CRA-DR-7-8

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
NEW YORK DIVISION
LONG-TERM PLAN DATA REQUESTS

CRA-DR-7-8

In NFG's Revised LTP Appendix page C-3, it states:

"Incentives are assumed to cover 75% of incremental installed costs, with individual customers contributing the remaining 25%."

- a. Please provide all backup data and sources (with any spreadsheets unlocked with formulas intact) that were used to derive this assumption of 75% of incremental installed costs being funded by incentives. Understanding that this assumption might be a rounded number based on other incentive programs analyzed by NFG (as stated in the June 1, 2023 Technical Conference when discussing incentives), please provide more information about the specific incentive programs analyzed to derive the 75%.
- b. Are the incentives modeled federal or state incentives?
- c. Has NFG considered treating federal and state incentives differently, given that federal incentives should not be included as a cost in the BCA when using a New York Societal Cost Test?

Response:

- a. The 75%/25% split between incentives and customer contributions for incremental installed costs is illustrative. Final incentives have not yet been determined and several sources and stakeholders reference incentives that are or may be provided by utilities or from state/ federal policies. For example, Option 1 of the CJ Brown Report filed as Appendix G to National Fuel's Revised LTP, shows a \$4,700 incentive for cold climate heat pumps, compared to a \$9,000 incremental cost, which represents an incentive of 52% of the incremental cost. In addition, National Grid's Natural Gas Long-Term Capacity Second Supplemental Report states that "The issue with heat pump technology in downstate New York is that it is more expensive both upfront and annually... for this Report [the assumption is]... that a single incentive would be provided upfront that exceeds the incremental cost of the heat pump and thereby pays for some of the ongoing operation costs." (Appendix, June 2021,

page B-20) Similar to National Grid, heat pumps in National Fuel's service territory are more expensive both upfront and annually, so National Grid's assumption of >100% of the incremental installation costs could apply upstate as well. Given the range of potential incentive levels, 75% of the incremental installation costs was used as an illustrative assumption for modeling purposes. National Fuel will incorporate more detailed customer incentive assumptions in future LTP filings, after they are determined.

- b. As discussed in this LTP, National Fuel has not attempted to quantify the value of potential federal incentives, state incentives, utility incentives, rate subsidies, transfer payments or other mechanisms that may reduce costs to participating customers. As stated in National Fuel's Revised LTP (p. 46):

The ultimate demarcation of which costs are recovered through gas bills and which Decarbonization Policy Costs will be recovered from other sources will be determined by policy makers. It is conceivable that the Decarbonization Policy Costs may be funded through a combination of tax policies, utility program incentives, rate subsidies, transfer payments and other mechanisms that supplement funds contributed by participants and any other private sources. These issues have not yet been resolved and while it was assumed for the purposes of this analysis that 75% of the incremental equipment installation costs will be funded through some type of incentive or rebate, National Fuel has not made any assumptions with respect to the specific mechanism(s) that will be used to recover Decarbonization Policy Costs.

- c. Please see the response to part b above. In addition, as stated in National Fuel's Revised LTP, Appendix C: Benefit Cost Analysis (p. C-2):

LDCs have yet to develop a consistent BCA framework for gas utilities, and National Fuel, specifically, has not yet developed a BCA Handbook for Non-Pipeline Alternatives. In the absence of a consistent BCA framework for gas utilities, the analysis follows guidance previously provided in the BCA Framework Order and industry best practices.

National Fuel will incorporate final BCA frameworks applicable to gas utilities into future LTP filings, after they are approved by the Commission. As discussed in this LTP, National Fuel has not attempted to quantify the value of potential federal incentives, state incentives, utility incentives, rate subsidies, transfer payments or

other mechanisms that may reduce costs to participating customers. Therefore, for the purposes of calculating the BCA for the long-term plan proceeding, National Fuel has grouped all potential sources of incentives into one “incentive” category and included these incentives as costs in the calculation of the SCT.

CRA-DR-4-7

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
NEW YORK DIVISION
LONG-TERM PLAN DATA REQUESTS

CRA-DR-4-7.

Please provide the “GHG Emissions” workpaper provided in response to CRA NFG-DR-1a in unlocked Excel spreadsheet format with all formulas intact.

Response:

Please see NFG - CRA-DR-4-7 Attachment 1 for the Excel version of the GHG Emissions workpaper.

