

BEFORE THE
STATE OF NEW YORK
PUBLIC SERVICE COMMISSION

In the Matter of
Corning Natural Gas Corporation
Case 16-G-0369

October 2016

Prepared Testimony of:

Sean Malpezzi
Public Utilities Auditor III
Office of Accounting and Finance
State of New York
Department of Public Service
Three Empire State Plaza
Albany, New York 12223-1350

1 Q. Please state your name, employer and business
2 address.

3 A. My name is Sean Malpezzi. I am employed by the
4 New York State Department of Public Service
5 (Department). My business address is Three
6 Empire State Plaza, Albany, NY 12223.

7 Q. Mr. Malpezzi, what is your position in the
8 Department?

9 A. I am employed as a Public Utilities Auditor III
10 in the Office of Accounting, Audits and Finance.

11 Q. Please describe your educational background and
12 professional experience.

13 A. I graduated from Siena College, Loudonville, New
14 York and have a B.B.A. degree with an Accounting
15 Major. I have been employed by the Department
16 since September of 2005. Previously I was
17 employed as an Auditor for the NYS Credit Union
18 League.

19 Q. Please briefly describe your responsibilities
20 with the Department.

21 A. Since joining the Department, my work as a
22 Public Utility Auditor has included examinations
23 of the accounts, records, documents, policies
24 and procedures of regulated utilities with

1 regard to the development of issues in electric,
2 gas, telephone, and water rate proceedings,
3 financings and other general accounting matters.

4 Q. Have you previously testified before the
5 Commission?

6 A. Yes, I have testified in several rate
7 proceedings before the Commission including Con
8 Edison Company of New York, Inc. - Case 07-E-
9 0523, New York State Electric & Gas Corporation
10 for Electric and Gas Service Cases - 15-E-0283
11 and 15-E-0284, and Rochester Gas and Electric
12 Corporation for Electric and Gas Service - Cases
13 15-E-0285 and 15-E-0285. I have also reviewed
14 municipal rate requests including the Village of
15 Freeport d/b/a Freeport Electric - Case 06-E-
16 0911, City of Plattsburgh Municipal Lighting
17 Department - Cases 05-E-1496 and 08-E-1227,
18 Village of Castile - Case 05-E-1247, Village of
19 Churchville - Case 06-E-0334, and Oneida County
20 Rural Telephone Company - Case 08-C-0610.

21 Q. Please describe the scope of your examination.

22 A. In examining Corning Natural Gas Corporation's
23 filing (Corning or the Company) I compared the
24 historical amounts reported to the Company's

1 financial records where appropriate and reviewed
2 the assumptions underlying the Company's rate
3 filing. I also compared the information from
4 the historical test year, the year ended
5 December 31, 2015, with prior periods and
6 examined various material cost elements in order
7 to determine their accuracy and consistency
8 between the test year and projected Rate Year
9 amounts.

10 Q. Please summarize your testimony.

11 A. My testimony will address the following items in
12 Corning's rate case filing: 1) Health Insurance,
13 2) Uncollectible Expense, 3) the General
14 Allocator, 4) Accumulated Deferred State Income
15 Tax and 5) Building Services Expense.

16 Q. Did you rely on any information provided by
17 Corning during the discovery phase of this
18 proceeding?

19 A. Yes. I relied on the Company's responses to
20 numerous interrogatories or IRs. These IR
21 responses are included in Exhibit __ (SM-1) and
22 are referred to by their numerical designation.

23

24

1 A. I used the gross domestic price (GDP) price
2 deflator to calculate the inflation factor of
3 4.46%. The GDP price deflator uses historical
4 data from the US Bureau of Economic Analysis and
5 the forecasts are from the latest available Blue
6 Chip Economic Indicators.

7 Q. What is your adjustment based on the general
8 inflation factor?

9 A. My adjustment reduces O&M expense by \$28,267.
10

11 **Health Insurance**

12 Q. Explain how the Company developed its \$773,871
13 Rate Year forecast of Health Insurance.

14 A. In the Company Workpaper Update,
15 Exhibit __ (CNG-5), Schedule 6, Page 2 of 2, the
16 Company began with Health Insurance of \$581,421
17 for the historic test year and increased it by
18 10% for three full years from the end of the
19 historic test year through the Rate Year to
20 arrive at the Rate Year forecast for health
21 insurance expense of \$773,871.

22 Q. Do you agree with the Company's application of a
23 10% annual inflation rate?

24 A. No, I do not. The GDP inflation index reflects

1 a basket of goods and services, including health
2 care services. The application of a separate
3 escalation factor in projecting health care
4 costs is inconsistent with the Commission's
5 practice, as expressed in Commission Opinion No.
6 84-27, Opinion and Order Determining Revenue
7 Requirement and Rate Design issued on October
8 12, 1985 in Case 28695, and reaffirmed in
9 numerous Commission decisions including Opinion
10 94-3, Opinion and Order Determining Revenue
11 Requirement and Rate Design, issued on February
12 11, 1994 in Case 92-E-1055. On page 13 of
13 Opinion 94-3, the Commission explains that: "The
14 treatment of medical insurance costs as one
15 factor in a large pool of expenses subject to
16 inflation should produce a reasonable result,
17 because some items will increase at a rate
18 greater than inflation and others at a lower
19 rate."

