 schedules?

19 A. Schedules 5 and 6 calculate rate year steam  
20 state and federal income tax expense,  
21 respectively. The adjustments in these  
22 schedules correspond primarily to adjustments  
23 set forth in other schedules. Schedule 7 shows  
24 the forecast of steam rate base for the rate

1 year. Schedule 8 shows the details of the  
2 allowance for working capital, which is a  
3 component of rate base. Schedule 9 is a summary  
4 of Staff's adjustments related to the steam  
5 revenue requirement.

6 **Proposed Revenue Requirement Adjustments**

7 **Electric Sales Revenues**

8 Q. Should electric sales revenues and East River  
9 Repowering Project (ERRP) rent expense paid to  
10 steam operations be synchronized for purposes of  
11 determining electric revenue requirement?

12 A. Yes. Con Edison recovers actual ERRP rents  
13 through the Monthly Adjustment Clause (MAC) and  
14 therefore the expense should have no impact on  
15 the Company's base rate delivery revenue  
16 requirement.

17 Q. Is there a mismatch between the Company's  
18 forecast of rate year electric sales revenues  
19 and electric O&M expense forecasts?

20 A. Yes. In its preliminary electric update, the  
21 Company increased its forecast of rate year ERRP  
22 rent expense from \$71.890 million to \$79.069  
23 million, or by \$7.179 million. However, the  
24 Company did not adjust its forecast of rate year

1 revenues associated with its ERRP rent update.  
2 Consequently, an adjustment increasing Con  
3 Edison's forecast of or rate year electric sales  
4 revenues by \$7.179 million is necessary.

5 Q. Does the Company agree with your recommended  
6 adjustment?

7 A. Yes. In its response to Staff IR DPS-482, the  
8 Company agrees that our adjustment is  
9 appropriate.

10 **Other Operating Revenue (Common)**

11 Q. Is the Panel recommending adjustments to the  
12 Company's forecast of late payment charge  
13 revenues for each service?

14 A. Yes. We recommend that the Company's forecast  
15 be increased by \$0.256 million (\$0.193 million  
16 Electric; \$0.062 million Gas and \$0.001 million  
17 Steam) to account for Staff's forecast of rate  
18 year sales revenue for each service.

19 **Other Electric Operating Revenues**

20 **Excess Distribution Facilities**

21 Q. Is Staff adjusting the Company's forecast of  
22 rate year other electric operating revenues from  
23 Excess Distribution Facilities?

1 A. Yes. We are increasing Con Edison's forecast of  
2 Excess Distribution Facilities revenues from  
3 \$3.113 million to \$3.312 million, or by \$0.199  
4 million to remove a normalization adjustment the  
5 Company reflected in its rate year forecast.

6 Q. Does the Company agree with your adjustment?

7 A. Yes. In its response to DPS-438, the Company,  
8 based upon its review of more current actual  
9 information, agrees to our adjustment.

10 Transmission Service Charge Revenues (Electric)

11 Q. What do transmission service charge (TSC)  
12 revenues represent?

13 A. TSCs represent the revenue resulting from daily  
14 transmission wheeling transactions scheduled  
15 through the New York Independent System Operator  
16 (NYISO).

17 Q. What is the current accounting and ratemaking  
18 for TSCs?

19 A. Under the 2010 Electric Rate Plan, an annual  
20 revenue imputation of \$15 million is reflected  
21 in base rates. If Con Edison's actual TSC  
22 revenues are less than the \$15 million, the  
23 Company is allowed recover the shortfall through  
24 its Monthly Adjustment Clause (MAC). If the

1 Company's actual TSC revenues are more than the  
2 \$15 million, the excess is refunded to customers  
3 through its MAC.

4 Q. What were Con Edison's actual TSC revenues over  
5 the last three rate years?

6 A. The Company's actual revenues were \$8.8 million,  
7 \$6.9 million and \$5.8 million for the rate years  
8 ending March 31, 2011, 2012 and 2013,  
9 respectively.

10 Q. How much is Con Edison reflecting in the rate  
11 year related to TSC revenues?

12 A. Con Edison is proposing to continue a revenue  
13 imputation of \$15 million in the rate year. The  
14 Company is also proposing to continue to  
15 reconcile the difference between its actual TSC  
16 revenues and the \$15 million and flow the  
17 difference through the MAC.

18 Q. Is the Panel recommending an adjustment to the  
19 Company's proposed rate year forecast?

20 A. Yes. We are recommending a reduction to the  
21 Company's forecast from \$15 million to \$7  
22 million, or by \$8 million to reflect the  
23 declining trend in TSC revenues over the last  
24 three rate years. Our objective here is to

1 reflect the most reasonable forecast in the rate  
2 year and minimize any subsequent recovery or  
3 refunding through adjustment clauses.

4 It should be noted that our adjustment has  
5 no overall bill impact in the rate year. That  
6 is because if the imputation remained at \$15  
7 million and actual revenues are \$7 million as we  
8 forecast, the Company would still recover the \$8  
9 million shortfall through its MAC.

10 Transmission Congestion Charge Revenues (Electric)

11 Q. What do transmission congestion credits (TCC)  
12 revenues represent?

13 A. TCCs represent the revenues resulting from the  
14 sale of transmission congestion credits through  
15 the NYISO.

16 Q. What is the current accounting and ratemaking  
17 for TCCs?

18 A. Under the 2010 Electric Rate Plan, an annual  
19 revenue imputation of \$120 million is reflected  
20 in base rates. If its actual TCC revenues are  
21 less than the \$120 million, Con Edison is  
22 allowed recover the shortfall through its MAC.  
23 If the Company's actual TCC revenues are more  
24 than the \$120 million, the excess is refunded to

1 customers through the MAC.

2 Q. What were the Company's actual TCC revenues over  
3 the last three rate years?

4 A. The Company's actual TCC revenues were \$110.6  
5 million, \$93.6 million and \$75.3 million for the  
6 rate years ending March 31, 2011, 2012 and 2013,  
7 respectively.

8 Q. How much is Con Edison reflecting in the rate  
9 year related to TCC revenues?

10 A. The Company is proposing to continue to reflect  
11 an imputation of \$120 million in the rate year.  
12 Con Edison is also proposing to continue to  
13 reconcile the difference between its actual TCC  
14 revenues and the level imputed in rates and flow  
15 the difference through its Monthly Adjustment  
16 Clause (MAC).

17 Q. Is the Panel recommending an adjustment to the  
18 Company's proposed rate year forecast?

19 A. Yes. We are recommending a reduction to the  
20 Company's forecast from \$120 million to \$90  
21 million, or by \$30 million to reflect the  
22 declining trend in TCC revenues over the last  
23 three rate years. Similar to our rationale  
24 above for TSC revenues, our objective here is to

1 reflect the most reasonable forecast in the rate  
2 year and minimize any subsequent recovery or  
3 refunding through adjustment clauses.

4 As with TSC revenues, our adjustment has no  
5 overall bill impact to electric customers in the  
6 rate year. That is because if the imputation  
7 remained at \$120 million and actual revenues are  
8 \$90 million as we forecast, the Company would  
9 recover the \$30 million shortfall in revenue  
10 through the MAC.

11 **POR Discount Revenues**

12 Q. Would the Panel explain what POR discount  
13 revenues represent?

14 A. POR discount revenues represent the small  
15 discount on accounts receivable that Con Edison  
16 purchases from Energy Service Companies (ESCOs)  
17 as part of its retail access program. The  
18 discount rate is determined bi-annually and is  
19 designed to compensate Con Edison for its  
20 exposure to uncollectible ESCO accounts, credit  
21 and collection costs, administrative costs and  
22 risk that the actual uncollectible rate may be  
23 higher than the assumed uncollectible rate.

24 Q. Please explain how the Company forecasts

1 electric revenues for the rate year resulting  
2 from its purchase of receivables from ESCOs?

3 A. The Company's revenue forecast of \$20.853  
4 million for the rate year was based on the  
5 historic three-year average of actual revenues  
6 for the period July 2009 through June 2012. For  
7 the twelve months ended June 2010, 2011 and 2012  
8 actual revenues were \$16.753 million, \$22.419  
9 million, and \$23.388 million, respectively.

10 Q. Do you agree with the Company's forecast?

11 A. No. The use of the three-year historic average  
12 to forecast the rate year level will  
13 significantly underestimate the level of  
14 electric POR discount revenues in the rate year.  
15 In fact, the three-year average yields a revenue  
16 forecast that is approximately \$2.5 million  
17 lower than the revenue the Company realized in  
18 the historic test year.

19 Q. Please explain.

20 A. In its response to DPS-467, Con Edison presents  
21 the number of ESCOs providing electric commodity  
22 service in the Company's service territory and  
23 the number of ESCO accounts enrolled in its  
24 electric POR program. The response shows that

1 both groups have significantly increased between  
2 2010 and 2012. The increase in the number of  
3 ESCO account enrollments in the Company's  
4 electric POR program is one of the contributing  
5 factors in the growth of POR discount revenues  
6 over the last three years.

7 Furthermore, Con Edison's Customer  
8 Operations Panel (COP) is requesting in this  
9 proceeding capital related expenditures of \$5.1  
10 million for systems that are utilized to  
11 effectuate customer choice of electric and gas  
12 energy suppliers. In support of the request,  
13 the COP states that the retail competitive  
14 market in Con Edison's territory is continuing  
15 to experience substantial growth in the number  
16 of ESCO customer enrollments. COP notes that as  
17 of December 2012, over 900,000 customers are  
18 taking supply service from ESCOs, representing  
19 an annual increase of about 100,000 customers  
20 over approximately the last two years.

21 Furthermore, it maintains that with the  
22 Company's customers clearly responding to the  
23 energy choices offered by ESCOs, enrollments  
24 will continue to increase through the 2013-2017

1 period, with over 1,200,000 customers taking  
2 electric supply service from ESCOs by 2017.

3 In consideration of the historic growth  
4 trend in retail access enrollments, the use of  
5 the three-year historic average to forecast rate  
6 year electric POR revenues does not reasonably  
7 forecast the current level of these revenues and  
8 also fails to consider the additional growth in  
9 ESCO enrollments anticipated by the Company.

10 Q. Do you have any additional concerns?

11 A. Yes, the Company's forecast also fails to  
12 reflect an appropriate POR discount rate that  
13 will be applicable in the rate year. By using  
14 the historic three-year average of POR revenues  
15 to forecast the rate year level, the Company's  
16 forecast by design assumes a lower discount rate  
17 than the discount rate currently in effect.  
18 Over the course of the historic three-year  
19 period the discount rate increased continually,  
20 from 1.76% in July 2009 to 2.55% in June 2012.  
21 The current discount rate for electric POR is  
22 2.64%. Thus, the Company's forecast reflects an  
23 average discount rate that is lower than the  
24 current POR discount rate.

1 Q. Do you consider the current discount rate a  
2 better proxy to forecast rate year POR revenues?

3 A. Yes. In view of the continual increasing trend  
4 in the electric POR discount rate, using the  
5 current discount rate to forecast rate year POR  
6 revenue is conservative.

7 Q. Are you recommending that the Company's forecast  
8 of rate year of electric POR revenues be  
9 adjusted?

10 A. Yes. We are increasing the Company's forecast  
11 from \$20.853 million to \$30.972 million, or by  
12 \$10.119 million to reflect the latest level of  
13 ESCO electric accounts receivables purchased by  
14 Con Edison and the current electric discount  
15 rate of 2.64%.

16 Q. How did the Panel determine the latest level of  
17 electric accounts receivables purchased by Con  
18 Edison from ESCOs and gas marketers?

19 A. We annualized accounts receivables purchased by  
20 Con Edison for the period between July 2012 and  
21 February 2013. Since we did not forecast any  
22 growth of accounts receivable in the rate year  
23 and in light of the substantial growth in ESCO  
24 enrollments anticipated by the Company, our

1 forecasting approach is conservative.

2 **Other Gas Operating Revenues**

3 **POR Discount Revenues**

4 Q. Would the Panel explain how the Company  
5 forecasts rate year gas POR discount revenues?

6 A. In its gas testimony, the Company's Accounting  
7 Panel (CAP) states that the rate year forecast  
8 of \$3.363 million was provided by the Company's  
9 Gas Rate Panel. In its response to DPS-310, the  
10 Company indicates that the rate year forecast is  
11 based on the reconciliation target for credit  
12 and collection costs currently in effect.

13 Q. How much POR discount revenue from ESCOs did the  
14 Company actually record in the historic test  
15 year?

16 A. The Company recorded revenues of \$4.626 million,  
17 or \$1.263 million more than its rate year  
18 forecast.

19 Q. Does Staff agree with the Company's rate year  
20 forecast?

21 A. No. The Company's forecast is seriously flawed  
22 and use of it will underestimate the level of  
23 revenues in the rate year.

24 Q. Please explain.

1 A. The POR discount applied to gas (and electric)  
2 account receivables purchased from the marketers  
3 and ESCOs includes four cost components: (1) an  
4 uncollectible rate; (2) a credit and collection  
5 cost rate; (3) a POR program administration cost  
6 rate; and, (4) an additional discount rate to  
7 compensate the Company for its financial risk  
8 that the actual uncollectible rate for the  
9 purchased receivables may be higher than the  
10 uncollectible rate. Although the Company's rate  
11 year forecast of gas O&M expenses reflects the  
12 costs associated with its gas POR program (i.e.  
13 uncollectible, credit and collections, and  
14 administrative costs), its POR revenue forecast  
15 only reflects the credit and collection  
16 component. Consequently, there is a mismatch  
17 between the POR revenue and expense in Con  
18 Edison's revenue requirement for gas service.

19 Q. Do you have additional concerns?

20 A. Yes. In its response to DPS-467, the Company  
21 presents the number of marketers providing gas  
22 service in its service territory and marketer  
23 accounts enrolled in its gas POR program. It  
24 shows that both groups have significantly

1 increased since 2010. Furthermore, as noted  
2 above, Con Edison is requesting capital related  
3 funding for systems that support the substantial  
4 growth in the number of customers taking supply  
5 service from marketers. Consequently, Con  
6 Edison's rate year forecast is underestimated  
7 because it does not reflect the increase in gas  
8 purchased accounts receivables confirmed by the  
9 level of revenues in the historic test year and  
10 the additional growth anticipated by the  
11 Company.

12 Q. Are you recommending that the Company's rate  
13 year forecast be adjusted?

14 A. Yes. We increased the Company's forecast from  
15 \$3.363 million to \$5.263 million or by \$1.900  
16 million to reflect the latest level of gas  
17 accounts receivables purchased by Con Edison  
18 from marketers and the current gas discount rate  
19 of 2.63%.

20 Q. How did you determine the latest level of  
21 accounts receivables purchased by Con Edison  
22 from marketers?

23 A. We annualized the accounts receivables purchased  
24 by Con Edison for the period between July 2012

1 and February 2013. Since we did not forecast  
2 any growth of accounts receivable in the rate  
3 year and in light of the substantial growth in  
4 marketer enrollments anticipated by Con Edison,  
5 our forecasting approach is conservative.

6 **Other Steam Operating Revenues**

7 **Interdepartmental Rents: East River Repowering**  
8 **Project**

9 Q. Are you adjusting Con Edison's forecast of rate  
10 year steam interdepartmental rent revenue from  
11 the Company's electric department for ERRP)?

12 A. Yes. We are decreasing the forecast from  
13 \$79.069 million to \$74.510 million, or by \$4.559  
14 million to reflect Staff's recommended rate year  
15 cost of capital.

16 **Amortization of Regulatory Deferrals**

17 **Deferred Property Taxes (Common)**

18 Q. What is the level of deferred property tax over-  
19 collections that the Company is proposing to  
20 refund to customers in these proceedings?

21 A. The Company is proposing to refund, over three  
22 years, a company-wide total of \$293.753 million  
23 (\$262.275 million Electric, \$14.563 million Gas  
24 and \$16.925 million Steam) of property tax over-

1 collections, or \$97.951 million (\$87.425 million  
2 Electric, \$4.854 million Gas and \$5.642 million  
3 Steam) on an annual basis. The proposed refund  
4 is comprised of actual property tax expense  
5 over-recoveries of \$186.745 million as of  
6 December 31, 2012 and estimated over-recoveries  
7 of \$107.018 million for 2013.