CRA-DR-6-1

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
NEW YORK DIVISION
INITIAL LONG-TERM PLAN DATA REQUESTS

CRA-DR-6

Question:

1. CRA is aware of the requirement that NFG file an annual report related to Case 13-G-0136 and Case 16-G-0257: “Proceedings on Motion of the Commission as to the rates, charges, rules and regulations of National Fuel Gas Distribution Corporation for gas service.” The annual report is titled “Gas Network Enhancement Collaborative Annual Report.” The most recent filings were in November 2021 and December 2022.

In this report, NFG summarizes the results of Distribution’s Collaborative Gas Network Enhancement Plan, formerly known as the Gas Expansion Plan. This program discusses pilot project results involving network expansion in regions where there is interest in gas from new customers. Based on an assessment of total cost, NFG provides a proposal customized for each customer that includes a charge (a monthly surcharge or one time pre-payment) once they are connected. The report also highlights the PUR-WNY program, which targets LMI customers in disadvantaged communities for new natural gas services.

- (A.) This program is not discussed in the current version of the Long-Term Plan. Will NFG be assessing NPA alternatives for these customers and include them in either the final version of the long-term plan or future long-term plans?
- (B.) Are the incremental demand and costs from pilot projects shown in “Appendix A –Phase I through VI Pilot Projects” included in the LTP?
- (C.) How does NFG plan to incorporate the New York State ban on fossil fuel use beginning in 2025 into the program?
- (D.) Are any of the neighborhoods being evaluated in the program near Clarence, NY or other municipalities where growth is showing the need for infrastructure enhancement in the next ten years?

Response:

- (A.) In the LTP, Distribution mentioned hybrid heat pumps, thermal energy networks (TEN's), compressed natural gas (CNG) and liquefied natural gas (LNG) as NPA solutions that could be viable options for NFGDC customers. Distribution feels that it would be appropriate to consider these potential solutions in the context of the GNEP. Generally, we will apply our proposed NPA criteria to these projects the same way we would any other projects (assuming the criteria aren't modified by the Commission in a future Order).
- (B.) The additional incremental gas usage and associated costs from the first 6 phases of the GNEP have been included in Distribution's forecasted growth over the LTP timeframe.
- (C.) As of the date of the response to this question, the current legislation requires all residential new construction of buildings less than 7 stories high after December 31, 2025, to not utilize fossil fuels. Distribution will comply with this new law. However, it is useful to note that most, if not all, of the applicants to our GNEP program are existing homes which currently do not apply to this legislation. These homes are mostly using either propane or oil as their primary fuel for space heating and water heating. How we comply with this legislation will depend on how the law is implemented in the state, which has yet to be determined.
- (D.) Distribution currently doesn't have any potential projects being evaluated in Clarence for future phases of the GNEP. From prior phases of the GNEP, we have completed two previous projects in Clarence, and there is another project that is waiting on permitting.

EDF-DR-4-1

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
NEW YORK DIVISION
INITIAL LONG-TERM PLAN DATA REQUESTS

EDF-DR-4-1

Question:

Please provide the following information regarding capital projects undertaken in the previous 5 years (2018-2022):

- a. List of projects and type (i.e., expansion of the gas system, maintenance of existing infrastructure, leak-prone pipe replacement, other and specified)
- b. Cost of each project, including the following cost categories: cost of total pipe and cost per foot of pipe, labor hours and aggregate labor cost, supervisory and engineering costs, permitting, training, other and specified.
- c. Time frame of project - from identification of project need to commencement of project, to completion.
- d. Geographic project location
- e. Geographic scale of project impact (i.e., length of pipeline mains and/or services to be installed, replaced, or retired)
- f. For any expansion projects, please identify the quantity of peak hour gas, in Dekatherms/hour, that the project would provide. Please also provide the quantity of gas associated with the project in Dth/day.

Response:

See NFG – EDF-DR-4-1 Attachment 1 for a list of capital pipeline and pipeline facility projects for Fiscal Years 2018 thru 2022.

