I. INTRODUCTION

2 Q. Would the members of the Accounting Panel please state  
3 your names and business address?

4 A. Joseph Miller, Richard A. Kane and Stephen Prager.  
5 Our business address is Consolidated Edison Company of  
6 New York, Inc. ("Con Edison," the "Company" or  
7 "CECONY"), 4 Irving Place, New York, NY 10003.

8 Q. What are your current positions with Con Edison?

9 A. **(Miller)** I am the Assistant Controller responsible for  
10 the Regulatory Accounting & Filings, Accounts Payable,  
11 Payroll and Account Reconciliation sections.

12 **(Kane)** I am the Department Manager of Regulatory  
13 Accounting & Filings.

14 **(Prager)** I hold the position of Senior Accountant in  
15 Regulatory Accounting & Filings.

16 Q. Please explain your educational background, work  
17 experience, and current general responsibilities.

18 A. **(Miller)** In June 1984, I received a Bachelor of  
19 Business Administration Degree in Accounting from  
20 Baruch College and in January 1990, I received a  
21 Masters of Business Administration in Finance from  
22 Baruch College. I began my employment with Con Edison  
23 in July 1984 as a Management Intern. I worked in the

1       Corporate Accounting Department from July 1985 until  
2       January 2001 primarily between Accounting Research and  
3       Procedures (ARP) and the General Accounts (GA)  
4       sections starting as a Staff Accountant, then  
5       Supervisor and ultimately reaching the Department  
6       Manager level in both sections. In 2001, I worked as  
7       a Department Manager within the Corporate Planning  
8       Department and then in 2002, I became the Department  
9       Manager of our Financial Reporting section. In 2004,  
10      I became an Assistant Controller and then a Director  
11      of Treasury's Risk Management section. From 2006  
12      through 2012, I was an Assistant Controller for the  
13      Financial Reporting Sections which ultimately included  
14      ARP, GA, Commodity and Derivative Accounting, Account  
15      Reconciliations and Financial Reporting.

16      (**Kane**) In May 1976, I received a Bachelor of Science  
17      degree in Accounting from Manhattan College. I worked  
18      for Con Edison from August 1976 until January 1978 as  
19      a staff accountant. I then joined Orange & Rockland  
20      Utilities, Inc ("O&R") and became Supervisor -  
21      Facility Accounting. In 1980, I became Manager -  
22      Budgets. In 1989, I became Manager - General  
23      Accounting and in 1996, the Accounts Payable Section

1           was added to my responsibilities. As a result of  
2           O&R's merger with Con Edison, the two Accounting  
3           Departments were combined. After the merger, I  
4           continued to be responsible for overseeing O&R's  
5           General Accounting Section and Financial Reporting  
6           area until March 2003. At that time, I assumed my  
7           current position as Department Manager of Regulatory  
8           Accounting & Filings. The primary responsibility of  
9           the section is to coordinate as well as participate in  
10          rate filings before regulatory agencies.

11          **(Prager)** I received a Bachelor of Science degree in  
12          Accounting from Yeshiva University in 1988. I started  
13          my career at Con Edison in July 1988 as a management  
14          intern. From July 1989 through September 1998, I  
15          worked in Accounting Research and Procedures. From  
16          October 1998 through March 2000, I worked in General  
17          Accounts. Since April 2000, I have been working in  
18          Regulatory Filings, coordinating the rate cases of Con  
19          Edison and Orange and Rockland and its subsidiaries.

20          Q.       Have any members of the Accounting Panel previously  
21          testified before the New York State Public Service  
22          Commission ("PSC" or the "Commission")?

1 A. **(Kane)** Yes, I have previously testified before the  
2 Commission in numerous proceedings.

3 **(Prager)** I have previously testified before the  
4 Commission as well.

5

6 **II. PURPOSE OF TESTIMONY**

7 Q. Please summarize your testimony.

8 A. The Accounting Panel primarily explains and details:

- 9           • Historic financial statements and statistical  
10            data, including balance sheets, income  
11            statements, unappropriated retained earnings,  
12            state and federal income taxes, utility plant and  
13            depreciation reserves (Exhibit \_\_\_\_ (AP-1) to  
14            Exhibit \_\_\_\_ (AP-4);  
15           • Revenues, Operation and Maintenance ("O&M")  
16            expenses and Other Operating Deductions from the  
17            historic period of the twelve months ended June  
18            30, 2012 ("Historic Year") through the twelve  
19            months ending December 31, 2014 ("Rate Year") are  
20            presented in Exhibit \_\_\_\_ (AP-5); a summary of  
21            normalizing adjustments to the Historic Year and

1 various program changes are also presented in  
2 Exhibit \_\_\_\_ (AP-5);

3 • The book cost of utility plant, the accrued  
4 depreciation reserve and the construction work in  
5 progress for steam utility plant for the Historic  
6 Year through the Rate Year are presented in  
7 Exhibit \_\_\_\_ (AP-6).

8 • Exhibit \_\_\_\_ (AP-7) - Production Expenses - Steam;  
9 • The average rate base for the Historic Year  
10 through the Rate Year, including normalization  
11 adjustments, is presented in Exhibit \_\_\_\_ (AP-8);  
12 • Various accounting changes, adjustments,  
13 amortizations of deferred charges and the  
14 resultant rate decrease of \$5.4 million for the  
15 Rate Year at proposed rates and based upon an  
16 overall rate of return of 7.69 percent is  
17 presented in Exhibit \_\_\_\_ (AP-9);  
18 • The overall rate of return of 7.69 percent and  
19 the capital structure for the Rate Year (Exhibit  
20 \_\_\_\_ (AP-10);  
21 • Fund requirements and sources of funds for the  
22 Rate Year (Exhibit \_\_\_\_ (AP-11);

1           • Interest coverage on the SEC basis including the  
2           actual for the calendar years 2007 through 2011  
3           and as forecasted for the Rate Year (Exhibit \_\_\_\_  
4           (AP-12); and  
5           • Cost Allocations.

6

7           **III. HISTORIC FINANCIAL AND STATISTICAL DATA -- (AP-1)**

8   Q.   Are you sponsoring exhibits containing historical  
9        financial and statistical data as required by the  
10      Commission?

11   A.   We are sponsoring several for that purpose. The  
12      first, which was prepared under our direction and  
13      supervision, is entitled "CONSOLIDATED EDISON COMPANY  
14      OF NEW YORK, INC. - FINANCIAL AND STATISTICAL DATA -  
15      INDEX TO SCHEDULES," and is set forth as Exhibit \_\_\_\_  
16      (AP-1).

17   Q.   What information is contained in Exhibit \_\_\_\_ (AP-1)?

18   A.   The Exhibit consists of an index and eight separate  
19      schedules containing financial data and the results of  
20      operations with particular reference to the Company's  
21      steam operations. The balance sheets are shown as of  
22      December 31 for the years 2008 through 2011, and as of

1        June 30, 2012, the end of the Historic Year. Details  
2        of the income accounts are shown for the calendar  
3        years 2009 through 2011 and the Historic Year. The  
4        arrangement of the schedules is as follows:

- 5        • Schedule 1 - Balance Sheets;
- 6        • Schedule 2 - Income Statements;
- 7        • Schedule 3 - Unappropriated Retained Earnings;
- 8        • Schedule 4 - Steam Utility Operating Income before  
9        and after income taxes;
- 10       • Schedule 5 - Steam Operating Revenues by Amount and  
11       Equivalent Cents per MLBS Sold;
- 12       • Schedule 6- Statement of MMLBS of Steam Supplied and  
13       Revenue Billed by Classification of Service. This  
14       schedule also reflects revenue per MLBS sold;
- 15       • Schedule 7 - Steam Operation and Maintenance  
16       Expenses. Schedule 7 consists of eight pages. Page  
17       1 is a summary statement, which shows the O&M  
18       expenses on a functional basis, both in dollar  
19       amounts and equivalent cents per MLBS sold. Pages 2  
20       through 8 show the details of the various functional  
21       groups by account number, in dollar amounts and in  
22       equivalent cents per MLBS sold;

1           • Schedule 8 - Taxes Other Than Income Taxes - Steam.  
2           All of the information in Exhibit \_\_\_\_ (AP-1) comes  
3           from the books and records of the Company except  
4           revenues and expenses stated in cents per MLBS sold or  
5           produced which were computed.

6

7           **IV. CALCULATION OF FEDERAL AND STATE INCOME TAXES -**

8           **(AP-2)**

9   Q.   Was the document entitled "CONSOLIDATED EDISON COMPANY  
10       OF NEW YORK, INC. - CALCULATION OF FEDERAL AND STATE  
11       INCOME TAXES - STEAM - FOR THE TWELVE MONTHS ENDED  
12       JUNE 30, 2012 " consisting of 6 pages, set forth as  
13       Exhibit \_\_\_\_ (AP-2), prepared under your direction and  
14       supervision?

15   A.   Yes, it was.

16   Q.   Please describe Exhibit \_\_\_\_ (AP-2) .

17   A.   Pages 1 through 3 set forth the calculation of federal  
18       income tax for steam operations, including accruals,  
19       deferrals and amortizations of deferrals for the  
20       Historic Year. Pages 4 through 6 show the calculation  
21       of New York State income tax for steam operations for

1           the same twelve month period. These amounts are also  
2           included on Exhibit \_\_\_\_ (AP-1), Schedule 2, page 4.

3           **V.       BOOK COST OF UTILITY PLANT -- (AP-3)**

4   Q.   Was the document entitled "CONSOLIDATED EDISON COMPANY  
5       OF NEW YORK, INC. - BOOK COST OF UTILITY PLANT - STEAM  
6       - AS OF DECEMBER 31, 2008, 2009, 2010, 2011 AND JUNE  
7       30, 2012," set forth as Exhibit \_\_\_\_ (AP-3), prepared  
8       under your direction and supervision?

9   A.   Yes, it was.

10   Q.   What is shown on Exhibit \_\_\_\_ (AP-3)?

11   A.   This exhibit shows the book cost of Utility Plant -  
12       STEAM - by utility plant account at December 31, 2008,  
13       2009, 2010, 2011 and June 30, 2012. The amounts shown  
14       for Steam Plant in Service and Construction Work in  
15       Progress were taken directly from the books and  
16       records of the Company.

17   Q.   Do the figures shown for Steam Plant in Service on  
18       Exhibit \_\_\_\_ (AP-3) represent the original cost of  
19       existing property, which is used and useful as of the  
20       dates indicated?

21   A.   To the best of our knowledge and belief, they do. The  
22       plant accounts are maintained in balance with the  
23       continuing property records which show the original

1 cost of the existing property classified in accordance  
2 with established continuing property record units.

3 **VI. DEPRECIATION OF STEAM PLANT -- (AP-4)**

4 Q. Was the document entitled "CONSOLIDATED EDISON COMPANY  
5 OF NEW YORK, INC. - ACCUMULATED PROVISION FOR  
6 DEPRECIATION OF STEAM PLANT AS OF DECEMBER 31, 2008,  
7 2009, 2010, 2011 AND JUNE 30, 2012," set forth as  
8 Exhibit \_\_ (AP-4), prepared under your direction and  
9 supervision?

10 A. Yes, it was.

11 Q. Please describe Exhibit \_\_ (AP-4).

12 A. This exhibit shows the accumulated provision for  
13 depreciation of Steam Plant in Service as of December  
14 31, 2008, 2009, 2010, 2011 and June 30, 2012. The  
15 amounts shown on this exhibit were taken from the  
16 books and records of the Company.

17

18 **VII. REVENUES AND OPERATING EXPENSE DATA -- (AP-5)**

19 Q. Was the document entitled "CONSOLIDATED EDISON COMPANY  
20 OF NEW YORK, INC. - REVENUES AND OPERATING EXPENSE  
21 DATA," set forth as Exhibit \_\_ (AP-5) prepared under  
22 your direction and supervision.

23 A. Yes, it was.

1 Q. Please describe Exhibit \_\_\_\_ (AP-5)

2 A. Generally speaking, Exhibit \_\_\_\_ (AP-5) contains  
3 extensive detail regarding elements or components of  
4 revenue and expense on which the Company's rate  
5 request is based. The first page of Exhibit \_\_\_\_ (AP-5)  
6 contains an index of the 10 schedules included in the  
7 exhibit.

8 Q. Please describe Schedule 1 of Exhibit \_\_\_\_ (AP-5).

9 A. Schedule 1, page 1 is a statement of Steam Operating  
10 Income before income taxes by component for the  
11 Historic Year and the Rate Year. Column 1 shows the  
12 data as recorded on the Company's books of account for  
13 the Historic Year. Column 2 reflects the changes made  
14 to normalize the Historic Year costs and to provide  
15 for increased or decreased costs and activity levels  
16 or other linkage to arrive at the Rate Year estimate  
17 shown in Column 3. The Historic Year revenues and  
18 costs were developed from various schedules from  
19 Exhibit \_\_\_\_ (AP-1). Total Steam Other Operating  
20 Revenues are shown on page 2 of Schedule 1 of Exhibit  
21 \_\_\_\_ (AP-5). We will address them in greater detail  
22 later in our testimony. O&M expenses by cost element  
23 are summarized on page 1 of Schedule 1 and are

1       detailed on Schedule 1, page 3. The O&M expense  
2       amounts were developed from various other schedules in  
3       the exhibits we are presenting. Pages 4a, 4b, 5a and  
4       5b of Schedule 1 detail the Steam depreciation and  
5       amortization expenses. Page 6 details the costs  
6       classified as taxes other than income taxes.

7   Q.   How were sales revenues and associated fuel costs for  
8       the Rate Year shown on Schedule 1 of Exhibit \_\_ (AP-5)  
9       developed?

10   A.   The Company's Steam Forecasting Panel provided us with  
11       the sales revenue forecast and it is addressed in  
12       their testimony. Fuel costs were developed by the  
13       Steam Fuel Panel. We adjusted the fuel costs to an  
14       accounting basis to reflect the deferred accounting  
15       for these costs prescribed by the Commission as  
16       implemented through Steam's Fuel Adjustment Clause  
17       (FAC) .

18   Q.   How were Other Operating Revenues, and Other Operating  
19       Income Deductions, as shown on line 2 and lines 6 - 9  
20       of page 1 of Schedule 1 of Exhibit \_\_ (AP-5)  
21       determined?

22   A.   The Historic Year levels are from Exhibit \_\_ (AP-1) .  
23       We developed the Rate Year forecasts for Other

1       Operating Revenues and Taxes Other than Income Taxes  
2       except property taxes which were provided to us by the  
3       Company's Property Tax and Depreciation Panel. These  
4       items are shown on Schedule 1, pages 2 and 6,  
5       respectively. Development of Depreciation and  
6       Amortization expense is shown on Schedule 1, pages 4a,  
7       4b, 5a and 5b. Underlying depreciation rates are  
8       addressed in the testimony of the Company's Property  
9       Tax and Depreciation Panel.

10      Q.     Please explain the derivation of the O&M expenses for  
11       the Rate Year shown on page 3 of Schedule 1 of Exhibit  
12       \_\_\_\_ (AP-1) .

13      A.     This page shows the derivation of the projected  
14       expense in the Rate Year from the Historic Year  
15       expense. Sources of the changes in expense level such  
16       as normalization adjustments, program changes, labor  
17       cost escalation and general inflation escalation are  
18       identified. We note that in this filing we have made  
19       a change from past filings regarding the presentation  
20       of O&M expenses. On page 3 there are 6 new categories  
21       of expenses. We added Bargaining Unit Contract Cost  
22       (line 5), Austerity (line 8), Company Labor - Fringe  
23       Benefit Adjustment (line 11), and Uncollectible

1        Expenses - Sundry (line 59) in order to show the Rate  
2        Year amounts for these items with better clarity. We  
3        added RCA - Levelization of Rate Increase (line 43)  
4        and Regulatory Commission Expense - 18-a Assessment  
5        (line 51) to segregate this item that we excluded from  
6        the Revenue Requirement, as explained below.

7 Various Company witnesses, including the Accounting  
8 Panel, will explain the normalizing adjustments and  
9 program changes.

10 Q. Please describe the remaining schedules in Exhibit \_\_\_\_  
11 (AP-5).

12 A. Schedule 2 is our development of the projection of  
13 labor costs from the Historic Year to the Rate Year  
14 and Schedule 3 of Exhibit \_\_ (AP-5) presents the  
15 projected employee levels reflected in that  
16 projection. Schedule 4 summarizes the Historic Year  
17 and Rate Year O&M expenses by Major Account Group  
18 ("MAG") function and the changes between the two  
19 periods. The totals correspond to Schedule 1, page 3.  
20 Schedule 5 shows the Historic Year elements of expense  
21 by MAG.

22 Schedule 6 shows a summary by function of the O&M  
23 expenses for the Historic Year by MAG and the changes

1       in the forecast to the Rate Year. Schedule 6 also  
2       includes a summary (pages 2 - 4) of the normalizations  
3       and program changes by projects within categories and  
4       the allocation to steam, where appropriate.  
5       These normalizations and program changes are also  
6       reflected in Schedules 7 and 8, respectively, by cost  
7       element. When a normalizing adjustment or program  
8       change affects an individual element of expense, it is  
9       shown as an addition or subtraction from the Historic  
10      Year, at the Historic Year price level. The business  
11      need for the specific normalizations and program  
12      changes are discussed by various Company witnesses in  
13      their testimony.  
14      Schedule 9 of Exhibit \_\_ (AP-5) shows the Company's  
15      Steam O&M expenses subject to general escalation.  
16      Finally, Schedule 10 lists cost elements that the  
17      Company expects to update during this proceeding and  
18      the witnesses sponsoring the cost elements. However,  
19      there may be other cost elements that should be  
20      updated as well, and if so, the Company will provide  
21      notification of these updates as appropriate.

1

**A. OTHER OPERATING REVENUES**

2 Q. Does Exhibit \_\_\_\_ (AP-5) show the details of Other  
3 Operating Revenues?

4 A. Yes. Schedule 1, page 2 of Exhibit \_\_\_\_ (AP-5) shows  
5 the detail of Other Operating Revenues in the Historic  
6 Year and Rate Year. The Historic Year level of \$67.3  
7 million is forecast to increase by \$13.2 million for a  
8 Rate Year level of \$80.5 million.

