I. INTRODUCTION

A. Introduction and Qualifications of Panel Members

Q. Would the members of the Gas Infrastructure, Operations and Supply Panel ("GIOSP" or "Panel") please state your names and business addresses?

A. Our names are Katherine Boden, Nicholas Inga, Amr Hassan, Robert Massoni, Christine Cummings, Ivan Kimball and Kathleen Trischitta.

Our business address is 4 Irving Place, New York, New York 10003.

Q. By whom are you employed and in what capacity?

A. We are all employed by Consolidated Edison Company of New York, Inc. ("Con Edison" or the "Company").

**(Boden)** I am the Senior Vice President of Gas Operations.

**(Hassan)** I am the Vice President of Gas Engineering.

**(Inga)** I am the Vice President of Gas Operations.

**(Cummings)** I am the General Manager of Project Management and Customer Programs.

**(Massoni)** I am the General Manager of Manhattan Gas Operations.

**(Kimball)** I am the Vice President of Energy Management.

**(Trischitta)** I am the Director of Commodity Operations.

Q. Please state your educational background.

A. **(Boden)** I hold a bachelor's degree in Electrical Engineering

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 from Polytechnic University, and a Master of Business  
2 Administration in Management from Hofstra University. I  
3 have also completed PTI's Power Technology Course, PTI's  
4 Electric Distribution System Engineering Course, and Gas  
5 Technology Institute's ("GTI") Registered Gas Distribution  
6 Professional Course.

7 **(Hassan)** I hold a bachelor's degree in Mechanical  
8 Engineering from the Cooper Union, and a Master of Business  
9 Administration in Finance from NYU Stern. I have also  
10 completed GTI's Registered Gas Distribution Professional  
11 Course.

12 **(Inga)** I hold a Bachelor of Science Degree in Mechanical  
13 Engineering from Polytechnic University, and a Master of  
14 Business Administration Degree in Corporate Finance from  
15 Fordham University. I have also completed PTI's Power  
16 Technology Transmission and Distribution Systems programs,  
17 and a Project Management certificate course through the  
18 Company's program with Stony Brook University.

19 **(Cummings)** I hold a Bachelor of Science degree in Economics  
20 from Queens College. I have also completed GTI's Registered  
21 Gas Distribution Professional Course.

22 **(Massoni)** I hold a bachelor's degree in Business Management  
23 from the University of Phoenix.

24 **(Kimball)** I hold a Bachelor of Science degree and a Master

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 of Science degree in Nuclear Engineering from Rensselaer  
2 Polytechnic Institute.

3 (**Trischitta**) I hold a bachelor's degree in Electrical  
4 Engineering from the State University of New York at Stony  
5 Brook.

6 Q. Please describe your work experience.

7 A. (**Boden**) I joined Consolidated Edison in 1990 as a Management  
8 Intern. I have held various positions of increasing  
9 responsibility in Construction, Operations, and Engineering  
10 in Electric Operations. In 2005, I was promoted to Vice  
11 President Manhattan Electric Operations a position that I  
12 held through 2010. In 2010 I was assigned to Gas Operations  
13 as Vice President. In 2017, I was assigned to Gas  
14 Engineering as Vice President. In 2021, I was promoted to  
15 my current position as Senior Vice Present Gas Operations.

16 (**Hassan**) In 1993, I joined the Company's Corporate Intern  
17 Program and have since held various positions of increasing  
18 responsibility mainly in Gas Operations, with some  
19 assignments in Energy Management and Corporate Planning.

20 In January 2013, I was promoted to General Manager Gas  
21 Operations, where I was responsible for the Construction and  
22 Distribution Services groups in regions of our service territory.

23 In November 2019, I became the Chief Distribution Engineer,  
24 and in September 2021, I assumed my current position as Vice

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 President of Gas Engineering.

2 **(Inga)** In 1992, I joined the Company's Corporate Intern  
3 Program and have since held various positions of increasing  
4 responsibility in Gas Operations, Treasury, and Shared  
5 Services. In April 2008, I was promoted to General Manager  
6 of Stores Operations, where I was responsible for the  
7 Company's supply inventory and order fulfillment processes.  
8 In June 2011, I was appointed to the position of Director  
9 of the Gas Conversion Group. In January 2015, I was  
10 assigned to Manhattan Gas Operations as General Manager. In  
11 2017, I assumed my current position as Vice President of Gas  
12 Operations.

13 **(Cummings)** In 2001, I joined the Company as a Management  
14 Associate following a previous career in global  
15 transportation, including roles in auditing and compliance,  
16 customer service, and corporate training. Since joining the  
17 Company, I have held various positions of increasing  
18 responsibility in Government Relations (Corporate Affairs)  
19 and the Gas Conversion Group. In January 2015, I was  
20 promoted to Director of the Gas Conversions Group. In 2018,  
21 I assumed my current position of General Manager of the  
22 Project Management and Customer Programs group.

23 **(Massoni)** In 1981, I joined the Company as a member of the  
24 union and have since held various positions of increasing

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 responsibility in Central Operations, Shared Services and  
2 Gas Operations. In March 2011, I was promoted to General  
3 Manager of Astoria Operations, where I was responsible for  
4 several groups including the Logistics Operations Control  
5 Center responsible for supporting the Company operating  
6 groups during storm response and recovery. In January  
7 2016, I was assigned to Bronx Gas Operations as the General  
8 Manger, and then in December 2017, moved to Manhattan as  
9 the General Manager of Gas Operations.

10 **(Kimball)** I joined Con Edison in 1987 as a Management Intern  
11 and held various positions of increasing responsibility  
12 until December 1998 when I was transferred to Consolidated  
13 Edison Energy, Inc. ("Con Edison Energy"). My  
14 responsibilities as Director of Asset Management included  
15 day-to-day scheduling, fuel procurement, electricity market  
16 sales and planning, and associated regulatory and accounting  
17 matters of generating facilities owned by Consolidated  
18 Edison Development, Inc. ("Con Edison Development") and  
19 other contracted generating facilities. In August 2008, I  
20 returned to Con Edison as Director of Electricity Supply.  
21 In that position I was responsible for day-to-day  
22 electricity supply operations, including the scheduling of  
23 generation and load bids with the New York Independent  
24 System Operator ("NYISO") and neighboring control areas;

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 developing the overall electric power procurement plans for  
2 full service customers; developing and implementing Con  
3 Edison's electric hedging program; strategically evaluating  
4 and participating in capacity and transmission congestion  
5 contract ("TCC") auctions; managing contractual rights with  
6 various non-utility generators; and processing monthly  
7 invoices for wholesale purchases and sales of capacity,  
8 energy, and TCCs for Con Edison and its affiliates, Orange  
9 and Rockland Utilities, Inc. ("ORU") and Rockland Electric  
10 Company ("RECO"). In July of 2012, I was promoted to my  
11 present position of Vice President of Energy Management.  
12 **(Trischitta)** I joined Con Edison in 1993 as a Management  
13 Intern in Gas Operations and have held various positions of  
14 increasing responsibility in Con Edison's Gas Operations,  
15 Fuel Supply, Unregulated Retail Operations and Energy  
16 Trading and Energy Management organizations. In 1995, I  
17 joined Fuel Supply's newly formed off-system sales  
18 organization with responsibility for developing and  
19 implementing some of the Company's first strategies for gas  
20 asset optimization. In 1997, I transferred to the newly  
21 formed unregulated subsidiary Con Edison Solutions and was  
22 responsible for the implementation of the retail gas  
23 business. Immediately prior to assuming my current position  
24 in January 2016, I was Managing Director of the Energy

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Trading organization within Con Edison Energy, another  
2 unregulated subsidiary of Con Edison, responsible for the  
3 oversight of electricity, gas, oil, and renewable energy  
4 credit trading.

5 Q. Please describe your current responsibilities.

6 A. **(Boden)** In my current position as Senior Vice President for  
7 Gas Operations, I am responsible for the overall Con Edison  
8 Gas Operations, Engineering, and Compliance and Quality  
9 Assessment groups.

10 **(Hassan)** In my current position as Vice President of Gas  
11 Engineering, I am responsible for the Technical Operations,  
12 Project Management & Customer Programs, Gas Distribution  
13 Engineering and Gas Transmission Engineering groups.

14 **(Inga)** In my current position as Vice President of Gas  
15 Operations I am responsible for leading and managing both  
16 Company employees and contractor personnel in the safe and  
17 effective execution of, primarily, the following work: leak  
18 response, leak repair, compliance inspections, main  
19 replacement, and service installations.

20 **(Cummings)** In my current position as General Manager of  
21 Project Management and Customer Programs Group, I am  
22 responsible for the overall management of the capital  
23 projects and programs and for leading and managing the

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Company's program to connect customers. As such, I am  
2 responsible for the engineering, operations planning, and  
3 customer liaison activities related to customer connections  
4 and safety-related inspection programs in customers'  
5 premises.

6 (**Massoni**) In my current position as General Manager of  
7 Manhattan Gas Operations I am responsible for leading and  
8 managing both Company employees and contractor personnel in  
9 the safe and effective execution of leak response, leak  
10 repair, compliance inspections, main replacement, and  
11 service installations, in Manhattan.

12 (**Kimball**) I am responsible for providing the overall  
13 strategic planning and direction for forecasting service  
14 area demand, evaluating electric, natural gas, and steam  
15 resource options, and procuring electricity, natural gas,  
16 oil and renewable attributes. I perform these functions  
17 for the customers of Con Edison, ORU, and RECO.

18 (**Trischitta**) In my current position as Director of Commodity  
19 Operations, I lead three sections comprised of (i) commodity  
20 purchasing and scheduling; (ii) gas planning and  
21 transportation services; (iii) commodity hedging. I am  
22 responsible for the functions of gas transportation  
23 services, gas transportation planning financial hedging,

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 physical procurement and associated scheduling of gas, fuel  
2 oil and renewable attributes. I oversee these areas for Con  
3 Edison and its corporate affiliate, ORU. I also oversee the  
4 procurement of gas and fuel oil for Con Edison-owned  
5 generation. Annual natural gas expenditures overseen by my  
6 areas are over \$700 million dollars per year.

7 Q. Do you belong to any professional organizations?

8 A. **(Boden)** Yes, I am a member of the Board of Solar One, the  
9 Board of a start-up called I-GIT (Institute of Gas  
10 Innovation and Technology) with Stony Brook University, the  
11 Board of the Northeast Gas Association ("NGA") and the  
12 American Gas Association ("AGA") Leadership Council. I am  
13 engaged in a number of research and development ("R&D")  
14 initiatives, most notably the Electric Power Research  
15 Institute ("EPRI")-GTI Low Carbon Resources Initiative. I  
16 am the outgoing president and member of the Executive  
17 Committee of the Society of Gas Lighting.

18 **(Hassan)** Yes, I am a member of the Operations Management  
19 Committee ("OMC") of the NGA, AGA Executive Pipeline Safety  
20 Management System ("PSMS") Committee and the GTI Operations  
21 Technology Development ("OTD") Board.

22 **(Inga)** Yes, I am currently a member of the AGA Operations  
23 Managing Committee and former Chair of the AGA Field

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Operations Committee. I am also a member of the Society of  
2 Gas Lighting, and a former member of various NGA technical  
3 committees, as well as the Gas Utilization Advisory Group.

4 **(Cummings)** Yes, I am currently a member of Women in  
5 Communications and Energy and a committee member of the AGA.

6 **(Massoni)** I am a member of the AGA Field Operations  
7 Committee and the Society of Gas Operators.

8 **(Kimball)** No.

9 **(Trischitta)** I am a member of Women in Communications and  
10 Energy and the Society of Gas Operators.

11 Q. Have any members of the Panel previously testified before  
12 the New York State Public Service Commission ("PSC" or  
13 "Commission")?

14 A. **(Boden)** Yes, I testified before the Commission in the 2004  
15 Electric Rate Case on the Infrastructure Investment Panel  
16 when I was the Chief Electric Distribution Engineer (Case  
17 04-E-0572) and in the previous gas rate case proceedings as  
18 part of the Gas Infrastructure and Operations Panel (Case  
19 16-G-0061 and Case 19-G-0066).

20 **(Hassan)** No, I have not testified previously before the  
21 Commission.

22 **(Inga)** Yes, I testified before the Commission in previous  
23 gas rate case proceedings as part of the Gas Infrastructure  
24 and Operations Panel (Case 13-G-0031, Case 16-G-0061 and

1 Case 19-G-0066).

2 **(Massoni)** No, I have not testified previously before the  
3 Commission.

4 **(Cummings)** Yes, I testified before the Commission in  
5 previous gas rate case proceedings as part of the Gas  
6 Infrastructure and Operations Panel (Case 13-G-0031, Case  
7 16-G-0061 and Case 19-G-0066).

8 **(Kimball)** Yes, I have testified before the Commission as the  
9 witness in previous electric and gas rate case proceedings  
10 (Cases 09-E-0428, 13-E-0030, 16-E-0060, 16-G-0061, 19-E-0065  
11 and 19-G-0066).

12 **(Trischitta)** Yes, I have testified before the Commission as  
13 the Gas Supply witness in cases 18-G-0068, 19-G-0066 and  
14 21-G-0073.

15 **B. Purpose of Filing**

16 Q. Please summarize and briefly explain the purpose of the  
17 Panel's testimony.

18 A. This is not a "business-as-usual" gas filing. Con Edison  
19 recognizes that use of its gas system must change over time  
20 in response to the State's policy to reduce greenhouse gas  
21 emissions and is moving in that direction. Our testimony  
22 describes our programs to reduce greenhouse gas emissions  
23 and to take steps to decarbonize the gas system by 2050.  
24 We will manage this transition and continue to provide

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 safe, reliable and resilient service to our 1.1 million  
2 existing customers. We will explain how our main  
3 replacement program not only provides important safety  
4 benefits, but also is an important contributor to reducing  
5 methane emissions. We will also explain what we are doing  
6 to enhance the program to provide even more methane  
7 emission reductions without sacrificing safety.

8 Additionally, to support electrification, we are the first  
9 utility in the State to propose removing many financial  
10 incentives for new gas customer connections. We are also  
11 recommending other changes to the gas tariff to align with  
12 the New York State Climate Leadership and Community  
13 Protection Act ("CLCPA") goals.

14 While we expect use of our gas system to decrease, we must  
15 make the investments necessary to continue to operate a  
16 safe gas system. Accordingly, this Panel will discuss the  
17 importance of, and overall need for, infrastructure,  
18 operations, and technology investments to enhance safety.

19 We emphasize here that the overwhelming majority of our gas  
20 capital investments are devoted to making our gas system  
21 safer, and we understand this is our core responsibility.  
22 As identified in Exhibit \_\_\_ (GIOSP-1), programs focusing  
23 on safety make up approximately 85% of the overall capital  
24 investment request (excluding Municipal Infrastructure).

1 We will also continue to serve our customers reliably,  
2 including any new customers who choose gas notwithstanding  
3 our electrification education and incentive programs.  
4 Finally, the Panel recommends the continuation of most of  
5 our current performance measures, with some modifications to  
6 better align the performance measures with the work the  
7 Company plans to undertake.

8 Q. What period does this testimony cover?

9 A. The Panel will present the projects and programs planned for  
10 the 12-month period ending December 31, 2023 ("Rate Year" or  
11 "RY1"); the following 12-month period ending December 31,  
12 2024 ("RY2"); and the following 12-month period ending  
13 December 31, 2025 ("RY3").

14 **C. Key Themes**

15 **1. Core**

16 Q. How does the Company plan to make investments that maintain  
17 a safe and reliable system?

18 A. We first want to emphasize that the overwhelming majority  
19 of our capital investments, and our increased operation and  
20 maintenance ("O&M") expense, are devoted to making our gas  
21 system safer. Our efforts to maintain a safe system are  
22 core to Gas Operations. Throughout the Company's Gas  
23 Operations projects, programs, and daily activities we  
24 strive to achieve high standards for planning, engineering,

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 execution, and response which support effective Company  
2 operations. This focus on core service enables the Company  
3 to accomplish our most important goal, making the gas  
4 system safe for our customers, employees, and the public.  
5 Core also includes our programs for maintaining reliability  
6 for our existing customers and any new customers who choose  
7 gas notwithstanding our electrification education and  
8 incentive programs.

9 Q. What are some examples of the types of capital programs the  
10 Company plans to undertake to maintain a safe system?

11 A. The Company's main replacement program, federally-mandated  
12 transmission projects, natural gas detector program, and  
13 regulator station improvement projects, are the initiatives  
14 that will serve to reduce system risk and improve customer  
15 and system safety. On a smaller scale, our reliability  
16 upgrade and winter load relief projects will also maintain  
17 reliability. We will discuss these later in this  
18 testimony.

19 Q. Please describe the core strategies the Company uses to  
20 continuously enhance safety, reduce risk and improve  
21 operational performance.

22 A. The Company's gas safety and risk reduction efforts span a  
23 wide array of programs and processes. Our risk reduction  
24 strategy focuses on programs that enhance prevention,

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 detection, and response to gas leaks. The American  
2 Petroleum Institute's Recommended Practice (API RP 1173)  
3 lays out the elements of an effective and holistic gas  
4 Pipeline Safety Management System ("PSMS") for pipeline  
5 operators. Through our PSMS, we follow a Plan-Do-Check-Act  
6 cycle for our daily activities, which promotes continuous  
7 improvement and feedback loops to our existing practices,  
8 procedures, and management systems. The application of  
9 this standard can be seen throughout our Distribution  
10 Integrity Management Program ("DIMP") and Transmission  
11 Integrity Management Program ("TIMP"). Our Integrity  
12 Management Programs support efforts to identify emerging  
13 areas of risk and allow the Company to take proactive steps  
14 to address them.

15 Q. How does the Company's Integrity Management Program reduce  
16 risk and enhance safety?

17 A. Both DIMP and TIMP use data analytics, root cause analysis,  
18 open communication, and standardization to examine risk and  
19 improve existing programs or create new ones.

20 Additionally, the Company incorporates lessons learned from  
21 industry events and compliance directives to further  
22 advance our processes and business practices.

23 DIMP analyzes the distribution system to target  
24 distribution mains and services for replacement,

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 refurbishment, or abandonment. TAMP focuses on  
2 transmission risk reduction and compliance programs,  
3 including identifying specific transmission mains for  
4 replacement. We discuss these and associated integrity  
5 management programs and projects in more detail below.

6 Q. In addition to the Company's traditional leak  
7 response/repair programs and efforts to identify and  
8 prioritize leaks emitting the most gas, what advanced leak  
9 detection technology is the Company investing in?

10 A. The Company began installing remote Natural Gas Detectors  
11 ("NGDs") inside customers' homes or buildings near where  
12 the gas pipe enters the building in 2018. The Company is  
13 proposing to continue this program, with the installation  
14 of additional Advanced Metering Infrastructure ("AMI")  
15 enabled NGDs. This will allow for the Company to complete  
16 initial deployment of all NGDs to all buildings that opt-in  
17 by the end of a three-year rate plan, if adopted. The  
18 Company will install these detectors indoors. They are  
19 designed to detect natural gas and send an alarm to our Gas  
20 Emergency Response Center ("GERC"). The GERC then contacts  
21 the fire department and dispatches a Company emergency  
22 response crew. The use of these detectors will be for both  
23 indoor and outdoor meter configurations. Detection of gas  
24 leaks through state-of-the-art technology and public

1 awareness is critical to our comprehensive approach to risk  
2 management and commitment to public safety. Through  
3 early/enhanced leak detection, we can respond and remediate  
4 quickly, thereby reducing risk, keeping the public safe,  
5 and protecting the environment by reducing methane  
6 emissions.

7 Another example of the Company's investment in advanced  
8 leak detection technology is the Piccaro Surveyor, which  
9 the Company currently proposes to use for a new high  
10 emissions leakage survey and will be discussed in more  
11 detail below.

12 Q. Have other safety regulators acknowledged the benefits of  
13 NGDs?

14 A. The installation of NGDs is considered a program with very  
15 high safety benefits. The National Transportation Safety  
16 Board ("NTSB") has listed the installation of methane-  
17 detection systems in residential occupancies as an item on  
18 their "Most Wanted List of Transportation Safety  
19 Improvements."<sup>1</sup>

## 20 **2. Clean and Resilient**

21 Q. Why is the Company focusing on reducing methane emissions?

22 A. Natural gas contains methane, a greenhouse gas that once

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 emitted into the air is 86 times more potent than carbon  
2 dioxide, if modeled on a 20-year time frame used in the  
3 CLCPA. Methane is the largest component of natural gas,  
4 and it can be emitted during normal operating activities  
5 during transportation, or prior to combustion. Known as  
6 fugitive emissions, the Company is committed to reducing  
7 these emissions whenever possible.

8 Q. How do the Company's investments advance its clean and  
9 resilience goals?

10 A. To achieve the Company's Clean Energy Commitment as well as  
11 help the State comply with CLCPA requirements, we are  
12 implementing or proposing to implement a number of  
13 greenhouse gas emission reduction initiatives. The  
14 following clean investments are significant in limiting the  
15 amount of natural gas emissions into the environment:

16 - Main Replacement Program & Service Replacement

- 17 o Abandons or replaces the most leak prone assets on the  
18 gas system, which reduces fugitive emissions; this  
19 program is responsible for reducing our emissions by  
20 53% from 1990 to 2020 based on the methodology  
21 required by the EPA for companies to use to calculate  
22 their emissions. Given that the goal of the CLCPA is  
23 to reduce overall GHG emissions by 40% by 2030, we can

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 say that the contribution to that goal from our main  
2 replacement program is far outpacing the CLCPA goal.  
3 Additionally, the newly constructed replacement pipes  
4 will provide reliability for our existing customers  
5 and can accommodate blended or completely low-carbon  
6 fuels in the future.

- 7 o Use of non-pipeline alternatives instead of main  
8 replacement when possible removes potential future  
9 emissions by downsizing the system;

10 - Vacuum Purging Technology

- 11 o Captures gas typically lost to the atmosphere during  
12 purging of gas lines and reintroduces it back into the  
13 gas system;

14 - Natural Gas Detectors and Leak Alarms

- 15 o Installation of NGDs near where the gas pipe enters  
16 the building is another resource to allow us to find  
17 gas leaks more quickly, thereby reducing emissions and  
18 keeping customers safe;

19 - Local Renewable Natural Gas ("RNG")

- 20 o Natural gas supply from non-fossil sources (e.g., food  
21 waste) that reduces the greenhouse gas impact; and

22 - Certified Natural Gas

- 23 o Pilot the procurement of natural gas that is certified  
24 to have followed the best environmental practices,

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 including lower emissions, in production.

2 Q. In what other ways is the Company furthering its Clean  
3 Energy Commitment through its gas operations?

4 A. Besides the Company's capital projects, there are also  
5 tools, processes, and programs in place to help make our  
6 system safer that also support the reduction of natural gas  
7 emissions:

8 - Leak Detection

9 o Monthly leakage surveys of our gas mains help find and  
10 address leaks in a rapid manner. The Company's  
11 program provides 11 more leak surveys per year than  
12 required under Commission regulations;

13 - Leak Response and Repair

14 o Goals to repair 85% of leaks within 60 days, which  
15 includes leaks the Company is not obligated to repair  
16 under Commission regulations.

17 - High Emitter Survey

18 o Development of a new high emitter surveillance program  
19 to find leaks, using advanced leak detection tools  
20 with the highest calculated standard cubic feet per  
21 hour ("SCFH"), and prioritize them for repair.

22 Currently, the Picarro Surveyor technology is being  
23 utilized for this work;

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

- 1 - Internally coated pipe
- 2 o Prevents the loss of odor to newly installed steel
- 3 mains. This significantly reduces the pickling
- 4 process which would purge gas to the atmosphere, in
- 5 order to odorize the main;
- 6 - Purge Burners
- 7 o Burn off planned natural gas releases (combusting
- 8 natural gas that would have been released to the
- 9 atmosphere reduces the greenhouse gases associated
- 10 with these releases due to the higher global warming
- 11 potential of methane); and
- 12 - Damage Prevention Plan
- 13 o Plan to reduce the number of damages, which in turn
- 14 would reduce the number of unplanned natural gas
- 15 releases.
- 16 Q. Is the Company also making investments to improve its
- 17 resiliency to extreme weather events?
- 18 A. In addition to the greenhouse gas reductions, the Company
- 19 recognizes that systems built today need to be resilient in
- 20 the face of more frequent and severe weather than our
- 21 service territory has experienced in the past. To account
- 22 for these risks, the Company has expanded its flood zone
- 23 criteria to identify and target additional gas assets with

1 the greatest risk of flooding and water infiltration.  
2 These assets will be replaced as part of our main  
3 replacement program. Additionally, the Company's Climate  
4 Change Planning and Design Guideline is being used in  
5 conjunction with our specifications to design and plan  
6 projects to the projected future changes in climate. The  
7 Company is continually reviewing new data and information  
8 to determine if additional resiliency investments may be  
9 required.

