

BEFORE THE
STATE OF NEW YORK
PUBLIC SERVICE COMMISSION

In the Matter of

Consolidated Edison Company Of New York, Inc.

Cases 25-E-0072 and 25-G-0073

May 2025

Prepared Testimony of:

Staff Accounting Panel

Rachel Catricala
Auditor Trainee 2

David Wilsey
Auditor 1

Clarke-Kerr, Monique
Auditor 1

Christopher Logan
Auditor 2 (Public Utilities)

Christopher Simon
Auditor 3 (Public Utilities)

Daniela Reinhart
Auditor 3 (Public Utilities)

Hongbing (Jerry) Shang
Supervisor, Utility Accounting
and Finance

Office of Accounting, Audits,
and Finance

State of New York
Department of Public Service
Three Empire State Plaza
Albany, New York 12223-1350

1 Q. Would the members of the Staff Accounting Panel
2 please state your names, employer, and business
3 address.

4 A. We are Rachel Catricala, David Wilsey, Monique
5 Clarke-Kerr, Christopher Logan, Christopher
6 Simon, Daniela Reinhart, and Hongbing (Jerry)
7 Shang. We are employed by the New York State
8 Department of Public Service, which we will
9 refer to as the Department. Our business
10 address is Three Empire State Plaza, Albany, New
11 York 12223-1350.

12 Q. Ms. Catricala, what is your position at the
13 Department?

14 A. I am an Auditor Trainee 2 in the Office of
15 Accounting, Audits, and Finance.

16 Q. Please describe your educational background and
17 professional experience.

18 A. In 2023, I received a Bachelor of Science in
19 Accounting from the State University of New York
20 (SUNY) Oneonta. I joined the department in
21 April 2024.

22 Q. Please briefly describe your responsibilities
23 with the department.

24 A. I am responsible for general accounting and

1 ratemaking matters, including the examination of
2 accounts, records, documentation, policies, and
3 procedures of utilities regulated by the Public
4 Service Commission, which we refer to as the
5 Commission.

6 Q. Ms. Catricala, have you previously submitted
7 testimony in proceedings before the Commission?

8 A. No.

9 Q. Mr. Wilsey, what is your position at the
10 Department?

11 A. I am an Auditor 1 in the Office of Accounting,
12 Audits, and Finance.

13 Q. Please describe your educational background and
14 professional experience.

15 A. In 2016, I received a Bachelor of Arts in
16 Accounting from Emmanuel College. In 2022, I
17 received a Master of Science in Accounting and
18 Taxation from the University of Hartford. Prior
19 to joining the Department, I worked in the
20 Corporate Tax department at Liberty Mutual
21 Insurance for eight years. I joined the
22 Department in August 2024.

23 Q. Please briefly describe your responsibilities
24 with the Department.

1 A. I am responsible for general accounting and
2 ratemaking matters, including the examination of
3 accounts, records, documentation, policies and
4 procedures of utilities regulated by the
5 Commission.

6 Q. Mr. Wilsey, have you previously submitted
7 testimony in proceedings before the Commission?

8 A. No.

9 Q. Ms. Clarke-Kerr, what is your position at the
10 Department?

11 A. I am an Auditor 1 in the Office of Accounting,
12 Audits and Finance.

13 Q. Please describe your educational background and
14 professional experience.

15 A. In 2012, I received a Bachelor of Business
16 Administration degree in Accounting from
17 Berkeley College and a Master of Business
18 Administration degree in Accounting from DeVry
19 University. I joined the Department in November
20 2022.

21 Q. Please briefly describe your responsibilities
22 with the Department.

23 A. I am responsible for general accounting and
24 ratemaking matters, including the examination of

1 accounts, records, documentation, policies, and
2 procedures of regulated utilities.

