## STATE OF NEW YORK PUBLIC SERVICE COMMISSION

\_\_\_\_\_

Case 17-E-0238 – Proceeding on Motion of the Commission as to the Rates, Charges, Rules and Regulations of Niagara Mohawk Power Corporation d/b/a National Grid for Electric Service

Case 17-G-0239 – Proceeding on Motion of the Commission as to the Rates, Charges, Rules and Regulations of Niagara Mohawk Power Corporation d/b/a National Grid for Gas Service

Case 14-M-0042 – Petition of Niagara Mohawk Power Corporation d/b/a National Grid for Authorization to Defer an Actuarial Experience Pension Settlement Loss for Fiscal Year 2014

Case 12-G-0202 – Petition of Niagara Mohawk Power Corporation d/b/a National Grid to Modify its Existing Gas Safety Metric

\_\_\_\_\_

#### **JOINT PROPOSAL**

This Joint Proposal ("Joint Proposal") is made this 19th day of January 2018, by and among Niagara Mohawk Power Corporation d/b/a National Grid ("Niagara Mohawk" or "Company"), New York State Department of Public Service Staff ("Staff"), Multiple Intervenors, Pace Energy and Climate Center ("Pace"), Environmental Defense Fund ("EDF"), International Brotherhood of Electrical Workers, Local Union 97, New York Geothermal Energy Organization, Inc., Tesla, Inc., City of Buffalo, City of Albany, City of Syracuse, ChargePoint, Inc., Great Eastern Energy, Mirabito Natural Gas, Blue Rock Energy, Inc., Direct Energy Services, LLC, the New York State Office of General

Services ("OGS"), Wal-Mart Stores East, LP and Sam's East, Inc., and the New York Power Authority ("NYPA")<sup>1</sup> (collectively, the "Signatory Parties").<sup>2,3</sup>

This Joint Proposal establishes a three-year rate plan for Niagara Mohawk's electric and gas businesses and resolves or establishes a framework for resolving all issues raised in Cases 17-E-0238 and 17-G-0239 ("Rate Cases"). Additionally, this Joint Proposal resolves all issues raised in the Company's petitions in Case 14-M-0042<sup>4</sup> ("Pension Settlement Loss Petition") and the petition dated June 22, 2016 in Case 12-G-0202<sup>5</sup> ("Gas Safety Metric Petition").

## I. <u>Procedural Background</u>

## 1. Rate Cases

On April 28, 2017, Niagara Mohawk filed tariff leaves and supporting testimony and exhibits for new rates and charges for electric and gas service to be effective

\_

OGS and Wal-Mart Stores East, LP and Sam's East, Inc. sign this Joint Proposal in support of Case 17-E-0238 and take no position with respect to Case 17-G-0239. NYPA signs this Joint Proposal in support of the street light issues in Case 17-E-0238 and takes no position with respect to any other issues.

In addition, the Public Utility Law Project of New York, the Utility Intervention Unit of the New York State Department of State's Division of Consumer Protection ("UIU"), Partnership for the Public Good, the North Country Energy Task Force, Advanced Energy Economy Institute, Castleton Power LLC, Indeck-Corinth LP, OSC Manufacturing & Equipment Services, Inc., and Alliance for Solar Choice, while not signing this Joint Proposal, have stated that they will not oppose it.

The parties included on the parties list maintained by the New York State Public Service Commission ("Commission") in these proceedings are referred to as "active parties."

<sup>&</sup>lt;sup>4</sup> Case 14-M-0042, <u>Petition of Niagara Mohawk Power Corporation d/b/a National Grid for</u> Authorization to Defer an Actuarial Experience Pension Settlement Loss for Fiscal Year 2014.

<sup>&</sup>lt;sup>5</sup> Case 12-G-0202, <u>Petition of Niagara Mohawk Power Corporation d/b/a National Grid to Modify its Existing Gas Safety Metric</u>.

April 1, 2018.<sup>6</sup> The new tariffs were designed to increase electric and gas delivery revenues by approximately \$326 million and \$81 million, respectively.

On May 19, 2017, Niagara Mohawk held a technical conference to provide parties with an overview of the rate filings. A subsequent technical conference was held on June 27, 2017 to discuss the Company's Advanced Metering Infrastructure ("AMI") proposal.

Administrative law judges ("ALJs") were appointed to conduct the proceedings and to review Niagara Mohawk's rate filings. On June 1, 2017, the ALJs held a procedural conference that was immediately followed by a technical presentation by the Company discussing various aspects of the rate filings.

On June 7, 2017, the ALJs issued a *Ruling on Schedule* that provided dates for certain activities in the cases, including the filing of parties' initial and rebuttal testimony and hearings. The active parties engaged in extensive discovery throughout the proceedings, with the Company responding to more than 1,750 information requests.

Niagara Mohawk filed corrections and updates testimony and exhibits on July 10, 2017, decreasing the electric and gas revenue requirement to approximately \$261 million and \$70 million, respectively. On August 25, 2017, twelve parties, including Staff, filed testimony and exhibits addressing the Company's filing. Niagara Mohawk and eight other parties each filed rebuttal testimony and exhibits on September 15, 2017.

The rebuttal testimony and exhibits of Niagara Mohawk's depreciation witness was filed on September 28, 2017.

3

On May 3 and September 8, 2017, the Secretary issued Notices suspending the effective date of the Company's new rates until March 28, 2018.

## 2. Pension Settlement Loss Petition

On February 28, 2014, the Company filed a petition for authorization to defer an actuarial experience pension settlement loss for fiscal year ("FY") 2014, the year ending March 31, 2014. The Company filed supplements to the petition on August 13, 2014 and September 2, 2015. The total loss for which the Company sought deferral treatment was \$14.093 million.

#### 3. Gas Safety Metric Petition

On June 22, 2016, Niagara Mohawk filed a petition in Case 12-G-0202 to: (i) reduce the negative revenue adjustments arising from the operation of the Gas Safety Regulations Performance metric for calendar years ("CY") 2013 and 2014 if the Company achieved certain performance targets in CY 2016; (ii) permit the Company to utilize any negative revenue adjustments resulting from the operation of the Gas Safety Regulations Performance metric in CYs 2013 and 2014 to fund gas safety and compliance improvement programs; and (iii) modify the Gas Safety Regulations Performance metric beginning in CY 2015 to provide for a cap on the number of instances of non-compliance subject to a negative revenue adjustment.

## 4. The Settlement Process

On September 11, 2017, Niagara Mohawk notified the active parties of the commencement of settlement negotiations pursuant to the Commission's settlement procedures set forth in 16 NYCRR § 3.9 and filed a formal notice of impending settlement negotiations with the Secretary.

Settlement negotiations were held on September 19 and 29; October 3-4, 10-11, 13, 16-19, and 26; November 1-3, 7-8, 16, and 27; and December 14, 19, 20, and 22,

2017. All settlement conferences were duly noticed to the active parties and held in person or by telephone. In person conferences included the option to participate via video conference and/or telephone.

To facilitate settlement discussions and allow time to finalize this Joint Proposal, on September 20, October 24, and November 22, 2017, Niagara Mohawk filed requests to extend the suspension period (most recently through July 1, 2018), subject to a make whole provision that would restore the Company to the same financial position it would have been in had there been no extension and new rates went into effect on April 1, 2018.

This Joint Proposal is the product of the active parties' settlement negotiations and was developed pursuant to, and in accordance with, the Commission's settlement procedures. The Signatory Parties believe that this Joint Proposal represents a fair and reasonable resolution of the issues presented in these proceedings and satisfies the requirements of Public Service Law § 65(1) that Niagara Mohawk provide safe and adequate service at just and reasonable rates.

#### II. Overall Framework

The Signatory Parties have developed a comprehensive set of terms and conditions for a three-year rate plan for Niagara Mohawk's electric and gas businesses. The terms and conditions of this rate plan are set forth below and in the attached Appendices. Specifically, this Joint Proposal addresses the following topics:

- 1. Effective Date and Term;
- 2. Electric and Gas Revenue Requirements;
- 3. Electric Revenue Allocation and Rate Design;
- 4. Gas Revenue Allocation and Rate Design;

- 5. Computation and Disposition of Excess Earnings;
- 6. Electric Capital and Common Investment Levels and Infrastructure and Operations Programs;
- 7. Gas Capital Investment Levels and Infrastructure and Operations Programs;
- 8. Information Services;
- 9. Street Lighting;
- 10. Electric and Gas Reconciliations, Deferrals, and True-ups;
- 11. Electric and Gas Customer Service Quality Assurance Program and Other Performance Metrics;
- 12. Gas Safety Performance Metrics;
- 13. Customer Programs;
- 14. Earnings Adjustment Mechanisms;
- 15. Miscellaneous Provisions; and
- 16. Other Provisions.

#### III. <u>Definitions</u>

"Effective Date" means April 1, 2018, or such other date as the Commission may determine.

"Rate Year One" means April 1, 2018 through March 31, 2019.

"Rate Year Two" means April 1, 2019 through March 31, 2020.

"Rate Year Three" means April 1, 2020 through March 31, 2021.

The three rate years are collectively referred to herein as "Rate Years" and individually as a "Rate Year."

## IV. Rate Plan

## 1. <u>Effective Date and Term</u>

The term of Niagara Mohawk's electric and gas rate plan is three years, beginning April 1, 2018 and continuing through March 31, 2021 ("Rate Plan"). For administrative reasons, certain targets and mechanisms are on different twelve month schedules (*e.g.*, CY periods), as provided herein. In addition, unless specifically noted in this Joint Proposal, all terms of this Joint Proposal will continue in effect until changed by the Commission.

#### 2. Electric and Gas Revenue Requirements

## 2.1 Rate Plan Revenue Requirements

This Joint Proposal provides for a Rate Year One electric revenue requirement increase of \$159.974 million and a gas revenue requirement increase of \$45.524 million, a Rate Year Two electric revenue requirement increase of \$31.014 million and a gas revenue requirement increase of \$5.344 million, and a Rate Year Three electric revenue requirement increase of \$49.801 million and a gas revenue requirement increase of \$9.951 million.

The components of the electric and gas revenue requirements are set forth in Appendix 1, Schedules 1 and 2. The revenue requirements are based on the following parameters:

- a. a return on equity ("ROE") of 9.0 percent<sup>8</sup> for the term of the Rate Plan that reflects (i) a stay-out premium and (ii) annual productivity savings that are incremental to productivity savings otherwise imputed in the revenue requirements.
- b. a capital structure and overall cost of capital consisting of the following components and rates:

## Rate Year One

	% of Capital	Annual Cost	Weighted Cost Percent	Weighted Cost Pre Tax
Long-Term Debt	51.06%	4.29%	2.19%	2.19%
Customer Deposits	0.48%	0.35%	0.00%	0.00%
Preferred Stock	0.46%	3.66%	0.02%	0.03%
Common Equity	48.00%	9.00%	4.32%	5.85%
<b>Total Capital</b>	100.00%		6.53%	8.07%

## Rate Year Two

	% of Capital	Annual Cost	Weighted Cost Percent	Weighted Cost Pre Tax
Long-Term Debt	51.06%	4.19%	2.14%	2.14%
Customer Deposits	0.48%	0.35%	0.00%	0.00%
Preferred Stock	0.46%	3.66%	0.02%	0.03%
Common Equity	48.00%	9.00%	4.32%	5.85%
Total Capital	100.00%		6.48%	8.02%

\_

One pre-tax basis point is equivalent to approximately: (i) \$0.342 million and \$0.080 million in electric and gas revenues, respectively, in Rate Year One; (ii) \$0.364 million and \$0.086 million in electric and gas revenues, respectively, in Rate Year Two; and (iii) \$0.387 million and \$0.093 million in electric and gas revenues, respectively, in Rate Year Three. These values are illustrative and will be updated based on actual data available as of December of each Rate Year for purposes of calculating negative or positive revenue adjustments.

Rate Year Three

	% of Capital	Annual Cost	Weighted Cost Percent	Weighted Cost Pre Tax
Long-Term Debt	51.06%	4.13%	2.11%	2.11%
Customer	0.48%	0.35%	0.00%	0.00%
Deposits				
Preferred Stock	0.46%	3.66%	0.02%	0.03%
Common Equity	48.00%	9.00%	4.32%	5.85%
<b>Total Capital</b>	100.00%		6.45%	7.99%

- c. A 48 percent common equity ratio.
- d. A Rate Year One electric rate base of \$5.261 billion and a gas rate base of \$1.232 billion, a Rate Year Two electric rate base of \$5.605 billion and a gas rate base of \$1.323 billion, and a Rate Year Three electric rate base of \$5.952 billion and a gas rate base of \$1.432 billion.
- e. Niagara Mohawk's electric and common depreciation rates have been updated and are set forth in Appendix 1, Schedule 3. The Company's gas transmission plant and distribution plant depreciation rates previously adopted by the Commission in Case 12-G-0202 will continue without change and are included for reference in Appendix 1, Schedule 4. The current gas general plant depreciation rates previously adopted by the Commission in Case 08-G-0609 will also continue without change and are included for reference in Appendix 1, Schedule 4.

#### 2.2 Rate Plan Deferral Credits

To promote rate stability and mitigate bill impacts for customers, over the term of the Rate Plan,<sup>9</sup> the Company will credit electric customers with a portion of the forecast electric deferral balance in the amount of \$200.4 million and credit gas customers with a portion of the forecast gas deferral balance in the amount of \$56.1 million. The credits will allow for a gradual transition to full cost-of-service rates (*i.e.*, step increases from Rate Year One to Rate Year Two, from Rate Year Two to Rate Year Three, and from Rate Year Three to the twelve-months ending March 31, 2022), as reflected in Appendix 2, Schedule 3.5 for electric, and in Appendix 3, Schedules 2 and 3 for gas.

The deferral credits will be calculated by taking a pro rata share from the overall projected deferred credit balances, as illustrated in Appendix 5, Schedule 23 for electric and Appendix 6, Schedule 20 for gas. The allocation of credits to the electric and gas service classes is discussed in Sections 3.4 and 4.4, respectively, below.

#### 2.3 Rate Plan Settlement Deferral Credit

As of the Effective Date, Niagara Mohawk will create a new electric deferral credit of \$44.88 million and a new gas deferral credit of \$28.42 million ("Rate Plan Settlement Credits"). In addition to creating the Rate Plan Settlement Credits, the Company will reduce pension funding in the internal reserve required under the Commission's *Statement of Policy and Order Concerning The Accounting and Ratemaking Treatment for Pension and Post-Retirement Benefits Other than Pensions* (issued September 7, 1993) in Case 91-M-0890 ("Pension & OPEB Statement of Policy")

For certain rate classes, this includes using credits in the twelve-month period ending March 31, 2022 to mitigate bill impacts at the conclusion of Rate Year Three.

by \$7.0 million in Rate Year One. The Rate Plan Settlement Credits and the internal reserve pension funding will resolve, with prejudice, the following:

- a. all issues associated with the Staff Policy Panel's testimony that the Company should be required to write-off approximately \$87.7 million of undepreciated investment in retired pre-Automated Meter Reading ("AMR") meters;
- b. all issues associated with the treatment of bonus depreciation related to capital investments made during the period January 1, 2013 through March 31, 2016, as raised in the testimony of the Staff Accounting Panel;
- c. all issues raised by the Company's petitions in Case 14-M-0042 to defer a
   FY 2014 actuarial experience pension settlement loss;
- d. all issues associated with negative revenue adjustments arising from the operation of the Company's Gas Safety Regulation Performance metric for CYs 2013 through 2015 and the Company's Gas Safety Metric Petition. There will be no changes to the operation of the Gas Safety Metric for the period prior to January 1, 2018. This Joint Proposal does not address the outcomes of the CY 2016 or CY 2017 field and record Gas Safety audits, or associated negative revenue adjustments; <sup>10</sup> and
- e. all issues associated with the Staff Gas Rates Panel's testimony in these proceedings that the Company should refund Lost and Unaccounted For ("LAUF") gas benefits allegedly retained by the Company as a result of gas usage on inactive accounts.

Niagara Mohawk will use (i) \$8.971 million of the gas Rate Plan Settlement Credits to fund Gas Safety programs that are more fully described in Section 7.5 of this

\_

Any negative revenue adjustments associated with CY 2016 or CY 2017 will be deferred and dedicated to the improvement of the safety of the Company's gas network.

Joint Proposal and (ii) \$5 million to fund future gas safety and compliance improvement programs, as discussed in Section 7.5.

The Company will use \$6.2 million of the electric Rate Plan Settlement Credits in each Rate Year (\$18.6 million in total) to amortize an equivalent amount of its undepreciated investment in pre-AMR meters. The unamortized balance of pre-AMR meter investment will remain in the Company's rate base. The Signatory Parties will not propose to require the Company to write-down any of its investment in pre-AMR meters in any future proceeding. This does not preclude further amortization of the remaining balance of pre-AMR meter investment with rate base treatment on any unamortized balance.

#### 2.4 Make Whole Provision

To the extent Commission approval of this Joint Proposal occurs after April 1, 2018, Niagara Mohawk will recover the revenue shortfall resulting from the extension of the suspension period through a make whole provision. The make whole provision is designed to ensure that, by March 31, 2019, Niagara Mohawk is restored to the same financial position it would have been in had rates gone into effect on April 1, 2018.

Niagara Mohawk will calculate any revenue adjustments as the difference between (i) sales revenues Niagara Mohawk would have billed at new rates, net of deferral sur-credits and NYPA Energy Efficiency Transition Implementation Plan ("ETIP") credits, during the extension of the suspension period and (ii) the level of sales revenue at current rates. The revenue adjustments will include all applicable surcharges and carrying charges, and be subject to reconciliation in accordance with all applicable

adjustment mechanisms (including revenue decoupling, where applicable). Financial true-up targets established in this Joint Proposal, as well as depreciation and amortization expense, will be applied to the extension of the suspension period. All accounting/ratemaking will be in accordance with this Joint Proposal and be effective as of April 1, 2018. An example of the make whole calculation is set forth in Appendix 1, Schedule 6.

## 3. <u>Electric Revenue Allocation and Rate Design</u>

## 3.1 Retail Delivery Electric Revenue Forecast

The retail delivery electric revenue forecast used to develop base rates and the reconciliation to total electric Operating Revenue for the Rate Years is set forth in Appendix 2, Schedule 1.

#### 3.2 Electric and Street Lighting Revenue Allocation

Rate Year One revenue will be allocated to service classes as shown on Appendix 2, Schedule 2. Revenues in Rate Year Two and Rate Year Three will be allocated to all classes using system average increases, as shown on Appendix 2, Schedule 2.

#### 3.3 Electric and Street Lighting Rate Design

Niagara Mohawk's existing electric and street lighting rate design will continue with the modifications described in the sections below, and as shown on Appendix 2, Schedule 3. Bill impacts resulting from this rate design are shown in Appendix 2, Schedule 8.

#### 3.3.1 Electric

- a. The Company will include the costs of the electric ETIP in base electric delivery rates, as described in Section 13.2.1. Allocation of electric ETIP costs will be as set forth in Appendix 2, Schedule 11. The Signatory Parties agree that this allocation methodology does not create any binding precedent for future proceedings. The Company will apply a credit to maintain current exemptions from the System Benefit Charge ("SBC").
- b. The customer charges for SC-3A and SC-3 are shown in the table below. The customer charges applicable to other service classes and the other voltage delivery levels within SC-3 and SC-3A will remain at existing levels.