10 The Company is also addressing environmental change and  
11 resiliency by incorporating higher flood elevation  
12 considerations into our design criteria, with the Company's  
13 Climate Change Planning and Design Guideline.

14 Additionally, the Main Replacement Program will support  
15 climate resilience activities by replacing low pressure gas  
16 mains in flood-prone areas, using a FEMA+3 feet area. The  
17 Company will increase our targeted mileage of flood-prone  
18 gas main replacement per year.

### 19 **3. Enhancing the Customer Experience**

20 Q. How will the Company's planned investments enhance the  
21 customer experience?

22 A. The customer experience will be enhanced through new  
23 technology and tools designed to provide customers with the

1 information they need to make effective decisions about  
2 their energy services. In order to align with the  
3 corporate, city and state's clean energy initiatives, all  
4 potential new gas customers will be offered information  
5 about clean alternatives to natural gas.

6 The Company is also proposing an investment in a new Gas  
7 Outage Management System. When implemented, this new  
8 system is expected to help identify outages quicker, track  
9 outages with advanced technology, improve efficiency in the  
10 restoration process, and provide timely and accurate  
11 information to customers when they need it most.

12 **D. Gas System Description**

13 Q. Please provide a high-level overview of the Company's  
14 natural gas transmission and distribution system.

15 A. A gas distributor since 1823, Con Edison currently provides  
16 natural gas service to more than 1.1 million customers in  
17 Manhattan, the Bronx, parts of Queens, and Westchester  
18 County. Con Edison manages a large, complex underground  
19 natural gas transmission and distribution system. This  
20 system contains approximately 4,400 total miles of gas main  
21 with approximately 375,000 service pipes that transport more  
22 than 330 million dekatherms of natural gas each year. The  
23 approximately 4,400 miles of gas mains consist of 97 miles

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 of mains operating at pressures greater than 125 psig and  
2 4,300 miles of distribution mains operating at pressures  
3 less than 100 psig. Approximately 300 miles are large-  
4 diameter distribution mains, greater than or equal to 16  
5 inches that mostly connect the transmission mains to  
6 approximately 4,000 miles of smaller-diameter distribution  
7 mains.

8 Q. Please provide a general description of the parameters  
9 within which the Company designs its gas system.

10 A. We design our gas transmission and distribution system to  
11 meet state and federal gas safety requirements and the load  
12 requirements of all firm customers 365 days per year, 24  
13 hours per day, based on the forecasted peak hourly load.

14 Q. What are the Company's gas infrastructure replacement  
15 objectives.

16 A. The Company's primary replacement objectives are to reduce  
17 risk, maintain safety, enhance reliability and resilience,  
18 and reduce fugitive methane emissions from the distribution  
19 system. By replacing leak prone pipe, we reduce the number  
20 of cracks and corrosion that could cause methane leaks.  
21 This provides an obvious safety advantage, reduces outages  
22 caused by flooding and, as discussed earlier, reduces  
23 emissions.

24 Additionally, certain projects, such as the Transmission

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 replacement items, are required for regulatory compliance,  
2 in addition to risk mitigation.

3 Q. How does the Company implement these objectives?

4 A. One method of reducing risk is our distribution main  
5 replacement program ("MRP"), which proactively replaces 12-  
6 inch and smaller cast iron, wrought iron, and unprotected  
7 steel mains.

8 In addition to replacing the leak prone pipe, we have an  
9 aggressive leak management program whereby we routinely  
10 seek, find and fix leaks in a timely fashion, rather than  
11 waiting to prioritize lesser hazardous leaks (*i.e.*, Type  
12 3's) with future main replacement plans.

13 The Company seeks to combine as much of this work together  
14 with infrastructure replacement, in order to minimize costs  
15 to our ratepayers; however, with a multi-year MRP ending by  
16 2040, and a need to safeguard our environment now, we  
17 cannot allow less hazardous leaks to go unchecked and  
18 unrepaired. There will be more discussion of our safety  
19 and environmental risk reduction efforts through  
20 inspections and leak management programs in subsequent  
21 sections of this testimony.

22 **II. CAPITAL AND O&M SUMMARY INFORMATION**

23 Q. What is the Company's projected capital investment for the  
24 three rate years?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 A. We are planning to invest \$905.1 million in RY1, \$924.2  
2 million in RY2, and \$890.2 million in RY3, excluding  
3 Municipal Infrastructure expenditures.

4 Q. What are the Company's projected O&M expenditures for the  
5 three rate years?

6 A. We are planning to spend \$179.34 million in RY1, \$182.12  
7 million in RY2 and \$184.65 million in RY3. Of these  
8 amounts, O&M program changes account for a \$40.1 million  
9 increase in RY1, with decreases of \$811,000 in RY2 and \$1.1  
10 million in RY3.

11 Q. Was the document entitled "CONSOLIDATED EDISON COMPANY OF  
12 NEW YORK, INC. 2023-2025 GAS CAPITAL PROGRAMS" prepared  
13 under the Panel's direction and supervision?

14 A. Yes, it was. This is the document which has been  
15 identified as Exhibit \_\_\_\_ (GIOSP-1).

16 Q. Please describe this exhibit.

17 A. This exhibit summarizes Gas Operations' three-year capital  
18 expenditures for RY1, RY2, and RY3. These capital  
19 expenditures are organized into the functional areas shown  
20 on the exhibit. This exhibit also includes the "White  
21 Papers" associated with the three-year capital  
22 expenditures. The white papers provide the description of  
23 work, justification, alternatives, milestones, benefits and

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 funding requirements for each capital program and project.

2 Q. How did you organize your testimony to address the programs  
3 and projects in Exhibits \_\_\_\_ (GIOSP-1)?

4 A. The testimony is broken down into the main areas set forth  
5 below:

6 • Distribution System Improvement Programs;

7 • Transmission Programs and Projects;

8 • Customer Connections;

9 • Technical Operations; and

10 • Gas Information Technology.

11 Q. Have you prepared an exhibit entitled "GAS OPERATIONS - O&M  
12 CHANGES BY CATEGORY"?

13 A. Yes, we have.

14 Q. Was this exhibit prepared under your supervision and  
15 direction?

16 A. Yes, it was. This is the document which has been  
17 identified as Exhibit \_\_\_\_ (GIOSP-2).

18 Q. Please explain what is reflected in Exhibit \_\_\_\_ (GIOSP-2).

19 A. This exhibit shows the Company's incremental O&M  
20 expenditures, compared to the 12-month period ended  
21 September 30, 2021 ("Historic Year"), for RY1, RY2 and RY3.

22 Q. Do the Company's capital and O&M funding projections  
23 include funding for municipal infrastructure projects?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 A. Yes, they do. However, these Public  
2 Improvement/Interference expenditures are not addressed in  
3 this testimony. These expenditures instead are addressed  
4 in separate testimony provided by the Company's Municipal  
5 Infrastructure Support Panel.

6 **III. ANNUAL CAPITAL PROGRAMS**

7 Q. Please summarize the gas capital request.

8 A. The Panel will identify major capital programs and projects  
9 to be conducted during the rate years. Each program and  
10 project is aligned with an exhibit or associated "white  
11 paper" that describes the scope of work, cost, schedule,  
12 and justification. As shown in Exhibit \_\_\_ (GIOSP-1), the  
13 Company projects overall capital expenditures are: \$905.1  
14 million in RY1, \$924.2 million in RY2, and \$890.2 million  
15 in RY3, excluding Municipal Infrastructure expenditures.  
16 This will provide for capital investments in:

- 17 • Programs/projects to reduce risk, enhance safety, and  
18 reduce methane emissions including main replacement  
19 efforts to eliminate 12-inch-and-under cast iron and  
20 unprotected steel gas main over the next 20 years;
- 21 • Programs/projects to improve system reliability,  
22 including Winter Load Relief and various system and  
23 regulator station upgrades;

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

- 1       • Transmission project and program investments to continue  
2           pipeline integrity management and meet regulatory  
3           requirements; and
- 4       • Information technology projects to reduce administrative  
5           and operational risk and achieve improved efficiencies  
6           and management of operations, programs and projects.

7 Q. Please describe the nature of the gas capital expenditures  
8 the Company is planning, why the work is necessary, and the  
9 major drivers of the projected increase in capital  
10 expenditures.

11 A. The Company recognizes that use of its gas system must  
12 change over time and describes herein the programs it is  
13 implementing as a result. At the same time, Con Edison  
14 must continue to keep its system safe. The overwhelming  
15 majority of the Company's gas system investments are to  
16 enhance the safety of its system. This entails programs to  
17 replace and/or upgrade its piping, equipment, and  
18 facilities. As shown in Exhibit \_\_\_\_ (GIOSP-1), the major  
19 drivers for the increase in gas capital expenditures in RY1  
20 include the Leak Prone Main and Service Replacement  
21 Programs and Transmission Projects. These and other  
22 projects and programs are described below within the five  
23 program areas, *i.e.*, distribution, transmission, customer

1 connections, technical operations and information  
2 technology.

3 **A. DISTRIBUTION SYSTEM IMPROVEMENT PROGRAMS**

4 **1. Distribution Integrity**

5 Q. Describe the Company's DIMP.

6 A. The purpose of DIMP is to enhance public and employee safety  
7 by identifying gas distribution pipeline integrity risks and  
8 implementing mitigating measures to address them. Some of  
9 these risks include distribution system leaks, excavation  
10 damages, and human error. The Company uses DIMP to enhance  
11 safety and create capital programs to improve safety.

12 Q. How does DIMP assess risk?

13 A. DIMP enhances safety by identifying and reducing  
14 distribution pipeline integrity risks through system  
15 analysis and by monitoring potential threats identified by  
16 internal subject matter experts ("SMEs"), regulators, gas  
17 associations and peers. Risk analysis is an ongoing process  
18 of understanding what factors affect the degree of risk  
19 posed by threats. To further enhance this process, starting  
20 in 2018, the Company moved from an evaluation process that  
21 considered risks separately under DIMP and the MRP Model,  
22 respectively, to a single consolidated risk model. The  
23 Company reviews top gas safety projects for changes and

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 considers further actions such as reprioritizing our  
2 current replacement schedule and creating new programs for  
3 mitigating or eliminating emergent risks.

4 Q. How does DIMP drive capital investments?

5 A. By properly collecting, documenting, and analyzing  
6 information and data about our distribution system, DIMP  
7 informs the Company's decisions on how to reduce risk  
8 through capital investments. One example is DIMP has  
9 identified leaks on small-diameter cast iron, wrought iron,  
10 and steel mains to be a threat, which is addressed through  
11 our Main Replacement Program, described further below.

12 Q. What is the Company's strategy for the Main Replacement  
13 Program?

14 A. The Company uses a risk-based approach to prioritize  
15 elimination of its inventory of 12-inch and smaller cast  
16 iron, wrought iron, and unprotected steel mains. Work  
17 falls into two categories: Planned and Emergent.

18 1. Planned - The Company uses the DIMP risk model to  
19 assess risk and select main replacement projects. Planned  
20 projects mainly consist of highly ranked segments and flood  
21 prone pipe. The program will support decarbonization of  
22 the gas system by targeting simplification opportunities  
23 that will decrease the footprint of the distribution gas  
24 system, as well as focusing on the abandonment of cast iron

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 and wrought iron pipe.

2 2. Emergent - The Company identifies circumstances where  
3 leak-prone main replacement is required for reasons other  
4 than the risk model selection. These types of projects are  
5 outside of the Planned work, as described above, but support  
6 overall risk reduction efforts and can lead to cost savings.  
7 For example, the Company looks to proactively replace all  
8 12-inch and smaller cast iron, wrought iron, and unprotected  
9 steel on a street prior to its scheduled paving date to  
10 reduce cost and prevent the need to excavate a newly paved  
11 street, should a leak occur. Some other examples of  
12 emergent conditions are leaks that cannot be repaired, cast  
13 iron encroachments, and public improvement projects.

14 Q. How does the Company try to achieve efficiencies in its  
15 main replacement program?

16 A. The Company proactively seeks opportunities to improve the  
17 reliability of our gas system and address other planned work  
18 streams in conjunction with this program. Such work  
19 includes winter load relief, customer connections, isolation  
20 valve installation, regulator station installations, and  
21 other pipework done in association with these projects.  
22 This allows us to integrate schedules so that all work  
23 streams can be efficiently planned and completed

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 concurrently. This enhanced coordination reduces the  
2 impact to customers of repeated excavations and gas work.

3 Q. What are the proposed goals for each Rate Year?

4 A. We propose to replace 85 miles of main in each of the three  
5 rate years. For each rate year, we will replace 80 miles  
6 of planned work and five miles of conjunctional work, such  
7 as municipal infrastructure work that eliminates leak prone  
8 pipe. These goals are in line with our 20-year replacement  
9 strategy to be completed by 2040.

10 Q. Why has the Company reduced its annual main replacement  
11 target from the 90-mile annual target in effect for the  
12 last gas rate plan?

13 A. We believe this modest reduction improves safety while  
14 accounting for expected decreases in system use as  
15 electrification increases. We believe it is imperative to  
16 continue to replace high-risk pipe at a rigorous pace. At  
17 the same time, we recognize that we must prepare for  
18 electrification and look for opportunities to reduce risk  
19 by retiring rather than replacing pipe. Moreover, slightly  
20 modifying our targets in this filing mitigates overall  
21 customer costs without compromising our ability to complete  
22 the MRP by 2040. Specifically, our proposal reduces the  
23 requested gas revenue requirement by approximately \$23.2  
24 million per rate year.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Q. Is the Company adjusting its main replacement program  
2 strategy to focus more on emissions reductions?

3 A. Yes. We are adjusting our strategy to maintain our focus  
4 on safety while emphasizing reducing methane leaks. Going  
5 forward, the Company will preferentially select cast  
6 iron/wrought iron replacement, over bare steel, when risk  
7 factors are equivalent. This shift could result in the  
8 Company reducing more methane emissions because the  
9 emissions factor for cast iron is greater than that of bare  
10 steel.

11 Q. Is the Company taking other steps to reduce emissions  
12 through its main replacement program?

13 A. Yes. We are increasing our efforts to simplify the gas  
14 distribution system, which will serve to accelerate our  
15 methane emissions reduction. Simplification projects allow  
16 us to abandon leak-prone assets that will not be required  
17 in the long-term, given our expectations of lower system  
18 demand as a result of electrification to meet the State's  
19 CLCPA requirements.

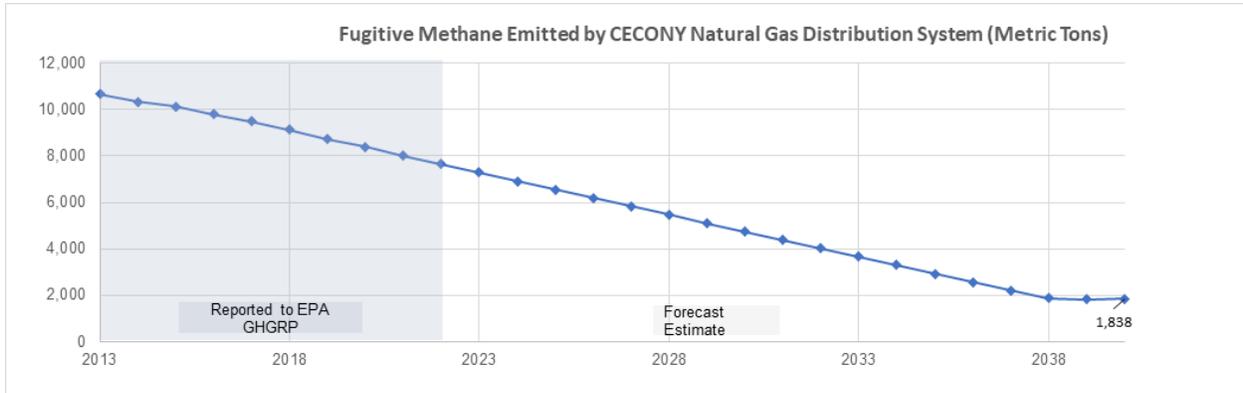

20 Q. Can you quantify the emissions reductions from the MRP?

21 A. Yes. The reduction in emissions associated with these  
22 programs is quantifiable through the use of Title 40 - CFR  
23 98. Subpart W. The projected annual reduction is shown in

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
 GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

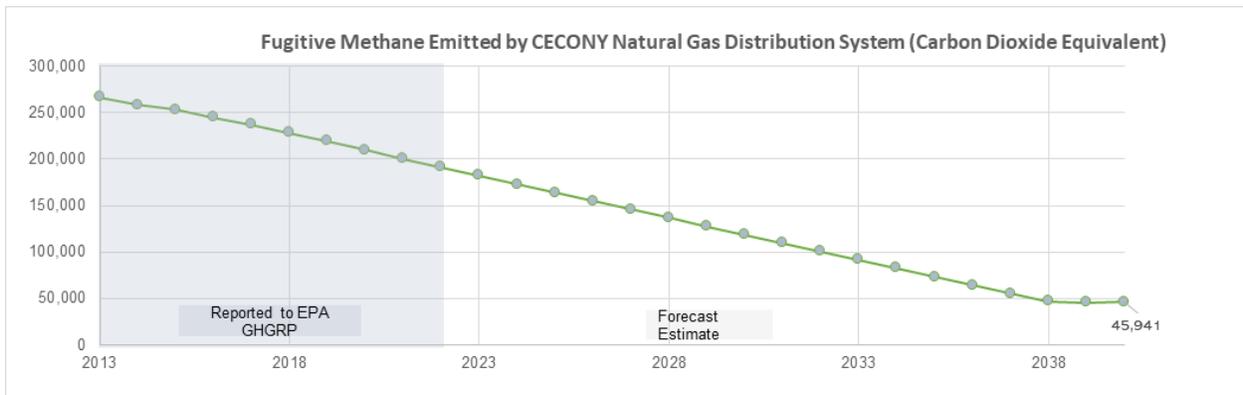

1 the charts below:

2 Table 1: Projected Fugitive Methane Emissions-CECONY

3

4

5

6 Q. What are the projected costs of the Main Replacement Program  
 7 for each rate year?

8 A. The Company is projecting the following expenditures for  
 9 this program: \$404.8 million in RY1, \$425.2 million in RY2,  
 10 and \$442.2 million in RY3, as set forth in Exhibit (GIOSP-  
 11 1), which accounts for 45% in RY1, 46% in RY2 and 50% in  
 12 RY3 of the total gas capital investment, excluding  
 13 Municipal Infrastructure projects.

14 Q. Does the Company have any other proposals related to its

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Main Replacement Program?

2 A. Yes, the Company proposes to capitalize all main  
3 installations, regardless of length. Currently, segments  
4 that are less than 25 feet are expensed as O&M.

5 Q. Has the Commission approved a similar proposal as part of  
6 any other NYS gas utility rate plan?

7 A. Yes, the Commission recently approved a similar proposal in  
8 National Grid's gas rate plan (Case 19-G-0309, et. al).

9 Q. Does the Company propose any additional investments that  
10 will reduce methane emissions?

11 A. Yes. The Company is introducing a new Methane Capture  
12 Technology program, which will procure and deploy Zero  
13 Emissions Vacuum ("ZEVAC") units to construction crews.  
14 Currently, certain construction activities release natural gas  
15 to the atmosphere. The ZEVAC unit can be used to mitigate  
16 methane emissions on larger volume pipe replacements for pipes  
17 operating at greater than or equal to medium pressure (15 psig  
18 MAOP). The ZEVAC units pump the gas out of the isolated pipe  
19 segment being replaced and into the portion of pipe remaining  
20 in service. The Company plans for full deployment by the end  
21 of 2026. The Company is projecting the following expenditure  
22 for this program: \$1 million in each of RY1, RY2 and RY3.

23 Q. Is the Company proposing to continue the Safety and  
24 Reliability Surcharge Mechanism ("SRSM") to recover the

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 carrying costs on incremental capital expenditures and O&M  
2 expenses associated with the replacement of main above the  
3 targets established for the Main Replacement Program?

4 A. Yes, the Company proposes to continue the SRSM for the Main  
5 Replacement Program.

6 Q. Are there additional costs not accounted for in this  
7 expenditure?

8 A. Yes. On January 12, 2022, the Company was informed that  
9 Urbint, the company that provides our current MRP modeling  
10 software, has made the strategic decision to no longer  
11 provide maintenance and support services for their Optimain  
12 products. Maintenance and support services will be  
13 discontinued on March 31, 2023. As a result of this  
14 announcement, the Company must seek an alternative software  
15 application to fill our MRP risk modelling needs. The cost  
16 of procuring an alternative software application is  
17 currently unknown and not accounted for in the costs  
18 presented for the Main Replacement Program. Therefore, the  
19 Company plans to determine the costs associated with this  
20 new project and present this information during the update  
21 phase of the proceeding.

22 **2. System Reliability**

23 Q. Are you planning any other programs that will address risk

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 on the distribution system?

2 A. Yes. We plan to continue our gas system reliability  
3 improvement programs, which are described in the Company  
4 submitted White Papers. Some key programs include the Gas  
5 Reliability Improvement Program and Winter Load Relief.  
6 Currently our design criteria for regulator stations  
7 includes installation of components to prevent over  
8 pressurization of our gas distribution system. We also  
9 plan on initiating a program to install additional  
10 equipment to provide redundancy to the existing over  
11 pressure protection ("OPP") components, which is discussed  
12 later in this testimony. The benefits of the Company's  
13 proposed gas system reliability programs are described in  
14 more detail below.

15 *Improve safety/reduce risk:* The Gas Distribution System  
16 Over Pressure Protection improvement program will improve  
17 public safety and continue to reduce the risk of an over  
18 pressurization event by employing secondary OPP technology  
19 on our gas distribution system. Where regulator stations  
20 employ primary and monitor regulator design, this program  
21 will seek to eliminate common mode of failure by providing  
22 added protection, as outlined in the Protecting Our  
23 Infrastructure of Pipelines and Enhancing Safety ("PIPES")

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Act, Section 206.<sup>2</sup> An over pressurization downstream of the  
2 regulator stations may create leaks on the system or, in  
3 the worst case, put life and property in imminent danger.  
4 This program increases public safety, and at the same time  
5 provides environmental benefits by minimizing methane  
6 emissions.

7 *Operational excellence:* Supply mains facilitate the  
8 delivery of natural gas to every customer on the Con Edison  
9 gas system. Improvements to these facilities are needed to  
10 enable the Company to continue to deliver reliable gas  
11 service to all our customers on the coldest winter days.  
12 This will be accomplished largely by planned capital  
13 programs, including the Winter Load Relief and the Gas  
14 Reliability Improvement Programs.

15 *Customer experience:* Programs such as Winter Load Relief  
16 and the Regulator Station Revamp Programs are designed for  
17 the natural gas system to be able to accommodate required  
18 gas pressures for existing customers as well as provide  
19 reliable service with minimal interruption, thus enhancing  
20 the customer experience.

21 Q. Please describe the planned work for each of the above-  
22 listed programs, the costs projected in RY1, RY2 and RY3,

---

<sup>2</sup> PIPES Act of 2020, S. 2299, 116th Cong. (2019)

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 as well as additional details regarding the benefits of  
2 this work.

3 A. 1. Winter Load Relief - To maintain system reliability,  
4 Con Edison needs to reinforce our systems to achieve the  
5 minimum pressures required to serve customers. We must  
6 also reinforce our system to maintain minimum inlet  
7 pressures to our low and medium-pressure regulator  
8 stations. Using our annual network analysis model  
9 validation process, we project anticipated system loads and  
10 system performance for the following winter season. Where  
11 marginal pressures are anticipated, areas are identified  
12 for additional reinforcement and can be addressed through  
13 specific recommended projects under the Winter Load Relief  
14 program. These projects typically consist of installing  
15 new mains to make ties or replacing smaller mains with  
16 larger diameter mains to eliminate area constraints. The  
17 Company is projecting the following expenditures for Winter  
18 Load Relief related projects: \$13.4 million for RY1, \$14.0  
19 million for RY2 and \$14.3 million for RY3, as set forth in  
20 Exhibit \_\_\_\_ (GIOSP-1).