3 Q. Ms. Clarke-Kerr, have you previously submitted
4 testimony in proceedings before the Commission?

5 A. No, I have not.

6 Q. Mr. Logan, what is your position at the
7 Department?

8 A. I am an Auditor 2 (public utilities) in the
9 Office of Accounting, Audits and Finance.

10 Q. Please describe your educational background and
11 professional experience.

12 A. In 2012, I received a Bachelor of Science in
13 Accounting and a Bachelor of Science in Finance
14 from the State University of New York (SUNY) New
15 Paltz. I joined the Department in October 2019.

16 Q. Please briefly describe your responsibilities
17 with the Department.

18 A. I am responsible for general accounting and
19 ratemaking matters, including the examination of
20 accounts, records, documentation, policies and
21 procedures of utilities regulated by the
22 Commission.

23 Q. Mr. Logan, have you previously submitted
24 testimony in proceedings before the Commission?

- 1 A. Yes. Most recently, I submitted testimony in
2 the Orange and Rockland Utilities, Inc. rate
3 proceedings, Cases 24-E-0060 and 24-G-0061.
4 Prior to that, I submitted testimony in the
5 Consolidated Edison Company of New York, Inc.
6 (Con Edison or the Company) rate proceedings in
7 Cases 22-S-0659, Cases 22-E-0064 and 22-G-0065
8 and Niagara Mohawk Power Corporation d/b/a
9 National Grid rate proceedings, Cases 20-E-0380
10 and 20-G-0381. I submitted testimony in the
11 Orange and Rockland Utilities, Inc. (O&R) rate
12 proceedings, Cases 21-G-0073 and 21-E-0074. In
13 addition, I submitted testimony in the Brooklyn
14 Union Gas Company d/b/a National Grid NY and
15 Keyspan Gas East Corporation d/b/a National Grid
16 rate proceedings, Cases 23-G-0225 and 23-G-0226.
- 17 Q. Ms. Reinhart, what is your position at the
18 Department?
- 19 A. I am an Auditor 3 (Public Utilities) in the
20 Office of Accounting, Audits, and Finance.
- 21 Q. Please describe your educational background and
22 professional experience.
- 23 A. In 2013, I received a Bachelor of Science in
24 Accounting and in 2014, a Master of Science in

1 Accounting from the University of North Carolina
2 Greensboro. I joined the Department in April
3 2016.

4 Q. Please briefly describe your responsibilities
5 with the Department.

6 A. I am responsible for general accounting and
7 ratemaking matters, including the examination of
8 accounts, records, documentation, policies, and
9 procedures of utilities regulated by the
10 Commission and the development from that
11 information of various analyses and
12 recommendations.

13 Q. Ms. Reinhart, have you previously submitted
14 testimony in proceedings before the Commission?

15 A. Yes. I testified before the Commission, as part
16 of a witness panel, in the O&R rate proceedings,
17 Cases 24-E-0060 and 24-G-0061, Veolia Water New
18 York, Inc. rate proceeding, Case 23-W-0111, and
19 the Suez Water Owego-Nichols, Inc. rate
20 proceeding, Case 17-W-0528. I have also
21 submitted pre-filed testimony in a number of
22 proceedings, most recently Cases 24-E-0060 and
23 24-G-0061, O&R rate proceedings, Case 23-W-0111,
24 Veolia Water New York, Inc. rate proceeding,

1 Cases 22-E-0064 and 22-G-0065, Con Edison rate
2 proceedings, and Cases 21-G-0073 and 21-E-0074,
3 Orange and Rockland Utilities, Inc. rate
4 proceedings.

5 Q. Mr. Simon, what is your position at the
6 Department?

7 A. I am an Auditor 3 (Public Utilities) in the
8 Office of Accounting, Audits and Finance.

9 Q. Please describe your educational background and
10 professional experience.

11 A. I graduated from the SUNY Institute of
12 Technology at Utica/Rome with a Master of
13 Business Administration with a concentration in
14 accounting. I worked for two and one-half years
15 at Warren Koch, PC, Croton-on-Hudson, New York.
16 At Warren Koch, I worked as a staff accountant
17 and as the network administrator. After Warren
18 Koch, I was employed as a staff accountant at
19 LCS&Z, LLP in Latham, New York. In February
20 2005, I joined the Office of Accounting and
21 Finance in the Department and advanced to my
22 present position.