EDF-DR-4-2

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
NEW YORK DIVISION
INITIAL LONG-TERM PLAN DATA REQUESTS

EDF-DR-4-2

Question:

Please provide the following information regarding capital projects planned for the next 5 years (2023-2027):

- a. List of projects and type (i.e., expansion of the gas system, maintenance of existing infrastructure, leak-prone pipe replacement, other and specified)
- b. Estimated cost of each project, including the following cost categories: cost of total pipe and cost per foot of pipe, labor hours and aggregate labor cost, supervisory and engineering costs, permitting, training, other and specified.
- c. Estimated time frame of project: time of identification of project need, estimated commencement month, estimated completion month.
- d. Geographic location of project (i.e., length of pipeline mains and/or services to be installed, replaced, or retired)
- e. Geographic scale of project impact (i.e., length of pipeline mains and/or services to be installed, replaced, or retired)
- f. For any expansion projects, please identify the quantity of peak hour gas, in Dekatherms/hour, that the project would provide. Please also provide the quantity of gas associated with the project in Dth/day.

Response:

See NFG – EDF-DR-4-2 Attachment 1 for a list of projected capital pipeline and pipeline facility projects currently anticipated for Fiscal Years 2023 thru 2027. Except for select steel pipeline transmission and other special facility projects, National Fuel does not budget on a project-by-project basis. Capital pipeline and pipeline facility projects are prioritized and developed on an annual basis based on maintaining gas safety and reliability and customer demand.

EDF-DR-2-13

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
NEW YORK DIVISION
LONG-TERM PLAN DATA REQUESTS

EDF-DR-2-13

Question:

Recognizing that National Fuel Gas Distribution receives deliveries of natural gas throughout the day (24 hours a day), and that it delivers natural gas to its customers throughout the day (24 hours a day), how does the Company ensure adequate supply to meet changing demand if it does not monitor or record hourly receipts and deliveries of natural gas?

Response:

As explained in National Fuel Gas Distribution Corporation's (Distribution) response to EDF - NFG DR-1-1, Distribution relies on the firm no-notice enhanced pipeline and storage service contracts (EFT and ESS) that it has with National Fuel Gas Supply Corporation (NFGSC). This service provides effective hourly demand response throughout Distribution's service territory. Further, as noted in Distribution's response to EDF-NFG DR-2-8, controllers monitor the system 24 hours a day, evaluating and responding to no-notice load requirements.

In addition, the Distribution's Engineering Department uses NFGSC hourly measurement to verify the system models and uses the daily measurement to build the models.

CRA-DR-2-14

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
NEW YORK DIVISION
INITIAL LONG-TERM PLAN DATA REQUESTS

CRA-DR-2-14.

Question:

Given announcements of significant incentives for electric heat pump installation (e.g., State of NY programs, Federal programs funded through IRA, the Sealed program), has NFG considered modeling approaches that include incentives for electrification or energy efficiency programs that would increase or modify adoption rates? If no, why not? If yes, explain why NFG has not pursued such approaches. Include any related supporting documentation.

Response:

As discussed in the filing, all decarbonization actions were modeled based on the full incremental costs without subsidies, incentives, or tax credits that might be created through policy initiatives. The purpose of National Fuel's modeling is to identify the total cost of implementing the decarbonization actions. Adoption rates were developed based on feasibility of implementation, not based on assumed cost responsibility.

SC-DR-1-25

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
NEW YORK DIVISION
INITIAL LONG-TERM PLAN DATA REQUESTS

SC-DR-1-25

Question:

When determining the installed costs for an air source heat pump (either standard or cold climate) in a customer's home, did the Company assume this would be installed before or after the customer weatherized their home?

Response:

When determining the installed costs for an air source heat pump, the Company assumed the installation of heat pump would occur before the customer weatherized their home.

SC-DR-1-20

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
NEW YORK DIVISION
INITIAL LONG-TERM PLAN DATA REQUESTS

SC-DR-1-20

Question:

Did the Company assume there would be any cost savings for customers that chose to electrify and weatherize their homes at the same time? Please provide these calculations in a live, unlocked Excel workbook with all formulas intact. Please explain how these calculations factored into the analysis.

Response:

The Company did not assume customers would electrify and weatherize their homes at the same time, therefore no cost savings were assumed. It is unlikely that customers would simultaneously electrify and weatherize their homes in the near term because both programs may develop at different rates over time. Any overlap would be in outer years, and any resulting savings would likely be small and have minimal impact on the analysis.