9 Q. Please describe each item of Other Operating Revenues  
10 shown on page 2 of Schedule 1 of Exhibit \_\_\_\_ (AP-5).

11 A. We will do so addressing each item in sequence. There  
12 are 21 items.

13 **Line 1, Interdepartmental Rents - ERRP and Line 2,**  
14 **Interdepartmental Rents - Hudson Avenue Tunnel:** These  
15 revenues represent carrying charges that the steam  
16 department charges the electric department for  
17 facilities it uses jointly with steam. Carrying  
18 charges on shared facilities include components for  
19 rate of return, depreciation and taxes. The carrying  
20 charges are applied to the book cost of the facility.  
21 For the Rate Year, revenue includes a \$71,890,000  
22 charge to the electric department for ERRP, which  
23 represents 2/3 of the total annual carrying charges

1 for the Rate Year of \$108,173,000. Interdepartmental  
2 rent revenue for the Historic Year for the joint usage  
3 of the Hudson Avenue Tunnel continues in the Rate Year  
4 at an increased level of \$0.2 million, which equates  
5 to a Rate Year level of \$2.3 million.

6 **Line 3, 74th/59th Streets:** This item also relates to  
7 Interdepartmental Rents. The \$1.5 million decrease in  
8 the revenues related to the 74<sup>th</sup> and 59<sup>th</sup> Street  
9 Generating stations is discussed by the Steam  
10 Infrastructure and Operations Panel.

11 **Line 4, Fuel Management Program:** This represents the  
12 steam department's allocation of revenues related to  
13 fuel oil exchange transactions by the Company's steam  
14 operations. The Rate Year forecast is zero as  
15 explained by the Company's Steam Fuel Panel.

16 **Line 5, Late Payment Charges:** The Rate Year estimate  
17 was based on the Historic Year ratio of late payment  
18 charges to sales revenues. The factor of 0.080% was  
19 then applied to the Rate Year sales revenue forecast  
20 to arrive at late payment charges of \$0.524 million.

21 **Line 6, Special Services Repair Program:** This program  
22 provides steam repairs and other special services,  
23 such as investigations of leaks and turn-ons/turn-

1       offs. The Company estimates the Rate Year level for  
2       such activity at \$671,000 based on a historic three-  
3       year average for the period July 2009 through June  
4       2012.

5       **Line 7, Real Estate Rents:** This revenue, projected to  
6       be \$78,000 in the Rate Year, represents rental income  
7       from Verizon Wireless related to the lease of a cell  
8       tower at 506 East 75<sup>th</sup> Street.

9       **Line 8, Net Unbilled Revenues:** This item represents  
10      the deferral of the difference between the unbilled  
11      revenue level reflected in rates and the actual  
12      unbilled revenues. As such, the Rate Year projection  
13      is zero.

14      **Line 9, Rider F Revenues:** This line reflects the  
15      accounting entries to record the steam rider F program  
16      credit deferral and collection through the FAC.

17      **Line 10, Hedging Program Interest:** This line reflects  
18      a reclassification of interest assessed on funds  
19      advanced for the program to Interest and Dividend  
20      Income.

21      **Line 11, Preferred Stock Redemption:** This represents  
22      the deferral of cost savings realized by the Company  
23      by redeeming its outstanding preferred stock and

1 issuing long term debt in its place. Such deferral  
2 was required by the Commission's January 19, 2012  
3 order in Case 08-M-1244.

4 **Line 12, Auction Rate Miscellaneous Revenues:** This  
5 line represents the reconciliation of actual auction  
6 rate interest expense of variable rate bonds to the  
7 targeted amounts per Case 09-S-0794.

8 **Line 13, Interest Revenues:** This line includes  
9 reductions to revenues for interest the Company owes  
10 its customers for the cash flow benefits related to  
11 Bonus Depreciation and for the settlement related to  
12 employee / contractor misconduct.

13 **Line 14, SO2 Allowances:** For the reasons explained in  
14 the testimony of Company witness Price, no sales of  
15 SO2 allowances are projected for the Rate Year.

16 **Line 15, Property Taxes:** This line represents the  
17 deferral of property tax expense under runs as  
18 compared to the target levels reflected in rates in  
19 Case 09-S-0794. The amortization of the forecast  
20 deferred balance at December 31, 2013 is shown on  
21 Exhibit        (AP-9), Schedule 4.

22 **Line 16, Local Law 11:** Pursuant to Case 07-S-1315,  
23 the Company was allowed to recover \$4.9 million of

1       Local Law 11 costs over the thirty-six month period  
2       from October 2008 through September 2011. This line  
3       contains the amortization of deferred costs recorded  
4       during the period from July 1, 2011 through September  
5       30, 2011.

6       **Line 17, WTC Carrying Costs:** This line represents the  
7       net amount of carrying charges accrued on the average  
8       deferred World Trade Center cost balance during the  
9       Historic Year.

10      **Line 18, Carrying Charges on Plant Balances:** This  
11      line represents the reconciliation of production and  
12      distribution plant additions under the current rate  
13      plan. The Company defers the revenue requirement  
14      impact of the amount by which the Company's actual  
15      capital program expenditures result in average net  
16      plant balances below the targets approved under the  
17      current rate plan.

18      **Line 19, Rate Case Amortizations:** This line  
19      represents the amortization of various previously  
20      deferred amounts being amortized over the term of the  
21      current rate plan.

22      **Line 20, Interest on Steam Deferrals:** This line  
23      reflects interest collected from customers on the

1 under-collection of reconcilable deferred fuel items  
2 such as the steam variance, water and water chemicals  
3 which are recoverable through the FAC.

4 **Line 21, Steam Interference Reconciliation:** This line  
5 reflects the accounting entries booked to reconcile  
6 actual interference expenses, excluding labor, with  
7 the targets established under the current rate plan.

8 **B. DEPRECIATION AND AMORTIZATION**

9 Q. Please explain Depreciation and Amortization shown on  
10 Exhibit \_\_\_\_ (AP-5), Schedule 1, page 1.

11 A. The depreciation and amortization expense of \$71.526  
12 million for the Rate Year was calculated based on  
13 projected plant balances through the Rate Year and  
14 composite depreciation rates based on currently  
15 effective depreciation rates by plant account. The  
16 composite depreciation rates were provided to us by  
17 the Company's Property Tax and Depreciation Panel.  
18 The currently effective depreciation rates as well as  
19 those proposed to be effective at the start of the  
20 Rate Year as reflected in the revenue requirement are  
21 discussed in that Panel's testimony. Details of the  
22 calculation of the depreciation and amortization  
23 amounts are shown in Exhibit \_\_\_\_ (AP-5), Schedule 1,

1        pages 4a, 4b and 5a. Exhibit \_\_\_\_ (AP-5), Schedule 1,  
2        pages 5b shows the calculation of depreciation at  
3        proposed rates. We would note that the proposed  
4        changes in depreciation rates if adopted by the  
5        Commission, would increase the annual depreciation  
6        expense by \$9,484,000 as reflected on Exhibit \_\_\_\_ (AP-9),  
7        Schedule 1 and 3, which we will discuss later.

8        **C. TAXES OTHER THAN INCOME TAXES**

9        Q. Please explain the first three line items on Schedule  
10        1, page 6, of Exhibit \_\_\_\_ (AP-5) named Taxes Other than  
11        Income Taxes.

12        A. The first item is Property Taxes (lines 1 and 2)  
13        consisting of New York City property taxes for the  
14        Historic Year applicable to Steam operations of  
15        \$84,957,000. The Rate Year forecast totaling  
16        \$101,187,000 was provided to us by the Company's  
17        Property Tax and Depreciation Panel and is described  
18        in their testimony. Line 2 represents the  
19        reconciliation of actual property taxes to the levels  
20        established in base rates in Case 09-S-0974 in  
21        accordance with the reconciliation mechanism adopted  
22        by the Commission in that case. There is no Rate Year  
23        forecast for items of this nature.

1 Q. How did you calculate Revenue Taxes for the Rate Year  
2 on line 4 of Schedule 1, page 5, of Exhibit \_\_ (AP-5)?

3 A. Revenue taxes derived from revenues included in the  
4 Steam Forecasting Panel's sales revenue forecast are  
5 \$17,922,000. To this, we added revenue taxes  
6 applicable to Other Operating Revenues, such as late  
7 payment charge revenues and others, in the amount of  
8 \$34,000 for a total of \$17,956,000.

9 Q. Please describe the increase in Payroll Taxes from the  
10 Historic Year to the Rate Year indicated on Schedule  
11 1, page 6, of Exhibit \_\_ (AP-5).

12 A. The increase in payroll taxes is due principally to  
13 the increase in base wages subject to FICA. A  
14 normalization adjustment was required to reclassify  
15 payroll tax recoveries from the A&G Credit element of  
16 expense to payroll taxes. Under the Company's new  
17 accounting system, the manner in which this credit is  
18 recorded has changed. Effective July 1, 2012, this  
19 credit is now reflected as a reduction to payroll  
20 taxes rather than included in the A&G Credit. The  
21 forecast of payroll taxes was developed by dividing  
22 the historic level of payroll taxes by the historic  
23 payroll applicable to steam operations. This factor

1       was then applied to the projected level of payroll to  
2       arrive at the Rate Year level of payroll tax expense  
3       of \$4,102,000.

4       The Company will revise payroll taxes for known  
5       changes, if any, in the FICA rate and base in the  
6       update stage of this proceeding. Any change in  
7       payroll taxes resulting from action by any taxing  
8       authority as well as any revisions related to changes  
9       in forecasted employee levels will also be reflected  
10      in the update stage of this proceeding.

11     Q.    Please explain the Sales and Compensating Use Tax on  
12      line 6.

13     A.    These are the state and local sales and use taxes paid  
14      by the Company when acquiring a broad range of goods  
15      and services. The amount shown is the portion of such  
16      taxes chargeable to expense as opposed to being  
17      capitalized. We have escalated the Historic Year  
18      level to recognize general inflationary increases in  
19      the cost of goods and services. The forecast did not  
20      assume any change in the current sales tax rates.

21     Q.    Please explain the Subsidiary Capital Tax item on line  
22      7 on Page 6 of Schedule 1 of Exhibit        (AP-5) .

1 A. Subsidiary capital tax is a tax imposed by the City of  
2 New York on the Company. The Rate Year forecast of  
3 this tax was based on the average historic growth in  
4 the Company's capitalization from 2005 through 2010  
5 and the allocation of the tax to Steam operations is  
6 \$467,000.

7 Q. Please describe All Other Taxes on line 8.

8 A. All Other Taxes represents minor taxes such as  
9 commercial rent and occupancy tax, motor vehicle  
10 taxes, state gasoline tax, state highway use tax,  
11 federal diesel and gasoline taxes, the New York State  
12 tax on insurance premiums and hazardous waste. The  
13 Company estimated the Rate Year level for such taxes  
14 at \$61,000 based on a historic three-year average for  
15 the period July 2009 through June 2012.

16 Q. Does this conclude your explanation of page 6 of  
17 Schedule 1 of Exhibit \_\_ (AP-5) regarding taxes other  
18 than income taxes?

19 A. Yes.

#### D. NORMALIZING ADJUSTMENTS

21 Q. Please explain what is shown on and the purpose of  
22 Schedule 7 of Exhibit (AP-5).

1 A. The purpose of this schedule is to eliminate from the  
2 elements of expense those amounts that are either  
3 nonrecurring, out of period, or for which the Company  
4 has decided to not seek recovery in this proceeding  
5 and also to annualize amounts that were not fully  
6 recognized in the Historic Year.

7 Q. For which normalization adjustments shown in Exhibit  
8 \_\_\_\_\_ (AP-5), Schedule 6, Page 1 are you responsible?

9 A. We are responsible for several which we will identify  
10 and explain.

11 **Line 1, Water Treatment:** This \$615,000 reduction to  
12 expense represents the accounting entries recorded on  
13 the Company's books relating to the reconciliation of  
14 water treatment expense. Per the rate plan effective  
15 in Case 07-S-1315 the Company was authorized to  
16 amortize \$2.46 million of water treatment expenses  
17 over four years (October 2008 through September 2012),  
18 or \$615,000 per rate year. Since, this amortization  
19 ceased prior to the Rate Year, we are normalizing the  
20 \$615,000 out of expense.

21 **Line 7, Interference Reconciliation:** This  
22 normalization adjustment of \$1,874,000 in the Historic  
23 Year represents accounting entries to true-up actual

1 interference expense with the target established under  
2 the current rate plan.

3 **Line 9, Customer Uncollectibles:** The uncollectible  
4 accounts expense in the Historic Year was negative  
5 \$206,000, due to an out of period adjustment. This  
6 normalizing adjustment removes the out of period  
7 adjustment. We will explain the development of  
8 uncollectible accounts expense for the Rate Year later  
9 in our testimony.

10 **Line 11, Fringe Benefit Adjustment:** This adjustment  
11 represents the increase in pensions and OPEBs,  
12 employee welfare expenses, and workers' compensation  
13 cost related to the increase in employees, through  
14 normalization adjustments, as sponsored by various  
15 Company witnesses, including the Accounting Panel.

16 **Line 12, Employee Welfare Expenses:** The total  
17 normalization for this element of expense is a  
18 decrease of \$246,000. As shown on Exhibit CBP-11,  
19 sponsored by the Compensation and Benefits Panel, this  
20 normalization has several components; the largest is  
21 reclassification recovered benefit costs from the  
22 shared services EOE to employee welfare expense. With  
23 the new accounting system put into place in July 2012,

1       these recoveries will be more appropriately reflected  
2       as credits against employee welfare costs going  
3       forward. The Benefits and Compensation Panel  
4       discusses all of the components, except for the  
5       \$43,000 increase related to the Deferred Income Plan,  
6       which we will explain. We are normalizing out of  
7       historic expenses, the administrative fee related to  
8       the administrative costs and losses on participants'  
9       accounts under the Deferred Income Plan. The Rate  
10      Year costs to administer these programs are projected  
11      to be offset by the investment gains generated by the  
12      trust funds.

13      **Line 13, Long Term Equity Grants:** This adjustment  
14      eliminates from the revenue requirement in this  
15      proceeding, the expense for the Company's long-term  
16      equity grant compensation program, for both officers  
17      and non-officer management employees, but without  
18      prejudice to the Company's right to seek the recovery  
19      of such costs in future rate proceedings.

20      **Line 14, Executive Annual Variable Pay:** This  
21      normalization adjustment eliminates the cost of the  
22      executive variable pay. The Company is not seeking to  
23      recover the cost of this plan through rates in this

1 proceeding, but without prejudice to the Company's  
2 right to seek the recovery of such costs in future  
3 rate proceedings.

4 **Line 15; SIR Reconciliation:** This adjustment resets  
5 the amortization of Site Investigation and Remediation  
6 ("SIR") costs during the Historic Year to zero which  
7 is replaced in the Rate Year by the level of SIR cost  
8 amortization as addressed later in our testimony.

9 **Line 16, Pension & Medicare Part D Reconciliation:**  
10 This adjustment eliminates the effect of accounting  
11 for the reconciliation of the Company's pension, OPEB  
12 and Medicare Part D expenses during the Historic Year.

13 This adjustment also includes an accounting  
14 reclassification of recovered retirement-related  
15 expenses from the Shared Services EOE to pension/OPEB  
16 expense.

17 **Line 17, Levelization of Rate Increase:** This  
18 normalization adjustment eliminates the effect during  
19 the Historic Year of accounting for the levelization  
20 of the three annual rate increases under the Company's  
21 current steam rate plan.

22 **Line 18, Business Ethics and Compliance:** As discussed  
23 more fully below, the Company created the Business

1       Ethics and Compliance department ("BEC") in January  
2       2012. This adjustment reflects the annualization of  
3       salaries for the three new positions which were  
4       created and staffed during the creation of the group  
5       in 2012. This adjustment does not include an  
6       annualization of salaries for nine positions in the  
7       BEC that were transfers from Auditing at the end of  
8       2011, and were not replaced in Auditing.

9       **Line 19, P-Card Signing Bonus:** The adjustment removes  
10      the effect of a non-recurring Historic Year credit  
11      from the card-issuing bank with respect to  
12      renegotiation of the terms of service of the Company's  
13      "P-Card" purchasing process due to the implementation  
14      of the Oracle ERP system. Prior to those changes, the  
15      contract with the card issuing bank was renegotiated  
16      and a signing bonus was received as a commitment to  
17      meet specific spending amounts in the future. This  
18      was a one-time credit that will not be received in  
19      future years.

20      **Line 20, Ghost Card Early Payment:** This adjustment is  
21      to reflect in the Rate Year the effect on early  
22      payment discounts or rebates of the slightly later in  
23      the month payment schedule under Project One than our

1 previous processing schedule (8<sup>th</sup> vs. 1<sup>st</sup>. of the  
2 month). This will essentially reduce the level of  
3 early payment discounts by half.

4 **Line 21, Project One:** During the historic period many  
5 employees were working on Project One, and  
6 consequently their labor costs were capitalized. Most  
7 employees are returning to their old positions or  
8 filling vacancies. No normalization is needed or made  
9 for any of these returning employees. The \$98,000  
10 normalization on this line applies to employees who  
11 are leaving Project One for newly created positions;  
12 twelve employees in a new organization, Finance and  
13 Supply Chain, five employees in a new department,  
14 Project Accounting, and two buyers in the Purchasing  
15 Department. We explain these changes more fully  
16 below.

17 **Line 22; Water Accrual:** At the end of 2011, the  
18 Company's review of the liability on its books for  
19 water (mostly used for generation) showed an over  
20 accrual related to a prior period. This normalization  
21 eliminates the out of period adjustment during the  
22 Historic Year to the water accrual.

1       **Line 23, 18-a Assessment:** This adjustment is to  
2       normalize the 18-a Surcharge Assessment during the  
3       Historic Year. Since the 18-a Surcharge Assessment  
4       includes a return on the average prepaid balance at  
5       the Company's authorized rate of return, we have  
6       excluded the annual assessment from operating  
7       revenues, operating expenses and rate base in order to  
8       eliminate any potential impact on the revenue  
9       requirement that would result from using a rate of  
10      return in this filing that is different from that  
11      currently authorized.