	Current	Rate Year 1	Rate Year 2	Rate Year 3
SC-3 Secondary	\$260.15	\$325.00	\$390.00	\$455.00
SC-3 SubT/Tran	\$565.23	\$639.00	\$712.00	\$786.00
SC-3A Secondary/Primary	\$1,000.00	\$1,333.33	\$1,666.67	\$2,000.00
SC-3A SubT	\$1,400.00	\$1,744.00	\$2,088.00	\$2,432.00
SC-3A Tran	\$3,500.00	\$4,007.00	\$4,513.00	\$5,020.00

- c. SC-7 (standby rates) will be modified as follows:
- i. To qualify as an Environmentally Advantageous Technology ("EAT") under SC-7, the NO<sub>x</sub> emissions rates must be less than or equal to 1.4 lbs/MWh. Units that have completed a Coordinated Electric System Interconnection Review ("CESIR") study by April 1, 2018 in accordance with the previously applicable standard will be grandfathered.

- ii. Energy storage technologies with inverter capability of up to 1MW also will qualify as EATs.
- iii. The percentage of "local" and "shared" costs to be recovered through the Contract Demand Charge and the As Used Daily Demand Charge, respectively, will be modified, as shown in Appendix 2, Schedule 5.

## 3.3.2 Street Lights

- a. The street light class returns will be set equal to the system average return after the rate increase.
- b. Pricing exception facilities will receive the system average percentage increase each year, and pricing exception treatment at existing locations will continue; provided, however, that if changes are made to one or more components of a pricing exception facility combination, pricing exception treatment for the affected location will be discontinued thereafter.
- c. The Company's street light rates reflect 10 W billing ranges for customerowned light emitting diodes ("LED"). LED luminaires will be categorized based on ANSI-approved labelled wattage, plus 1 W for the photo-electric control.
- d. Billing changes due to equipment changes will take effect at the beginning of the customer's next billing cycle to avoid mid-cycle adjustments.

#### 3.4 Deferral Credits

# 3.4.1 Allocation of Deferral Credits to Service Class Voltage Delivery Levels

The deferral credits described in Section 2.2 will be allocated to service class voltage delivery levels based on the ratio of delivery revenue at present rates, as shown on Appendix 2, Schedule 3.5. The deferral credits will be applied as a sur-credit that expires on March 31, 2021 (except for SC-1C and SC-2ND, which will expire on March 31, 2022).

## 3.4.2 Service Class Deferral Credits

The service class deferral credits will be charged on a per kWh basis for non-demand classes and on a per kW basis for demand classes in the amounts shown in Appendix 2, Schedules 3.1A, 3.2A, and 3.3A. The service class deferral credits will be applied to delivery load, including all NYPA load. The deferral credits will not be applied to load served at Empire Zone Rider ("EZR") or Excelsior Jobs Program ("EJP") rates, or to the Street Lighting Service Classifications.

## 3.5 Revenue Decoupling Mechanism

Niagara Mohawk's current RDM (as set forth in the Company's Electric Tariff PSC 220 ("PSC 220") Rule 57) will continue with the following modifications:

a. The RDM will include NYPA load revenue (including ReCharge New York) in each service class's otherwise applicable parent service class target and reconciliation.

- b. The annual target revenues for reconciliation purposes are set forth in Appendix 2, Schedule 6. These revenues will include electric ETIP revenue moved from a surcharge into base rates. The RDM reconciliation period will be a twelve-month fiscal year period (*i.e.*, April 1 through March 31).
- c. The Company will establish a single RDM to be instituted for all Lighting Tariff PSC 214 ("PSC 214") service classes. In the event that the Company transfers street lighting assets to one or more municipalities, the targets will be reduced to reflect changes in facilities charge revenues resulting from such sales.

#### 3.6 Merchant Function Charge

Niagara Mohawk's current Merchant Function Charge ("MFC") (as set forth in PSC 220 Rule 42) will continue with the following modifications:

- a. The commodity-related credit and collections revenue requirement will be set for Rate Year One using the Company's electric Embedded Cost of Service Study ("ECOSS") in this proceeding and held constant thereafter. The amounts are shown in Appendix 2, Schedule 7.1 for all three Rate Years. The kWh rates for the commodity-related credit and collections component of the MFC will be based on forecast full-service and purchase of receivables ("POR") kWh in each customer group. The commodity-related credit and collections target revenue for each Rate Year is \$4.044 million.
- b. The commodity-related uncollectible account expense components are shown in Appendix 2, Schedule 7.2 for all three Rate Years.
- c. The electric supply procurement revenue requirement will be set for Rate
  Year One using the Company's electric ECOSS in this proceeding and held constant

thereafter. The rates for electric supply procurement are shown in Appendix 2, Schedule 7.3 for all three Rate Years. The electric supply procurement target revenue for each Rate Year is \$3.070 million.

d. The commodity-related working capital will be calculated by multiplying the commodity lead/lag percentage by the Company's pre-tax weighted average cost of capital applicable in each Rate Year.

## 3.7 Miscellaneous Electric and Street Lighting Provisions

## 3.7.1 Service Re-Establishment Charge

The re-establishment charges under PSC 220 Rule 9 will be updated as follows:

a. At the meter during normal business hours: \$50.00

b. At the meter after hours: \$64.00

c. At the pole during normal business hours: \$209.00

d. At the pole after hours: \$372.00

The partial re-establishment charges for seasonal customers under PSC 220 Rule 9.2.2 will be updated as follows:

a. At the meter during normal business hours: \$25.00

b. At the meter after hours: \$26.00

c. At the pole during normal business hours: \$45.00

d. At the pole after hours: \$47.00

## 3.7.2 ESCO Disconnection Charge

The charges applicable to a disconnection initiated by an energy service company ("ESCO") for non-payment of the commodity charges will be updated to \$50.00 at the meter and \$209.00 at the pole.

## 3.7.3 Billing Backout Credit

The updated billing charges to ESCOs to issue a consolidated bill will be \$0.98 to an ESCO that supplies electricity to an electric-only customer and \$0.49 to an ESCO that supplies electricity to a dual electric and gas customer. The customer backout credit will equal the ESCO billing charge.

## 3.7.4 Paperless Billing Credit

The paperless billing credit will be updated to \$0.41 per service period.

#### 3.7.5 Incremental Customer Charge

The incremental customer charge assessed to customers that participate in (i) emergency demand response programs; (ii) day-ahead demand response programs; (iii) commercial system relief programs; or (iv) distribution load relief programs is reduced to \$12.42 per month.

## 3.7.6 Expansion of SC-12

The Company will expand the eligibility of SC-12 discounts to include NYPA deliveries.

## 3.7.7 Miscellaneous Changes to PSC 220

a. Tariff Rule 31 (Market Settlement Credit) will be eliminated.

- b. Tariff Rules 34.1.1.1 (Economic Development Rider), 34.1.1.3 (Economic Development Power Rider), and 34.1.1.4 (Power for Jobs) will be eliminated.
- c. The charge for ESCO-requested bill calculations will be eliminated on Leaf 88
- d. Tariff Rule 59 (Temporary Deferral Recovery Surcharge/Credit) will be eliminated.

## 3.7.8 Removed Street Light Facility Offerings

The Company will remove four high intensity diode ("HID") continuous operation closed facilities from the SC-6 offering. The Company does not currently serve any customers with these facilities.

## 3.7.9 Lighting Service Charge; Outage Credit

The Company will update the Lighting Service Charge to \$153.82 per occurrence.

The Company will decrease the SC-3 Outage Credit Allowance to \$0.19 per lamp per night.

#### 3.8 Earnings Adjustment Mechanisms Surcharge

The Company will be permitted to recover earned electric Earnings Adjustment Mechanisms ("EAM") positive revenue adjustments through an EAM surcharge beginning April 1, 2019. The Company will allocate (i) the Peak Reduction EAM using the Coincident Peak allocator, (ii) the Incremental Energy Efficiency, the Residential and Commercial Energy Intensity, and the LED Streetlight EAMs using the energy allocator, and (iii) the Distributed Energy Resources ("DER") Utilization, Interconnection, and the Environmentally Beneficial Electrification EAMs using the Coincident Peak, Non-

Coincident Peak at Primary Voltage, and Energy allocators, each with equal weight. The EAMs will be collected from demand classes through their kW charge and non-demand classes through their kWh charge, including NYPA load, but excluding EZR, EJP, and SC-12 load (if required by the customer's individual contract). An illustrative example of the EAM surcharge is shown in Appendix 2, Schedule 9.

## 3.9 Economic Development/Marginal Cost Rates

The Company will adopt new marginal cost rates effective April 1, 2018, as shown in Appendix 2, Schedule 10. The EZR rate for SC-2 ND customers will be phased in over a five-year period. Niagara Mohawk will also phase in the electric EJP rates over a five-year period for those classes seeing an increase, subject to EJP customers being the lower of EJP rates or standard tariff rates.

## 3.10 Next Base Rate Filing

#### 3.10.1 Sales and Revenue Forecasts

In its next base rate filing, Niagara Mohawk will update its delivery sales and revenue forecasts when it files its corrections and updates to the initial rate filing.

#### 3.10.2 Historical Embedded Cost of Service Study

In its next base rate filing, Niagara Mohawk will submit an historical ECOSS along with its responses to the pre-filing information requests to the active parties in that proceeding. Niagara Mohawk will not be required to use the results of that study for any purpose.

## 3.10.3 Information Services Expense Allocator

In its next base rate filing, Niagara Mohawk will consider a specific allocator for Information Services projects equal to or greater than \$1 million.

## 3.10.4 Minimum System Study

The Company will maintain data necessary to conduct a minimum system study for overhead and underground conductor accounts and transformer accounts and provide the minimum system study in its next base rate filing.

## 4. Gas Revenue Allocation and Rate Design

#### 4.1 Gas Revenue Forecast

The gas revenue forecast at current rates is set forth in Appendix 3, Schedule 1.1. The gas delivery rate revenue forecast used to develop base rates and the reconciliation to total gas Operating Revenue for the Rate Years is set forth in Appendix 3, Schedule 1.2. A summary of Other Revenues for each of the Rate Years is also set forth in Appendix 3, Schedule 1.1.

#### **4.2** Gas Revenue Allocation

The Rate Year One revenue increase will be allocated to service classes as set forth in Appendix 3, Schedule 2. Revenue increases in Rate Years Two and Three will be allocated as set forth in Appendix 3, Schedule 3.

## 4.3 Gas Rate Design

Niagara Mohawk's gas rates will be revised, as shown in Appendix 3, Schedule 4, with the following modifications:

- a. The Company will include the costs of the gas ETIP in base gas delivery rates, as described in Section 13.2.1 below. Allocation of ETIP costs will be as set forth in Appendix 3, Schedule 12. The Signatory Parties agree that this allocation methodology does not create any binding precedent for future proceedings. The SBC exemption will continue for classes SC-6, SC-9, SC-10, SC-12, SC-13, SC-14, and New York State Electric and Gas Corporation ("NYSEG"). There will be no RDM for SC-3, SC-5, and SC-8; therefore, any energy efficiency costs included in base rates for these classes will be separately reconciled with any over/under-recovered amounts to be deferred for future refund to, or recovery from customers, as discussed in Section 10.2.11.
- b. The minimum delivery service charges for the Rate Years are set forth in Appendix 3, Schedules 4.1 through 4.3. The minimum delivery service charge to all service classes will remain the same, except for SC-5 and SC-8 (shown in the table below).

	Current	Rate Year 1	Rate Year 2	Rate Year 3
SC-5	\$522.38	\$555.00	\$587.00	\$620.00
SC-8	\$924.04	\$1,040.00	\$1,155.00	\$1,271.00

- c. Bill impacts resulting from this rate design are shown in Appendix 3, Schedules 5.1 through 5.3.
- d. NYSEG will receive equal percentage increases to its demand charge, customer charge, and block rate.

#### 4.4 Deferral Credits

The deferral credits described in Section 2.2 will be allocated to the firm service classes (including NYSEG but excluding SC-9, SC-10, SC-12, SC-13, and SC-14) proportionate to delivery revenues at present rates using the allocators set forth in Appendix 3, Schedules 2 and 3. The deferral credits will not be allocated to load served at EZR or EJP rates. The deferral credits will be applied as a sur-credit that expires on March 31, 2021 (except for SC-3 and SC-8, which will expire on March 31, 2022).

#### 4.5 LAUF Gas

## 4.5.1 Target and Deadbands

As set forth in Appendix 3, Schedule 8, effective September 1, 2018, the LAUF gas target and deadbands are as follows:

LAUF Target	1.516%
Upper Band	2.516%
Lower Band	0.516%

#### 4.5.2 Inactive Accounts Adjustment

Beginning September 1, 2018, Niagara Mohawk will remove from the LAUF calculation an estimate of gas usage associated with meters that have been inactive for more than 90 days. Inactive meters are those that are not associated with an active customer account. To estimate usage, Niagara Mohawk will develop usage proxies that will be applied to meters that were inactive 90 days or more during each Gas Adjustment Charge ("GAC") period beginning September 1, 2018. To determine the proxies, Niagara Mohawk will calculate a monthly class-average use on inactive meters that

continue to report consumption during the GAC year. The applicable historic reference proxy will be applied to each meter that is inactive 90 days or more to determine the amount of gas to be excluded from the LAUF calculation.

## 4.6 Revenue Decoupling Mechanism

Niagara Mohawk's current RDM (as set forth in Gas Tariff PSC 219 ("PSC 219") Rule 32) will continue with updated revenue-per-customers targets for each of the following six groups: SC-1 Residential Non-heat, SC-1 Residential Heating, SC-2 Small General Residential, SC-2 Small General Commercial, SC-2 Small General Industrial, and SC-7 Small Transportation, and will include gas ETIP revenue moved from a surcharge into base rates, as shown in Appendix 3, Schedules 7.1 through 7.3.

## 4.7 Merchant Function Charge

Niagara Mohawk's current MFC (as set forth in PSC 219 Rule 33) will continue with the following modifications:

a. The MFC annual expense targets and annual reconciliation will be on a Monthly Cost of Gas ("MCG") year (twelve months ending August 31) basis to align the MFC reconciliation with the Company's Cost of Gas reconciliation. The conversion of the annual expense targets of the gas supply procurement and commodity-related credit and collection charge from Fiscal Year to MCG year is shown in Appendix 3, Schedule 6.2. An illustrative example of the stub period (April 1, 2018 to August 31, 2018) reconciliation is shown on Appendix 3, Schedule 6.1.

- b. The MFC will be updated to reflect the Gas Supply Procurement target of \$1.39 million, and the Commodity Related Credit and Collection target of \$1.08 million, as shown in Appendix 3, Schedule 6.2.
- c. The return requirement on gas purchase related to working capital will updated to reflect the lead-lag rate and the Company's pre-tax weighted average cost of capital, as shown in Appendix 3, Schedule 6.3.
- d. The commodity-related credit and collection expense target revenue requirement will be allocated between residential and non-residential customers in the amount of \$1.084 million and \$0.045 million, respectively, as shown in Appendix 3, Schedule 6.3.
- e. The Company will separately reconcile revenues to targets for residential and non-residential commodity-related credit and collection expenses. The Company will reset its commodity-related credit and collection expense per therm charge annually based on the latest sales forecast every September 1, and reconcile the revenue to target, effective the following January of each year.
- f. The commodity-related uncollectible rate, which is 3.2 percent for residential and 0.3 percent for non-residential customers, will be calculated by dividing net write-offs by the sum of (i) total revenue exclusive of Other Gas Revenues; (ii) Late Payment Charge Revenues; and (iii) receivables purchased under the Company's POR program.
- g. The Company will update the discount rate applicable to the purchased receivables to reflect the commodity-related uncollectible percentage and will update the commodity-related credit and collections rates applicable to the POR program that are

being proposed in this case. The credit and collections rate and the uncollectible percentage applicable to ESCOs will equal the Company's MFC charged to its sales customers.

h. The Company will update the return requirement on gas storage inventory target annually based on the latest storage cost forecast and will also update the pre-tax weighted average cost of capital. An illustrative example of the calculation is shown in Appendix 3, Schedule 6.3.

#### 4.8 Statements to be Eliminated and Tariff Modifications

PSC 219 will be revised as follows:

- a. Niagara Mohawk will add language to Leaf 92 that defines the twelvemonth period used to measure total demand costs for purposes of the Average Demand Cost of Gas calculation as September 1 through August 31 of each year.
- b. Niagara Mohawk will add language stating that all monthly tariff statements are available on the Company's website.
- c. Rule 22 (Economic Development Rider), Rule 24 (Economic Revitalization Incentive Rider), and Rule 34 (Deferral Credits) will be eliminated on Leaf 122.7.
- d. The charge for ESCO requested bill calculations will be eliminated from Leaf 190.

#### 4.9 Miscellaneous Gas Provisions

#### 4.9.1 Electric Generation

The Company will modify the balancing provisions of SC-14 to provide that customers will incur no imbalance charges for daily imbalances that are less than or equal to two percent of their daily consumption. Daily imbalances that are less than or equal to two percent will be aggregated on a monthly basis and cashed out at a monthly index price equal to the simple average of the Dominion Northpoint midpoint, Dominion South Point, and the Iroquois receipts midpoint prices. The Company will also modify the balancing provisions that set forth the prices at which daily imbalances are cashed out to reflect the use of these same index prices to determine the daily Gas Sales and Gas Purchase prices. Any discounts or surcharges to any daily price applied to the purchase of gas as a result of an over-delivery or under-delivery, respectively, will be identified as penalties in PSC 219 and Gas Transportation Operating Procedures ("GTOP") manual.

## 4.9.2 Reconnection/Disconnect Charges

The service re-establishment charge during normal business hours is updated to \$50.00. The charge to restore service outside of normal business is updated to \$64.00. Additionally, when the ESCO requests that the Company disconnect service to the ESCO's sales customer for non-payment, the charge to the ESCO is updated to \$50.00.

## 4.9.3 Paperless Billing

The updated paperless billing credit is \$0.41 per service period.

### 4.9.4 Gas Billing Charge

The Company's gas billing charges will be as follows: \$0.98 to an ESCO that supplies gas to a gas-only customer and \$0.49 to an ESCO that supplies gas to a dual gas and electric customer.

#### 4.9.5 Backout Credit Updates

The billing backout credit to gas only customers is updated to \$0.98. The billing backout credit to a dual gas and electric customer that is supplied gas by an ESCO is updated to \$0.49.

#### 4.10 Earnings Adjustment Mechanisms Surcharge

The Company will be permitted to recover earned gas EAM positive revenue adjustments through an EAM surcharge beginning April 1, 2019. The Company will allocate any positive revenue adjustments to the service classes using the Gas Deliveries allocator, and collect any positive revenue adjustments on a per-therm basis, exclusive of EZR and EJP load. The EAM surcharge will be included in the delivery service adjustment ("DSA") recovered from SC-1, SC- 2, SC-3, SC-5, SC-7, SC-8, SC-12, and SC-13 firm sales and firm transportation customers. An example is shown in Appendix 3, Schedule 10.

#### 4.11 Economic Development/Marginal Cost Rates

The Company will adopt new marginal cost rates effective April 1, 2018, as shown in Appendix 3, Schedule 11. Niagara Mohawk will phase in the gas EJP rates over a five-year period for those classes seeing an increase, subject to EJP customers receiving the lower of EJP rates or standard tariff rates. The Company will perform an

annual review of all EJP customer classes that may pay more on EJP marginal rates than on the otherwise applicable standard tariff rate. If that review indicates a customer paid more on EJP rates than on the standard tariff rate, the Company will provide a refund for the difference.

#### 4.12 Next Base Rate Filing

#### 4.12.1 Revenue Forecast

In its next base rate filing, Niagara Mohawk will update its revenue forecast when it files its corrections and updates to the initial rate filing. Additionally, the revenue forecast will utilize heating degree days ("HDDs") from Syracuse for the West Gate sales forecast and HDDs from Albany for the East Gate sales forecast.<sup>11</sup>

The Company will collaborate with Staff to improve its future revenue forecast with regard to input data sanitization, economic variable selection, and statistical tests. Further, the Company will use all data (zero usage to the largest usage in the service class) in its ogive analysis used in future base rate cases.