20 Q. Has the Commission used GDP inflation to
21 forecast medical insurance expenses in rate
22 orders?

23 A. Yes. For example, in the 2008 Electric Rate
24 Order in Case 07-E-0523, Con Edison - Electric

1 Rates, issued March 25, 2008, the Commission
2 included medical care expenses in the inflation
3 pool. At pages 42-43 of the Order, the
4 Commission stated: "The practice uses the recent
5 costs and the current employee count to capture
6 the present operating conditions." The
7 Commission also acknowledged that the costs in
8 this and many other categories are expected to
9 increase. Overall, the Company is expected to
10 manage the cost increases in the entire group
11 and to keep them, as best it can, to the general
12 inflation rate.

13 Q. Why did the Company use a rate of 10%, rather
14 than the general inflator, for health care
15 costs?

16 A. The direct testimony of Company witnesses
17 Sarhangi and DiValentino states that while the
18 Commission practice "...may have been justified in
19 the distant past when health costs increases
20 were more closely aligned with other costs
21 increases, those days are long gone." The
22 Company continues that the use of the general
23 inflation factor for health care costs "has
24 become untenable and warrants re-examination

1 based on current circumstances." However,
2 despite the Company's statements to the
3 contrary, the Commission has consistently upheld
4 its position, notably in Case 13-W-0295. In the
5 2014 Water Rate Order issued on June 26, 2014 in
6 Case 13-W-0295 with regard to United Water New
7 York Inc., the Commission included medical care
8 expenses in the inflation pool. At pages 20-21
9 of the 2014 Water Rate Order, the Commission
10 stated: "If medical expense falls into the
11 former category, as experience indicates
12 according to UWNY, that does not alter the fact
13 that the general inflation rate is an average of
14 inflationary and deflationary changes in the
15 prices of all the various goods and services in
16 the pool. Thus a deviation between the increase
17 in a single pooled cost item such as medical
18 expense, relative to the average increase, does
19 not justify removing that item from the pool in
20 an attempt to predict it separately. On the
21 contrary pooling of diverse expenses into a
22 single inflation forecast tends to minimize the
23 forecasting errors—and, as noted in the Con
24 Edison decision, the waste of time and

1 resources—that would result from attempting to
2 predict each expense item separately.”

3 Q. Please explain your adjustment to Rate Year
4 health insurance expense.

5 A. My calculation of the Rate Year health insurance
6 expense begins with the historic test year
7 expense of \$581,421 and applies the general
8 inflation rate of 4.46% from the end of the
9 historic test year through the Rate Year. The
10 results is a period of two years and five months
11 as opposed to the Company’s use of three full
12 years. This forecast results in a decrease to
13 health insurance expense of \$166,519.

14

15 **Uncollectible Expense**

16 Q. Explain the Company’s method of forecasting
17 uncollectible expense.

18 A. Corning used the net write off method to
19 calculate uncollectible expense. This method
20 divides total revenues by the net accounts
21 receivable write offs for the year to arrive at
22 an annual uncollectible rate. The Company
23 calculated a four-year average of this
24 uncollectible rate of 1.42% and applied this

1 rate to the forecasted Rate Year revenues to
2 arrive at Rate Year uncollectible expense of
3 \$188,239.

4 Q. Do you agree with the Company's calculation of
5 uncollectible expense?

6 A. No, I disagree with the Company's use of a four-
7 year average uncollectible rate to forecast the
8 Rate Year expense.

9 Q. Explain why you disagree.

10 A. In 2014, the Company had an unusually large
11 commercial write off. This large write off
12 resulted in an uncollectible rate of 2.44%,
13 which is more than twice the uncollectible rate
14 of the other three years in the Company's
15 calculation. Based on the 2014 anomaly, a four-
16 year average is skewed, resulting in a much
17 higher rate than three of the four historic
18 years used in the Company's uncollectible
19 forecast.

20 Q. Does Corning acknowledge that this was an
21 unusual occurrence?

22 A. Yes. In response to IR DPS-298, the Company
23 states, "Since 2005, no single write-off of this
24 magnitude has occurred."

1 Q. What do you recommend should be used as an
2 uncollectible rate?

3 A. I recommend using a six-year average
4 uncollectible rate of 1.20%, rather than a four-
5 year average rate. A six-year average is more
6 appropriate based on the occurrence of an
7 unusually large write off only once in the past
8 ten years. The six-year average helps to smooth
9 out the large uncollectible expense anomaly that
10 occurred in 2014 more so than a four-year
11 average does.