12       **Line 24, Austerity:** This adjustment removes the  
13      Historic Year effect of the austerity imputations  
14      reflected in the revenue requirements under the  
15      Company's current steam rate plan.

16       **Line 26, Insurance:** This adjustment is to eliminate  
17      an out of period life insurance premium payment.

18       **Line 27, Shared Services:** This item reflects an  
19      accounting reclassification. The Historic Year level  
20      of shared service costs for the 12 months ended June  
21      30, 2012 includes \$23.1 million of combined pension  
22      and other post-retirement benefits that were charged  
23      to PSC account 922 under the accounting system in

1 place prior to implementation of Project One.  
2 Effective July 1, 2012 pension, OPEB and health  
3 insurance costs will be included under PSC account  
4 926, while the payroll tax costs will be included in  
5 PSC account 408. The \$1.2 million adjustment reflects  
6 the portion allocated to steam.

7 **Line 29; M&S Write-off:** In conjunction with the  
8 implementation of Project One, the Company changed its  
9 policy regarding the accrual for unpaid receipts for  
10 material and supplies. Due to this policy change, the  
11 June 2012 accrual was \$1.2 million lower than it would  
12 have been under the old policy. This normalizing  
13 adjustment for \$67,000 removes the steam portion of  
14 this non-recurring event.

15 **Finance and Supply Chain Organization**

16 Q. Please describe the newly formed Finance and Supply  
17 Chain organization.

18 A. We would first like to provide some relevant  
19 background information regarding system changes as a  
20 result of implementing Project One. Starting in  
21 November 2009, the Company undertook a three-year  
22 project to develop and implement a new integrated  
23 system for its finance, supply chain and management

1 reporting activities. The new system, which is known  
2 as Project One, was the largest technology investment  
3 in the Company's history. Project One replaced 61  
4 existing systems at CECONY and O&R with Oracle  
5 Enterprise Resource Planning (ERP), Business  
6 Intelligence, and Hyperion Planning and Budgeting  
7 systems. The scope of Project One included  
8 integrating Procurement, Inventory Management,  
9 Accounts Payable, Miscellaneous Accounts Receivable,  
10 Projects Accounting, Treasury, General Ledger,  
11 Consolidations, Budgeting and Financial Forecasting,  
12 and Management Reporting systems onto one common  
13 platform. In addition, the Company also implemented a  
14 new multi-segment account structure for capturing and  
15 reporting all financial data.

16 The overall objective of Project One was to strengthen  
17 and improve our financial, purchasing and operational  
18 activities through an integrated information system.

19 The design of the new structure reduces the risk of  
20 error in the financial reporting process through more  
21 automation of processes and controls.

22 As a result of the implementation of Oracle Finance,  
23 Supply Chain and Business Intelligence systems in July

1       2012, additional staffing will be required to provide  
2       ongoing support for the new systems. A new  
3       organization consisting of 15 positions was created in  
4       Corporate Accounting headed by an Assistant  
5       Controller. Out of the 15 positions, 12 were staffed  
6       by individuals who worked on the development and  
7       implementation of Project One and, up until June 30,  
8       2012, the cost of their labor was capitalized as part  
9       of the project cost. The organization has three  
10      sections: Finance, Supply Chain, and User  
11      Provisioning.

12     Q.    Please describe the work that the new organization is  
13      performing?

14     A.    The staff is providing ongoing support relating to the  
15      Oracle Finance, Supply Chain, and Business  
16      Intelligence system modules. The primary support  
17      activities include: (i) troubleshooting and defect  
18      resolution, (ii) management and reconciliation with  
19      other interfacing systems, (iii) configuration support  
20      and maintenance, (iv) analysis, design, and testing of  
21      enhancements, upgrades and patches, and (v) business  
22      user support and training.

1       The Finance section will be performing the above  
2       functions relative to the General Ledger and Accounts  
3       Receivable modules. The section will manage and  
4       support the interfaces between these modules and other  
5       Con Edison applications (e.g., the Customer Service  
6       System, the Allegro energy management system). In  
7       addition, the section will also be responsible for  
8       maintenance of the chart of accounts. This includes  
9       processing requests for additions, deletions, and  
10      changes to the chart of account values; synchronizing  
11      the changes across all Oracle applications;  
12      maintaining the parent-child hierarchical structure  
13      for each chart of accounts segment; and maintaining  
14      cross-validation rules. The section will also be  
15      responsible for creating new financial reports as the  
16      need arises.

17      The Supply Chain section will perform support  
18      activities for the Procurement, Inventory Management,  
19      Accounts Payable, and Employee Expense Reimbursement  
20      modules. They will manage and support the integration  
21      with other Con Edison applications, such as the  
22      Construction payment system (COMPASS), and Cable  
23      inventory system, and Logica, when implemented. They

1       will also support the external interfaces with the  
2       Company's banks and suppliers.

3       The User Provisioning section is responsible for the  
4       creation and maintenance of user accounts, and  
5       granting users role-based access to the Oracle  
6       systems.

7   Q.   What are the projected O&M projected costs related to  
8       this new organization?

9   A.   The Company is projecting a total cost of \$1.33  
10      million for the Rate Year (\$972,000 for electric,  
11      \$200,000 for gas, and \$63,000 for steam with the  
12      remaining \$95,000 applicable to O&R) for the 12  
13      individuals whose labor costs were capitalized during  
14      the Historic Year, due to their work on Project One.

15   **Project Accounting Organization**

16   Q.   Please describe the newly formed Project Accounting  
17      organization.

18   A.   We would first like to provide some relevant  
19      background information regarding system changes as a  
20      result of implementing Project One. As part of the  
21      implementation of Oracle Finance, Supply Chain and  
22      Business Intelligence systems in July 2012, Con Edison  
23      implemented the Oracle Projects module. Oracle

1 Projects is a suite of Oracle modules which forms the  
2 central part of the software solution for a project-  
3 oriented company. It provides an integrated cost  
4 management solution for all projects and activities  
5 across the company. It enables the collection of  
6 costs at a granular level of detail, the application  
7 of overhead costs, and the timely and accurate  
8 accounting of such costs. Oracle Projects integrates  
9 with all Con Edison's work management systems, as well  
10 as its payroll, fixed assets and other systems to  
11 collect, classify, report and monitor costs.

12 A new Project Accounting section was created  
13 comprising a section manager, five senior analysts and  
14 four junior accountants. Out of the 10 positions,  
15 five were staffed by individuals who worked on the  
16 development and implementation of Project One and, up  
17 until June 30, 2012, their labor was capitalized as  
18 part of the project cost and five positions were  
19 transfers from the Property Record section. The key  
20 functions of the new organization include: (i) setup  
21 and maintenance of new projects and tasks; (ii) master  
22 data maintenance; (iii) management and reconciliation  
23 with work management and other interfacing systems;

- 1 (iv) management of the labor distribution process; and
- 2 (v) accounting transfers and corrections.

3 Q. What are the O&M costs that are included in the filing  
4 for the new Project Accounting organization?

5 A. The Company is projecting a total cost of \$547,000 for  
6 the Rate Year (\$400,000 for electric, \$82,000 for gas,  
7 and \$26,000 for steam with the remaining \$39,000  
8 applicable to O&R) for the five individuals whose  
9 labor costs were capitalized during the Historic Year,  
10 due to their work on Project One.

## **E. PROGRAM CHANGES**

12 Q. Please explain what is shown on and the purpose of  
13 Schedule 8 of Exhibit (AP-5).

14 A. The purpose of this schedule is to detail all the new  
15 programs and any other changes to the elements of  
16 expense, other than escalation that are not shown on  
17 Schedule 7.

18 Q. For which program changes shown in Exhibit \_\_\_\_ (AP-5),  
19 Schedule 8, are you responsible?

20 A. We are responsible for several which we will identify  
21 and explain.

22 Lines 3, 11, and 29. Interdepartmental Rents: The

23 \$4.224 million increase shown for Interdepartmental

1       Rents is due to a \$2.018 million increase in the  
2       carrying costs resulting from increases in property  
3       taxes and increases in capital investment at East  
4       River Station and the Ravenswood tunnel. As shown on  
5       line 29, MAG 49 - Administrative and General Expense,  
6       \$2.206 million is attributable the increased cost for  
7       common capital expenditures for such items as  
8       computers, mobile equipment, communication equipment,  
9       etc.

10      **Line 15, Uncollectibles:** The Rate Year level of  
11       uncollectible accounts expense is estimated to be  
12       \$425,000, based on the three-year average for the  
13       period October 2009 through September 2012.

14      **Line 20, Financial Services:** The increase of \$196,000  
15       represents the increase in miscellaneous financing  
16       costs, fees and services for the Company's expected  
17       increase in financing needs to support its increased  
18       capital and operating costs as testified to by various  
19       witnesses in this proceeding, as well as various fees  
20       paid to the rating agencies. The largest component of  
21       the increase is for the cost of a Letter of Credit to  
22       support new financings. Fees paid to banks and other  
23       financial institutions to service the Company's

1       outstanding debt have also been increasing  
2       significantly.

3       **Line 23, Consultants:** Consultants are hired by the  
4       Company to assist on subject matters about which the  
5       Company does not possess sufficient expertise.  
6       Additionally, services provided by  
7       PricewaterhouseCoopers ("PwC"), such as auditing,  
8       research, and accounting advice are also included.  
9       The forecast was based on a three-year (July 2009  
10      through June 2012) average of historic costs,  
11      excluding PwC. The PwC audit portion was based on a  
12      2.0 percent increase of the 2011 audit fees for 2012  
13      as agreed to by the Board of Directors. This rate of  
14      increase was projected forward for the Rate Year.

15      **Line 24, Business Ethics and Compliance:** As we  
16      discuss below, the Company created the Business Ethics  
17      and Compliance Department in January 2012. This  
18      adjustment reflects the salaries for four positions  
19      that were filled after the end of the Historic Year  
20      and the four new positions which will be filled by the  
21      beginning of the Rate Year.

22      **Line 25, Law:** As discussed below, the Company's Law  
23      Department is seeking to upgrade its Case Management

1 System and its Document Imaging System. This  
2 adjustment reflects the salaries for two new positions  
3 which will be filled during the first quarter of 2013.

4 **Line 26, Outside Legal:** This adjustment of \$4,000 is  
5 to reflect a three-year (July 2009 through June 2012)  
6 average cost for use of outside legal services.

7 **Line 28, Fringe Benefits:** This adjustment represents  
8 the increase in pensions and OPEBs, employee welfare  
9 expenses, and workers' compensation related to the  
10 increase in employees through program changes as  
11 sponsored by various Company witnesses, including the  
12 Accounting Panel.

13 **Line 30, Injuries and Damages:** In accordance with  
14 prior practice in rate case filings, the Rate Year  
15 level of injuries and damages was forecasted based on  
16 the average net claim payments for the most recent  
17 three-year period. In accordance with Case 08-S-0153,  
18 the Company excluded liability claims in excess of \$5  
19 million up through April 30, 2012. The adjusted  
20 three-year average, for the period July 2009 through  
21 June 2012 results in annual claims payments of \$55.6  
22 million, of which the allocation to steam is \$2.835

1 million. With escalation, the Rate Year amount for  
2 injuries and damages is \$2.976 million.

3 **Line 31, Institutional Dues and Subscriptions:** This  
4 increase of \$5,000 is to reflect the three-year (July  
5 2009 through June 2012) average of this element of  
6 expense.

7 **Line 32, Insurance:** The increase of \$282,000  
8 primarily represents increases in premiums for  
9 liability insurance (\$192,000) and in the Workers  
10 Compensation Board assessment charge (\$40,200). The  
11 information regarding actual premiums was provided to  
12 us by the Company's insurance department. Some  
13 policies will expire before the beginning of the Rate  
14 Year and in those instances we used general escalation  
15 factors of 1.9 percent for 2013 and 2.0 percent for  
16 2014 to project insurance costs for the Rate Year.  
17 The increase in liability insurance is primarily in  
18 the excess liability insurance category, where the  
19 premium costs increased by 14.8% at the last policy  
20 renewal in May 2012. These increases are due to the  
21 Company's own adverse loss experience, increasing  
22 underwriting scrutiny by insurers of utilities with  
23 gas pipeline services, and the San Bruno explosion,

1                   which is having adverse ramifications for all  
2                   utilities in terms of both limited capacity and higher  
3                   pricing. The Company will update for the latest  
4                   insurance premiums at a later time in this proceeding.

5                   **Line 33, A&S Transfer Credit:** A&S Transfer Credit,  
6                   relates to capitalization of administrative function  
7                   costs as those administrative functions relate to  
8                   capital spending. This filing reflects the Company's  
9                   plans to spend \$37.029 million more on capital  
10                  projects in the Rate Year than such expenditures on  
11                  which the Historic Year A&S Transfer Credit was based.  
12                  As a result, more of the administrative function  
13                  costs, primarily salary related, will be capitalized.  
14                  This credit (decrease) to expense is estimated to be  
15                  \$853,000.

16                  **Line 34, Employee Pensions / OPEBs:** This line  
17                  reflects the actuarially determined level of expenses  
18                  for employee pensions and other post employment  
19                  benefits ("OPEBs"), which was based on two studies  
20                  performed by the Company's actuary, Buck Consultants,  
21                  dated September 24, 2012 for pensions and October 5,  
22                  2012 for OPEBs. Supplemental Retirement Income Plan  
23                  ("SRIP") projections were obtained from a study dated

1        May 18, 2012. The studies were based on the Company's  
2        actual 2011 experience. Assumptions used in the  
3        forecast of pensions were a discount rate of 4.0  
4        percent and an expected return on plan assets of 8.0  
5        percent. Assumptions for OPEBs were equivalent to  
6        those used for pensions, plus a health care cost trend  
7        rate of 6.0 percent for 2012 with the rate decreasing  
8        gradually by 0.25 percent per year to 4.5 percent in  
9        2018. The OPEB actuary forecast reflects similar  
10      assumptions. In addition the actuary projections  
11      reflects a switch in the Companies' financing  
12      mechanism of the post-65 retiree drug plan to an  
13      Employer Group Waiver Plan ("EGWP/Wrap") in lieu of  
14      the Medicare Part D retiree drug subsidy (RDS) plan  
15      effective January 1, 2013. This change in the retiree  
16      drug plan contributed to a \$1.6 million decrease in  
17      OPEB expense.

18      Q.     Please summarize the estimate of the Rate Year  
19      employee pensions/OPEBs expense that is allocated to  
20      steam.

21      A.     The net amount of the actuarially determined level of  
22      expense for employee pensions/OPEBs and other  
23      payments, net of capitalization, allocable to steam

1 for the Historic Year is \$27.058 million. The  
2 estimated cost allocated to steam for the Rate Year is  
3 \$28.044 million. This \$986,000 increase consists of a  
4 program change increase of \$1.827 million offset by a  
5 normalization adjustment decrease of \$840,000  
6 discussed previously in the normalization section of  
7 our testimony. The \$1.827 million increase is driven  
8 by the use of a lower discount rate of 4% in actuarial  
9 projections compared to 4.7% in 2012 offset by the  
10 implementation of Total Rewards and adoption of  
11 EGWP/WRAP plan effective January 1, 2013.

12 At the time we prepared our testimony, a preliminary  
13 estimate indicated the value of the assets held by the  
14 Pension trust at the end of 2012 to be approximately  
15 \$8.7 billion. By comparison, at the end of calendar  
16 year 2008 the pension assets were valued at less than  
17 \$6 billion. Gains and losses from the pension assets  
18 in any one year are recognized in expense over time to  
19 smooth out extreme fluctuations. As a result, market  
20 gains in recent years are being credited to expense  
21 over fifteen years and serve to moderate the net  
22 increase in this expense.

23 Q. Please continue.

1    A. **Line 35, Project One:** The Company implemented  
2       Oracle's Finance and Supply Chain Enterprise Resource  
3       Planning system, and Oracle's Business Intelligence  
4       system in July 2012. The annual support fees payable  
5       to Oracle provides for priority technical support  
6       services. It allows Con Edison to receive software  
7       fixes and enhancements. Additionally, it provides  
8       access to Oracle's support teams to resolve Con Edison  
9       specific issues and questions. It also grants Con  
10      Edison access to Oracle's online knowledge base. The  
11      \$158,000 increase to expense represents the steam  
12      allocation of the fees.

13      **Line 37, Shared Services:** The projection of shared  
14      service billings is based on the historic costs,  
15      adjusted for the post-retirement benefits  
16      normalization described in the related section of this  
17      testimony. The remaining costs were apportioned to  
18      labor and non-labor related costs, escalated  
19      accordingly and allocated amongst the services to  
20      arrive at the \$26,000 program change for Steam.

21      **Line 38, Sundry Uncollectibles:** This \$66,000 decrease  
22      to Sundry Uncollectibles expense results in a Rate  
23      Year amount of \$31,000. The Rate Year amount is based

1 on a five-year average for the period July 2007  
2 through June 2012.

3 **Line 39, Business Finance and Quality Assurance:** This  
4 adjustment includes the salaries for three positions,  
5 filled after the end of the Historic Year in the  
6 Business Finance department that the Company  
7 established in 2012. Also included are the salaries  
8 for seven positions that will be filled in 2013 and  
9 2014 in connection with the creation of the Quality  
10 Assurance department in the Company's finance area.  
11 We provide further explanation of these departments  
12 later in our testimony.

13 **Line 40, Regulatory Commission Expenses:** The increase  
14 of \$343,000 is comprised of a \$296,000 increase  
15 related to the PSC Assessment and a \$47,000 increase  
16 related to all other expenses included in this element  
17 of expense. The Rate Year PSC Assessment was  
18 forecasted based on the latest PSC Assessment letter  
19 dated August 10, 2012, excluding refunds, for the  
20 2012-2013 State fiscal year ending March 31, 2013.  
21 The PSC's calculation of the assessment is based on  
22 intrastate revenue from 2011. The other expenses are  
23 estimated based on the use of a three-year (July 2009

1       through June 2012) average of historic costs. The  
2       Company will update this element of expense based on  
3       the PSC Assessment letter for the 2013-2014 State  
4       fiscal year.