8 Q. Is the Panel recommending that the Company's  
9 proposed refund be adjusted?

10 A. Yes. Based on actual property tax expense over-  
11 recoveries as of March 2013, we are increasing  
12 the Company's property tax over-recoveries by a  
13 Company-wide total of \$19.121 million (\$2.162  
14 million Electric, \$10.381 million Gas and \$6.578  
15 million Steam), to \$312.844 million (\$264.437  
16 million Electric, \$24.944 million Gas and  
17 \$23.503 million Steam). Accordingly, we  
18 recommend increasing the amortization in the  
19 rate year by \$6.374 million (\$0.721 million  
20 Electric, \$3.460 million Gas and \$2.193 million  
21 Steam) since the over-recoveries are proposed to  
22 be amortized in rates over three years.

23 A concomitant adjustment decreasing rate  
24 base by \$10.457 million (\$1.171 million

1 Electric, \$5.623 million Gas and \$3.563million  
2 Steam) is required to account for the increased  
3 level of unamortized deferred property taxes in  
4 the rate year.

5 **Sale of Property - John Street (Electric)**

6 Q. Is the Company proposing to pass back to  
7 customers proceeds related to the sale of its  
8 John Street property?

9 A. Yes. The Company is proposing to pass back to  
10 customers a portion of the sales proceeds. The  
11 Company proposes to allocate \$4.478 million of  
12 the gain on the sale to customers and to provide  
13 that benefit to customers over three years of  
14 \$1.493 million annually.

15 Q. Please explain the sale of the John Street  
16 property.

17 A. By the letter dated January 31, 2013, as shown  
18 in Exhibit\_\_\_SAP-4, the Company notified the  
19 Commission of its intent to sell approximately  
20 3.4 acres of property located on John Street,  
21 Brooklyn, New York to the Brooklyn Bridge Park  
22 Development Corporation for approximately \$9  
23 million. The transaction is expected to result  
24 in a pre-tax gain of approximately \$8.4 million

1 for Con Edison.

2 Q. Is Commission approval of the sale required?

3 A. On advice of counsel, no. The Brooklyn Bridge  
4 Park Development Corporation is a "duly  
5 constituted authority of the State" as such the  
6 Panel has been advised by Staff Counsel that the  
7 proposed sale is exempt from Commission review  
8 and approval under Public Service Law section  
9 70(7). Because rates are being set in this  
10 proceeding, however, the appropriate accounting  
11 of the proceeds from the sale of the property  
12 should now be determined by the Commission.

13 Q. What is the history of the John Street property?

14 A. The John Street property was acquired by Con  
15 Edison in 1963 for approximately \$0.250 million.  
16 The Property was supported by ratepayers as  
17 electric property held for future use until 1996  
18 when the Company determined that it was no  
19 longer needed for operations. In 1996 the  
20 Company transferred the property at its then  
21 book value of \$0.554 million to non-utility  
22 property. At that time the Company should have  
23 assumed responsibility for all costs related to  
24 the property and related risk of ownership.

1           However, the Company failed to properly account  
2           for costs associated with the property and as a  
3           result, customers paid the property taxes  
4           through their electric rates until 2008 and  
5           still continue to bear the O&M costs associated  
6           with the property.

7    Q.   How does the Company propose to allocate the  
8           gain on the sale between ratepayers and the  
9           Company?

10   A.   The Company purports to allocate the gain  
11           between ratepayers and the Company reflecting  
12           the relative costs borne by each since 1996 when  
13           the property was reclassified to non-utility  
14           property. However, under its methodology, the  
15           Company proposes to determine the customers'  
16           share of the gain based on a 1998 appraisal of  
17           the property which determined a value of \$1.2  
18           million. To this amount, the Company adds the  
19           property taxes and O&M costs borne by customers  
20           subsequent to the transfer to non-utility plant,  
21           inclusive of carrying costs, to arrive at the  
22           customers' \$4.478 million share of the net  
23           proceeds. The Company proposes to retain its  
24           original investment and \$3.9 million of the net

1 gain.

2 Q. Does the Panel agree with the Company's  
3 proposal?

4 A. No we do not.

5 Q. Please explain.

6 A. We believe that the benefit or net proceeds from  
7 the sale should follow the burden of supporting  
8 the property. Ratepayers fully supported the  
9 property by bearing all operating costs and  
10 taxes from 1963 to 1996 and providing the  
11 Company a full return on its investment. Due to  
12 the Company's improper accounting, ratepayers  
13 have inappropriately borne all the costs and  
14 risk on the John Street property since 1963.  
15 The only cost ratepayers did not bear is the  
16 forgone return on the \$0.554 million investment  
17 since the property was removed from rate base in  
18 1996. The Company's proposal also fails to  
19 provide customers with the appreciation in the  
20 fair market value of the land from 1996 to the  
21 present. Since customers continued to bear all  
22 the costs and risks associated with the  
23 property, following the transfer to non-utility  
24 property, we believe customers should receive a

1 larger share of the net gain from the sale.

2 Q. Please explain the Panel's recommendation.

3 A. We recommend that the Commission determine that  
4 the Company be allowed to retain the carrying  
5 costs and related interest of \$1.9 million on  
6 the \$0.554 million since 1996, as shown in  
7 Exhibit\_\_\_SAP-5, which is the only cost related  
8 to the property that was not borne by customers.  
9 Therefore, we recommend that the Commission  
10 require the Company to pass back to ratepayers  
11 \$5.9 million.

12 Q. What is the impact of the Panel's adjustment?

13 A. Our adjustment increases the amount being passed  
14 back to electric customers by \$1.5 million. A  
15 concomitant adjustment decreasing rate base by  
16 \$0.796 million is required to account for the  
17 increased level of unamortized deferred gain on  
18 the sale of the property in the rate year.

19 **Property Tax Refund: Town of Pleasant Valley**  
20 **(Electric)**

21 Q. Did Con Edison reflect the disposition of the  
22 property tax refund that is the subject of the  
23 April 9, 2013 Joint Proposal between Staff and  
24 the Company in Case 12-M-0506?

1 A. Yes. In its electric filing, the Company  
2 reflects a total refund of \$1.8 million over  
3 three years, or \$0.6 million on an annual basis.  
4 The proposed refund and the disposition to  
5 electric customers reflect the conditions of the  
6 Joint Proposal. We should note that as of the  
7 date we filed this testimony, the Commission has  
8 yet to act on the Joint Proposal.

9 **Medicare Part D (Common)**

10 Q. Is the Company proposing to recover the  
11 shortfall for the difference between its actual  
12 tax Medicare Part D tax benefits and the  
13 Medicare Part D tax benefits reflected in rates?

14 A. Yes. The Company is proposing to recover \$21.7  
15 million (\$15.4 million Electric, \$4.6 million  
16 Gas and \$1.7 million Steam) over a three year  
17 period, or \$7.2 million annually (\$5.1 million  
18 Electric, \$1.5 million Gas and \$0.570 million  
19 Steam) of deferred Medicare Part D tax benefits.

20 Q. Does the Panel agree with the deferred tax  
21 benefits Con Edison proposes to recover?

22 A. No. The deferred tax benefits for each service  
23 have not been properly calculated. In  
24 particular, the deferred tax benefits do not

1 properly reflect the amounts that were  
2 previously included in rates related to the  
3 Medicare Part D subsidy.

4 Q. Does Con Edison agree with the Panel that the  
5 deferred tax benefits the Company proposes to  
6 recover were not properly calculated?

7 A. Yes. In its response to DPS-509, Con Edison  
8 agrees that its calculations need to be revised  
9 and that the Company would present them in its  
10 rebuttal filing.

11 Q. Is the Panel planning on adjusting the Company's  
12 request for recovery of deferred tax benefits?

13 A. Yes. We will review the Company's revisions  
14 which it will provide in its rebuttal filing.  
15 Should any significant issues arise with those  
16 revisions Staff will address them at the hearing  
17 and in brief.

18 **Section 263-A Simplified Service Cost Method**

19 **(Electric and Gas)**

20 Q. Is the Company proposing to refund or recover  
21 carrying charges associated with its Simplified  
22 Service Cost Method (SSCM) accumulated deferred  
23 income tax (ADIT) balances?

24 A. Yes. Con Edison proposes to recover deferred

1 carrying costs of \$3.441 million and \$1.563  
2 million in its electric and gas revenue  
3 requirements, respectively, over a three year  
4 period, or \$1.147 million and \$0.521 million on  
5 an annual basis, respectively. The Company is  
6 also proposing to refund \$4.901 million in its  
7 steam revenue requirement over a three year  
8 period, or \$1.634 million on an annual basis.

9 Q. Please explain the nature of the carrying  
10 charges deferred on the Company's books.

11 A. The carrying charges represent the accrued  
12 interest associated with the tax benefits before  
13 the deduction was reflected in rates for each  
14 service as well as the accrued interest on the  
15 difference between the Company's actual deferred  
16 tax balances and the deferred tax balances  
17 reflected in rates beginning in March 2005 for  
18 Electric, and October 2004 for Gas and Steam.

19 Q. Does the Panel agree with the carrying cost  
20 amounts the Company is proposing to recover in  
21 its electric and gas revenue requirements?

22 A. No. Con Edison's electric and gas deferred  
23 carrying cost balances and, in turn, the  
24 proposed recoveries are overstated. The Company

1           should be recovering \$0.100 million less than it  
2           proposes for electric and should actually be  
3           refunding \$0.663 million, not recovering \$1.563  
4           million for gas.

5   Q.   Does Con Edison agree with the Panel that its  
6           proposed recoveries are incorrect by those  
7           amounts?

8   A.   Yes. In its response to DPS-510, the Company  
9           agrees that its proposed recoveries are  
10          incorrect by those amounts. Consequently, we  
11          are reflecting a recovery of \$3.315 million over  
12          three years, or \$1.105 on annual basis for  
13          electric and a refund of \$0.663 million over  
14          three years, or \$0.221 on annual basis service  
15          for gas.

16               Concomitant adjustments decreasing rate  
17          base by \$0.069 million for Electric and \$2.223  
18          million for Gas are required to reflect the  
19          increased level of unamortized deferred carrying  
20          charges in the rate year.

21   Q.   Do you agree with the Company's request that it  
22           stop deferral accounting procedures for SSCM  
23           deferred tax balances?

24   A.   Yes. The matter between the Company and the

1 Internal Revenue Service has been resolved.

2 **Spent Nuclear Fuel Litigation (Electric)**

3 Q. Would you briefly explain the nature of the  
4 Company's spent nuclear fuel (SNF) litigation?

5 A. The case involved Con Edison's claim that the  
6 Department of Energy (DOE) disregarded a 1982  
7 statute and breached a 1983 contract with Con  
8 Edison. Under the statute and contract, in  
9 exchange for the payment of fees by Con Edison  
10 that exceeded \$120 million, DOE was to commence  
11 disposal of spent nuclear fuel from Con Edison's  
12 Indian Point (IP) nuclear power plant beginning  
13 in January 1998. Con Edison sold IP to the  
14 Entergy Corporation in 2001, according to the  
15 Company, when DOE was already in breach of the  
16 contract. The case went to trial in June 2009  
17 before the Court of Federal Claims. A decision  
18 was rendered in May 2010, wherein the Court  
19 awarded Con Edison \$448,859 for its engineering  
20 studies, but denied the Company's other claims.

21 Q. How much is the Company requesting be recovered  
22 for SNF litigation costs in its electric revenue  
23 requirement?

24 A. The Company is requesting to recover \$10.223

1 million of SNF litigation costs over three  
2 years, or \$3.411 million on an annual basis.

3 Q. What is the basis for the Company's request?

4 A. The Company is seeking recovery pursuant to a  
5 proposal Staff made in its direct testimony in  
6 Case 09-E-0428. In that case, the Staff  
7 Accounting Panel proposed that, in view of the  
8 size of Con Edison's requested rate increase  
9 (\$840 million) and the then current state of the  
10 economy, the Company be allowed to defer its  
11 rate year SNF litigation cost request of \$2.67  
12 million until the Company recovered the cost,  
13 partly or wholly from its lawsuit against DOE.

14 Q. How was Case 09-E-0428 resolved?

15 A. The signatory parties developed a comprehensive  
16 Joint Proposal (JP) to the Commission for a  
17 three-year electric rate plan, commencing April  
18 1, 2010 and continuing through March 31, 2013.  
19 The Commission adopted the JP without  
20 modification by Order dated March 26, 2010.

21 Q. Did the JP or the Commission's Order adopting it  
22 include a provision for the deferral and  
23 recovery of SNF litigation costs?

24 A. No.

1 Q. How much SNF litigation expense did the Company  
2 actually incur since April 1, 2010, the  
3 effective date of current electric rate?

4 A. In its response to DPS-500, the Company  
5 indicates that since April 1, 2010 it has  
6 actually incurred legal expenditures of \$18.430  
7 million.

8 Q. How then does the Company derive the \$10.223  
9 million it is requesting in this proceeding?

10 A. Con Edison just creates the balance.  
11 Specifically, it reaches back to 2005 for  
12 unrecovered SNF litigation charges incurred; it  
13 then offsets those amounts by amounts previously  
14 collected in electric rates and the above  
15 mentioned DOE refund, and then applies interest  
16 to the unrecovered balance.

17 Q. How much of the \$10.233 million has Con Edison  
18 actually deferred on its books to date?

19 A. The Company has not deferred any of \$10.233  
20 million on its books.

21 Q. What is the Panel recommending?

22 A. We recommend that the Commission reject the  
23 Company's request for recovery of past SNF  
24 litigation costs. The Company's reliance on a

1 proposal advanced by Staff in direct testimony  
2 that ultimately was not a provision of the 2010  
3 Electric Rate Plan is totally without merit.  
4 The Electric Rate Plan the Company is currently  
5 operating under does not allow for the deferral  
6 and recovery of SNF litigation costs. The  
7 Company's financial statements reflect that  
8 reality in that there is no deferred amount for  
9 SNF litigation costs on its books. Accordingly,  
10 Con Edison's request for recovery here for past  
11 SNF litigation costs should be rejected.

12 Q. Explain what adjustments are necessary to remove  
13 this item from the Company's electric revenue  
14 requirement request?

15 A. It is necessary to remove the proposed recovery  
16 of \$3.411 million of nuclear fuel litigation  
17 costs from the Company's forecast of other  
18 electric operating revenues and \$5.543 million  
19 of unamortized nuclear fuel litigation costs  
20 from the Company's forecast of rate year  
21 electric rate base.

22 **Deferred Verizon Joint Use Poles Revenue (Electric)**

23 Q. How much does the Company propose to refund in  
24 the rate year for deferred Verizon joint use

1 pole revenue?

2 A. The Company proposes to refund \$11.043 million  
3 over three years, or \$3.681 million on an annual  
4 basis. The \$11.043 million reflects the actual  
5 balance of deferred revenues on the Company's  
6 books as of December 31, 2012.

7 Q. Is Staff recommending an adjustment the  
8 Company's proposed refund?

9 A. Yes. In its response to DPS-391, Con Edison  
10 states that it anticipates to receive \$2.2  
11 million and \$1.8 million of additional revenue  
12 related to its joint use pole agreement with  
13 Verizon in 2013 and 2014, respectively.  
14 Accordingly, we are increasing the Company's  
15 proposed refund from \$11.043 to \$15.043, or by  
16 \$4.000 million to reflect the additional  
17 revenues anticipated by the Company.

18 Since the amortization of the refund is  
19 being reflected over three-years, we are  
20 increasing the pass back in the rate year from  
21 \$3.681 million to \$5.014 million, or by \$1.333  
22 million. A concomitant adjustment is also  
23 required, decreasing rate base by \$1.581 million  
24 to reflect the increased level of unamortized

1 deferred revenue associated with the Verizon  
2 joint use pole agreement in the rate year.