23 Q. Please briefly describe your responsibilities
24 with the Department.

1 A. My responsibilities include the examination of
2 the accounts, financial statements, policies,
3 and procedures of utilities regulated by the
4 Commission.

5 Q. Mr. Simon, have you previously submitted
6 testimony in proceedings before the Commission?

7 A. Yes. I have filed testimony as a part of an
8 accounting panel in Con Edison rate proceedings,
9 Cases 22-E-0064, 22-G-0065, and 22-S-0659. In
10 those proceedings, I testified to labor expense,
11 medical benefits, payroll taxes and the revenue
12 requirement.

13 Q. Mr. Shang, what is your position at the
14 Department?

15 A. I am employed as a Supervisor of Utility
16 Accounting and Finance in the Office of
17 Accounting, Audits and Finance.

18 Q. Please describe your educational background and
19 professional experience.

20 A. I graduated from China Anhui Institute of
21 Finance and Trade in 1993 with a Bachelor of
22 Business Administration in Accounting. In 2006,
23 I received my Master of Science in Accounting
24 from SUNY Albany. After I graduated from SUNY

1 Albany, I was employed by Ernst & Young, LLP at
2 its Stamford, Connecticut office from June 2006
3 to March 2008 as an audit associate. In May
4 2008, I joined the Department as a senior
5 auditor and advanced to my present position.

6 Q. Please briefly describe your responsibilities
7 with the Department.

8 A. I examine accounts, records, documentation,
9 policies and procedures of utilities regulated
10 by the Commission. I also review petitions for
11 property transfers, financings, and rate
12 filings.

13 Q. Mr. Shang, have you previously submitted
14 testimony in proceedings before the Commission?

15 A. Yes. I submitted testimony in O&R rate
16 proceedings in Cases 24-E-0060, 24-G-0061, 21-E-
17 0073, 21-G-0074, 18-E-0067, 18-G-0068, 11-E-
18 0408, 10-E-0362 and 08-G-1398. I also submitted
19 testimony in Con Edison rate proceedings in
20 Cases 22-E-0064, 22-G-0065, 22-S-0659, 19-E-
21 0065, 19-G-0066, 16-E-0060, 16-G-0061, 13-E-
22 0030, 13-G-0031 13-S-0032, 09-E-0428 and 09-G-
23 0795 and Central Hudson Gas & Electric
24 Corporation rate proceedings in Cases 14-E-0318

1 and 14-G-0319.

2 **Scope of Testimony**

3 Q. Panel, what is the scope of your testimony in
4 this proceeding?

5 A. First, we will discuss Staff's recommended
6 overall electric and gas revenue requirements.
7 Next, we will address Con Edison's Rate Year
8 forecast for the following other operating
9 revenues: Late Payment Revenues; electric
10 service specific revenue of Excess Distribution
11 Facilities; and gas service specific revenues of
12 Field Collection Revenues and NYPA Variable &
13 Maintenance Revenues. The Rate Year, or RY, is
14 the twelve-month period ending December 31,
15 2026. Then, we will address Con Edison's Rate
16 Year forecast for the following operation and
17 maintenance, referred to as O&M, expenses: Fuel
18 and Purchased power; Administrative and General
19 (A&G) Capitalized; Advanced Metering
20 Infrastructure; Bargaining Unit Contract Cost;
21 Company Labor expense; Company labor - fringe
22 benefit expense; Corporate & Shared Services,
23 Employee Welfare expense; East River Repowering
24 Project, or ERRP, Major Maintenance expense;

1 Institutional Dues and Subscriptions; Regulatory
2 Commission Expense; Uncollectible Reserve-
3 Customer; and general inflation. Next, we will
4 address Taxes Other than Income Taxes, Federal
5 and State Income Taxes, Rate Base, Amortization
6 of Regulatory Deferrals, and the Company's
7 proposed modifications to existing
8 reconciliation mechanisms, as well as new
9 reconciliations the Company proposes in these
10 proceedings. Finally, we will discuss our
11 recommendation to the Commission regarding how
12 it should address the gas weld issues raised in
13 Consolidated Edison, Inc.'s (CEI) 2024
14 Securities and Exchange Commission 10-K filing.

