Re: PSC Case 04-E-0572 – Con Edison Electric Rates
Con Edison's Electric Service Reliability Incentive
Performance for Year ended December 31, 2005

Dear Mr. Gallagher:

Enclosed is Con Edison's "Report on 2005 Performance under Electric Service Reliability Performance Mechanism." This report is provided pursuant to Section G.3 Con Edison's Rate Plan, dated December 2, 2004, adopted by the Public Service Commission in Case 04-E-0572. The voluminous spreadsheet attachments to this report are not included in the enclosed hard copy of the report but are being provided electronically to you and the Staff members noted below.

Sincerely,

Enclosure

Cc. Michael Worden
Kinard Eng

**Consolidated Edison Company of New York, Inc.
Report on 2005 Performance under
Electric Service Reliability Performance Mechanism**

March 31, 2006

Distribution Engineering Department

**Consolidated Edison Company
of New York, Inc.**

Consolidated Edison Company of New York, Inc. Report on 2005 Performance under Electric Service Reliability Performance Mechanism

I. Introduction

Consolidated Edison Company of New York, Inc.'s ("Con Edison" or "the Company") Rate Plan, dated December 2, 2004, adopted by the Public Service Commission in Cases 04-E-0572, established a Reliability Performance Mechanism ("RPM") consisting of six "performance metrics" applicable from January 1, 2005 through March 31, 2008.¹ The RPM provides for the Company to file an annual performance report with the Director of the Office of Electricity and Environment of the Department of Public Service. Accordingly, Con Edison is reporting herein on its performance under the RPM during 2005.

As set forth in the RPM, this report on 2005 performance (a) states the Company's performance under the performance metrics (b) states whether a revenue adjustment is applicable, and (c) provides supporting performance data.²

¹ The RPM is set forth in section G of the Joint Proposal, dated December 2, 2004, approved by the Commission in Case 04-E-0572. The RPM established six "performance metrics:"

1. Threshold Standards consisting of measures of the frequency [System Average Interruption Frequency Index ("SAIFI")] and duration [Customer Average Interruption Duration Index ("CAIDI")] of electric service outages on Con Edison's network and non-network ("radial") distribution systems.
2. Major Outage metric
3. Program Standard for repairs to damaged poles
4. Program Standard for the removal of temporary shunts
5. Program Standard for the repair of "no current street lights and traffic signals, and
6. Program Standard for the replacement of over duty circuit breakers.

² The RPM establishes "revenue adjustments" that reduce the Company's earnings if a program standard is not achieved in any year.

II. Threshold Standards – Performance and Exclusions

A. Threshold Standards Performance

The table below shows Con Edison's performance under the Threshold Standards during 2005. The first column shows the four performance areas that the mechanism measures. The second column states the RPM's "threshold standard" for each of the four performance areas. Performance that is lower than or equal to the threshold standard is satisfactory. Performance greater than the threshold standard subjects Con Edison to a revenue adjustment. The third column shows Con Edison's annual performance in each area adjusted to exclude (a) radial customer interruptions that occurred during "major storms" as defined in Part 97 of the Commission's rules (16 NYCRR 97), as allowed by the RPM and (b) network customer interruptions that occurred during winter snow / ice events meeting the Part 97 outage criteria, as allowed by the RPM.³ For SAIFI measures, 2005 year-end SAIFI is shown. For CAIDI measures, 2005 year-end CAIDI is shown.

	Threshold Standard	2005 Performance⁴
Network SAIFI	0.015	0.005 (.006) ⁵
Radial SAIFI	0.530	0.507
Network CAIDI	3.74	3.94 (4.44)
Radial CAIDI	1.85	1.91

³ Joint Proposal, p. 37.

⁴ Reflects the exclusion of the impact of "major storms" that interrupted service to radial system customers for over 24 hours in Westchester on July 27, August 14, October 7-9, October 16-17 and October 24-26, 2005.

⁵ Parenthetical numbers indicate performance without exclusion of winter snow / ice events.

Con Edison's 2005 performance, adjusted for excludible outages during major storms and winter snow / ice events, was better (i.e., lower) than the threshold standards for Network SAIFI and Radial SAIFI. Accordingly, no penalties are applicable for 2005 performance in these measures. Con Edison's 2005 performance, adjusted for excludible outages during major storms and winter snow / ice events, did not achieve threshold standards (i.e., lower) for Network CAIDI and Radial CAIDI. A \$4 million penalty is applicable for each measure.