3 **Reserve for 2005 -2008 Capital Expenditure (Electric)**

4 Q. Would the Panel please explain its adjustment?

5 A. In its response to DPS-93, the Company agreed  
6 with us that its initial electric filing should  
7 be revised to reflect an additional credit of  
8 \$2.448 million related to the Department's  
9 review of the Company's capital expenditures in  
10 Case 07-E-0523. In its preliminary electric  
11 update, the Company included the \$2.448 million  
12 over three years, or \$0.816 annually. However,  
13 Con Edison mistakenly presented it as a recovery  
14 from customers rather than as a refund to  
15 customers, thus overstating its electric revenue  
16 requirement by \$1.6 million. In its  
17 supplemental response to DPS-93, the Company  
18 notes that since its initial response it has  
19 determined that the additional credit of \$2.448  
20 million should be reduced by \$1.612 million to  
21 \$0.836 million. The Company claims that the  
22 \$1.612 million is the amount by which refunds to  
23 customers have exceeded the Company's cumulative  
24 liability related to this item from 2005 through

1 March 2013. Con Edison claims that its  
2 cumulative liability for the period April 2005  
3 through March 2013 amounted to \$36.442 million  
4 but actual refunds have amounted to \$38.054  
5 million, or \$1.612 million more. Thus, the  
6 Company maintains that as of the beginning of  
7 the rate year the Company's liability to  
8 customers will be \$0.836 million, or \$2.448  
9 million less \$1.612 million.

10 Q. Do you agree with the Company's proposal?

11 A. Subject to the Company providing, in its  
12 rebuttal filing, detailed work-papers supporting  
13 the amounts claimed to have been refunded to  
14 electric customers between April 2005 and March  
15 2013, yes.

16 Q. What adjustments are necessary to correct the  
17 Company's preliminary electric update and  
18 reflect the amounts that have already been  
19 refunded to customers?

20 A. It is necessary to increase the rate year  
21 forecast other electric operating revenues by  
22 \$1.088 million and decrease electric rate year  
23 base by \$1.768 million to reflect the balance of  
24 unamortized deferred revenue associated with

1 this item.

2 **Brownfield Tax Credits (Electric)**

3 Q. Is Con Edison allowed to defer the difference  
4 between the actual NYS Brownfield tax credit it  
5 takes on its NYS tax return and the Brownfield  
6 tax credit amount reflected in electric delivery  
7 rates?

8 A. Yes.

9 Q. Did the Company include a request related to  
10 Brownfield tax credits in its electric filing?

11 A. Yes. In its preliminary electric update, the  
12 Company included a refund of \$2.367 million over  
13 three years, or \$0.789 million on an annual  
14 basis, for amounts related to the tax credit.  
15 However, as Con Edison indicated in its response  
16 to DPS-484, its intent was to reflect the  
17 amortization as a recovery from customers, not  
18 as a refund to customers.

19 Q. Did Staff review the Company's support for the  
20 requested recovery of \$2.367 million?

21 A. Yes. We reviewed the support behind Con  
22 Edison's request and determined that no deferred  
23 amounts actually exist for either recovery or  
24 refunding. In fact, in its supplemental

1 response to DPS-484 (supplement), the Company  
2 withdraws its request for recovery related to  
3 this item.

4 Q. Are any adjustments necessary to remove this  
5 item from the Company's electric revenue  
6 requirement and rate base?

7 A. It is necessary to decrease other electric  
8 operating revenues by \$0.789 million and  
9 increase electric rate base by \$1.282 million.

10 **Net Plant Reconciliation (Electric)**

11 Q. Under the 2010 Electric Rate Plan, is the  
12 Company required to defer the difference the  
13 revenue requirement impact (i.e., carrying costs  
14 including depreciation) of the amount by which  
15 its actual expenditures for capital programs  
16 result in average net plant (excluding removal  
17 costs) that is less the average plant-in-service  
18 balance (excluding removal costs) for each rate  
19 year?

20 A. Yes, for the transmission & distribution (T&D),  
21 production, shared service, infrastructure and  
22 the enterprise resource project (ERP or Project  
23 One) plant-in service categories. The revenue  
24 requirement impact is calculated by applying an

1 annual carrying charge factor for the applicable  
2 capital expenditure category to the amount by  
3 which the actual is below the target. The  
4 reconciliations to average plant-in-service  
5 balances for rate year 2 and rate year 3 are  
6 cumulative within each of the T&D and Other  
7 capital expenditures categories. That is, a  
8 carrying charge deferral is required only if the  
9 actual average net plant balances for the 36  
10 month period covered by the rate plan for a  
11 category is below the target average net plant  
12 balances over that period for the category. Con  
13 Edison is not allowed to recover the carrying  
14 charges associated with expenditures for capital  
15 programs in rate year 1 that cause the average  
16 net plant balances to exceed the RY1 plant-in-  
17 service target. The ERP is subject to  
18 reconciliation based on the average net plant  
19 balances for that project during the term of the  
20 2010 Electric Rate Order.

21 Q. Did the Company include a request related to its  
22 net plant reconciliation credits in its electric  
23 filing?

24 A. Yes. In its initial filing, the Company

1 included a refund of \$24.721 million over three  
2 years, or \$8.240 million on an annual basis, for  
3 amounts related to the reconciliation based on  
4 net plant activity through June 30, 2012. In  
5 its preliminary electric update, the Company  
6 reduced its refund from \$24.721 million to  
7 \$6.660 million, or by \$18.060 million based on  
8 net plant activity through February 2013.

9 Q. Did the Panel review the Company's support for  
10 the proposed refund of \$6.660 million?

11 A. Yes. We reviewed the net plant support behind  
12 the proposed refund and found several problems.  
13 First, the Company's actual electric net plant  
14 balance includes approximately \$76 million of  
15 Smart Grid investment. However, the Company  
16 should not be including any Smart Grid capital  
17 expenditures in the net plant reconciliation  
18 because it is recovering the carrying charges  
19 through a surcharge mechanism, not in electric  
20 base rates. Its inclusion in the net plant  
21 reconciliation would cause a recovery of  
22 carrying charges on the same Smart Grid  
23 investment twice.

24 Second, the Company's net plant balance

1 includes approximately \$45 million of capital  
2 expenditures associated with the reconstruction  
3 of the World Trade Center (WTC) that was  
4 transferred from the WTC deferral account to  
5 electric plant in service. However, the 2010  
6 Electric Rate Plan did not provide for the  
7 transfer of WTC related capital expenditures out  
8 of the WTC deferral account to electric plant-  
9 in-service. Thus, the net plant targets  
10 established in the 2010 Electric Rate Plan did  
11 not reflect the transfer. Consequently,  
12 including the WTC capital expenditures in the  
13 net plant reconciliation is not appropriate.

14 Third, for the net plant reconciliation for  
15 its ERP, the Company included its Company-wide  
16 net plant of approximately \$131 million rather  
17 than only the electric piece of the net plant of  
18 \$115.9 million thereby understating carrying  
19 charges owed to customers.

20 Finally, the Company's reconciliation  
21 includes the carrying charges associated with  
22 T&D expenditures for capital programs in rate  
23 year 1 that caused their average net plant  
24 balances to exceed the rate year 1 plant-in-

1 service target.

2 Q. Is Staff recommending that the Commission adjust  
3 the Company's electric net plant reconciliation?

4 A. Yes. We recommend that the Company's  
5 reconciliation be corrected to address the  
6 aforementioned issues as well as to update the  
7 reconciliation based on net plant activity  
8 through March 31, 2013. Consequently, we  
9 recommend increasing the Company's proposed  
10 refund from \$6.660 million to \$23.765 million,  
11 or by \$17.105 million. Since the refund is  
12 being amortized over three years, we recommend  
13 increasing the Company's proposed rate year  
14 amortization from \$2.220 million to \$7.922  
15 million, or by \$5.702 million.

16 A concomitant adjustment is also required  
17 decreasing rate base by \$9.266 million to  
18 reflect the increased level of the unamortized  
19 deferred credit associated with the net plant  
20 reconciliation in the rate year.

21 **59<sup>th</sup> Street Gas Conversion (Steam)**

22 Q. Is Con Edison seeking to recover in this case  
23 amounts associated with its fuel conversion  
24 project at the Company's 59th Street Station

1 before it is reflected in steam rates?

2 A. Yes. The Company is seeking to recover, before  
3 it is admitted to steam rate base in this case,  
4 \$1.710 million over three years, or \$0.570  
5 million annually, representing the revenue  
6 requirement associated with its 59th Street  
7 Station capital addition. Specifically, the  
8 proposed recovery represents the incremental  
9 revenue requirement associated with the 59th  
10 Street Station investment for the six month  
11 period July 1, 2013 through December 31, 2013  
12 based on the Company's anticipated in service  
13 date of July 2013.

14 Q. What is the basis for this request?

15 A. In its testimony, the Company's Accounting Panel  
16 indicates that the basis for the deferral is  
17 that the Company's current 2010 Steam Rate Plan  
18 in Case 09-S-0794 provides the following:  
19 "The net plant targets do not include any costs  
20 associated with the 59th Street or 74th Street  
21 gas addition proposed by the Company in its  
22 initial filing. If, during the term of the  
23 Steam Rate Plan, the Company needs to install  
24 gas-burning capability (or implement other

1 measures) at either or both stations in order to  
2 comply with a change in rule, law and/or  
3 regulation (e.g., a change in environmental laws  
4 relating to permissible levels of emissions from  
5 the Stations), the Company's recovery of and a  
6 return on these investments, incremental O&M  
7 expenses, if any, will commence on the date that  
8 such equipment is placed in service, subject to  
9 Commission approval of the petition described  
10 below."

11 Q. Did the Company file a petition with the  
12 Commission seeking authority to recover  
13 expenditures related to adding natural gas  
14 burning capability at its 59th and 74th Street  
15 Stations during the term of the 2010 Steam Rate  
16 Plan?

17 A. Yes. In July 2011, Con Edison petitioned the  
18 Commission in Case 09-S-0794, seeking approval  
19 of special ratemaking treatment for its  
20 expenditures associated with the two projects.  
21 In particular, the Company sought recovery on an  
22 accelerated basis of the total projected revenue  
23 requirement related to the projects including  
24 capital costs of \$109 million through its steam

1 Fuel Adjustment Clause (FAC).

2 Q. Did the Commission issue an order allowing for  
3 accelerated recovery of the Company's projected  
4 Steam plant capital investments?

5 A. No. In its Order issued February 22, 2012, the  
6 Commission denied Con Edison's request for  
7 accelerated recovery of its projected capital  
8 investments and stated that the Company should  
9 seek to recover all prudently incurred costs  
10 associated with the projects through traditional  
11 base rate recovery in its next steam filing.

12 Q. Are you proposing to remove the requested costs  
13 from the Company's rate year forecast?

14 A. Yes. Since the Company was not authorized to  
15 defer costs associated with the fuel  
16 conversions, there is no basis to provide rate  
17 recovery of the unauthorized deferral here. As  
18 a result, we are increasing the Company's rate  
19 year forecast of other steam operating revenues  
20 by \$0.570 million. A concomitant adjustment is  
21 also required decreasing rate base by \$0.927  
22 million to reflect the removal of this item from  
23 the Company's rate year steam rate base.

24 **Operation and Maintenance Expenses**

1 **Administrative & General Expense Capitalized (Common)**

2 Q. Can you explain Con Edison's forecast of rate  
3 year Administrative & General (A&G) expense  
4 capitalized?

5 A. Yes. The A&G costs capitalized, an offset to  
6 O&M expense represents the overhead costs  
7 attributed to the Company's construction  
8 expenditures, including corporate accounting,  
9 purchasing, and information resources costs,  
10 etc. According to the Company's general  
11 accounting procedures, costs that are directly  
12 related to Company labor are allocated to  
13 construction in the same proportion as the ratio  
14 of the Company's direct construction labor costs  
15 to total labor costs (i.e., the labor  
16 capitalization rate). Costs that are related to  
17 construction projects in a manner not directly  
18 proportional to labor expenditures are allocated  
19 on the basis of a time study of each department  
20 involved. In a period of changing construction  
21 activities, the labor capitalization rate and  
22 the administrative expenditures applied to  
23 construction are both expected to change  
24 accordingly.

1 Q. How did the Company determine its rate year  
2 forecast of A&G expense capitalized?

3 A. The Company first determined the ratio of the  
4 increase in rate year capital expenditures over  
5 the historic test year level for each service.  
6 The ratio was then applied to the actual level  
7 of A&G expense capitalized in the historic test  
8 year for each service to arrive at the rate year  
9 forecast for each service.

10 Q Does Staff agree with the Company's rate year  
11 forecast?

12 A. No. While we agree with the Company's concept  
13 of adjusting the A&G credit proportionally with  
14 the change in capital expenditures, we do not  
15 agree with the ratio the Company used.

16 Q. Please explain.

17 A. When Con Edison developed its ratio it relied on  
18 its forecast of rate year plant additions net of  
19 retirements when it should have used its rate  
20 year forecast of capital expenditures. Since  
21 net plant additions are significantly less than  
22 the Company's planned capital expenditures, the  
23 Company's forecast of capitalized A&G is  
24 underestimated.

1 A. How does Staff recommend forecasting the rate  
2 year A&G expense capitalized?

3 A. We determined the ratio of forecast of capital  
4 expenditures to actual historic test year  
5 capital expenditure levels for each service.  
6 Our ratios were then applied to the actual level  
7 of A&G cost capitalized during the historic year  
8 for each service. The capitalized A&G costs  
9 were then escalated to the rate year levels  
10 using escalation rates that are applicable to  
11 the underlying costs to arrive at the rate year  
12 forecast of capitalized A&G for each utility  
13 service. As a result, we are proposing to  
14 increase the A&G expense credit (decrease O&M  
15 expense) by \$4.690 million and \$0.408 for  
16 electric and gas, respectively and decrease the  
17 credit (increase O&M expense) for steam by  
18 \$1.639.

19 **Austerity (Common)**

20 Q. Do Con Edison's electric, gas and steam rate  
21 filing's include an imputation for austerity  
22 related measures?

23 A. Yes. The Company includes an imputation for  
24 austerity that increases its forecast of rate

1 year O&M expenses by \$16.7 million (\$13.2  
2 million Electric, \$2.0 million Gas and \$1.5  
3 million Steam).

4 Q. Did the Company provide testimony or evidence by  
5 any means in support of its imputation to  
6 increase rate year O&M expense for austerity?

7 A. No. Unlike other program changes proposed by  
8 the Company, there is no justification for the  
9 need or nature of the costs for which the  
10 Company is seeking rate recovery. As a result  
11 there is no way to determine if the requested  
12 costs are just and reasonable.

13 Q. Is the Panel recommending an adjustment?

14 A. Yes. The Panel recommends that the Commission  
15 remove the entire \$16.7 million (\$13.2 million  
16 Electric, \$2.0 million Gas and \$1.5 million  
17 Steam) from the Company's rate year forecast of  
18 electric, gas and steam O&M expense due to lack  
19 of support and a verifiable link between the  
20 historic test year and the rate year.

21 **Company Labor (Common)**

22 Q. How did Con Edison develop its forecast of rate  
23 year labor expense?

- 1 A. Con Edison started with its actual booked  
2 historic test year labor expense of \$733.7  
3 million (Electric \$565.5 million, Gas \$109.4  
4 million and Steam \$58.8 million). It then  
5 normalized, or increased, the historic test year  
6 expense by \$3.375 million (Electric \$2.9  
7 million, Gas \$0.361 million and Steam \$0.114  
8 million) to account for certain non-recurring  
9 labor expenses and to annualize labor expenses  
10 that were not fully recognized in the historic  
11 test year. The Company then increased that  
12 amount by \$9.048 million (Electric \$7.4 million,  
13 Gas \$1.3 million and Steam \$0.348 million) to  
14 reflect new, or the expansion of existing  
15 electric, gas and steam programs, referred to by  
16 Con Edison as program changes. The Company then  
17 applied a labor escalation rate of 6.43%,  
18 inclusive of a 1% productivity adjustment, to  
19 arrive at a rate year expense forecast of \$793.7  
20 million (Electric \$612.6 million, Gas \$118.1  
21 million and Steam \$63.0 million).
- 22 Q. Is the Panel adjusting the Company's forecast of  
23 rate year labor expense?