12 Q. Does the data support the use of a six-year
13 average instead of the four-year average?

14 A. Yes. The uncollectible percentage for the past
15 six years, calendar years 2010 through 2015,
16 were .75%, .75%, .98%, .91%, 2.40%, and 1.12%,
17 respectively. The Company's use of 1.42% is
18 significantly higher than three of the four
19 years it used in its calculation. By using the
20 six-year average of 1.20% the percentage still
21 exceeds the five of the six years used. The
22 six-year average is still in excess of the
23 uncollectible percentage for 2014 when there was
24 the unusually large commercial write off, and it

1 is close to the uncollectible percentage for
2 2015, the historic test year.

3 Q. What is your calculation of Rate Year
4 uncollectible expense?

5 A. I applied the six-year average uncollectible
6 rate of 1.20% to Staff's adjusted Rate Year
7 revenues to arrive at a Rate Year forecast of
8 \$159,358. This forecast results in a decrease
9 to Rate Year uncollectible expense of \$28,881.

10

11 **Affiliate Allocations**

12 Q. What types of costs did the Company allocate to
13 affiliates in the forecasted Rate Year?

14 A. As discussed in Staff witness Allison Esposito's
15 testimony, the Company allocated payroll,
16 payroll associated fringe benefit costs, and
17 various other expenses related to office space
18 and equipment.

19 Q. Please explain the Company's affiliate
20 allocation methods.

21 A. The Company uses three methods for charging
22 costs to affiliates. The first is the direct
23 charge method, under which costs are directly
24 charged to Corning or its affiliates. This

1 method is used when a direct link to the charge
2 is clearly evident. The second method uses
3 various cost causative allocators to assign
4 costs. The third method assigns costs based on
5 a general allocator, which is designed to
6 equitably allocate costs when direct charging or
7 appropriate cost-causative relationships cannot
8 be established.

9 Q. Please describe Corning's development of its
10 general allocator.

11 A. The Company uses the Massachusetts Formula for
12 calculating the general allocator. The
13 Massachusetts Formula averages three general
14 components - direct labor distribution,
15 revenues, and utility plant in service.
16 Although this is a commonly used method, many
17 utilities use modifications of this formula to
18 better reflect the companies' individual
19 circumstances. For example, a utility may use
20 net, instead of gross, revenues to eliminate any
21 potential variability in purchased power costs.

22 Q. Did you find the Company's calculation of the
23 general allocator reasonable?

24 A. Yes. I reviewed other inputs, such as net

1 revenues, as I previously mentioned, and net
2 plant, and found the results comparable to the
3 general allocator the Company proposed.
4 Therefore, for the purpose of this case, and
5 considering the Company's current affiliates are
6 all regulated utilities, this allocation method
7 appears reasonable. However, to the extent that
8 circumstances change or the Company acquires
9 additional affiliates, in the future Staff and
10 the Commission may need to revisit whether or
11 not this method of calculating the general
12 allocator is still appropriate.

13

14 **Accumulated Deferred State Income Tax**

15 Q. Did Corning include an adjustment to reflect the
16 effect of the change in the New York State
17 Income Tax rate from 7.1% to 6.5%, effective
18 January 1, 2016, to Accumulated Deferred State
19 Income Tax (ADSIT)?

20 A. No. In response to IR DPS-248, the Company
21 states that, "The rate change impact on the
22 ADSIT is not included in the testimony and
23 exhibits because the amount is not material."

24 Q. Do you agree with the Company's exclusion of an

1 ADSIT adjustment?

2 A. No. Staff reviewed the Company's calculation of
3 the ADSIT included in the response to IR DPS-248
4 which calculates a change in the Deferred Tax
5 Reserve of \$7,964. Although it is not a major
6 adjustment, it is important to recognize it as a
7 reflection of the change in the New York State
8 Corporate Tax Rate. This Deferred Tax Reserve
9 change of \$7,964 reduces the Company's revenue
10 requirement by \$13,230.

11 **Building Services**

12 Q. Explain how the Company calculated the Accounts
13 Payable Other section of the Building Services
14 Expense?

15 A. As shown in the Company Workpaper Update,
16 Exhibit __ (CNG-5), Schedule 10, Page 2 of 2,
17 the Company increased the "Accounts Payable
18 Other" costs by the direct labor increases of
19 2.7%, 12.1%, and 9.9% for the periods January 1,
20 2016 through May 31, 2016, June 1, 2016 through
21 May 31, 2017 and June 1, 2017 through May 31,
22 2018 respectively.

23 Q. Do you agree with the Company's application of
24 the direct labor increases to the Accounts

1 Payable Other in Building Services?

2 A. No. The correct rate to apply to the "Accounts
3 Payable Other" costs is the general inflation
4 rate. This is supported by the Company's
5 Inflation Exhibit __ (CNG-9), Schedule 2 which
6 lists Accounts Payable and Inventory as one of
7 the categories subject to inflation.

8 Q. What adjustment do you recommend?

9 A. I recommend an adjustment based on using the
10 inflation rate, which results in a decrease to
11 Building Services Expense of \$6,512.

12 Q. Does this conclude your testimony at this time?

13 A. Yes.