#### 4.12.2 Historical ECOSS

In its next base rate filing, Niagara Mohawk will submit an historical ECOSS along with its responses to the pre-filing information requests to the active parties in that proceeding. Niagara Mohawk will not be required to use the results of that study for any purpose.

\_

<sup>&</sup>lt;sup>11</sup> The East Gate is the gates located east of Amsterdam, New York, and the West Gate is the gates located west of Amsterdam, New York.

#### 4.12.3 Information Services Expense Allocator

In its next base rate filing, Niagara Mohawk will consider a specific allocator for Information Services projects equal to or greater than \$1 million.

#### 4.12.4 Minimum System Study/Zero Intercept Study

The Company will develop and maintain the data necessary to conduct a minimum system or zero intercept study for the distribution mains account and will provide the study in its next base rate filing.

#### 4.12.5 Streamline PSC 219

The Company will conduct a study to streamline the general sections of PSC 219 with its downstate affiliates and file a report in its next base rate case.

### 4.12.6 Meeting to Discuss Residential Rate Design

Prior to its next gas base rate filing, the Company will hold a meeting with interested parties to discuss options for gas residential rate design. The input received at the meeting will help inform the Company's next base rate filing.

#### 4.12.7 Gas SC-2/SC-7 Classification Issue

The Company will analyze the eligibility requirements and other terms of service for SC-2 and SC-7. In its next base rate filing, the Company will propose tariff modifications, as appropriate, to ensure that similarly-situated customers are subject to the same delivery rates regardless of their commodity supplier.

### 5. <u>Computation and Disposition of Excess Earnings</u>

#### **5.1** Earnings Report

By August 31 of each year, commencing in CY 2019, the Company will file an earnings report using the methodology described in this Section and shown in Appendix 4. The earnings report will be used for the Earnings Sharing Mechanism set forth in Section 5.3.

The earnings report will calculate Niagara Mohawk's ROE for the preceding Rate Year using a capital structure with an equity component equal to 48 percent and incorporating the adjustments set forth below. In the event Niagara Mohawk does not file for new rates to be effective until after March 31, 2021, the earnings sharing threshold of greater than 9.5 percent for any period of time less than a year before new rates take effect will be prorated to develop a stub period earnings sharing threshold. The stub period will be calculated by adjusting the actual average rate base for that period by an operating revenue ratio factor. The operating revenue ratio factor will be calculated as the ratio of operating revenue during the same partial period in the previous Rate Year to the total operating revenue for that Rate Year. An example of the calculation for the stub period is shown in Appendix 4, Schedule 1.

#### 5.2 Discrete Incentives and Negative Revenue Adjustments

Niagara Mohawk will calculate its ROE by excluding the effects of the following discrete incentives and negative and positive revenue adjustments:

a. Electric and Gas Customer Service Quality revenue adjustments;

- b. Electric Reliability revenue adjustments, which include the Electric Cost Estimating and Inspection and Maintenance metrics;
  - c. Gas Safety Performance revenue adjustments;
  - d. Electric and Gas property tax sharing;
  - e. Gas revenue sharing for capacity release and off-system sales;
  - f. Gas revenue sharing for SC-6, SC-9, and SC-14;
  - g. Gas LAUF;
- h. Electric and Gas Termination and Uncollectible Expense metric revenue adjustments;
  - i. Gas Cost Estimating metric revenue adjustments;
  - j. Electric and Gas EAMs;
  - k. Non-Wires Alternative and Non-Pipeline Alternative revenue adjustments;
  - 1. Information Services Capital Cost Incentive revenue adjustments; and
  - m. Leak prone pipe productivity incentives.

#### **5.3** Earnings Sharing Mechanism

If Niagara Mohawk's actual ROE in any Rate Year, excluding the discrete incentives and negative and positive revenue adjustments identified in Section 5.2, exceeds 9.5 percent, the amount in excess of 9.5 percent will be deemed "shared earnings" for the purposes of this Joint Proposal and be treated as follows:

#### 5.3.1 ROE > 9.5% and $\leq$ 10.0%

If the level of earned ROE for Niagara Mohawk exceeds 9.5 percent but is less than or equal to 10.0 percent, 50 percent of the revenue equivalent of earnings will be deferred for the benefit of customers and 50 percent will be retained by Niagara Mohawk.

#### 5.3.2 ROE > 10.0% and $\leq 10.5\%$

If the level of earned ROE for Niagara Mohawk exceeds 10.0 percent but is less than or equal to 10.5 percent, 75 percent of the revenue equivalent of earnings will be deferred for the benefit of customers and 25 percent will be retained by Niagara Mohawk.

#### 5.3.3 ROE >10.5%

If the level of earned ROE for Niagara Mohawk exceeds 10.5 percent, 90 percent of the revenue equivalent of earnings will be deferred for the benefit of customers and 10 percent will be retained by Niagara Mohawk.

# 6. <u>Electric and Common Capital Investment Levels and Infrastructure and Operations Programs</u>

### **6.1** Capital Investment Levels

Appendix 1, Schedule 5 sets forth the Company's forecast level of electric and common capital and cost of removal (where applicable) investment for each Rate Year. Notwithstanding the specified segment-level spending amounts set forth in Appendix 1, Schedule 5 nothing in this Joint Proposal is intended to limit Niagara Mohawk's flexibility during the term of the Rate Plan to substitute, change, or modify its capital projects.

#### **6.2** Non-Wires Alternatives

In connection with the evaluation, implementation, cost allocation and recovery, incentive calculation and recovery, and other aspects of non-wires alternatives, the Company will follow the process described in Appendix 13.

#### **6.3** Electric Capital Reporting Requirements

The Company will submit periodic reports regarding its electric infrastructure planning and investment to the Commission and Staff as follows:

- a. Distributed System Implementation Plan ("DSIP") in accordance with Cases 14-M-0101 and 16-M-0411.
- b. Annual Report on the Condition of Physical Elements of Transmission and Distribution Systems (commonly referred to as the Asset Condition Report) in accordance with Case 06-M-0878.
- c. Annual Transmission and Distribution Capital Investment Plan (commonly referred to as the 5-year CIP) in accordance with Case 06-M-0878.
- d. Annual Capital Investment Plan Quarterly Report in accordance with Case
   06-M-0878.
- e. 15-Year System Plan to be filed every two years in accordance with Case 08-E-0827. The 15-Year System Plan is to be filed in the opposite years in which the DSIP filing is submitted.

# 7. <u>Gas Capital Investment Levels and Infrastructure and Operations Programs</u>

#### 7.1 Gas Capital Investment Levels

Appendix 1, Schedule 5 sets forth the Company's forecast level of gas capital and cost of removal (where applicable) investment by program for each Rate Year. Notwithstanding the specified segment-level and program/project level spending amounts set forth in Appendix 1, Schedule 5 nothing in this Joint Proposal is intended to limit Niagara Mohawk's flexibility during the term of the Rate Plan to substitute, change, or modify its capital projects.

#### 7.2 Leak Prone Pipe Productivity Incentive

Niagara Mohawk's rates reflect the following unit costs for leak prone pipe ("LPP") replacements: Rate Year One - \$184/foot, Rate Year Two - \$188/foot, and Rate Year Three - \$192/foot. If Niagara Mohawk achieves unit cost savings for proactive LPP replacements in a Rate Year as compared to the unit costs reflected in rates for that Rate Year, it will accrue a positive revenue adjustment as follows:

	Tier 1	Tier 2	Tier 3	Tier 4	Tier 5	Tier 6
Unit Cost Savings (%)	0 to < 1.50	$\geq$ 1.50 to $<$ 3.00	≥3.00 to <4.50	≥4.50 to <6.00	$\geq$ 6.00 to <7.50	≥7.50
Unit Cost Rate Year One	\$184 to >\$181	≤\$181 to >\$178	≤\$178 to >\$176	≤\$176 to >\$173	≤\$173 to >\$170	≤\$170
Unit Cost Rate Year Two	\$188 to >\$185	≤\$185 to >\$182	≤\$182 to >\$180	≤\$180 to >\$177	≤\$177 to >\$174	≤\$174
Unit Cost Rate Year Three	\$192 to >\$189	≤\$189 to >\$186	≤\$186 to >\$183	≤\$183 to >\$180	≤\$180 to >\$178	≤\$178

Basis Points 0 2 4 6 8 10
---------------------------

Niagara Mohawk's eligibility for the LPP Productivity Incentive in each Rate Year is conditioned upon Niagara Mohawk removing, at a minimum, the minimum removal target in the relevant CY (see Section 12.1.1). Unit costs for purposes of the LPP Productivity Incentive will be calculated by dividing Niagara Mohawk's actual costs for proactive LPP removals by the total number of LPP feet removed from service through Niagara Mohawk's proactive main replacement program in the relevant Rate Year. Any positive revenue adjustment earned in a Rate Year will be deferred for future collection from customers. An illustrative example of this incentive mechanism is provided in Appendix 6, Schedule 16.

#### 7.3 Gas Safety and Reliability Surcharge

Niagara Mohawk will establish a Gas Safety and Reliability Surcharge to recover (i) the cost to replace incremental LPP (Section 7.3.1) and (ii) the cost to repair additional Type 3 leaks (Section 7.3.2).

## 7.3.1 Recovery of Incremental LPP Replacement Costs

The Gas Safety and Reliability Surcharge will provide a return on investment and depreciation expense associated with removing from service miles of LPP incremental to the annual 50 miles funded in base rates.

For each mile removed above the annual 50 mile threshold, Niagara Mohawk will be allowed to recover the revenue requirement (the return on investment and depreciation expense) associated with incremental LPP investment, using the unit costs for proactive LPP replacements set forth in Section 7.2, which will be calculated as the lesser of (i) Niagara Mohawk's average proactive main replacement program capital replacement cost per mile of LPP in the given Rate Year, or (ii) 102 percent of the proactive main replacement program capital unit costs allowances for LPP replacement in the given Rate Year. An illustrative example of this mechanism is provided in Appendix 6, Schedule 15.

#### 7.3.2 Recovery of Incremental Leak Repair Costs

Niagara Mohawk will be permitted to recover through the Gas Safety and Reliability Surcharge the cost to eliminate up to 250 incremental leaks per CY in excess of its Total Leaks targets (see Section 12.2.1) in increments of 50 leaks (*e.g.*, if the Company repairs 67 incremental leaks in a CY, cost recovery for that CY would be limited to 50 incremental leaks). The per-leak rate allowances are \$4,947 for Rate Year One, \$5,075 for Rate Year Two, and \$5,200 for Rate Year Three. An illustrative example of this mechanism is provided in Appendix 6, Schedule 15.

### 7.3.3 Gas Safety and Reliability Surcharge Calculation

The Gas Safety and Reliability Surcharge will be developed as a per therm surcharge that will appear on the Statement of Gas Safety and Reliability Surcharge. The surcharge will be calculated by first allocating the return on investment and depreciation expense associated with incremental LPP investment and leak repair costs to each firm service class by forecast delivery revenues established in this Joint Proposal, then developing a per therm rate per service class, and will be collected in the DSA. The Gas

Safety and Reliability Surcharge will be reconciled annually and included in the DSA recovered from firm sales and firm transportation customers beginning August 1 of the following Rate Year. An illustrative example of the Gas Safety and Reliability Surcharge calculation, including examples of the incremental proactive LPP replacement and leak repair, is provided in Appendix 6, Schedule 15.

### 7.4 Capitalization Policies

Niagara Mohawk is authorized to capitalize the following corrosion control activities in accordance with Accounting Standards Codification 360, the Federal Energy Regulatory Commission's accounting regulations and International Accounting Standard 16:

- Install test station ("TS") on Main
- Install TS on main across Insulated Joints ("IJ")
- Install TS on Distribution Service
- Install TS on Main with anode(s)
- Install TS on main across IJ with anode(s)
- Install TS on Distribution Service with anode(s)
- Install/Replace IJ at Meter
- Install/Replace IJ on Main
- Special Request Renew Service with Plastic
- Install new Rectifier

Testing and inspection activities related to corrosion control will remain as expensed items.

### 7.5 Gas Safety Programs

The Company will implement the following gas safety programs during the Rate Plan:

Program	Costs
Damage Prevention Vehicle Wrapping	\$0.09 million
Damage Prevention GPS Transmission Pipeline Mapping	\$2.60 million
Damage Prevention GPS Mapping of Distribution Pipeline and Services (see Section 7.5.2)	\$3.00 million
First Responder Train the Trainer	\$0.182 million
First Responder Mobile Hands On	\$1.074 million
Residential Methane Detector (see Section 7.5.1)	\$2.025 million
Total	\$8.971 million

The Company will use \$8.971 million of the Rate Plan Settlement Credits to fund the above programs. There is no presumption that such programs will continue, or be discontinued, beyond the term of the Rate Plan.

The Company also will reserve \$5 million from the Rate Plan Settlement Credits and \$1.351 million of the negative revenue adjustment resulting from operation of the CY

2015 Mismark and Overall Damages metrics<sup>12</sup> to fund future gas safety and compliance improvement programs during the Rate Plan. The Company will consider the following incremental gas safety programs during the Rate Plan: (i) distribution of additional residential methane detectors; (ii) flood zone protection packages;<sup>13</sup> and (iii) leak detection equipment to aid first responders. The Company will meet with Staff annually, by April 1<sup>st</sup> of each Rate Year beginning April 1, 2018, to report on incremental gas safety programs and will seek Staff's input in the development of incremental gas safety programs. The Company will petition the Commission for approval to use the incremental funds, up to \$6.351 million, for non-recurring expenses related to gas safety and compliance improvement programs in the Rate Plan, with such petition to be filed by December 31, 2019.

In the Rate Plan, the Company will reconcile all expenditures, and any underspending will be deferred. If the \$15.332 million allocated to gas safety and compliance programs is not used or encumbered by the time the Commission next changes the Company's base delivery rates, the remaining funds will be used for rate mitigation, and not restricted to gas safety use.

#### 7.5.1 Residential Methane Detector Program

The Company's Residential Methane Detector program involves the distribution of approximately 13,500 residential methane detectors, targeted towards low income,

\_

Case 06-M-0878, National Grid (Niagara Mohawk, The Brooklyn Union Gas Company d/b/a National Grid NY ("KEDNY") and KeySpan Gas East Corporation d/b/a National Grid ("KEDLI")) 2015 Annual Gas Safety and Reliability Performance Report (filed March 16, 2016).

<sup>&</sup>lt;sup>13</sup> The Commission approved flood zone protection demonstration projects in Cases 16-G-0058 and 16-G-0059.

multi-use residences. Within 90 days of the Effective Date, the Company will file an implementation plan with the Secretary that will include a deployment plan and methane detector costs.

# 7.5.2 Damage Prevention GPS Mapping of Distribution Pipeline and Services Facilities

Within 90 days of the Effective Date, the Company will file an implementation plan with the Secretary that details how, and over what period, the \$3 million budget for the program will be spent.

#### 7.6 Methane Reduction Efforts

- a. Niagara Mohawk will continue to advance methane reduction efforts in its service territory similar to the terms set forth in the rate plans for KEDLI and KEDNY adopted in Cases 16-G-0058 and 16-G-0059. Such methane reduction efforts will include consideration of best practices for identifying and abating high volume leaks.<sup>14</sup> The Company will continue to work collaboratively with EDF in assessing, developing, and implementing such best practices.
- b. By March 31, 2019, the Company agrees to develop a methodology for assessing leak size and volume using leak quantification methods, and will begin to deploy such methodology on an ongoing basis, to the extent practical, during the term of the Rate Plan.

This will include consideration of efforts currently underway at Niagara Mohawk's affiliate utilities in Massachusetts and as implemented by other utilities including at Public Service Gas & Electric Company, Consolidated Edison Company of New York, Inc., Pacific Gas and Electric Company, and Center Point Energy.

- c. The Company agrees to use leak data gathered in the manner described above to prioritize the highest emitting leaks when repairing Type 3 leaks, and as a factor in prioritizing leak prone pipe removal.
- d. The Company will monitor the deployment of new leak quantification technology and report on its efforts to advance leak quantification technologies and practices, as specified in (e) below.
- e. The Company agrees to file publicly-accessible annual reports with the Commission by March 15 of each year beginning March 15, 2019 until the conclusion of the Company's next base rate case, documenting progress towards meeting the goals set out in (a) and (b) above. The Company will document its efforts to advance any improvements to leak quantification methods during the Rate Plan, consistent with (c) above. Interested parties will have an opportunity to respond to such reports 30 days after their submission. In addition, starting in 2018, the Company, EDF, and any other interested party will have at least one face-to-face meeting each year by the end of September until the conclusion of the Company's next base rate case.

#### 7.7 Gas Capital Reporting Requirements

## 7.7.1 LPP Prioritization, Type 3 Leak, and Capital Plan Report

Prior to the beginning of each Rate Year, the Company will file with the Secretary a LPP prioritization summary identifying: (i) the proposed projects and their estimated costs; (ii) estimates of the number of Type 3 leaks on each system; and (iii) the five-year capital plan in the same format as Appendix 1, Schedule 5.

### 7.7.2 Quarterly Capital Report

The Company will file with the Secretary a quarterly variance report within 45 days after the end of each of the first three quarters of each Rate Year. The report will be in the same format as Appendix 1, Schedule 5 with explanations for variances between the approved budget and the actual expenditures, details on the progress of LPP retirement mileage, Type 3 leaks repaired, and a summary of the current Type 3 leak inventory.

#### 7.7.3 Annual Capital Report

The Company will file with the Secretary an annual report not later than 60 days after the end of the last quarter in each Rate Year that includes: (i) a final variance summary of capital expenditures for all capital projects and programs including all ongoing and active construction projects and programs in the same format as Appendix 1, Schedule 5; (ii) a narrative explaining any cost or timeline deltas exceeding 10 percent; (iii) a narrative on project design, permitting, and/or construction status (including a detailed construction schedule for each project) for any ongoing projects; (iv) a description of any new projects or programs; and (v) capital project sanctioning documents for any projects exceeding \$1 million that were authorized during the previous Rate Year.

#### 7.8 Gas Business Enablement

Niagara Mohawk will continue to implement the Gas Business Enablement ("GBE") Program, the scope of which is more fully described in Appendix 10, Schedule 1, during the term of the Rate Plan. The GBE Program is a shared investment across all

National Grid USA operating companies, that will implemented and owned by the National Grid USA Service Company, Inc. ("Service Company"), with a portion of the costs allocated to Niagara Mohawk. The total Service Company costs of the GBE Program for capital expenses and project operating expenses relating to the capital investment (excluding run the business costs) are \$458.1 million through FY 2023.

### 7.8.1 GBE Program Total Cost Cap

For purposes of determining Niagara Mohawk's allocable share of GBE Program costs, the total Service Company costs, comprised of capital and project operating expenses related to capital expenses, for the GBE Program will be capped at \$458.1 million through FY 2023. In future rate proceedings, the Company may seek recovery of costs in excess of this cap that are associated with incremental investments in the GBE Program beyond those described in Appendix 10, Schedule 1 as long as the incremental costs are justified by measurable benefits.

#### 7.8.2 GBE Program Capital Investment Levels

The revenue requirements include the costs of GBE Program capital investments charged to the Company by the Service Company as a rent expense. The rent expense charged to Niagara Mohawk for the GBE Program includes the return on, and the amortization and depreciation of, the Company's allocated portion of current GBE Program capital investments along with incremental GBE Program capital investments that are forecast for the Rate Years. The Company's forecast of capital expenditures reflects the following levels of Service Company capital investment for the GBE Program during the term of the Rate Plan: \$92.305 million in Rate Year One, \$68.166 million in

Rate Year Two, and \$45.232 million in Rate Year Three, as shown in Appendix 1, Schedule 7. Section 8.2 describes the downward-only Service Company Rents Net Utility Plant and Depreciation Expense Reconciliation Mechanism applicable to Information Services and GBE Program capital investments. Notwithstanding the specified program level spending amounts shown in the Schedule, nothing in this Joint Proposal is intended to alter the Company's flexibility during the term to substitute, change, or modify the timing of its GBE Program capital investments to deliver the scope of the GBE Program.