1 A. Yes. We recommend two adjustments to Con  
2 Edison's rate year forecast. The first  
3 adjustment reflects a lower and more appropriate  
4 employee headcount than the Company uses. The  
5 second adjustment reduces the Company's request  
6 for labor related program changes.

7 Q. What level of employee headcount does Con Edison  
8 use to forecast its rate year labor expense?

9 A. By relying on the historic test year labor  
10 expense, the Company uses the average number of  
11 employees during the historic test year, or  
12 13,716 employees.

13 Q. Do you agree with the Company's use of the  
14 average number of employees during the historic  
15 test year to forecast rate year labor expense in  
16 these proceedings?

17 A. No. The use of the average historic test year  
18 employee headcount will significantly overstate  
19 the forecast of labor expense in the rate year  
20 as it does not adequately reflect the Company's  
21 current employee headcount or the trend in force  
22 count over the past several years.

23 Q. Would the Panel please explain why?

- 1 A. The use of a historic year average employee  
2 headcount is appropriate when headcounts are  
3 varying in order to capture the increases and  
4 decreases in headcount over a period of time.  
5 However, the Company's average employee  
6 headcount, as shown in Exhibit\_\_\_SAP-6, has  
7 declined consistently since December 2008. From  
8 December 2008 to June 2011, the Company's  
9 employee headcount decreased from 14,326 to  
10 13,839, or by 487 employees. From July 2011 to  
11 June 2012, the historic test year, the Company's  
12 employee headcount decreased further from 13,839  
13 to 13,565, or by additional 274 employees.
- 14 Q. Did the Company's employee headcount continue to  
15 decline between July 2012 and December 2012?
- 16 A. Yes. In its response to DPS-26, the Company  
17 states that from July 2012 to December 2012, its  
18 employee headcount decreased from 13,565 to  
19 13,259, or by another 306 employees.
- 20 Q. Did Con Edison indicate how it is managing the  
21 Company's workload with a reduced workforce?
- 22 A. Yes. In its response to DPS-384, the Company  
23 indicates it is using outside contractors,  
24 redeploying existing employees, and utilizing

1 employee overtime. In addition, the Company  
2 notes that it has realized efficiencies due to  
3 project optimization and prioritization, as well  
4 as the use of new technology, such as automated  
5 meter reading. The Company acknowledges that  
6 all of these measures have mitigated the need to  
7 replace employees that leave the Company through  
8 attrition.

9 Q. Is the Panel recommending an adjustment to the  
10 Company's forecast?

11 A. Yes. We recommend that the Company's rate year  
12 forecast be reduced by \$23.831 million (Electric  
13 \$18.367 million, Gas \$3.553 million and Steam  
14 \$1.909 million) to reflect the Company's average  
15 December 2012 employee headcount of 13,259.

16 Q. Does the Company's forecast of labor expense  
17 include wage progression increases for weekly  
18 employees?

19 A. Yes. The labor expense forecast includes  
20 0.7%semi-annual wage progression increases for  
21 weekly employees.

22 Q. What is the nature of a wage progression award  
23 for the Company's weekly employees?

24 A. Per the terms of the current collective

1 bargaining agreements, certain employees are  
2 entitled to a series of wage progressions that  
3 over time increase the employee's rate of pay  
4 from the hiring rate to the top pay rate for  
5 their title. These awards are conditioned upon  
6 satisfactory performance evaluations and are in  
7 addition to other general wage award increases.

8 Q. Has the Commission rejected Con Edison's request  
9 for incremental wage progression increases for  
10 weekly employees in prior rate cases?

11 A. Yes. In 2009 Electric Rate Order in Case 08-E-  
12 0539, the Commission denied the Company's  
13 request to include incremental wage progression  
14 allowances in the Company labor expense  
15 forecast. The Commission determined that costs  
16 related to the wage progressions were reflected  
17 in the historic test year labor costs which the  
18 Company sought to increase for incremental  
19 progression amounts. Specifically, the  
20 Commission determined that employee turnover  
21 would result in savings not reflected in the  
22 Company's forecast methodology. The Commission  
23 found that the cost of the wage progressions for  
24 new hires was offset by the savings realized

1 from employees who retire at the top of the wage  
2 progression scale. Additionally, the Commission  
3 determined that the Company's forecast included  
4 wage progressions for employees who were at the  
5 top of the wage progression scale and,  
6 therefore, not entitled to additional wage  
7 progressions.

8 Q. Did Con Edison make any changes to the  
9 methodology used to calculate wage progression  
10 increases in this case?

11 A. Yes. The Company forecasted wage progression  
12 increases for 60% of its weekly employees. The  
13 60% factor represents the 2009 to 2012 three-  
14 year average fraction of weekly employees that  
15 received progression increases. However, the  
16 Company's methodology is slightly flawed because  
17 the 0.7% semi-annual wage progression factor was  
18 applied to the average weekly employee base  
19 wage. The average weekly base wage includes the  
20 wages for weekly employees that are not entitled  
21 to wage progressions, since they are at the top  
22 of pay scale. As such, the average base wage is  
23 higher than the average wage for progression  
24 eligible employees. Thus, the Company's

1 forecast method will likely overstate the rate  
2 year cost of progression awards.

3 Q. Does this change in forecast method address all  
4 the concerns the Commission had?

5 A. No. The Company's revised forecast method only  
6 addresses the Commission's concern that not all  
7 weekly employees are entitled to wage  
8 progressions as they are at top of the wage  
9 progression scale. The revised forecast method  
10 does not address the concern that employee turn-  
11 over results in savings that offset any cost  
12 related to wage progressions.

13 Q. Did Con Edison provide any other rationale that  
14 attempts to address the Commission's concerns  
15 regarding incremental costs related to  
16 progression increases for weekly employees?

17 A. The Company asserts the percentage of its weekly  
18 employees that are eligible for retirement has  
19 decreased since 2008. Additionally, Con Edison  
20 claims that the attrition rate for employees  
21 above and below the age of 55 is approximately  
22 the same and that the average annual base wages  
23 paid to employees below the age of 55 has  
24 increased. Therefore, Con Edison claims it is

1 not reasonable to assume that the cost of the  
2 wage progressions for new hires will be offset  
3 by the savings realized from employees who  
4 retire.

5 Q. Does the Panel support the Company's claims that  
6 wage progressions represent an incremental cost  
7 to the Company?

8 A. No. We still maintain that the savings  
9 resulting from employees leaving the Company  
10 offset the costs associated with other  
11 employee's advancement and wage progressions.  
12 Over time, with the natural turnover of  
13 employees, the progressive steps are averaged  
14 into any given year. In years when there is a  
15 high rate of turnover, the costs would be less  
16 than an average year. In years when turnover is  
17 low, the progressive increments may cost more  
18 than in an average year. Over time the savings  
19 from seasoned employees at higher pay levels  
20 leaving should more than offset the cost on step  
21 increases for new employees

22 Q. Is the Panel proposing an adjustment to the  
23 Company's forecast of labor expense related to  
24 progression increases in these cases?

1 A. Based on the circumstances we observed in these  
2 proceedings, we are not.

3 Q. Please explain.

4 A. Due to the historic and continuing declining  
5 trend in the Company's employee headcount, we  
6 recommend that a more current headcount be  
7 reflected in the overall forecast of Company  
8 labor expense. We recognized that in reflecting  
9 a lower actual headcount in our rate year labor  
10 expense forecast, we are in effect capturing  
11 some of the savings that would otherwise offset  
12 wage progressions in the rate year. Therefore,  
13 there is the potential for double counting the  
14 savings if our labor forecast and a disallowance  
15 of wage progressions were adopted by the  
16 Commission. As such, we are not recommending a  
17 wage progression adjustment in these cases.

18 Q. Would the Panel now turn to and explain the  
19 Company's request for labor related program  
20 changes?

21 A. Yes. The labor related program changes reflect  
22 the Company's request for incremental employees  
23 above the 13,716 employees reflected in its base  
24 labor forecast.

1 Q. Has the Company filled any of the requested  
2 positions?

3 A. Yes. According to its pre-filed testimony and  
4 Con Edison's responses to DPS-380, DPS-382, and  
5 DPS-383, the Company has filled a number of the  
6 positions as of December 31, 2012.

7 Q. Are you proposing to adjust the Company's  
8 request for labor related program changes?

9 A. Yes. Since we rely on the December 2012  
10 employee headcount, we reduced the labor program  
11 change forecast for positions that were filled  
12 at the end of 2012. Consequently, we are  
13 reducing the Company's requested labor program  
14 changes by \$5.123 million (Electric \$4.233  
15 million, Gas \$0.731 million and Steam \$0.159  
16 million).

17 **Contract Labor Expense (Common)**

18 Q. Did the Panel adjust the Company's rate year  
19 forecast of contract labor expense?

20 A. Yes. Con Edison's aforementioned labor program  
21 change includes a request for 31 additional  
22 employees related to the Company's  
23 implementation of its new financial system,  
24 Project One, which we will discuss in more

1 detail later in our testimony. In its response  
2 to DPS-508, the Company indicates that 12 of the  
3 31 additional positions requested were actually  
4 filled by outside contractors between June 30,  
5 2012 (the end of the historic test year) and  
6 December 31, 2012. Therefore, since these  
7 employees are not reflected in our forecast of  
8 rate year Company labor expense, it is  
9 appropriate to reflect them in the Company's  
10 forecast of rate year contract labor expense.

11 Q. What is the impact of your proposed adjustment  
12 to the Company's rate year forecast of contract  
13 labor expense?

14 A. Our adjustment increases the Company's forecast  
15 of contract total labor expense by \$1.300  
16 million (Electric \$1.023 million, Gas \$0.211  
17 million and Steam \$0.066).

18 **Company Labor Fringe Benefit Adjustment (Common)**

19 Q. Would the Panel explain what the Company's  
20 adjustment to labor fringe benefits represents?

21 A. Yes. The Company's forecast reflects the change  
22 in fringes benefits (i.e., pensions and other  
23 post-employment benefits (OPEB), employee  
24 welfare expenses, and worker compensation costs)

1 in the rate year that are associated with its  
2 various proposals including its request for  
3 incremental employees.

4 Q. Are you adjusting the Company's expense  
5 forecast?

6 A. Yes. We reduced the Company's forecast by  
7 \$3.535 million (\$2.921 million Electric, \$0.505  
8 million Gas and \$0.109 Steam) to account for our  
9 adjustment to the Company's request for labor  
10 related program charges.

11 Q. Is the Panel proposing another adjustment to the  
12 Company's forecast?

13 A. Yes. In its preliminary electric and gas  
14 updates, the Company increased the projected  
15 labor savings related to its Saturated Automated  
16 Meter Reading (AMR) program from \$1.521 million  
17 to \$1.965 million, or by \$0.444 million.

18 However, Con Edison did not adjust its forecast  
19 of rate year employee fringe benefits related to  
20 its revised rate year AMR labor savings.

21 Consequently, an adjustment decreasing the  
22 Company's forecast of rate year fringe benefits  
23 by \$0.320 million (\$0.262 million Electric and  
24 \$0.058 million Gas) is appropriate.

1 Q. Does the Company agree with your adjustment?

2 A. Yes. In its response to DPS-481, Con Edison  
3 agrees that these adjustments are proper.

4 **Consultants Expense (Common)**

5 Q. Would the Panel explain how Con Edison developed  
6 its forecast of rate year consultant expense?

7 A. To project consultant expenses for auditing  
8 services provided by PricewaterhouseCoopers  
9 (PwC), Con Edison increased actual 2011 audit  
10 fees by 2% annually from the end of the historic  
11 test year through the rate year. The Company's  
12 forecast all other consultant expenses using a  
13 three year average of actual expenses for the  
14 period July 2009 through June 2012.

15 Q. Does the Panel agree with the Company's rate  
16 year forecast of non-PwC consultant expenses?

17 A. No. In its response to DPS-17 and DSP-364, Con  
18 Edison disclosed that its forecast includes  
19 expenses associated with Case 09-M-0243 and 09-  
20 M-0114, the Commission's investigative audit  
21 related to fraudulent and illegal actions  
22 committed by Con Edison employees and  
23 contractors.

24 Q. Would you briefly explain the investigative

1 audit?

2 A. The Commission commenced these proceedings in  
3 2009 following the arrests of 13 Con Edison  
4 employees and a Company contractor. The Con  
5 Edison employees were charged with crimes  
6 related to arranging for Con Edison to pay  
7 inflated claims by a contractor and with  
8 receiving over \$1 million in bribes and  
9 kickbacks. This investigation focuses on Con  
10 Edison's internal controls that govern  
11 transactions with contractors. The  
12 investigation was also designed to estimate the  
13 extent of ratepayer harm stemming from improper  
14 activity for the period 2000-2009.

15 Q. Were internal control deficiencies observed in  
16 the course this investigation?

17 A. Yes. The Department's consultants, Charles  
18 River Associates, observed a number of issues  
19 with the Company's control environment in place  
20 at the time. In CRA's opinion, breakdowns in  
21 Con Edison's internal control processes and  
22 systems provided opportunities for the arrestees  
23 to perpetrate fraud.

24 Q. Has the Company taken any actions to prevent

1           these fraudulent and illegal activities from  
2           happening again?

3    A.    Yes.  As discussed in Con Edison's Accounting  
4           Panel testimony, the Company is proposing to  
5           increase spending to enhance its internal  
6           controls.  Specifically, the establishment of a  
7           Business and Ethic department and a Quality  
8           Assurance department, to strengthen the  
9           Company's auditing function and improve its  
10          ethics and compliance management.

11   Q.    Is the Panel recommending adjustments to the  
12          Company's rate year forecast?

13   A.    Yes.  We are removing all expenses related to  
14          the investigative audit that are embedded in the  
15          Company's rate year forecast.  In consideration  
16          of the internal control changes the Company has  
17          made and those planned by the Company to prevent  
18          future fraudulent and illegal activities, we do  
19          not expect the activity that caused the  
20          investigation to reoccur.

21   Q.    Please quantify the Panel's recommended  
22          adjustment?

23   A.    Our adjustment decreases the Company's forecast  
24          of rate year consultant expense by \$2.100

1 million (Electric \$1.704 million, Gas \$0.277  
2 million and Steam \$0.119 million).

3 **Corporate and Fiscal (Common)**

4 Q. Is the Panel recommending adjustments to the  
5 Company's forecast of rate year corporate and  
6 fiscal expenses?

7 A. Yes. We are recommending that the Company's  
8 forecast be reduced by \$0.128 million (Electric  
9 \$0.104 million, Gas \$0.017 million Steam \$0.007  
10 million) to reflect the removal of costs related  
11 to long-term equity grants and dividend  
12 equivalents for members of the Company's Board  
13 of Directors.

14 Q. Does Con Edison agree with the Panel's  
15 adjustment?

16 A. Yes. In response to DPS-461, the Company agrees  
17 and states that the costs were intended to be  
18 and should be removed from its rate year  
19 forecast.

20 **Employees Pension and OPEB Expense (Common)**

21 Q. How much is the Company's forecasting for rate  
22 year employee pension and OPEB expense?

23 A. The Company's preliminary update reflects a rate  
24 year expense of \$468.8 million (Electric \$384.8

1 million, Gas \$56.6 million and Steam \$27.4  
2 million).

3 Q. How did the Company develop its forecast for  
4 rate year pension and OPEB expense?

5 A. The Company's rate year projections reflect the  
6 actuarial determined level of cost based on  
7 studies performed by the Company's consultants.

8 Q. Is the Panel recommending the Commission adjust  
9 the Company's rate year forecast?

10 A. Yes. We recommend the removal of the expense  
11 associated with the Company's Supplemental  
12 Retirement Income Plan (SRIP) from the forecast.