5       **Business Finance and Quality Assurance**

6       Q.     You mentioned earlier that the Company formed a  
7       Business Finance organization during 2012. Please  
8       explain the Company's objective in doing so.

9       A.     The Company established the Business Finance  
10      organization, under a new officer level position of  
11      Vice President of Business Finance, filled in August  
12      2012, in furtherance of implementing the element the  
13      Cultural Imperatives, as described by the Management  
14      Audit Panel, to reinforce cost management  
15      consciousness. Establishing the Business Finance  
16      organization follows the Company having established  
17      its Cost Management organization.

18      The Company established the Cost Management  
19      organization to centralize and sharpen focus on cost  
20      management by replacing the previous more parochial  
21      approach to budgeting and cost analysis. The Cost  
22      Management organization began the process of  
23      centralizing cost management by bringing the cost

1       analysts and managers in the operating areas together  
2       in an organization charged to stress the importance of  
3       cost management to operating the Company and to  
4       improve the quality, consistency and cohesiveness of  
5       cost planning and analysis.

6       The Business Finance organization will further promote  
7       cost management and a cost consciousness mindset  
8       through further consolidation by bringing financial  
9       planning, budgeting, and forecasting functions under  
10      one organization. This consolidation will create a  
11      greater alignment in the Company's short and long  
12      range plans, promote best practices in cost management  
13      and improve financial performance. This  
14      centralization promotes the continued high priority of  
15      cost management and consistency of communication  
16      across all organizations, greater integration of input  
17      from all areas of the Company, and responsiveness to  
18      the needs from all business units and levels of  
19      management.

20      The new organization is being formed to explicitly  
21      drive the reinforcement of cost management throughout  
22      CECONY and O&R and provide a platform and more  
23      prominent role for cost management, financial planning

1 and financial analysis within the Company. In  
2 addition, the Business Finance organization is  
3 expected to help reduce corporate risk through  
4 increased financial transparency; drive efficiency  
5 within operating and support organizations; and  
6 identify and drive cost-savings opportunities across  
7 the Company.

8 Other benefits will include standardization of  
9 financial reporting available via Project One and  
10 Business Intelligence and the development of new  
11 employee competencies, focusing on improved financial  
12 analytics. In addition, the recent consolidation of  
13 systems and reporting due to Project One will enable  
14 Business Finance to more efficiently achieve its  
15 objectives.

16 Q. How will the Company staff the Business Finance  
17 organization?

18 A. The new organization will merge existing personnel  
19 from Company operating areas and Shared Services, O&R  
20 Operations and Financial Services, as well as  
21 personnel from Business Improvement Services,  
22 Financial Forecasting and Revenue and Volume  
23 Forecasting. Additional personnel include the new

1 vice president and associated executive assistant as  
2 well as a new director at an estimated labor-related  
3 O&M cost during the Rate Year of \$575,000 (\$420,000  
4 for electric, \$86,000 for gas, and \$27,000 for steam  
5 with the remaining \$42,000 applicable to O&R). The  
6 new vice president was hired from outside the Company  
7 in August 2012. The new director position will  
8 oversee the consolidated financial forecasting and  
9 Business Intelligence functions and is expected to be  
10 filled in January 2013. The new executive assistant  
11 position was filled in August of 2012.

12 Q. Please describe the new Quality Assurance department  
13 you mentioned earlier in your testimony.

14 A. The Quality Assurance department's objective will be  
15 to become an integral part of Company's Finance  
16 department. Its focus will be to improve key Finance  
17 processes by strengthening internal controls and  
18 reducing the frequency of internal control  
19 deficiencies. The Quality Assurance function will  
20 develop and coordinate plans to improve work practices  
21 in Corporate Accounting, Treasury, Tax, and Rate  
22 Engineering. The department will conduct quality  
23 assurance reviews that will evaluate the effectiveness

1 of internal controls and the current processes. It  
2 will also conduct benchmarking initiatives to maintain  
3 an understanding of the best practices in these areas.  
4 A curriculum of training and industry knowledge will  
5 be created from inside and outside the Company. The  
6 Quality Assurance department will participate in  
7 periodic meetings with similar organizations to share  
8 experiences and to maximize the effectiveness of the  
9 reviews.

10 The Quality Assurance department's focus on improving  
11 key processes within the Finance function will help  
12 improve Finance's performance and its ability to help  
13 the Company meet its goals. Some examples of these  
14 processes include analyzing the closing of the books  
15 and bill payment processes in Corporate Accounting as  
16 well as the cash payment process in Treasury. Having  
17 skilled professionals review these key processes would  
18 lead to improvements in controls and efficiencies.  
19 Improving the overall effectiveness of the Finance  
20 function is the objective.

21 The Quality Assurance team will collectively possess  
22 the requisite education and experience enabling them  
23 to analyze and evaluate the financial and operational

1 issues in Finance or between Finance and other  
2 departments. The team will foster the environment of  
3 continuous process improvement by providing  
4 comprehensive analysis of post process and in-process  
5 reviews. An annual coordinated risk assessment  
6 discussion among senior management, Auditing and PwC  
7 (external auditor) will provide the topics that the  
8 Quality Assurance team will address within the next  
9 planning cycle. The Quality Assurance team will  
10 operate independently providing senior management with  
11 a fair and objective appraisal of the effectiveness of  
12 process controls and efficiency of operational  
13 performance. The team will establish a data  
14 management system to collect data from quality  
15 assurance reviews to share with organizations within  
16 Finance; identify trends and perform analyses to  
17 identify areas of concern; formulate short, mid and  
18 long-term plans for compliance with approved  
19 procedures; prepare reports that evaluate the  
20 effectiveness of processes used within all areas of  
21 Finance, including recommendations for improvement.  
22 The Quality Assurance methodology will be to measure,  
23 inspect or observe processes and compare them to

1       approved criteria (e.g., GAPS). Standardizing work  
2       practices, where appropriate, will be a focus across  
3       all process reviews.

4   Q.   How will the Company staff the Quality Assurance  
5       organization?

6   A.   The Company is requesting funding for seven employees  
7       to staff this new function. The Company plans to  
8       phase-in this program over a two-year period with a  
9       Section Manager and the three Senior Analysts during  
10       2013 and an additional three Senior Analysts during  
11       2014.

12   Q.   Will these positions be filled from outside the  
13       Company?

14   A.   A mix of outside hires and inside transfers would be  
15       optimal. Outside employees can come with different  
16       perspectives and experience. The Company would look  
17       for individuals with quality assurance or audit  
18       experience. Employees from inside the Company could  
19       come from Auditing Operations or within Finance.  
20       Their positions would need to be backfilled. We  
21       estimate a labor-related O&M cost during the Rate Year  
22       of \$665,000 (\$486,000 for electric, \$100,000 for gas,

1 and \$32,000 for steam with the remaining \$47,000  
2 applicable to O&R).

3 **Business Ethics and Compliance**

4 Q. Turning now to the Business Ethics and Compliance  
5 department you mentioned earlier, what was Con  
6 Edison's process for managing business ethics and  
7 compliance issues at the beginning of the current rate  
8 plan?

9 A. The Auditing Department was charged with the  
10 administration of the Ethics and Compliance program at  
11 Con Edison since the 1980s. At the beginning of the  
12 current rate plan, three employees (one director and  
13 two section managers) were responsible for maintaining  
14 and providing guidance on the Standards of Business  
15 Conduct; business ethics and compliance training and  
16 communications; administering the ethics helpline;  
17 reviewing and maintaining policies and procedures;  
18 reviewing conflict of interest disclosures; and  
19 leveraging internal staff to perform investigations of  
20 allegations of employee misconduct. An additional  
21 section manager was solely dedicated to creating and  
22 administering FERC compliance and training program to  
23 oversee FERC standards of conduct and NERC

1 requirements for all Consolidated Edison, Inc. ("CEI")  
2 affiliate companies.

3 In 2010, four auditor/investigators were hired to  
4 consolidate all investigations of employee misconduct  
5 under the Director.

6 In 2011, a system analyst was hired to assist with  
7 compliance issues in the group. The system analyst  
8 assisted the FERC Compliance and Training section  
9 manager to set up and test a new database for  
10 regulatory compliance issues.

11 Q. What factors led to the Company reassessing this  
12 process?

13 A. In the wake of three separate federal prosecutions of  
14 Con Edison employees and contractors from 2009 through  
15 2011, Con Edison hired organizational consultants to  
16 review the Company's controls and provide  
17 recommendations regarding the best ethics and  
18 compliance governance structure to protect our  
19 stakeholders' interests. As a result of this review,  
20 Con Edison's Board approved the creation of a separate  
21 organization to increase focus on ethics and  
22 compliance.

1 Q. Has the Company changed any processes to improve the  
2 management of ethics and compliance?

3 A. Yes. In response to the consultants' recommendations,  
4 a Vice President and Chief Ethics and Compliance  
5 Officer ("CECO") was appointed on January 1, 2012, and  
6 a separate Business Ethics and Compliance department  
7 ("BEC") was created. The CECO is designated as the  
8 person with day-to-day responsibility for the Ethics  
9 and Compliance Program for all of CEI, including Con  
10 Edison. The CECO reports administratively to the  
11 General Counsel, and maintains a direct line of  
12 communication to the CEO and Audit Committee of the  
13 Board of Directors. The CECO restructured the  
14 organization and added staffing, as described more  
15 fully below. One of the goals of the restructuring  
16 and increased staffing is to better align the BEC with  
17 the requirements of the U.S. Sentencing Guidelines for  
18 Organizations.

19 Q. Please describe Con Edison's current BEC structure and  
20 resources.

21 A. The BEC is divided into three functional groups:  
22 Investigations; Training and Communications; and FERC

1           Training and Compliance. Currently, the BEC is  
2           staffed with 16 employees.

3   Q.    Do you have an organizational chart of the BEC?

4   A.    Yes, it is Schedule 1 of the document entitled  
5           "Personnel Requested For The Law Department"  
6           designated as EXHIBIT \_\_\_\_ (AP-13) which was prepared  
7           under our supervision and direction.

8   Q.    Of the 16 positions currently in the BEC, how many are  
9           positions that were formerly part of Auditing and how  
10           many are new positions that were added after the BEC  
11           was established?

12   A.    Nine positions (the Investigations Director, three  
13           section manager positions, four investigators, and the  
14           system analyst) were transferred from Auditing at the  
15           end of 2011, and were not replaced in Auditing. An  
16           additional seven positions (the CECO, Training and  
17           Communications Director, four project specialists, and  
18           an analyst) were created and staffed during the  
19           creation and restructuring of the group in 2012.  
20           These are new, permanent positions filled during the  
21           Historic Year, which were normalized to reflect a full  
22           year of service in the Rate Year.

1 Q. Do you anticipate adding any more positions to the  
2 BEC?

3 A. Yes. We expect to add four more positions: a project  
4 specialist for communications; a third project  
5 specialist for FERC Compliance and Training; an  
6 attorney; and an additional investigator.

7 The ethics and compliance function is closely related  
8 to the cultural imperatives of openness, fairness and  
9 trust to which the Company has committed itself.

10 Change management is a long and complicated process  
11 that must be closely tended to be successful in a  
12 large organization. As we will explain, these  
13 staffing requirements are established to meet the  
14 projected increased demands of the employee population  
15 as the program grows in breadth and visibility.

16 Q. Do you have a list of current BEC positions and  
17 anticipated positions; the date the position was  
18 filled or is planned to be filled; and the annual  
19 salary or salary range associated with each position?

20 A. Yes. That information is on Schedule 2 of Exhibit 13.

21 Q. Please describe each of the functional groups under  
22 the BEC.

1    A.    The Investigations group focuses on investigating  
2        allegations of employee misconduct. The group has  
3        focused on identifying trends and leveraging  
4        technology and data to perform its investigations, and  
5        the team is comprised of individuals with both law  
6        enforcement and utility industry expertise.

7        The Training and Communications group is responsible  
8        for developing and executing all ethics training and  
9        communications; administering the ethics helpline;  
10       providing guidance on issues relating to the Standards  
11       of Business Conduct; reviewing conflicts of interest  
12       disclosures; conducting outreach relating to ethics  
13       and compliance with all employees, vendors and third  
14       parties; performing issue and trends tracking in  
15       collaboration with the investigations group;  
16       developing enhanced background check processes; and  
17       preparing reports for the Audit Committee.

18       The FERC Compliance and Training group handles the  
19       oversight of all FERC compliance and training issues.

20    Q.    Please discuss some of the positive results of the  
21       restructuring effort?

22    A.    The BEC has commenced a communications campaign that  
23       has raised awareness of the department's functions,

1 objectives and services. We have increased visibility  
2 of the program through in-person and electronic  
3 communications. The team has also presented to  
4 management at staff meetings throughout the Company to  
5 introduce the BEC's mission and objectives. These  
6 staff meetings have resulted in positive feedback  
7 about the organization, and increased communications  
8 from employees seeking guidance on various ethical  
9 issues.

10 We revised our new employee and new management ethics  
11 training to allow more discussion of real-world  
12 scenarios and present the BEC as a resource and  
13 partner for employees to seek advice and raise  
14 concerns about ethical issues.

15 We also recently consolidated the helpline phone  
16 numbers for all subsidiaries into one, easy to  
17 remember phone number and email address (1-855-FOR-  
18 ETHX; FORETHX@coned.com) to further facilitate  
19 reporting.

20 We developed a tracking system to assist in tracking  
21 and coordinating investigative efforts among the BEC,  
22 Security Departments of Con Edison and O&R, Human  
23 Resources, Equal Employment Opportunity Affairs, and

1 the O&R Ethics office. The tracking system will also  
2 permit BEC to further identify and report on trends  
3 within the operating organizations. We have issued a  
4 Request for Proposals to obtain even more robust case  
5 management capabilities with vendors who are  
6 experienced helpline and case management providers.  
7 In addition, the BEC obtained commitment from Human  
8 Resources to integrate ethical awareness as an element  
9 in evaluating employee performance in the 2013  
10 performance review cycle for management employees.  
11 Human Resources also has agreed to expand its pre-  
12 employment criminal background checks to improve our  
13 due diligence processes. The BEC also worked with  
14 Human Resources to revise the portion of its  
15 Behavioral Events Interview that focuses on ethics and  
16 integrity to update the examples and scenarios used to  
17 assess candidates for employment.  
18 The creation of the FERC program in 2009-2010 has led  
19 to a greater awareness and a better understanding of  
20 FERC, NERC, anti-market manipulation, accounting,  
21 reporting and oversight. New centralized elements of  
22 the FERC program include new and updated procedures

1 and training, a formalized FERC audit program, and  
2 greater attention to FERC risk management.

3 Q. Why are additional resources required in order for the  
4 BEC Group to accomplish its objectives?

5 A. Section 8 of the United States Sentencing Guidelines  
6 for Organizations sets the baseline requirements for  
7 an effective ethics and compliance program. Over the  
8 last 15 years or so, industry best practices have been  
9 established for such programs. The BEC seeks to  
10 enhance its program to align itself with those  
11 industry standards. To accomplish this goal,  
12 additional resources with expertise in the areas of  
13 investigations, compliance, training, and  
14 communications are necessary.

15 The current resources are inadequate to continue to  
16 meet the ethics and compliance needs of a publicly  
17 traded company like Con Edison in a complicated legal,  
18 regulatory, and compliance landscape that is  
19 constantly changing and expanding. In addition, many  
20 of the initiatives launched this year need additional  
21 resources and support to maintain and manage for long-  
22 term success.

1       The BEC intends to have all employees participate in  
2       regular annual ethics training. The BEC plans to  
3       supplement annual mandatory e-learning with manager-  
4       led training. This will, by necessity, include in-  
5       person, tailored training designed to teach managers  
6       how to reach employees in the various business units,  
7       who perform diverse tasks on a daily basis.

8       In conjunction with our Public Affairs Department, the  
9       BEC has developed a communications plan for 2013,  
10      which includes electronic and hard copy communications  
11      to employees around the Company, on a quarterly basis,  
12      focused on relevant and timely themes to educate and  
13      raise awareness. Currently, the majority of employee  
14      communications are disseminated electronically through  
15      our Postmaster system. Significantly, a large part of  
16      our employee base is comprised of field workers who  
17      are not accustomed to acquiring information about  
18      their work through electronic means. To be most  
19      effective in our communications mission, a network of  
20      resources is needed to develop and manage the  
21      communications that must be disseminated in ways that  
22      will increase engagement.

1       Con Edison is a major user of contractor services  
2       within the City and State of New York. Therefore, the  
3       BEC is developing a vendor outreach program to develop  
4       partnerships with vendors with whom we do business to  
5       assess and promote ethics and compliance. This will  
6       allow us to improve our vendor due diligence by  
7       confirming that those parties with whom we do business  
8       have adequate ethics and compliance programs, and if  
9       they do not, to assist in developing them as an  
10      incentive to continue their business relationships  
11      with Con Edison. One of the project specialists for  
12      training is currently working on this effort.  
13      We are in the process of securing an outside vendor to  
14      provide non-business hours and web-based reporting, to  
15      give an additional level of assurance for those who  
16      desire to report anonymously, as well as more robust  
17      case management capabilities. Increased regulatory  
18      frameworks, such as the Dodd-Frank Act, compel  
19      companies to maintain robust internal reporting  
20      systems for reported concerns of misconduct.  
21      Employees who contact the BEC through the Helpline  
22      during business hours will continue to have the option  
23      to speak to an in-house resource. Those within the

1       BEC who take calls are able to leverage their  
2       knowledge of the Company and the Standards of Business  
3       Conduct during their interactions with callers to more  
4       quickly 1) respond to requests for advice and  
5       guidance, and/or 2) refer reports of suspected  
6       misconduct to the correct organization for follow up.  
7       Increased awareness, integration and visibility of the  
8       program will result in increased requests for advice  
9       and guidance.

10      Q.     Please describe the additional resources required in  
11       the BEC group.

12      A.     The BEC intends to add a project specialist during Q1  
13       2013 to support the communications function. This  
14       person will be responsible for maintaining the  
15       internal website to keep employees informed about BEC  
16       initiatives; assisting the section manager to develop  
17       the annual communications plan; and creating and  
18       disseminating communications. Among the  
19       responsibilities of the communications project  
20       specialist will be to assist the manager to develop,  
21       coordinate, and manage a network of employees in each  
22       business unit who will serve as advisors or liaisons  
23       to their colleagues on ethical issues.