#### 7.8.3 GBE Program Key Performance Indicators

Niagara Mohawk will measure and report on six key performance indicators ("KPIs") that are intended to demonstrate successful delivery of GBE Program capabilities. The GBE KPIs are (i) the average number of completed Customer Meter Services ("CMS") jobs per worker per day; (ii) the average feet of main replaced per Maintenance and Construction ("M&C") worker per day; (iii) work orders processed each year per each full-time equivalent ("FTE") engineering clerical employee; (iv) total call volume related to customer moves and non-moves per year; (v) total number of gas safety non-compliance occurrences per year; and (vi) the Company's customer experience (effort) rating based on customer surveys. Appendix 10, Schedule 2 details how each KPI is defined and calculated. The Company will report on each GBE KPI on an annual basis as discussed in Section 7.8.4.

At the end of FY 2023, the Company will measure delivery of GBE Program capabilities based on performance across the FY 2023 KPI targets. The FY 2023 GBE KPIs, weightings, and targets are set forth in Appendix 10, Schedule 3.

Illustrative examples of the GBE KPI performance measurement are provided in Appendix 10, Schedules 4 through 6. To the extent the Company fails to meet the FY 2023 KPI targets (net of any offsets discussed below), the Company will record a regulatory liability to return to customers all or a portion of Niagara Mohawk's \$31.2 million share of GBE investment costs for enhanced capabilities beyond system replacement.

As illustrated on Appendix 10, Schedules 4 through 6, in the event the Company outperforms on any individual GBE KPI, the value of such outperformance, expressed as a dollar value of business case benefits for the GBE Program, may be re-allocated to any underperforming KPIs subject to the following: (i) an underperforming GBE KPI may be improved by no more than 50 percent of Niagara Mohawk's business case benefits (as set forth in Appendix 10, Schedules 4 through 6); and (ii) the value of all GBE KPIs after reallocation is subject to a cap of 100 percent of its associated Niagara Mohawk's business case benefits.

In the event of any unforeseen circumstances, changes in law or regulation, or other events that impact the underlying assumptions used to develop the GBE KPI performance targets, such that the KPI targets are no longer reasonable measures of the Company's performance, the Company and Staff may, by mutual agreement subject to Commission approval, equitably adjust the GBE KPI targets upward or downward to address such changes. In addition, the Company's failure to perform under any GBE KPI will be excused if the Company can reasonably demonstrate that the failure to perform was caused by any unanticipated or anomalous circumstances or events outside of the

Company's control and materially affected or delayed the Company's performance with respect to the affected KPI.

#### 7.8.4 GBE Program Reporting

The Company will file a quarterly GBE Program report with the Secretary within 60 days after the end of each quarter of each Rate Year. The report will address the status of the GBE Program and budget, including: (i) a narrative explaining overall GBE Program status; (ii) detail on budgets and actual spending for the GBE Program; (iii) identification of allocations of GBE Program costs to the Company; and (iv) explanations of variances between budgets and actual spending. In the report for the last quarter of each Rate Year (quarter ending March 31), the Company will also include (i) any cost or timeline differences that exceed ten percent for the Rate Year; (ii) the Rate Year's GBE KPI performance; (iii) the number and length of the customer appointment windows (currently two-hour intervals (e.g., 8 a.m. to 10 a.m.)) and non-appointment commitment windows (currently either 8 a.m. to 4 p.m., or 4 p.m. to 8 a.m.) offered to customers during the Rate Year; and (iv) the latest GBE sanction paper authorized during that Rate Year.

The Company will hold semi-annual meetings with Staff to (i) discuss budget and actual GBE spending to date; (ii) provide an update on the status of GBE initiatives that have been undertaken; and (iii) review quarterly filings.

#### 8. <u>Information Services</u>

## 8.1 Information Services Electric and Gas Capital Investment Levels

Niagara Mohawk's electric and gas rates include Information Services ("IS") capital investments that are owned by the Service Company and allocated to the Company in the form of rent expense. Rent expense includes the return on, and the amortization and depreciation of, current IS capital investments along with incremental IS capital investments that are forecast for the Rate Years. The incremental IS capital investment is \$90 million in Rate Year One, \$90 million in Rate Year Two, and \$96 million in Rate Year Three. These costs do not include costs associated with the Company's GBE Program (which is separately discussed in Section 7.8). Appendix 1, Schedule 7 sets forth Niagara Mohawk's IS capital investment plan by program. The schedule reflects actual capital spending through September 2017 and the incremental capital investment forecast from October 2017 through each Rate Year. Notwithstanding the specified program-level spending amounts shown in the Schedule, nothing in this Joint Proposal is intended to limit Niagara Mohawk's flexibility during the term of the Rate Plan to substitute, change, or modify its IS capital projects. Section 8.2 describes the downward-only Service Company Rents Net Utility Plant and Depreciation Expense Reconciliation Mechanism applicable to IS and GBE Program capital investments.

## 8.2 Service Company Rents IS and GBE Program Net Plant and Depreciation Expense Reconciliation Mechanism

The Company will implement a downward-only IS and GBE Program Net Utility

Plant and Depreciation Expense Reconciliation Mechanism. Each Rate Year, the

Company will reconcile its respective actual IS and GBE Program average net utility

plant and depreciation expense revenue requirements to the forecast revenue requirements, as set forth below and shown in Appendix 5, Schedule 19 for electric, and in Appendix 6, Schedule 17 for gas:

	FY 19	FY 20	FY 21
IS and GBE -	\$34.42 million	\$36.72million	\$38.63 million
Electric			
IS and GBE – Gas	\$7.87 million	\$10.06 million	\$12.53 million

The IS and GBE Program average net utility plant and depreciation expense revenue requirement will be calculated by applying the Company's pre-tax weighted average cost of capital in the respective Rate Years (8.07 percent in Rate Year One, 8.02 percent in Rate Year Two, and 7.99 percent in Rate Year Three) to the IS and GBE Program average net utility plant balance and adding the depreciation expense to the product.

The difference between the actual IS and GBE Program average net utility plant and depreciation expense revenue requirement and the target average net utility plant and depreciation expense revenue requirement will carry forward for each Rate Year and be summed at the end of Rate Year Three for electric and gas, respectively. As illustrated in Appendix 5, Schedule 19 and Appendix 6, Schedule 17, if, at the end of Rate Year Three, the cumulative actual IS and GBE Program average net utility plant and depreciation expense revenue requirement is negative, the Company will defer the revenue requirement impact for the benefit of customers. If, at the end of Rate Year Three, the cumulative actual IS and GBE Program average net utility plant and depreciation expense revenue requirement is positive, there will be no deferral.

The reconciliation mechanism will apply to the Company's aggregate total IS and GBE Program average net plant and depreciation expense combined, and not to individual components. The net plant target balances and reconciliation will not consider the impact of Accumulated Deferred Income Taxes ("ADIT").

#### 8.3 IS Capital Investment Cost Incentive

To incent the Company to implement IS projects at lower costs, the IS Capital Investment Cost Incentive will allow the Company and customers to share in any efficiency savings on the Company's share of capital costs for identified IS projects. The incentive will initially apply to the following IS project:

Investment Name	INVP#	Forecast In- Service Date	Total Project Forecast Appendix 1, Schedule 7	10% Target Threshold for Incentive
Green Button Connect	4704C	3/31/21	\$3,072,759	\$2,765,483

To the extent the actual capital costs (upon project closure) are less than the Company's full sanction estimate by ten percent or more (as defined in Appendix 5, Schedule 20 and Appendix 6, Schedule 18), the savings allocable to Niagara Mohawk will be shared 80 percent/20 percent between customers and the Company, respectively, and recorded as a regulatory asset. An illustrative example of this incentive mechanism is provided in Appendix 5, Schedule 20 and Appendix 6, Schedule 18.

In addition, as part of the semi-annual IS meeting discussed in Section 8.6 below, the Company and Staff will consider including additional projects to include in the incentive in future Rate Years. In the report for the last quarter of each Rate Year, the Company will report on its performance against the incentive.

#### 8.4 Distribution Supervisory Control and Data Acquisition System

The revenue requirement includes \$0.500 million annually in Rate Year Two and Rate Year Three for requirements and design work for the Distribution Supervisory Control and Data Acquisition ("DSCADA") system. The \$96 million IS capital investment level discussed in Section 8.1 includes \$6 million for capital investment for the DSCADA system in Rate Year Three. The DSCADA system capital investment will not go into service until after the term of the Rate Plan; therefore, there are no costs reflected in the Rate Year Three revenue requirement relative to this capital investment.

## 8.5 Distributed Generation Interconnection Online Application Portal

The revenue requirement does not include recovery for Phase 3 costs of the Distributed Generation Interconnection On-line Application Portal ("DGIOAP") project. The Signatory Parties agree that if the Company is required to incur Phase 3-related costs within the term of the Rate Plan, it may file a petition with the Commission to request recovery of such costs.

#### 8.6 IS Capital Reporting

Prior to the beginning of each Rate Year, the Company will file with the Secretary its IS Capital Investment Plan for that Rate Year, including a narrative explaining the overall IS investment plan and identifying the proposed IS projects and their estimated costs.

The Company will also file with the Secretary quarterly variance reports within 60 days after the end of each Rate Year quarter. The reports will address the status of Service Company IS programs and budgets. The reports will include (i) a narrative explaining overall IS investment plan approach; (ii) a description of defined program categories (e.g., Regulatory, Legal and Compliance Mandates; Business Programs and Projects; Technology/Infrastructure Foundation and Reliability) that form the spending rationale for IS projects; (iii) detail on budgets and actual spending for each of the program categories, and for the top ten projects by budget within the program categories; (iv) explanations of variances between budgets and actual spending; (v) identification of allocations to Niagara Mohawk; and (vi) a report on budget exceptions by program category and top ten projects based on allocations to Niagara Mohawk. In the report for the last quarter of each Rate Year, the Company will also include (i) an explanation of any cost or timeline differences exceeding ten percent for projects completed; (ii) the latest partial, full, re-sanction or closure paper for any projects exceeding \$1 million that were authorized during the previous Rate Year; and (iii) performance on the IS capital cost incentive.

On a semi-annual basis, the Company will meet with Staff to (i) discuss budget and actual spending to date; (ii) provide an update on the status of in-flight projects; (iii) discuss proposed projects for the next six months; (iv) identify any projects subject to the IS capital cost incentive; and (v) review quarterly filings. Beginning with the first semi-annual meeting, the Company will work with Staff to develop mutually agreeable sanction paper enhancements needed to justify IS investments and allow for adequate review. At a minimum, the enhancements will include minimum cost alternative

analyses, as appropriate, based on the type of IS investment (e.g., regular upgrades versus build of new function), and the consensus enhancements will be implemented no later than the end of Rate Year One. The Company will also work with Staff to determine whether different or additional information would be useful to include in the quarterly reports.

### 9. Street Lighting

#### 9.1 LED-Only Replacement Luminaire Program

The Company will establish an "opt-in" LED-only replacement program for Company-owned luminaires. Under the LED-only replacement program, existing Company-owned failed roadway luminaires will be replaced with LEDs. Further, HID luminaires will no longer be offered for new street light installations. Municipalities will have the opportunity to identify the LED luminaires that meet their community's respective needs. The Company will develop procedures and protocols, including providing recommendations for LED conversions for Company-owned streetlights based on currently installed luminaires. The Company will coordinate with municipalities to ensure procedures are properly implemented.

#### 9.2 Street Lighting Plant Accounts and Service Lives

The Company will separate the Overhead Street Lighting plant account (account 373.10) into the two new sub-accounts: (i) non-LED Overhead Street Lighting-Luminaires (account 373.11); and (ii) Overhead Street Lighting-Other (account

373.10). The Company also will separate the Underground Street Lighting plant account (account 373.20) into the two new sub-accounts: (i) non-LED Underground Street Lighting-Luminaires (account 373.21); and (ii) Underground Street Lighting-Other (account 373.20). Additionally, the Company will split the associated depreciation reserves for the Overhead Street Lighting plant account (account 373.10) into the book reserves for the non-LED Overhead Street Lighting-Luminaires (account 373.11) and Overhead Street Lighting-Other (account 373.10) based on a theoretical depreciation reserve calculation, and perform the same segregation exercise for the corresponding underground street lighting accounts. The average service lives for the assets in the non-LED luminaire accounts (accounts 373.11 and 373.21) will be set to 20 years, and the average service lives for assets in the other equipment accounts (accounts 373.10 and 373.20) will be set to 60 years. LED luminaire investments will be reflected in LED Overhead Street Lighting (account 373.30) and LED Underground Street Lighting (account 373.40). Service lives for the LED luminaire accounts will be set to 25 years.

#### 9.3 Street Light Asset Sales

#### 9.3.1 Net Book Value Sales

For the term of this Rate Plan only, the Company agrees to sell its PSC 214 SC-2 street lighting assets at net book value ("NBV") to any municipal customer that agrees to purchase all street light assets serving it within the municipality's taxing jurisdiction. Sales of less than all street light assets serving the customer within a municipal taxing

\_

Both the Overhead Street Lighting–Other and Underground Street Lighting–Other accounts include the non-luminaire street lighting plant, such as poles, conductors, arms, etc.

district will be subject to negotiating a mutually-agreeable sales price as currently specified in the tariff governing street light asset sales.

### 9.3.2 NBV Sale Price

- a. The NBV for street lighting assets serving a given municipal customer will be calculated using the Street Lighting FERC sub-accounts (included in the Account 373 series) Plant Accounting information provided by the Company's plant asset repository system, Power Plan. Power Plan maintains asset investment amount information by vintage year and by tax district, but does not maintain the NBV of individual assets. Depreciation rates, depreciation expense, and the associated depreciation reserve are determined and recorded at the FERC sub-account level, not at an individual asset level. Therefore, subject to the provisions of Section 9.3.2(b), the Company will use the following process to determine the NBV of street light assets for purposes of sale transactions:
- i. Determine the book cost for each street light FERC sub-account, by vintage year (*i.e.*, year the investment was placed in service), by tax district.<sup>16</sup>
- ii. Calculate a theoretical depreciation reserve for each FERC sub-account, based on the vintage investment, by tax district. This calculation will be based on the depreciable service lives in effect at the time of the calculation, as well as dispersion patterns (*i.e.*, Iowa or H curves) and net salvage factor included in the depreciation rate.

56

<sup>&</sup>lt;sup>16</sup> The Power Plan system maintains assets by vintage year and by tax district. Depreciation rates, depreciation expense, and the associated depreciation reserve are determined and recorded at the FERC sub-account level, not at an individual asset level.

- iii. Allocate the sub-account's total book reserve to vintage investments by tax district in proportion to the theoretical depreciation reserve calculation. This will produce the NBV for the tax district. (Steps (ii) and (iii) are done utilizing a depreciation study software calculation in Power Plan).
- iv. Determine the tax district's NBV by asset types using the Company's location-based billing inventory system.
- v. Determine the NBV for customer-specific street lighting assets by applying the average NBV by asset type for a tax district to the specific customer billing units.

These steps will be performed for each sub-account in which the customer's assets are booked, and the amounts will be aggregated to arrive at a total NBV determination. The sale price will be based on the NBV at the time of closing, and any price estimates provided prior to closing will be adjusted (up or down) to the actual NBV at closing.

- b. Notwithstanding the foregoing, for any municipal customer with more than 10,000 luminaires listed in the Company's billing inventory files in the respective municipal tax district as of December 1, 2017, that enters into a binding purchase agreement on or before September 1, 2018 to acquire all of the street light assets serving it within the municipality's taxing jurisdiction, and that received a street light acquisition pricing proposal letter dated between June 1, 2017 and December 1, 2017 from the Company, the NBV sale price will be the NBV indicated in said letter.
- c. Following the issuance of a final rate order in these proceedings, and at the request of a municipality that had previously received a street light sales proposal, the

Company will provide the NBV purchase price calculated as described above along with supporting data as reasonably available.

The Signatory Parties acknowledge and agree that the Company's agreement to sell its PSC 214 SC-2 street lighting assets at NBV does not create any precedent with respect to similar sales after the term of this Rate Plan or with respect to the sale of any of the Company's transmission or distribution assets.

### 9.3.3 Provisions Applicable to All Street Light Asset Sales

- a. A municipality acquiring street light assets is responsible for transaction and transition costs. Transaction costs consist of transfer taxes, recording fees, and mortgage indenture release fees associated with the sale. Transition costs consist of those costs relating to GIS, billing, and data changes associated with the sale. A municipality purchasing street light assets must install disconnect equipment consistent with PSC 214 Rule 8.d.1, Leaf 44.0.1, and will be responsible for the costs of installing such equipment. The Company will not charge for reconfiguration costs unless the municipality specifically requests the reconfiguration. A like-for-like luminaire replacement (or a conversion from HID to LED) will not be considered a municipal request for reconfiguration.
- b. The municipality will have the sole responsibility to determine if a worker/contractor is qualified to perform the required work and to perform work in proximity of the electric system.
- c. For the 24-month period following the transfer of street light assets from the Company to a municipal customer, the conversion to an LED luminaire from a non-

LED luminaire will not constitute a material change under PSC 214.

d. A municipality must be current in its payment of all undisputed bills.

#### 9.4 Miscellaneous Street Light Matters

The Company will incorporate its roadway-LED luminaire offerings into the Lighting Tariff SC-1, and will continue to evaluate potential decorative LED offerings.

#### 10. Electric and Gas Reconciliations, Deferrals, and True-Ups

### 10.1 Existing Electric and Gas Reconciliations, Deferrals, and True-Ups

Appendix 5, Schedule 1 and Appendix 6, Schedule 1 set forth the electric and gas deferral accounts and other regulatory assets and liabilities forecast balances, respectively, as of March 31, 2018. With the exception of the deferral accounts and other regulatory assets and liabilities identified as "Discontinued" on Schedule 1, Niagara Mohawk is authorized to continue its use of reconciliation mechanisms and/or deferral accounting (with certain modifications) with respect to the electric and gas expenses set forth in Schedule 1.<sup>17</sup> In addition, the Company will continue its use of all other currently-authorized reconciliation mechanisms and/or deferral accounting.

Except where otherwise noted, Niagara Mohawk will accrue carrying charges on all electric and gas deferral accounts and other regulatory assets and liabilities, net of deferred taxes, using the pre-tax weighted average cost of capital for the respective Rate

59

The deferral accounts and other regulatory assets and liabilities identified as "Discontinued" on Schedule 1 will be discontinued as of the Effective Date. These accounts contain forecast balances as of March 31, 2018, which are set forth in Schedule 1. The discontinuance of these accounts is not intended to preclude the Company from returning to or recovering from customers the balances as of March 31, 2018 plus any applicable carrying charges.

Year. No example of the calculation of carrying charges is set forth in Appendix 5, Schedule 2 for electric and Appendix 6, Schedule 2 for gas.

# 10.1.1 Pension and Other Post-Employment Benefit Expenses (Electric and Gas)

Niagara Mohawk will continue to defer and reconcile its actual electric and gas pension and OPEB expenses to the levels allowed in rates (set forth in the tables below) in accordance with the Commission's Pension & OPEB Statement of Policy.

Pension Expense	Rate Year One	Rate Year Two	Rate Plan Three
Electric Business	\$33.185 million	\$8.852 million	\$0.744 million
Gas Business	\$6.383 million	\$1.852 million	\$0.311 million

OPEB Expense	Rate Year One	Rate Year Two	Rate Year Three
Electric Business	\$17.591 million	\$11.167 million	\$2.178 million
Gas Business	\$3.424 million	\$2.335 million	\$0.630 million

Additional provisions relating to the reconciliation of electric and gas pension and OPEB expenses are set forth in Appendix 9. Carrying charges will not be calculated on pension or OPEB deferred balances. An example of the reconciliation is set forth in Appendix 5, Schedule 3 for electric and Appendix 6, Schedule 3 for gas.