21 2. Gas Reliability Improvement Program - Our priority is  
22 to avoid large-scale outages on our system during peak  
23 demand periods. To address this potentially devastating  
24 and costly risk, system reinforcements such as main ties,

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 or regulator station upsizing are needed, specifically  
2 targeting vulnerable segments, more described in the  
3 whitepaper. The Company is projecting the following  
4 expenditures for the Gas Reliability Improvement Program:  
5 \$10.1 million for RY1, \$10.7 million for RY2 and \$10.7  
6 million for RY3, as set forth in Exhibit \_\_\_\_ (GIOSP-1).

7 **B. TRANSMISSION PROGRAMS AND PROJECTS**

8 Q. Please describe Con Edison's gas facilities, which operate  
9 above 125 psig.

10 A. Con Edison has 97 miles of 6-inch to 36-inch diameter mains  
11 in Manhattan, Queens, the Bronx, and Westchester County,  
12 that operate above 125 psig. For purposes of this  
13 testimony, these pipelines will be referred to as  
14 transmission. These mains, most of which were installed  
15 between 1947 and 1973, have a maximum allowable operating  
16 pressure of either 245 psig or 350 psig. The transmission  
17 facilities are supplied by seven gate stations from four  
18 pipeline companies. In addition, most of these facilities  
19 are part of a larger regional network called the New York  
20 Facilities ("NYF") System, which is jointly owned and used  
21 by Con Edison and National Grid. Con Edison's system is  
22 connected to National Grid's system at two bi-directional  
23 metering stations, as well as five metered take-off  
24 locations in Queens.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Q. Please describe the capital investment that is planned for  
2 the gas transmission facilities.

3 A. As presented in Exhibit \_\_\_(GIOSP-1), the following  
4 expenditures are related to transmission programs and  
5 projects: \$115.3 million in RY1, \$133.8 million in RY2 and  
6 \$112.8 million in RY3. These investments are required to  
7 comply with the new state and federal Transmission MAOP  
8 Reconfirmation Rule (MAOP Rule, part 1).

9 **1. Transmission Risk Reduction and Reliability**

10 Q. Please describe each of the gas transmission capital  
11 programs and projects that are planned for the 2023-2025  
12 period and how they address safety and reliability.

13 A. The gas transmission capital programs are as follows:

14 1. Installation of Remotely Operating Valves ("ROVs") -

15 This program provides for rapid isolation of a compromised  
16 section of the transmission facilities; rapid isolation of  
17 transmission facilities at river and tunnel crossings and  
18 at the outlet of gate stations; and rapid separation of  
19 intersecting transmission mains at tee or branch locations.

20 The ROV program consists of converting existing  
21 transmission valves or installing new ROVs to meet the  
22 future ROV design criteria, specifically targeting those  
23 transmission mains that are not slated for pipeline

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 replacement. Once the program is complete, the closure of  
2 any two consecutive ROVs will not negatively impact supply  
3 mains or the distribution system on an average winter day.  
4 Five total ROVs are required to meet System Design  
5 Criteria, as part of this program. All will be installed  
6 by the end of RY3. The Company projects the following  
7 expenditures for this program: \$ 3.1 million in RY1; \$3.3  
8 million in RY2; and \$3.3 million in RY3, as set forth in  
9 Exhibit \_\_\_\_ (GIOSP-1).

10 2. The Newtown Creek Metering Station - This is a capital  
11 project that addresses a facility constructed in 1951 that  
12 contains older piping configurations and obsolete metering  
13 equipment that is maintenance intensive. One of those  
14 pieces of new equipment is the addition of a new control  
15 valve that would allow Con Edison to control the flow rate  
16 to National Grid. Our ability to control flow to National  
17 Grid would allow us to regulate the Con Edison portion of  
18 the gas transmission system and protect the Con Edison  
19 portion of the gas transmission system from abnormal  
20 operating conditions and maintain flow to the maximums  
21 permitted under the New York Facilities agreement. The  
22 Company forecasts the following expenditures for this  
23 project: \$15.6 million in RY2; and \$14.5 million in RY3,  
24 as set forth in Exhibit \_\_\_\_ (GIOSP-1).

1        3. Transco Gate Station Over Pressure Protection - This  
2        project addresses the installation of Con Edison owned OPP  
3        at the following Transco facilities: Transco's Upper  
4        Manhattan Gate Station located in Manhattan and Transco's  
5        Central Manhattan gate station located in New Jersey. The  
6        Con Edison OPP will provide for the safe operation of the  
7        gas transmission system if Transco's OPP device at any of  
8        the two gate stations fails and the pipeline's operating  
9        pressure cannot be controlled. This project will also  
10       include installing new piping from the Transco-Con Edison  
11       demarcation point up to the outlet of the ROV with piping  
12       for the same MAOP as the Transco station inlet piping. The  
13       Company forecasts the following expenditures for these  
14       projects: \$10 million in RY1; and \$10.0 million in RY2, as  
15       set forth in Exhibit \_\_\_\_ (GIOSP-1).

16       4. Knollwood Overpressure Protection Project - This project  
17       addresses the installation of Con Edison owned OPP at the  
18       Tennessee Knollwood Gate Station. Upgrades at the  
19       Knollwood station are to be completed in 2022, after which,  
20       this OPP project can commence. The Con Edison OPP will  
21       provide for the safe operation of the gas transmission  
22       system in the event that the pipeline's OPP device fails  
23       and the pipeline's operating pressure cannot be controlled.  
24       This project will also include the installation of new

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 piping from the Tennessee-Con Edison demarcation point up  
2 to the outlet of the ROV, as set forth in Exhibit \_\_\_\_  
3 (GIOSP-1).

4 5-9. MAOP Rule Replacement - The Company has five projects  
5 required for compliance with federal and state law. These  
6 projects will replace transmission infrastructure installed  
7 using legacy construction practices, for which traceable,  
8 verifiable and complete records related to the pipeline's  
9 MAOP show that the pipeline was not pressure tested to the  
10 new federal and state requirements.

11 Pursuant to federal and state regulations, "transmission  
12 lines" are defined as pipelines that operate at a hoop  
13 stress of 20 percent or more of Specified Minimum Yield  
14 Strength ("SMYS") (see 49 CFR 192.3). The Company plans to  
15 replace vintage federally defined transmission pipelines  
16 with new facilities that will improve safety and  
17 reliability by operating at less than 20 percent SMYS. Loss  
18 of supply from these facilities would otherwise cause  
19 widespread customer outages.

20 In addition to complying with federal and state law, these  
21 projects will improve safety through the retirement of  
22 certain high-risk assets, including: a compressor station,  
23 certain regulators and a super monitor.

24 The Company forecasts \$99.8 million in RY1; \$108.4 million

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 in RY2; and \$88.4 million in RY3 for these initiatives, as  
2 set forth in Exhibit \_\_\_\_ (GIOSP-1).

3 **2. Gate Station Work**

4 Q. Please describe the two broad categories of gate station  
5 work that the Company typically undertakes.

6 A. The first category is capital work at Company-owned gate  
7 station facilities. The second category is work on  
8 pipeline-owned facilities that primarily benefits the  
9 Company and its customers. Costs associated with this  
10 second category are usually recovered as a surcharge  
11 through the monthly rate adjustment ("MRA") for projects  
12 approved by the Commission, as set forth in the Company's  
13 Gas Tariff.

14 Q. Is the Company proposing any gate station projects during  
15 RY1-RY3 that fall under the first category (*i.e.*, work on  
16 Company-owned facilities)?

17 A. Yes, the Company plans to refurbish the Algonquin Cortlandt  
18 gate station. This work is scheduled to occur in 2022 and  
19 2023. The cost associated with this project is \$11 million  
20 in RY1, as set forth in Exhibit \_\_\_\_ (GIOSP-1). The need for  
21 this project is discussed in the whitepaper.

22 Q. Is the Company proposing any gate station projects during  
23 RY1-RY3 that fall under the second category (*i.e.*, work on

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 pipeline-owned facilities that primarily benefit the  
2 Company and its customers)?

3 A. The Company is not proposing any new projects in this  
4 second category. But the Company is updating the cost  
5 estimate for the Tennessee White Plains gate station  
6 project, which was approved under the current Gas Rate Plan  
7 (Case 19-G-0066). The work at the gate station has been  
8 completed.

9 Q. What are the Company's final costs related to the White  
10 Plains gate station?

11 The final costs associated with the White Plains gate  
12 station work have not been provided to the Company as of  
13 the date of this rate filing. To the extent available, the  
14 Company will provide any additional information it obtains  
15 during the update phase of this proceeding. In the event  
16 that final cost information is not available by the update  
17 phase of this proceeding, the Company proposes to defer any  
18 costs in excess of the \$11 million approved in Case 19-G-  
19 0066, for recovery in the Company's next base rate filing.

20 **3. Renewable Natural Gas - Mount Vernon Interconnection**

21 Q. Please describe the Mount Vernon RNG interconnection  
22 facility investment.

23 A. The Mount Vernon RNG interconnection facility is part of  
24 the Company's Smart Solutions initiatives. One of the

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Smart Solutions for gas customers is to solicit the energy  
2 market for cost effective alternatives to pipeline capacity  
3 though non-pipeline alternatives ("NPAs"). In response to  
4 a request for proposals ("RFP"), a vendor has proposed a  
5 facility that will produce RNG from food waste within Con  
6 Edison's service territory. Con Edison will install  
7 equipment to support the interconnection to this RNG  
8 facility, which will consist of metering, gas quality  
9 measurement, odorant measurement and remote shutdown. The  
10 Company forecasts the following expenditures for these  
11 projects: \$1.5 million in RY1, as set forth in Exhibit \_\_\_\_  
12 (GIOSP-1).

13 Q. How does this investment align with the Company's clean  
14 energy commitments?

15 A. This RNG facility provides the ability for waste-related  
16 methane to be captured and used, in lieu of being released  
17 into the environment.

18 This interconnection is the first of its kind supplying the  
19 Con Edison system and opens the door for other similar  
20 interconnections in the future.

21 **4. Pressure Control**

22 Q. Please describe the functions performed by the Pressure  
23 Control Department.

24 A. The Pressure Control Department is primarily responsible

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 for the maintenance and operation of the Company's gas  
2 pressure reduction equipment. This equipment ranges from  
3 major transmission gate station assets to the many  
4 components that make up the high and low-pressure district  
5 regulator stations located throughout the Company's service  
6 territory. Most of this equipment is located within below-  
7 grade manhole structures underneath roadways and sidewalk  
8 areas. This equipment includes 337 regulator stations.  
9 The Pressure Control Department validates each station's  
10 operating condition annually, as well as conducting monthly  
11 site inspections.

12 Q. Please summarize the capital expenditures projected for the  
13 Pressure Control Department during the 2023-2025 period.

14 A. The Pressure Control Department sponsors three capital  
15 programs that are planned for the rate years. The Company  
16 estimates capital expenditures of \$20.3 million in RY1;  
17 \$20.2 million in RY2; and \$20.2 million in RY3, as set  
18 forth in Exhibit \_\_\_ (GIOSP-1). These investments are  
19 needed for safe and reliable service, because they keep  
20 essential pressure control equipment operational and give  
21 the Company new monitoring and control capabilities, which  
22 reduce the possibility of an overpressure event or loss of  
23 service continuity.

24 Q. Please describe the capital programs planned to be

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 completed by the Pressure Control Department.

2 A. The capital programs planned to be completed by the  
3 Pressure Control Department are: Regulator Automation,  
4 Regulator Station Improvements, and Station Gas Detector &  
5 Fire Detection/Alarm Systems. All are described in more  
6 detail in the applicable White Papers.

7 The largest project of this category is Regulator  
8 Automation. The purpose of this program is to install  
9 automated control equipment at regulator stations  
10 throughout the gas system to enable remote operation while  
11 providing real time visibility. Also included is the  
12 installation of enhanced OPP equipment on the low-pressure  
13 gas system to provide additional levels of protection to  
14 prevent pressure exceedances. Where applicable, these  
15 installations will also include the replacement of  
16 regulator station piping that contains bypasses which  
17 connect different MAOP systems, the replacement of  
18 distribution mains that connect to pressure division  
19 valves, or the relocation of regulator station sensing,  
20 control, and overpressure protection monitoring lines  
21 within the boundaries of regulator stations to improve  
22 station operation and overpressure protection. The Company  
23 forecasts the following expenditures for this program:  
24 \$19.1 million in each of RY1, RY2, and RY3, as set forth in

1 Exhibit \_\_\_\_ (GIOSP-1).

2 **C. NATURAL GAS DETECTORS**

3 Q. What is the purpose of NGDs?

4 A. NGDs are safety devices installed indoors near the gas  
5 point-of-entry ("POE") and head of service valve intended  
6 to provide continuous monitoring of atmospheres for a  
7 concentration of methane that result in an alarm. When a  
8 NGD alarms (10% lower explosion limit), this alarm  
9 information is transmitted through the AMI network to the  
10 Gas Emergency Response Center ("GERC"). The GERC will then  
11 notify the local fire department and dispatch a Gas  
12 Distribution Services ("GDS") mechanic to respond to the  
13 potential gas leak using normal leak response protocols.

14 Q. What benefits do NGDs provide to customers?

15 A. The accumulation of natural gas in a building can occur  
16 from a leak on the buried gas distribution infrastructure  
17 located outside of the building. Gas migrates through the  
18 soil or through a utility service POE and into the  
19 building. Buildings are typically constructed where the  
20 majority of utility POEs (water service, sewer pipe, buried  
21 electric service) are normally in close proximity to the  
22 gas POE. Locating the NGD on service line pipe near POE  
23 provides detection capability for this type of occurrence.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 It will also detect leaks on nearby customer piping or  
2 equipment.

3 The development of methane sensor technology in combination  
4 with the Company's AMI communication network presents a  
5 first-of-a-kind and unique opportunity to pair remote  
6 methane detection with the AMI communication infrastructure  
7 that will enable a direct alarm to the Company's GERC that  
8 could prevent a gas incident in the future, improving  
9 public safety.

10 Using NGD technology will improve public and employee  
11 safety by identifying potential leaks much earlier than  
12 relying on odor calls, allowing GDS crews more time to  
13 identify potential gas leaks, make the location safe and  
14 evacuate the public if necessary.

15 Q. What investments are required to install and maintain NGDs?

16 A. Con Edison started mass deployment and monitoring of AMI  
17 enabled NGDs in 2020 after successful completion of the  
18 pilot phase of NGD deployment in 2019. To date, the  
19 Company has installed approximately 90,000 AMI NGDs and is  
20 estimated to install a total of 150,000 through the end of  
21 2022. As of December 31, 2021, the Company has received  
22 and responded to over 900 NGD alarms.

23 NGD installations for rate case years 2023-2025 are  
24 estimated to be: 65,700 in RY1, 73,300 in RY2, and 67,800

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 in RY3. To reduce the cost of installations and decrease  
2 the number of visits to customers' homes and buildings,  
3 when possible, NGD installations will be completed with  
4 other work including service line/meter inspections.

5 In total, we currently anticipate the following capital  
6 expenditures to install and support NGD's during the  
7 upcoming 2023-2025 period: \$33.3 million in RY1, \$37.6  
8 million in RY2, and \$35.2 million in RY3 as shown in  
9 Exhibit \_\_\_\_ (GIOSP-1).

10 **D. PROPOSALS TO INCREASE CUSTOMER INTEREST IN GAS ALTERNATIVES**

11 Q. How does the Company propose to make alternative energy  
12 solution options more attractive for new customers and  
13 support non-fossil technology adoption?

14 A. In line with the Company's clean energy commitment, we are  
15 proposing to eliminate certain tariff provisions that  
16 facilitate natural gas use but exceed statutory  
17 requirements. The Company is also enhancing the  
18 information it provides to customers, with the goal of  
19 discouraging customers from using or expanding their use of  
20 natural gas.

21 Q. Please describe the Company's proposed tariff  
22 modifications.

23 A. First, the Company is proposing to eliminate language in  
24 its gas tariff that allows multiple customers seeking to

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 connect to the Company's gas distribution system to pool  
2 their installations and avoid connection costs.  
3 Eliminating the "concurrent connections" tariff language  
4 will preclude sharing of benefits between customers who  
5 otherwise would exceed their individual allotment of main,  
6 but for the fact that other customers connected at the same  
7 time and did not use their full allotment. As an example,  
8 a customer who needed 120 feet of main while the next  
9 building only needed 80 feet could "use" the current tariff  
10 allowance and would not incur any additional cost. This  
11 language is a legacy of the gas expansion period in the  
12 Company's history and is no longer part of our forward-  
13 looking clean energy vision.  
14 Second, customers who pay for the main extension currently  
15 benefit from connections made along that length of main by  
16 subsequent customers connecting within a five-year window.  
17 Going forward the Company proposes that reimbursement (in  
18 part or in full) for costs to customers who chose to pay  
19 for their main extension be eliminated. Third, the  
20 Company is proposing to eliminate the "revenue test" for  
21 all customers, thus requiring every foot beyond the 100-  
22 foot allotment under law be paid for by the customer in  
23 full prior to the commencement of the work. Customers can  
24 currently avoid such charges if they can demonstrate that

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 their gas usage will generate revenues above a specified  
2 threshold.

3 Finally, the Company proposes that no customer will receive  
4 a service determination (also referred to as a "ruling")  
5 for natural gas service of any size or for any purpose  
6 without first acknowledging in written form that they have  
7 been provided information on non-fossil alternatives and  
8 that they are aware of climate protection laws and  
9 regulations.

10 Q. What is the "100-foot rule"?

11 A. The obligation to provide customers a total of 100-feet of  
12 main and/or service without cost is codified in Public  
13 Service Law § 31. Section 230.2 of the Commission's  
14 regulations goes beyond the Public Service Law, based on  
15 the type of customer requesting service and usage.  
16 Specifically, for a residential heating customer, Section  
17 230.2 requires New York State local distribution companies  
18 ("LDCs") to provide 100 feet of main *and* 100 feet of  
19 service, while for Residential non-heating customers and  
20 nonresidential customers Section 230.2 requires a *total* of  
21 100 feet of main and/or service, plus the length of service  
22 line necessary to reach the edge of the public right-of-  
23 way.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Q. What is the Company proposing with respect to the "100-foot  
2 rule"?

3 A. The Company is not proposing any deviation from the  
4 requirements of the Public Service Law. But we are  
5 requesting a waiver from the requirements of 16 NYCRR  
6 §230.2 that provides additional piping to residential  
7 heating customers. Instead, the Company is proposing to  
8 provide all customers (regardless of customer type or  
9 usage) with a combined total of 100 feet of main and/or  
10 service, plus the length of service line necessary to reach  
11 the edge of the public right-of-way.

12 Q. Why are you requesting a waiver?

13 A. Some of the tariff modifications described above are not  
14 consistent with current Commission regulations and  
15 therefore require a waiver for implementation.  
16 Specifically, a waiver is required for the Company's  
17 proposals: to eliminate the revenue test for all customers;  
18 to eliminate reimbursements to customers who chose to pay  
19 for their main extensions due to subsequent customer  
20 connections; and to combine the 100-foot allotment of main  
21 and service, irrespective of the customers' service  
22 classification or usage. The Company's waiver request will  
23 apply to new customer connections only. These proposed  
24 measures will bring greater price parity between natural

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 gas service and alternatives for many customers, while  
2 still allowing customers to make connections to existing  
3 infrastructure in accordance with our statutory  
4 obligations. These changes, however, require a waiver of  
5 16 NYCRR §§230.2 and 230.3.

6 Q. What is the Company's justification for such a waiver?

7 A. As explained throughout our testimony, the Company fully  
8 supports the State's clean energy policy and efforts to  
9 achieve CLCPA requirements. While we recognize that  
10 important work related to the CLCPA is ongoing and final  
11 decisions in many key areas are still pending, we view the  
12 requirements in 16 NYCRR §§230.2 and 230.3 as incongruent  
13 with the CLCPA and highly unlikely to continue in their  
14 current form. Therefore, we believe a waiver is justified  
15 in anticipation of expected changes to the Commission's  
16 regulations and to advance important, state-wide policy  
17 goals.

18 **E. CUSTOMER CONNECTIONS**

19 Q. How has the Company advanced its goals through Customer  
20 Connections?

21 A. As described in more detail below, the Company's Customer  
22 Connections investments have offered the opportunity to  
23 enhance both customer engagement and operational  
24 performance. The Company is obligated by the Public

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Service Law to provide gas service to new customers (even  
2 if we have educated them on the alternatives and they  
3 decline) and requests to increase gas demand for existing  
4 customers. In accordance with this obligation, we will  
5 continue to provide safe, reliable service to our customers  
6 in a cost-effective manner. However, as stated above, we  
7 encourage all potential natural gas customers to consider  
8 alternative (*i.e.*, non-fossil) energy solution options.  
9 Additionally, as outlined above, the Company's proposed  
10 tariff changes should have an impact on Customer  
11 Connections, as those changes are put into effect. The  
12 Company is forecasting a reduction in the number of  
13 customer connections during RY1-RY3, with even more  
14 significant reductions anticipated in the future.

15 Q. Are the Company's proposed tariff changes reflected in the  
16 forecast for customer connections?

17 A. No, considering we have no experience regarding the impact  
18 these proposed changes would have, it would be premature to  
19 reflect them in the Company's forecast. However, the  
20 Company notes that, under the downward-only capital  
21 reconciliation it is proposing, any capital underspending  
22 would be returned to customers.

23 Q. What are the projected overall costs associated with the  
24 Customer Connections Program?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 A. As presented in Exhibit \_\_\_ (GIOSP-1), the Company projects  
2 the following expenditures for this program: \$73.1 million  
3 in RY1; \$74.6 million in RY2; and \$76.7 million in RY3.

4 The overall costs are for the installation and replacement  
5 of gas services and main associated with facilitating  
6 customer connection requests.

7 Q. Does the Company's request reflect an overall lower growth  
8 rate, including the impact of this industry change?

9 A. Yes. The current request assumes a significant reduction  
10 from historical service installations and associated main  
11 installation.

12 Q. Do you expect the Westchester moratorium to continue during  
13 the potential 2023-25 rate plan period?

14 A. No. We anticipate being able to lift the moratorium at the  
15 end of in RY1, as further described below in the Gas Supply  
16 portion of this testimony.

17 Q. Have you considered the New York City legislation or other  
18 state CLCPA initiatives when planning the Customer  
19 Connections program?

20 A. Yes. As discussed above, the number of customer  
21 connections anticipated is decreasing, but this will have a  
22 limited impact in the RY1-RY3 period. We expect to see  
23 more dramatic reductions in future rate cases.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Q. Why is the Company anticipating a limited impact in the  
2 RY1-RY3 period?

3 A. The New York City legislation will only begin to go into  
4 effect during this rate case, with certain building sectors  
5 having until 2027 to comply.

6 Q. Beyond the construction cost to install gas services and  
7 gas main to support growth, are there additional associated  
8 expenses the Company will incur?

9 A. Yes. We have a dedicated program to purchase and install  
10 gas meters. As explained in Exhibit \_\_\_ (GIOSP-1), Meter  
11 Purchases and the Meter Installation programs support the  
12 mandated replacement of existing meters for new connections  
13 and conversions programs. The following Section F.3  
14 discusses this topic further.

15 **F. TECHNICAL OPERATIONS**

16 Q. Please summarize and briefly explain the purpose of this  
17 Technical Operations testimony.

18 A. Consistent with core Company principles this Section will  
19 discuss the importance of, and overall need for,  
20 infrastructure, operations, and technology investments to  
21 reduce risk, enhance safety across the system, and enhance  
22 system operational performance, for specific Company  
23 assets. Included is the Liquefied Natural Gas ("LNG")

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Plant, Tunnels, Meters, Natural Gas Detectors, and Gas  
2 Information Technology.