13 Q. Would you please describe the Company's SRIP?

14 A. According to its response to DPS-141, the  
15 Company's Supplemental Retirement Income Plan is  
16 a non-qualified deferred compensation plan that  
17 is incremental to the pension benefits provided  
18 to all employees in its qualified pension plans.  
19 The Company determines which employees are  
20 allowed to participate in the SRIP, as well as,  
21 the type and level of benefits provided.

22 Q. Would the Panel please explain what the primary  
23 difference is between the Company's qualified  
24 pension plan and its Supplemental Retirement

1 Income Plan?

2 A. The Company's conventional qualified pension  
3 plans qualify for special tax treatment to the  
4 Company under the Internal Revenue Code (IRC) of  
5 1986. In particular, the Company can deduct  
6 contributions made to its qualified pension  
7 plans on its tax return. The Supplemental  
8 Retirement Income Plan provides additional  
9 retirement benefits to certain highly  
10 compensated employees whose qualified pension  
11 benefits are limited by the Employee Retirement  
12 Income Security Act (ERISA) of 1974 and the  
13 Internal Revenue Code. Since the benefits  
14 provided by the Supplemental Retirement Income  
15 Plan exceed federal limits, the Company cannot  
16 deduct contributions made to the SRIP for income  
17 tax purposes.

18 Q. How many employees participate in the Company's  
19 Supplemental Retirement Income Plan?

20 A. In its supplemental response to DPS-141, the  
21 Company indicates that, as of December 31, 2012,  
22 there are 81 active participants, 109 retired  
23 participants and nine beneficiaries  
24 participating in the plan.

1 Q. How much of Con Edison's forecast for pension  
2 and OPEB expense is for the SRIP?

3 A. The Company's forecast includes a total of  
4 \$9.984 million (Electric \$8.271 million, Gas  
5 \$1.107 million and Steam \$0.605 million) for its  
6 SRIP.

7 Q. Why does the Panel believe it is appropriate to  
8 remove Supplemental Retirement Income Plan from  
9 the Company's pension forecast in these  
10 proceedings?

11 A. Con Edison's SRIP is a discretionary benefit  
12 provided to certain highly compensated  
13 individuals. It provides benefits that are in  
14 excess of the Company's normal pension plan.  
15 Moreover, the plan is non-qualifying because the  
16 benefits provided exceed the federal limits.  
17 Con Edison has not provided any evidence in this  
18 proceeding to support the cost of program as  
19 being reasonable, nor why customers should be  
20 required to support the plan through recovery in  
21 their rates.

22 Although in its response to DPS-141, the  
23 Company states that its SRIP is part of a  
24 pension component of an overall reasonable

1 compensation package, however in its responses  
2 to DPS-537 and DPS-686 Con Edison indicates that  
3 the cost of Supplemental Retirement Income Plan  
4 was not included in any of the compensation  
5 studies the Company put forth with respect to  
6 management compensation in these proceedings.

7 Q. Is the Company proposing to update pension and  
8 OPEB expense for the latest known actuarial data  
9 later in these proceedings?

10 A. Yes.

11 Q. Does the Panel have any objections to the  
12 Company's proposed update for the latest known  
13 actuarial data later in the proceeding?

14 A. No.

15 **Employee Welfare Expenses (Common)**

16 Q. How did the Company forecast rate year employee  
17 welfare expenses?

18 A. Con Edison uses three different methods to  
19 forecast its rate year employee welfare  
20 expenses. For non-health care benefits that are  
21 correlated to salaries and wages, the Company  
22 escalates the historic test year cost by its  
23 forecast for labor escalation of 6.43%. For  
24 non-health care benefits that are unrelated to

1 salaries and wages, the Company forecasts using  
2 its general inflation factor of 4.49%. For  
3 health care costs (i.e., dental, prescription  
4 drug and hospital and medical insurance costs),  
5 the Company developed its forecast based on  
6 projections of rate year premium rates and  
7 enrollment levels.

8 Q. How did the Company determine the rate year  
9 premium rates it used for health care costs?

10 A. For its self-insured health care costs (MetLife  
11 Dental, Prescription Drug, and Cigna hospital  
12 and medical insurance costs), the Company  
13 increased its estimated 2012 cost, which is  
14 comprised of six-months of actual costs and six-  
15 months of estimated costs, in the rate year by  
16 using plan-specific escalation factors. The  
17 Company used plan-specific escalation factors of  
18 6% for MetLife Dental and Prescription Drug  
19 costs and 10.9% for the Cigna hospital and  
20 medical insurance costs which are based on claim  
21 history and the projected impact of recent plan  
22 design changes.

23 For its managed health care costs (HMOs),  
24 the Company increased the projected 2013 premium

1 rates, provided by the various HMOs, by its  
2 general inflation rate of 1.96% from 2013 to the  
3 rate year.

4 For long term disability costs, the Company  
5 escalated the historic test year expense by its  
6 forecast for labor escalation (6.43%). For  
7 Vision and Flex Benefits Administration, Con  
8 Edison escalated the historic test year cost by  
9 its general inflation rate of 4.49%.

10 In total, the Company's rate year forecast  
11 of health care expense, before employee  
12 contributions, reflects an increase of  
13 approximately 18% from the historic test year  
14 level.

15 Q. Is the use of plan-specific escalation factors  
16 consistent with Commission practice?

17 A. No. The use of plan-specific escalation factors  
18 to project health care costs is inconsistent  
19 with the Commission's practice of escalating  
20 health care costs by general inflation. This  
21 policy was established in Commission Opinion No.  
22 84-27 issued October 12, 1985 and reaffirmed in  
23 numerous Commission decisions including Opinion  
24 94-3 issued February 11, 1994 wherein the

1 Commission stated: "The treatment of medical  
2 insurance costs as one factor in a large pool of  
3 expenses subject to inflation should produce a  
4 reasonable result, because some items will  
5 increase at a rate greater than inflation and  
6 others at a lower rate."

7 Q. Has the Commission recently used inflation to  
8 forecast medical insurance expenses in rate  
9 cases?

10 A. Yes, in the 2008 Electric Rate Order in Case 07-  
11 E-0523, Con Edison - Electric Rates, issued  
12 March 25, 2008, the Commission included medical  
13 care expenses in the inflation pool. At pages  
14 42-43 of the Order, the Commission stated: "The  
15 practice uses the recent costs and the current  
16 employee count to capture the present operating  
17 conditions. It also acknowledges that the costs  
18 in this and many other categories are expected  
19 to increase. Overall, the Company is expected  
20 to manage the cost increases in the entire group  
21 and to keep them, as best it can, to the general  
22 inflation rate. By this time, we would expect  
23 the utility companies to have accepted the  
24 standard practice and to apply their resources

1 more productively to other matters."

2 Q. Is the Panel recommending an adjustment to the  
3 Company's forecast of rate year health care  
4 costs?

5 A. Yes. Consistent with past Commission practice  
6 we propose adjusting the Company's forecast to  
7 reflect latest known premiums, escalated by  
8 general inflation to the rate year. For the  
9 Company's self-insured, HMOs, and vision health  
10 care costs we use the Company's latest known  
11 2013 premiums and current enrollment levels to  
12 develop a 2013 cost. We then escalate the 2013  
13 cost by general inflation to the rate year  
14 (1.96%) to arrive at our forecast. We rely on  
15 the Company's responses to DPS-423 for latest  
16 known premiums and DPS-424 for current plan  
17 enrollment levels.

18 Q. Has the Company taken any measures to mitigate  
19 its health care costs in order to manage them at  
20 a level closer to inflation?

21 A. Yes. The Company's Compensation & Benefits  
22 Panel discuss several measures taken by Con  
23 Edison to control or reduce future health care  
24 costs.

1 Q. Did the Company quantify the savings associated  
2 with the various measures it took to control or  
3 reduce health insurance costs?

4 A. Yes. In response to DPS-136, the Company  
5 indicates that plan design changes were  
6 implemented in 2012, and were estimated to save  
7 \$4.1 million for health insurance plans covering  
8 management employees and \$7.8 million for plans  
9 covering union employees.

10 Q. Did the Panel also make a related adjustment to  
11 the Company's forecast of employee health  
12 insurance contributions?

13 A. Yes. To be consistent with our proposed rate  
14 year forecast of health care costs, we adjusted  
15 the Company's forecast of rate year enrollment  
16 levels to the current enrollment levels used in  
17 our forecast.

18 Q. What is the impact of your adjustments to the  
19 Company's rate year forecast of employee welfare  
20 expense?

21 A. Our recommended adjustments reduce the Company's  
22 forecast of rate year employee welfare expense  
23 by \$20.807 million (Electric \$16.375 million,  
24 Gas \$3.370 million and Steam \$1.061 million).

1 **Insurance Expense (Common)**

2 Q. How did the Company develop its forecast of rate  
3 year insurance expense?

4 A. Con Edison carries a number of types of  
5 insurance policies, including property,  
6 liability, directors and officers insurance,  
7 workers compensation bond and insurance on  
8 company employees. For all insurance other than  
9 excess liability insurance, the Company  
10 escalated latest known insurance premiums by its  
11 forecast of general inflation to the rate year.  
12 For excess liability insurance, the Company  
13 escalated latest known premium levels by a  
14 growth factor of either 12.5% or 20.0% depending  
15 on the provider.

16 Q. What evidence did Con Edison provide in support  
17 of the growth factors it used to forecast rate  
18 year excess liability insurance?

19 A. In its response to DPS-365, the Company  
20 indicates that its growth factors were based on  
21 discussions it had with its insurance brokers.

22 Q. Does the Panel agree with the growth factors of  
23 12.5% or 20% the Company used to forecast rate  
24 year excess liability insurance expense?

1 A. No. The Company provided insufficient evidence  
2 to support its forecast of excess liability  
3 insurance. Absent reliable evidence, we see no  
4 reason to treat excess liability insurance costs  
5 any differently from the way the Company  
6 forecasts other forms of insurance and the way  
7 the Commission treats other costs such as health  
8 care costs. Consequently, we are proposing to  
9 reduce the Company's forecast of insurance  
10 expense by a total of \$1.372 million (Electric  
11 \$1.080 million, Gas \$0.222 million and Steam  
12 \$0.070 million) to reflect the Company's latest  
13 known excess liability premiums escalated by  
14 general inflation to the rate year.

15 A concomitant adjustment is also required  
16 to decrease rate base by a total of \$0.537  
17 million (Electric \$0.435 million, Gas \$0.085  
18 million and Steam \$0.017 million) to reflect our  
19 forecast of prepaid insurance expense for the  
20 rate year.

21 Q. Does the Panel have any other comments regarding  
22 the Company's forecast of rate year insurance  
23 premiums expense?

24 A. Yes. We would point out that the 2013-2014 New

1 York State budget included reforms to workers  
2 compensation insurance law. The reforms are  
3 intended to cut costs for employers, increase  
4 the minimum benefit to workers, and overhaul the  
5 way the workers' compensation system is managed.

6 Q. Will the reforms have an impact on the cost of  
7 workers' compensation insurance for the Con  
8 Edison in the rate year?

9 A. Based on the information we have gathered to  
10 date, it is unclear whether the reforms will  
11 have an impact on its workers compensation  
12 costs. However, the Company should disclose  
13 with appropriate evidence, in rebuttal, the  
14 impact the legislation will have on its cost of  
15 workers' compensation insurance.

16 Q. Did Con Edison state its intention to update  
17 insurance expense for the latest known insurance  
18 premiums?

19 A. Yes.

20 Q. Does the Panel object to the Company's proposal?

21 A. Subject to the condition of providing  
22 information in rebuttal concerning the impact of  
23 recent reforms to workers compensation law on  
24 its workers compensation costs, no.

1 **Informational Advertising (Electric and Gas)**

2 Q. What is the level of Con Edison's requested rate  
3 allowance for informational advertising?

4 A. The Company is requesting a total of \$8.083  
5 million (\$6.669 million Electric and \$1.414  
6 million Gas) for informational advertising  
7 expense in the rate year.

8 Q. How did the Company forecast rate year  
9 informational advertising expense?

10 A. For its electric and gas services, the Company  
11 escalates the historic year level by its  
12 forecast of general inflation. Con Edison is  
13 not requesting an allowance for its steam  
14 service.

15 Q. Are you recommending that the Company's forecast  
16 of rate year electric and gas informational  
17 advertising expense be adjusted?

18 A. We recommend that the Company's forecast be  
19 decreased by \$0.391 million (\$0.247 million  
20 Electric and \$0.144 million Gas) to reflect an  
21 allowance of 0.08% of Staff's forecast of rate  
22 year electric and gas revenues.

23 The Commission's Statement of Policy on  
24 Advertising and Promotional Practices of Public

1 Utilities, 17 NY PSC 1-R, issued February 25,  
2 1977 suggests a range of between 0.04% and 0.1%  
3 of revenues be recoverable in rates for  
4 informational advertising, in inverse proportion  
5 to utility size. In its Order in Case 08-E-  
6 0523, the Commission allowed Con Edison's  
7 percentage to rise to 0.08%, excluding ESCO  
8 revenues. The Company has provided no  
9 testimony, evidence or justification for the  
10 larger allowance it proposes.

11 Q. Are you making any additional adjustments to the  
12 Company's forecast?

13 A. Yes. We are increasing the Company's forecast  
14 by \$0.055 million (\$0.040 million Electric and  
15 \$0.015 million Gas) to account for Staff's  
16 adjustments increasing the Company's rate year  
17 forecast of electric and gas sales revenue.

18 **Institutional Dues and Subscriptions (Common)**

19 Q. How did Con Edison forecast rate year  
20 institutional dues and subscriptions expense?

21 A. The Company relies on a three-year historic  
22 average of actual incurred expenses for the  
23 period July 2009 through June 2012 to forecast  
24 its rate year expenses.

1 Q. How much is the Company requesting for  
2 institutional dues and subscriptions expense?

3 A. The Company requests a total rate year rate  
4 allowance of \$2.557 million (\$1.776 million  
5 Electric, \$0.717 million Gas and \$0.064 million  
6 Steam).

7 Q. Are you recommending an adjustment to the  
8 Company's request?

9 A. Yes. In its response to DPS-390, the Company  
10 provided a list of charges made to institutional  
11 dues and subscriptions expense during the  
12 historic test year. The list reflects a number  
13 of charges that appear to be donations for  
14 charitable, social or community welfare  
15 purposes. On advice of counsel, recovery of  
16 such donations from customers in rates is  
17 unconstitutional (Cahill v. PSC, 76 N.Y.2d 102  
18 (1990)). Donations for charitable, social or  
19 community welfare purposes must be booked in a  
20 below the line account and, in turn, excluded  
21 from utility revenue requirements for ratemaking  
22 purposes. Since the Company uses a three-year  
23 historic average of expenses to forecast the  
24 rate year rate allowance and we only have

1 detailed information relating to the historic  
2 test year, we cannot at this time quantify the  
3 appropriate amount by which to adjust the  
4 Company's rate year forecast.

5 Q. What then does the Panel propose?

6 A. Since we do not have the data to parse  
7 legitimate dues and subscriptions from the  
8 Company's rate year forecast of costs, we  
9 recommend eliminating the entire cost from the  
10 Company's revenue requirements. The Company  
11 should provide in its rebuttal a revised  
12 forecast of dues and subscriptions that excludes  
13 all forms of charitable contributions. As such,  
14 we recommend that the Company's rate year rate  
15 allowance be reduced by \$0.745 million (\$0.605  
16 million Electric, \$0.98 million Gas \$0.042  
17 million Steam).

18 Q Does the Panel have any other recommendations to  
19 ensure that the shareholders, not customers, pay  
20 for all future Con Edison philanthropy?

21 A. Yes. Con Edison should include in its rebuttal  
22 a description of the changes in accounting it  
23 will make to ensure that its charitable  
24 contributions are accounted below the line in a

1 manner that is consistent with the Commission's  
2 Policy. The changes proposed by Con Edison  
3 should be designed to ensure that customers do  
4 not directly or indirectly, (i.e., through  
5 earnings sharing), bear any of the costs of the  
6 Company's charitable gifts.

