Attached is a letter I received National Grid regarding my URD deposit Expiration, set to expire on 1/28/2027. I was under the assumption that all 5-year terms were extended one year due to the shut downs and effects of Covid-19 and the construction industry. Investigating this I was told that I didn't have a qualifying job because power had not been made available to me yet during the specified period. I want to petition for an extension due to other negative effects that Covid-19 had on the construction industry. I started the process to get power for my community on or around 10/2/2019, when I sent in the URD information sheet attached. I found the Bill of sale dated 8/18/2020 that we signed during Covid. The power was not installed until 1/28/2022. I feel this goes to show that I probably could have had power and qualified for the extension if things hadn't slowed down so much. I lost two presales due to the community not being ready. Then I recently lost two sales due to inflation caused by Covid-19 and Tariffs enacted by the current administration. I can provide more information and documentation.

At this time, please start me a case number so that I don't miss the 120 day period needed to petition for an extension.
