Hon. Michelle L. Phillips (secretary@dps.ny.gov)
Secretary to the Commission
New York State Public Service Commission

Re: Case No. 15-F-0122 – Baron Winds Phase II

Dear Secretary Phillips:

I am submitting the attached report, *The Fremont Project: A Case Study of Residential Low-Frequency Sound, Reported Impacts, and Displacement at Jobs Corners*, dated October 10, 2026, and respectfully request that it be placed in the official Document and Matter Management (DMM) record for Case 15-F-0122.

This report is submitted in my personal capacity as an affected resident of the Town of Fremont and as a continuation of the concerns raised in my previous complaints regarding Baron Winds II.

Since turbine operations began in late 2025, my household has experienced recurring physical symptoms and conditions that ultimately resulted in our relocation from our residence on January 21, 2026. As of the date of this submission, we remain displaced from our home.

Over the past several months, I have conducted independent monitoring using two Raspberry Boom microbarometers, documented our experiences under varying environmental conditions, and reviewed available information concerning post-construction sound testing.

The attached report brings together these observations, monitoring records, relevant scientific research, and questions regarding the methods and frequency ranges used to investigate the conditions we have reported.

Of particular concern is whether the post-construction monitoring adequately evaluated very-low-frequency atmospheric-pressure fluctuations, including frequencies below 10 Hz, and whether the recorded conditions have been compared with individual turbine operating data and meteorological information.

The report identifies specific questions requiring answers and requests independent technical review, including appropriately designed indoor and outdoor measurements, examination of available raw monitoring data, and comparison with turbine operating records.

I respectfully request that the Department:

1. Accept this report and include it in the official DMM record for Case 15-F-0122.
2. Associate the submission with my previously filed complaints concerning Baron Winds II.
3. Refer the report to the appropriate DPS technical and compliance staff for review.
4. Provide written acknowledgment that the report has been entered into the official DMM record and identify whether DPS intends to conduct a substantive technical review of the findings, questions, and requests for independent investigation presented in the report.

My intention in preparing this report is to provide a documented account of the conditions experienced at our residence and to encourage a thorough, transparent, and scientifically sound investigation.

After nearly nine months of displacement, I respectfully request that the unresolved conditions at our residence and the technical questions presented in this report receive meaningful consideration and a written response.

Thank you for your attention to this submission.

Sincerely,

Emily Murray
Affected Resident, Town of Fremont, New York
Submitted in my personal capacity