3 **1. LNG Plant**

4 Q. How does the Company's LNG facility benefit customers?

5 A. Con Edison uses its liquefied natural gas facility to  
6 maintain adequate supply during gas peak operations. The  
7 LNG Plant serves as a cost-effective alternative to more  
8 expensive firm peaking supplies and as a contingency  
9 resource, in the event of any incident impacting our  
10 external supply sources.

11 The LNG Plant is the only source of in-city natural gas  
12 supplying Con Edison's customers in the event of an  
13 interstate pipeline interruption or other emergency  
14 condition affecting external gas supply. The LNG Plant  
15 continues to serve as a supply and hourly balancing source  
16 during very cold days, as its capacity is needed during  
17 design peak day conditions to meet the needs of our firm  
18 customers. The LNG Plant also serves firm gas customers by  
19 potentially mitigating short term price volatility.

20 Q. Why are the LNG Plant's planned programs necessary?

21 A. The proposed capital programs and projects are important to  
22 continue safe plant operations and maintain plant  
23 reliability for the following plant systems: withdrawal

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 (vaporizers), tank management, and injection (liquefaction)  
2 process plant. In addition, these projects are important  
3 measures to harden the LNG Plant.

4 Critical components of the plant are obsolete, with the  
5 original equipment manufacturer(s) unavailable to provide  
6 parts and services. Mechanical integrity of equipment is  
7 important for employee and public safety. The current  
8 liquefaction nitrogen refrigeration cycle is inefficient  
9 and does not fill the LNG tank in six months, consistent  
10 with its original design. To bring the plant up to  
11 standard, we plan to invest over \$70.4 million in plant  
12 infrastructure over the next five years, starting in RY1.  
13 This will allow for the Company to continue to deliver  
14 affordable natural gas to our customers when they need it  
15 the most and continue to provide reliable services for gas  
16 peaking, unplanned upstream gas system contingency and to  
17 mitigate gas price volatility.

18 Q. What investments are required in the Company's LNG  
19 facility?

20 A. As shown in Exhibit \_\_\_ (GIOSP-1), the investments are  
21 described in five areas:

22 1) Instrumentation upgrade program:

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

- 1           • Plant Controls Instrumentation Upgrade Program: \$12  
2           million in RY1 and \$2 million in RY2.
- 3       2) Nitrogen Refrigeration Cycle Replacement:
- 4           • Nitrogen Refrigeration Cycle Replacement: \$10 million  
5           in RY1 and \$10 million in RY2.
- 6       3) Electrical equipment upgrades and relocation:
- 7           • Motor Control Center: \$2.8 million in RY1 and \$500,000  
8           in RY2.
- 9           • Electrical Distribution System Upgrade: \$1.9 million  
10          in RY1.
- 11       4) Equipment integrity projects:
- 12          • Plant Boil-Off Compressor Replacement: \$2 million in  
13          RY1 and \$400,000 in RY2.
- 14          • Security Upgrade Program: \$2.87 million in RY1.
- 15       5) Reliability Remediation Program:
- 16          • Various reliability projects including relocation of  
17          the LNG Meter Station, and the Independent Flare Gas  
18          Supply: \$7 million in RY1, \$8.25 million in RY2 and  
19          \$4.75 million in RY3.

20       These programs reflect a \$68 million capital improvement  
21       investment at the LNG Plant during this coming rate period.  
22       This amount is broken down as follows: \$38.6 million in  
23       RY1, \$21.15 million in RY2, and \$4.75 million in RY3, as

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 set forth in Exhibit \_\_\_\_ (GIOSP-1), with some projects  
2 extending past this proposed rate period.

3 Q. Please explain further the work that is planned for the LNG  
4 facility.

5 A. The new Instrument Upgrades Program contains real-time  
6 monitoring, data acquisition and analysis tools. The new  
7 Nitrogen Refrigeration Cycle Replacement will replace the  
8 original obsolete equipment. The nitrogen refrigeration  
9 cycle will have a new, more efficient turbine that will  
10 produce less CO<sub>2</sub> air emissions per million cubic feet of LNG  
11 produced. With recent local supply constraints and the LNG  
12 plant having the ability to withdraw and provide 15% daily  
13 supply to the transmission system, the ability to quickly,  
14 efficiently, safely fill the tank with new modern reliable  
15 nitrogen refrigeration cycle allows the LNG Plant to be a  
16 reliable supply source for gas system resiliency.

17 The new Electrical equipment upgrades and relocation will  
18 provide both a new motor control center and a new high  
19 tension vault substation relocated away from the existing  
20 natural gas transmission main and both projects will  
21 improve employee safety and plant reliability. The new  
22 equipment will meet current arc flashing, newer national  
23 electric code requirements, and replace original (50-year  
24 old equipment upon replacing) and obsolete equipment. This

1 upgrade and relocation will modernize, make electrical  
2 power more reliable, and increase the plant's safety.  
3 LNG projects consist of multiple system reliability  
4 requirements for safety, system reliability and to enable  
5 continued safe operation as shown in Exhibit \_\_\_\_ (GIOSP-1).

6 **2. Tunnels**

7 Q. Briefly describe the Company's tunnel facilities and their  
8 importance in delivering safe and reliable energy services  
9 to the Company's electric, gas and steam customers.

10 A. There are eight utility tunnels on the Company's system.  
11 These tunnels house critical electric, gas, and steam  
12 facilities, as well as a fuel oil line and  
13 telecommunications systems. They are critical pathways for  
14 service lines under bodies of water, except for one, which  
15 was needed for our steam transmission infrastructure after  
16 the retirement of the Waterside Steam Generating Plant and  
17 does not cross under a body of water. Tunnel  
18 infrastructure is significantly impacted by atmospheric  
19 corrosion, water infiltration and salt deposits. The  
20 original infrastructure (e.g., cast steel liner, steel  
21 beams), feeder cables, lighting and electrical outlets, and  
22 gas main rollers are exposed to heavy salt and water  
23 infiltration. In addition, safety components such as the

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 fire and gas monitoring systems have become obsolete. If  
2 this infrastructure is not replaced there is an increased  
3 risk of a catastrophic failure jeopardizing the reliability  
4 of the electric, gas and steam transmission and  
5 distribution systems.

6 Q. Why are the proposed projects necessary for the tunnels?

7 A. These projects are required for system reliability,  
8 employee safety, and to enable continued access to critical  
9 infrastructure. This includes the gas main rollers, feeder  
10 cables, elevators, cast steel liner, structural concrete,  
11 ladders and landings, electric and ancillary equipment such  
12 as sump pumps, lighting, and remote monitoring capability.  
13 All of these are subject to corrosion and deterioration due  
14 to ground water intrusion and exposure to extreme moisture,  
15 salt, humidity, and heat, especially in the tunnels that  
16 carry steam mains.

17 Q. What are the critical projects related to tunnel system  
18 safety, customer experience, operational excellence or  
19 clean energy?

20 A. As shown in Exhibit \_\_\_\_ (GIOSP-1), and described further in  
21 the associated white papers, the tunnels projects are:

- 22 • Fire and Gas Monitoring Replacement: \$1.5 million in  
23 RY1 and \$1.5 million in RY2.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

- 1           • Ravenswood Gas Main Rollers: \$1.7 million in RY1 and
- 2           \$1.8 million in RY2.
- 3           • Ravenswood Concrete Restoration: \$225,000 in RY1.
- 4           • Conduit Bulkhead Replacement: \$1.0 million in RY1.
- 5           • Astoria Cast Steel Liner Replacement: \$1.0 million
- 6           in RY1.
- 7           • Lighting Improvement Program: \$1.0 million in RY1;
- 8           \$1.0 million in RY2; and \$1.0 million in RY3.
- 9           • Carbon Fiber Wrap Program: \$701,000 in RY1; \$744,000
- 10          in RY2; and \$765,000 in RY3.
- 11          • Replacement Feeder Rollers: \$1.7 million in RY2.
- 12          • Steel Replacement Program: \$877,000 in RY1; \$930,000
- 13          in RY2; and \$957,000 in RY3
- 14          • Astoria Elevator Modernization: \$600,000 in RY1.
- 15          • Annual Sump Pump Program: \$100,000 in RY1; \$100,000
- 16          in RY2; and \$100,000 in RY3.

17          In total, the capital expenditures to support these tunnel  
18          projects during the upcoming 2023-2025 period are \$8.7  
19          million in RY1; \$7.8 million in RY2; and \$2.8 million in  
20          RY3.

21    Q.    Is the Company considering moving responsibility for the  
22          tunnels to another organization?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 A. Yes. We are considering moving the Tunnel Maintenance  
2 organization from Gas Operations to Central Operations.

3 Q. Please explain why this move is under consideration?

4 A. There are several reasons. These are multi-commodity  
5 tunnels that carry electric transmission feeders, steam  
6 mains, as well as gas mains. However, Gas Operations has  
7 historically had the responsibility for the maintenance of  
8 the tunnels, and the capital expenditures associated with  
9 improvement projects have fallen under Gas Operations and  
10 therefore paid for by gas customers. Additionally, most  
11 O&M expense for maintenance of the tunnels is also paid by  
12 gas customers. As we consider future rate mitigation  
13 opportunities given the foreseeable drop in demand for gas,  
14 we are evaluating whether the tunnels would be more  
15 appropriately paid for by electric customers. As such, we  
16 are exploring a re-organization to place the Tunnel  
17 Maintenance group under Central Operations and thereby  
18 shift the capital and O&M expenditures to electric  
19 customers. An update of the Company's analysis and plans  
20 will be provided in the update testimony.

21 **3. Meters**

22 Q. How will the Company's proposed meter purchase and meter  
23 installation programs foster better customer engagement?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 A. These programs allow the Company to provide safe and  
2 reliable gas service to our customers. In addition, these  
3 programs also support the Company's mandated meter  
4 replacement programs. We discuss below the need for this  
5 program and how its related to the Company's AMI program.

6 Q. What meter investments are required by Technical  
7 Operations?

8 A. Technical Operations purchases gas meters and related  
9 devices for all our customers. When possible, we refurbish  
10 meters and when necessary we replace them. Our investment  
11 in this area takes into account historic replacement and  
12 refurbishment. Currently, 34 percent of the meters  
13 purchased and installed are related to mandated meter  
14 replacement programs and required replacements, while 66  
15 percent of the meters purchased and installed are  
16 associated with customer connections or replacements of  
17 existing customer meters who are increasing their existing  
18 gas demand. While customer connection projects have  
19 decreased, we have experienced an increased need to replace  
20 undersized meters, which have been identified as a result  
21 of new AMI information. For this reason, the estimates  
22 used below remain level with historical numbers, for the  
23 short-term forecasting related to this rate case.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Installations are estimated at approximately \$17 million  
2 annually, while purchases are estimated at approximately  
3 \$11 million annually. Annual costs for purchases and  
4 installations are based on historical and projected usage.  
5 These capital expenditures include funding for the purchase  
6 of meters and related devices (e.g., interruptible customer  
7 monitors (Metscans), service regulators, and electronic  
8 correctors); outsourced meter-related services for mandated  
9 meter programs required by 16 NYCRR 226; and for  
10 repair/replacement of defective meters (e.g., customer  
11 complaints, broken meters, tampering) in accordance with  
12 Commission regulations. As shown in Exhibit \_\_\_\_ (GIOSP-1),  
13 these programs are listed as:

- 14 • Meter Purchases - Customer Connections and Meter  
15 Replacement Programs (\$12 million in RY1, \$12 million  
16 in RY2, and \$12 million in RY3); and
- 17 • Meter Installations - Customer Connections and Meter  
18 Replacement Programs (\$19.4 million in RY1, \$20.9  
19 million in RY2, and \$20.9 million in RY3).

20 Q. How do the meter investments discussed above take into  
21 account AMI deployment?

22 A. Metering costs and savings associated with AMI are  
23 independent of the meter investments discussed above

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 because there will still be a need for meter installations  
2 and replacements independent of AMI deployment.

3 Approximately 250,000 gas meters have been replaced with  
4 new meters equipped with AMI modules, that were required by  
5 the PSC to be remediated by 2021. The remaining 950,000 or  
6 so gas meters were retrofitted with AMI gas modules.

7 Although there are many benefits to these AMI replacements,  
8 once in service, these meters will have the same operations  
9 and maintenance requirements as any other meter.

10 Additionally, a large population of older meter classes  
11 will require remediation during this coming rate case.

12 **G. GAS INFORMATION TECHNOLOGY**

13 Q. What Information Technology ("IT") improvements are planned  
14 for Gas Operations?

15 A. Gas Operations is presenting IT investments in the  
16 following two categories: Gas Control Center and Outage  
17 Management. Further details for each can be found in the  
18 associated white papers, with a few of the larger capital  
19 investments highlighted below. There are also gas-related  
20 IT programs, including the Work Management Program, that  
21 are separately being addressed by the Company's IT Panel.

22 **1. Gas Control Center Improvements**

23 Q. What improvements are planned for the Gas Control Center?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 A. Gas Control is presenting three items for this Rate Case.  
2 They are Operator Training System ("OTS") Simulator  
3 Project, End of Life ("EOL") Equipment Replacement Program,  
4 and Gas Control Center ("GCC") Improvements Projects.  
5 Further details for each item can be found in the  
6 associated white papers.

7 The GCC Improvements is the largest capital investment in  
8 this category and consists of three improvement projects  
9 for the GCC. The first is the relocation of the Alternate  
10 GCC from Manhattan to Westchester, the second is the Gas  
11 Operations Supervisory System ("GOSS") and Gas Day  
12 Operations ("GDO") Application Upgrades, and the final  
13 project is the furnishment for the relocation of the  
14 Primary GCC. The expenditures associated with this project  
15 are \$2.7 million in RY1; \$3.0 million in RY2; and \$3.95  
16 million in RY3, as shown in Exhibit \_\_\_ (GIOSP-1). This  
17 project also has an O&M component which is further detailed  
18 below.

19 Q. What are the benefits to Gas Operations that are  
20 anticipated from the GCC Improvements?

21 A. The proposed GCC Improvement projects will provide numerous  
22 safety and reliability benefits for our gas customers and  
23 the public. The relocation of the Alternate GCC from  
24 Manhattan to Westchester will significantly reduce response

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 time under a forced relocation from the primary site, while  
2 developing the site using industry and international  
3 standards will help address Pandemic lessons-learned and  
4 the expansion of the Gas Control Department since the  
5 original facility's construction. The GOSS and GDO  
6 Application upgrade will maintain Gas Operations critical  
7 remote monitoring and control applications on supported  
8 software and mitigate potential cybersecurity threats to  
9 the Gas HVN. Finally, the new GCC will allow Gas  
10 Operations to leverage best-in-class Control Center  
11 strategies to provide Gas Control Operators the tools to  
12 rapidly address abnormal operating conditions while  
13 facilitating Gas Operations organizational response to  
14 significant events, all while remaining compliant with  
15 Control Room Management compliance requirements.

16 Q. Have plans for the new GCC changed since the last rate case  
17 filing?

18 A. Yes, due to lessons learned from the pandemic, business  
19 user requirements, and projected schedules for the original  
20 location's Re-Development Project, the location of the new  
21 GCC has changed to a location within an existing facility  
22 in Westchester.

23 Q. What changes were made?

24 A. Additional user requirements were incorporated, which was

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 not possible at the original location. The schedule was  
2 also deferred to later years, due to the pandemic, which  
3 temporarily halted progress. Due to these challenges, the  
4 new GCC will now be completed within this rate case.

5 Q. What investments are being requested for this Rate Case,  
6 related to the new GCC?

7 A. As described above and further in the associated white  
8 paper, the furnishment portion of the GCC Improvements  
9 Projects, as presented by the GIOSP. Other additional  
10 funding included as part of the relocation and new  
11 location's re-development project is being put forth by  
12 Facilities, under the Shared Services panel.

13 **2. Gas Outage Management System**

14 Q. What is the Company proposing related to a gas outage  
15 management system ("OMS")?

16 A. The Company is proposing an investment in the development  
17 and deployment of a gas OMS. The Company does not  
18 currently have such a system, so initial IT software  
19 development will be required for this project. The  
20 projected expenditures associated with this project are \$9  
21 million in RY1 and \$8.8 million in RY2, as shown in Exhibit  
22 \_\_\_\_ (GIOSP-1), with associated O&M costs to be seen in RY3  
23 and discussed further below.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Q. What are the current challenges in managing gas outages?

2 A. Without an OMS, identifying gas outages is done through  
3 direct communications with customers and tracking outage  
4 impacts is done by manually researching several systems,  
5 then using field verification to confirm. This is an  
6 administrative burden that requires extensive resources  
7 from several departments.

8 Q. In what scenarios would the Company use the OMS?

9 A. Generally speaking, the Company would leverage an OMS  
10 during larger outages, of 50 or more services or when  
11 larger buildings with 200 or more customers are affected.  
12 However, we believe even the management of smaller scale  
13 outages can benefit from an OMS.

14 Q. Please provide an example of a situation when such a large  
15 outage might be expected to occur.

16 A. While the gas system is extremely reliable, when outages do  
17 occur, they can be extensive. The most common occurrence  
18 is a result of water intrusion or damage, such as an event  
19 like Hurricane Ida. Gas outages can take considerably  
20 longer to restore service than an electrical outage;  
21 therefore, the implementation of an OMS system could be  
22 very beneficial to the affected customers and facilitate a  
23 better response.

24 Q. What are the benefits of having an OMS?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 A. Having an OMS would help identify outages quicker via  
2 instant detection when faced with extreme weather or system  
3 related issues that compromise supplying service to  
4 customers. Having the ability to track outages with  
5 advanced technology as opposed to a manual process will  
6 provide an administrative advantage. One such example is:  
7 through system integrations (with systems such as AMI), the  
8 OMS can receive the electric meter count data for master  
9 metered buildings, providing quick and accurate customer  
10 outage information. The OMS would also serve as a  
11 repository to record outages throughout our system.

12 Q. How would an OMS impact communication?

13 A. Field, control center, and administrative employees will be  
14 able to view status information for outages. Dashboards  
15 will be shared that include locations, resources, and real-  
16 time status information. This will enhance communication  
17 between the control center and the field. Dashboards that  
18 include outage progress and additional tracking information  
19 will also be available.

20 Q. How does the Company plan to use an OMS to improve outage  
21 restoration?

22 A. An OMS should provide quick visibility into the number of  
23 customers affected by an event. Large outage areas can  
24 then be divided into several outage status areas, to

1 increase visibility on customers pending restoration and to  
2 focus resources accordingly. Additionally, when  
3 implemented, we expect this new system will provide timely  
4 and accurate information to customers when they need it  
5 most.

6 **IV. OPERATION & MAINTENANCE PROGRAM CHANGES**

7 Q. What O&M Program Changes are the Company putting forward?

8 A. The Company is requesting O&M Program changes for the  
9 following programs: Service Line Inspections, Bridge  
10 Inspections, High Emissions Surveillance, and various  
11 software needs related to capital projects, with the  
12 Service Line Inspections being the largest O&M change  
13 request. Similar to the Company's capital expenditures,  
14 the majority of projected O&M expenses are focused on  
15 safety-related programs. The following testimony describes  
16 these program changes in further detail:

17 **A. Service Line Inspections**

18 Q. Please explain how the definition of "service line" has  
19 changed in recent years.

20 A. On April 2, 2015 in Case No. 14-G-0357, the Commission  
21 revised the definition of "service line" in 16 NYCRR  
22 255.3(a)(29) to align with federal law. As a result of the  
23 new definition, New York State gas utilities were required  
24 to perform leakage surveys and corrosion inspections on

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 piping that was previously not considered to be a "service  
2 line" under the Commission's rules. Specifically, under  
3 the prior definition, a service line associated with a gas  
4 meter inside a building ended at the first fitting inside  
5 the building. Under the revised definition, a service line  
6 extends further into the building and ends at the meter's  
7 outlet.

8 Q. Please describe the Company's experience inspecting the  
9 piping that was newly designated as Commission-  
10 jurisdictional service lines.

11 A. In accordance with the Commission's order in Case 15-G-  
12 0244, the Company initiated "baseline" inspections in 2017  
13 to evaluate the newly jurisdictional pipe for the first  
14 time. These inspections targeted more than 300,000 service  
15 lines and nearly 1 million inside gas meters, of which  
16 approximately 200,000 are inside building sets in  
17 apartments (room sets).

18 Pursuant to State executive orders to address COVID-19, Con  
19 Edison suspended the inspections in March 2020. The  
20 Company resumed inspections in July 2020, when New York  
21 City entered Phase III of the reopening plan. At that  
22 time, the Company had 150,000 services and 400,000 gas  
23 meters left to inspect. Con Edison and other local  
24 distribution companies petitioned the Commission for an

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 extension to complete the inspections until August 1, 2020,  
2 and the Commission granted the request.

3 Q. What efforts had the Company taken to complete the  
4 inspections prior to July 2020?

5 A. The Company notified customers of the required inspections  
6 and their obligation to provide access to our equipment.  
7 The Company communicated with customers through emails,  
8 letters, social media, a dedicated webpage, drop cards,  
9 phone calls, meetings with building management  
10 associations, and a robust appointment-scheduling process  
11 employed by our contractor. The Company made at least two  
12 attempts per premises (as required) to gain access for the  
13 inspections.

14 Q. Did the Company complete the inspections by August 1, 2020?

15 A. No.

16 Q. What was the primary reason that the Company was not able  
17 to complete the inspections?

18 A. Inability to gain access to the inside of buildings to  
19 perform the inspections, despite several attempts,  
20 exacerbated by customer reluctance to provide access  
21 because of COVID-19.

22 Q. What are some of the actions the Company took to gain  
23 access?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 A. In addition to the efforts we already described, after  
2 resuming inspections in July 2020, the Company initiated an  
3 email campaign for customers who have email addresses on  
4 file and modified its letters and drop cards to include  
5 enhancements to appointment scheduling and information  
6 about the Company's COVID-19 safety precautions. The  
7 Company also created a notice that is placed directly on  
8 customers' bills when a fee is assessed. On December 22,  
9 2020, the New York State Department of Public Service Chief  
10 of Pipeline Safety and Reliability provided a letter ("DPS  
11 Letter") emphasizing the importance of these inspections  
12 and the need for customers to provide access to allow  
13 utilities to perform these inspections. The Company began  
14 sending the DPS Letter to No-Access customers shortly after  
15 it became available. Con Edison also used no access fees  
16 to encourage customers to provide access for inspections.

17 Q. Did the Company take any further actions to complete  
18 inspections at these no access locations?

19 A. Yes. The Company increased the number of dedicated  
20 technicians performing additional cold call attempts, which  
21 resulted in a significant number of scheduled appointments  
22 through these communication efforts. In addition, the  
23 Company increased efforts to perform additional service  
24 line inspections when it was able to access a building for

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 other work reasons (e.g., turn-ons, inside leaks, meter  
2 exchanges, NGD installations, second cycle business  
3 district re-inspections). Despite these efforts, these  
4 opportunistic inspections resulted in only modest  
5 reductions in the Company's remaining backlog.

6 Q. Did Staff direct the Company to further revise its  
7 procedures for complying with the new gas service line  
8 rules?

9 A. Yes. On December 31, 2020, to comply with Staff's  
10 directive, the Company filed a compliance plan in Case 15-  
11 G-0244 (Petition to Establish an Additional Compliance  
12 Method for Gas Service Line Leakage Surveys/Corrosion  
13 Inspections for Premises with Access Issues) ("Service Line  
14 Compliance Plan"). The Commission has not issued an order  
15 on the petition, but Staff has made it clear that the  
16 Company must comply with the revised plan that it filed.

17 Q. What has the Company done under the Service Line Compliance  
18 Plan and what have been the results?

19 A. As outlined in the Service Line Compliance Plan, the  
20 Company has continued to conduct baseline gas service line  
21 inspections and intensified its efforts to notify customers  
22 of the inspection requirements in writing, assess fines  
23 where appropriate, and place customers that continued to  
24 refuse access under the threat of termination. Since the

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 inception of the program, the Company has sent out: 1.1  
2 million letters, over 110,000 e-mails, over 170,000 fee  
3 warning letters (a net of over 60,000 accounts were  
4 assessed fees) over 110,000 turn off warning letters, and  
5 over 77,000 final and reoccurring termination warning  
6 letters.