1       The BEC plans to add an attorney to the team during Q2  
2       2013 to provide advice and counsel to the  
3       investigations, training, and communications teams  
4       regarding compliance issues. Currently, the Law  
5       Department assigns an attorney to provide services as  
6       a part-time function, but the rapid expansion of laws  
7       and regulations, as well as increased scrutiny of  
8       ethics and compliance functions by regulators and  
9       stakeholders, demands a full time position dedicated  
10      to Ethics and Compliance matters.

11      We will perform periodic enhanced background and asset  
12      checks of employees in sensitive positions. Enhanced  
13      background and asset checks routinely reveal  
14      information that requires further review. The BEC  
15      plans to increase its investigations staff by one  
16      position in the Rate Year to conduct the necessary  
17      follow up when issues are identified.

18      The FERC group intends to further develop and expand  
19      its centralized compliance oversight of FERC  
20      regulatory and legal issues. These issues cover, for  
21      example, interlocking directorates, standards of  
22      conduct, reliability, interconnection of generation  
23      and transmission, price reporting, electronic and gas

1           quarterly reporting, natural gas capacity-related  
2           transactions, anti-market manipulation, market-based  
3           rate authority, filing of contracts and tariffs and  
4           PSC affiliate issues. The BEC plans to add a third  
5           Project Specialist in the Rate Year, who would mainly  
6           focus on Affiliate transactions and billing, PSC  
7           market-based requirements, energy trading code of  
8           conduct, interlocking directorates, market-behavior  
9           requirements, regulatory monitoring, case tracking and  
10           settlement monitoring.

11   Q.   What is the projected increase in labor-related O&M  
12           costs for the Rate Year associated with (1)  
13           normalizing new positions established during the test  
14           year for a full year, and (2) new positions that have  
15           been or will be filled during the linking period and  
16           the Rate Year?

17   A.   The projected Rate Year increase in O&M costs  
18           associated with these eleven positions is \$1.176  
19           million of which \$60,000 is allocated to steam.

20   Q.   Are there any projected program changes for BEC for  
21           the twelve-month periods ending December 31, 2015 and  
22           December 31, 2016?

23   A.   Not at this time.

1    Law Department System Upgrades and Labor

2    Q.    Please describe the Law Department system upgrades and  
3           two new positions you mentioned earlier.

4    A.    As we mentioned above, the Company's Law Department is  
5           seeking to upgrade its Case Management System and its  
6           Document Imaging System. We will first explain the  
7           capital funding required for the Case Management  
8           System and then explain the need for the new  
9           associated position.

10          The Law Department has a Case Management System that  
11           was developed in-house approximately sixteen years  
12           ago. The system is comprised of the following  
13           components: Docket Management (developed in 1996),  
14           Case Tracking & Case Notes (developed in 1999), File  
15           Management (developed in 1997), Time Management  
16           (developed in 1991), Process Service (developed in  
17           1999), and Outside Legal (developed in 1994). Each of  
18           these components is critical to the administration and  
19           operation of the Law Department and enables the  
20           department to promptly respond to claims, litigation  
21           discovery demands, and pleadings in addition to  
22           tracking all activity associated with claims or  
23           litigation. The system also provides a mechanism to

1        manage case files and track attorney, paralegal and  
2        investigator activity on these matters.

3    Q.    Why does the Law Department need to replace its  
4        current system?

5    A.    One reason is a change in legal reporting  
6        requirements. The Medicare, Medicaid and SCHIP  
7        Extension Act of 2007 ("MMSEA" or "the Act") imposes a  
8        new duty on companies identified as "primary payers,"  
9        which includes any entity with liability for medical  
10       payments. The Act requires primary payers to provide  
11       the government with information regarding all  
12       settlements, awards, judgments, or other payments for  
13       personal injury cases involving a Medicare beneficiary  
14       and gives Medicare the right to recover payments made  
15       to Medicare beneficiaries. As of January 2011, Con  
16       Edison has been required to report all workers'  
17       compensation and no-fault automobile injury cases  
18       opened on or after January 1, 2010. Beginning in  
19       January 2012, there was an added requirement to  
20       electronically submit quarterly reports of total  
21       payments for personal injury matters paid on or after  
22       October 1, 2011. Failure to comply with these

1 reporting requirements will result in a penalty of  
2 \$1,000 per day, per claim.

3 We are currently partnering with our Workers'  
4 Compensation third-party administrator to self-  
5 administer mandatory reporting using a software  
6 product that the administrator has developed.

7 However, because of the nature of our current Case  
8 Management System, it cannot communicate with our  
9 administrator's system. Accordingly, we must manually  
10 enter data separately into both systems and monitor  
11 compliance without using data in the Case Management  
12 System. The possibility of failing to enter a case or  
13 monitor it up until the time to report is a  
14 significant concern.

15 The purchase of a new case management system with the  
16 capability of transmitting the data directly to  
17 Medicare will eliminate the duplication of entering  
18 data and reduce the possibility of missing reportable  
19 cases.

20 In addition, the Case Management System's technology  
21 is obsolete and uses development language and  
22 communications gateways that are no longer supported  
23 by the vendor. The system requires frequent

1 modification to accommodate claims involving major  
2 incidents and litigation involving multiple parties.  
3 We are frequently asked to provide reports of data and  
4 must turn to Information Resources to create these  
5 reports. Moreover, the system has not kept pace with  
6 the significant changes in technology that have  
7 occurred since it was created and therefore lacks  
8 basic capabilities such as remote access, ad-hoc user  
9 reporting, integration with other Law Department  
10 systems, or attaching supporting documents such as  
11 photographs, medical records, or company records.

12 Q. What are the funding requirements for a new Case  
13 Management System?

14 A. The projected funding is \$1.5 million in 2014 to  
15 install and implement a new system. A major part of  
16 the implementation will involve developing and  
17 implementing process changes, and converting  
18 significant amounts of current and historical data.  
19 We are projecting an additional \$500,000 in 2015 to  
20 integrate the Case Management System with our existing  
21 document and litigation management systems. The Law  
22 Department intends to add a Litigation Support  
23 position to manage and administer the new system.

1       The department does not have a dedicated employee who  
2       could assume the responsibilities for database and  
3       application support; database management; preparation  
4       of electronic data for document review and production;  
5       script creation; vendor management, and quality  
6       control. Our current system, developed internally,  
7       relies on Information Resources programming expertise  
8       for modifications, enhancements and reporting. We  
9       have benchmarked our staffing levels with the City of  
10      New York, the New York Power Authority, and Public  
11      Service Electric & Gas and found that a dedicated  
12      system administrator is critical to the success of  
13      this type of project.

14     Q.    What are the projected increases in labor-related O&M  
15      costs associated with filling the Litigation Support  
16      position during the linking period or in the Rate  
17      Year?

18     A.    The projected increases in labor-related O&M costs  
19      associated with filling the Litigation Support  
20      position is approximately \$133,000, of which \$6,780 is  
21      allocated to steam.

1 Q. Please explain the capital funding required for the  
2 Document Imaging System and the need for the new  
3 associated position.

4 A. The Law Department is planning to develop and  
5 implement a Document Imaging System to enable us to  
6 electronically manage claims and litigation documents.  
7 The system will allow us to receive paper documents  
8 from external sources (e.g., legal proceedings and  
9 discovery requests) and existing documents (e.g.,  
10 company records) and convert them to an electronic  
11 format.

12 Q. Why is the Document Imaging System needed?

13 A. Con Edison's litigation attorneys defend the Company  
14 in approximately 3,000 pending personal injury and  
15 property damage lawsuits. Accessing, searching, and  
16 presenting supporting documents is critical to the  
17 defense of these cases. Documents in legal cases  
18 include court pleadings, transcripts, and discovery  
19 materials. Our attorneys, investigators, paralegals,  
20 and support staff currently access, search, retrieve,  
21 and use hard-copy documents because most of the  
22 documents exist only as paper.

1       The Law Department's Document Imaging system would  
2       enable the attorneys, investigators, paralegals and  
3       support staff to work with documents in electronic  
4       format rather than paper format, allow work on matters  
5       from court or other remote locations, and allow  
6       greater and more efficient access to all case-related  
7       documents. Implementation of a document imaging  
8       system will provide our attorneys, investigators and  
9       paralegals with the ability to search materials  
10      electronically rather than manually, and provide  
11      immediate access to case-related documents while in  
12      court or at other remote locations. Without such a  
13      system, the department lacks the ability to access  
14      critical documents during examinations before trial,  
15      settlement negotiations, and trial. Our extensive  
16      dependency on paper also places severe limitations on  
17      the department's ability to function from remote  
18      locations or during potentially catastrophic events.  
19      In addition, the New York State court system has a  
20      stated goal of moving to electronic filing of  
21      documents and has already implemented this process in  
22      many cases. The electronic filing of documents will  
23      only become more widespread in the future and we run

1           the potential risk of being unable to comply with  
2           court rules.

3   Q.    What is the projected funding for the Document Imaging  
4           System?

5   A.    The Law Department is projecting funding for the  
6           Document Imaging System in the amount of \$1.5 million  
7           in 2014. Additional funding of \$750,000 is projected  
8           for 2015, \$500,000 for 2016, and \$500,000 for 2017.

9           The funding is required to integrate the Document  
10          Imaging System with our case management, document  
11          management and litigation support systems. The  
12          department intends to add a Specialist during the  
13          linking period or in the Rate Year to manage the  
14          process and administer the system. A successful  
15          document imaging system requires a controlled process  
16          to make sure that documents are properly identified  
17          and coded for scanning. The Specialist will provide  
18          support to our legal staff to ensure system and data  
19          integrity. The department's staff is otherwise  
20          occupied with managing the day-to-day activities  
21          associated with a caseload of approximately 3,000  
22          active lawsuits and approximately 1,000 active claims.  
23          We do not have a dedicated employee who can assume the

1 responsibilities of overseeing the daily activities of  
2 the document imaging system.

3 Q. What is the projected O&M labor-related cost  
4 associated with filling the position during the  
5 linking period or in the Rate Year?

6 A. The projected O&M labor-related cost associated with  
7 filling this position is \$69,200, of which \$3,530 is  
8 allocated to steam.

9 Q. Are there any projected program changes for the Law  
10 Department for the twelve-month periods ending  
11 December 31, 2015 and December 31, 2016?

12 A. Not at this time.

## **F. GENERAL ESCALATION**

14 Q. Please describe how you escalated certain costs and  
15 the general escalation rate you used.

16 A. The general escalation rate is applied to costs  
17 anticipated to increase at the rate of inflation as  
18 measured by the Gross Domestic Product ("GDP") price  
19 deflator. The labor component was removed from each  
20 element of expense and then the residual amounts were  
21 escalated using the GDP price deflator for most  
22 elements of expense subject to escalation. For  
23 certain expenses the escalation factor is specifically

tailored to the particular expense item such as medical insurance costs as addressed by the Company's Compensation and Benefits Panel.

4 Q. Please describe the general escalation rate you used.

5 A. The actual GDP deflator used was published as of  
6 October 10, 2012 by the U.S. Department of Commerce.

7 The quarterly forecasts for 2012 and 2013 are from the  
8 Blue Chip Economic Indicators, dated November 10,  
9 2012. The annual forecast for 2014 is from the Blue  
10 Chip Economic Indicators, dated October 10, 2012.

Utilizing these forecasts, we calculated the increase from the average of the Historic Year through the average of the Rate Year to be 4.96%. As with past practice in the Company's rate cases, we will update the inflation factors to reflect the latest available inflation forecasts later in this proceeding.

## G. LABOR ESCALATION

18 Q. What escalation factor did you use to project Steam  
19 labor costs from the Historic Year to the Rate Year?

20 A. We used an escalation factor of 6.43 percent.

21 Q. Please explain the derivation of the 6.43 percent  
22 escalation factor you used to escalate the Historic  
23 Year labor expense level to the Rate Year.

1    A.    As shown on Exhibit \_\_\_\_ (AP-5), Schedule 2, page 1,  
2            column 1, total Company salaries and wages for the  
3            Historic Year amounted to \$1,376,299,000. Straight-  
4            time union labor shown includes temporary summer  
5            employees. For the Rate Year, total Company salaries  
6            and wages, as shown in column 3, amount to  
7            \$1,464,750,000. The increase of \$88,451,000 in total  
8            Company labor dollars from the Historic Year level to  
9            the Rate Year level equates to a 6.43 percent increase  
10          after reflecting the 1% annual productivity adjustment  
11          discussed later in our testimony. We assumed the same  
12          total labor escalation factor would apply to  
13          escalation of the Historic Year labor amount for Steam  
14          operations to arrive at the Rate Year level of labor  
15          expense.

16    Q.    Please describe the development of the total Company  
17          Rate Year labor cost forecast that equates to a 6.43  
18          percent increase over the Historic Year.

19    A.    As shown on Exhibit \_\_\_\_ (AP-5), Schedule 3, starting  
20          with the average number of employees during the  
21          Historic Year of 13,716, we assumed a one percent  
22          annual productivity reduction from June 30, 2012  
23          through December 31, 2014 to arrive at the

1 productivity-adjusted average number of employees  
2 during the Rate Year of 13,443, a reduction of 273  
3 employees from the average number of actual employees  
4 during the Historic Year. That one percent  
5 productivity-based employee reduction has lowered the  
6 labor escalation factor by approximately 2 percent  
7 from 8.66 percent to 6.43 percent as shown on Schedule  
8 2 of this exhibit. The Company's labor and labor-  
9 related forecasts for the Rate Year were developed  
10 based on the 6.43 percent productivity-based factor.

11 Q. Does the method you used regarding employee level  
12 recognize that there will not at all times be a full  
13 complement of employees on the Company's payroll?

14 A. Yes. By starting with the average number of employees  
15 during the Historic Year and not normalizing the  
16 Historic Year labor cost to reflect what it would have  
17 been at a full complement of employees, our forecast  
18 reflects the fact that vacancies do occur.

19 Q. Please explain the remainder of the approach you used  
20 to forecast labor costs.

21 A. Exhibit    (AP-5), Schedule 2, page 4, shows the  
22 computation of the average wages and salaries in the  
23 Rate Year for weekly and management employees. For

1 weekly employees, we included a general wage increase  
2 of 2.0 percent effective in July of 2012, 2.5% in July  
3 of 2013 and 3.0% for each remaining year starting in  
4 July 2014. Semi-annual progression increases of 0.7  
5 percent in October and February of each year are also  
6 included but applied to only 60 percent of total  
7 weekly employees. The 60 percent figure is based on a  
8 three-year (2009-2012) average of the actual number of  
9 weekly employees that received progression increases.  
10 The annual and progression wage increase rates are all  
11 pursuant to the collective bargaining agreements with  
12 the unions representing the weekly employees. For  
13 management employees, we assumed annual 3.0 percent  
14 merit increases in April each year. That rate was  
15 used in order to approximate the rates applicable to  
16 union employees. We then used the Rate Year average  
17 staffing levels and average rates of pay to develop  
18 the total Company Rate Year straight-time wages and  
19 salaries as shown on Schedule 2, page 2 of Exhibit \_\_\_\_  
20 (AP-5).  
21 Page 3 of Schedule 2 of Exhibit \_\_\_\_ (AP-5) shows the  
22 calculation of salaries and wages other than straight-  
23 time payrolls. In the Historic Year, actual weekly

1        premium time and overtime payrolls were \$34,737,000  
2        and \$110,308,000, respectively. We increased these  
3        Historic Year amounts by the wage escalation rates  
4        contained in the current bargaining unit contracts.  
5        Management compensatory wages were developed by  
6        starting with the Historic Year level of \$30,197,000  
7        and then applying the average rate of increase, as  
8        previously mentioned, to arrive at the Rate Year  
9        amount.

10      Q.      Has the Commission previously rejected progression  
11        increases for weekly employees as a part of the  
12        Company's labor expense?

13      A.      Yes. However, the calculation of progression  
14        increases in this filing addresses the Commission's  
15        reasons for rejecting progression increases in the  
16        2008 rate proceeding.

17      Q.      Please explain.

18      A.      In Case 08-E-0539, the Commission disallowed the  
19        progression increases for the following reasons:  
20                1. The progression increases were calculated for all  
21        union employees.

1           2. One-third of the Company's employees were  
2           eligible for retirement and assumed to be at the  
3           top of their pay grade.

4           3. The Company would experience savings from higher  
5           paid employees leaving the Company that would  
6           more than offset the costs of wage progressions

7   Q.   Are these assumptions true for the current rate  
8           filing?

9   A.   No. As we noted above, in this case, the Company  
10          applied wage progressions to only 60 percent of total  
11          weekly employees, based on a three-year (2009-2012)  
12          average of the actual number of weekly employee that  
13          received progression increases.

14          Second, we reviewed the actual number of union  
15          employees that may be eligible for retirement (55 and  
16          older). We found that this equates to roughly 20% of  
17          all weekly employees and not one-third of weekly  
18          employees as indicated in the 2008 order.

19          Moreover, the Company has not experienced a greater  
20          decrease in the number of employees over 55 retiring or  
21          leaving the Company than it has for all union  
22          employees. The turnover or attrition for both groups

1 of union employees (those over and under 55 years of  
2 age) is equivalent.

3 In terms of actual increases in base wages paid to  
4 union employees over the last three years, the average  
5 annual increase for union employees under 55, which  
6 make up 80% of the union population, has been 1.65%  
7 higher than for those over 55. The largest portion of  
8 this differential is attributable to employee wage  
9 progressions of 1.3%. Other factors that account for  
10 this differential are increased shift differentials for  
11 employees assigned to evening and night time work-  
12 shifts, which the Company has not requested in the  
13 filing, and for promotional or other changes in job  
14 titles of employees.

15 Accordingly, considering (1) the lower percentage of  
16 weekly employees eligible for retirement than assumed  
17 in the 2008 case, (2) an attrition rate for above- and  
18 below-55 that is equivalent, (3) the application of  
19 progression increases for purposes of this rate filing  
20 to only 60 percent of weekly employees, (4) the  
21 Company's nonrecovery of shift differential expenses,  
22 and (5) higher average annual increases for below-55  
23 employees, it is not reasonable to assume that savings

1       from higher-paid employees leaving the Company will  
2       offset the costs of wage progressions.