B. Threshold Standards Exclusions

The RPM permits exclusion from operating performance for:

Any outages resulting from a major storm, as defined in 16 NYCRR Part 97 (for at least 10% of the customers interrupted within an operating area or customers out-of-service for at least 24 hours), except as otherwise noted; this includes secondary network interruptions that occur in an operating area during winter snow/ice events that meet the 16 NYCRR Part 97 definition (10%/24 hour rule).⁶

During winter periods in 2005, there were several snow / ice events that qualify for exclusion in determining 2005 Threshold Standards performance for Network SAIFI and Network CAIDI. However, the exclusion of these events does not affect whether the Company's performance in any of these areas met the applicable Threshold Standard. Because there is no affect on meeting the Threshold Standards, Con Edison is not seeking approval of these exclusions. Appendix D to this report contains a chart that identifies these snow / ice events.

⁶ Joint Proposal, p. 37.

III. Major Outage Metric

No Major Outages occurred in 2005. Accordingly, a revenue adjustment is not applicable.

IV. Pole Repair Metrics

A. Poles Damaged as of December 31, 2004

The pole repair metric provides for the Company to make repairs, by December 31, 2005, to at least 90% of the "Damaged Poles" and "Double Damaged Poles" that exist on December 31, 2004 and repair all such existing "Damaged Poles" and "Double Damaged Poles" by June 30, 2006, except in extraordinary circumstances.

On December 31, 2004, there were a total of 63 "Damaged Poles" and "Double Damaged Poles" in Con Edison's electric distribution system. The Company has repaired all of the 63 poles by June 30, 2006. Accordingly, a revenue adjustment is not applicable for this metric.

Appendix A (file tab "*Damaged Poles 2004*") contains a listing of the above damaged pole locations, the date the Company became aware of the problem at that location, and the date of the repair.

B. Poles Damaged in 2005

The pole repair metric provides that Con Edison will repair within 30 days 90% of "Damaged Poles" and "Double Damaged Poles" that come into existence on or after January 1, 2005.⁷

⁷ The 30-day period is measured from the date the Company became aware of the "Damaged Pole" or "Double Damaged Pole."

A total of 354 "Damaged Poles" and "Double Damaged Poles" came into existence during 2005. Con Edison repaired 346 (97.7%) of these poles within 30 days of learning of the damage. Repairs for the balance of 8 (2.3%) exceeded 30 days due to extraordinary circumstances. This report does not state the extraordinary circumstances because the 90% threshold was otherwise achieved. Accordingly, a revenue adjustment is not applicable for this metric.

The pole repair metric provides that Con Edison will make repairs to all "Damaged Poles" and "Double Damaged Poles" that come into existence on or after January 1, 2005, within six months of the dates the poles are damaged. The PRM does not provide a revenue adjustment for this metric.

A total of 354 "Damaged Poles" and "Double Damaged Poles" came into existence during 2005. Con Edison repaired all of these 354 (100%) poles within 6 months of the damage date.

Appendix A (File tab *"2005 Damaged Poles"*) contains a listing of the above damaged pole locations, the date Con Edison became aware of the problem at that location, and the date of the repair. The locations of the 8 damaged poles not repaired within 30 days are identified in Appendix A.

V. Shunt Removal Metrics

Con Edison tracked shunts in two categories. One category is shunts that energize streetlights ("streetlight shunts"). The other category is street, sidewalk or overhead shunts. This section will report on shunt removals in each of these categories.

A. Streetlight Shunts Installed as of December 31, 2004

The shunt removal metric provides for the Company to remove, by December 31, 2005, all shunts that exist on December 31, 2004.

On December 31, 2004, there were a total of 5633 streetlight shunts on Con Edison's distribution system. By December 31, 2005, the conditions necessitating each shunt was remediated, the services were repaired, and all of these shunts were removed. Accordingly, a revenue adjustment is not applicable for this metric.

Appendix B (file tab "5633 Temp list") contains a listing of the above streetlight shunt locations, the date the shunt was installed, and the date of the permanent repair and shunt removal.