7 **Regulatory Commission Expense (Common)**

8 Q. How much is the Company seeking for regulatory  
9 commission expense in the rate year?

10 A. The Company is requesting a rate year rate  
11 allowance of \$39.908 million (Electric \$30.498  
12 million, Gas \$7.334 million and Steam \$2.076  
13 million).

14 Q. Is the Panel proposing to adjust the Company's  
15 forecast of rate year regulatory commission  
16 expense?

17 A. Yes. In its responses to DPS-364 and DPS-557,  
18 the Company indicates that expenses related to  
19 the Commission's investigative audit in Case 09-  
20 M-0243, previously discussed in our testimony,  
21 are embedded in the Company's regulatory  
22 commission expense forecast. Consistent with  
23 our proposal to remove these expenses from the  
24 Company's forecast of consultant expenses, we

1 are removing expenses from the Company's  
2 forecast of regulatory commission expense. Our  
3 adjustment decreases Con Edison's rate year  
4 forecast by \$0.445 million (Electric \$0.361  
5 million, Gas \$0.059 million and Steam \$0.025  
6 million).

7 Q. Is the Panel recommending any additional  
8 adjustment to the Company's forecast?

9 A. Yes. We recommend an additional adjustment to  
10 the Company's forecast of regulatory commission  
11 expense for gas service?

12 Q. Would you explain the proposed adjustment?

13 A. Yes. Historically, Con Edison has received  
14 refunds of assessments by the New York State  
15 Energy Research and Development Authority  
16 (NYSERDA). The Company's forecast of regulatory  
17 expense for gas service fails to reflect refunds  
18 of any amounts related to the NYSERDA  
19 assessment.

20 Q. Please explain your adjustment in more detail.

21 A. Each fiscal year a tentative NYSERDA assessment  
22 is developed based on estimated research costs  
23 and Con Edison's total intrastate revenues. In  
24 the following year, a final assessment bill for

1 the period is developed using actual data and as  
2 a result a refund or a request for additional  
3 payment is issued to the Company. A review of  
4 Con Edison's actual experience over the past  
5 three fiscal years shows that the Company has  
6 received an assessment refund from NYSERDA in  
7 each year. Accordingly, we recommend that the  
8 Company's forecast of regulatory commission  
9 expense for gas service be reduced to reflect an  
10 estimated refund of \$0.165 million in the rate  
11 year.

12 A concomitant adjustment decreasing the  
13 rate year prepaid PSC assessment included in gas  
14 rate base by \$72,000 is also required.

15 Q. How did the Panel determine the estimated  
16 refund?

17 A. We developed a ratio based on a three-year  
18 average of actual refunds to estimated  
19 assessments and then applied that ratio to the  
20 Company's latest assessment bill.

21 **Uncollectible Accounts Expense (Electric)**

22 Q. Can you describe Con Edison's rate year forecast  
23 of uncollectible accounts expense for its  
24 electric service?

1 A. The Company's rate year forecast is comprised of  
2 a request for uncollectible expense associated  
3 with its electric customers' accounts and a  
4 request for uncollectible expense associated  
5 with its electric POR program. The Company used  
6 completely different approaches to forecast each  
7 request.

8 For Con Edison electric customer accounts,  
9 the Company developed a rate of uncollectible  
10 write-offs to electric sales revenue based on  
11 historic data. The uncollectible rate is then  
12 applied to the Company's rate year electric  
13 sales forecast to derive the rate year  
14 uncollectible expense forecast associated with  
15 Con Edison customer accounts. In its initial  
16 filing, the Company's uncollectible rate of  
17 0.81% was based on actual write offs and sales  
18 revenue in the historic test year and resulted  
19 in a rate year forecast of \$65.27 million. In  
20 its preliminary electric update, the Company  
21 increased its uncollectible rate to 0.82% based  
22 on actual write-offs and electric sales revenues  
23 for the 12-month ended February 2013. The  
24 update increased rate year uncollectible expense

1 associated with Con Edison customer accounts to  
2 \$66.075 million, or by \$0.806 million.

3 For account receivables purchased from  
4 ESCOs through its electric POR program, Con  
5 Edison forecasts that approximately 49%, or  
6 \$10.299 million, of its POR discount revenue  
7 forecast of \$20.853 million will be  
8 uncollectible in the rate year.

9 The two forecasts combined are used to  
10 determine the Company's rate year forecast for  
11 uncollectible accounts expense for electric  
12 service of \$76.374 million.

13 Q. Is Staff recommending adjustments to the  
14 Company's rate year forecast of uncollectible  
15 associated with its electric customer accounts?

16 A. Yes. We recommend this piece of the Company's  
17 forecast be adjusted to reflect Staff's rate  
18 year forecast of electric sales revenue.  
19 Consequently, we are increasing the Company's  
20 rate year forecast by \$0.410 million.

21 Q. Does Staff agree with the Company's rate year  
22 forecast of uncollectible accounts expense  
23 associated with its electric POR program?

24 A. No. Con Edison's approach is arbitrary and the

1 Company failed to provide any basis to support  
2 it. Absent reliable evidence, we see no reason  
3 to accept the Company's forecast.

4 Q. Is the Panel proposing to adjust the Company's  
5 forecast?

6 A. Yes. Based on information provided in response  
7 to DPS-495 as well as work-papers provided by  
8 the Company, we were able to determine actual  
9 POR uncollectible write-offs for twelve months  
10 ended June 2010 through 2012 and for the eight  
11 months from July 2012 to February 2013. We then  
12 compared actual POR uncollectible write-offs  
13 with actual receivables purchased, provided in  
14 DPS-310 and DPS-311, for the same time periods.  
15 We found actual POR uncollectible rates in the  
16 range of 0.58% to 0.69%, with an average rate of  
17 0.63%.

18 Accordingly, we are recommending that the  
19 average ratio of 0.63% be applied to the latest  
20 level of electric accounts receivable purchased  
21 from ESCOs, discussed earlier in our testimony,  
22 to project the rate year POR uncollectible  
23 expense. Our forecast results in rate year POR  
24 uncollectible expense of \$7.389 million, or

1           \$2.910 million less than the Company's forecast.

2   Q.    Please summarize your two adjustments to Con  
3           Edison's rate year forecast of uncollectible  
4           accounts expense for electric service?

5   A.    Our adjustments reduce the Company's rate year  
6           forecast of electric uncollectibles from \$76.374  
7           million to \$73.874 million, or by \$2.500  
8           million.

9   **Uncollectible Accounts Expense (Gas)**

10   Q.   Please describe Con Edison's rate year forecast  
11           of uncollectible expense for gas service?

12   A.   Similar to the way the Company forecasted  
13           uncollectible expense for its electric service,  
14           the Company's rate year forecast for gas service  
15           is comprised of a request for uncollectible  
16           expense associated with its gas customers  
17           accounts and a request for uncollectible expense  
18           associated with its gas POR program. Here  
19           again, the Company uses different approaches to  
20           forecast each request.

21           For Con Edison gas customer accounts, the  
22           Company developed a rate of uncollectible write-  
23           off to gas sales revenue. The uncollectible  
24           rate was then applied to the Company's rate year

1 forecast of gas sales to derive its rate year  
2 forecast of uncollectible expense. In its  
3 direct case, the Company's uncollectible rate of  
4 0.81% was based on actual write off and gas  
5 sales revenue for 12-month period ended June  
6 2012 and resulted in a forecast of rate year for  
7 uncollectible expense \$12.022 million. In the  
8 Company's preliminary update, the write-off rate  
9 was updated to 0.82%, based on actual write-offs  
10 and gas sales revenues for 12-month ended  
11 February 2013. The update increased the rate  
12 year uncollectible expense associated with its  
13 gas customer accounts by \$0.119 million to  
14 \$12.140 million.

15 For gas account receivables purchased from  
16 ESCOs through its gas POR program, Con Edison  
17 just forecasted that approximately 43%, or  
18 \$1.438 million, of its POR discount revenue  
19 forecast of \$3.363 million will be uncollectible  
20 in the rate year.

21 Combining the two forecasts, the Company's  
22 rate year forecast for gas uncollectible expense  
23 is \$13.578 million.

24 Q. Is Staff recommending that the Company's rate

1 year forecast of uncollectible associated with  
2 its gas customer accounts be adjusted?

3 A. Yes. We are adjusting this piece of the  
4 Company's forecast to reflect Staff's rate year  
5 forecast of gas sales revenue. Consequently, we  
6 are increasing the Company's rate year forecast  
7 by \$0.151 million.

8 Q. Does the Panel agree with the Company's rate  
9 year forecast of uncollectible accounts expense  
10 associated with its gas POR program?

11 A. No. As previously noted, Con Edison's approach  
12 is without sound basis. Absent reliable  
13 evidence, we see no reason to accept the  
14 Company's forecast.

15 Q. Is the Panel proposing to adjust the Company's  
16 forecast?

17 A. Yes. The Company's supporting work-papers and  
18 information provided in response to DPS-495,  
19 indicate actual uncollectible write-offs for  
20 twelve months ended June 2010 through 2012 and  
21 for the eight months from July 2012 to February  
22 2013. We then compared actual gas POR  
23 uncollectible write-offs with actual gas  
24 accounts receivable purchased, provided in DPS-

1 310 and DPS-311, for the same period of time.  
2 We found actual POR uncollectible rates in the  
3 range of 0.58% to 0.69%, with an average rate of  
4 0.63%.

5 Therefore, we recommend that the average  
6 ratio of 0.63% be applied to the latest level of  
7 gas accounts receivable purchased from ESCOs,  
8 discussed earlier in our testimony, to project  
9 the rate year POR uncollectible expense.  
10 Staff's forecast results in rate year POR  
11 uncollectible expense of \$1.26 million, or a  
12 \$0.178 million reduction from the Company's  
13 forecast.

14 Q. Please summarize your two adjustments to the  
15 Company's rate year forecast of uncollectible  
16 accounts expense for electric service?

17 A. Our two adjustments reduce the Company's rate  
18 year forecast from \$13.578 million to \$13.552  
19 million, or by \$0.026 million.

20 **Project One (Common)**

21 Q. What is Project One?

22 A. Project One, or Con Edison's Enterprise Resource  
23 Planning (ERP) System, is the largest technology  
24 investment in the history of Company. It

1 replaced over sixty existing financial-related  
2 systems, including the Cost Analysis Reporting  
3 System, Materials Management System, Procurement  
4 Management System, Accounts Payable System,  
5 Concur Expense System and Con Edison's  
6 affiliate's Orange & Rockland's financial  
7 programs. Many of these systems were developed  
8 in the 1960's and 1970's and, according to the  
9 Company, were increasingly more difficult to  
10 maintain as they were programmed in a computer  
11 language that were no longer commonly used.

12 Project One is an enterprise-wide software  
13 system that is based on Oracle's financial and  
14 supply chain ERP system. The system allows  
15 users to develop business plans and budgets,  
16 record financial transactions and analyze data,  
17 purchase materials and services, manage  
18 inventory and report financial and purchasing  
19 data.

20 Q. What are the benefits of Project One to Con  
21 Edison?

22 A. Advantages include employing modern, integrated  
23 software programs to manage the Company's  
24 businesses. According to Con Edison, this

1 project was undertaken to also improve  
2 reliability, timeliness and transparency of  
3 financial data, reduce financial reporting risk,  
4 and enhance cost management practices.

5 Q. How much has the Company invested in Project  
6 One?

7 A. As of February 28, 2012 Con Edison has invested  
8 roughly \$156 million in Project One, of which  
9 \$146 million is allocated to Con Edison and \$10  
10 million is allocated to Orange & Rockland  
11 Utilities, Inc (O&R).

12 Q. Is Con Edison requesting additional funding for  
13 Project One in this proceeding?

14 A. Yes. The Company, through its Shared Service  
15 Panel, is requesting \$3.165 million (\$2.492  
16 million Electric, \$0.513 million Gas and \$0.160  
17 million Steam) for 31 new employees to expand  
18 programming support for Project One. In  
19 addition, through its Accounting Panel, Con  
20 Edison is requested \$2.801 million (\$2.273  
21 million Electric, \$0.370 million Gas and \$0.158  
22 million Steam) related to ongoing fees for  
23 support from Oracle. Finally, the Accounting  
24 Panel testifies that the Company will expend an

1 additional \$12 million for capital updates to  
2 the system over 2014 and 2015.

3 Q. When did Con Edison seek approval for its  
4 investment in Project One?

5 A. In its last electric rate case, the Company  
6 requested funding for Project One. While the  
7 Staff Accounting Panel took issue with the ERP  
8 project in its direct case, the Company  
9 persuaded Staff, through information provided in  
10 rebuttal testimony and information provided  
11 during negotiations, to support this project as  
12 part of the electric Joint Proposal to the  
13 Commission. Staff's support of the project was  
14 largely due to the net benefits that were to be  
15 realized from the investment once implemented.

16 In its response to DPS-293, in Case 09-E-  
17 0428 (Case 09-E-0428, Staff Accounting Panel  
18 Exhibit\_\_\_AP-2, pages 18 through 29), Con Edison  
19 indicated that once implemented, the Company  
20 would realize significant cost savings. In  
21 particular, the Company disclosed ongoing annual  
22 net capital and operations and maintenance  
23 expense benefits of \$7.684 million and \$7.032  
24 million, respectively once the project was

1 implemented. The Company also indicated one-  
2 time capital and O&M benefits of \$5.195 million  
3 and \$4.000 million, respectively once the  
4 project was implemented.

5 Q. Has Project One been implemented?

6 A. Yes, it was implemented on July 1, 2012.

7 Q. What cost savings did Con Edison reflect in its  
8 rate filings related to the largest technology  
9 investment in its history?

10 A. The Company did not reflect any.

11 Q. Why not.

12 A. In its response to DPS-281, the Company claims  
13 that due to the size and scale of  
14 implementation, it is continuing the process of  
15 stabilizing Project One, and it will take a  
16 number of years for it to recognize full  
17 efficiencies.

18 Q. Is Panel proposing to impute cost savings into  
19 the Company's respective electric, gas and steam  
20 rates filings?

21 A. Yes. We are proposing to impute \$6.540 million  
22 (\$5.307 million Electric, \$0.864 million Gas and  
23 \$0.369 million Steam) of cost savings in the  
24 Company's forecast of electric, gas and steam

1 expenses. This represents Con Edison's share or  
2 93% of net O&M cost savings (Case 09-E-0428,  
3 Staff Accounting Panel Exhibit\_\_\_AP-2, pages 18  
4 through 29) that were relied on in the last  
5 electric case as the basis to support the  
6 investment in the Joint Proposal to the  
7 Commission.

8 Q. What is the Panel's basis for an imputation?

9 A. In its support the Project One investment the  
10 Company claimed significant cost savings for its  
11 customers. Absent those projected savings, it's  
12 doubtful that Staff would have even considered,  
13 let alone supported, the Company's request as  
14 part of the Joint Proposal to the Commission.  
15 If the Company miscalculated the amount and/or  
16 timing of the cost savings, associated with  
17 largest technology investment in its history,  
18 then it is the Company, not its customers that  
19 should bear the impact of that miscalculation.

20 Q. Do you have any additional recommendations to  
21 the Commission?

22 A. Yes. The Commission should direct Con Edison to  
23 file annually with the Secretary to the  
24 Commission a year-end report on its Project One

1 investment reporting in detail: the capital  
2 investments made and O&M expense incurred to  
3 support Project One, along with an explanation  
4 of the expenditures; and, a quantification of  
5 any and all net benefits realized. If no  
6 benefits were realized, Con Edison would be  
7 required to explain why no benefits were  
8 realized.

9 Furthermore, we recommend that the  
10 Commission should consider, as part of its next  
11 management audit of Con Edison, directing that  
12 an in-depth review of the Company's Project One  
13 investment be performed.

14 **Depreciation Expense**

15 Smart Grid

16 Q. Does the Panel have any adjustments to the  
17 Company's forecast of rate year electric  
18 depreciation expense related to its Smart Grid  
19 Investment Grant (SGIG) project investments?