# 10.1.2 Low Income Energy Affordability Program (Electric and Gas)

The Company will implement its electric and gas Energy Affordability Program as set forth in Section 13.1. Each Rate Year, the Company will fully reconcile Energy Affordability Program costs to the rate allowance of \$56.594 million for electric and \$14.905 million for gas. Amounts in excess of the rate allowance will be deferred for

60

<sup>&</sup>lt;sup>18</sup> This applies to deferred balances referenced in other sections of this Joint Proposal unless specifically stated otherwise.

future recovery from customers. Any under-expenditures will be deferred for future use in a low income program. An example of the reconciliation is set forth in Appendix 5, Schedule 4 for electric, and in Appendix 6, Schedule 4 for gas.

# 10.1.3 Economic Development Fund Program (Electric and Gas)

The Company will continue its electric and gas Economic Development Fund Programs as set forth in Section 13.3.1. Each Rate Year, the Company will fully reconcile economic development discounts (*i.e.*, for electric, EZR, EJP, new discount contracts under SC-12, and existing discount contracts under SC-12; for gas, EZR and EJP discounts) to the amount reflected in rates for refund to or recovery from customers. The target amounts for economic development discounts are as follows:

<b>Economic Development</b>	Rate Year One	Rate Year Two	Rate Plan Three
Fund Programs			
Electric Business	\$2.193 million	\$2.120 million	\$1.721 million
Gas Business	\$1.150 million	\$0.935 million	\$0.762 million

The electric and gas Economic Development Fund Programs will be a separate deferral account from the electric and gas Economic Development Grant Programs set forth below. An example of the reconciliation is provided in Appendix 5, Schedule 5 for electric, and in Appendix 6, Schedule 5 for gas.

# 10.1.4 Economic Development Grant Program (Electric and Gas)

The Company will continue its electric and gas Economic Development Grant Programs as described in Section 13.3.2. The Economic Development Grant Program for electric and gas will be funded at \$11 million and \$1 million per year, respectively,

subject to downward-only reconciliations over the term of the Rate Plan. Any difference between the respective rate allowance and actual program costs in a given Rate Year will be carried forward and reconciled at the end of Rate Year Three, with any underexpenditure to be deferred for future use in the respective Economic Development Grant Programs. The Company may petition the Commission to utilize any deferral balances related to the Economic Development Grant Programs to fund emergency economic assistance or other incremental economic development programs. An example of the reconciliation is provided in Appendix 5, Schedule 6 for electric, and in Appendix 6, Schedule 6 for gas.

In the event of any anticipated over-expenditures, the Company may petition the Commission for deferral treatment and will have no obligation to make any additional expenditure unless and until the Commission authorizes the Company to defer amounts in excess of the three-year aggregate rate allowance for future recovery.

#### 10.1.5 Auction Debt True Up (Electric and Gas)

Niagara Mohawk's capital structure includes variable rate pollution control revenue bonds. The interest rate for these bonds is periodically reset using an auction process that provides for a default rate if the auctions fail. For Rate Year One only, the Company will reconcile the actual interest expense with the amount reflected in rates and defer the difference for refund to or recovery from customers. Appendix 5, Schedule 7 and Appendix 6, Schedule 7 set forth the forecast interest rates to be trued up and a sample calculation for the reconciliation for electric and gas, respectively. The reconciliation of the variable rate pollution control revenue bonds interest expense for

Rate Year Two and Rate Year Three is included in the long-term debt true-up set forth in Section 10.2.2.

# 10.1.6 Site Investigation and Remediation Expense (Electric and Gas)

Each Rate Year, the Company will fully reconcile actual Site Investigation and Remediation ("SIR") expense to the annual rate allowance of \$27.321 million for electric and \$4.821 million for gas. Any under- or over-expenditures will be deferred for future refund to, or recovery from, customers. An example of this reconciliation is set forth in Appendix 5, Schedule 11 for electric and Appendix 6, Schedule 10 for gas. SIR costs are defined on Page 2 of each Appendix.

#### 10.1.7 Property Tax Expense (Electric and Gas)

Each Rate Year, the Company will reconcile actual property tax expense to the rate allowance. The difference between actual property tax expense, excluding the effects of property tax refunds, and the rate allowance (set forth in the table below) will be deferred for future refund to or recovery from customers. Differences will be shared 80 percent/20 percent between customers and the Company, respectively. An example of this reconciliation is set forth in Appendix 5, Schedule 12 for electric, and in Appendix 6, Schedule 11 for gas.

<b>Property Tax Expense</b>	Rate Year One	Rate Year Two	Rate Plan Three
Electric Business	\$183.024 million	\$189.211 million	\$195.164 million
Gas Business	\$43.072 million	\$45.311 million	\$47.730 million

If Niagara Mohawk is successful in obtaining property tax refunds, it will have the right to petition the Commission to share in such refunds. Other parties may take any position concerning any petition filed by Niagara Mohawk.

# 10.1.8 Negative or Positive Revenue Adjustments (Electric and Gas)

Niagara Mohawk will defer (i) any negative revenue adjustments associated with the electric and gas Service Quality Assurance Program (Section 11.1) (subject to the exception discussed in Appendix 15); (ii) any negative or positive revenue adjustments associated with the electric and gas Termination and Uncollectible Expense metric (Section 11.2); (iii) any negative revenue adjustments associated with the Gas Cost Estimating metric (Section 11.3); (iv) any negative or positive revenue adjustments associated with the Gas Safety Performance Metrics (Section 12);<sup>19</sup> and (v) any positive revenue adjustments associated with the LPP Productivity Incentive (Section 7.2).

#### 10.1.9 Externally Imposed Costs (Electric and Gas)

One hundred percent of all Externally Imposed Costs (including any credits) associated with or caused by an individual instance (as described below) will be deferred, once such costs exceed the threshold set forth below. If Externally Imposed Costs caused by an individual instance in any one Rate Year exceed \$8.8 million or \$2.283 million for Niagara Mohawk's regulated electric or regulated gas operations, respectively (the "Externally Imposed Cost Threshold"), the total impact of the Externally Imposed Costs as applicable to the Company's regulated electric or regulated gas operations,

\_

Any negative revenue adjustments associated with the Gas Safety Performance Metrics will be applied to fund future incremental gas safety programs.

respectively, will be deferred. "Externally Imposed Costs" means all of the incremental effects on Niagara Mohawk's costs, revenues, or revenue requirements above or below the amounts set forth in Appendix 1, Schedules 1 and 2, associated with or caused by an individual instance of:

- any externally imposed accounting change;
- any change in the federal, 20 state, or local rates, laws, regulations, or b. precedents governing income, revenue, sales, or franchise taxes;
- any refunds or payments (with interest and net of deferred taxes) C. reasonably made to or by Niagara Mohawk associated with electric and/or gas operations as a result of any ongoing or new examinations by federal and/or state tax authorities of Niagara Mohawk's tax returns; or
- d. any legislative, court, or regulatory change that imposes new or modifies existing obligations or duties.

In addition, the Signatory Parties recognize that:

- i. there is a pending Pipeline and Hazardous Materials Safety Administration ("PHMSA") rulemaking regarding pipeline integrity management, integrity verification and related issues in PHMSA Docket ID 2011-0023;
- ii. the United States Congress has in recent years modified bonus depreciation numerous times. This Joint Proposal sets forth rates predicated on bonus depreciation terminating as of September 27, 2017, as set forth in the recent changes to federal tax law. Congress may make more changes to bonus depreciation during the term of this rate plan; and

See Section 10.1.10, specifically regarding changes to federal tax law.

iii. a healthcare excise tax may be assessed on certain medical plans beginning in 2020.

Should new regulations and/or legislation identified in items (i) and (ii) above be enacted that affect Niagara Mohawk's costs, or should the healthcare excise tax identified in item (iii) above take effect during the term of the Rate Plan, Niagara Mohawk will defer all incremental costs or decreases in costs arising from such actions without regard to whether such changes exceed the Externally Imposed Cost Threshold. In the event that Externally Imposed Costs are incurred, Niagara Mohawk will file a letter with the Secretary setting forth the rationale for the deferral and its calculation. Any disagreement associated with the filing will be referred to the Commission for a decision.

## 10.1.10 Federal Tax Law Changes (Electric and Gas)

The Signatory Parties recognize that the United States Congress has recently made significant modifications to the federal tax law. The rates set forth in this Joint Proposal reflect the Company's current estimate of the reduction in the corporate tax rate from 35 percent to 21 percent, the termination of bonus depreciation as of September 27, 2017, and increase in deferred taxes at a rate of 21 percent associated with future plant additions. Rates do not include any amortization of the excess accumulated deferred federal income tax associated with the reduction in the tax rate. The Company will make a compliance filing no later than the end of Rate Year One to reflect the final impact on rates of the changes to the federal tax law. The compliance filing must include all supporting workpapers and calculations. The Signatory Parties agree that the net benefits of the recent modifications to federal tax law shall accrue to customers, including all of the benefits related to the excess accumulated deferred federal income taxes, the pass

back of which have not yet been reflected in rates. The Company will defer for further refund or recovery any difference between its recalculated federal tax expense and amounts provided for in rates, including any effects related to the excess deferred federal income taxes. The Company will meet with Staff and other interested parties prior to making its compliance filing. Further, the Signatory Parties recognize that the Commission may address the changes in the federal tax law in a generic proceeding, these proceedings, or otherwise, which may necessitate that the Company take additional actions, and the Signatory Parties recognize that this could result in changes to the treatment of federal taxes, or the ratemaking effects of these federal tax changes, that are different from those set forth in this Joint Proposal.

## 10.1.11 Internally-Adopted Accounting Changes (Electric and Gas)

Niagara Mohawk will notify the DPS Director of the Office of Accounting, Audits and Finance of any significant changes to its accounting policies. Approval of the DPS Director of the Office of Accounting, Audits and Finance is necessary before Niagara Mohawk records on its books any deferral for the net impact of an internal accounting change pursuant to this Section. If such approval is granted, the Company will be allowed to book the deferral prospectively from the date of approval, regardless of whether the accounting change was previously reflected in an account other than the deferral account. The DPS Director of the Office of Accounting, Audits and Finance will use best efforts to rule on any request for the deferral of the impact of an internal accounting change within 90 days of submission, provided that the Company's initial submission is complete and includes full support for the accounting change and the

quantification of the net impact of the accounting change, including any required offsets. Niagara Mohawk will include in the deferral account the net impact of any accounting change adopted as a matter of internal accounting policy when the accounting change, evaluated individually, increases or decreases Niagara Mohawk's costs or revenues from regulated operations or changes Niagara Mohawk's policy for capitalizing or expensing any item by more than \$500,000 per year for the electric business and/or \$100,000 per year for the gas business.

#### 10.1.12 Variable Pay (Electric and Gas)

Each Rate Year, the Company will defer for refund to customers any variable pay compensation amounts reflected in rates that are not paid to employees. The rate allowance for variable pay is set forth in the table below. An example of this reconciliation is set forth in Appendix 5, Schedule 13 for electric and Appendix 6, Schedule 12 for gas.

Variable Pay Expense	Rate Year One	Rate Year Two	Rate Plan Three
Electric Business	\$17.8 million	\$18.4 million	\$18.9 million
Gas Business	\$4.0 million	\$4.2 million	\$4.3 million

# 10.1.13 Revenue Decoupling Mechanism (Electric and Gas)

The revenue decoupling mechanism ("RDM") reconciliation, as modified in Section 3.5 for electric and Section 4.6 for gas, will continue.

# 10.1.14 Electric Net Utility Plant and Depreciation Expense Reconciliation Mechanism

The Company will implement a downward-only electric Net Utility Plant and Depreciation Expense Reconciliation Mechanism. Each Rate Year, the Company will reconcile its actual electric average net utility plant (which includes the allocation of common plant to the electric business) and depreciation expense revenue requirement to the target electric average net utility plant and depreciation expense revenue requirement, which are: \$793.801 million for Rate Year One; \$831.870 million for Rate Year Two; and \$871.228 million for Rate Year Three.

The electric average net utility plant and depreciation expense revenue requirement will be calculated by multiplying the Company's pre-tax weighted average cost of capital in the respective Rate Years to the electric average net utility plant balance, and adding this product to the electric depreciation expense.

With the exception as described below with regard to the implementation of a non-wires alternative ("NWA"), the difference between the actual electric average net utility plant and depreciation expense revenue requirement and the target electric average net utility plant and depreciation expense revenue requirement will carry forward for each Rate Year and be summed at the end of Rate Year Three. As illustrated in Appendix 5, Schedule 9, if, at the end of Rate Year Three, the cumulative actual electric average net utility plant and depreciation expense revenue requirement is negative, the Company will defer the revenue requirement impact for the benefit of customers. If, at the end of Rate Year Three, the cumulative actual electric average net utility plant and depreciation expense revenue requirement is positive, there will be no deferral.

The reconciliation mechanism will apply to the Company's aggregate total electric average net plant and depreciation expense combined, and not to individual components. The LED Capital Investment Tracker described in Section 10.2.7 will operate in conjunction with the Net Utility Plant and Depreciation Expense Reconciliation Mechanism to account for the two-way nature of the LED Capital Investment Tracker. The net plant target balances and reconciliation will not consider the impact of ADIT.

To the extent the Company implements an NWA that results in the displacement of a capital project reflected in the average electric net utility plant, the balance(s) will be reduced to exclude the forecast net plant associated with the displaced project. The carrying charge, or a portion thereof, as warranted, on the reduction of the average electric net utility plant that would otherwise be deferred for customer benefit will instead be applied as a credit against the recovery of the NWA, as shown in Appendix 5, Schedule 9.

## 10.1.15 Major Storm Expense (Electric Only)

The provisions relating to major storm expense are set forth in Appendix 14. An example of the reconciliation is set forth in Appendix 5, Schedule 10.

#### **10.1.16** Aggregation Fee (Electric Only)

The Company will continue to accrue and amortize aggregation fee amounts collected pursuant to PSC 220 Rule 47. No carrying charges will be calculated for aggregation fee amounts.

## 10.1.17 Voltage Migration Fee (Electric Only)

The Company will continue to accrue and amortize voltage migration fee amounts collected pursuant to PSC 220 Rule 44.2. No carrying charges will be calculated for voltage migration fee amounts.

### **10.1.18** Generation Stranded Cost (Electric Only)

The Company will include in the deferral account any reductions or additions to stranded costs associated with the implementation of the Niagara Mohawk Joint Proposal for Nine Mile Point (Case 01-E-0011), and the implementation of any of Niagara Mohawk's other agreements for the sale of the fossil and hydro generating assets to the extent allowed by the Orders in those cases.<sup>21</sup>

# 10.1.19 Transmission Revenue Adjustment Clause (Electric Only)

Pursuant to PSC 220 Rule 43, the Company will continue to reconcile the actual transmission revenue realized, exclusive of revenue taxes, to the forecast transmission revenue credit assumed in rates (\$185.696 million in each Rate Year). NYPA load (including ReCharge New York load) will be subject to the Transmission Revenue Adjustment Clause ("TRAC"). The TRAC will be subject to a monthly true-up, with any over/under collection at the end of each month to be included in the TRAC balance for

71

See Cases 94-E-0098 and 94-E-0099 for the Order dated June 7, 1999, approving the sale of Huntley and Dunkirk Stations, the Order dated May 27, 1999, approving the sale of the hydro stations, and the Order dated April 26, 2000, approving the sale of the Albany Station; see those dockets and Case 96-E-0898 for the Order dated October 21, 1999, approving the sale of the Oswego Station; see those dockets and Cases 96-E-0909 and 96-E-0897 for the Order dated December 20, 2000, approving the sale of the Roseton Station; and see Case 98-E-1028 for the Order dated September 29, 1999, approving the sale of the Glen Park Hydro Station.

refund or recovery, subject to the caps. An example of this reconciliation is set forth in Appendix 5, Schedule 14. Carrying charges will be calculated as set forth in PSC 220 Rule 43.5.1.

## 10.1.20 Reforming the Energy Vision Demonstration Projects (Electric Only)

Niagara Mohawk's electric rates include costs associated with the Company's Fruit Belt Neighborhood Solar, Potsdam Community Resilience, Distributed System Platform, and Clifton Park Demand Reduction Reforming the Energy Vision ("REV") demonstration projects. The Company will defer costs associated with additional REV demonstration projects, including, but not limited to, the Smart Home Rate and the Schenectady "Smart City" demonstration projects, in accordance with the Commission's February 26, 2015 *Order Adopting Regulatory Policy Framework and Implementation Plan* in Case 14-M-0101 ("Track One Order"). The demonstration project budget cap, regardless of cost recovery mechanism, is \$43.915 million, as described in the Track One Order. In the event that future demonstration projects would result in the Company exceeding the demonstration project budget cap, Niagara Mohawk may file a petition with the Commission to increase the budget cap. Future demonstration projects will follow the statewide procedures approved by the Commission for demonstration projects.

## 10.1.21 Gas Net Utility Plant and Depreciation Expense Reconciliation Mechanism

The Company will implement a downward-only gas Net Utility Plant and Depreciation Expense Reconciliation Mechanism. Each Rate Year, the Company will reconcile its actual gas average net utility plant (which includes the allocation of common

plant to the gas business) and depreciation expense revenue requirement to the target gas average net utility plant and depreciation expense revenue requirements, which are: \$183.448 million for Rate Year One; \$193.840 million for Rate Year Two; and \$206.317 million for Rate Year Three.

The gas average net utility plant and depreciation expense revenue requirement will be calculated by multiplying the Company's pre-tax weighted average cost of capital in the respective Rate Years to the gas average net utility plant balance, and adding this product to the gas depreciation expense.

The difference between the actual gas average net utility plant and depreciation expense revenue requirement and the target gas average net utility plant and depreciation expense revenue requirement will carry forward for each Rate Year and be summed at the end of Rate Year Three. As illustrated in Appendix 6, Schedule 9, if, at the end of Rate Year Three, the cumulative actual gas average net utility plant and depreciation expense revenue requirement is negative, the Company will defer the revenue requirement impact for the benefit of customers. If, at the end of Rate Year Three, the cumulative actual gas average net utility plant and depreciation expense revenue requirement is positive, there will be no deferral. In years that incremental LPP replacement costs are recovered through the Gas Safety and Reliability Surcharge, the net plant and depreciation components of the Gas Safety and Reliability Surcharge for incremental LPP replacement costs will be added to the overall Net Utility Plant and Depreciation Expense Reconciliation Mechanism target to avoid any double recovery. An example is shown in Appendix 6, Schedule 15.

The reconciliation mechanism will apply to the Company's aggregate total gas average net plant and depreciation expense combined, and not to individual components.

The net plant target balances and reconciliation will not consider the impact of ADIT.

### 10.1.22 Oil Conversion Program (Gas Only)

Each Rate Year, the Company will reconcile the actual cost of the oil-to-gas conversion program to the annual rate allowance of \$0.764 million. Any difference will be deferred for future return to or recovery from customers, up to a cap of \$1 million annually. The oil-to-gas conversion program is discussed in Section 13.8.2. An example of this reconciliation is set forth in Appendix 6, Schedule 13.

### 10.1.23 Net Revenue Sharing (Gas Only)

The Company's Net Revenue Sharing Mechanism set forth in PSC 219 Rule 26 will continue. The delivery revenue service targets for SC-6, SC-9, and SC-14 have been updated for each of the Rate Years. The updated targets are set forth in Appendix 3, Schedule 9. Carrying charges do not apply.

#### 10.1.24 Accrued Unbilled Revenue Deferral (Gas Only)

Niagara Mohawk will continue its current deferral practice concerning accrued unbilled revenues pursuant to the Commission's August 30, 1988 Order in Case 29670.

No carrying charges will be calculated for accrued unbilled revenues.