B. Streetlight Shunts Installed in 2005

The shunt removal metric provides that, for shunts that come into existence on or after January 1, 2005, Con Edison will make permanent repairs within 90 days for at least 90% of shunts installed during the winter months (January, February, March, April, November, and December) and within 60 days for at least 90% of shunts installed during the remaining six months (May through October) ("summer months").

A total of 4 streetlight shunts were installed during winter months in 2005. The Company made permanent repairs and removed the shunts within 90 days for all 4 (100%) of these shunts. Accordingly, a revenue adjustment is not applicable for this metric.

A total of 1 streetlight shunt was installed during summer months in 2005. The Company made permanent repairs and removed this shunt within 60 days. Accordingly, a revenue adjustment is not applicable for this metric.

The shunt removal metric provides that in all cases in which shunts are installed on or after January 1, 2005, Con Edison will make permanent repairs within six months of the dates the shunts are installed. The RPM does not provide a revenue adjustment for this metric.

A total of 5 streetlight shunts came into existence during 2005. Con Edison made permanent repairs and removed all of these 5 streetlight shunts (100%) within six months of the shunt installation date.

Appendix B (file tabs "*WinterA-Temp*", "*SummerTemp*", and "*WinterB_temp*")_ contains a listing of the above streetlight shunt locations, the date the shunt was installed, and the date of the permanent repair and shunt removal.

C. Street, Sidewalk or Overhead Shunts Installed as of December 31, 2004

The shunt removal metric provides for the Company to remove, by December 31, 2005, all shunts that exist on December 31, 2004.

On December 31, 2004, there were a total of 404 street, sidewalk, or overhead shunts on Con Edison's distribution system. By December 31, 2005,

the conditions necessitating each shunt was remediated, the services were repaired, and all of these shunts were removed. Accordingly, a revenue adjustment is not applicable for this metric.

Appendix C (file tab "*ShuntCompletedAsOfDec04*") contains a listing of the above shunt locations, the date the Company became aware of the problem at each such location, the date the shunt was installed, and the date of the permanent repair and shunt removal.

D. Street, Sidewalk or Overhead Shunts Installed in 2005

The shunt removal metric provides that, for shunts that come into existence on or after January 1, 2005, Con Edison will make permanent repairs within 90 days for at least 90% of shunts installed during the winter months (January, February, March, April, November, and December) and within 60 days for at least 90% of shunts installed during the remaining six months (May through October) ("summer months").

A total of 1844 street, sidewalk, or overhead shunts were installed during winter months in 2005. The Company made permanent repairs and removed the shunts within 90 days for 1757 (95.3%) of these shunts. Repairs and removal for the balance of 88 (4.7%) winter shunts exceeded 90 days due to tolling caused by other-party work or due to extraordinary circumstances. This report does not state the basis for the tolling or extraordinary circumstances because the 90% threshold was otherwise achieved. Accordingly, a revenue adjustment is not applicable for this metric.

A total of 1285 street, sidewalk, or overhead shunts were installed during summer months in 2005. The Company made permanent repairs and removed the shunts within 60 days for 1190 (92.6%) of these shunts. Repairs and removal for the balance of 95 (7.4%) summer shunts exceeded 60 days due to tolling caused by other-party work or due to extraordinary circumstances. This report does not state the basis for the tolling or extraordinary circumstances because the 90% threshold was otherwise achieved. Accordingly, a revenue adjustment is not applicable for this metric.

The shunt removal metric provides that in all cases in which shunts are installed on or after January 1, 2005 Con Edison will make permanent repairs within six months of the dates the shunts are installed. The RPM does not provide a revenue adjustment for this metric.

A total of 3129 street, sidewalk, or overhead shunts came into existence during 2005. Con Edison made permanent repairs and removed 3070 (98.1%) of these shunts within six months of the shunt installation date. Repairs on 20 exceeded six months, and the remaining jobs are pending repair but have not exceeded 6 months to date. Appendix C (file tab *"Exceeded 6 months"*) identified the 20 jobs and reasons for exceeding six months.