7 Q. How is the Company handling the remaining "No-Access"  
8 customers?

9 A. After all efforts were exhausted, Con Edison placed these  
10 customers into a separate service termination process. As  
11 of December 31, 2021, there were approximately 26,000  
12 services and approximately 52,000 gas meters remaining to  
13 be inspected. The Company continues to attempt to gain  
14 access to complete these inspections to avoid terminating  
15 the customers' gas service. The remaining customers will  
16 continue to receive communications warning them about the  
17 possibility of service termination until the customer  
18 either grants the Company access to complete the  
19 inspection, the Company cuts and caps the existing gas  
20 service or, where appropriate and for buildings where the  
21 Company has been able to inspect some but not all meters,  
22 the Company replevins the relevant gas meter. We intend to  
23 resume potential service terminations after the heating  
24 season has concluded in March 2022.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Q. What are the inspection requirements after the baseline  
2 inspections?

3 A. The general periodic inspection requirement is once per  
4 year (not to exceed 15 months) for business district  
5 services and once every three years (not to exceed 39  
6 months) for non-business districts. In Case 15-G-0244, the  
7 Commission authorized a pilot program for Con Edison  
8 designed to test whether extended inspection intervals for  
9 all service lines of once every five years (not to exceed  
10 63 months), combined with conditions such as the  
11 installation of AMI-enabled methane detectors at each  
12 inspected meter, meets or exceeds existing safety  
13 standards.

14 Q. Have there been any other significant regulatory  
15 developments as they relate to inspection intervals for gas  
16 service lines?

17 A. Yes, on March 21, 2021, PHMSA modified 192.481 to extend  
18 onshore service line atmospheric corrosion control  
19 inspections to once every five calendar years, not to  
20 exceed 63 months. Then on October 25, 2021 in case 19-G-  
21 0736 the Commission proposed to modify 255.481 reflecting  
22 the PHMSA code modifications. Once the proposed 255.481  
23 changes are adopted, all non-business district service line

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 inspections can be extended to once every five-years, not  
2 to exceed 63 months.

3 Q. Based on the foregoing, what is the inspection interval  
4 that is assumed for purposes of the Company's forecast?

5 A. The Company's forecast assumes the extension of the  
6 inspection cycles for all services to a five-year cycle,  
7 not to exceed 63 months starting January 1, 2023.

8 Q. Please describe the Company's Service Line Program O&M  
9 request.

10 A. We propose a program change increase of \$39.2 million in  
11 RY1, with reductions of \$0.9 million in RY2 and \$1.2  
12 million in RY3. This proposed change reflects only a  
13 change in the cost recovery mechanism (from surcharge to  
14 base rates) and a significant reduction compared to the  
15 Company's recent costs for the service line inspection  
16 program.

17 Q. What were the Company's historic costs for this program  
18 during the current Gas Rate Plan?

19 A. The Company's actual costs under this program were \$29.3  
20 million in 2020 and \$68.6 million in 2021 when it began  
21 following its revised compliance plan at Staff's direction.

22 Q. Why does the Company believe it can reduce the costs of  
23 this program so significantly in RY1?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 A. We believe we can achieve these reductions through the  
2 anticipated completion of the baseline inspections and the  
3 expected corresponding decrease in repairs associated with  
4 baseline inspections. The Company also had high rates of  
5 access refusal due to customer concerns related to COVID-  
6 19.

7 Q. How does the Company recover the costs for this program  
8 under the current Gas Rate Plan?

9 A. The current Gas Rate Plan included a relatively small  
10 amount in base rates (approximately \$7.0 million in 2020  
11 and \$700,000 in each of the subsequent two rate years) for  
12 this program. The Plan authorized an MRA surcharge  
13 mechanism, which was capped at approximately \$99 million  
14 for the term of the three-year Gas Rate Plan.

15 Q. Has the Company gained sufficient experience with this  
16 program since its last rate filing to develop a projection  
17 of its future costs?

18 A. Yes. As we have explained, the Company has undertaken  
19 extensive and comprehensive measures to comply with the  
20 Commission's and Staff's additional directives relating to  
21 service line inspections and repairs.

22 Q. What is the basis for the Company's estimated expenditures  
23 for this program?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 A. The Company has approximately 1 million inside building  
2 sets, of which an estimated 200,000 inside building sets  
3 are in apartments (room sets) or other remote locations  
4 that are less readily accessible. As described above, the  
5 Company made significant efforts and is continuing to  
6 complete the remaining baseline inspections pursuant to its  
7 revised compliance plan. Because of the new five-year  
8 inspection cycle, inspections will be spread out more  
9 evenly throughout the five-year period. We will also  
10 attempt to bundle this work with installation of AMI  
11 natural gas detectors where feasible. Projected  
12 expenditures include all costs associated with the  
13 emergency response when a leak is detected, the repair to  
14 Company piping from the point of entry to the outlet of the  
15 gas meter, labor to perform the inspections and support the  
16 customer communication and scheduling. The expenditures  
17 enable a minimum of two cold call field attempts, plus  
18 additional attempts that may result from customer letters  
19 warning of fines and subsequent termination of service.

20 Q. What is the breakdown of the program forecast?

21 A. The \$39.7 million annual forecast for this safety program  
22 is divided into the following functions:

23 1. \$18 million annually for field inspections;

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 2. \$4.2 million annually for non-field support, which  
2 includes customer support, scheduling, training and  
3 equipment;

4 3. \$6.9 million annually for corrosion repairs and all  
5 necessary follow-up surveillance and rechecks after repair  
6 inspections;

7 4. \$2.7 million annually for emergency response associated  
8 with any leaks identified during the service line  
9 inspection; and

10 5. \$7.9 million annually for operating and maintenance  
11 costs associated with cutting and capping and/or replevin  
12 when a customer fails to provide access after the required  
13 attempts, and notifications fail to result in a completed  
14 inspection.

15 Q. Is the Company proposing any tariff changes related to the  
16 Service Line Inspection program?

17 A. Yes. The Company is proposing to modify the fee structure  
18 for customers or access controllers who deny the Company  
19 access to the premise to perform the inspection. The  
20 proposed change will modify the fee from one-time billed,  
21 to a fee assessed in every billing period, until access is  
22 provided. The customer will also be responsible for all  
23 costs associated with meter seizure/forced access if  
24 refusals continue.

1 Additionally, when customers refuse an outdoor meter  
2 location while Con Edison is performing work on their  
3 service, it perpetuates the need for inside service line  
4 inspections. Therefore, the Company is also proposing that  
5 the meter relocation refusal fee be increased to cover  
6 inside inspection costs that would have otherwise been  
7 avoided.

8 Q. Are there any other costs not included in this request?

9 A. Yes. The costs for additional vehicles and associated  
10 maintenance are not included. These costs are  
11 approximately \$600,000, which we may include as part of our  
12 update filing.

13 **B. Bridge Inspections**

14 Q. Please describe the Company's next O&M program change.

15 A. The Company is proposing a reallocation of funding for its  
16 Bridge Inspection program. Looking ahead to 2026, we see a  
17 much higher number of bridge inspections coming due in a  
18 single year than normal. Gas mains at bridges receive a  
19 visual inspection every three years and a more costly,  
20 detailed inspection (including preventative maintenance)  
21 every 21 years. The inspection workload varies, with  
22 inspections at 257 locations coming due on a cyclical  
23 basis. However, 137 inspections (about 62% above the  
24 normal amount) are due in 2026. Planning ahead, we expect

1 that this increase in workload will challenge our ability  
2 in 2026 to complete these inspections. Therefore, the  
3 Company is proposing to preemptively move 30 detailed  
4 inspections, due in 2026, to the rate case years and spread  
5 them evenly across 2023, 2024, and 2025.

6 A total of \$1,104,750 for the three years cumulatively  
7 needs to be reallocated to cover additional pipe inspection  
8 and preventative maintenance proposed for 2023, 2024, and  
9 2025. The amount will be evenly distributed across the  
10 three years. Further details of this program change can be  
11 found in the associated white paper.

12 **C. High Emissions Survey**

13 Q. Please describe the next O&M change.

14 A. The Company has designed a program to identify and target  
15 the highest emitting natural gas leaks, which are currently  
16 defined as leaks emitting greater than 10 standard cubic  
17 feet per hour. To conduct the survey, we attach advanced  
18 leak detection technology to a passenger vehicle and drive  
19 multiple passes over the course of two to three nights down  
20 the same street, according to the manufacturer's  
21 recommendation. Currently, the Company is utilizing the  
22 Picarro Surveyor device for this survey. Once all passes  
23 are completed, data is downloaded and analyzed. This  
24 survey complements our current leak survey programs by

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 covering one-third of the of the distribution system that  
2 has not recently been covered by the walking compliance  
3 survey.

4 Q. Once identified, how will the Company eliminate fugitive  
5 emissions?

6 A. The Company has a performance metric to repair gas leaks  
7 within 60 days, 85% of the time. On average, all leak  
8 types are repaired within 30 days or less, far exceeding  
9 code requirements. Once a high emitter is identified, the  
10 Company will maintain these high standards by repairing the  
11 known leak and eliminating the emissions.

12 Q. What benefits does this program provide?

13 A. By targeting leaks with the highest emissions and running  
14 the program as a complement to other existing leak survey  
15 programs, we are able to focus on eliminating fugitive  
16 methane emissions efficiently. Due to its propriety  
17 algorithms, the advanced leak detection system can detect  
18 methane leaks farther from the source, and it is the only  
19 leak detection equipment able to quantify the emissions  
20 rating. This program also supports the future rulemakings  
21 PHMSA will implement as required by the PIPES Act. The  
22 PIPES Act calls for rules to be promulgated for the use of  
23 advanced leak detection technologies on new and existing  
24 gas distribution pipeline facilities. In a recent industry

1 presentation, PHMSA announced that it anticipates a notice  
2 of proposed rulemaking on this subject in 2022.

3 Q. Please provide the projected expenditures, and how the  
4 Company developed its projection.

5 A. We currently anticipate the following O&M expenditures for  
6 this new program: \$499,000 per year, in each of RY1, RY2  
7 and RY3. This cost was estimated based on the mileage per  
8 year needed to be surveyed, number of required passes per  
9 manufacturer's recommendation, and experience utilizing the  
10 equipment to know how many miles could be covered each day.  
11 Labor rates were then used to determine staffing increases.

12 **D. Capital Projects Software Changes**

13 Q. What is the final O&M change being proposed?

14 A. The Company, as described in more detail throughout this  
15 testimony and in the associated White Papers, is making  
16 capital investments, which includes the development and/or  
17 implementation of software technology. Licensing fees  
18 associated with software usage have an O&M expense and are  
19 therefore presented here.

20 Q. Which capital investments include such O&M expenses?

21 A. The following investments include an O&M component:

- 22 • The Gas Outage Management System: As described further  
23 in the associated white paper, this brand-new software

1 solution will require ongoing licensing fee O&M  
2 expenses of \$140,000 per year, starting in RY3.

3 • The Gas Control Operator Training System Simulator: As  
4 described further in the associated white paper, this  
5 new software solution will require ongoing licensing  
6 fee O&M expenses of \$60,000 per year, starting in RY2.

7 **V. DEFERRAL ACCOUNTING/SURCHARGES**

8 **A. Pipeline Safety Act**

9 Q. Please describe the Pipeline Safety Act of 2011 ("PSA") and  
10 its requirements.

11 A. The PSA was signed into law in January 2012. The PSA  
12 authorizes and directs the United States Department of  
13 Transportation ("DOT") to perform studies and adopt rules  
14 intended to enhance gas pipeline safety.

15 Q. Please explain the status of PSA implementation.

16 A. To date, PHMSA has completed 40 of the 42 mandates and a  
17 number of non-mandated actions, leaving certain significant  
18 issues still pending. These pending issues include rules  
19 on the use of automatic and remote-controlled shutoff  
20 valves and expansion of the transmission integrity  
21 management program requirements.

22 Q. Please identify the continuing uncertainties associated  
23 with PSA requirements.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 A. Although PHMSA has published Notice of Proposed Rulemakings  
2 ("NPRM") on certain aspects of the PSA, those were met with  
3 a large amount of public comment. Additionally, the Gas  
4 Pipeline Advisory Committee ("GPAC") has also modified and  
5 voted on these proposed rules. As a result, there are a  
6 number of uncertainties regarding the pending PSA  
7 regulations that could have a significant impact on the  
8 Company's costs. These include the following related to  
9 transmission mains: expansion of the existing integrity  
10 management requirements; new material verification  
11 requirements; new risk modeling requirements; and the  
12 required use of automatic or remote-controlled shut-off  
13 valves. As such, the Company proposes to continue the  
14 reconciliation for any costs related to compliance through  
15 a surcharge. As further explained below, the costs to  
16 comply remain uncertain.

17 Q. Has PHMSA taken any action to complete the remaining  
18 mandates?

19 A. To date, TAMP requirements and MAOP verification have been  
20 proposed by PHMSA through the NPRM "Pipeline Safety: Safety  
21 of Gas Transmission and Gathering Lines", Docket PHMSA-  
22 2011-5 0023. The NPRM was released in 2016, and GPAC  
23 meeting concluded in 2017, yet all parts of the final  
24 rule(s) have yet to be published. To date, only part one

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 has been released, leaving two parts outstanding. It  
2 remains uncertain whether PHMSA will address the  
3 industry/public comments that they received and how they  
4 will modify the rulemaking, based on the GPAC comments and  
5 voting.

6 Q. Why is it reasonable to reconcile costs related to  
7 compliance with the PSA through a surcharge?

8 A. As described above, there are a number of uncertainties  
9 associated with pending DOT regulations enacted in response  
10 to the mandates in the PSA. Some of the uncertainties are  
11 directly related to the requirements that DOT may include  
12 in these new regulations, which are unknown at this time.  
13 Other uncertainties (and their related costs) are dependent  
14 on the regulations the DOT ultimately adopts.

15 Q. Can the Company provide an estimate of the costs of these  
16 pending regulations?

17 A. No, the Company does not have a basis to include an  
18 estimate. The uncertainties of these pending regulations,  
19 including the timeframe of enactment, make it too difficult  
20 to develop a cost estimate for the Rate Years.

21 Q. Why is the Company proposing a surcharge?

22 A. The Company believes it makes more sense to use a surcharge  
23 to avoid a potential large deferral build-up prior to the  
24 next rate case filing. The surcharge mechanics are

1 described in the Gas Rates Panel testimony.

2 **B. PIPES Act**

3 Q. Please describe the new regulations that may be enacted by  
4 the United States DOT in response to the PIPES Act of 2020?

5 A. The PIPES Act of 2020 authorizes and directs the DOT to  
6 perform studies and adopt rules intended to enhance gas  
7 pipeline safety, as well as ties environmental safety to  
8 pipeline and public safety.

9 Q. What, if any, uncertainty exists with respect to the  
10 regulations that may be promulgated under the PIPES Act and  
11 their impact on Company operations?

12 A. As this Act is relatively recent, PHMSA has yet to propose  
13 any rulemakings to implement its directives. Without  
14 seeing the proposed rulemakings, significant uncertainty  
15 exists as to whether such new or modified rulemakings will  
16 have an impact on the Company's operations or investments.

17 Q. What is the anticipated timing of the PHMSA rulemaking  
18 associated with the PIPES Act?

19 A. Although no notices of proposed rulemaking have been  
20 released, the PIPES Act provides timeframes for each  
21 directive to PHMSA. These timeframes vary based on the  
22 topic within the Act; however, it is reasonable to expect  
23 that some associated rulemakings will be enacted during the  
24 rate years. During a recent industry presentation, PHMSA

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 forecasted that Notice of Proposed Rulemakings ("NPRMs")  
2 should be expected as follows:

- 3 • Leak Detection NPRM in 2022
- 4 • Safety of Gas Distribution NPRM in 2022
- 5 • Pipeline Operational Status NPRM in 2023

6 Q. Why is it reasonable to reconcile the costs related to  
7 compliance with the PIPES Act through a surcharge?

8 A. As described above, there currently is uncertainty  
9 associated with pending DOT regulations enacted in response  
10 to the mandates in the PIPES Act. Some of the  
11 uncertainties are directly related to the requirements that  
12 DOT may include in these new regulations, which are unknown  
13 at this time. Other uncertainties (and their related  
14 costs) are dependent on the regulations the DOT ultimately  
15 adopts.

16 Q. Can the Company provide an estimate of the costs of these  
17 pending regulations?

18 A. No, the Company does not have a basis to include an  
19 estimate. The uncertainties of these pending regulations,  
20 including the timeframe of enactment, make it too difficult  
21 to develop a cost estimate for the Rate Years.

22 Q. Why is the Company proposing a surcharge?

23 A. The Company believes it makes more sense to use a surcharge

1 to avoid a potential large deferral build-up prior to the  
2 next rate case filing. The surcharge mechanics are  
3 described in the Gas Rates Panel testimony.

4 **C. NY Operator Qualification Rulemaking**

5 Q. Why does uncertainty exist with respect to new regulations  
6 that may be enacted by the Commission related to the  
7 Operator Qualification ("OQ") notice of proposed  
8 rulemaking?

9 A. On December 17, 2021, the Company and other utilities and  
10 industry groups provided comments on the proposed OQ rule.  
11 Many of Con Edison's comments sought clarity from the  
12 Commission on regulatory language, which may affect the new  
13 investments necessary to comply with a final rule. Until  
14 the final rule is adopted, the Company cannot anticipate  
15 what investments will be necessary to present for recovery.

16 Q. What sections of the proposed regulation has the Company  
17 identified as areas with potential cost implications for  
18 the Company's operations?

19 A. The following topics within the proposed rule may result in  
20 the need for further investment, depending on the final  
21 rule:

- 22 • Time restrictions prior to evaluations;
- 23 • Span of control records;

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

- 1           • Training records associated with qualification
- 2           records;
- 3           • Automatic failure from abnormal operating condition
- 4           questions; and
- 5           • Program effectiveness.

6 Q.    What is the anticipated timing of the OQ final rule?

7 A.    As comments have already been submitted, Con Edison  
8       anticipates a final rule to be released sometime in mid-  
9       2022; therefore, any associated investments may not able to  
10      be included in this case.

11 Q.   Why is reconciliation through a surcharge reasonable for  
12      such costs?

13 A.    As described above, there currently is uncertainty  
14      associated with the pending OQ rule.  Some of the  
15      uncertainties are directly related to the requirements that  
16      the Commission may include in these new regulations, which  
17      are unknown at this time.  Other uncertainties (and their  
18      related costs) are dependent on the regulations the  
19      Commission ultimately adopts.

20 Q.    Can the Company provide an estimate of the costs of these  
21      pending regulations?

22 A.    No, the Company does not have a basis to include an  
23      estimate.  The uncertainties of these pending regulations,

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 including the timeframe of enactment, make it too difficult  
2 to develop a cost estimate for the Rate Years, at this  
3 time.

4 Q Why is the Company proposing a surcharge?

5 A. The Company believes it makes more sense to use a surcharge  
6 to avoid a potential large deferral build-up prior to the  
7 next rate case filing. The surcharge mechanics are  
8 described in the Gas Rates Panel testimony.

9 **VI. PERFORMANCE MEASURES**

10 **A. Gas Performance Measures**

11 Q. Is the Company proposing any changes to the existing Gas  
12 Performance Measures, which are set forth in Appendix 17 of  
13 the Joint Proposal adopted by the Commission in its January  
14 16, 2020 rate order?

15 A. The Company proposes to continue most of the major elements  
16 associated with current Gas Performance Measures. We are  
17 proposing modifications to some of the targets and negative  
18 revenue adjustments, as discussed in more detail below.

19 Q. Are any of the Company's proposed changes similar to changes  
20 that have been approved in other Commission-approved  
21 utility rate plans or rate plans that are pending approval?

22 A. Yes, many of the changes the Company is proposing are  
23 consistent with recent trends of increased positive  
24 incentives in other utility rate plans that have been

1 approved or are pending approval. However, the Company  
2 recognizes that each utility rate plan should be viewed in  
3 total and that individual elements of an overall settlement  
4 agreement should not be evaluated in isolation.

5 Q. How should NRAs be applied?

6 A. The Company proposes that any NRAs it incurs should be  
7 applied to fund incremental gas safety programs to be  
8 developed at the Company's direction, in consultation with  
9 Staff.

10 Q. Which specific Gas Performance Measures does the Company  
11 propose to modify?

12 A. The Company is proposing to modify the following performance  
13 measures, established under its current Gas Rate Plan: Gas  
14 Main Replacement, Leak Management, and Gas Regulations  
15 Performance Measure.

16 **1. Gas Main Replacement**

17 Q. Please describe the Company's proposed changes to the Gas  
18 Main Replacement Program Safety Performance Measure.

19 A. As discussed earlier under the Main Replacement Program, the  
20 Company is proposing a slight reduction from the prior rate  
21 case main replacement target of 90 miles to 85 miles per  
22 year for each rate year, for a total of 255 miles of leak  
23 prone pipe over the three-year period 2023 through 2025.

**2. Leak Management**

1

2 Q. What is the Company's proposed change to the Leak Management  
3 Performance Measure?

4 A. As set forth in the current Gas Rate Plan, the Company  
5 receives a positive revenue adjustment, up to an annual  
6 maximum of four basis points, for reducing the leak backlog  
7 below the associated annual targets. The Company would  
8 maintain the 2022 year-end total leak backlog target of 200,  
9 for each rate year. However, the Company is proposing an  
10 increase to the positive revenue adjustment basis points.

11 Q. What positive revenue adjustment changes are the Company  
12 proposing?

13 A. The positive revenue adjustment would be awarded as  
14 follows:

Total Leak Backlog:	Prior Rate Case Positive Basis Points:	Proposed Positive Basis Point:
76-100	1 BP	2 BP
26-75	2 BP	4 BP
<=25	4 BP	6 BP

15 Q. Why does the Company believe such positive revenue  
16 adjustment increases are appropriate?

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

- 1 A. In order to achieve such low total leak backlog targets,  
2 the Company must expend a significant level of resources.  
3 The cost of deploying such resources currently exceeds the  
4 value of the positive revenue adjustment ("PRA").  
5 Therefore, the Company is proposing a PRA structure that is  
6 more in line with the costs associated with achieving such  
7 goals.
- 8 Q. Are there benefits to customers and other stakeholders  
9 associated with the gas main replacement and leak management  
10 positive incentives?
- 11 A. Yes. Eliminating 12-inch and smaller cast iron, wrought  
12 iron, and unprotected steel above the established targets  
13 will enhance safety and reduce emissions.
- 14 Q. Is the Company proposing any modifications to the current  
15 Joint Proposal language regarding the calculation of the  
16 final leak backlog count?
- 17 A. Yes. The Company believes additional clarity is needed  
18 regarding leaks being added back into the final leak  
19 backlog.
- 20 Q. Why is the Company proposing additional language around  
21 leaks being added back into the final leak backlog?
- 22 A. In 2021, there was a disagreement regarding the meaning of  
23 "successful elimination" of leaks and how type 3 leaks are  
24 successfully eliminated.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Q. What is Con Edison's position on how a type 3 leak is  
2 successfully eliminated?

3 A. Type 3 leaks do not require follow up inspections by State  
4 code or Company specification and, therefore, the  
5 successful elimination of a type 3 leak is the action of  
6 repairing said leak and confirming (at the time of the  
7 repair) that there are no gas readings.

8 Q. What additional language is needed to clarify what is meant  
9 by "successful elimination?"

10 A. The language in any potential joint proposal or rate plan  
11 in this proceeding should be specific that successfully  
12 eliminated leaks are defined as both: 1.) leaks that have  
13 been repaired that do not require follow up by code or  
14 Company specification; and 2.) leaks that do require follow  
15 up by code and specification which have successfully passed  
16 the follow-up inspection.

17 Q. Is the Company proposing to continue the SRSM to recover  
18 incremental O&M expenses associated with lowering the  
19 Company's leak backlog below the target established for the  
20 Leak Backlog performance measure?

21 A. Yes, the Company proposes to continue the SRSM for the Leak  
22 Backlog performance measure.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 received for reasons beyond the Company's control. There  
2 is a general recognition that, under such circumstances, it  
3 would be unreasonable to expect the Company to meet the  
4 targets that apply under normal conditions. Put another  
5 way, the Company should not be punished for failing to meet  
6 targets that are unrealistic due to rare and extreme  
7 conditions that arise for reasons beyond the Company's  
8 control. This general understanding of the purpose of the  
9 exclusion should inform how it is implemented.