### 10.1.25 Continuing Electric Reconciliation Mechanisms

The following electric reconciliation mechanisms will continue outside of base rates:

- a. SBC costs, which include the Clean Energy Fund surcharge, will continue to be reconciled pursuant to PSC 220 Rule 41. Carrying charges will be calculated using the other customer capital rate.
- b. Pursuant to PSC 220 Rule 46.2.6, the Company will continue to pass the benefits associated with the net market value of NYPA Rural and Domestic Power to residential customers. No carrying charges will be calculated.
- c. Commodity costs will be reconciled through the Electricity Supply Reconciliation Mechanism ("ESRM") pursuant to PSC 220 Rule 46.3. No carrying charges will be calculated.
- d. Pursuant to PSC 220 Rule 46.2.7, the Company will reconcile costs associated with the Nine Mile Unit #2 PPA. Carrying charges will be calculated as set forth in Rule 46.2.7.
- e. Purchased power contract costs will be reconciled through the Legacy Transition Charge ("LTC") pursuant to PSC 220 Rule 46.2. No carrying charges will be calculated.
- f. Dynamic Load Management program costs will be reconciled pursuant to PSC 220 Rule 64. Carrying charges will be calculated as set forth in Rule 64.
  - g. The MFC reconciliation as modified in Section 3.6 will continue.
- h. The Clean Energy Standard Supply and Delivery charges will be reconciled pursuant to PSC 220 Rule 46. No carrying charges will be calculated.
- i. Value of Distributed Energy Resources Value Stack costs will be reconciled pursuant to PSC 220 Rule 46. No carrying charges will be calculated.

## 10.1.26 Continuing Gas Reconciliation Mechanisms

The following gas reconciliation mechanisms will continue outside of base rates:

- a. SBC costs, which include the Clean Energy Fund surcharge, will continue to be reconciled pursuant to PSC 219 Rule 31. Carrying charges will be calculated using the other customer capital rate.
- b. The Company will continue to recover and reconcile research and development Millennium Fund costs in accordance with PSC 219 Rule 30 and the Commission's February 14, 2000 Order in Case 99-G-1369. No carrying charges will be calculated.
- c. The Company will continue to recover and reconcile its cost of gas in accordance with PSC 219 Rule 17. Carrying charges will be calculated as set forth in PSC 219 Rule 17.7.2.
- d. The MFC reconciliation as modified in Section 4.7 will continue. Carrying charges for the annual MFC reconciliation will be calculated at the other customer capital rate.
- e. The LAUF reconciliation as modified in Section 4.5 will continue. Carrying charges for the annual LAUF reconciliation will be calculated at the other customer capital rate.

#### 10.2 New Electric and Gas Reconciliations, Deferrals, and True-Ups

The following new electric and gas deferral accounts will be implemented. Niagara Mohawk will accrue carrying charges on the new deferral account balances calculated using the pre-tax weighted average cost of capital for the respective Rate Year.

### 10.2.1 ETIP Costs (Electric and Gas)

The electric and gas ETIP costs deferral is set forth in Section 13.2.1.

#### 10.2.2 Long-Term Debt True-Up (Electric and Gas)

Beginning in Rate Year Two, the Company will reconcile its actual cost of long-term debt to the cost used to establish rates in these proceedings. As detailed in Section 2.1.b, the cost of long-term debt set forth in this Joint Proposal reflects debt rates of 4.19 percent in Rate Year Two and 4.13 percent in Rate Year Three, and a ratio of Long-Term Debt to Total Capitalization of 51.06 percent. The calculation of actual interest expense will reflect the agreed upon ratio of Long-Term Debt to Total Capitalization and actual debt rates multiplied by the lesser of the actual rate base or the rate base used to establish rates in these proceedings. Any difference will be deferred for future refund to or recovery from customers. Examples of this reconciliation are set forth in Appendix 5, Schedule 8 for electric, and in Appendix 6, Schedule 8 for gas.

10.2.3 Service Company Rents IS and GBE Program
Net Utility Plant and Depreciation Expense
Reconciliation Mechanism (Electric and Gas)

This deferral is set forth in Section 8.2.

## 10.2.4 IS Capital Investment Cost Incentive (Electric and Gas)

This deferral is set forth in Section 8.3.

## 10.2.5 Walk-in Payment Transaction Fees (Electric and Gas)

As set forth in Section 13.5.1, Niagara Mohawk's electric and gas rates include \$1.120 million and \$0.414 million, respectively, per year to recover the forecast cost of the transaction fees charged to customers who pay their bill at an authorized walk-in payment location. Each Rate Year, the Company will fully reconcile the actual level of transaction fee costs to the respective rate allowance. Any under- or over-recovery will be deferred for future refund to or recovery from customers. An example of this reconciliation is set forth in Appendix 5, Schedule 17 for electric, and in Appendix 6, Schedule 14 for gas.

## 10.2.6 LED Energy Efficiency Program (Electric Only)

The LED energy efficiency deferral is set forth in Section 13.2.3.

#### 10.2.7 LED Capital Investment Tracker (Electric Only)

Niagara Mohawk's electric rates assume an annual rate of municipal conversions to LED technology of ten percent. To enable the Company to implement municipal conversions of up to 20 percent annually, the Company will implement an LED capital investment tracker for municipal LED street light conversions. Each Rate Year, the Company will reconcile the amount reflected in rates to convert municipal roadway luminaires to LEDs (\$7.745 million per year, which includes the cost of removal), and defer for future recovery from or refund to customers the revenue requirement impact of the over or under spend (capped at an annual 20 percent LED conversion level). The LED Capital Investment Tracker will operate in conjunction with the Net Utility Plant and Depreciation Expense Reconciliation Mechanism described in Section 10.1.14 to

account for the two-way nature of the LED Capital Investment Tracker. An example of this reconciliation is set forth in Appendix 5, Schedule 15.

## 10.2.8 Vegetation Management Program Costs (Electric Only)

Niagara Mohawk will implement a downward only reconciliation of its transmission and distribution vegetation management program costs. The reconciliation will apply to the Company's aggregate total vegetation management costs (*i.e.*, combined transmission and distribution program costs, including the Emerald Ash Borer component of the program) over the term of the Rate Plan. Any under-expenditure in total program costs in a given Rate Year will be carried forward and reconciled at the end of Rate Year Three. An example of the reconciliation is set forth in Appendix 5, Schedule 16.

## 10.2.9 Platform Service Revenue (Electric Only)

Consistent with the Commission's *Order Adopting a Ratemaking and Utility Revenue Model Policy Framework* (issued and effective May 19, 2016) in Case 14-M-0101 ("Track Two Order"), the Company will implement a platform service revenue sharing mechanism for its electric business in the Rate Years. The mechanism applies to the fees collected by the Company from vendors who participate in the Company's Residential Solar Marketplace and E-Commerce Platform. Each Rate Year, the Company is authorized to retain 20 percent of the fees. The remaining 80 percent of the fees will be deferred for future credit to customers. An example of this mechanism is set forth in Appendix 5, Schedule 18.

## 10.2.10 Street Light RDM (Electric Only)

The street light RDM is set forth in Section 3.5.

## 10.2.11 ETIP Revenues (Gas Only)

The Company will reconcile the actual gas ETIP revenues recovered from SC-3, SC-5, and SC-8 customers to the amount included in rates over the term of the Rate Plan. At the end of Rate Year Three, the Company will reconcile the difference, if any, and refund to or recover from customers the difference through the DSA. An example of this reconciliation is set forth in Appendix 3, Schedule 12.

## 10.2.12 Gas Safety Programs

This deferral is set forth in Section 7.5.

## 10.3 Additional Reconciliations, Deferrals, and True-Ups

Nothing in this Joint Proposal prevents Niagara Mohawk from implementing additional reconciliations or deferral mechanisms if approved by the Commission.<sup>22</sup>

To the extent a deferral is not addressed by a specific provision of this Joint Proposal or as otherwise ordered by the Commission, in determining whether a change in Niagara Mohawk's costs or revenues that falls within a provision of this Joint Proposal is incremental or decremental, Niagara Mohawk's actual cost or revenue for the year affected by the change will be compared to the corresponding annual cost or revenue item reflected in rates. The cost or revenue forecast underlying rates established in these proceedings will be as stated in this Joint Proposal or as modified by the Commission in its final Order in these proceedings, increased as appropriate for inflation and reduced to reflect the total net productivity savings assumed in rates.

## 11. <u>Electric and Gas Service Quality Assurance Program and Other</u> Performance Metrics

### 11.1 Service Quality Assurance Program

Niagara Mohawk's Service Quality Assurance Program, which includes electric and gas customer service and electric reliability performance metrics, are set forth in Appendix 15.

# 11.2 Termination and Uncollectible Expense Metric (Electric and Gas)

Effective January 1, 2018, the Company will implement an annual Termination and Uncollectible Expense metric. The metric is designed to provide an incentive for the Company to reduce the number of residential service terminations for non-payment while decreasing, or maintaining, the level of bad debt from residential accounts.

The metric measures the number of annual residential terminations and the total annual uncollectible expense (*i.e.*, write offs) for the combined electric and gas segments, which, depending on performance, can result in full or partial negative or positive revenue adjustments as set forth in the table below:

	<b>Customer Terminations*</b>	Uncollectible Expense
	(5-Year Average)	(5-Year Average)
5-Year Historical	58,000	\$52,700,000
Average		
Positive (Lower)	43,000	\$39,400,000
Target (PRA)		
Negative (Upper)	72,000	\$66,100,000
Target (NRA)		

<b>Positive Incentive</b>	Negative Incentive	
\$3,591,700 if both measures are at	\$3,591,700 if both measures are at	
or below Lower Targets	or exceed Upper Targets	

\$1,539,300 if one measure is equal to or below Lower Target and the other is equal to or below 5-year Historical Average

\$1,539,300 if one measure is equal to or exceeds Upper Target and the other is equal to or above 5-Year Historical Average

\* "Terminations" means actual residential terminations completed, not the number of termination notices issued.

Niagara Mohawk will report on its performance on the Terminations and Uncollectible Expense metric in the quarterly and annual Service Quality Assurance Program reports, discussed in Appendix 15.

#### 11.3 Gas Cost Estimating Metric

The Gas Cost Estimating Performance Metric is measured on a fiscal year basis (April 1 through March 31) and applies to all complex gas capital projects (initiated on or after May 19, 2016) with project estimates over \$100,000 that are developed by the Company's Gas Projects Estimating group and that close during the applicable fiscal year. The metric includes both projects constructed by internal resources or contractors. Blanket and Program projects are excluded from the metric unless they are complex projects. Emergency projects and material-only purchase orders also are excluded from the metric.

The Gas Cost Estimating Performance Metric will be based on the variance between the project estimate and actual spending, measured using the pre-construction project estimate plus pre-construction change orders versus actual spending recorded in Power Plan when the project is closed. At the time the variance is calculated, the estimated burden/overheads included in the pre-construction estimates will be recalculated using the actual effective rates experienced during construction for all

projects except for customer reimbursed projects. Any recalculations to the preconstruction estimates will be clearly identified.

For all projects subject to the metric that closed during a given fiscal year, the Company will incur a negative revenue adjustment in the amount of:

- \$280,000 if more than 20 percent of the projects experience cost variances of more than ten percent;
- \$560,000 if more than 30 percent of the projects experience cost variances of more than ten percent; and
- \$1.120 million if more than 40 percent of the projects experience cost variances of more than ten percent.

The Company will file a Gas Cost Estimating Metric Report with the Secretary by May 15 following each fiscal year for all metric-qualified projects that closed during the previous fiscal year. The Company may include in the annual report a request for exemption from the metric calculation for any project variance that was caused by third-party changes or other circumstances beyond the Company's control.

## 12. Gas Safety Performance Metrics

Niagara Mohawk's gas safety performance will be measured for each CY against a set of Gas Safety Performance Metrics. A total of 150 pre-tax basis points will be at risk per CY for Niagara Mohawk's performance under the Gas Safety Performance Metrics, as described below. Any Gas Safety Performance Metrics negative revenue adjustments incurred by Niagara Mohawk will be deferred for future use in incremental gas safety programs.

The Gas Safety Performance Metrics will be in effect for the term of the Rate Plan, and will continue thereafter on a year-to-year basis, unless discontinued or modified by the Commission. If Niagara Mohawk believes in any year that its inability to meet any of the established incentive targets was attributable to circumstances that are outside the control of Niagara Mohawk and could not be avoided with the exercise of due care, it may petition the Commission for relief from any associated negative revenue adjustment.

#### 12.1 LPP Removal

#### 12.1.1 Annual LPP Removal Metric

Niagara Mohawk will incur a negative revenue adjustment of eight basis points should it fail to remove from service a minimum of 45 miles of LPP in CY 2018 and CY 2019, or a cumulative three-year total of 150 miles of LPP by the end of CY 2020. Niagara Mohawk will replace leak-prone services in conjunction with LPP main removal efforts.

Should Niagara Mohawk not file for new rates to be effective at the conclusion of the Rate Plan, the negative revenue adjustment target will be set at 50 miles per CY beginning with CY 2021 and continuing until modified by the Commission.

#### 12.1.2 LPP Removal Incentive

Niagara Mohawk will earn a positive revenue adjustment of two basis points for each full mile of LPP removed above the incentive thresholds set forth below. The positive revenue adjustment will be capped at ten basis points per year and deferred, as discussed in Section 10.1.8.

CY	2018	2019	2020
Incentive Threshold – Incremental Mileage	50 miles	50 miles	150 cumulative total
Incentive (capped at 10 basis points annually)	2 basis points per mile above threshold	2 basis points per mile above threshold	2 basis points per mile above threshold

An illustrative example of this incentive mechanism is provided in Appendix 6, Schedule 16. In the event Niagara Mohawk fails to achieve its minimum removal target in any CY or the cumulative target at the end of the Rate Plan, it will return any LPP removal incentive earned during the term of the Rate Plan.

## 12.2 Leak Management

## 12.2.1 Leak Backlog Metrics

Niagara Mohawk will incur a negative revenue adjustment if it fails to achieve year-end leak backlog targets for (i) workable leaks (Type 1, 2, and 2A leaks) and (ii) all leaks (Type 1, 2, 2A, and 3), as follows:

Leak Metric	Target		Negative Revenue Adjustment
Workable Leaks (Type 1, 2, 2A)	Each CY	≤ 25	8 basis points
	CY 18	925	
Total Leaks (Type 1, 2, 2A, 3)	CY 19	See Below	4 basis points
	CY 20	See Below	

For the Total Leaks Metric, the year-end total leak backlog relative to the target will result in the following revenue adjustments and targets for the subsequent year:

- Missed total target: Negative revenue adjustment of four basis points and the target for following year is reduced by 75.
- Total is 0 to 49 below target: Revenue adjustment of zero basis points and the target for following year is reduced by 75.
- Total is 50 to 99 below target: Positive revenue adjustment of one basis point and the target for following year is reduced by 75.
- Total is 100 to 149 below target: Positive revenue adjustment of two basis points and the target for following year is reduced by 100.
- Total is 150 to 199 below target: Positive revenue adjustment of three basis points and the target for following year is reduced by 150.
- Total is 200 to 249 below target: Positive revenue adjustment of four basis points and the target for following year is reduced by 200.
- Total is more than 249 below target: Positive revenue adjustment of five basis points and the target for following year is reduced by 250.

The following table provides the CY 2019 and CY 2020 targets based on the CY 2018 and CY 2019 performance expressed as the resulting revenue adjustment. For example, if CY 2018 performance results in a positive revenue adjustment of two basis points, the target for CY 2019 would be 825, and then if CY 2019 performance results in a positive revenue adjustment of three basis points, the target for CY 2020 would be 675.

Total Leak Backlog Target						
CY 2018	CY 2019	CY 2020				
CY 18 Target = 925  CY 18  Performance	CY 19 Performance  CY19  Target	RA = -4,0,1	RA = 2	RA = 3	RA = 4	RA = 5
↓	<b>+</b>		CY	20 Targe	et	
RA = -4,0,1*	850	775	750	700	650	600
RA = 2	825	750	725	675	625	575
RA = 3	775	700	675	625	575	525
RA = 4	725	650	625	575	525	475
RA = 5	675	600	575	525	475	425

<sup>\* &</sup>quot;RA" means revenue adjustment resulting from that year's actual performance.

#### 12.2.2 Leak Repair Incentive

As described above Niagara Mohawk will earn a positive revenue adjustment for eliminating incremental leaks below the Total Leak targets in Section 12.2.1. Niagara Mohawk will accrue a positive revenue adjustment of one basis point for each 50 leaks

<sup>\*\*</sup> The numbers in the table represent the revenue adjustments ranging from negative four basis points up to a positive five basis point adjustment.

eliminated (maximum of five basis points per year). Niagara Mohawk must achieve both annual backlog reduction targets to qualify for this incentive. The positive revenue adjustment will be deferred, as discussed in Section 10.1.8. An example of this mechanism is included in Appendix 6, Schedule 16.

## 12.3 Damage Prevention

## **12.3.1 Damage Prevention Metric**

Beginning in CY 2018, the Damage Prevention Metric has been restructured to eliminate the individual metrics for Mismark and Company/Company Contractor damages. Instead of individual metrics for each damage category, the Damage Prevention Metric will be based on Overall Damages (as described below). Niagara Mohawk will incur a negative revenue adjustment of up to 18 basis points in the event its year-end damage prevention performance in Overall Damages falls within the following ranges:

Damage Prevention Measure	Overall Damages per 1,000 one-call ticke		
Negative Revenue Adjustment	0 basis points	9 basis points	18 basis points
CY 2018	< 2.25	2.25 – 2.75	> 2.75
CYs 2019 and 2020	< 2.00	2.00 – 2.50	> 2.50

For purposes of calculating the Damage Prevention Metric, Overall Damages will include the following categories and subcategories of damages:

Categories	Sub-Categories	
Mismarks	Records Deficiency	
IVIISIIIaIKS	Locator Error	
C 1	Company: Gas	
Company and Company Contractor	Contractor: Gas	
Company Contractor	Other	
	Operators	
Third Party	Excavators	
	Homeowners	
No-Calls	Operators	
ino-calls	Excavators	

Additionally, the Company will continue to report damage prevention data quarterly for purposes of the "Analysis of Damages on Gas Corporation Facilities" quarterly performance report as set forth in the Gas Safety Guidance letter dated December 11, 2015 and issued by the Deputy Director of the Office of Electric, Gas, and Water. The data included in the quarterly performance report is for informational purposes only and does not impact the calculation of the Damage Prevention Metric.

## **12.3.2 Damage Prevention Incentive**

Niagara Mohawk will earn a positive revenue adjustment of up to six basis points in the event its year-end damage prevention performance in Overall Damages meets the following incentive targets:

Damage Prevention Measure	Overall Damages per 1,000 one-call tickets		
Positive Revenue Adjustment	3 basis points	6 basis points	
CY 2018	1.50 – 2.0	< 1.50	

CYs 2019 and 2020	1.25 – 1.75	< 1.25
-------------------	-------------	--------

The positive revenue adjustment will be deferred, as discussed in Section 10.1.8.

## 12.4 Emergency Response

### 12.4.1 Emergency Response Metric

Niagara Mohawk will incur a negative revenue adjustment for failure to meet the following leak and odor call response targets:

- (a). Respond to 75 percent of all gas leak and odor calls within 30 minutes (six basis points);
- (b). Respond to 90 percent of all gas leak and odor calls within 45 minutes (four basis points); and
- (c). Respond to 95 percent of all gas leak and odor calls within 60 minutes (two basis points).

Instances of 20 or more odor calls in a two-hour period resulting from a mass area odor issue that is not caused by Niagara Mohawk can be excluded from this measure with Staff review. Niagara Mohawk will provide notification to Staff (through an email to safety@dps.ny.gov) within seven days of such events. Staff will review the requested exclusion and provide Niagara Mohawk with a determination of whether the event may be excluded.