Appendix C (file tabs *"Received Jan-Apr 05," "Received NovDec 05," "Received Summer05"*) contains a listing of the above shunt locations, the date the shunt was installed, and the date of the permanent repair and shunt removal. The shunt locations that were not permanently repaired within the 60-day summer period (95 shunts), the 90-day winter period (88 shunts), and the 6-

month period (20 shunts) are identified in Appendix C (file tabs *"Exceeded JanApr05," "Exceeded NovDec05," "Exceeded Summer05"*).

VI. No-Current Streetlight Repairs

A. No-Current Streetlight Existing on December 31, 2004

The no-current streetlight metric provides for Con Edison to permanently repair by May 1, 2005, all no-current streetlights that are in existence as of December 31, 2004, except in situations in which the Company can demonstrate that it could not complete its repair due to work required to be undertaken by third parties.

On December 31, 2004, there were a total of 475 no-current streetlights. The Company permanently repaired all 475 (100%) of these no-current streetlights by May 1, 2005. Accordingly, a revenue adjustment is not applicable for this metric.

Appendix B (file tab *"Dec31_04_snapshot"* and *"Westchester-04"*) contains a listing of the above no-current streetlight locations, the date the Company became aware of the problem at each location, and the date of the permanent repair at each location.

B. 2005 No-Current Streetlights

The no-current streetlight metric provides that for no-current streetlights that come into existence on or after January 1, 2005, Con Edison will make permanent repairs within 90 days for at least 90% of no-current streetlights installed during the winter months (January, February, March, April, November,

and December) and within 45 days for at least 80% of no-current streetlights installed during the remaining six months (May through October).

A total of 3923 no-current streetlights occurred during winter months in 2005. Con Edison made permanent repairs within 90 days for 3912 (99.72%) of winter no-current streetlights. Repairs for the balance of 11 winter no-current streetlights exceeded 90 days due to tolling caused by other-party work or due to extraordinary circumstances. This report does not state the basis for the tolling or extraordinary circumstances because the 90% threshold was otherwise achieved. Accordingly, a revenue adjustment is not applicable for this metric.

A total of 3809 no-current streetlights occurred during summer months in 2005. Con Edison made permanent repairs within 45 days for 3768 (98.92%) summer no-current streetlights. Repairs for the balance of 41 summer no-current streetlights exceeded 45 days due to tolling caused by other-party work or due to extraordinary circumstances. This report does not state the basis for the tolling or extraordinary circumstances because the 80% threshold was otherwise achieved. Accordingly, a revenue adjustment is not applicable for this metric.

The no-current streetlight metric provides that Con Edison permanently repair all no currents that come into existence on or after January 1, 2005 within six months of the dates they come into existence. The RPM does not provide a revenue adjustment for this metric.

A total of 7732 no-current streetlights occurred during 2005. Con Edison permanently repaired 7726 of these no-current streetlights within 6 months of the

occurrence date. The remaining 6 jobs are pending repair but have not exceeded 6 months to date.

Appendix B (file tabs *"WinterA-NC"*, *"Summer-NC"*, and *WinterB-NC"*) contains a listing of the above no-current streetlight locations, the date the Company became aware of the problem at each location, and the date of the permanent repair at each location. The summer period no-current streetlight locations that were not repaired within 45 days and the winter period no-current streetlight locations that were not repaired within 90 days are identified in Appendix (file tabs *"WinterA-NC-over90"*, *"SummerNC-over45"*, and *"WinterB-NC-over90"*).

VII. Over-Duty Circuit Breakers

The over-duty circuit-breaker metric provides that Con Edison will replace a target of at least 60 over-duty circuit breakers during each Rate Year, except upon the occurrence of extraordinary system conditions. The RPM does not provide a revenue adjustment for this metric for performance during the rate year ended March 31, 2006.

At the beginning of 2005, Con Edison had identified 1130 over duty 13 kV and 27 kV circuit breakers on its distribution system. At the beginning of 2006, Con Edison had identified 1043 over duty 13 kV and 27 kV circuit breakers on its distribution system. During rate year ended March 31, 2006, Con Edison replaced 113 over-duty circuit breakers. Favorable weather conditions during the fall and winter, and the completion of the White Plains substation, as part of the

Company's obsolescence program (23 breakers), contributed to the higher than forecasted number of breakers replaced during the rate year.