10 As a result of Hurricane Ida, the Company sought to invoke  
11 this exemption for odor calls and leaks that arose due to  
12 the hurricane and which were beyond the Company's control.  
13 The Company experienced an increase in odor call volumes of  
14 over 400%. There was a disagreement regarding whether this  
15 exclusion should apply only to leaks that could directly be  
16 attributable to the storm (an identification and  
17 attribution process which would be impossible to validate).  
18 The Company believes this exemption applies to all odor  
19 calls that occurred during the hurricane, since the entire  
20 weather-event was out of the Company's control.

21 Q. How is the Company proposing to modify the exclusion  
22 language?

23 A. The Company proposes the following:

24 "The Company may seek the following exclusion to operating

1 performance under this measure: All odor calls associated  
2 with mass area odor complaints, major weather-related  
3 occurrences, and major equipment failure. Con Edison shall  
4 provide notification..."

5 **4. Gas Regulations Performance Measure**

6 Q. What modifications is the Company proposing to the Gas  
7 Regulations Performance Measure?

8 A. The Company is proposing the following modifications to  
9 this metric:

- 10 • Change in the NRA calculation;
- 11 • Establish audit protocols;
- 12 • Eliminate NRA for violations that were previously  
13 identified in a quality control/assessment process  
14 and rectified prior to an audit; and
- 15 • Eliminate NRA for violations that were self-reported  
16 and not subject to reporting requirements.

17 Q. Please describe the Company's first modification.

18 A. The Company is proposing to change the NRA calculation for  
19 violations identified in Records and Field Audits.

20 Q. How does the Company propose to calculate the NRAs for  
21 Records and Field Audit Violations?

22 A. Records Audit Operations

23 High Risk: 6-20 (1/2 BP); 21+ (1BP)

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Other Risk: >15 (1/4 BP)

2 Records Audit Central

3 High Risk: 10-25 (1/2 BP); 26+ (1BP)

4 Other Risk: >15 (1/4 BP)

5 Field Audit

6 High Risk: 6-20 (1/2 BP); 21+ (1BP)

7 Other Risk: >15 (1/4 BP)

8 Q. What is the basis for separating the Central category and  
9 excluding that categories' first 10 audit high risk items  
10 and 15 other risk items in the records audit?

11 A. During the 2021 PSC Records Audit of 2020 Records, Staff  
12 changed the audit protocols for Central Records by sampling  
13 by borough, instead of the Central group as a whole, which  
14 resulted in quadruple the number of records and field  
15 inspections than had been historically sampled, in the  
16 Central categories. Con Edison has a Central Operations  
17 organization which singularly performs this work, and  
18 therefore, DPS Staff's historical practice of treating this  
19 group similar to an operational borough (*i.e.*, sampling  
20 protocols in place prior to 2021) was appropriate.  
21 Additionally, these changes were not negotiated for Rate  
22 Years 2020-2022 nor were they established in the current  
23 Gas Rate Plan. If this is the audit protocol going  
24 forward, the Company is requesting a separation of this

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 category with the proposed dead band, in order to establish  
2 appropriate targets that reflect the audit protocol  
3 changes. Con Edison has shown a consistent downward trend  
4 in our Records and Field audit violations since this metric  
5 was put into place, and we will strive to continue this  
6 decline in violations.

7 Q. What is the basis for proposing a dead band for Field Audit  
8 findings?

9 A. Since the current rate case's negotiations, DPS Staff has  
10 greatly increased its field presence overall, and  
11 therefore, increased the number of field audits in the  
12 process.

13 Additionally, and as discussed above, in 2021 DPS Staff  
14 modified its sampling practices related to the Central  
15 group. This change occurred in the field audit as well,  
16 which resulted in quadruple the number of field inspections  
17 than had been historically sampled, in the Central  
18 categories. These changes were not negotiated for Rate  
19 Years 2020-2022 nor were they established in the Gas Rate  
20 Plan. Therefore, the Company is requesting a dead band of  
21 5 high risk and 15 other risk Field Audit findings, in  
22 order to establish appropriate targets that reflect the  
23 audit protocol changes.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Q. Please describe the Company's next proposed modification to  
2 the Gas Regulations Performance Measure.

3 A. The next proposed modification would establish more  
4 consistency around audit sampling. In the context of  
5 annual field and record audits, where violations carry  
6 significant NRA implications and are reported in the annual  
7 Performance Measurement Report, it is imperative that  
8 consistent sampling and audit protocols be established.  
9 There is currently no documented methodology or protocols  
10 explaining how Staff develops samples and/or audits a LDC's  
11 records. As stated in the prior two answers, Staff has  
12 modified sampling protocols outside of rate case  
13 negotiations, which has greatly increased the number of  
14 audited items for both the Records and Field audit. To  
15 address this issue, the Company is requesting that the  
16 Commission direct Staff, in consultation with New York  
17 State LDCs, to establish a documented sampling and audit  
18 protocol to promote greater consistency.

19 Q. What is the Company's next proposed modification related to  
20 the Gas Regulations Performance Measure?

21 A. The Company is proposing the elimination of NRA for  
22 violations resulting from self-reported events not subject  
23 to reporting requirements, as long as the Company takes  
24 immediate corrective action to resolve said issue. To

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 promote transparency and cooperation, the Company has self-  
2 reported issues or incidents to Staff, which do not meet  
3 current regulatory reporting requirements. These self-  
4 reported events should not be subject to NRA, because the  
5 Company should not be penalized for going above and beyond  
6 its reporting requirements.

7 Q. What is the Company's next proposed modification related to  
8 the Gas Regulations Performance Measure?

9 A. The Company is proposing the elimination of any NRA  
10 penalties associated with violations that were previously  
11 identified by internal quality control processes and  
12 rectified prior to identification in a PSC audit. The  
13 Company puts considerable effort into identifying and  
14 rectifying compliance or quality issues; therefore, it not  
15 reasonable for the rate plan to establish disincentive for  
16 a violation that has already been identified and rectified  
17 by the Company. Indeed, it is contrary to governmental  
18 policy regarding compliance, which is to encourage  
19 disclosure and correction.

20 **VII. GAS SUPPLY**

21 **A. Capacity and Supply Portfolio**

22 Q. Please describe the nature of the Companies' gas supply  
23 portfolio.

24 A. The Company manages a joint gas supply and capacity

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 portfolio ("joint portfolio") with (Orange and Rockland  
2 Utilities, Inc. ("O&R") that allows for the joint  
3 utilization of both Companies' gas supply and interstate  
4 pipeline capacity contracts, including storage. The joint  
5 portfolio is operated for the benefit of the firm gas  
6 customers of both Con Edison and O&R (the "Companies").  
7 The contracts that the Companies' have entered into are  
8 listed in Schedules 1, 2, 3, and 4 of Exhibit\_\_\_(GIOSP-3).

9 Q. Please describe the objective of the Companies' long-term  
10 gas supply plan.

11 A. The Company evaluates supply and capacity requirements over  
12 a ten-year planning horizon and integrates and extends this  
13 over a 20-year planning horizon to determine the plan to  
14 meet the needs of its firm gas customers. While the  
15 Company plans only for its firm customers, it is cognizant  
16 of needs of its non-firm customers and of electric  
17 customers. The Companies have also adopted the objective  
18 of decreasing the emissions associated with the gas flowing  
19 through the system, through the purchase of certified gas  
20 and the interconnection of RNG facilities.

21 Q. Please describe the objective of the Companies' gas  
22 purchasing and hedging programs.

23 A. The Company's objective is to obtain reliable, diverse,  
24 lower emission, and reasonably-priced gas supply in order

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 to: (i) meet the design winter requirements of its firm gas  
2 customers, (ii) minimize costs to its firm customers, (iii)  
3 reduce price volatility, (iv) react to changing weather  
4 conditions, (v) to the extent possible, maintain service  
5 during a contingency event affecting a major pipeline or  
6 supply basin and (vi) reduce the emissions associated with  
7 the gas it purchases.

8 Q. How do the Companies seek to maintain reliability of  
9 supply?

10 A. One of the cornerstones of a reliable gas portfolio is  
11 diversity. The Companies' joint gas supply and capacity  
12 portfolio includes contracted supplies from the Marcellus  
13 Shale in the Northeast, the Gulf Coast, and Canada, from  
14 suppliers on multiple pipelines, as set forth in  
15 Exhibit\_\_\_(GIOSP-3), Schedule 1, Gas Supply Contracts. The  
16 Companies also have firm pipeline capacity contracts with  
17 various interstate pipeline transportation companies, as  
18 set forth in Exhibit\_\_\_(GIOSP-3), Schedule 2, Pipeline  
19 Transportation Contracts, which provide access to diverse  
20 sources of supply. In addition, the Companies have a  
21 number of contracts for underground storage, which are  
22 listed in Exhibit\_\_\_(GIOSP-3), Schedule 3, Storage  
23 Contracts, an LNG peaking facility, whose deliverability is  
24 set forth on Exhibit\_\_\_(GIOSP-3), Schedule 4, baseload and

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 peaking delivered service, as set forth in Exhibit (GIOSP-  
2 3), Schedule 2, and has contracted for CNG peaking  
3 deliveries, whose deliverability is set forth on  
4 Exhibit\_\_\_(GIOSP-3), Schedule 4.

5 Q. What are design weather conditions?

6 A. The peak day demand represents the quantity of gas that  
7 firm customers would require in a twenty-four hour period  
8 of a gas day, which starts at 10:00 am, at a Temperature  
9 Variable of zero degrees Fahrenheit. The Temperature  
10 Variable is defined as the sum of 70 percent of the  
11 projected gas day average temperature plus 30 percent of  
12 the prior gas day average temperature, which provides the  
13 best correlation with firm customer demand.

14 Exhibit\_\_\_(GIOSP-3), Schedule 5, Forecasted Requirements -  
15 Peak Day, shows the forecast of Con Edison's and O&R's firm  
16 customers' peak day demand for each winter period (*i.e.*,  
17 November through March) beginning with the winter of  
18 2019/2020 through winter 2021/2022. The Companies also  
19 calculate the gas requirements for meeting demand over the  
20 course of a winter under severe weather conditions (a  
21 "design winter") in order to establish storage and  
22 Delivered Services amounts needed to meet potential  
23 customer demand.

24 Q. Please explain how the Companies' contracts enable them to

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 meet these design weather conditions.

2 A. The Companies meet peak day demand in four ways. First,  
3 the Companies rely on the delivery of firm supply through  
4 their firm interstate pipeline transportation and firm  
5 storage contracts, which are listed in Exhibit\_\_\_(GIOSP-3),  
6 Schedules 2 and 3. Second, the Companies maintain  
7 contracts for Delivered Services. Historically, these have  
8 primarily been firm peaking supplies that give the option  
9 to purchase gas for a pre-determined number of days during  
10 the winter (typically 15, 30, or 60 days) and pay the daily  
11 citygate index price for the gas on those days. The  
12 Companies' also have base delivered supply contracts in  
13 addition to peaking supplies. Base delivered supplies are  
14 a commitment to procure gas at the citygate for a set  
15 winter term (typically December through February or  
16 November through March) and are priced at a NYMEX index  
17 price plus a fixed basis. These contracts for Delivered  
18 Services, which are listed in Exhibit\_\_\_(GIOSP-3), Schedule  
19 2, contribute to the Companies' ability to meet peak load.  
20 Third, Con Edison vaporizes gas from its LNG facility to  
21 meet peak day demand. Fourth, Con Edison can call upon its  
22 contracted CNG facility to meet peak day demand.

23 Q. What do you mean by "Delivered Services?"

24 A. Delivered Services are gas supplies procured at the

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 citygate from third party suppliers that have primary firm  
2 capacity to the citygate.

3 Q. What risks does a high level of Delivered Services  
4 introduce to the Gas Supply portfolio?

5 A. The Company has identified three risks: re-contracting,  
6 availability, and price volatility.

7 Q. Please explain these risks.

8 A. Unlike the Company's contractual rights for pipeline  
9 capacity, there is no regulatory renewal right for  
10 Delivered Services and, therefore, no certainty that the  
11 Company can continue to rely on the same Delivered Service  
12 supply contract year-to-year, to reliably meet customer  
13 heating needs.

14 Second, with the pipeline capacity coming into the Con  
15 Edison service territory being fully contracted and new  
16 pipeline projects facing increased difficulty in securing  
17 necessary permits, the future availability of Delivered  
18 Services required to meet our forecasted peak demand is  
19 uncertain because shippers who hold this capacity can  
20 market it to persons outside of the service territory.

21 Third, the increased reliance on Delivered Services in the  
22 portfolio results in higher gas price volatility and  
23 potentially increased costs for our customers. Instead of  
24 buying gas at low price volatility production area receipt

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 points and transporting it on pipeline capacity to our  
2 service territories, the Companies must purchase at New  
3 York area citygates where prices are subject to significant  
4 volatility during high demand periods.

5 Q. What actions have the Companies taken to reduce their  
6 reliance on Delivered Services?

7 A. The Companies actively seek to acquire firm transportation  
8 capacity to the New York area citygates as it becomes  
9 available from other shippers through permanent capacity  
10 release transactions or by contracting directly with  
11 pipelines once the capacity has been turned back by the  
12 existing shipper. The Companies have also acquired  
13 capacity released through Asset Management Agreements  
14 ("AMA") with third party capacity holders in addition to  
15 traditional capacity release agreements. The Companies  
16 will pay a fee in exchange for capacity with a supply  
17 component from the third party.

18 Q. Have there been changes to the Companies' supply and  
19 capacity portfolio over the last three years?

20 A. Yes. The Companies have recently entered into new  
21 agreements and elected not to renew certain agreements.

22 Q. Please describe the recent agreements the Companies have  
23 entered.

24 A. As discussed in further detail below, the Companies are

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 diversifying their Delivered Services portfolio. The  
2 Companies have entered Delivered Services contracts with up  
3 to two or three-year durations to meet firm gas customers'  
4 current and future peak day requirements. These contracts  
5 give the Companies the right to call upon the supplier and  
6 purchase daily-priced gas for a maximum of 30 or 60 days  
7 during the winter season. As previously discussed, these  
8 Delivered Services contracts provide needed supply to our  
9 gas system to supplement pipeline capacity under contract  
10 by our suppliers.

11 The Companies have new contracts for additional  
12 deliverability to our citygates: four with Texas Eastern  
13 for 147,500 Dt/ of pipeline capacity which delivers to  
14 Lower Manhattan.

15 Beginning in 2020, the Companies have also subscribed to  
16 pipeline capacity through Asset Management Arrangements,  
17 specifically a total of 80,000 Dt/d delivery on Transco  
18 Pipeline to Manhattan and 15,500 (increases to 40,000 Dt/d  
19 in November 2023) on Tennessee pipeline to Westchester.

20 Q. How do the Companies evaluate whether to renew an expiring  
21 contract?

22 A. The Companies evaluate the capacity portfolio. If an  
23 expiring contract is still required to serve firm customers  
24 or manage system operations, the Companies assess the

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 market to determine if there are more economic alternatives  
2 available that provide at least the same degree of  
3 reliability and flexibility. If not, the Companies will  
4 renew the contracts by exercising their rights pursuant to  
5 existing interstate pipeline tariff Right of First Refusal  
6 ("ROFR") provisions or other applicable contract  
7 provisions.

8 Q. Have the Companies elected not to renew certain expiring  
9 contracts?

10 A. Over the past three years, the Companies elected not to  
11 renew some of their firm transportation contracts with  
12 National Fuel.

13 Q. Why did the Company elect not to renew these contracts?

14 A. The increase in supply available from the Northeast  
15 Marcellus and Utica shale regions has affected how the  
16 Companies evaluate certain contracts. Historically, the  
17 Companies seek to access receipt points where gas can be  
18 purchased from multiple sellers, which are often referred  
19 to as a "liquid supply points." To accomplish this, the  
20 Company has historically entered contracts that formed  
21 paths accessing the Gulf, Canada, or a storage field. Some  
22 of these paths include multiple contracts such as one  
23 upstream pipeline with access to a liquid supply point,  
24 connected with one downstream pipeline with access to NYC.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 With the increased gas available in the Northeast, liquid  
2 supply points that previously did not exist have formed on  
3 the downstream pipelines.

4 The firm transportation contracts with National Fuel were  
5 upstream transportation contracts that were needed to reach  
6 a liquid supply point. Since liquid supply points are now  
7 available on their downstream counterpart along the same  
8 path, the Companies no longer need to purchase firm  
9 transportation rights on this upstream pipeline.

10 Q. Do you anticipate any future changes to the capacity  
11 portfolio?

12 A. Yes. As described in our testimony in Case 19-G-0066, the  
13 Companies have subscribed to pipeline capacity on Mountain  
14 Valley Pipeline ("MVP") which is scheduled to be in service  
15 as early as 2022. The Companies have also subscribed to  
16 pipeline capacity on Iroquois pipeline for 62,500 Dt/d of  
17 capacity for deliveries from Waddington, NY to New York  
18 City, NY and on Tennessee pipeline for 115,000 Dt/d of  
19 capacity for deliveries from Pennsylvania to Westchester,  
20 NY. The estimated in-service date of the Iroquois pipeline  
21 is winter 2023 and while Tennessee pipeline has indicated  
22 an estimated in-service date of winter 2022, due to the  
23 high risk associated with that aggressive schedule, the  
24 Companies continue to plan for an in-service of winter

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 2023.

2 Q. What is the current/updated status of the anticipated  
3 future pipeline projects?

4 A. MVP was originally planned to be in service in 2018 and has  
5 now been delayed such that the earliest it will be in  
6 service is November 2022. In Case 19-G-0066, the Companies  
7 had also described a project, Penn East Pipeline, for  
8 100,000 Dt/d. The pipeline company has permanently  
9 terminated that project.

10 The estimated in-service date of the project on Iroquois  
11 Pipeline has not changed since inception. The estimated  
12 in-service date of the project on Tennessee Pipeline has  
13 also not changed. The Tennessee project will allow Con  
14 Edison to lift its moratorium in Westchester, but we  
15 continue to plan for an in-service date of no earlier than  
16 winter 2023.

17 Q. Have there been any changes to the Companies' supply  
18 portfolio?

19 A. Yes. As illustrated in Exhibit\_\_(GIOSP-3), certain of the  
20 Companies' gas supply contracts expire each year. Existing  
21 contracts may be renegotiated or replaced through  
22 competitive bidding or RFPs.

23 In the past, the gas supply contracts required to fill open  
24 firm transportation capacity typically had one, three, or

1 five-year terms. The Companies' purchasing strategy has  
2 changed in recent years. Upstream supplies have generally  
3 been limited to one year or less, whereas for Delivered  
4 Services or peaking supplies, the Company will look to  
5 procure up to three years or more based on availability.  
6 The Companies have entered multi-year upstream supply  
7 purchase deals for a small portion of their supply in order  
8 to capture some of the current market differentials and  
9 will continue to do so when market conditions support it.  
10 The Companies re-evaluate their purchasing strategy and  
11 make changes as circumstances dictate. Exhibit\_\_\_(GIOSP-  
12 3), Schedule 1, lists all gas supply contracts effective  
13 winter 2021/22.

14 **B. Price Volatility Reduction**

15 Q. What efforts have the Companies undertaken to reduce the  
16 volatility of delivered services?

17 A. To address the price volatility risk, the Companies have  
18 begun diversifying the type of Delivered Services procured  
19 by adding base delivered services to the portfolio. These  
20 products are priced at a fixed basis for the term plus the  
21 NYMEX settle for the month and are intended to reduce the  
22 impact of citygate commodity-priced peaking supplies on the  
23 total portfolio during periods of high volatility. On

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 October 22, 2018, the Commission approved the Company's  
2 request to include the costs of the new base delivered  
3 services as part of its DDS program (Case 18-G-0393).

4 Q. Please describe the procurement strategies the Companies  
5 employ in the wholesale market to minimize gas costs.

6 A. The Companies use many procurement strategies to minimize  
7 gas costs. For procurement of supply in liquid markets,  
8 such as production area receipt points, we use a  
9 competitive bidding process through Requests for Proposals  
10 ("RFPs") and by participating in on-line reverse auctions.  
11 In illiquid markets, such as Delivered Services procured at  
12 certain of our service area citygates, the Companies will  
13 at times engage in direct negotiation with the third  
14 parties capable of meeting the supply requirement.

15 Q. Please describe the Companies' gas hedging program.

16 A. The Companies' hedging program is designed to reduce gas  
17 price volatility. One of the hedging program's components  
18 is the Monthly Plan, which dictates the use of various  
19 financial instruments to hedge natural gas prices for part  
20 of the gas supply necessary to meet the monthly  
21 requirements of firm sales customers. The program provides  
22 for the Companies to hedge a predetermined quantity of  
23 their forecasted sales using financial price hedges for the  
24 winter period.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Q. Are there other efforts to reduce costs?

2 A. Yes. The dynamic nature of the wholesale gas market, since  
3 the advent of shale-based production, has created new  
4 opportunities for the Companies to purchase more economic  
5 natural gas at alternative receipt points along the path of  
6 its interstate pipeline capacity. As new production and  
7 upstream pipeline capacity go into service the Companies  
8 are frequently assessing and modifying their purchasing  
9 strategy for the resulting changes in pricing dynamics. In  
10 addition, the Companies seek to optimize their joint  
11 portfolio primarily through capacity releases, AMAs, and  
12 off-system bundled sales.

13 Q. Please provide an illustration of the historical benefits  
14 from the Companies' portfolio optimization efforts.

15 A. Exhibit\_\_\_(GIOSP-3), Schedule 6, Non-Traditional Revenues,  
16 illustrates annual benefits received over the past five  
17 years from the Companies' portfolio optimization efforts to  
18 minimize overall costs to their firm gas customers.

19 Q. How are portfolio optimization benefits derived?

20 A. The expected benefits are derived when available capacity,  
21 not used to serve the Companies' customer requirements or  
22 balancing needs, is offered to the market through capacity  
23 releases, off-system sales, or AMAs that together are  
24 referred to as "discretionary capacity releases."

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Q. What changes do you see for revenue from discretionary  
2 capacity releases?

3 A. We expect the revenue from discretionary capacity releases  
4 to decrease. First, because more existing capacity will be  
5 needed to serve firm customers more often, projected near  
6 term load growth, and therefore will be unavailable for  
7 release during times of higher market value. Second, the  
8 market value of some capacity has decreased because of  
9 recent pipeline buildouts from the Marcellus region (e.g.,  
10 Atlantic Sunrise, Rover) that have increased the capacity  
11 price in that region. This price increase decreases  
12 pricing differentials with other regions and decreases the  
13 value of released capacity.

14 **C. Marginal Cost Study**

15 Q. Please address the marginal cost study with respect to gas  
16 supply costs.

17 A. Supply-side marginal costs are the costs of procuring and  
18 transporting an additional unit of gas to the Companies'  
19 distribution systems. Fixed costs of existing resources  
20 are not considered because they do not vary with additional  
21 usage and because the Companies cannot avoid paying them.  
22 The marginal costs projected for the 2022-2025 period  
23 average \$4.06/dt for the year, \$6.95/dt for the winter

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 period and \$13.46/dt for a peak day.

2 Q. Please define the marginal commodity cost.

3 A. Marginal commodity cost is the cost of an incremental  
4 purchase of gas required to meet system demand that exceeds  
5 committed supply sources and planned supply additions.

6 Q. Please explain the development of the marginal commodity  
7 cost.

8 A. Exhibit\_\_\_(GIOSP-3), Schedule 8, Summer Season  
9 Supply/Demand Balance and Schedule 9, Winter Season  
10 Supply/Demand Balance, compare the Companies' firm  
11 transportation and supply capability to serve gas demand  
12 for firm sales customers on a summer season and for a  
13 normal winter season. Exhibit\_\_\_(GIOSP-3), Schedule 10,  
14 Peak Day Supply/Demand Balance compares the Companies' firm  
15 transportation and supply capability to serve all firm  
16 customers on a peak-day. The Companies' firm  
17 transportation and supply capability includes all firm  
18 transportation deliverability and accompanying purchased  
19 firm supplies. As shown by these Schedules, the highest  
20 cost of supply was assumed for purposes of the marginal  
21 cost study, combined with the projected firm demand, are  
22 less than the Supply Capability of the Companies except on  
23 a design day. The need to add capacity to serve firm  
24 customer requirements is driven by the Companies'

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 requirements on a design day. As such the marginal cost  
2 for commodity on a design day reflects the purchase of gas  
3 through a peaking contract at a Con Edison citygate. The  
4 Companies often secure peaking supplies to supplement  
5 baseload, storage and other supplies to meet our peak  
6 demand on a design day.