SC-DR-1-19

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
NEW YORK DIVISION
INITIAL LONG-TERM PLAN DATA REQUESTS

SC-DR-1-19

Question:

Please provide the revenue requirement for each year for each scenario in a live unlocked spreadsheet with all formulas intact. Please describe if/how targeted electrification was considered when determining the forecast for the Company's revenue requirement.

Clarification Received 2/16/2023:

Sierra Club is referring to each of the identified scenarios in the LTP: the Reference Case, the SCE Scenario, and the Aggressive Scenario.

Response:

The cost of electrification was not included in the Company's revenue requirement. Cost of electrification are included as Decarbonization Policy Costs discussed on pages 44 and 45 of National Fuel's Initial Long-Term Plan. Please see **CONFIDENTIAL** SC – NFG DR-11-19 Attachment 1 for the forecasted revenue requirement for each year for each scenario.

SC-DR-1-30

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
NEW YORK DIVISION
INITIAL LONG-TERM PLAN DATA REQUESTS

SC-DR-1-30

Question:

With reference to Figure III-2 on page 22 of the LTP, do the “decarbonization actions” identified in Step 1 represent that complete universe of decarbonization actions considered and evaluated by NFG? If not, please identify and describe the other decarbonization actions considered and evaluated.

Response:

No, the decarbonization actions included in Figure III-2 are not the universe of decarbonization actions considered. As shown in Table IV-5, the Company considered additional decarbonization actions, including targeted network replacement and leak prone pipe replacement, but did not expand these actions beyond Reference Case levels.

CRA-DR-1-13c

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
NEW YORK DIVISION
INITIAL LONG-TERM PLAN DATA REQUESTS

CRA-DR-1-13c:

Targeted (Strategic) Electrification

- Are technology and cost improvements considered over the course of the 20-year plan?

Response:

The LTP is generally based on currently available information related to costs and technology for targeted (strategic) electrification. It would be speculative to assume specific cost and technology improvements over the course of the 20-year plan. Relevant new information that becomes available will be incorporated into National Fuel's future LTPs that will be filed every three years.

CRA-DR-1-8a

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
NEW YORK DIVISION
INITIAL LONG-TERM PLAN DATA REQUESTS

CRA-DR-1-8a.

8. DACs

- a. While NFG states that it “does not have any proposed projects that will disproportionately impact disadvantaged communities”, please describe how NFG will assure that DACs will receive 35% of the benefits of the Company’s decarbonization efforts as outlined in the LTP.

Response:

The Company is committed to developing programs and establishing processes that endeavor to ensure Disadvantaged Communities (DACs) receive at least 35% of the benefits of the Company’s decarbonization efforts outlined in the LTP.

Most of the costs and emissions reductions in the LTP are derived from 3 decarbonization actions: (1) energy efficiency / weatherization, (2) hybrid residential electrification, and (3) the substitution of renewable natural gas (RNG) and hydrogen into the gas system. As can be observed in Table V-3 on page 52 of the LTP, over 95% of the NPV of weatherization investments are directed toward low- and moderate-income customers, many of which live in DACs. The Company’s weatherization efforts were developed using a study from The Cadmus Group, Inc., which identified that LMI customers would likely have greater gas savings for most weatherization measures due to the characteristics of LMI housing. The Company would also anticipate the overweighting of future investment in the deployment of hybrid heating systems toward LMI customers, particularly in DAC areas where constraints on existing electric infrastructure is most acute. Finally, we will continue to focus on investments in the modernization of the gas system in DACs to ensure that these communities can participate in the use of alternative fuels for decarbonization.

Program design is critical to directing investments in energy efficiency, hybrid heating, and other decarbonization efforts towards DACs. The Company anticipates that incentives will need to cover a significant percentage of the upfront costs for building retrofits and equipment conversion to encourage participation in weatherization and hybrid heating programs, particularly for LMI

customers. The Cadmus study on residential weatherization designed an incentive program at various budget levels that directed most of the program incentives toward LMI customers. For example, for low-income customers, the utility's residential weatherization program incentives would cover 100% of the project costs. For moderate-income customers, the utility's incentives would cover 80% of the project costs.