## 12.4.2 Emergency Response Incentive

Niagara Mohawk will earn a positive revenue adjustment of up to six basis points for meeting the following leak and odor call response targets:

<b>Emergency Response Incentive</b>	Response within 30 minutes		inutes
Response Rate	86% - 88%	> 88% - 90%	> 90%
Positive Revenue Adjustment	2 basis points	4 basis points	6 basis points

The positive revenue adjustment will be deferred, as discussed in Section 10.1.8.

## 12.5 Gas Safety Regulations Performance Metric

- a. Niagara Mohawk will incur a negative revenue adjustment for instances of noncompliance (occurrences of violations) of certain gas safety regulations identified during Staff's field and records audits. Appendix 8 lists the high risk and other risk gas safety regulations pertaining to this metric.
- b. Subject to section (c), below, Niagara Mohawk will be assessed negative revenue adjustments for each high risk and other risk violation, up to a maximum of 100 basis points per Rate Year, as follows:

Audit	Violation Type	Occurrences	Basis Points Per Occurrence
		1-10	0
	High Risk	11-40	1/2
Records		41+	1
Audit	Audit Other Risk	1-30	0
		31+	1/3
Annual	1 – 40	1/2	
Audit	Field High Risk Audit	41+	1

Other Risk	All	1/3
------------	-----	-----

- c. The number of occurrences of non-compliance with each high risk and other risk regulation listed in Appendix 8 subject to a negative revenue adjustment is capped at ten per calendar year. If Niagara Mohawk is cited for more than ten occurrences of non-compliance with a particular high risk or other risk regulation in a calendar year, Niagara Mohawk will file with the Secretary a compliance improvement plan that contains: (i) a root cause analysis of Niagara Mohawk's compliance deficiency; and (ii) a proposed mitigation plan to address future performance. Niagara Mohawk and Staff will meet to develop a mutually agreeable mitigation plan, which will include provisions for tracking and regular reporting on Niagara Mohawk's efforts to address the compliance deficiency. The improvement plan will be filed with the Secretary within 90 days of the audit letter identifying the compliance deficiency.
- d. At the conclusion of each audit, Staff and Niagara Mohawk will have a compliance meeting where Staff will present its findings to Niagara Mohawk. Niagara Mohawk will have ten business days from the date the audit findings are presented to cure any identified document deficiency. Only official Niagara Mohawk records, as defined in Niagara Mohawk's Operating and Maintenance plan, will be considered by Staff as a cure to a document deficiency. Staff will submit its final audit report to the Secretary under Case 17-G-0239. If Niagara Mohawk disputes any of Staff's final audit results, Niagara Mohawk may appeal Staff's finding to the Commission. Niagara Mohawk will not incur a negative revenue adjustment on the contested findings until such time as the Commission has issued a final decision on the contested findings.

Niagara Mohawk does not waive its right to seek an appeal of any Commission determination regarding a violation or penalty under applicable law.

- e. If an alleged occurrence of non-compliance with a high risk or other risk regulation is the subject of a separate penalty proceeding by the Commission, the occurrence will not count under the performance metric. Any non-compliance event that encompasses more than one code section (*e.g.*, a violation of a gas safety regulation and Niagara Mohawk's operating procedures under 16 NYCRR 255.603(d)) will count as one occurrence for purposes of calculating a negative revenue adjustment.
- f. The total negative revenue adjustment incurred will be deferred for future use to fund gas safety and compliance improvement programs. Niagara Mohawk and Staff will develop mutually agreeable program scopes and timelines for these safety and compliance programs, which will be submitted to the Commission for its review. Niagara Mohawk will submit regular status reports on the programs and funds expended.

## 12.6 Gas Safety Reporting and Exceptions

Niagara Mohawk will report its annual performance in each of the areas set forth in Sections 12.1 to 12.4 to the Secretary by April 1 following the end of each CY.

#### 13. Customer Programs

## 13.1 Low Income Energy Affordability Program

Beginning January 1, 2018, Niagara Mohawk will implement its Energy Affordability Program in accordance with the Company's implementation plan, which was approved by the Commission with modification in its *Order Approving Implementation Plans With Modifications*, issued on February 17, 2017 in Case 14-M-

0565 (the "Implementation Order"). As noted in the Implementation Order, Niagara Mohawk discontinued new enrollments in its arrears forgiveness program (the Affordability Program) in March 2017. The program will be phased-out gradually, as existing customers participating in the program either complete the program, default, or voluntarily remove themselves from the program. The Company will reduce (debit) the current regulatory liability for the arrears forgiveness program for any credits provided to grandfathered customers.

The monthly benefit levels for each tier in the Energy Affordability Program are as follows:

**Energy Affordability Program – Tiered Benefit Levels** 

<u>Electric</u>				
Tier Description	<u>Tier</u>	<b>Heat Discount</b>	Non-Heat Discount	
Regular and Emergency				
HEAP Payment	Tier 1	\$11.00	\$11.00	
HEAP payment + 1 add-				
on	Tier 2	\$29.00	\$29.00	
HEAP payment + 2 add-				
ons	Tier 3	\$47.00	\$47.00	
Direct Voucher/Guarantee	Tier 4	\$31.00	\$31.00	
Non-Utility HEAP	Tier 5	\$11.00	\$11.00	
<u>Gas</u>				
<u>Tier Description</u>	<u>Tier</u>	Heat Discount	Non-Heat Discount	
Regular and Emergency				
HEAP Payment	Tier 1	\$3.00	\$3.00	
HEAP payment + 1 add-				
on	Tier 2	\$10.00	\$3.00	
HEAP payment + 2 add-				
ons	Tier 3	\$29.00	\$3.00	
Direct Voucher/Guarantee	Tier 4	\$12.00	\$3.00	
Non-Utility HEAP	Tier 5	\$3.00	\$3.00	

The annual rate allowance for the Energy Affordability Program is \$56.594 million for electric and \$14.905 million for gas. Per the Commission's *Order Adopting* 

Low Income Program Modifications and Directing Utility Filings (issued and effective May 20, 2016) in Case 14-M-0565 ("Low Income Order"), the Company annually will review the benefit levels with regard to the overall energy burden target and the two percent budget cap, and adjust benefit levels as needed. The rate allowance is subject to reconciliation, as set forth in Sections 10.1.2.

The Company will continue its current, monthly low income reports through November 2018. Starting with the first report filed after the Commission issues an order adopting the terms of this Joint Proposal, the reports will be filed with the Secretary. Beginning in December 2018, the Company will submit quarterly reports on the electric and gas Energy Affordability Program to the Secretary, as specified in the Low Income Order.

## 13.2 Energy Efficiency Program Costs

#### **13.2.1 ETIP Costs**

As of the Effective Date, the Company's electric and gas ETIP costs will be recovered in base rates instead of the Energy Efficiency Tracker Surcharge portion of the SBC. As Niagara Mohawk would be the first utility in the State to have its energy efficiency costs fully transitioned into base rates, Staff, the Company, and interested parties will work collaboratively to address any potential issues that may arise from the transition. The annual electric and gas ETIP costs included in base rates are \$51.458 million and \$10.549 million, respectively. This excludes the \$1.6 million for the electric LED Energy Efficiency Program described in Section 13.2.3. The electric and gas ETIP costs are subject to a downward-only reconciliation over the term of the Rate Plan. Any under-expenditure in a given Rate Year will be carried forward and reconciled at the end

of Rate Year Three. An example of the reconciliation is set forth in Appendix 5, Schedule 22 for electric, and in Appendix 6, Schedule 19 for gas. The reconciliation applies to the Company's aggregate total electric and gas ETIP spending, respectively, not to individual budgeted program components within the electric and gas ETIPs. The Company will continue to be afforded the flexibility to shift funds within the respective electric and gas ETIP portfolio of programs.

## 13.2.2 Internal Labor, EM&V, and E-Commerce Platform Costs

Costs associated with the Company's energy efficiency internal labor, evaluation, measurement, and verification ("EM&V") activities, and the E-Commerce platform have been moved from the electric and gas ETIPs to base rates (\$10.840 million annually for electric and \$3.465 million annually for gas). These costs are not subject to reconciliation.

#### 13.2.3 LED Energy Efficiency Program

The Company will implement an LED street lighting energy efficiency program with an annual rate allowance of \$1.6 million to facilitate the conversion of street light assets to LEDs. This amount will be included in the electric ETIP, thus bringing the annual electric ETIP total to \$53.058 million. The annual cost of this program will be separately reconciled, as described below. Under this program, the Company will provide an energy efficiency incentive per fixture, based on the fixture wattage installed, for both customer-owned and Company-owned street light assets on a first-come, first-served basis. Niagara Mohawk's administrative costs for the program will not exceed 10 percent of the annual program cost.

If, on an annual basis, the Company converts more than 10 percent of street light assets to LEDs and actual program costs exceed \$1.6 million, the Company is authorized to defer for future recovery the pro-rated costs that: (i) exceed the rate allowance, and (ii) result from conversions in excess of 10 percent of the street light assets. The maximum amount that the Company can defer is an additional \$1.6 million per year, for a maximum total annual cost of \$3.2 million. An example of this reconciliation is set forth in Appendix 5, Schedule 21.

### 13.2.4 Moderate Income Energy Efficiency Offering

Beginning in Rate Year One, Niagara Mohawk will implement a moderate income electric and gas energy efficiency offering. In developing the offering, the Company will collaborate with the New York State Energy Research and Development Authority. By May 1, 2018, the Company will convene a meeting with interested parties to receive input on the Company's proposed offering. The details of the offering will be set forth in the Company's June 1, 2018 ETIP filing. The cost of the offering will be funded from the current electric and gas ETIP budgets.

#### 13.3 Economic Development Programs

#### 13.3.1 Economic Development Fund Program

The Company will continue its existing electric and gas Economic Development Fund Programs, which provide discounted electric and gas delivery rates to qualifying customers under the EZR and Excelsior Jobs Programs, and discounted delivery rates to customers qualifying for electric discount contracts under SC-12 or to customers with

existing SC-12 discount contracts. The discounts provided are subject to full reconciliation as set forth in Section 10.1.3.

#### 13.3.2 Economic Development Grant Program

The Company will administer its portfolio of electric and gas Economic Development Grant Programs at funding levels of \$11 million and \$1 million per year, respectively, subject to downward-only reconciliation over the term of the Rate Plan, as set forth in Section 10.1.4. The Company will file annually with the Commission its Economic Development Program Plan for the upcoming year no later than November 1. The Company will continue to meet on an annual basis with Staff and interested parties to discuss the Economic Development Program Plan.

### 13.4 Call Center Technology Upgrades

Niagara Mohawk will implement IS upgrades to its call center technology. The Company will file with the Secretary quarterly reports on implementation status, including progress toward call balancing capability and expenditures to date. The first quarterly report will be due 30 days following the end of the second quarter of Rate Year One, with subsequent reports to be filed 30 days after the end of each Rate Year quarter. Once the call center technology upgrades are implemented, Niagara Mohawk is authorized to transfer calls among National Grid's New York State call centers and in state third-party vendors to balance call volumes.

### 13.5 Bill Payment Options

## 13.5.1 Walk-in Payment Transaction Fees

Niagara Mohawk's rates include the cost to socialize the per transaction fee charged to customers who pay their bill at an authorized walk-in payment location. Based on the current \$1.25 per transaction fee for authorized walk-in payments, for approximately 1.22 million transactions, the annual rate allowance for these fees is \$1.534 million. The fees will be allocated 73 percent and 27 percent to the electric and gas businesses, respectively. The rate allowance is subject to full reconciliation, as set forth in Section 10.2.5. The Company will make a determined effort to negotiate lower per-transaction costs in future vendor payment agreements.

#### 13.5.2 Credit/Debit Card Transaction Fees

Niagara Mohawk will review options to attempt to lower the transaction fee customers are charged for using their credit or debit cards to pay their utility bill. Within 90 days of the Effective Date, the Company will file a report with the Secretary that includes an estimate of the costs to socialize the transaction fee, along with a proposal for cost recovery should the Commission determine that the transaction fee should be socialized. There is no presumption that such transaction fees should or should not be socialized, and parties may take any position concerning any proposal filed by the Company.

#### 13.6 Same-Day Electric Customer Reconnections

Niagara Mohawk commits to perform more same-day electric reconnections when practical. The Company will work toward a goal of same-day reconnections for electric

customers whose payment is received by noon. The Company will work toward this goal without additional incremental cost recovery and without any associated penalty. The Company will collect and report monthly data to the Secretary on the number and percentage of same-day reconnections for electric customers whose payment is received by noon.

#### 13.7 Payment Agreements

## 13.7.1 Training Materials and Customer Messaging

Niagara Mohawk will update its training materials for customer service representatives and enhance its customer messaging on collections-related brochures, written customer notices, and the integrated voice response message regarding customers' rights for affordable payment agreements. In addition, the Company's training materials will be updated, as needed, to discuss the availability of, and the requirements for enrollment in, low income assistance programs. Specifically:

- a. The Company's training materials and customer messaging will distinguish between customers' options for "collection arrangements" or "deferred payment agreements" ("DPAs"), and include language to provide customers with information on the features of each, including the amount the customer will be required to pay under each; and
- b. The Company will update its 2015 Customer Service Representative Training Materials (which were provided in these proceedings as Attachment 2 to the Company's response to Information Request No. DPS-580) to eliminate references to "non-enforceable" oral arrangements and otherwise update the training materials to reflect current practices.

Within 30 days of the Effective Date, the Company will provide interested parties with the updated training materials and enhanced messaging for input and comment. Parties will provide any comments to the Company by May 31, 2018, with the Company finalizing any proposed changes by June 30, 2018. The Company fully commits to working with the parties to enhance these materials, but the final content of the training materials and messaging will be selected by the Company in its discretion. The Company will complete any required training for call center representatives and consumer advocates within 90 days of finalizing the updated training materials and messaging.

### 13.7.2 Recording Calls

Niagara Mohawk will, to the extent practicable, record outbound and inbound collection calls to and from the Company's call centers.

# 13.7.3 Written Confirmation of Collections Arrangements

Niagara Mohawk will maintain a record of non-DPA collection arrangements entered into as part of a customer's account file. The Company will instruct its call center representatives to offer a written copy of all such agreements to the customer, and to furnish a written copy to each customer entering into such agreement by mail or email, upon request.

### 13.7.4 Electronic Deferred Payment Agreements

By December 31, 2017, Niagara Mohawk agrees to submit a proposal to implement electronic DPAs to the Commission for its approval. The proposal will be

modeled upon the electronic DPA implementation plan submitted in Case 13-G-0016, and will include a risk assessment. A draft of Niagara Mohawk's proposal will be provided to interested parties for comment prior to filing with the Commission.

### 13.8 Gas Programs

### 13.8.1 Commercial Gas Demand Response Project

Niagara Mohawk will implement a Commercial Gas Demand Response Project for commercial firm customers who agree in advance to permit the Company to reduce their gas usage during periods of peak demand. This non-pipeline alternative project will focus on customers served through the East Gate and will target a 25 percent average peak reduction in gas usage for each participating customer. The goal of the program is to achieve an approximate one percent reduction of the winter peak on the East Gate. Under the program, participating customers will receive payments based on the number of demand response activations, the number of "units" reduced by the customer (where one unit represents 0.5 dekatherms per hour), and the incentive rate, which will be determined through a competitive bid process. The program will utilize third-party aggregation, as available, and develop equipment control interconnection standards for prospective participants. The Company will file with the Secretary an annual report on the status of the program that includes a benefit-cost analysis ("BCA") within 30 days following the end of each Rate Year.

### 13.8.2 Oil Conversion (Gas) Program

The Company will continue its oil conversion program, the cost of which will not exceed \$1 million annually. The program provides customers with rebates for converting

to high-efficiency gas equipment to reduce a customer's upfront cost of converting from oil to natural gas, including a rebate targeted at low income customers. Niagara Mohawk's rates reflect an expense allowance of \$0.764 million each Rate Year to support the conversion program. Program costs will be subject to a full reconciliation, as set forth in Section 10.1.22, provided that the total program costs will be capped at \$1 million in any Rate Year.

### 13.8.3 Neighborhood Expansion Program

Niagara Mohawk's Neighborhood Expansion Program ("NEP") was approved by the Commission in Case 12-G-0202. Under the NEP, Niagara Mohawk uses a variety of data to identify promising locations for conversion projects and seeks to secure commitments from a threshold level of customers to justify the capital investment in infrastructure necessary to serve the area. Niagara Mohawk will continue the NEP using the density test approved in Case 12-G-0202 to identify a threshold level of customers sufficient to justify NEP-related investments.

As part of its marketing for the NEP, the Company will assess customers' interest in converting from oil to gas or electric heat pumps. The Company will also develop two BCAs for the NEP to be filed in its next rate case. The first BCA will be conducted from a prospective customer perspective and consider the cost and benefits of a customer installing and operating natural gas or other heating alternatives. The second BCA will be conducted using the Commission's societal cost test set forth in the *Order Establishing the Benefit Cost Analysis Framework*, issued on January 21, 2016 in Case 14-M-0101 (the "BCA Order"). At the same time as the Company responds to the pre-filing discovery requests in the next rate proceeding, the Company will provide one

additional run of the customer perspective BCA and the societal cost test BCA to Pace directly. The customer perspective BCA provided to Pace will reflect the operating expenses over the lives of each heating system. The societal cost test BCA provided to Pace will include methane (to the extent that methane or its CO<sub>2</sub> equivalent is not already included in the version submitted by the Company) and additional inputs to be provided by Pace. The provision of this information by the Company will not be considered to be an endorsement of the requested BCA by the Company or other Signatory Parties.

### 13.8.4 Low Income CIAC Relief Program

The Low Income CIAC<sup>23</sup> Relief Program will provide customers enrolled in the Energy Affordability Program who are interested in converting to natural gas with up to 50 feet of additional main and up to 50 feet of additional service line (in addition to the existing tariff entitlements) at no cost. The Company estimates this program will provide benefits to 50 eligible low income customers in each Rate Year.

#### 13.8.5 Renewable Gas Interconnection Standards

Within 30 days of the Effective Date, Niagara Mohawk will file with the Secretary a standard interconnection agreement to be used by owners, operators, and/or developers of renewable resources that will set forth the terms and conditions on which gas may be delivered to the Company's distribution systems. This interconnection agreement will set forth, *inter alia*, standards for gas quality and will delineate responsibility for equipment ownership and operation and maintenance. The

\_

<sup>&</sup>lt;sup>23</sup> CIAC is the contribution in aid of construction that customers seeking natural gas service are required to pay for an extension of more than 100 feet of main and/or 100 feet of service line.

interconnection agreement will permit owners/operators/developers to deliver gas for either transportation to third parties or sale to the Company on such terms as the parties may negotiate. The standard interconnection agreement will be consistent with the standardized interconnection agreements that were approved by the Commission in Cases 16-G-0058 and 16-G-0059.

### 13.8.6 Non-Pipeline Alternative Incentive Mechanism

Within 60 days of the Effective Date, the Company will facilitate a collaborative to develop mechanisms, targets, and appropriate financial incentives for non-pipeline alternatives that are focused on improving the efficiency and operation of the Company's natural gas system. The collaborative will consider solutions using new and existing technologies to accomplish this goal. Any recommended incentive will require, on a project basis: (i) an overall positive net BCA, performed in accordance with the BCA Order, and (ii) a reduction to fossil fuel usage and/or the elimination of fossil fuel usage during peak periods. As a starting point, the parties to the collaborative will assess the applicability of the non-wires alternative process, set forth above in Appendix 13, to the non-pipeline alternative incentive. The Company will file a report on the collaborative's findings and recommendations within 180 days of the start of the collaborative.

### 13.9 Electric Customer Products

Niagara Mohawk's electric rates include \$2 million annually (\$6 million in total over the term of the Rate Plan) for an electric heat and an electric transportation initiative.