20 A. Yes. In the electric rate filing, the Company  
21 proposed to continue recovery of its Smart Grid  
22 investments via the Smart Grid surcharge  
23 mechanism. However, as we discuss in greater  
24 later in our testimony, we are recommending that

1 the Company transition recovery of Smart Grid  
2 Demonstration Grant (SGDG) and SGIG project  
3 costs to base rates. Consequently, we are  
4 increasing the Company's forecast of rate year  
5 depreciation expense by \$1.056 million to add  
6 back the SGIG related depreciation expense that  
7 the Company removed.

8 **Taxes Other Than Income Taxes**

9 **Property Tax Expense (Common)**

10 Q. Are you recommending an adjustment to the  
11 Company's rate year forecast of property tax  
12 expense?

13 A. Yes. We are decreasing Con Edison's rate year  
14 forecast by \$1.171 million (\$0.009 million  
15 Electric, \$1.145 million Gas and \$0.017 million  
16 Steam) to account for Staff's recommended  
17 adjustments to the Company's forecast of plant  
18 additions for each service in 2013 and 2014ce.

19 Q. Is Con Edison proposing to reconcile the  
20 difference between its actual property tax  
21 expense and the rate allowance for property tax  
22 expense for each service?

23 A. Yes. The Company requests a full and  
24 symmetrical reconciliation of property taxes for

1 each service. Currently, for each utility  
2 service, Con Edison is deferring the difference  
3 between its actual property tax expense and the  
4 level reflected in rates on a shared 80% / 20%  
5 basis between customers and shareholder with the  
6 Company benefit or exposure capped at 10 basis  
7 points on equity annually.

8 Q. Do you support the Company's request for  
9 reconciliation of property tax expenses?

10 A. No. First, the Commission's is setting rates  
11 for just one rate year and such mechanisms are  
12 generally not employed by the Commission in a  
13 single year rate plan. In only one instance we  
14 know of, Case 08-E-0539, the Commission allowed a  
15 full reconciliation mechanism for property taxes  
16 in a one year rate plan. However, this was the  
17 result of the Commission giving due  
18 consideration to the potential upside risk to  
19 property taxes due to the economic downturn that  
20 started in the fall of 2008 that it considered  
21 unique.

22 Second, reconciliation is not necessary  
23 when setting rates for a single rate year  
24 because by the time the Commission issues its

1 rate order in these cases, most of the property  
2 tax data will be known to the Commission and the  
3 latest know information can be reflected in the  
4 Commission's rate order.

5

6 **Payroll Taxes (Common)**

7 Q. Are you making any adjustments to the Company's  
8 forecast of rate year payroll taxes?

9 A. Yes, we are reducing the Company forecast by  
10 \$2.868 million (\$2.369 million Electric, \$0.358  
11 million Gas and \$0.141 Steam) to track the  
12 effects of Staff's recommended adjustments to  
13 the Company's labor expense.

14 **Subsidiary Capital Tax (Common)**

15 Q. Are you recommending an adjustment to the  
16 Company's forecast of rate year of Subsidiary  
17 Capital Tax?

18 A. Yes. We are decreasing the Company's forecast  
19 of Subsidiary Capital Tax expense by \$1.656  
20 million (\$1.346 million Electric, \$0.219 million  
21 Gas and \$0.091 Steam) based on the latest  
22 apportionment of revenues within New York City  
23 to total Company revenues (87%) and the common  
24 equity balance reflected in the Staff Capital

1           Structure Panel's forecasted rate year cost of  
2           capital.

3           **New York State Income Taxes (Common)**

4    Q.    Did the Panel prepare schedules showing the rate  
5           year forecast of NYS income tax expense for each  
6           service?

7    A.    Yes.   Schedule 1, page 5 of our Exhibit\_\_\_SAP-1  
8           presents our calculation of rate year NYS income  
9           tax expense for electric service.   Schedule 1,  
10          page 5 of our Exhibit\_\_\_SAP-2 presents our  
11          calculation of rate year NYS income tax expense  
12          for gas service.   Schedule 1, page 5 of our  
13          Exhibit\_\_\_SAP-3 presents our calculation of rate  
14          year NYS income tax expense for steam service.

15          **Federal Income Taxes**

16   Q.    Did the Panel prepare a schedule showing the  
17          rate year forecast of federal income tax expense  
18          for each service?

19   A.    Yes.   Schedule 1, page 6 of our Exhibit\_\_\_SAP-1  
20          presents our calculation of rate year federal  
21          income tax expense for electric service.

22                 Schedule 1, page 6 of our Exhibit\_\_\_SAP-2  
23          presents our calculation of rate year federal  
24          income tax expense for gas service.

1           Schedule 1, page 6 of our Exhibit\_\_\_SAP-3  
2           presents our calculation of rate year federal  
3           income tax expense for steam service.

4           **Manufacturing Tax Deduction (Steam)**

5   Q.   In its preliminary steam update, did the Company  
6           revise its state and federal income taxes for  
7           Steam service to try and recapture the revenue  
8           requirement related to a tax deduction that was  
9           reflected in the Steam Rate Order in Case 05-S-  
10          1376?

11   A.   Yes.

12   Q.   How much did the Company add back to its  
13          forecast of rate year state and federal income  
14          tax?

15   A.   The Company added back \$1.937 million to its tax  
16          forecasts, or one-third of the total amount of  
17          \$5.811 million it seeks to recover in steam  
18          rates over a three-year period.

19   Q.   Please explain the nature of the tax deduction.

20   A.   The American Job Creation Act of 2004 created a  
21          manufacturing tax deduction to provide a tax  
22          deduction for income attributable to domestic  
23          production activities.

24   Q.   What is the Company's basis for adding back the

1 manufacturing deduction in its forecast of  
2 income tax expense in the current steam case?

3 A. In its response to DPS-410, the Company  
4 indicates that when rates were established in  
5 Case 05-S-1376 a tax benefit related to the  
6 manufacturing deduction of \$5.811 million was  
7 reflected in steam rates over two years, or  
8 \$2.906 million per year. However, due to tax  
9 law changes establishing bonus depreciation, the  
10 Company incurred a loss for federal income tax  
11 purposes in 2009. Consistent with federal tax  
12 regulations, the loss was carried back to  
13 preceding tax years including 2005. As a result  
14 of the carry back, the actual amount of the  
15 manufacturing deduction the Company was able to  
16 realize was limited to \$1.3 million, or \$4.5  
17 million less than the amount reflected in steam  
18 rates.

19 In the response to DPS-410, the Company  
20 also notes its intention, in its rebuttal  
21 filing, to reduce its request from \$5.800  
22 million to \$4.500 million, or from \$1.937  
23 million to \$1.500 million on annual basis.

24 Q. Does the Panel support the Company's request to

1 the recapture the revenue requirement associated  
2 with this tax benefit?

3 A. No. The Steam Rate Order in Case 05-S-1376 did  
4 not include a provision allowing the Company to  
5 defer the difference between the actual tax  
6 benefit related to the manufacturing deduction  
7 realized by the Company and the tax benefit  
8 reflected in rates. Furthermore, the concept of  
9 isolating one single of element of a long  
10 forgotten and expired rate plan for special  
11 ratemaking treatment without disclosure or  
12 justification is ill-conceived. Consequently,  
13 we are removing the manufacturing tax add back  
14 from the Company's forecasts of rate year state  
15 and federal income tax expense for steam  
16 service.

17 **Rate Base**

18 **Plant In Service (Common)**

19 Q. Are you making any adjustments to the Company's  
20 forecast of rate year plant in service?

21 A. We are reducing the Company's forecast by  
22 \$102.732 million (\$30.896 million Electric,  
23 \$70.232 million Gas and \$1.604 Steam) to account  
24 for Staff's forecast of capital expenditures and

1 plant in service for each service in the rate  
2 year.

3 **Smart Grid (Electric)**

4 Q. Are you adjusting the Company's forecast of rate  
5 year electric net plant related to its Smart  
6 Grid Investment Grant (SGIG) project  
7 investments?

8 A. Yes. As discussed earlier, Con Edison proposes  
9 to continue recovery of SGIG investments through  
10 the Smart Grid surcharge mechanism and we  
11 recommend that the Company recover all Smart  
12 Grid related costs in electric base rates. As a  
13 result, we are increasing the Company's forecast  
14 of rate year electric net plant by \$69.383  
15 million to reflect the transfer of the Company's  
16 SGIG net plant investment from the current  
17 surcharge mechanism to electric rate year rate  
18 base.

19 **Accumulated Reserve for Depreciation (Common)**

20 Q. Are you making any adjustments to the Company's  
21 forecast of rate year accumulated reserve for  
22 depreciation?

23 A. We are reducing the Company's forecast by  
24 \$98.964 million (\$80.940 million Electric,

1       \$7.480 million Gas and \$10.544 Steam) to account  
2       for Staff's forecast of depreciation expense and  
3       plant-in-service for each service in the rate  
4       year.

5       **NIBCWIP (Common)**

6       Q.   Is the Panel adjusting the Company's forecast of  
7       rate year Non-Interest Bearing Construction Work  
8       In Progress (NIBCWIP)?

9       A.   Yes. We are decreasing the Company's forecast  
10       of electric and gas NIBCWIP by \$84.577 million  
11       and \$11.458 million, respectively, and  
12       increasing the Company's forecast of steam  
13       NIBCWIP by \$0.773 million to correct an error in  
14       the Company's construction and plant model  
15       developing the rate year forecasts.

16       Q.   Does the Company agree with your proposed  
17       adjustment?

18       A.   Yes. In its response to DPS-606, the Company  
19       agrees that the adjustment is warranted.

20       Q.   Are you making any additional adjustments to the  
21       Company's forecast of rate year NIBCWIP?

22       A.   Yes. We are reducing the Company's forecast by  
23       \$57.604 million (\$30.341 million Electric,  
24       \$25.395 million Gas and \$1.868 Steam) to account

1 for Staff's adjustments to the Company's  
2 forecast of 2013 and 2014 capital expenditures.

3 **Deferred Fuel (Electric and Steam)**

4 Q. Would the Panel explain how Con Edison forecasts  
5 rate year electric and steam deferred fuel?

6 A. Yes. The Company's rate year deferred fuel  
7 balances are based on the historic three-year  
8 average of deferred fuel balances for the period  
9 of July 2009 through June 2012.

10 Q. Is this methodology a change from that used by  
11 the Company, and approved by the Commission, to  
12 forecast electric and steam deferred fuel  
13 balances in the Company's previous electric and  
14 steam rate cases?

15 A. Yes. In its previous electric and steam cases,  
16 the Company based its forecast on projected  
17 deferred fuel balances.

18 Q. How was the projected deferred fuel balance  
19 developed in prior Con Edison rate cases?

20 A. It was developed using the Company's forecast of  
21 rate year fuel costs.

22 Q. Did the Company explain why it proposes to use a  
23 forecast based on historic information as  
24 opposed to using its forecast of rate year fuel

1 costs?

2 A. Yes. In its responses to DPS-376 and DPS-379,  
3 the Company stated that electric and steam fuel  
4 costs vary and are difficult to forecast and  
5 therefore historic information provides a more  
6 reasonable basis.

7 Q. Do you agree with the Company's rationale that  
8 historic information provides a more reasonable  
9 basis to base the rate year forecast on?

10 A. No. The Company's electric and steam fuel cost  
11 forecasts provide a logical and supportable  
12 approach to calculate the rate year forecast.

13 Q. Does the Company rely on its fuel cost forecasts  
14 to project any other rate year rate base  
15 elements?

16 A. Yes. Con Edison relies on its fuel cost  
17 forecasts in the development of its forecast of  
18 rate year electric and steam working capital.

19 Q. Please quantify the Panel's deferred fuel  
20 adjustments.

21 A. We are decreasing the Company's forecast of rate  
22 year electric deferred fuel balance from \$77.3  
23 million to \$71.9 million, or by \$5.5 million and  
24 we decreasing the Company's forecast of rate

1 year steam deferred fuel balance from negative  
2 \$4.6 million to negative \$9.4 million, or by  
3 \$4.7 million.

4 **FIT Interest Refund (Electric)**

5 Q. Is Staff recommending adjustments to the  
6 Company's forecast of electric rate base for a  
7 balance included related to a Federal Income Tax  
8 (FIT) interest refund?

9 A. Yes. In its electric filing, the Company  
10 included an FIT interest refund representing a  
11 receivable the Company recorded in 2007 based on  
12 a notice from the IRS that it was due interest  
13 on its 1997 FIT return. After the IRS issued  
14 the notice it later rescinded it and did not  
15 make the interest payment to the Company.  
16 Consequently, this item should not be reflected  
17 in rate base. In its response to DPS-389, the  
18 Company agrees that this item should not be  
19 reflected in rate base. Accordingly, we are  
20 reducing electric rate year rate base by \$1.506  
21 million.

22 **Mount Vernon Properties (Common)**

23 Q. How much did Con Edison include in its revenue  
24 requirement for its Mount Vernon properties?

1 A. The Company included \$2.081 million (\$1.638  
2 million Electric, \$0.337 million Gas and \$0.106  
3 million Steam) for properties it previously  
4 purchased.

5 Q. Please describe the acquisition of the Mount  
6 Vernon Properties?

7 A. Extensive contamination was found below the  
8 foundations of four residences adjacent to a  
9 Company manufactured gas plant cleanup site in  
10 Mount Vernon, NY. In order to meet remediation  
11 requirements, the Company deemed it cost-  
12 effective to purchase the four houses. The  
13 Company believed purchasing the properties and  
14 demolishing the houses to excavate the soil had  
15 numerous advantages over the alternative of  
16 remediation with the houses in place.

17 Q. Please describe how the Company has accounted  
18 for the properties?

19 A. The book cost of the properties is reflected as  
20 a regulatory asset on the Company's books.

21 Q. Does the Panel agree with the inclusion of the  
22 properties in the Company's rate year rate base?

23 A. No. Since the Company has not identified any  
24 specific future utility use for the properties,

1 we recommend that the properties be removed from  
2 rate year rate base for each service. In fact,  
3 in its response to DPS-454, the Company  
4 indicates that it has actually begun the process  
5 of marketing the property for sale.

6 Q. What about other expenses related to this  
7 property that potentially may be in the  
8 Company's rate year forecast?

9 A. We propose that the Company, in its rebuttal  
10 filing, remove any and all O&M, depreciation  
11 and/or property tax expense, associated with the  
12 property from its filing.

13 Q. Does the Panel have any other recommendations  
14 concerning the Mount Vernon properties?

15 A. Yes. Given Con Edison's lack of identified  
16 future utility use for the properties we  
17 recommend that the properties be transferred  
18 immediately from plant held for future use to  
19 non-utility property.

20 **Working Capital (Common)**

21 Q. Are you recommending an adjustment to the  
22 Company's forecast of Working Capital?

23 A. Yes. We are decreasing Con Edison's forecast of  
24 rate year working capital for electric and gas

1 service by \$14.066 million and \$3.593 million,  
2 respectively, and increasing the forecast for  
3 steam service by \$0.773 million to account for  
4 Staff's adjustments to the Company's forecast of  
5 rate year prepayments and O&M expenses.

6 **Regulatory Deferrals**

7 **Site Investigation and Remediation Costs (Common)**

8 Q. Are you proposing to adjust the Company's rate  
9 year balance of deferred Site Investigation and  
10 Remediation (SIR) program costs?  
11 A. Yes. In its preliminary update for each  
12 service, Con Edison reflected the rate year  
13 balance of deferred SIR program costs at a  
14 pretax amount. That is, the Company did not  
15 reflect the accumulated deferred income taxes  
16 arising from the book-tax timing differences  
17 related to SIR costs in its rate year balance of  
18 deferred SIR program costs. Funds provided  
19 through deferred taxes are considered cost-free  
20 capital and, therefore, that portion of the  
21 Company's SIR program costs financed by such  
22 funds should not be allowed a return.  
23 Consequently, we decreasing Con Edison's  
24 forecast by \$75.107 million (\$60.615 million

1 Electric, \$11.346 million Gas and \$3.146 million  
2 Steam) to reflect the average rate year balance  
3 at a net of tax amount.