A proper tracking and accounting for program costs, incentives, and impacts on usage and emissions will also be necessary to evaluate and report on the Company's ability to reach DACs with decarbonization investments. As such, the Company will also need to develop processes and systems that will allow it to identify customers in DACs and properly track where the money is being spent and how it is impacting customers. Currently, the Company is working to identify energy efficiency investments within (DACs by matching up device locations to the DACs using geocoding. This process is helping to identify projects and their associated benefits.

CRA-DR-7-4

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
NEW YORK DIVISION
LONG-TERM PLAN DATA REQUESTS

CRA-DR-7-4. (as revised June 13, 2023)

NFG's Revised Long-Term Plan now assumes that a certain percentage of existing residential and small commercial customers convert to a hybrid heating system at the end of life for either their heating or air conditioning equipment. The Initial LTP assumed this conversion of existing customers only occurred at the end of life of the heating equipment.

- a. Please provide a comparison of the adoption rate and number of existing customers converting to a hybrid heating system on an annual basis between the Initial LTP and the Revised LTP due to this change in assumption. CRA is only requesting this for the LTP.

Response:

The following changes in assumptions between the Initial LTP and the Revised LTP affect the number of existing residential and small commercial customers electrifying on an annual basis:

Assumption	Initial LTP	Revised LTP	Reason for Change
Conversion Decision Point(s)	End-of-life of heating system	End-of-life of heating system and end-of-life central air conditioning system	Stakeholders raised reasonable alternative
Adoption Rate in Later Years	Decline after reach max in 2038	Remain at 2038 max through end of study period	Decline in adoption rate in later years unlikely because new population has failing equipment each year
Max Adoption Rate	100%	70%	Unlikely that 100% of customers with failing equipment will convert without a mandate
Small Commercial Customer Proportion of Furnaces	50%	64%	Additional research produced more precise data

A comparison of the adoption rate and number of existing customers converting to a hybrid heating system on an annual basis between the Initial LTP and the Revised LTP is provided in the following table.

	2024	2025	2026	2027	2028	2029	2030	2031	2032	2033	2034	2035	2036	2037	2038	2039	2040	2041	2042

SC-DR-1-4

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
NEW YORK DIVISION
LONG-TERM PLAN DATA REQUESTS

Sierra Club-DR-1-4.

Sierra Club 1-4: On page 25 of the LTP, NFG states that the SCE scenario “reflects labor and resource constraints that are experienced under normal economic conditions that limit energy equipment manufacturing, building construction and utility infrastructure development.”

- (a) Please identify each labor and resource constraint in the plan, a narrative description of each constraint, and all documents and information the utility relied upon to develop each constraint.
- (b) Please provide a description of the “normal economic conditions” referenced in the scenario description, as well as all documents and sources the utility relied upon to develop its assessment.
- (c) Please provide all sources, documents, and data in their native format. If the utility’s analysis includes Excel data, please provide the entire workbook unlocked and with all formulas intact.

Response:

The Supply-Constrained Economy (SCE) Scenario incorporates assumptions to reflect the potential for labor and/or non-labor resource constraints to impact National Fuel’s LTP decarbonization actions (see Table III-1 on page 23). They are not based on any particular study, and we are not aware of any studies that could have informed these scenarios. The reference to “normal economic conditions” refers to periods when the economy is not experiencing the extraordinary supply chain challenges that have characterized the US and global economies over the past few years.

The two scenarios incorporate more optimistic or more pessimistic perspectives. The Aggressive Scenario “reflects an optimistic view with respect to customer interest in electrification options and the ability of the national, regional, and local economy to deliver labor, technologies, customer equipment and infrastructure to enable decarbonization of New York’s economy.” [Page 25 of the Report]. The Supply-Constrained Economy (SCE) Scenario represents a more pessimistic view with respect to these assumptions. Both reflect judgement and are subject to change as

circumstances evolve over time. Rather, the scenarios are analyzed in order to inform the development of NFG's recommended plan given reasonable expectations of the level and timing of the market development necessary to implement the decarbonization actions (e.g., it will take time for necessary build-out of electric infrastructure, heat pump manufacturing, and labor skilled at heat pump installation to enable electrification of residential heating systems). More data regarding the timing of market development will become available in future years as efforts to decarbonize the global, US, and local economies progress. As noted, "this LTP is the first of several plans that will be updated every three years to reflect the evolution of technology, implementation constraints, and policy." [Page 64]

INITIAL LONG-TERM PLAN DATA REQUESTS

CRA-DR-2-9abc.