3   Q.    Do your labor cost projections include the variable  
4       portion of the non-officer management labor cost?

5   A.    Yes. The Company's Compensation and Benefits Panel  
6       demonstrates the reasonableness of the Company's  
7       compensation of its management, and weekly, employees.

8   Q.    Does the Company's rate filing reflect a productivity  
9       imputation?

10   A.    Yes. The Company's filing reflects a one percent  
11       productivity imputation.

12   Q.    Does the Company's rate filing anticipate productivity  
13       from Company initiatives?

14   A.    Yes. Various Company efforts serve to avoid  
15       unnecessary costs and result in this rate request  
16       being lower than it would otherwise be. They are  
17       described by various witnesses, including the Steam  
18       Infrastructure and Operations Panel, the Shared  
19       Services Panel, the Municipal Infrastructure Support  
20       Panel, the Compensation and Benefits Panel, the  
21       Property Tax and Depreciation Panel, Company witness  
22       Price as to environmental costs, and the Steam Fuel  
23       Panel as to fuel costs.

1        In addition, the Management Audit Panel discusses  
2        efficiencies and savings associated with the Company's  
3        implementation of Management Audit recommendations.

4        Q.      Why did the Company nonetheless apply a one percent  
5        productivity adjustment?

6        A.      We applied the one percent to minimize the number of  
7        issues to be addressed in this proceeding. The  
8        Company recognizes that a one percent imputation is  
9        common practice. However, we would emphasize that  
10       there is nothing in the Commission's rules that  
11       require the Company to reflect a productivity  
12       imputation in its rate filings. Nor does it otherwise  
13       seem reasonable that the Company's expense forecast,  
14       which reflects expected costs in the Rate Year, should  
15       effectively be subject to automatic reduction of one  
16       percent before the costs are even examined in this  
17       case. Accordingly, we would add that the Company's  
18       decision to reflect this mitigation measure in this  
19       case is without prejudice to its right to not continue  
20       this practice in future rate filings.

21

1

**VIII. AVERAGE PLANT BALANCES -- (AP-6)**

2 Q. Has the Accounting Panel prepared projections of net  
3 plant balances for the linking period from June 30,  
4 2012 through December 31, 2013 and for the Rate Year  
5 appraising the impact of the current construction and  
6 retirement programs on the Steam department's average  
7 rate base?

8 A. Yes, we have.

9 Q. Was the three page tabulation, the first entitled  
10 "ESTIMATED NET PLANT - STEAM - TWELVE MONTH AVERAGE  
11 ENDING DECEMBER 31, 2014, AT CURRENT DEPRECIATION  
12 RATES", a second entitled "ESTIMATED NET PLANT - STEAM  
13 - TWELVE MONTH AVERAGE ENDING DECEMBER 31, 2014, AT  
14 PROPOSED DEPRECIATION RATES", and the third "ESTIMATED  
15 NET PLANT - STEAM - JUNE 30, 2012 - DECEMBER 31,  
16 2013," and designated as EXHIBIT        (AP-6) prepared  
17 under your supervision and direction?

18 A. Yes, it was.

19 Q. What does this exhibit show?

20 A. There are two schedules. The first relates to the  
21 average net plant in rate base. The second schedule  
22 relates to the average construction work in progress  
23 ("CWIP") balance in rate base (i.e., non-interest

1 bearing CWIP) and the balance subject to Allowance for  
2 Funds Used During Construction ("AFUDC") (i.e.,  
3 interest bearing CWIP) which is not included in rate  
4 base.

5 Q. Please continue and describe those two schedules.

6 A. Page 1 of Schedule 1 of the exhibit shows the  
7 projected average net plant for the twelve months  
8 ending December 31, 2014 at current depreciation  
9 rates. Page 2 of the schedule shows projected average  
10 net plant for the twelve months ending December 31,  
11 2014 at proposed depreciation rates. Page 3 of the  
12 schedule shows the estimated monthly balances from  
13 June 30, 2012 through December 31, 2013 that served as  
14 a basis for our Rate Year projections. The first  
15 column shows the book cost of plant; the second column  
16 shows the accumulated provision for depreciation and  
17 the third column shows the resulting net plant.  
18 Schedule 2 shows the average estimated balance for  
19 CWIP, both interest bearing and non-interest bearing.  
20 The schedule shows the data for the same time periods  
21 as Schedule 1. Page 1 shows the data for the twelve  
22 months ended December 31, 2014. Page 2 shows the data  
23 for the linking period. Page 1 of Schedule 1 ties

1 into the average rate base Exhibit \_\_\_\_ (AP-8), lines 1  
2 through 4, discussed later in our testimony. Page 2  
3 of Schedule 1 ties into the last column of Exhibit \_\_\_\_  
4 (AP-8) lines 1 through 4. Non-Interest bearing CWIP  
5 on Page 1 of Schedule 2 ties into the average rate  
6 base Exhibit \_\_\_\_ (AP-8), line 5.

7 Q. Please describe the development of the projections  
8 contained in Exhibits 6 and 8.

9 A. Using estimated capital expenditures provided to us by  
10 the various witnesses in this proceeding and the  
11 Company's books and records for CWIP balances as of  
12 June 30, 2012, we developed estimated transfers to  
13 plant in service, and CWIP balances. We then added  
14 the estimated transfers to plant in service to the  
15 actual plant in service account balances at June 30,  
16 2012 and deducted the book cost of plant for  
17 retirements. In addition, we calculated the  
18 accumulated provision for depreciation in order to  
19 develop net plant balances. Included in this  
20 calculation is the forecasted depreciation accruals  
21 based on current depreciation rates, and net removal  
22 costs provided by the Company's Property Tax and  
23 Depreciation Panel. The details of the average net

1        plant balances are included in the first four lines of  
2        the average rate base which is included in Exhibit \_\_\_\_  
3        (AP-8), columns 1 through 3, for the Rate Year.    We  
4        will update for any significant changes later in this  
5        proceeding.

6    Q.    Does the net plant rate base include the Steam  
7        department's share of common capital costs including  
8        general equipment?

9    A.    Yes

10   Q.    How is the cost of common general equipment or plant  
11        allocated?

12   A    Overall, the Company's common plant expenditures are  
13        allocated to the operations that benefit from the  
14        projects.   A reasonable basis for the allocation is  
15        used.   For example, if the cost driver is the number  
16        of employees or the number of units, costs will be  
17        allocated accordingly.   If a common plant project  
18        benefits O&R, the portion of the project applicable to  
19        O&R will be charged to an O&R capital account through  
20        the affiliate billing process.   If there is not  
21        another basis to allocate costs, the shared services  
22        percentage will be used.   This rate is currently 7.1  
23        percent.

1 Q. How does the Company allocate costs among electric,  
2 gas and steam operations?

3 A. Generally, the portion of common plant allocated to  
4 Con Edison is allocated 83 percent to Electric  
5 operations and 17 percent to Gas operations. Steam  
6 operations is charged an interdepartmental rent charge  
7 for common plant used in steam operations. That  
8 charge to steam operations is credited to the electric  
9 and gas departments.

10

11 **IX. STEAM PRODUCTION EXPENSES -- (AP-7)**

12 Q. Have you prepared an exhibit, which shows the  
13 breakdown of steam production costs by station for the  
14 twelve months ended June 30, 2012.

15 A. Yes. It is the document entitled "CONSOLIDATED EDISON  
16 COMPANY OF NEW YORK, INC. - PRODUCTION EXPENSES -  
17 STEAM (INDIVIDUAL STATIONS) - TWELVE MONTHS ENDED JUNE  
18 30, 2012, set forth as Exhibit \_\_\_\_ (AP-7) and which  
19 was prepared under our supervision and direction.

20 Q. Please describe Exhibit \_\_\_\_ (AP-7).

21 A. This exhibit consists of two pages and shows the  
22 allocation by station of steam production expenses in  
23 the Historic Year. Included on the second page of the

1       exhibit are the production costs as shown on page 1  
2       expressed in terms of equivalent cents per MLBS  
3       produced.

4   Q.   Are generating stations classified as electric plant  
5       also used in the production of steam for delivery to  
6       the Company's steam customers?

7   A.   Yes.   Steam was produced at East River.

8   Q.   Please explain the accounting for electric production  
9       expenses chargeable to steam operations.

10   A.   The production of steam at this electric generating  
11       station involves charges for the fuel used to produce  
12       steam, plus processing charges for water, labor, and  
13       chemicals.   The charges for the fuel used to produce  
14       steam are made directly to steam production expense  
15       and are included in Account 703, Fuel, whereas the  
16       processing charges for such steam are charged to Steam  
17       Production Expenses, Station Supplies and Expenses,  
18       Account 705.2, and credited to Electric Production  
19       Expenses.

20   Q.   How are the charges to the steam department determined  
21       for steam produced at these electric stations?

1 A. The Steam Fuel Panel discusses in their testimony the  
2 computations of quantities of fuel used to produce  
3 steam for steam operations.

4

**X. AVERAGE RATE BASE - (AP-8)**

6 Q. Turning to average rate base, was the document  
7 entitled "CONSOLIDATED EDISON COMPANY OF NEW YORK,  
8 INC. - RATE BASE - STEAM - AVERAGE TWELVE MONTHS ENDED  
9 JUNE 30, 2012 AND AVERAGE TWELVE MONTHS ENDING  
10 DECEMBER 31, 2014" and designated as Exhibit        (AP-8)  
11 prepared under your direction and supervision?

12 A. Yes, it was.

13 Q. Please describe the exhibit.

14 A. The first page shows the average rate base for the  
15 actual twelve months ended June 30, 2012 in column 1;  
16 the adjustment to the Historic Year to reflect  
17 conditions in the Rate Year absent a rate filing in  
18 column 2; the average rate base for the Rate Year  
19 absent a rate filing in column 3; the adjustments to  
20 the average rate base in the Rate Year as a result of  
21 this filing in column 4; and the fully adjusted  
22 average rate base for the Rate Year upon which the  
23 proposed rate increase is based in column 5. Page 2

1 details the items in working capital as shown on page  
2 1, line 6. Page 3 shows the net deferrals from  
3 reconciliation mechanisms as shown on page 1, line 13.

4 Q. Please describe the various rate base items that are  
5 listed in the first three columns of page 1.

6 A. Lines 1 through 4 show the average book cost of plant,  
7 accumulated provision for depreciation and net plant  
8 balance and line 5 shows the average balance for Non-  
9 interest bearing CWIP. Historic Year levels on lines  
10 1, 3, and 5 were developed from the books and records  
11 of the Company. The Rate Year levels were previously  
12 discussed. Line 2 relates to the Hudson Avenue  
13 Generating Station ("Hudson Avenue"). The adjustment  
14 of \$92.288 million in column 2 reflects the  
15 undepreciated cost of structures and equipment that is  
16 proposed to be transferred from the Steam depreciation  
17 reserve to the Electric depreciation reserve in this  
18 proceeding as discussed by Company witness Muccilo and  
19 others. The adjustment on line 3, column 4, of  
20 (\$14.1) million, reflects the change in the average  
21 accumulated depreciation reserve resulting from the  
22 proposed changes in depreciation rates. Those changes

1       are discussed in the testimony of the Company's  
2       Property Tax and Depreciation Panel.

3   Q.    Is the rate base forecast for plant subject to update  
4       to reflect steam system storm hardening projects?

5   A.    Yes. The Company's storm hardening proposals are  
6       discussed by the Steam Infrastructure and Operations  
7       Panel and Company witness Muccilo. Planned  
8       expenditures for storm hardening in 2014 of \$26.5  
9       million were finalized too late to be reflected in the  
10      revenue requirement. We estimate at this time that  
11      the associated revenue requirement would be  
12      approximately \$2.2 million. We will reflect an  
13      appropriate adjustment at the time of the update.

14   Q.    Please explain the remaining rate base items on  
15      EXHIBIT \_\_\_\_ (AP-8) .

16   A.    **Line 6** shows the level of the working capital included  
17      in rate base. We will explain the details of working  
18      capital later in our testimony.

19      **Line 7**, Deferred Fuel, represents the average balance  
20      of deferred fuel, net of federal income tax. This  
21      amount represents 30 days of recoverable fuel costs.  
22      Deferred fuel is the amount of fuel, above the base

1 cost of fuel that will be recovered in the following  
2 month.

3 **Line 8** represents the average balance of the  
4 Metropolitan Transportation Authority ("MTA")  
5 surcharge paid but not yet collected from customers,  
6 net of income taxes.

7 **Lines 9 and 10** reflect the steam portion of the  
8 unamortized balance of debt discount, premium and  
9 expense; and preferred stock expense, respectively, as  
10 additions to rate base. This rate base treatment was  
11 directed by the Commission's Order on Rehearing in  
12 Electric Case 27353.

13 **Line 11** represents the Mount Vernon properties that  
14 the Company purchased as part of the environmental  
15 remediation.

16 **Line 12** shows the balance of customer advances for  
17 construction, net of income tax. These are funds  
18 provided by customers for the construction of utility  
19 services on their premises.

20 **Line 13**, these items in general represent the  
21 estimated average rate base impacts of the various  
22 reconciliation provisions of the 2007 and 2009 rate  
23 cases and any remaining balances from prior rate plans

1 that were not reflected in the current rate plan. The  
2 detail supporting the net balance is shown on page 3.  
3 We will discuss the derivations and disposition of  
4 these items in the Revenue Requirement and Accounting  
5 Adjustments section of this testimony. Lines 14  
6 through 27 reflect the accumulated deferred federal  
7 and State income taxes for various items.

8 **Line 14** represents the taxes resulting from the  
9 normalization of federal tax depreciation. The  
10 average balance of accumulated deferred taxes for the  
11 Rate Year was developed by starting with the June 30,  
12 2012 actual balance and was increased each month,  
13 through the Rate Year, to the extent of tax  
14 depreciation normalized for book purposes offset in  
15 part by the flow-back of tax depreciation previously  
16 deferred.

17 Q. Does this filing reflect the continuation of the 50%  
18 bonus depreciation for 2013 as provided for in the  
19 American Tax Payer Relief Act of 2012?

20 A. No. The Company was not in a position to reflect the  
21 impacts of the new law in this filing. Internal  
22 Revenue Service regulations have not been issued and  
23 the Company has not had an opportunity to evaluate the

1       best tax strategy to apply for 2013 and 2014 to  
2       minimize its current tax payments. The Company will  
3       update this filing at an appropriate time to reflect  
4       the impact of the extension of Bonus Depreciation  
5       along with other factors to be considered when  
6       developing tax strategy.

7   Q.   Please continue with line 15.

8       **Line 15** relates to repair allowance and the  
9       accelerated deduction of plant service costs computed  
10      under the Simplified Service Cost Method.

11      **Line 16** relates to capitalized overheads (Section 263A  
12      of the IRS Code).

13      **Line 17** is the accumulated federal income tax related  
14      to the capitalization of computer software costs.

15      **Line 18** reflects excess deferred state income taxes  
16      resulting from changes in statutory tax rates.

17      **Lines 19 and 20** reflect the amount of accumulated  
18      deferred Federal income taxes on Vested Vacation and  
19      Prepaid Insurance Expenses.

20      **Line 21** represents deferred balance of taxes paid on  
21      unbilled revenues. The Commission, in its Statement  
22      of Policy on Accounting and Ratemaking Procedures to  
23      Implement Requirements of the Tax Reform Act of 1986

1 ("TRA-86"), issued July 8, 1989, in Case 29465,  
2 directed utilities to normalize the effect of unbilled  
3 revenues in taxable income.

4 **Line 22** reflects the accumulated deferred federal  
5 income taxes associated with Contributions in Aid of  
6 Construction, which are reflected as taxable income  
7 and for which the Commission also mandated tax  
8 normalization since TRA-86.

9 **Line 23** is the deferred federal income tax for the MTA  
10 taxes.

11 **Line 24** reports the deferred federal income taxes on  
12 Capitalized Interest. The Commission, also in Case  
13 29456, concluded that utilities should normalize the  
14 income tax expense for additional interest required to  
15 be capitalized for tax purposes under TRA-86.

16 **Line 25** reflects accumulated deferred federal income  
17 tax associated with the repair and maintenance  
18 allowance.

19 **Line 26** is the deferred federal income tax effect  
20 resulting from the payment of Call Premiums when  
21 redeeming long-term debt issues prior to their  
22 maturity dates. The Call Premiums paid are a current  
23 deduction for federal income tax purposes, but

1       amortized over the remaining lives of the redeemed  
2       issues, in accordance with prior Commission policy.

3       **Line 27** reflects the deferred balance of New York  
4       State income taxes on various items.

5   Q.    Please explain Line 29, Rate base over/under  
6       capitalization adjustment.

7   A.    This reflects the required adjustment to make earnings  
8       base equal to capitalization. The Company's  
9       adjustment is a relatively small positive amount and  
10       has been for the last several years.

11   Q.    You previously indicated that line 29 of the Rate Base  
12       Exhibit reflects a requirement to make earnings base  
13       equal to capitalization. Would this represent the  
14       Earnings Base Capitalization or "EB/Cap" Adjustment  
15       the Commission has adopted in numerous prior rate  
16       proceedings?

17   A.    Yes. This adjustment has been required by the  
18       Commission to synchronize rate base plus interest  
19       bearing items (what is often referred to as the  
20       "Earnings Base") with the total capitalization  
21       employed in utility service

1 Q. Did the Company adjust its EB/Cap calculation in this  
2 case to include an adjustment for prepaid pension  
3 expenses?

4 A. Yes, without prejudicing our position in future rate  
5 proceedings, the Company made an adjustment for  
6 prepaid pensions of approximately \$20 million as shown  
7 on Exhibit \_\_ (AP-8), page 1 of 3.

8 Q. Please turn to page 2 of Exhibit \_\_ (AP-8) and  
9 explain the items of Working Capital.

10 A. Working Capital is comprised of three categories:  
11 Materials and Supplies, including Liquid Fuel  
12 Inventory, Prepayments, and Cash Working Capital.

13 Q. How did you determine the average balance of liquid  
14 fuel inventory and other materials and supplies for  
15 the rate year as reflected in column 5 of page 2?