4 Q. Does the Company agree with your adjustment?

5 A. Yes. In its response to DPS-483, the Company  
6 agrees that our adjustment is proper.

7 **Accumulated Deferred Income Taxes**

8 **ADR/ACRS/MACRS Depreciation Tax Deductions (Common)**

9 Q. Does the Panel have an adjustment to the  
10 Company's rate year forecast of Accumulated  
11 Deferred Income Taxes (ADIT) related to ADR,  
12 ACRS and MACRS depreciation tax deductions?

13 A. Yes. We are decreasing the Company's rate year  
14 electric deferred tax forecast (increasing rate  
15 year electric rate base) by \$253.258 million to  
16 correct a formulaic error in the Company's rate  
17 year forecast and to reflect actual ADIT  
18 balances as of December 31, 2012.

19 We are decreasing the Company's rate year  
20 gas forecast (increasing rate year gas rate  
21 base) by \$1.741 million to reflect actual ADIT  
22 balances as of December 31, 2012 thereby  
23 shortening the period of forecast.

24 Similarly, we are increasing the Company's

1 rate year steam forecast (decreasing rate year  
2 steam rate base) by \$4.467 million to reflect  
3 actual ADIT balances as of December 31, 2012.

4 Q. Does the Company agree with your adjustments?

5 A. Yes. In its response to DPS-568, the Company  
6 agrees with the adjustments and provides the  
7 ADIT balances related to ADR/ACRS/MACRS  
8 depreciation on which our adjustments are based.

9 Q. Are there any additional adjustments to the  
10 Company's forecast?

11 A. Yes. Staff is recommending changes to the  
12 Company's forecasts of electric, gas and steam  
13 depreciation expense and plant additions for the  
14 rate year. Consequently, we are increasing the  
15 Company's rate year forecast (decreasing rate  
16 year rate base) for electric and steam by \$8.292  
17 million and \$1.120 million, respectively, and  
18 decreasing the forecast for gas by \$ 0.328  
19 million to account for Staff's adjustments.

20 **Repair Allowance (Common)**

21 Q. Is the Panel adjusting the Company's rate year  
22 forecast of accumulated deferred income taxes  
23 related to Repair Allowance tax deductions?

24 A. Yes. We are increasing the Company's rate year

1 electric forecast (decreasing rate year electric  
2 rate base) from \$320.487 million to \$420.076  
3 million or by \$99.589 million to correct an  
4 error in the Company's rate year forecast and to  
5 reflect actual ADIT balances as of December 31,  
6 2012. The adjustment related to Repair Allowance  
7 is necessary because when separating the historic  
8 test year total ADIT into its Depreciation, Repair  
9 Allowance and SSCM deduction components, the  
10 amount used by the Company for Depreciation was  
11 understated by approximately \$136 million and the  
12 amount for Repair Allowance overstated by that  
13 same amount. These offsetting errors were carried  
14 through the forecasts of ADIT for each of those  
15 components. The understatement for Depreciation  
16 is included in our adjustment to Depreciation  
17 discussed above. The overstatement for Repair  
18 Allowance required a separate adjustment.

19 We are also increasing the Company's rate  
20 year gas forecast (decreasing rate year gas rate  
21 base) from \$91.784 million to \$99.512 million or  
22 by \$7.728 million to reflect actual ADIT  
23 balances as of December 31, 2012.

24 Finally, we are increasing the Company's

1 rate year steam forecast (decreasing rate year  
2 steam rate base) from \$5.588 million to \$5.823  
3 million, or by \$0.235 million to reflect actual  
4 ADIT balances as of December 31, 2012.

5 Q. Does the Company agree with your adjustments?

6 A. Yes. In its response to DPS-568, the Company  
7 agrees with the adjustments and provides the  
8 ADIT balances related to Repair Allowance on  
9 which our adjustments are based.

10 **SSCM Deductions (Common)**

11 Q. Is the Panel adjusting the Company's rate year  
12 forecast of accumulated deferred income taxes  
13 related to simplified service cost method (SSCM)  
14 tax deductions?

15 A. Yes. We are decreasing the Company's rate year  
16 electric forecast (increasing rate year electric  
17 rate base) from \$376.260 million to \$375.659  
18 million or by \$0.601 million to reflect actual  
19 ADIT balances as of December 31, 2012 to  
20 synchronize the SSCM deferred taxes balances to  
21 the Company's construction and plant model which  
22 uses December 31, 2012 as the starting point to  
23 forecast rate year net plant.

24 We are also increasing the Company's rate

1 year gas forecast (decreasing rate year gas rate  
2 base) from \$83.761 million to \$83.905 million or  
3 by \$0.144 million to reflect actual ADIT  
4 balances as of December 31, 2012.

5 Finally, we are increasing the Company's  
6 rate year steam forecast (decreasing rate year  
7 steam rate base) from \$35.440 million to \$38.500  
8 million, or by \$3.060 million to reflect actual  
9 ADIT balances as of December 31, 2012.

10 Q. Does the Company agree with your adjustments?

11 A. Yes. In its response to DPS-568, the Company  
12 agrees with the adjustments and provides ADIT  
13 balances related to SSCM on which our  
14 adjustments are based.

15 **Deferred SIT (Gas)**

16 Q. Would you please explain your SIT gas  
17 adjustment?

18 A. We are decreasing the average rate year forecast  
19 (increasing rate year rate base) by \$13.339  
20 million to correct an error in the Company's  
21 forecast. In its forecast Con Edison used a  
22 state income tax rate of 71% instead of the  
23 current rate of 7.1% thereby creating an  
24 understatement of SIT deferred taxes in the rate

1 year.

2 Q. Does the Company agree with your adjustment?

3 A. Yes. In its response to DPS-611, the Company  
4 agrees with the adjustment.

5 Q. Are you making any additional adjustments to the  
6 Company's forecast of rate year deferred SIT?

7 A. Yes. We are decreasing the rate year forecast  
8 for electric service by \$0.045 million and  
9 increasing the rate year forecast for gas and  
10 steam service by \$0.545 million and \$0.105  
11 Steam, respectively, to account for Staff's  
12 adjustments to the Company's forecast of rate  
13 year depreciation expense and plant-in-service.

14 **Earnings Base Capitalization (EBCap) Adjustment**

15 Q. Does the Panel agree with the Company's EBCap  
16 Adjustment?

17 A. No. We recommend that the Company's EBCap  
18 Adjustment (decreasing rate year rate base) be  
19 increased by \$127.127 million (\$98.967 million  
20 Electric, \$18.650 million Gas and \$9.510 million  
21 Steam) to account for our adjustment removing  
22 the Company's Supplemental Retirement Incentive  
23 Plan from the forecast of rate year pension and  
24 OPEB expense.

1 Q. Would the Panel please explain its adjustment in  
2 more detail?

3 A. Yes. The Company's historic test year  
4 capitalization includes a balance of \$127.127  
5 million related to the pension assets for the  
6 Company's Supplemental Retirement Incentive  
7 Plan. As part of our adjustment removing  
8 Supplemental Retirement Incentive Plan from the  
9 Company's forecast of rate year pension and OPEB  
10 expense, we removed the earnings from the  
11 Supplemental Retirement Incentive Plan pension  
12 assets that were credited to pension expense.  
13 Since we are not including the income generated  
14 by the Supplemental Retirement Incentive Plan  
15 pension assets in the Company's revenue  
16 requirement for any service it is appropriate to  
17 excluded the pension assets from the EBCap  
18 calculation.

19 **Smart Grid Surcharge (Electric Only)**

20 Q. Would the Panel explain how Con Edison is  
21 currently recovering its SGIG and SGDG project  
22 expenditures?

23 A. Yes. Pursuant to the Commission's October 19,  
24 2010 Order in Case 09-E-0310, the Company was

1 directed to establish a customer surcharge to  
2 permit for the recovery of the customers' share  
3 of SGIG and SGDГ projects which was not fully  
4 funded by federal grants. The Order provided  
5 that the surcharge method of recovering these  
6 costs is a short-term measure until the capital  
7 projects are included in rates in Con Edison's  
8 next rate proceeding.

9 Q. Please explain the Con Edison's request in this  
10 case.

11 A. The Company is proposing to include a portion of  
12 its SGIG and SGDГ project costs in rate and  
13 continue the surcharge approach for others.  
14 Specifically, the Company has reflected its  
15 Smart Grid project expenditures through June 30,  
16 2012 in rate base and has reflected the  
17 associated carrying charges costs in its revenue  
18 requirement. Con Edison proposes to continue  
19 the surcharge for Smart Grid project costs  
20 incurred after June 30, 2012 until included in  
21 rates at a time after the rate year in this  
22 proceeding.

23 The Company claims that this approach will  
24 allow Staff a reasonable opportunity to review

1 the costs as of June 30, 2012 prior to the  
2 completion of this case.

3 Q. Do you support the Company's proposal?

4 A. No. By the beginning of the rate year, January  
5 1, 2014, the Company will have expended  
6 approximately 97% of its total Smart Grid  
7 project costs and by March 31, 2014, the Company  
8 will have completed its Smart Grid project  
9 investments. Consequently, there is little, if  
10 any financial risk, to the Company or its  
11 customers by reflecting the Smart Grid project  
12 costs in rates in this proceeding.

13 Q. What is the Panel recommending?

14 A. We recommend that the Company's Smart Grid  
15 project costs be reflected in electric rates for  
16 the rate year ending December 31, 2014, and that  
17 the surcharge mechanism cease as December 31,  
18 2013. As noted above, the Company's investment  
19 will be completed as of March 31, 2014 and there  
20 is little, if any, benefit to the Company, its  
21 customers, or Commission in prolonging the  
22 surcharge. As the Commission noted in its  
23 October 2010 Order, the surcharge method of  
24 recovering these costs is a short-term measure

1 until the capital projects are included in rates  
2 in Con Edison's next rate proceeding.

3 Q. What is needed to effectuate this  
4 recommendation?

5 A. We discussed the appropriate revenue  
6 requirements adjustments earlier in our  
7 testimony. In addition, the Company would be  
8 required to file, approximately 60 days after  
9 the expiration of the surcharge mechanism on  
10 December 31, 2013, a reconciliation of Smart  
11 Grid revenues collected and its actual Smart  
12 Grid costs for the nine months (April 1, 2013 -  
13 December 31, 2013) that the current surcharge  
14 mechanism would be in effect.

15 **Deferral Accounting and Reconciliations**

16 Q. Does the Company propose to continue the use of  
17 deferral accounting and reconciliation  
18 mechanisms for electric, gas and steam costs  
19 that the Commission has previously authorized?

20 A. Yes. The Company proposes to continue the  
21 reconciliation mechanisms related to property  
22 taxes, interference costs, pensions and OPEBS,  
23 Site Investigation Remediation (SIR) costs, the  
24 cost of long-term debt, net plant and changes to

1 legislative, regulatory, and related actions as  
2 well as a number of other existing  
3 reconciliations for all services. For electric  
4 and gas service, the Company proposes to  
5 continue the existing supply rider provisions  
6 (i.e., MSC, MAC, GAC, etc.) as well as, the  
7 revenue decoupling mechanisms. For steam  
8 service, Con Edison proposes to continue the  
9 fuel adjustment clause. Additionally, for  
10 electric service the Company proposes to  
11 continue reserve accounting for major storm  
12 costs and ERRP major maintenance costs.

13 Q. Does the Company propose to modify any of the  
14 reconciliation mechanisms that are currently in  
15 effect?

16 A. The Company proposes to modify the  
17 reconciliation mechanisms related to property  
18 taxes, the electric and gas revenue decoupling  
19 mechanisms, interference costs, and net plant.  
20 In addition, the Company proposes that the  
21 existing provision related to legislative,  
22 regulatory, and related actions be modified to  
23 include changes in Company revenues due to such  
24 circumstances. Furthermore, the Company

1 proposes to shorten the amortization period  
2 associated with the recovery of SIR costs from  
3 ten to five years.

4 Q. Does Con Edison propose to terminate any of the  
5 reconciliation mechanisms that are currently in  
6 effect?

7 A. The Company proposes that the reconciliation  
8 mechanisms for gas and steam research and  
9 development costs and the oil to gas conversions  
10 costs be terminated for gas service. Earlier in  
11 our testimony we discussed the Company's request  
12 to terminate deferral accounting for SSCM tax  
13 deductions.

14 Q. Does the Panel agree that the use of deferral  
15 accounting and reconciliation mechanisms should  
16 continue for these cost elements and in certain  
17 circumstances be modified or terminated?

18 A. We agree that the deferred accounting for  
19 pension and OPEB expenses should continue and  
20 the changes to legislative, regulatory, and  
21 related actions should continue. However, we do  
22 not support the Con Edison's proposed  
23 modification to include changes in Company  
24 revenues due to such circumstances because Con

1 Edison failed to provide any basis for the  
2 proposed modification. Staff also agrees with  
3 the Company that the reconciliation mechanisms  
4 for gas and steam research and development costs  
5 be eliminated. The Staff Policy Panel discusses  
6 the Company's request to eliminate the deferred  
7 accounting related to its oil to gas conversion  
8 program. The deferred accounting associated  
9 with interference costs, net plant, electric  
10 major storm reserve and major maintenance for  
11 East River Unit 1 and 2 are also discussed by  
12 the Staff Policy Panel. In addition, the Staff  
13 Policy Panel addresses the Company's request to  
14 change the amortization period associated with  
15 the recovery of SIR costs. The SIR Panel  
16 testimony addresses the Company's request to  
17 continue deferred accounting related to SIR  
18 costs. The existing reconciliation mechanisms  
19 related to the supply rider provisions for  
20 electric and gas service should continue without  
21 modification and the revenue decoupling  
22 mechanisms for electric and gas service should  
23 continue as discussed by the Staff Policy Panel  
24 and the Staff Gas Rates Panel. The Fuel

1 Adjustment Clause for steam service should  
2 continue as discussed by the Staff Steam Fuel  
3 Panel. Staff's Capital Structure Panel  
4 addresses the Company's request for deferred  
5 accounting related to the weighted average cost  
6 of long-term debt.

7 Q. Does the Company propose a new deferred  
8 accounting or reconciliation mechanisms?

9 A. The Company proposes to establish deferred  
10 accounting related to management variable pay,  
11 O&M costs associated with the Pipeline Safety  
12 Act of 2011, major storm reserves for gas and  
13 steam service, a weather normalization clause  
14 for steam service, and a storm hardening  
15 surcharge mechanism.

16 Q. Does the Panel agree with Company's proposal?

17 A. We agree with the Company's proposal to  
18 establish deferred accounting for any  
19 management variable pay such any allowances in  
20 rates not be paid, as described by the Company  
21 and the Staff Policy Panel addresses all of the  
22 other requests by the Company to establish new  
23 deferred accounting or reconciliation  
24 mechanisms.

1 Q. Would the Panel like to address any other issues  
2 related to deferred accounting?

3 A. Yes. In response to DPS-184 and DPS-185, the  
4 Company indicated that federal tax credits and  
5 NYS alternative fueling infrastructure credits,  
6 including a clean alternative fuel credit, may  
7 be available to the Company related to the  
8 Company's proposed Fuel Station and compresses  
9 natural gas Station Upgrades. Furthermore, the  
10 Company indicated any tax credits received from  
11 these projects would be deferred for customer  
12 benefit. We agree with the Company that any tax  
13 credits related to these projects should be  
14 deferred for customer benefit.

15 Q. Did the Panel prepare an exhibit that lists the  
16 Company's costs that will be subject to  
17 reconciliation in the rate year based on Staff's  
18 various recommendations?

19 A. Yes. Exhibit\_\_\_SAP-7 lists the revenues and  
20 costs by service that will be reconciled in the  
21 rate year based on Staff's recommendations.

22 Q. Does this conclude your testimony at this time?

23 A. Yes.