7 Q. Please explain the calculation of the marginal commodity  
8 cost.

9 A. The marginal commodity cost is measured by using an  
10 optimization model to dispatch load profiles under normal  
11 and design weather and taking the resulting highest cost of  
12 supply.

13 Q. What is the forecast period used in your marginal cost  
14 study?

15 A. The forecast period for the marginal cost study is the  
16 three-year period from November 2022 through October 2025.  
17 Exhibit\_\_\_(GIOSP-3), Schedule 11, Natural Gas Monthly  
18 Marginal Commodity Costs, displays the monthly forecasted  
19 marginal commodity costs for the three years of the study.  
20 Exhibit\_\_\_(GIOSP-3), Schedule 12, Marginal Commodity Costs,  
21 summarizes these costs to show the impact of the  
22 incremental increase on an average annual, summer season,  
23 winter season, and design day basis.

21  
22  
23  
24

Q. Are there presently Gas Supply IT systems requiring capital enhancements?

A. Yes, there are presently two systems that require enhancements. The first is for the Transportation Customer Information System ("TCIS") with a capital cost of \$1.08 million over the rate period; the white paper is called "Utilizing AMI Data for Interruptible Gas Marketer Forecasting and Retail Choice Information System ("RCIS") Migration." The second project is for the Gas Transaction System ("GTS") with a capital cost of \$1.9 million in 2025 and is called "FIS GTS Enhancements and Upgrade." The white papers for these two projects are included in the exhibits of the Company's IT Panel.

Q. Starting with the first System Enhancement, Utilizing AMI Data for Firm and Interruptible Gas Marketer Forecasting and RCIS Migration, please describe the project's purpose.

A. TCIS is a software used by marketers to communicate gas operational information to Con Edison. TCIS has many functions, including the ability to communicate gas scheduling information, control access security, generate reports, post messages to the internet, store rates, create invoices and vouchers, and track enrollments/de-enrollments. In 2021, Con Edison enhanced TCIS to include

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 the implementation of capacity release, implementation of  
2 rebill adjustments, and include a display of AMI meter  
3 reading data. The project proposed in this rate filing  
4 will expand TCIS' capability to leverage AMI data for  
5 forecasting as well as enable the Company to migrate  
6 current functionality from RCIS to TCIS. Currently, the  
7 system uses monthly data to create a linear forecasting  
8 equation that intakes forecasted temperature to determine  
9 the projected usage of firm transportation customers. AMI  
10 data will allow the Company to use daily information for  
11 daily forecasts, thus improving the accuracy of its  
12 forecasts. The movement of marketer related functionality  
13 from RCIS to TCIS will allow for the retirement of RCIS and  
14 combine all marketer related functionality into one system.

15 Q. Please describe the purpose of the second project, FIS GTS  
16 Enhancements and Upgrade.

17 A. GTS acts as the operational and accounting system of  
18 record, used by commodity operations to record and schedule  
19 deliveries of natural gas purchases to the Companies'  
20 service territory. In addition, it identifies, assembles,  
21 analyzes and reports the organization's transactions for  
22 accrual purposes, accounts for the related assets and  
23 liabilities and allocates the various costs of natural gas  
24 purchases to the various end uses. This purpose of this

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 project is to upgrade the FIS GTS application to its latest  
2 version, modernize the system application to the cloud, and  
3 automate select processes, notifications, and business  
4 activities.

5 Q. Are there projected additional O&M expenses associated with  
6 these projects?

7 A. Yes, there are. The additional O&M expense is \$690,000  
8 over the rate period.

9 Q. What are the drivers for the projected increases in O&M?

10 A. The O&M expenses are associated with maintaining and  
11 supporting the TCIS system on a real-time basis. TCIS is a  
12 system used for daily operations, specifically to calculate  
13 the daily gas delivery requirements of the more than eighty  
14 gas marketers serving firm and interruptible customers in  
15 our service territory. TCIS also acts as the electronic  
16 bulletin board for accepting gas schedules from the gas  
17 marketers in accordance with both day ahead and intra-day  
18 scheduling deadlines. Those schedules are then sent  
19 through systems to Gas Control every fifteen minutes.  
20 These deliveries represent 50% of all nominations for firm  
21 gas customers on our system. This information is critical  
22 to Gas Control's confirming of gas supplies at the various  
23 pipeline citygates in order to maintain system reliability.  
24 This system is currently being supported by the capital

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 team working on the current TCIS upgrades. However, the  
2 complexity of this in-house developed product combined with  
3 a recent uptick in system performance issues are driving  
4 the need for more internal IT support to supplement those  
5 of the third-party vendor. Due to the operational nature  
6 of the system, system performance issues are urgent and  
7 need to be resolved quickly, which is why the Company uses  
8 the capital team to resolve these issues. The O&M request  
9 is to provide funding to internally support TCIS starting  
10 in late 2023, after the proposed capital project ends.

11 Q. Was the document titled "CONSOLIDATED EDISON COMPANY OF NEW  
12 YORK, INC. - GIOSP Gas Distribution Peak Forecasting Model  
13 O&M" prepared under this Panel's direction and supervision?

14 A. Yes, it was. This is the document which has been  
15 identified as Exhibit \_\_\_\_ (GIOSP-4).

16 Q. Please describe this exhibit.

17 A. This exhibit outlines the O&M program change called  
18 Gas Distribution Peak Forecasting Model.

19 Q. Please briefly describe its benefits and justification.

20 A. Given the Company's commitment to a clean energy future  
21 and the interests of its stakeholders, optimization and  
22 accurate planning for the gas distribution system is  
23 necessary. The effectiveness of the Company's plans for  
24 its gas distribution system has a direct impact on its gas

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 customers. If the gas distribution system is not planned  
2 for properly, there is the risk of shedding gas load in  
3 certain areas. Identifying distinct areas of load growth  
4 will assist with pinpointing non-pipe solutions instead of  
5 the need for system reinforcements. Current gas policy is  
6 moving towards less development of gas supply. As such,  
7 the margins on the system will become tighter thus  
8 prompting the need for a more granular and longer term  
9 forecasting model for the distribution system.

10 The Company is seeking to develop a firm gas distribution  
11 forecasting model that predicts firm gas peak day demand at  
12 design weather conditions. This new model will predict the  
13 peak-day and peak-hour firm gas demand for newly  
14 established districts within the gas distribution system in  
15 the Company's gas service territory out 20-years, which  
16 will be developed by an expert forecasting vendor and the  
17 Company's forecast development team. The Company's  
18 forecast development team will be comprised of subject  
19 matter experts from Gas & Steam Forecasting, Policy  
20 Integration Forecasting, Forecasting Services, Gas  
21 Engineering, and Gas Control - all working incrementally on  
22 this effort.

23 The total cost of this project is projected to be  
24 \$2.05 million, which will result in:

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

- 1           • The development of an Excel based firm gas  
2           distribution peak day forecasting model.
- 3           • A proven methodology and algorithms for transposing  
4           the firm gas transmission system and regulator peak  
5           day forecasts to distribution level district  
6           forecasts.
- 7           • Mapping or the gas service territory to distribution  
8           districts.

9           Accordingly, the cost request here is for forecast vendor  
10          professional services and incremental Company labor costs.

11          The nature of this work is considered O&M and three  
12          additional Full Time Equivalents ("FTE") are required for  
13          Rate Year 1. In Rate Years 2 and 3, ongoing operations,  
14          maintenance, and calibration of the  
15          model/methodology/mapping will occur to sustain accuracy,  
16          totaling \$190,000 per year for 1 FTE and associated  
17          overheads for the Gas & Steam Forecasting Section.

18          As such, projected incremental O&M costs total \$1.67  
19          million in Rate Year 1 (2023), \$0.19 million in Rate Year 2  
20          (2024) and \$0.19 million in Rate Year 3 (2025). Please note  
21          that the total of these values is about \$1 million less  
22          than what is included in the associated program change form  
23          and will be revised on update. The Company expects the

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 completion of the forecast tool to occur early in RY2.

2 **E. Lost and Unaccounted for Gas**

3 Q. Please explain the current methodology for calculating lost  
4 and unaccounted for ("LAUF") gas.

5 A. In accordance with the current Gas Rate Plan, the Company  
6 uses a throughput method that calculates unaccounted for  
7 gas by subtracting metered deliveries to customers from  
8 metered supplies to the system. An adjustment is made for  
9 Generators who contribute 0.5% of their metered deliveries  
10 to the unaccounted for gas as well as the Delivering Party  
11 to the Receiving Party among the New York Facilities  
12 companies. Beginning September 2020 and going forward, gas  
13 loss due to inactive accounts are no longer part of the net  
14 gas loss calculation. The remaining LAUF gas is compared  
15 against a rolling five-year average. The calculation of  
16 the current average is shown on Exhibit\_\_\_(GIOSP-3),  
17 Schedule 13.

18 Q. Are you proposing any changes to Con Edison's LAUF  
19 calculations for the period commencing January 1, 2023?

20 A. No.

21 **F. Renewable Natural Gas and Retail Access**

22 Q. Is RNG currently included in the retail access program?

23 A. Yes. In the event the Company purchases RNG on behalf of  
24 customers, Retail Access customers would receive a portion

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 through Tier 3.

2 Q. Are you proposing any changes to RNG and the Retail Access  
3 program?

4 A. Yes. The Company is looking to incorporate the option for  
5 Retail Access marketers to directly procure RNG injected  
6 directly into our distribution system themselves. This  
7 would not change any current allocations for baseload or  
8 any of the tiers. Deliveries from RNG would be included in  
9 the marketers' daily delivery requirement and those volumes  
10 would be subject to the same imbalance and cashout  
11 procedures as all other volumes delivered to Con Edison.

12 Q. Why are allocations for baseload or any of the tiers not  
13 being changed if a Retail Access marketer subscribes to  
14 RNG?

15 A. The Company is responsible for ensuring sufficient capacity  
16 for all firm customers. The Company will continue to  
17 procure sufficient capacity for all firm customers to  
18 ensure that in the event a marketer turns its customers  
19 back to the Company, there will be adequate capacity to  
20 account for their peak day usage. If the Company were to  
21 reduce the amount of capacity procured by the annual amount  
22 of RNG, it may be unable to provide service down to the  
23 peak day in the event that customers return to the utility  
24 from a marketer.

**G. Certified Natural Gas**

1  
2  
3  
4

16  
17  
18  
19  
20  
21  
22  
23  
24

Q. Is the Company proposing any procurement of certified natural gas?

A. Yes. The Company is proposing a pilot program designed to allow for the procurement of certified gas, during the rate period, limited to an annual cost above traditional supplies of \$800,000 per year.

Q. What is certified natural gas?

A. Certified natural gas is natural gas originating from producing sites that have undergone third-party certification to verify that the operator has met high environmental standards and best practices for methane emissions reduction in their operations.

Q. Does the procurement of certified gas align with the goals of CLCPA?

A. Yes, per CLCPA, the 1990 net emissions baseline includes not only all statewide sources of greenhouse gas emissions but also those associated with imported electricity and fossil fuels.

Q. Why is the Company proposing a pilot program only?

A. The Company is proposing a pilot program given the market for certified natural gas is still evolving and many certification processes exist, rather than an industry standard. The experience from the pilot coupled with the

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 reporting requirements of the pilot will allow the program  
2 to be ramped up or down as appropriate.

3 Q. What reporting requirements is the Company proposing as  
4 part of the pilot?

5 A. The Company will file an annual report each May, describing  
6 progress of the pilot to date and meet with DPS Staff each  
7 June to review the report and recommend next steps, which  
8 could include filing with the Commission for modification  
9 of the program.

10 **H. Gas Supply Constraints and Temporary Moratorium**

11 Q. Are there any updates to the status of the moratorium?

12 A. Yes, existing gas supply constraints in this part of our  
13 service territory still limit our ability to meet customer  
14 demand there.

15 Q. Is there an expectation of when the temporary moratorium  
16 will be lifted?

17 A. The temporary moratorium is expected to be lifted when the  
18 Company's subscribed Tennessee compression-only project is  
19 in service. The Company contracted with Tennessee Gas  
20 Pipeline to increase firm transportation capacity to our  
21 Westchester citygates utilizing increases in compression  
22 only. Tennessee has applied for permits for this project  
23 and those requests are currently pending before the Federal  
24 Energy Regulatory Commission and various state agencies.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 While Tennessee continues to work toward an in-service date  
2 of November 1, 2022, the Companies are planning for an  
3 estimated in-service date of November 1, 2023.

4 Q. Are there other considerations that would allow the  
5 temporary moratorium to be lifted?

6 A. Yes, if the demand in the area decreases to a level where  
7 gas supply constraints no longer exist, but our current  
8 forecast does not show demand decreasing to that degree.

9 Q. What changes has the Company undertaken to its supply  
10 portfolio while the moratorium remains in effect?

11 A. In order to meet the increase in demand associated with the  
12 acceleration of customer applications received in the sixty  
13 days between moratorium announcement and implementation,  
14 the Company entered into an agreement with a trucked CNG  
15 vendor. As a result, a trucked CNG facility capable of  
16 providing 25,000 dt per day of supply is now in-service in  
17 Westchester County. This facility is temporary and will be  
18 retired once the Tennessee Pipeline project enters service  
19 or demand is reduced such that the CNG facility is no  
20 longer necessary and the moratorium is lifted.

21 Q. Has the Company provided any assistance to customers during  
22 the moratorium?

23 A. Yes. The Company provides information on non-fossil  
24 alternatives and has worked with potential customers prior

1 to the purchase or lease of a property to find alternative  
2 solutions that will meet their energy needs.

3 **I. Regulatory Activities**

4 Q. Do the Companies undertake any regulatory efforts to  
5 maintain the reasonableness of their gas costs and the  
6 reliability of their supply?

7 A. Yes. The Companies participate in FERC proceedings  
8 involving: (i) their interstate pipeline transportation and  
9 storage providers ("service providers") and (ii) generic  
10 issues that impact the cost and quality of the gas service  
11 received by the Companies from FERC-regulated entities.

12 The Companies review all significant FERC filings made by  
13 the interstate pipelines and storage companies from which  
14 they receive service. Since January 2017, the Companies  
15 have participated in numerous FERC proceedings and, when  
16 circumstances dictate, have filed detailed comments or  
17 objections. Exhibit\_\_\_(GIOSP-3), Schedule 7, lists the  
18 FERC dockets in which Con Edison has filed detailed  
19 comments since January 2017.

20 The Companies are also active participants in the AGA FERC  
21 Regulatory Committee, which takes an active role in a range  
22 of federal regulatory issues relating to gas. The  
23 Companies closely follow FERC proceedings that impact rates  
24 and terms and conditions of service of their interstate

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 pipeline service providers and actively participate in  
2 litigation as well as settlement negotiations. In addition  
3 to the FERC proceedings listed in Exhibit\_\_\_(GIOSP-3)  
4 Schedule 7, the Company is participating in several federal  
5 appellate court cases where we advocate in favor of  
6 reasonable prices and adequate supply for our customers.  
7 The Companies have also actively participated in the FERC's  
8 inquiries into gas-electric coordination and, more  
9 recently, impacts to pipeline rates due to the Tax Cuts and  
10 Jobs Act. The Companies are also actively engaged on  
11 several pipeline rate cases, both ongoing and expected, to  
12 negotiate reasonable rates for our customers. When  
13 appropriate, the Companies also participate in  
14 collaborative discussions among pipelines and their  
15 customers, the North American Energy Standards Board  
16 ("NAESB") and the Natural Gas Council ("NGC"), either  
17 directly or through their membership in the AGA.GSP-

18 Q. Please provide examples of the Companies' active  
19 participation in the rate proceedings of their interstate  
20 pipeline suppliers.

21 A. As examples, the Companies participated and are actively  
22 participating in rate settlements with Texas Eastern (RP21-  
23 1001 and RP21-1188), Eastern Gas (RP21-144 and RP21-1187),  
24 National Fuel (RP19-1426) and Transcontinental Gas

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Pipeline's ongoing market-based rate proceeding (RP21-  
2 1143). The Companies are actively participating in Texas  
3 Eastern's (RP21-1001 and RP21-1188), Eastern Gas' (RP21-  
4 1187), and Transcontinental Gas Pipeline's (RP21-1143)  
5 ongoing FERC proceedings with LDC customer groups and is  
6 leading the LDC customer groups in Texas Eastern's and  
7 Transcontinental Gas Pipeline's proceedings, the Texas  
8 Eastern Customer Group and the WSS Customer Group,  
9 respectively.

10 Other FERC proceedings the Companies are following relate  
11 to interstate pipeline cost allocation issues involving,  
12 for example, fuel retention and electric power compression  
13 charges. In a recent case, the Companies negotiated a  
14 favorable settlement agreement related to Algonquin's fuel  
15 rates (RP18-75), protecting a substantial one-time refund  
16 and preventing unreasonable cost shifting to our customers.  
17 In 2016 and 2017, the Companies were involved in settlement  
18 discussions regarding costs Texas Eastern had incurred and  
19 will incur as a result of its PCB Environmental Remediation  
20 Program. The Companies were participants in a shipper  
21 group that successfully negotiated a settlement agreement  
22 with Texas Eastern, and this agreement was ultimately  
23 approved by FERC in Docket Nos. 17-964 and 17-967.

24 The Companies also closely monitor proposed tariff changes

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 by service providers that modify their terms and conditions  
2 of service, including matters related to rights of first  
3 refusal, gas quality, lost and unaccounted for gas, bidding  
4 rules, shipping priority, service provider credit policies,  
5 and tariff and negotiated agreement filings that could  
6 affect the quality of pipeline service to the Companies.

7 The Companies also closely monitor new incremental services  
8 being offered by the Companies' current service providers  
9 so that the rates of those new incremental services are not  
10 subsidized by existing customers, such as the Companies.

11 For example, in 2017, the Companies protested two National  
12 Fuel proceedings that would have resulted in the  
13 subsidization of fuel costs for the new Northern Access  
14 2015 ("NA2015") expansion by system shippers, including the  
15 Companies. FERC ultimately sided with the Companies and  
16 required separate accounting for NA2015 fuel costs in  
17 Docket Nos. CP14-100 and RP17-407.

18 Q. What other regulatory efforts have the Companies taken to  
19 maintain the reliability of their supply?

20 A. The Companies have focused on preventing increasing  
21 electric system reliance on natural gas as a fuel from  
22 adversely affecting gas system reliability. In particular,  
23 the Companies advocated vigorously for the NYISO to  
24 prohibit electric generators from recovering penalties they

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 incur as a result of violating Operational Flow Orders.  
2 Related rules changes were approved by the NYISO's  
3 stakeholder committees and FERC in 2016. In addition, the  
4 Companies continue to advocate for coordination of electric  
5 and gas system reliability and resilience through market  
6 rule changes, such as expanding dual-fuel requirements in  
7 New York State to outside of our service territory. The  
8 Companies are currently working closely with the NYISO on a  
9 Fuel Security Study, which, among other things, will  
10 identify possible system needs to be addressed.

11 Q. Are the Companies a member of any groups addressing gas  
12 reliability issues in New York State?

13 A. Yes. The Companies have been an active participant in the  
14 Natural Gas Reliability Advisory Group ("NGRAG") from its  
15 initiation. The NGRAG was formed to consider the evolving  
16 gas capacity markets and how they affect reliability, and  
17 to inform the Commission about issues that need to be  
18 addressed to protect reliability. The NGRAG has focused  
19 discussion on the NYISO gas/electric workgroup to address  
20 gas supply and transportation issues, updates of an ongoing  
21 LDC collaborative addressing Gas Marketer Transportation  
22 and Balancing Programs, and operational updates provided by  
23 gas industry LDCs, pipelines, marketers, customer groups,  
24 NYSERDA and NYMEX representatives.

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Q. Please describe the Companies' efforts in connection with  
2 NAESB.

3 A. We have been a member of NAESB and its predecessor  
4 organization, the Gas Industry Standards Board ("GISB"),  
5 since the latter's inception in 1994. The Companies  
6 continue to monitor the development of new business  
7 standards and, as appropriate, participate in periodic  
8 revisions to the NAESB Base Contract, a form agreement  
9 frequently used in the industry for the purchase and sale  
10 of natural gas.

11 Q. Please describe the Companies' efforts in connection with  
12 the NGA.

13 A. The Companies participate on NGA's New York State Gas  
14 Utility Planning Committee ("NYPLAN"). NYPLAN is comprised  
15 of planning, supply, and regulatory personnel from New  
16 York's investor-owned natural gas utilities. Its mission  
17 is to provide a forum for New York State gas companies to  
18 address the broad spectrum of issues relating to the  
19 natural gas supply, transportation, storage, peak shaving,  
20 and demand planning process. This includes, but is not  
21 limited to, such responsibilities as responding to  
22 regulatory mandates, discussion/follow-up on key  
23 regulatory/ legislative issues, and working in  
24 collaboration with NYSEARCH, a collaborative Research,

CONSOLIDATED EDISON COMPANY OF NEW YORK, INC  
GAS INFRASTRUCTURE, OPERATIONS AND SUPPLY PANEL - GAS

1 Development & Demonstration organization that serves its  
2 gas utility member companies, on R&D projects.

3 The Companies are members of the NGA Gas Supply Task Force  
4 ("Task Force"). The Task Force includes representation  
5 from all the interstate transmission companies serving the  
6 region, LNG importers and trucking companies, and the  
7 largest of the northeast region's LDCs. Recent members  
8 include several of the larger power generation owners who  
9 use natural gas as a major part of their fuel supply. The  
10 Task Force meets prior to the winter heating season to  
11 confirm communication protocols and to provide updates on  
12 the status of member company transmission and storage  
13 systems. The Task Force is convened during the winter to  
14 monitor supply and deliverability issues. The region's  
15 state regulators and the electric grid operators are  
16 notified of Task Force meetings and are provided meeting  
17 summaries.

18 Q. Does this conclude your direct testimony?

19 A. Yes, it does.

20

<b>Work Description:</b> This program is to fund leak surveys and corrosion inspections of the inside gas piping from the point of entry (POE) of the building to the outlet of every gas meter. There are ~1 million gas meters on over 300,000 gas services located inside the customer’s premise. This program supports the revision of the “service line” definition. This request includes the inspection of the gas piping on a five-year cycle. The inspection cycle is based on the extension of inspection cycles to five years for all inside service inspections, from a prior cycle of once a year annually for business district and once every three years for non-business district.  This program includes the funding for 2023-2025 inspection costs associated with inspector labor to support the physical inspection as well as the back-office labor to support customer communication and education, scheduling, routing and other efforts to coordinate work streams between natural gas detector (NGD) installation and service line inspections. During this period, the funding request also includes costs associated for repairs, emergency response, surveillance, and the need to raise customer awareness of this program. This also includes the mandated number of minimum attempts required before escalating communication, fee warning, fine assessment, termination notification and the associated inspection requests that may result from the multiple attempts made to complete the inspections.			
<b>Justification Summary:</b> On April 20, 2017 the Commission issued an Order in Case 15-G-0244 that immediately implemented the expanded leak survey and corrosion inspection requirements. In accordance with this Order, Con Edison was required to complete baseline natural gas leakage surveys. The Commission issued several Orders modifying the completion date due to COVID and New York State local gas distribution companies (LDCs) all experiencing access issues. On December 31, 2020 Con Edison filed a Petition to Establish an Additional Compliance Method for Gas Service Line Leakage Surveys/Corrosion Inspections for Premises with Access Issues in Case 15-G-0244. In the Petition, Con Edison provided			

it's compliance plan and committed to the completion of the baseline program, which required the inspections to be completed or the gas meter was placed into a termination eligible status by September 15, 2021. This target was achieved.

The Company has approximately 1.1 million inside meter sets, with over 900K inside building sets, located in more readily accessible building areas (e.g., basements), and about 200K inside building sets in apartments ("room sets") or other remote locations. The expenditure level assumes an inside leak survey and corrosion inspection program for the inside piping associated with the 900,000 inside meters that are readily accessible, and the 200,000 room sets, as well as any necessary repairs.