15 Q. Is the Panel sponsoring any Exhibits?

16 A. Yes, we are sponsoring three Exhibits:
17 Exhibit__(SAP-1), Exhibit__(SAP-2),
18 Exhibit__(SAP-3).

19 Q. Please describe Exhibit__(SAP-1), and
20 Exhibit__(SAP-2).

21 A. Exhibit__(SAP-1) is our Rate Year cost of
22 service presentation for the electric business
23 and Exhibit__(SAP-2) is our Rate Year cost of
24 service presentation for the gas business. Both

1 consist of thirteen schedules. Schedule 1
2 summarizes our projection of operating income,
3 rate base and rate of return for the Rate Year
4 ending December 31, 2026, and includes our
5 proposed base rate increases. Schedule 1 is
6 supported by Schedules 2 through 13. Schedule 2
7 is a summary of other operating revenues.
8 Schedule 3 is a summary of operating expenses.
9 Schedule 4 is a summary of the amortization of
10 regulatory deferrals in the Rate Year. Schedule
11 5 is a summary of taxes other than income taxes.
12 Schedules 6 and 7 show the computation of state
13 and federal income taxes, respectively.
14 Schedule 8 is the calculation of rate base for
15 the Rate Year, supported by Schedules 9 through
16 11. Schedule 9 shows the allowance for working
17 capital included in rate base. Schedule 10
18 reflects the unamortized deferral balances
19 included in rate base. Schedule 11 reflects the
20 forecast of accumulated deferred income taxes
21 included in rate base. Schedule 12 is a summary
22 of the capital matrix. Schedule 13 is a list of
23 Staff's adjustments for the Rate Year.
24 Q. Please describe Exhibit__(SAP-3).

- 1 A. Exhibit__ (SAP-3) includes the responses to
2 information requests, or IRs, that we have
3 relied upon and referenced throughout our
4 testimony. We will refer to these responses by
5 the number assigned by the Department, for
6 example DPS-123.
- 7 Q. Please summarize Con Edison's requested electric
8 and gas revenue requirements.
- 9 A. In its January 31, 2025, initial filing, the
10 Company requested a \$1,611.592 million increase
11 for its electric business and \$440.522 million
12 increase for its gas business for the Rate Year.
13 In its April 10, 2025 Update and Correction
14 filing, the Company decreased its request for
15 its electric business by \$3.156 million to
16 \$1,608.436 million. For the gas business the
17 Company decreased its request by \$91.478 million
18 or a request of \$349.042 million.
- 19 Q. What is the Historic Test Year (HTY) in these
20 proceedings?
- 21 A. The twelve-month period ended September 30,
22 2024.
- 23 Q. What is the Company's Fiscal Year (FY)?
- 24 A. Con Edison's Fiscal Year runs from January 1 to

1 December 31. For example, Fiscal Year 2024 is
2 the twelve-month period ending December 31,
3 2024.

4 Q. Please summarize Staff's recommended electric
5 revenue requirement for Con Edison.

6 A. Staff recommends an electric base delivery
7 revenue increase of \$~~319.204~~411.876 million, or
8 \$~~1.289~~1.196 billion less than the amount
9 requested by Con Edison in its Update and
10 Correction filing. The largest difference
11 between the Company's request and Staff's
12 recommended revenue requirement is due to our
13 adjustment to property taxes expense, which
14 accounts for approximately \$269.386 million of
15 the \$~~1.289~~1.196 billion. Other major
16 differences include: (1) \$~~221.033~~133.724
17 million related to rate base adjustments; (2)
18 \$~~162.518~~160.107 million related to the
19 amortization of regulatory deferral adjustments;
20 (3) \$~~156.236~~153.229 million related to labor
21 adjustments; (4) \$~~147.604~~151.938 million
22 related to Staff's recommended 9.30% ROE and 48%
23 equity ratio; (5) \$~~103.320~~85.963 million
24 related to depreciation expense adjustments; and