16 A. To develop the rate year amount of liquid fuel  
17 inventory and other materials and supplies, excluding  
18 fuel, we took the average balance for the Historic  
19 Year and escalated it using the general escalation  
20 factor of 4.96 percent, which we discussed previously,  
21 to arrive at the increase of \$1.75 million as shown in  
22 column 2.

1 Q. Please continue with an explanation and description of  
2 the components in Prepayments.

3 A. Steam prepayments, lines 4-10, consist of the steam  
4 department's allocation of insurance premiums,  
5 property taxes, the PSC assessment, the new 18-a  
6 assessment to be collected through a surcharge,  
7 software and maintenance contracts, interference, and  
8 other.

9 Q. How did you develop the level of prepaid insurance and  
10 property taxes?

11 A. Prepaid insurance for the Rate Year was forecasted by  
12 assuming that 25 percent of insurance premiums are  
13 prepaid. This factor was developed by dividing the  
14 prepaid insurance balance at June 30, 2012 by the  
15 steam portion of the insurance premiums at June 30,  
16 2012. We applied this factor to our estimate for  
17 steam insurance premiums in the Rate Year of \$3.594  
18 million to arrive at the rate year level for insurance  
19 prepayments of \$910,000. This treatment is consistent  
20 with the Commission's determination in the Company's  
21 prior rate cases. Prepayments for New York City  
22 property taxes were forecasted based on the Company's  
23 actual level of steam property taxes for fiscal year

1        2011/2012 and the estimated levels for fiscal year  
2        2013/2014. Payments for property taxes are currently  
3        made to New York City in July and January of each  
4        year. Based on the forecast level of expense,  
5        prepayment for New York City property taxes in the  
6        rate year is estimated to be \$21.081 million.

7    Q.    Please continue with the prepayment for the PSC  
8        Assessment.

9    A.    We developed the amount for the PSC assessment, line  
10        6, by taking the latest known steam assessment of  
11        \$938,000 for the fiscal year ending September 30,  
12        2012. This amount is then escalated to the Rate Year  
13        and reflected payments on a semi-annual basis in March  
14        and September. As indicated above, if a revised  
15        assessment is received during the course of this  
16        proceeding, we will update the PSC Assessment, as  
17        appropriate.

18    Q.    Please explain the prepayment for Regulatory  
19        Assessment - 18-a Legislation.

20    A.    The prepayment amount for regulatory assessment  
21        relating to the 18-a Legislation represents the  
22        temporary State Energy and Utility Service  
23        Conservation Assessment imposed on public utility

1        companies from April 1, 2009 to September 30 2014 as  
2        a result of Public Service Law 18-a. The average  
3        prepaid assessment for the Rate Year is \$16.726  
4        million.

5    Q.    How have you handled the 18-a assessment in the Rate  
6        Year?

7    A.    The current surcharge mechanism provides for a full  
8        return on the average prepaid balance. In order to  
9        eliminate any revenue requirement impact for this  
10       item, we have eliminated this balance along with the  
11       associated revenue and test year level of expense  
12       consistent in the manner this item was treated in Case  
13       09-E-0428.

14    Q.    Please explain the prepayment for Software and  
15       Maintenance Contracts and Interference.

16    A.    The prepayment amounts for Software and Maintenance  
17       Contracts, Interference, and Other were developed by  
18       utilizing the average balance at June 30, 2012 and  
19       escalating at 4.96 percent inflation factor to arrive  
20       at a Rate Year level of \$144,000 and \$42,000, 597,000  
21       respectively.

22    Q.    Please explain the last item of working capital.

1 A. Line 22 is the allowance for cash working capital.  
2 The historic year calculation was described earlier in  
3 our testimony. For the Rate Year, we started with  
4 operation and maintenance expenses of \$385.427  
5 million. From this amount we eliminated purchased  
6 steam and fuel expenses, interdepartmental rents, and  
7 uncollectibles to arrive at the level of operating  
8 expenses that would be subject to the 1/8 FERC Working  
9 Capital Formula that the Commission has applied for  
10 many years. The total cash working capital allowance  
11 is \$28.479 million as shown in column 3, line 22.  
12

13 **XI. REVENUE REQUIREMENT AND ACCOUNTING ADJUSTMENTS -- (AP-**

14 **9)**

15 **A. SUMMARY OF REVENUE REQUIREMENT**

16 Q. Please describe the basis for the revenue requirement  
17 in this filing.

18 A. The revenue requirement is based upon our forecast of  
19 steam operations for the Rate Year, and an overall  
20 rate of return requirement of 7.69 percent. The  
21 decrease in the Company's revenue requirement is  
22 \$5,431,000, inclusive of gross receipts taxes.

1 Q. I show you a document, the first page of which is  
2 entitled, "OPERATING INCOME, RATE BASE AND RATE OF  
3 RETURN FOR STEAM OPERATIONS SHOWING THE EFFECT OF THE  
4 PROPOSED INCREASE IN RATES - TWELVE MONTHS ENDING  
5 DECEMBER 31, 2014" and designated as Exhibit \_\_\_\_ (AP-9)  
6 and ask if it was prepared under your direction and  
7 supervision?

8 A. Yes, it was.

9 Q. Please describe Exhibit \_\_\_\_ (AP-9).

10 A. Exhibit \_\_\_\_ (AP-9) consists of four schedules.  
11 Schedule 1 summarizes the development of operating  
12 income, average rate base and rate of return for the  
13 Rate Year as adjusted for the rate increase. Column 1  
14 shows operating income and rate of return unadjusted,  
15 or as it would be reflected in the books of account,  
16 for the Rate Year. The operating income before income  
17 taxes is as shown on Exhibit \_\_\_\_ (AP-5), Schedule 1,  
18 page 1, column 3. The New York State and federal  
19 income tax computations in this column are detailed on  
20 Schedule 2, pages 1 and 2, respectively, and the  
21 average rate base in this column is based on Exhibit  
22 \_\_\_\_ (AP-8). Column 2 summarizes certain adjustments  
23 to operating income that are detailed on Schedule 3.

1       The adjustments to average rate base in this column  
2       are also reflected on Exhibit \_\_\_\_ (AP-8). Column 3 is  
3       the summation of columns 1 and 2. Column 4 shows the  
4       effect of the \$5,431,000 rate decrease. Column 5,  
5       which is a summation of columns 3 and 4, shows  
6       operating income, average rate base and rate of return  
7       for the Rate Year after factoring in the rate  
8       increase. Schedule 4 summarizes the Regulatory  
9       Liabilities due customers and the Regulatory Assets to  
10      be recovered from customers that are reflected on  
11      Schedule 3 and included in the calculation of the  
12      revenue requirement.

13      Q.     What rate of return does Schedule 1 of Exhibit \_\_\_\_ (AP-  
14       9) show?

15      A.     The unadjusted rate of return in column 1 is 7.7  
16       percent. After factoring in the adjustments to  
17       operating income, rate base but not the proposed rate  
18       increase, the rate of return on average rate base is  
19       7.91 percent.

20      Q.     What was the steam department's actual rate of return  
21       for the Historic Year of the twelve-months ended June  
22       30, 2012?

1 A. As shown on Exhibit \_\_ (AP-1), Schedule 2, page 4,  
2 steam operating income for the Historic Year was  
3 \$92,283,000. The steam department's average rate base  
4 for the Historic Year, as shown on Exhibit \_\_ (AP-8),  
5 was \$1,512,862,000 producing an actual rate of return  
6 for the Historic Year of 6.10 percent. For the reasons  
7 explained throughout this filing, absent a rate  
8 reduction, the Company is projecting the higher return  
9 of 7.91 percent for the Rate Year.

10 Q. Please explain Schedule 2, page 1 of Exhibit \_\_ (AP-  
11 9).

12 A. Schedule 2, page 1 details the New York State income  
13 tax computation for each of the 5 columns shown on  
14 Schedule 1. Column 1 of Schedule 2, page 1 is the  
15 calculation of New York State income tax expense for  
16 Steam operations. Starting with book operating income  
17 before income taxes as shown on line 1, we then set  
18 forth on lines 2-37 the various required tax  
19 adjustments to book operating income to determine  
20 taxable income as shown on line 38. We then compute  
21 on line 39 the amount of New York State income tax  
22 payable using the statutory rate applicable to such  
23 taxable income. From the New York State income tax

1 payable so calculated, we reflect on line 40  
2 normalizations for certain items reflected as  
3 adjustments to taxable income and other tax credits to  
4 arrive at New York State income tax expense as shown  
5 on line 41. The items detailed on column 2 of this  
6 schedule, which reflect rate case adjustments, are  
7 more fully detailed on Schedule 3 of this Exhibit \_\_\_\_  
8 (AP-9) and are discussed later. Column 3 is the sum  
9 of columns 1 and 2. Column 4 is the additional New  
10 York State income tax to be paid as a result of the  
11 additional revenue requirement and column 5 is the sum  
12 of columns 3 and 4.

13 Q. Please explain Schedule 2, page 2 of Exhibit \_\_\_\_ (AP-  
14 9).

15 A. Schedule 2, page 2 details the federal income tax  
16 computation for each of the 5 columns shown on  
17 Schedule 1. Column 1 of Schedule 2, page 2 is the  
18 calculation of federal income tax expense for Steam  
19 operations. Starting with book operating income before  
20 income taxes as shown on line 1, we deducted on line 2  
21 the amount of New York State income tax previously  
22 determined on Schedule 2, page 1 to arrive at book  
23 operating income before federal income tax on line 3.

1 We then set forth on lines 4-47 the various required  
2 tax adjustments to book operating income to determine  
3 taxable income as shown on line 48. We then compute  
4 the amount of federal income tax payable on line 49  
5 using the statutory rate applicable to such taxable  
6 income. From the federal income tax payable so  
7 calculated, we reflect on lines 50-55 normalizations  
8 for certain items reflected as adjustments to taxable  
9 income as well as amortizations for items normalized  
10 in the Rate Year or in prior periods to arrive at  
11 federal income tax expense as shown on line 56. The  
12 items detailed on column 2 of this schedule, which  
13 reflect rate case adjustments, are more fully detailed  
14 on Schedule 3 of this exhibit and will be discussed  
15 later. Column 3 is the sum of columns 1 and 2.  
16 Column 4 is the additional federal income tax to be  
17 paid as a result of the additional revenue requirement  
18 and column 5 is the sum of columns 3 and 4.

**B. OTHER OPERATING REVENUES - PASSBACK OF DEFERRED**

## CREDITS

21 Q. Please explain the adjustments to other operating  
22 revenues as shown on Schedule 3 of Exhibit \_\_ (AP-9).  
23 A. Schedule 3 details the adjustments to operating income

1 as shown on Schedule 1, column 2 by major income  
2 statement category.

3 Q. Please discuss the deferred credit items included in  
4 Other Operating Revenues on Schedule 3 of Exhibit \_\_  
5 (AP-9) that the Company is now proposing to refund to  
6 customers according to that Schedule.

7 A. Adjustments 1(a) through 1(m) reflect items for which  
8 there are deferred credit balances on the books of  
9 account that the Company is proposing to refund to  
10 customers. The proposed refund period for each item  
11 listed is three-years starting at the beginning of the  
12 Rate Year. The total amount of the credits for the  
13 Rate Year is \$18.274 million.

14 Q. Please discuss the origin of the accounting credits to  
15 be refunded to customers as listed on Schedule 3 of  
16 Exhibit \_\_ (AP-9) .

17 A. There are several and we will address them in the  
18 order they appear. It should be noted that the  
19 amounts shown on Schedule 3 of Exhibit \_\_ (AP-9) are  
20 based on projected credit balances as of the start of  
21 the Rate Year and, because they result from  
22 reconciliation mechanisms, the balances should be  
23 updated to actual, later known amounts.

1       **Adjustment 1(a)** reflects a refund over three years of  
2       the amount of Property Tax expense provided for in  
3       Case 09-S-0794 in excess of the actual expense  
4       incurred as determined by applying the property tax  
5       sharing mechanism under the current rate plan.

6       **Adjustment 1(b)** proposes to refund over a three-year  
7       period the estimated deferred pension and OPEB credit  
8       balance of \$1,644,000 at December 31, 2013. We  
9       project that the deferred pension and OPEB costs of  
10      \$16,624,000 at June 30, 2012 will be offset by  
11      \$18,268,000 of credits to the deferral through  
12      December 31, 2013. Thus the deferred amount at the  
13      start of the Rate Year is estimated to be a credit of  
14      \$1,644,000. A three-year amortization would be  
15      \$548,000 per year. Deferral accounting for pension  
16      and OPEB costs is provided for by the Commission's  
17      Statement of Policy and Order Concerning the  
18      Accounting and Ratemaking Treatment for Pensions and  
19      Postretirement Benefits Other Than Pensions issued  
20      September 7, 1993 in Case 91-M-0890.

21       **Adjustment 1(c)** represents the refund over three years  
22      of the over recovery of long term debt interest costs.  
23      The over collection resulted from lower income tax

1 payments that resulted from new tax legislation (i.e.,  
2 Bonus Depreciation) that reduced the Company's debt  
3 financing requirements and, more notably, the collapse  
4 of the variable rate tax exempt bond market which  
5 reduced the interest rate paid on this debt during the  
6 Historic Year to less than 1% as shown on Exhibit \_\_\_\_  
7 (AP-10), Schedule 5 that will be adopted later in our  
8 testimony.

9 **Adjustment 1(d)** reflects a refund over three years of  
10 estimated deferred carrying charges on net plant under  
11 runs during the current rate plan. The under run is  
12 attributable to projects not completed during the term  
13 of the rate plan approved in Case 07-S-1315. For the  
14 current rate plan approved in Case 09-S-0794, actual  
15 net plant additions are above the targets.

16 **Adjustment 1(e)** reflects the refund over a three-year  
17 period of the amount of restitution and recoveries  
18 received in connection with criminal activities  
19 committed by several former employees and contractors  
20 against the Company, plus interest.

21 **Adjustments 1(f) and 1(g)** are to pass-back to  
22 customers over three years rate base carrying charges  
23 avoided as a result of additional income tax

1           deductions the Company was able to secure for (bonus)  
2           depreciation and the repair allowance deduction.

3           **Adjustment 1(h)** reflects the refund over a three-year  
4           period of carrying charges accrued on the variation  
5           between the forecasted Deferred Income Tax balance  
6           related to the Section 263A-1(a)(3)- Simplified  
7           Service Cost Method (SSCM) tax benefits included in  
8           rate base under the current steam rate plan and the  
9           actual net balance. There was an issue between the  
10          Company and the IRS regarding the acceptable method  
11          for calculating the SSCM deduction. That issue has  
12          been resolved and the Company proposes that the  
13          necessary reconciliations be resolved in this  
14          proceeding rather than in Case 04-M-0026, which the  
15          Commission instituted for that purpose. The actual  
16          deductions allowed by the IRS were significantly less  
17          than the Company originally deducted on its tax  
18          returns and the final deduction allowed and  
19          adjustments to resolve this matter with the IRS for  
20          tax years up through 2008 are now complete.

21          The Company has reflected a credit to customers of  
22          \$4.9 million over three years in the revenue  
23          requirement in this filing based on the projected

1                   amount as of the beginning of the Rate Year. The  
2                   Company will update that amount if necessary based on  
3                   later known information.

4   Q.    Returning to the other deferred credits on Schedule 3  
5                   of Exhibit \_\_ (AP-9), please continue addressing the  
6                   items in turn beginning with adjustment 1(i) related  
7                   to interest on deferred balances.

8   A.    **Adjustment 1(i)** refunds to customers over three years  
9                   carrying charges accrued on the variation between the  
10                  forecasted balance of deferred SIR costs reflected in  
11                  rate base under the current steam rate plan and the  
12                  actual deferred balance.

13                  **Adjustment 1(j)** reflects a refund over three years of  
14                  insurance and other recoveries in excess of the World  
15                  Trade Center related costs and interest on those  
16                  costs.

17                  **Adjustment 1(k)** relates to the redemption of all  
18                  outstanding shares of the Company's preferred stock on  
19                  May 1, 2012. There is a net financing saving to the  
20                  Company related to the redemption of the preferred  
21                  stock. In an order dated January 19, 2012 in Case 08-  
22                  M-1244, the Commission directed the Company to defer  
23                  the net savings in total financing costs for the

1 benefit of customers until base rates were reset.

2 This adjustment reflects the refund to customers over  
3 a three-year period of these net savings.

4       **Adjustment 1(1)** reflects the refund over a three-year  
5       period of steam interference under-spending of  
6       \$53,000, or \$18,000 per year.

7       **Adjustment 1(m)** reflects the crediting to customers of  
8       the regulatory liability that Company witness Muccilo  
9       explains will be recorded due to over recovery of  
10      costs being amortized under the current rate plan.

11 The amount shown of \$0.988 million represents three  
12 monthly accruals, for the period October 1, 2013  
13 through December 31, 2013, based on the \$3.951 million  
14 annual amount developed in Mr. Muccillo's testimony.

15 C. OTHER OPERATING REVENUES-RECOVERY OF DEFERRED CHARGES

16 Q. Please discuss the deferred charge items included in  
17 Other Operating Revenues on Schedule 3 of Exhibit \_\_  
18 (AP-9) that the Company is proposing to recover from  
19 customers.

20 A. There are several and we will address them in the  
21 order they appear. In each case the Company is  
22 proposing to recover the deferred charge over three  
23 years effective at the start of the Rate Year, except

1 for adjustment 2(a) related to the amortization of  
2 environmental costs for which the Company proposes a  
3 five-year amortization. It should be noted that the  
4 amounts shown on Schedule 3 of Exhibit    (AP-9) are  
5 based on projected deferred charge balances as of the  
6 start of the Rate Year and, because they result from  
7 reconciliation mechanisms, the balances should be  
8 updated to actual, later known amounts. The total  
9 amount of the charges for the Rate Year is \$8.136  
10 million.

11 **Adjustment 2(a)** reflects the five-year amortization of  
12 SIR costs estimated through the end of the Rate Year  
13 netted against the recoveries approved under the  
14 current rate plan. The amortization amount is \$1.997  
15 million. The use of a five-year amortization period  
16 is explained by Company witness Muccillo.