We estimated the cost based on the assumption that a portion of these inspections will be completed during the normal course of business. (responding to leaks or performing other inspections). However, the majority of these inspections must be completed during dedicated visits. Furthermore, some locations will require multiple attempts due to inability to access the building. The most challenging locations generally are the buildings that have apartment meters, which requires individual apartment customers to provide access within a building.

We initiate communication to the customer to inform them that the inspection is required and providing several ways to make a scheduled appointment. If the customer elects not to schedule an appointment, we proactively make a minimum of two cold call attempts to gain access. If the attempts are not successful, we send additional communication that informs the customer of a fee that will be assessed for failing to get their inspection done and with information on how to make an appointment. If that also goes unanswered, the customer will be assessed a fine and then a termination notification process will be initiated. Prior to termination of service, the customer may elect to make a scheduled appointment to comply and avoid termination. Therefore, for each individual gas meter, we may make as many as 3-4 attempts prior to completion. In addition, when in a building with apartment meters, we may pre-emptively make additional cold calls to customer as our goal is to ensure safety, compliance and avoid service termination.

To minimize the number of appointments, we are attempting, where feasible, to complete inspections while installing and replacing AMI enables NGDs. In addition, when other inside compliance work is being performed, we are proactively completing an opportunistic service line inspection. In some cases, this may result in inspections being completed more than the minimum required per a 5-year cycle. The significant challenge remains the apartment meter inspections which can't generally be bundled with other opportunistic visits.

The projected number of service line completions per year are listed below:

	2022	2023	2024	2025	2026
Inspections	121,130	107,630	114,470	104,023	100,447

Based on the results of the baseline, we anticipate finding (in the next inspection cycle):  
~ 8.25% of the completed inspections result in a leak being discovered, which requires an emergency response and associated leak repair. The majority of which are anticipated to be associated with minor leaks on fittings, and not due to corrosion.  
~ 1% of the completed inspections result in a corrosion repair being required

In order to reduce the percentage of no access we also included programmatic funding to raise customer awareness of and education on these inspections.

**Relationship to Broader Company Plans and Initiatives (e.g. Long-Range Plans, CLCPA Initiatives, Risk Mitigation)**

Con Edison recognizes the significant costs associated with complying with the mandated gas safety inspection program. We are taking every opportunity when in a customer's premise and have access, to perform the inspection. This can help increase compliance, reduce repeat visits and minimize the

costs associated with this program, thus enhancing the customers' experience. Most importantly, we are bundling the NGD installations with a service line inspection. In this manner, we can align the inspection cycles with the NGD install/replacement schedules. As the NGD device battery life and technology progresses towards a 10-year battery life, we would seek to increase the service line inspection cycles from a 5-year plan to a 10-year cycle plan to minimize the on-going O&M associated with such inspections.

## 2. Supplemental Information

### Alternatives

Alternative 1:

Alternative 2:

Alternative 3:

### Risk of No Action

The Company will be in violation of the state and federal gas safety codes.

### Non-Financial Benefits

Company will be in compliance with the state and federal gas safety codes and as a result improve public and employee safety.

### Summary of Financial Benefits and Cost

This program does not yield any financial benefit.

<p><b>Work Description:</b></p> <p>This program is designed to reduce methane emissions by identifying the highest emitting natural gas leaks and prioritizing them for repair. This is designed to be complimentary to our current leak survey programs by utilizing advanced leak detection technology to survey areas of the distribution system not covered by the walking compliance survey in a given year. Resulting data is then gathered and analyzed for indications. All high emitting indications are then investigated utilizing approved leak detection technology in a timely manner. The survey is designed to cover areas of the system not covered by other existing programs, with the entire system covered by advanced leak detection within a three year period.</p> <p>The use of advanced mobile leak survey provides additional tools to quantify emissions and prioritize locations for repair not available through other existing leak survey programs. This includes being able to drive an area and quantify the size of a methane indication. Doing so will provide another layer of emissions data to prioritize emissions reduction. To conduct the survey, the technology is attached to a passenger vehicle and a dedicated driver must drive at night. The driving protocol requires multiple passes over the course of two to three nights. Once all passes are completed, the data is downloaded and analyzed. Based on field trial data, we can expect 69% of the indications found to result in a natural gas leak with other indications being false positive or non-natural gas methane indications (such as sewer gas). The costs under this program include the annual cost for the advanced leak detection equipment, labor, supervision, and leak investigations.</p>			
<b>Justification Summary:</b>			
Natural gas contains methane, a potent greenhouse gas, that once emitted into the air is 80 times more			

potent than carbon dioxide. To identify methane emissions in gas leaks and reduce emissions, Con Edison currently has several leak survey programs which meet or exceed code requirements, including a monthly mobile survey of all distribution main, multiple transmission leak surveys, walking leak surveys of business and non-business district services, and various special surveys. Once identified, leaks are repaired on average within a few weeks and far ahead of code requirements. Con Edison has also been the first to deploy Natural Gas Detectors (NGDs) across the territory to immediately notify the Gas Emergency Response Center (GERC) of natural gas leaks inside buildings. This comprehensive approach to leak identification and repair allows the Company to reduce fugitive methane emissions across the territory. The High Emissions Leak Survey Program will supplement these programs, target the highest emitting gas leaks, and further reduce emissions. Overall, this new program is designed to complement the other programs and add an additional layer of emissions reduction.

In addition to the environmental and operational benefits to this program, the U.S. Congress passed the Protecting our Infrastructure of Pipelines and Enhancing Safety Act of 2020 (PIPES Act) which directed the Pipeline and Hazardous Materials Safety Administration (PHMSA) to promulgate rules for the use of advanced leak detection technologies on new and existing gas distribution pipeline facilities. This program will support the PIPES Act, and associated future regulations, through periodic surveys with advanced leak detection equipment mounted on a mobile vehicle.

**Relationship to Broader Company Plans and Initiatives (e.g. Long-Range Plans, CLCPA Initiatives, Risk Mitigation)**

This program also supports Con Edison’s Clean Energy Commitment and New York State’s Climate Leadership and Community Protection Act to achieve a reduction in greenhouse gas emissions.

## 2. Supplemental Information

**Alternatives**

Alternative 1: Maintain emissions reduction through existing programs.

Alternative 2: Increase the frequency of current mobile leak detection, which would come at a much higher cost.

**Risk of No Action**

No action would result in less emissions data and reduction

**Non-Financial Benefits**

The benefits for this program primarily come from the benefits to the environment. By limiting the volume of greenhouse gasses emitting into the atmosphere we slow climate change. Non-Financial benefits include emissions reduction and quantification through widespread use of advanced leak detection. Targeting the highest emitting leaks will make the fastest impact on emissions reduction. This program also identifies leaks potentially faster than if such a survey was not conducted; therefore, enhancing pipeline and public safety as well.

**Summary of Financial Benefits and Cost**

Costs	O&M	Description
Advanced Mobile Leak Detection	\$237,800	Cost for technology, software payments go to clearing
Supervision	\$66,231	\$60 per hour, 168 days to complete the survey, management Employees go to clearing
Driver	\$173,914	\$129 per hour, 168 days to complete survey, weekly employees charge direct to O&M
Leak Investigations	\$20,691	Investigate 100% of the LISAs, ~1 per 100 miles driven

\$498,636

**Project Risks and Mitigation Plan**

Risk - The advanced mobile leak detection technology may not function properly.

Mitigation Plan - Proper maintenance and ongoing discussions with the manufacturer will mitigate any downtime for both the vehicle or data that must be downloaded from the cloud.

Risk - Adverse weather could limit driving.

Mitigation Plan - The technology cannot be used during periods of heavy precipitation. Planning ahead to anticipate poor weather will ensure driving time is maximized.

**Technical Evaluation / Analysis**

During the course of 2021, Leak Survey completed a field trial of this program. A vehicle equipped with advanced mobile leak detection drove over 1,700 miles. During that time, 16 high emitting indications were flagged by the software. All indications were investigated by qualified personnel with approved instrumentation; 11 of the indications (69%) were natural gas, the remaining indications were non-natural gas atmospheric readings with traces of methane such as sewer gas. On average, each indication had an emissions rating of 19 scfh. All indications were repaired in a timeframe ranging from 5 to 22 days, eliminating any additional methane from emitting into the air.

The 11 indications confirmed to be natural gas included the following leak types:

Type 1's	2
Type 2's	3
Type 3's	6
Total	11

**Project Relationships (if applicable)**

Project/Program Title: Inspection and Maintenance of Aboveground Gas Mains at Bridges	
Project/Program Manager: M. Cifelli	Project/Program Number (Level 1): n/a
Status: <input type="checkbox"/> Initiation <input type="checkbox"/> Planning <input type="checkbox"/> Execution <input checked="" type="checkbox"/> On-going <input type="checkbox"/> Other: Submit Rate Case	
Estimated Start Date: On-Going	Estimated Date In Service: not applicable
E. Total Funding Request (\$000) Capital: O&M: \$2,338	F. <input type="checkbox"/> 5-Year Gross Cost Savings (\$000) <input type="checkbox"/> 5-Year Gross Cost Avoidance (\$000) O&M: Capital:
G. 5-Year Ongoing Maintenance Expense (\$000) O&M: \$2,338 Capital:	H. Investment Payback Period: (Years/months) (If applicable)
<p><b>Work Description:</b></p> <p>This existing, annual bridge inspection program entails inspection and maintenance of natural gas piping at expansion joints, bridges, and stations as per Con Edison Specification G-11815 and State regulations covering aboveground gas pipelines throughout the CECONY service territory, pursuant to 16NYCRR Part 255, Sections 161, 317, 323, 479, 481, and 487. Pipeline inspections at submarine (waterway) crossings and expansion joints are also regulated mandates under this Program. On average, aboveground gas mains at 85 bridges are visually inspected each year with approximately 13 of these locations receiving detailed inspection and repair. Looking ahead to 2026, we see a large increase in the number of bridge inspections coming due on a cyclical basis. In fact, 137 inspections (62% above the norm) are scheduled to be inspected in 2026. This future, sharp increase in workload threatens to overrun the O&amp;M budget and strain manpower resources. To avoid a sudden drain on Program resources, Con Edison proposes to preemptively move 30 inspections due in 2026 to be distributed over rate case years 2023, 2024, and 2025.</p> <p>Redistributing these periodic inspections from 2026 will require reallocation of O&amp;M funding into upcoming rate case years 2023 through 2025. This funding request of \$1,104,750 represents the additional, reallocated funds necessary to complete 30 detailed bridge inspections earlier than 2026. The reallocated funds will supplement regular, ongoing O&amp;M spending on this Bridge Inspection and Maintenance Program.</p> <p>This request for reallocation of O&amp;M funding is not made in response to a PSC audit.</p>	
<p><b>Justification Summary:</b></p> <p>Each gas pipeline that is exposed to the atmosphere, including those on bridges, is inspected at least once every three calendar years with intervals not exceeding 39 months as per Code of Federal Regulations CFR Title 49 192.481. Every 21 years, in addition to the regular 3-year visual inspections, Con Edison performs a detailed inspection and maintenance regimen for each bridge asset. Of the 137</p>	

total inspections coming due in 2026, 42 are detailed inspections (due on a 21-year inspection frequency) that may also involve routine maintenance work like coating and hanger repairs. The cost of inspecting and maintaining gas mains on bridges is escalating, especially for inspections at the 21-year mark due in large part to extrinsic factors beyond our control. High traffic control costs and limitations to working hours on highly congested roadways contribute to the rising costs. Aging facilities and bridge structures, together with the growing impact of climate change, have also placed an added financial burden on caring for gas mains at bridge crossings. The additional, reallocated O&M funding (described in this request) will ultimately serve to offset future O&M expenses while avoiding some of the higher cost of future main replacement.

**Relationship to Broader Company Plans and Initiatives (e.g. Long-Range Plans, CLCPA Initiatives, Risk Mitigation)**

Normally exposed gas mains, especially on heavily traveled bridges above major highways and at railroad crossings, are among the most inaccessible and vulnerable facilities that require extra levels of care and attention. Loss of a gas supply main, due to inadequate inspection/ maintenance, at a bridge crossing will likely cause major service interruptions along with the potential for having a harmful impact on public safety. Long range budget planning (at least 5-year) is necessary to ensure adequate funding and manpower is available to meet the scheduled workload. With an unusually large number of inspections coming due in 2026, reallocation of O&M funds for 2023 through 2025 is strongly advised to lower the risks of scheduling too much inspection work in a single year. Higher O&M spending in rate case years 2023, 2024, and 2025, made possible with reallocated funding above historical levels, is necessary as a countermeasure to these corporate risks.

## 2. Supplemental Information

**Alternatives**

*Briefly describe reasonable alternatives and reason for rejection (e.g., costs, timing, etc.). At least one is required.*

Alternative 1 description and reason for rejection

Inspection and maintenance of aboveground piping at bridges and stations is currently managed as a stand-alone, regulatory mandated program. If O&M funding continues over the next five years within historical spending limits, some inspections would have to be postponed or money/staffing diverted from other equally important programs to pay for a heavy inspection workload. Therefore, continuing forward on the current fiscal path challenges our ability to comply with mandatory inspection commitments, especially for 2026. For these reasons, keeping funding at existing levels was not selected.

Alternative 2 description and reason for rejection

Alternative 3 description and reason for rejection

**Risk of No Action**

*Give the consequences, including enterprise risks that might arise by not doing the project/ program. Quantify the risks, if applicable.*

Risk 1

If Con Edison's bridge inspection schedule is not adjusted to provide a more even distribution of the future workload and funds are not accordingly reallocated, pipeline safety could be compromised because available funding and manpower for inspection and maintenance of bridge piping in 2026 will not cover all 137 inspections. No action may lead to major delays in addressing maintenance issues.

Risk 2

No action could mean O&M funding for 2026 is diverted from other sources, forcing other programs to lower standards.

Risk 3

The Bridge Program remains underfunded and at-risk ultimately leading to a significant increase in future maintenance or main replacement costs.

**Non-Financial Benefits**

- Enhancing pipeline safety benefits a reputation of reliability and resilience.
- Ensuring 100% regulatory compliance is a solid corporate commitment.

**Summary of Financial Benefits and Costs**

1. Cost-benefit analysis (if required)

2. Major financial benefits

3. Total cost

Over the next 5 years, O&M spending on the Bridge Inspection & Maintenance Program is projected to rise \$2,406,203 above the \$2,337,767 spent during the previous 5-year period. Based on the number of periodic inspections coming due, the 5-year O&M cost (2022-2026) for the Program is estimated to be \$4,744,000. Reallocation of \$368,250 per year for 2023, 2024, and 2025 is requested. The total reallocation is \$1,104,750.

4. Basis for estimate

Cost estimates for projected O&M spending are based on priced items for inspection and maintenance from the existing bridge inspection & maintenance contract for NYC and Westchester County. Other variables used in cost calculations include the number of linear feet to be inspected as well as the number and type of bridge inspections coming due in each year, as determined from the 3-year and 21-year inspection schedules.

5. Conclusion

Since this Program is mandated by Federal and State regulations, continued funding is necessary. Additional O&M funding above historical levels is strongly advised, primarily because an overload of costly 21-year inspections coming due in 2026. A portion of these inspections can be done earlier. Reallocation of O&M funds is the prudent approach to lowering future cost pressures.

**Project Risks and Mitigation Plan**

Risk 1

Mitigation plan

The plan to prevent O&M cost overruns (above the 5-year spending plan contained herein) is to issue a new inspection and maintenance contract by March 31, 2022, with unit costs for inspection and maintenance maintained at or below present levels.

Risk 2

Mitigation plan

Work locations are widely dispersed across different operating areas. Starting in 2022, the Bridge Inspection and Maintenance Program will be managed by a central authority- Corrosion Control will ensure completion of all Program work throughout NY City and Westchester.

**Technical Evaluation / Analysis**

Detailed inspection reports and analysis for bridge assets, archived for the past 15 years, are documented in our Gas Information System GIS. These reports give a clear picture of the condition of bridge assets and inspection deadlines, as required for directing resources on a priority basis.

Status: <input type="checkbox"/> Initiation <input type="checkbox"/> Planning <input type="checkbox"/> Execution <input type="checkbox"/> On-going <input type="checkbox"/> Other: _____	
Estimated Start Date: 2023	Estimated Date In Service: 2024
<b>A. Total Funding Request (\$000)</b> Capital: 0 O&M: \$2,054 (2023-2026)	<b>B.</b> <input type="checkbox"/> 5-Year Gross Cost Savings (\$000) <input type="checkbox"/> 5-Year Gross Cost Avoidance (\$000) O&M: Capital:
<b>C. 5-Year Ongoing Maintenance Expense (\$000)</b> O&M: Capital:	<b>D. Investment Payback Period: (Years/months) (If applicable)</b>
<b>Work Description:</b>  The Company is seeking to develop a firm gas distribution forecasting model that predicts firm gas peak day demand at design weather conditions. This new firm gas distribution forecast model will predict the peak day and peak hour firm gas demand for newly established districts within the gas distribution system in the Company's gas service territory. Using this new model, the Company will be able to project firm gas peak day demand at the neighborhood/district level as well as for any specific location of interest for the gas distribution system out 20 years.  This forecast will consider new business, new construction, demand response, steam-to-gas customers, energy efficiency (EE), distributed generation, oil to gas conversions, electrification of heating (EoH), and electrification of gas appliances.  The Company currently uses the Gas System and High Pressure (HP)/Transmission Regulator Forecasts to manage the gas transmission system, and these existing forecasts will be used along with other analytical tools to determine the boundaries for the firm gas peak distribution forecasting model at design weather conditions.  The new forecasting model will balance and reconcile with the System and HP/Transmission Regulator Forecasts to factor line loss into its predictions. The model will bridge these boundary forecasts with the existing daily forecast model and with assessments made by using the Synergi Distribution Hydraulic Model (Stoner). The existing Marquette Daily Gas Forecasting Model will be	

utilized to assist in the development. Connecting the existing models to the new model would allow the Company to balance output and forecasted demands by distribution location and to consider future changes to distribution and transmission piping. Such will enable enhanced planning and strategic pinpointing for non-pipe solutions.

This effort will result in:

- The development of a granular Excel based firm gas distribution peak day forecasting model
- A proven methodology and algorithms for transposing the firm gas transmission system and regulator peak day forecasts to distribution level district forecasts
- Mapping of the gas service territory to distribution districts

Con Edison Subject Matter Experts (SMEs) from the Gas Forecasting, Policy Integration Forecasting, Forecasting Services, Gas Engineering, and Gas Control Sections will team up with a vendor to develop the model, methodology, and mapping.

**Justification Summary:**

Given the Company's commitment to a clean energy future and the interests of its stakeholders, optimization and accurate planning for the gas distribution system is necessary. The effectiveness of the Company's plans for its gas distribution system has a direct impact on its gas customers. In addition, if the gas distribution system is not planned for properly, there is the risk of shedding gas load in certain areas. Identifying distinct areas of load growth will assist with pinpointing non-pipe solutions instead of the need for system reinforcements. Current gas policy is moving towards less development of gas supply. As such, the margins on the gas system will become tighter thus prompting the need for a more granular and longer-term forecasting model for the distribution system.

**Relationship to Broader Company Plans and Initiatives (e.g. Long-Range Plans, CLCPA Initiatives, Risk Mitigation)**

This project would provide information vital in forming long-range goals and will address future changes to the gas distribution system over the next 20 years. Planning around accurate forecasts for firm gas peak day demand at the distribution district/neighborhood level reduces many risks.

Currently, the Company is assessing its plans for the gas system because of implications from climate policy. Legislation like the CLCPA and Local Law 97 advocate moving toward renewable energy sources and electrification. This project will enable enhanced planning and strategic pinpointing for non-pipe solutions, which aligns with these regulations/policies, and will be instrumental in the Company's strategic planning towards assisting energy customers achieve a green energy future.

## 2. Supplemental Information

**Alternatives**

The only alternative is to continue the current gas distribution forecasting process, which does not provide a long-range projection and does not entirely bridge the technical information between the existing long-term system and transmission regulator forecasts and short-term distribution forecasts.

**Risk of No Action**

Identifying distinct areas of load growth will assist with pinpointing non-pipe solutions instead of the need for system reinforcements. The risk of no action is that the Company may miss the opportunity to pursue Non-Pipe Alternatives on behalf of its customers.

Under the current policy landscape, not having a locational district and granular distribution long-term peak day forecasting model could lead to reduced reliability of the gas system over time. If the gas distribution system is not planned for with accuracy, there is the risk of shedding gas load in certain areas.

### **Non-Financial Benefits**

Non-financial benefits of this project include the ability to predict peak demand at the distribution district level well into the future hence, the potential to leverage that information to develop distribution management strategies, the potential to improve the reliability of the system by optimizing engineering strategies, and the enhanced ability to achieve and comply with the New York City and State's long-term climate goals and regulations.

### **Summary of Financial Benefits and Costs (attach backup)**

#### 1. Cost-benefit analysis (if required)

This project will indirectly result in financial benefits, as mentioned below. Improved precision of gas distribution system modeling through a) statistical and other methodologies and b) inclusion of climate change driven policy will improve short- and long-term planning for system infrastructure that will lead to optimized operation and maintenance of the overall system. An optimized system maintains safety and reliability, leading to overall cost savings.

#### 2. Major financial benefits

This new tool will optimize predicting firm gas peak demand in specific areas of the gas distribution system over a 20-year period. This improved and long-term gas distribution system forecast will lead to:

- Improved pinpointing and planning of Non-Pipe Solutions
- Maintaining normal planning for an increasingly dynamic distribution system consumption that is inclusive of the direction within climate change driven policy (i.e., CLCPA, Local Law 97, etc.)
- Avoided cost of building additional distribution system infrastructure
- Optimized planning of regulator operations to better maintain system pressure within operational requirements
- Improved planning towards optimal areas of critical investment in decreasing opportunities for leaks by operating at lower pressures

#### 3. Total cost

The total cost of this project is \$2.054 million, which will result in:

- The development of an Excel based firm gas distribution peak day forecasting model
- A proven methodology and algorithms for transposing the firm gas transmission system and regulator peak day forecasts to distribution level district forecast
- Mapping of the gas service territory to distribution districts

The primary cost components are forecast vendor professional services and incremental internal labor. This work is O&M and 3 additional Full Time Equivalents (FTE) are required in Rate Year 1. An estimated cost breakdown for Rate Year 1 is as follows:

- Consultant Professional Services: \$1,166,000

<ul style="list-style-type: none"> <li>• 3 FTE: \$388,000</li> <li>• Overheads: \$120,000</li> </ul> <p>In Rate Years 2 and 3, ongoing operations and maintenance on the model/methodology/mapping will occur, totaling \$190,000 per year. This includes 1 FTE and associated overheads for the Gas &amp; Steam Forecasting Section; and is anticipated for adjustments and calibrations required annually to update the mapping, to operate and maintain model, and to sustain accuracy.</p> <p>4. Basis for estimate</p> <p>Vendor quote and Company estimates.</p> <p>5. Conclusion</p> <p>This tool must be developed in order to continue to increase the accuracy, time horizon, and the granularity of the firm gas peak day distribution system forecast. The final product will facilitate more prudent planning and will help Gas Operations effectively adapt to emerging energy policy and regulations.</p>
<p><b>Project Risks and Mitigation Plan</b></p> <p>See Technical Evaluation / Analysis below.</p>
<p><b>Technical Evaluation / Analysis</b></p> <p>The Company has held several detailed discussions, internally and with a gas forecasting expert vendor, that have reviewed and assessed the scope and approach towards achieving an accurate firm gas peak demand distribution forecast model.</p>
<p><b>Project Relationships (if applicable)</b></p> <p>N/A.</p>

## 4. Definitions

**Total Funding Request:** All funding requested for program or project over program/project lifecycle or for on-going programs the five-year requested amount, including all capital, O&M, retirement.

**Cost Savings:** Reductions in costs that are currently being incurred (e.g., reduced annual maintenance cost relative to today)

**Cost Avoidance:** Reductions in anticipated future costs that don't occur today (e.g., anticipated short-term fixes/maintenance if capital isn't deployed)

Project Status:

- Initiation – New project, not authorized yet
- Planning – Project authorized, not started yet
- Executing – Project in-flight
- On-going – Annual program