1 (6) \$75.593 million related to an increase in
2 other operating revenues, mainly driven by
3 higher RY late payment revenues. Staff's
4 recommended delivery revenue increase also
5 reflects a \$79.836 million adjustment to
6 increase RY uncollectible expense.
7 Exhibit__(SAP-1), Schedule 13 lists the
8 adjustments that Staff witnesses and panels
9 recommend which comprise this ~~\$1.2891.196~~
10 billion revenue requirement difference, with the
11 exception of Staff's recommended rate of return.

12 Q. Please summarize Staff's gas delivery revenue
13 requirement recommendation.

14 A. Staff recommends a gas base delivery revenue
15 decrease of ~~\$45.463-15.220~~ million, or ~~\$394.505~~
16 ~~364.262~~ million less than the amount requested
17 by the Company as of its Update and Correction
18 filing. The largest difference between the
19 Company and Staff is due to Staff's recommended
20 adjustments to the Company's proposed
21 amortization of regulatory deferrals, which
22 accounts for approximately ~~\$63.071-62.316~~
23 million of the ~~\$394.505-364.262~~ million
24 difference. Other major differences include:

1 (1) \$59.818 million related to property taxes
2 expense adjustments; (2) \$~~58.380~~60.701 million
3 related to depreciation expense adjustments (3)
4 \$~~57.112~~36.802 million related to rate base
5 adjustments; (4) \$~~51.419~~52.434 million related
6 to Staff's recommended 9.30 percent ROE and 48
7 percent equity ratio; (5) \$~~38.945~~37.710 million
8 related to labor adjustments; and (6) \$~~36.847~~
9 25.093 million related to an increase in sales
10 revenues due to a difference in the forecasted
11 level of sales. Staff's recommended delivery
12 revenue increase also reflects a \$17.666 million
13 adjustment to increase RY uncollectible expense.
14 As discussed, Exhibit__ (SAP-2), Schedule 13
15 lists the adjustments that Staff witnesses and
16 panels recommend that comprise this
17 \$~~394.505~~364.262 million revenue requirement
18 difference, with the exception of Staff's rate
19 of return.

20 **Other Operating Revenues**

21 Field Collection Revenues (Gas)

22 Q. Please explain the nature of field collection
23 revenues.

24 A. As explained on page 46 of the initial testimony

1 of the Company's Accounting Panel, these
2 revenues represent charges that are assessed to
3 commercial customers when the Company sends
4 employees to the field to collect overdue
5 balances.

6 Q. How did the Company forecast its RY gas field
7 collection revenues?

8 A. The Company started with a HTY revenue level of
9 \$0.155 million, then normalized out the full
10 amount resulting in a zero-dollar RY forecast.

11 Q. Did the Company explain why it reflected zero
12 revenues in the RY?

13 A. Yes. The Company explained, in its response to
14 DPS-435, that the historical data shows minimal
15 or no collections for gas.

16 Q. Does the Panel agree with the Company's RY
17 forecast?

18 A. No, we do not agree for two reasons. First, the
19 Company's underlying policy for generating such
20 revenue for its gas service has not changed;
21 second, the Company received gas collection
22 revenues during the latest 15-months, or from
23 December 2023 through February 2025.

24 Q. Please explain your first reason.

1 A. The Company's response to question 1b, of DPS-
2 435, states that, "When we go out for field
3 collections, we attempt to terminate or collect
4 on the electric first unless it is a gas only
5 account". The Company then explained that this
6 policy will "remain in place" in the RY.
7 Therefore, the policy to send field
8 representatives to collect or terminate its gas
9 customer's service, and the charging of a fee
10 for such collection and termination, will not
11 change in the RY.