Question:

The Electrification Customer Participation Ramp Rate shown in Figure A-2 in Appendix A cites the Cadmus Weatherization Study as the source. The following questions are related to this ramp rate assumption.

- a. Please confirm that the market adoption rate for all electrification cases uses the same underlying data as "Figure 1. Aggressive Savings Scenario Annual Savings and Budgets by Customer Program Pathway." If not, please identify and explain the alternate data source used.
- b. Please provide additional detail explaining the justification for applying this curve as the basis for the adoption rate that would support its application for multiple market segments (e.g., residential, small commercial, and university electrification). Please provide any supporting documentation.
- c. Did NFG consider alternate or accelerated ramp rates or building code changes for market adoption rates for new construction? If no, describe why these were not considered. If yes, why did NFG decide against such changes?

Response:

- a. The market adoption rate for all electrification scenario uses the same underlying data as "Figure 7. Aggressive Ramp Rate S-Curves" in the Cadmus study. Note that the market adoption rate for electrification assumes that electrification conversions occur either at the end of equipment life or at the time of new builds. Annual conversion counts by equipment type are calculated by applying the ramp rate schedule to a specified maximum participation rate. That is, the ramp rate curve is shifted up or down based on the assumed maximum participation rate based on the scenario being modeled.

- b. As explained in the Cadmus study, the ramp rates are not sector specific; rather, they are generalized S-curves that assume an initial saturation rate in the study's first year before progressing to the maximum achievability percentage on an incremental basis. (See Cadmus Weatherization Study provided as Appendix F, page 22) Given the general nature of the ramp rates used by Cadmus, the gradual growth in participation over time as the market for projects improves, and the similarity between weatherization and electrification projects in that both require customer acceptance of renovations within their home or business, it is appropriate to use the same ramp rate for weatherization and electrification and for all sectors.
- c. As explained in National Fuel's Initial Long-Term Plan, while the shape of the ramp rate did not change, National fuel did consider different market adoption rates for electrification when it modeled the various scenarios. As shown in Table IV-5, the Reference Case assumed no electrification, the SCE reaches an annual max of 50% of end of life/new construction conversions, and the Aggressive Scenario reaches an annual max of 100% of end of life/new construction conversions. It was premature to include the impact of potential building code changes related to electrification in the Initial Long-Term Plan since they have not been finalized or enacted.

NFG-DR-1

NATIONAL FUEL GAS DISTRIBUTION CORPORATION
NEW YORK DIVISION
INITIAL LONG-TERM PLAN DATA REQUESTS

NFGDC-NRDC-DR-1-1

Reference Initial Comments of Natural Resources Defense Council, filed in Case 22-G-0160 dated March 13, 2023 at 18: What does NRDC believe to be the appropriate methodology to convert lifecycle CO₂e emission intensities of RNG from 100-year GWP to 20-year GWP? Please provide an example of the calculation of the 20-year GWP if landfill gas has CO₂e of 21 and animal manure has CO₂e of -124 using 100-year GWP including all formulas used. Please also provide sources for required assumptions.

Response:

NRDC has not conducted this analysis with respect to NFG's plan. However, we outline the approach as follows: Using its lifecycle emissions analysis, NFG should determine the share of lifecycle emissions attributable to each type of greenhouse gas (carbon dioxide, methane, and nitrous oxide). NFG should document all assumptions (e.g., regarding leakage, thermal energy use, baseline emissions, etc.), methodologies, and tools for examining the life-cycle impacts of various technologies, fuels, products, and energy systems that it uses to calculate these values for each type of RNG produced within New York State. All assumptions, methodologies, and tools used should be consistent with the recommendations of the New York Climate Action Council, and the GHG emission accounting requirements of the CLCPA, as implemented by the Department of Environmental Conservation, and used for measuring the achievement of the CLCPA emission limits.

Once NFG has determined the share of lifecycle emissions attributable to each greenhouse gas, it should proceed with the calculation as before.

CRA-DR-2-3.

Question:

Please provide the Design Day demand for each of the scenarios (SCE, LTP, AGG) in a spreadsheet covering the period through 2042.

Response:

Design day demand for each of the scenarios in the Initial Long-Term Plan is provided in CRA – NFG DR-2-3 Attachment 1.xlsx.