The electric heat initiative is designed to encourage customers to convert to efficient electric heat pumps when replacing older, less efficient, and more carbon

intensive heating equipment. The initiative will provide rebates to promote the installation of electric heat pumps so as to accelerate efficient heat electrification in support of New York State's climate goals.

The electric transportation initiative is an electric vehicle charging station development and education program that is designed to increase electric vehicle adoption while supporting New York State's zero emission vehicles and greenhouse gas emissions policy goals. Under this initiative, the Company would make capital upgrades to accommodate the future installation of electric vehicle charging stations at commercial customers' properties, and provide incentives to property owners to encourage the installation of these stations.

The Company will spend \$2 million over the term of the Rate Plan on each initiative (total of \$4 million). The remaining \$2 million will be allocated between the electric heat and electric transportation initiatives in an amount that the Company determines, in its discretion, would deliver the most benefits for customers through carbon reductions.

#### 13.10 SC-1 Alternative Rate Structures

Within six months of the order setting rates in these proceedings, the Company will file with the Secretary a proposal or proposals for time-of-use and/or other voluntary residential rate structure(s) to further the State's energy goals, including the adoption of beneficial electrification technologies such as electric vehicles and renewable electric heat pumps. The Company will provide interested parties with a draft of the proposal for comment, and will consider comments from the parties prior to filing the proposal with

the Commission. Any revenue impacts associated with any alternative rate structure will be reconciled within the SC-1 RDM.

### 13.11 Electric Vehicle Statewide Proceeding

Niagara Mohawk commits to support, and would fully participate in, a generic statewide proceeding addressing the development of electric vehicle infrastructure in New York State if the Commission were to institute such a proceeding.

### 14. Earnings Adjustment Mechanisms

Niagara Mohawk's electric and gas EAMs are set forth in Appendix 7.

### 15. Miscellaneous Provisions

### 15.1 Electric Supply Matters

### 15.1.1 Avoided Capacity and Ancillary Service Costs

The Company will calculate an estimate of avoided ancillary service costs for legacy contracts and avoided ancillary service and capacity costs for SC-6 contracts, and credit such avoided costs through the LTC. An illustrative example of the allocation of avoided capacity and ancillary service costs is set forth in Appendix 2, Schedule 12.

### 15.1.2 NYISO Weather Normalizing Adjustment

For the purpose of calculating Installed Capacity Tags, the Company will allocate the New York Independent System Operator ("NYISO") weather normalizing adjustment to determine peak factor to reflect that some service classes are more weather-sensitive than others. An example of this methodology is included in Appendix 2, Schedule 13.

### 15.1.3 Electricity Supply Reconciliation Mechanism

The Company will file with the Commission a study that evaluates alternative methods for calculating the ESRM for mandatory hourly-priced customers. The study will include an evaluation of the possibility of reconciling capacity charges for hourly-priced customers separately. The Company will provide Staff, OGS, and other interested parties a draft of the study for comment, and will consider comments from OGS and other parties prior to filing the study with the Commission. The Company will file the study, along with proposals and tariff amendments, if any, within six months after the order setting rates is issued in these proceedings. Any potential change must be cost neutral to the Company.

### 15.2 Gas Supply Matters

# 15.2.1 Long-Term Capacity Planning Changes for East Gate and West Gate

Niagara Mohawk will segregate its planning for the needs of the East Gate and West Gate service areas to provide transparency between demand forecast and capacity planning needs for both gates. Albany, New York weather data will be used for the East Gate, and Syracuse, New York weather data will be used for the West Gate.

# 15.2.2 Delivery Nomination Procedures for East Gate Constraint

To address capacity constraints on the East Gate, beginning in the winter of CY 2018/19, Niagara Mohawk will establish transporter nomination procedures for all transport customers served in the East Gate region during times of capacity constraint on the East Gate. These nomination procedures will require that a percentage of each East

Gate transportation customer's nominations be delivered to the Company's system on Tennessee Gas Pipeline ("TGP") when forecast temperatures are at or below designated temperature triggers. The TGP delivery percentage and temperature trigger will be set forth in the Company's GTOP manual and will be reviewed annually and revised, as necessary. Niagara Mohawk may enter into individually-negotiated contracts with customers that may provide alternative means for addressing capacity issues on the East Gate. These contracts would not necessarily require customers to nominate deliveries on TGP, provided that they reasonably address the capacity constraint. Additional details are provided in Appendix 11.

Prior to March 1, 2018, the Company will provide affected transportation customers with details on the Company's proposal to implement the new transporter nomination procedures. Interested parties will have the opportunity to provide comments and feedback on the Company's proposal, and the Company will consider that feedback in developing the final implementation plan. These procedures will be discussed in the ESCO collaborative meetings described in Section 15.3.1.

## 15.2.3 New Gas Cost Mechanism for SC-8 D-1 Sales Service

To eliminate arbitrage opportunities with SC-8 D1 Standby Sales Elections, the Company will establish a set of D1 election guidelines, to be effective beginning in the winter of 2018/2019, intended to discourage the purchase of standby gas supplies when not required to meet the gas supply requirements of D1 customers (*e.g.*, D1 elections that are resold in the market). D1 elections determined to have violated the D1 election

guidelines will be billed at the Company's highest daily incremental cost of gas.

Additional details on the D1 election guidelines are provided in Appendix 12.

### 15.3 ESCO Gas Matters

### 15.3.1 Retail Choice Program Capacity Modifications

Commencing in the winter of CY 2018/19, Niagara Mohawk will establish a capacity release program to release to gas marketers/ESCOs a pro-rata share of all of the Company's gas supply assets (*i.e.*, provide a "slice of the system"). Allocation of the Company's capacity will be adjusted among ESCOs to meet East Gate and West Gate customer supply needs. Niagara Mohawk will release or assign to each ESCO its prorata share of each of the Company's pipeline and storage assets (regardless of whether the ESCO's customers are located in the east or west). The Company will also allocate a portion of its city gate peaking supplies to ESCOs to be managed by the Company, and provided to ESCOs, as needed. The details of the capacity release program will be described in the Company's GTOP manual.

For Dominion Transmission's City Gate Swing Customer program to work with the Company's new slice of the system approach to capacity releases, ESCO deliveries on pipelines other than Dominion Transmission will be considered "first through the meter." The remaining deliveries will be allocated to, and balanced on, Dominion Transmission.

Prior to March 1, 2018, the Company will provide ESCOs with details on the Company's proposal to implement the expanded capacity release program. ESCOs and other interested parties will have the opportunity to provide comments and feedback on the Company's proposal, and the Company will consider that feedback in developing the

final implementation plan. Within 60 days of the Effective Date, the Company will hold a special technical meeting to coordinate with ESCOs and other interested parties on the final implementation plan. Following implementation of the capacity release program, the Company will address any ESCO issues resulting from the new program at the Company's annual winter supply meeting (to take place no later than April 15, 2019). To the extent necessary, an additional collaborative session facilitated by the Company and Staff will be held to discuss the capacity release programs and address any implementation issues. If the parties cannot resolve any issues in the collaborative after consultation with Staff, the parties retain the right to petition the Commission for resolution

# 15.3.2 Allocation of the Proceeds of Asset Management Agreements

Consistent with current practice, Asset Management Agreement ("AMA") credits derived from upstream transportation and storage assets used to serve sales customers only will be allocated solely to those sales customers. Any credits derived from assets serving both core sales and core transportation customers, such as storage services and peaking services (reliability assets) that are not released under the retail choice program, will be shared by sales customers and transportation customers' ESCOs equally on a volumetric basis calculated using distribution volumes. The amount of revenues/credits provided to ESCOs will be equivalent to the ESCO customers' proportionate responsibility for the costs of the upstream storage services provided by the Company that are the subject of the AMAs that result in the revenues/credits. This excludes sharing

of credits for assets that are retained solely to serve sales customers after ESCOs have received their "slice of the system" share of the Company's assets.

#### 15.4 AMI

Niagara Mohawk will convene a collaborative with Staff and interested parties to refine and update its AMI business plan. The collaborative will provide the parties with an opportunity to review and provide input on the Company's plan to implement AMI across its service territory. As set forth below, the schedule includes large group meetings, with the possibility of smaller working group meetings, with the goal of presenting to the Commission a report with a revised AMI business plan, no later than October 1, 2018, for Commission review and action.

a. By April 30, 2018, the Company will hold an initial large group meeting with Staff and interested parties. At the initial meeting, the Company will make a technical presentation about its AMI business plan, review its BCA, as set forth in the rebuttal testimony of the Company's AMI Panel and provide the BCA model. Thereafter, the Company and parties will discuss any questions, comments, or requests Staff and the parties would like the Company to address going forward as it works to refine and update its AMI business plan. The discussions, comments, and questions will include, but are not limited to, the proposed AMI meter deployment period; customer engagement plan; real-time data latency; third-party data access; metrics to measure the success of the AMI program; allocation of AMI costs among service classifications; AMI system components; and the level of granularity at which AMI costs can be tracked without increasing costs above a *de minimis* level. Participants also can determine whether there are sub-issues that would benefit from discussion in smaller working

groups that would report their findings to all stakeholders at the subsequent large group meetings.

- b. Between May 15 and August 1, 2018, the Company will refine and update its AMI business plan. As part of this process, the Company will take into consideration the comments and concerns raised by Staff and interested parties. During this time period, the Company will also hold smaller working group meetings, as requested by the participants.
- c. On or about August 1, 2018, the Company will convene a second large group meeting with Staff and interested parties. At this meeting, the Company will provide a technical presentation about its refined and updated AMI business plan and BCA model, responses to the parties' comments, and proposed metrics. The Company will further discuss any questions, comments, or proposed modifications from Staff or interested parties.
- d. By August 15, 2018, Staff and interested parties may submit to the Company written comments and/or proposed modifications to the Company's refined and updated AMI business plan and BCA, responses to the parties' comments, and proposed metrics.
- e. By August 30, 2018, the Company will convene a third large group meeting with Staff and interested parties. At this meeting, the Company will provide new information, if any, on the AMI business plan and BCA, responses to the parties' comments, and proposed metrics, and further discuss any questions, comments, or proposed modifications from Staff or interested parties.

- f. No later than October 1, 2018, the Company will file a report with the Secretary for the proposed implementation of AMI. The report will contain the following elements:
  - A refined and updated AMI business plan, BCA, and customer engagement plan;
  - A metering plan to meet the rate design options as of January 1, 2020 that are envisioned in the Commission's Value of DER proceeding in Case 15-E-0751;
  - A revised AMI deployment schedule with a BCA (using the Societal Cost Test, Utility Cost Test, and Rate Impact Measure) for different meter deployment periods;
  - Metrics to measure the success of the AMI program;
  - Information on expected real-time data latency and third-party data access;
  - The level of granularity at which AMI costs can be tracked without increasing costs above a *de minimis* level;
  - A proposal for cost recovery of AMI and any associated activities associated with implementation of AMI;
  - A proposal to allocate AMI costs among customer service classifications; and
  - A proposal that would enable the Company to meet the rate design options as of January 1, 2020 envisioned in the Commission's Value of DER proceeding in Case 15-E-0751.

g. At the same time that the Company files the report specified in paragraph 15.4.f, the Company will provide interested parties with the BCA model reflected in the report.

The Signatory Parties recognize that the Company's report would then be subject to consideration by the Commission, and all interested parties will have an opportunity to participate in any process provided for prior to Commission action on the AMI report and proposals contained therein. Interested parties may also challenge any recommendation to proceed with AMI via the procedures set forth in the Commission's Rules and Regulations. The Signatory Parties acknowledge and agree that the Commission will make a final determination on whether and how to implement AMI in the Company's service territory.

# 15.5 Corporate Structure, Affiliate Rules, and Miscellaneous Corporate Provisions

Niagara Mohawk's Corporate Structure, Affiliate Rules, and Miscellaneous Corporation Provisions have been updated and are included in Appendix 16.

### 15.6 Recognition of Policy Proceedings

The Commission conducts proceedings associated with statewide policy objectives that may impact the Company during the term of the Rate Plan (*e.g.*, the Value of DER proceeding in Case 15-E-0751, the REV proceeding in Case 14-M-0101, and the energy efficiency programs proceeding in Case 15-M-0252). Nothing in this Joint Proposal limits the Commission's ability to require the Company to implement changes or take certain action pursuant to these or other policy proceedings that may necessitate cost recovery of incremental costs or changes in rate design during the term of the Rate

Plan. Additionally, the Company may petition the Commission for approval of programs that will create savings or add value, and associated shared savings mechanisms during the term of this rate plan.

### 15.7 Clifton Park REV Demonstration Project

The Company will work with UIU to analyze available data from the Clifton Park REV Demonstration Project to inform the REV Track Two rate design working group.

### 15.8 2000 New York State Income Tax Change

Niagara Mohawk agrees to amortize and credit to customers over ten years approximately \$30.9 million associated with the 2000 New York State income tax change and the related amortization of the Statement of Financial Accounting Standards 109 regulatory liability for federal income tax and state income tax expense. This agreement fully and finally resolves, with prejudice, all matters related to this issue. An illustration of the amortization and credit is included in Appendix 1, Schedules 1 and 2.

## 15.9 Filing for New Base Delivery Rates During the Term of the Rate Plan

Niagara Mohawk agrees not to file for new base delivery rates to be effective prior to April 1, 2021. The following exceptions will apply:

a. The Company may petition the Commission to implement changes to its base rates as may be required or warranted by newly-enacted legislation or regulations and nothing in this Joint Proposal shall prohibit Niagara Mohawk from implementing changes to rates or charges, in a manner to be determined by the Commission, as may be required by newly enacted legislation or regulations;

- b. The Company may petition the Commission for deferral of extraordinary expenses not addressed by this Joint Proposal;
- c. The Company may petition the Commission for approval of new services and/or discrete incentives;
- d. The Company may petition the Commission for changes to rate design or revenue allocation that are revenue neutral including, but not limited to, the implementation of new service classifications and/or elimination of existing service classifications. Such petitions must demonstrate that the proposed changes are consistent with the overall rate design and revenue allocation provided for in this Joint Proposal;
- e. The Company may petition the Commission for minor changes in base rates, provided the effect is *de minimis* or is essentially offset by associated changes in other base rates, statements, terms, or conditions of service; and
- f. The Company may file tariff amendments to implement changes as described in this Joint Proposal.

Any party may take any position on any filing made by the Company pursuant to this section.

Notwithstanding the foregoing, nothing in this Joint Proposal shall prohibit the Commission (upon its own motion or upon motion of an interested party) from exercising its ongoing statutory authority to act on the level of the Company's rates in the event of unforeseen circumstances that, in the Commission's judgment, have such a substantial impact on the rate of return as to render the return on common equity unreasonable, unnecessary, or inadequate for the provision of safe and adequate service.

### 16. Other Provisions

### 16.1 Submission to the Commission

The Signatory Parties agree to request that the Commission adopt the terms of this Joint Proposal without modification. The Signatory Parties intend that this Joint Proposal will be adopted by the Commission as being in the public interest and agree individually to advocate its adoption by the Commission in its entirety and to act so as to expedite that result.

### 16.2 Conditioned on Commission Adoption/ No Severability

The Signatory Parties intend this Joint Proposal to be a complete resolution of all issues in these proceedings. It is understood that each provision of this Joint Proposal is in consideration and support of all the other provisions, and expressly conditioned upon acceptance by the Commission. Except as set forth herein, none of the Signatory Parties is deemed to have approved, agreed to, or consented to any principle, methodology, or interpretation of law underlying or supposed to underlie any provision herein. If the Commission fails to adopt this Joint Proposal according to its terms, then the Signatory Parties to the Joint Proposal will be free to pursue their respective positions in this proceeding without prejudice.

### 16.3 Application of Agreement/No Precedent

Except as otherwise stated in this Joint Proposal, the provisions of the Joint Proposal apply solely to and are binding only in the context of this Joint Proposal and this proceeding. None of the terms of this Joint Proposal and none of the positions taken by any Signatory Party with respect to this Joint Proposal may be referred to, cited by, or

relied upon by anyone in any manner as precedent or otherwise in any other proceeding before the Commission or any other regulatory body or before any court of law for any purpose other than the adoption, implementation, furtherance, or extension of this Joint Proposal. Concessions made by any Signatory Party on any issue do not preclude that party from addressing such issues in future rate proceedings or in other proceedings.

### **16.4** Future Actions/ Dispute Resolution

The Signatory Parties recognize that certain provisions of this Joint Proposal contemplate actions to be taken in the future and agree to cooperate with each other in good faith in taking such actions.

In the event of any disagreement over the interpretation of this Joint Proposal that cannot be resolved informally among the Signatory Parties, the party claiming a dispute will serve a Notice of Dispute on the remaining parties, briefly identifying the provision or provisions of this Joint Proposal under dispute and the nature of the dispute, and convening a conference in a good faith attempt to resolve the dispute. If any such efforts are not successful in resolving the dispute among the Signatory Parties, the matter will be submitted to the Commission for resolution.

### 16.5 Continuation

Except as set forth herein, following the expiration of the term of the Rate Plan, all provisions of this Joint Proposal (except for (i) the application of deferral credits to offset the revenue requirements, (ii) the downward-only tracking mechanisms for IS, GBE, and electric and gas net utility plant and depreciation expenses set forth in Sections 8.2, 10.1.14, and 10.1.21, respectively, and (iii) the provisions governing the sale of street

lighting facilities during the term of this Joint Proposal set forth in Section 9.3) will continue until changed by order of the Commission. Except as expressly provided otherwise, any targets, goals, deferral thresholds, or other similar items set forth in this Joint Proposal for Rate Year Three will continue beyond Rate Year Three until modified by the Commission.

### 16.6 Extension

Nothing in this Joint Proposal will be construed as precluding the active parties from convening additional conferences and from reaching agreement to extend this Joint Proposal on mutually-acceptable terms and from presenting an agreement concerning such extension to the Commission for its approval.

### 16.7 Entire Agreement

This Joint Proposal sets forth the entire agreement of the Signatory Parties and supersedes any prior or contemporaneous written documents or oral understandings among the Signatory Parties concerning the matters addressed herein. In the event of any conflict between this Joint Proposal and any other document addressing the same subject matter, this Joint Proposal will control.

### 16.8 Counterparts

This Joint Proposal is being executed in counterpart originals and will be binding on each Signatory Party when the counterparts have been executed.

## NOTES:

- (1) The revenue variance associated with the delay for the credit and collections, supply procurement and storage components of the MFC will flow through their annual reconciliations.
  - (2) The revenue variance associated with the delay in the bad debt rate will flow through the credit and collections annual reconciliation.
    (3) The revenue variance associated with the delay in the working capital rate will flow through the supply procurement annual reconciliation.
    (4) The revenue variance associated with the POR will be reconciled through a manual adjustment to the ESCo billing system.
    (5) The same methodology will be applied to Consolidated Billing Charges.

\* SC12 shown above is for a customer with a DG unit rated at less than 5 MW with annual consumption less than 250,000 thems. A similar calculation would be done for all other SC12 customers experiencing a rate change

<sup>(1)</sup> The revenue variance associated with the delay for the credit and collections, supply procurement and storage components of the MFC will flow through their annual reconciliations.

(2) The revenue variance associated with the delay in the bad debt rate will flow through the credit and collections annual reconciliation.

(3) The revenue variance associated with the delay in the Working capital rate will flow through the annual mutual MCS reconciliation.

(4) The revenue variance associated with the delay in the LAUF percentage will flow through the annual MCS reconciliations.

(5) The revenue variance associated with the POR will be reconciled through a manual adjustment to the ESCo billing system

- (1) The SC-3 facility revenue is from a single SC-3 contract customer.
- (2) The SC-4 basic service charges are included in "facility revenue" above and elsewhere, for convenience of presentation.
- (3) The total current revenue reflects the proper T&D contract rates, as compared to Appendix 2, Schedule 1.