12 Q. Please explain your second reason.

13 A. As shown in the response to DPS-435, Attachment
14 1, the Company has still been receiving gas
15 field collection revenues on a monthly basis
16 during the latest 15-months, with total revenue
17 collected of \$0.179 million. Given that the
18 policy will remain the same in the RY and the
19 fact the Company is still receiving these
20 revenues on an on-going basis, it is not
21 reasonable to reflect a zero-dollar forecast in
22 the RY for gas field collection revenues.

23 Q. What is the Panel's recommendation for
24 forecasting RY gas field collection revenues?

1 A. We recommend the Commission forecast revenues
2 based on the Company's HTY level of \$0.155
3 million. We recommend the use of the HTY level
4 because the Company has continually received gas
5 collection revenues since December 2023 and the
6 HTY is representative of what gas field
7 collection revenues will be in the RY.

8 Excess Distribution Facilities (Electric)

9 Q. What is the Company's excess distribution
10 facilities component of other operating
11 revenues?

12 A. As explained on page 48 of the initial testimony
13 of the Company's Accounting Panel, these
14 revenues represent tariff payments from
15 customers for distribution facilities provided
16 by the Company in excess of those normally
17 provided.

18 Q. How did the Company forecast its excess
19 distribution facilities revenues for the RY?

20 A. The Company explains on page 48 of the initial
21 testimony of its Accounting Panel that the RY
22 forecast of \$2.038 million reflected an average
23 of these revenues for the prior three years
24 beginning October 1, 2021, and ending September

1 30, 2024.

2 Q. Did the Company explain why it utilized a three-
3 year average to derive its RY forecast?

4 A. Yes. The Company stated in response to DPS-531
5 that it has consistently used a three-year
6 average to forecast these revenues in past rate
7 cases. Further, the Company states that this
8 method normalizes fluctuations over the years
9 and is therefore reasonable.

10 Q. Did the Company's excess distribution revenues
11 fluctuate over the three-year period ending
12 September 30, 2024?

13 A. No. The response to DPS-531 shows that the
14 Company's excess distribution revenue has
15 trended upward year over year totaling \$1.802
16 million, \$2.128 million, and \$2.184 million for
17 the 12-months ended September 30, 2022, 2023,
18 and 2024, respectively. In response to DPS-531,
19 the Company explains that the upward trend is
20 driven by increases in electrification of
21 heating in existing buildings, large electric
22 vehicle charging loads, and clean heat (heat
23 pump) loads. The Company further states that it
24 generally expects that new Excess Distribution

1 Facility customers will require larger new
2 electric services versus what has been installed
3 in the past.

4 Q. Does the Company claim that the upward trend
5 will continue into the RY?

6 A. Yes. In the response to DPS-855, the Company
7 states that it believes that the upward trend
8 will continue as a function of new customers
9 that require larger services for
10 electrification, vehicle charging, and clean
11 heat loads. Furthermore, in its response, the
12 Company identifies new electric distribution
13 facilities customers representing additional
14 revenues which it stated should continue to
15 support the upward trend.

16 Q. Does the Panel agree with the Company's three-
17 year average methodology?

18 A. No. Given the upward trend in excess
19 distribution facilities revenues, which the
20 Company expects to continue, the use of a three-
21 year average would inappropriately understate
22 the RY forecast.

23 Q. How did the Panel develop its RY forecast of
24 excess distribution facilities revenues?

1 A. First, we calculated a two-year average annual
2 growth rate of 10.36 percent based on the
3 Company's actual excess distribution facilities
4 revenues from the 12-months ended September 30,
5 2022 to September 30, 2024. We then applied our
6 10.36 percent two-year average annual growth
7 rate to the Company's HTY excess distribution
8 revenues to reach our RY forecast of \$2.729
9 million for the Company's electric operations.