17 **Adjustment 2(b)** proposes to recover over a three-year  
18 period, deferred Medicare Part D costs of \$1,470,000  
19 at June 30, 2012, plus \$241,000 of estimated increases  
20 to the deferral through December 31, 2013. Thus the  
21 deferred amount is estimated to be \$1,711,000 at the  
22 start of the Rate Year. A three-year amortization  
23 would be \$570,000 per year. The deferral represents

1 the variation between the actual Medicare Part D tax  
2 deduction reflected in rates and the tax deduction  
3 permitted. Recent federal legislation eliminated the  
4 earlier exclusion of projected retiree reimbursements  
5 for prescription drug coverage from taxable income.

6 **Adjustment 2(c)** reflects the recovery over a three-  
7 year period of variations between the level of SO2  
8 Allowances projected to be sold during the current  
9 rate plan and the actual revenues received. As  
10 discussed in the testimony of Company witness Price,  
11 the market for SO2 allowances has significantly  
12 diminished and for the foreseeable future, we do not  
13 anticipate there will be any significant revenue  
14 contribution from the sale of these allowances.  
15 Consequently, we recommend that the target amount of  
16 revenues currently reflected in rates be eliminated  
17 (i.e., be set at zero) but that the reconciliation of  
18 target and actual revenues continue.

19 **Adjustment 2(d)** proposes to recover over a three-year  
20 period the interest deferred as a result of various  
21 reconciliation mechanisms]under the current rate plan.

22 **Adjustment 2(e)** proposes to recover over a three-year  
23 period \$100,000 of deferred consulting costs related

1 to the Steam Peak Reduction Collaborative, as provided  
2 for under the current rate plan.

3 **Adjustment 2(f)** relates to Superstorm Sandy and  
4 represents the amortization over three years of  
5 incremental costs incurred in response to the storm.  
6 The costs remain subject to update. The storm  
7 affected 48 steam main segments (approximately 30  
8 miles of steam pipe), caused the preemptive shutdown  
9 of the East River and Brooklyn Navy Cogeneration  
10 Partners Generating Stations and forced shutdown of  
11 the 59th and 74th Street Generating Stations (making  
12 nearly 90% of total steam generating capacity  
13 unavailable) and flooded a portion the First Avenue  
14 Steam Tunnel, among other consequences. The storm  
15 affected 561 customers, approximately one-third of all  
16 steam customers.

17 These incremental costs relate to, among other items,  
18 Company overtime labor, contract services for pumping  
19 flooded generating stations and steam main structures,  
20 equipment repairs including replacement parts from  
21 inventory or purchased as required, and hazardous  
22 waste disposal.

23 The costs reflected in the rate request will form the

1 basis of a Company petition to the Commission for  
2 authorization to defer incremental costs of responding  
3 to Superstorm Sandy.

4 **Adjustment 2(g)** relates to the recovery of carrying  
5 charges associated with the gas addition projects at  
6 the 59<sup>th</sup> Street and 74<sup>th</sup> Street steam production plants.  
7 The Company's Steam Infrastructure and Operations  
8 Panel and Steam Fuel Panel explain the need for and  
9 other aspects of this project. The projected in-  
10 service dates are June 2013 for the 59<sup>th</sup> Street project  
11 and December 2013 for the 74<sup>th</sup> Street project. The  
12 Company intends to defer the recovery of and return on  
13 these investments and incremental depreciation from  
14 the in-service dates through December 31, 2013. The  
15 estimated deferral amounts to \$1.7 million which the  
16 Company proposes to recover over three years. The  
17 basis for this deferral is that the current steam rate  
18 plan provides:

19 The net plant targets do not include  
20 any costs associated with the 59<sup>th</sup>  
21 Street or 74<sup>th</sup> Street gas addition  
22 projects proposed by the Company in its  
23 initial filing. If, during the term of  
24 the Steam Rate Plan, the Company needs  
25 to install gas-burning capability (or  
26 implement other measures) at either or  
27 both stations in order to comply with a

1 change in rule, law and/or regulation  
2 (e.g., a change in the environmental  
3 laws relating to permissible levels of  
4 emissions from the Stations), the  
5 Company's recovery of and a return on  
6 these investments, incremental O&M  
7 expenses, if any, and incremental  
8 property taxes, if any, will commence  
9 on the date that such equipment is  
10 placed in service, subject to  
11 Commission approval of the petition  
12 described below. [emphasis added]

13  
14 The Company submitted a petition for recovery of the  
15 gas additions in July 2011, explaining that the  
16 facilities were required to comply with new  
17 environmental regulations. The Company also requested  
18 accelerated recovery through the Fuel Adjustment  
19 Clause (FAC). The Commission rejected the request for  
20 accelerated recovery and advised the Company to seek  
21 recovery of prudently incurred costs associated with  
22 the projects through traditional base rate recovery in  
23 the Company's next steam filing.

24 **D. DEPRECIATION AND AMORTIZATION EXPENSES**

25 Q. Please explain the adjustment to depreciation expenses  
26 as shown on Schedule 3 of Exhibit \_\_\_\_ (AP-9).

27 A. We are increasing depreciation expense by \$9.484  
28 million due to the proposed changes in steam  
29 depreciation rates, as discussed in the testimony of

1 the Steam Property Tax and Depreciation Panel.

2

3 **XII. RATE OF RETURN -- (AP-10)**

4 Q. Is the Accounting Panel sponsoring an exhibit  
5 regarding the required rate of return?

6 A. Yes, we are sponsoring the document entitled  
7 "CONSOLIDATED EDISON COMPANY OF NEW YORK, INC. - RATE  
8 OF RETURN REQUIRED FOR THE RATE YEAR - TWELVE MONTHS  
9 ENDING DECEMBER 31, 2014," set forth as Exhibit \_\_\_\_  
10 (AP-10), which was prepared under our direction and  
11 supervision for that purpose?

12 Q. Please describe Exhibit \_\_\_\_ (AP-10), Schedule 1.

13 A. Exhibit \_\_\_\_ (AP-10), Schedule 1 shows the actual  
14 capital structure for the Company as of June 30, 2012,  
15 the average cost rate for each component of the  
16 capital structure and the related cost of capital.  
17 The Company's overall weighted cost of capital at June  
18 30, 2012 was 7.64 percent.

19 Q. Please describe Exhibit \_\_\_\_ (AP-10), Schedules 2, 3,  
20 and 4.

21 A. These schedules show the projected average capital  
22 structure, the average cost rate for each component of  
23 the capital structure and the related cost of capital

1 for the Rate Year and the two following twelve-month  
2 periods ending December 31, 2015 and December 31,  
3 2016. The Company's overall weighted cost of capital  
4 for the Rate Year is projected to be 7.69 percent.

5 Q. How did you derive the amount of average long-term  
6 debt for each period?

7 A. To derive the average long-term debt for the Rate  
8 Year, we determined the amount of long-term debt  
9 outstanding at the end of each month from June 2012  
10 through December 2014. We then utilized these amounts  
11 to calculate the average of long-term debt  
12 outstanding. We followed the same methodology for  
13 each subsequent period.

14 Q. How was the amount of long-term debt outstanding each  
15 month determined?

16 A. We estimated changes in the outstanding amount of debt  
17 from month to month during the linkage period from  
18 June 30, 2012 forward based on the funding  
19 requirements forecasted. Exhibit        (AP-10), Schedules  
20 5, 6, 7, and 8 list the actual and projected long term  
21 debt balance as of June 30, 2012 and forward. This  
22 resulted in the Company's forecasted issuances and  
23 scheduled maturities as follows:

1       The issuance of \$900 million, 4.15 percent Series  
2       2013A debentures on June 3, 2013;  
3       The issuance of \$420 million, 4.15 percent Series  
4       2013B debentures on December 2, 2013;  
5       The forecasted issuance of \$530 million, 4.70 percent  
6       Series 2014A debentures on April 1, 2014;  
7       The forecasted issuance of \$600 million, 4.70 percent  
8       Series 2014B debentures on June 2, 2014;  
9       The forecasted issuance of \$470 million, 5.40 percent  
10      Series 2015A debentures on June 1, 2015;  
11      The forecasted issuance of \$560 million, 5.40 percent  
12      Series 2015B debentures on December 1, 2015;  
13      The forecasted issuance of \$500 million, 6.10 percent  
14      Series 2016A debentures on September 1, 2016;  
15      The forecasted issuance of \$500 million, 6.10 percent  
16      Series 2016B debentures on December 1, 2016;  
17      The maturity of the \$300 million, 5.625 percent Series  
18      2002a debentures on July 1, 2012;  
19      The maturity of the \$500 million, 4.875 percent Series  
20      2002B debentures on February 1, 2013;  
21      The maturity of the \$200 million, 3.85 percent Series  
22      2003B debentures on June 15, 2013;

1       The maturity of the \$200 million, 4.70 percent Series  
2       2004A debentures on February 1, 2014;  
3       The maturity of the \$275 million, 5.55 percent Series  
4       2009A debentures on April 1, 2014;  
5       The maturity of the \$350 million, 5.375 percent Series  
6       2005C debentures on December 1, 2015;  
7       The maturity of the \$400 million, 5.50 percent Series  
8       2006C debentures on September 15, 2016; and  
9       The maturity of the \$250 million, 5.30 percent Series  
10      2006D debentures on December 1, 2016.

11      The forecasted amount of average long-term debt for  
12      the Rate Year is \$10,839 million as shown on Schedule  
13      6 of Exhibit \_\_\_\_ (AP-10).

14   Q.   Does this forecast of debt issuances take into account  
15      the impact of the tax law changes enacted by the  
16      American Taxpayer Relief Act of 2012?

17   A.   No. The Company was not in a position to take the  
18      potential impacts of the new law into account when the  
19      debt financing plan was developed. The Company will  
20      update its financing plan once the Company's income  
21      tax strategy for 2013 and 2014 is developed and the  
22      related cash flow impact can be determined.

1 Q. Does the Company's capitalization as filed in this  
2 proceeding include Preferred Stock?

3 A. No. During 2012 the Company redeemed all of its  
4 outstanding Preferred Stock and replaced it with long  
5 term debt. Debt Series 2012A was issued to provide  
6 the funds necessary to redeem the outstanding  
7 preferred stock. This matter was reviewed by the  
8 Commission in Case 08-M-1244.

9 Q. Please explain how you derived the average customer  
10 deposits, set forth on Exhibit \_\_\_\_ (AP-10), Schedules  
11 2 - 4.

12 A. With respect to customer deposits, we started with the  
13 average balance outstanding at June 30, 2012 of \$291  
14 million. The balance is expected to grow by  
15 approximately 0.3% a month making the average of  
16 customer deposit balance for the Rate Year \$317.8  
17 million. The 0.3% monthly growth rate is based on the  
18 general rate of inflation.

19 Q. Please explain the change in Common Equity during the  
20 linking period from June 30, 2012 to the beginning of  
21 the Rate Year.

22 A. During the linking period from June 30, 2012 to the  
23 beginning of the Rate Year, we increased common equity

1 for net income of \$1.962 million and decreased it for  
2 common dividends of \$1.249 million to the parent  
3 company.

4 Q. What is the average cost rate of CECONY's long-term  
5 debt?

6 A. CECONY's long-term debt is comprised of tax-exempt  
7 debt issued through NYSERDA and debenture bonds. The  
8 average annual cost rate of this debt is calculated by  
9 dividing the average annual interest requirements for  
10 all long-term debt issues, including the average  
11 annual amortization of the net amount of any premiums  
12 or discounts realized when the securities were sold  
13 and the cost and expense of issuance, by the amount of  
14 long-term debt outstanding. As shown on Schedules 6  
15 through 8 of Exhibit        (AP-10), the average cost of  
16 long-term debt for the Rate Year is 5.18 percent, 5.26  
17 percent for the twelve months ending December 31, 2015  
18 and 5.40 percent for the twelve months ending December  
19 31, 2016.

20 Q. What cost rate was assigned to customer deposits?

21 A. We reflected the current 1.65 percent cost rate, as  
22 mandated by the Commission. The Commission reviews  
23 this rate annually. We will update this rate for any

1 change the Commission may decide with respect to  
2 customer deposits, at the appropriate time.

3 Q. What cost rate has the Company reflected as the rate  
4 of return for common equity?

5 A. We have utilized a return on common equity of 10.35  
6 percent to calculate an overall rate of return of  
7 7.6974 percent, which we used in determining the  
8 revenue requirement for the rate year. The return on  
9 common equity is based on Company witness Hevert's  
10 testimony.

11 Q. Will the Accounting Panel update the rate of return at  
12 the appropriate time in this proceeding?

13 A. The rate of return may be updated as part of the  
14 Company's rebuttal and update testimony if financial  
15 conditions at that time indicate a significant change.

16 Q. Is it your decision or do you participate in any  
17 decision making as to what CECONY's dividend funding  
18 requirements to CEI will be?

19 A. No. The Board of Directors makes the dividend  
20 decision for CEI. We are not members of the Board of  
21 Directors nor are we participants in its meetings or  
22 meetings of the Finance Committee of the Board.

1 Q. Does that mean that your assumption of an estimated  
2 per annum dividend increase is not based upon any  
3 projections that the Board of Trustees may have made?  
4 A. That is correct.

5 **XIII. FUND REQUIREMENTS AND SOURCES -- (AP-11)**

6 Q. Was the document entitled "CONSOLIDATED EDISON COMPANY  
7 OF NEW YORK, INC. - FUND REQUIREMENTS AND SOURCES -  
8 TWELVE MONTHS ENDING DECEMBER 31, 2014," set forth as  
9 Exhibit \_\_\_\_ (AP-11), prepared under your direction and  
10 supervision?

11 A. Yes, it was.

12 Q. What does Exhibit \_\_\_\_ (AP-11) reflect?

13 A. This exhibit reflects the Company's forecast of  
14 capital fund requirements and sources of capital  
15 funds, as well as certain financial statistics, for  
16 the Rate Year. Exhibit \_\_\_\_ (AP-11) shows that capital  
17 funds required during the Rate Year will exceed  
18 internal sources by \$1,210 million.

19 Q. Please describe the items contained in the exhibit  
20 under the heading "INTERNAL SOURCES OF FUNDS."

21 A. The first item is retained earnings of \$433 million.  
22 This estimate includes certain earnings and common  
23 dividend assumptions. For the Rate Year, net income

1 for common stock is projected at \$1,154 million,  
2 offset by projected common stock dividends of \$721  
3 million. The second item is depreciation. The third  
4 item is the amortization of net accounting credits.  
5 The forth item is net working capital requirements.  
6 The fifth item is deferred tax accruals, are funds  
7 provided principally by the use of tax depreciation  
8 subject to normalization. As we stated previously,  
9 the Board of Trustees makes the dividend decision for  
10 CECONY. We are not members of the Board of Trustees  
11 nor are we participants in its meetings or meetings of  
12 the Finance Committee of the Board and our assumption  
13 of an estimated per annum dividend increase is not  
14 based upon any projections that the Board of Trustees  
15 may have made.

16 Q. Please describe the next section of Exhibit \_\_\_\_ (AP-  
17 11).

18 A. The next section shows the projected debt issuances  
19 and changes to short-term borrowings for the Rate  
20 Year. Our projections show internal sources of funds  
21 will provide \$1,466 million. External sources of  
22 funds from proceeds will provide \$1,210 million. As a  
23 result the outstanding balance of commercial paper and

1 temporary investments will be increased by \$1,210  
2 million at December 31, 2014.

3 Q. Please describe the items contained in this exhibit  
4 under the heading "USE OF FUNDS".

5 A. The first item, requiring the largest amount of  
6 capital funds, is Construction Expenditures of \$2,182  
7 million. This amount is consistent with the Company's  
8 five-year forecast of construction expenditures.  
9 The second item shows the long term debt maturities  
10 during the rate year.

11 **XIV. INTEREST COVERAGE - S.E.C. BASIS PER BOOKS - (AP-12)**

12 Q. Was the document entitled "CONSOLIDATED EDISON COMPANY  
13 OF NEW YORK, INC. - INTEREST COVERAGE - S.E.C. BASIS -  
14 PER BOOKS," set forth as Exhibit \_\_\_\_ (AP-12), prepared  
15 under your direction and supervision?

16 A. Yes, it was.

17 Q. Does your calculation of interest coverage only  
18 include the interest paid on long-term debt?

19 A. No. As shown in Exhibit \_\_\_\_ (AP-12), the interest  
20 coverage calculation also includes "other" interest.

21 Q. Please explain what is included in "other" interest.

1 A. "Other" interest is comprised of interest on the  
2 following items: customer deposits, commercial paper,  
3 customer overpayments and other miscellaneous items.

4 Q. Does the Company currently have lines of credit  
5 available to it?

6 A. Yes. The Company, along with CEI and O&R, has  
7 agreements with various banks for revolving credit  
8 lines of \$2,250 million. However, assuming that CEI  
9 and O&R have not used their assigned portions of this  
10 credit, \$1,000 million and \$200 million, respectively,  
11 the Company can utilize the entire \$2,250 million.

12 **XV. COST ALLOCATIONS**

13 Q. How did you allocate CECONY's common costs between  
14 electric, gas and steam services?

15 A. We used the same allocations that have been effect  
16 since 1999. These percentages have been approved in  
17 every rate plan since 1999. Customer Operations and  
18 Customer Services costs were allocated electric (82%)  
19 / gas (18%). Administrative & General labor expenses  
20 were allocated electric (78.7%) / gas (16.2%) / steam  
21 (5.1%). Administrative & General non-labor expenses  
22 were allocated electric (81.14%) / gas (13.21%) /  
23 steam (5.65%).

1 Q. How did you allocate common costs between electric,  
2 gas and steam services, if they applied to O&R, as  
3 well as CECONY?

4 A. Administrative & General labor expenses were allocated  
5 electric (73.07%) / gas (15.04%) / steam (4.74%), with  
6 the remaining 7.15% pertaining to O&R. Administrative  
7 & General non-labor expenses were allocated electric  
8 (75.34%) / gas (12.26%) / steam (5.25%), with the  
9 remaining 7.15% pertaining to O&R.

10 Q. Does this conclude your testimony?

11 A. Yes, it does.