10 Q. What is your adjustment to the Company's RY
11 forecast of excess distribution facilities
12 revenues?

13 A. Our adjustment increases the Company's RY
14 forecast for its electric operations by \$0.691
15 million.

16 Late Payment Revenues

17 Q. Please summarize the Company's forecast of late
18 payment charge revenues for the RY.

19 A. As shown on Schedule 5 of Exhibit___(AP-E3) and
20 Exhibit___(AP-G3) of the Company's Update and
21 Correction filing, the Company forecasts late
22 payment charge revenues, prior to the base
23 revenue increases, of \$52.425 million for
24 electric and \$14.255 million for gas. These

1 amounts were then adjusted to reflect additional
2 late payment charge revenues associated with the
3 Company's proposed electric and gas rate
4 increases by applying the late payment factors
5 adopted in the Commission's Order Adopting Terms
6 of Joint Proposal and Establishing Electric and
7 Gas Rate Plans with Additional Requirements
8 issued July 20, 2023 in Cases 22-E-0064 and 22-
9 G-0065, referred to as the 2023 Rate Order, of
10 0.52 percent for the Company's electric
11 operations and 0.42 percent for the Company's
12 gas operations to each respective commodities
13 proposed RY revenue increase.

14 Q. How did the Company forecast its late payment
15 charge revenues for the RY prior to adjusting
16 for the proposed electric and gas revenue
17 increases?

18 A. As explained on page 48 of the initial testimony
19 of its Accounting Panel, the Company proposed to
20 utilize the amount set in its current rate plans
21 as its RY forecast in these proceedings. As
22 stated on page 14 of the Update and Correction
23 testimony of the Accounting Panel, the Company
24 subsequently updated its forecast to track its

1 update to sales revenues.

2 Q. Why did the Company utilize the levels set by
3 the Commission in its current rate plans to
4 forecast the RY late payment charge revenues in
5 these proceedings?

6 A. As explained on page 48 of the initial testimony
7 of the Company's Accounting Panel, compared to
8 the HTY revenues, the Company claims that the RY
9 late payment charges will significantly decrease
10 due to its proposed increase in Company
11 collection efforts. However, the Company states
12 that it is unable to firmly forecast the impact
13 of those efforts on the late payment charges.

14 Q. Why does the increase in the Company's
15 collection efforts have an impact on the
16 Company's late payment charge revenues?

17 A. As explained on pages 112 and 113 of the initial
18 testimony of the Company's Accounting Panel,
19 late payment charges are generally higher when
20 more customers are in arrears, as they have been
21 since the pandemic. The Company states that it
22 is focusing heavily on arrears reduction efforts
23 in 2025 and beyond and expects that these
24 efforts will lead to a reduction in late payment

1 charge revenues.

2 Q. Does the Panel agree with the Company that a
3 reasonable RY forecast of late payment charge
4 revenues cannot be determined in light of the
5 Company's arrears reduction efforts?

6 A. No. As the Company explained, late payment
7 revenues are directly related to customer
8 arrears. Late payment charges represent an
9 additional charge applied when a customer's bill
10 has not been paid on time, while the Company's
11 arrears balances reflect the unpaid amounts for
12 bills that were not paid on time, including any
13 late payment charges that have accrued. Given
14 the correlation between the two, a reasonable
15 forecast can be developed by utilizing a
16 historical ratio of late payment charges to
17 average arrears balances and then applying that
18 ratio to the projected level of average arrears
19 in the RY. By applying this ratio to the
20 projected average arrears balance for the RY, we
21 are able to develop a forecast of late payment
22 charge revenues for the RY that takes into
23 account the resulting impact of the Company's
24 arrears reduction efforts.

1 Q. How did the Panel project the average arrears
2 balance for the RY?

3 A. In its redacted response to DPS-416, the Company
4 provides its initial arrears reduction forecast
5 for January through December 2025 based on its
6 proposed arrears management program. We
7 compared the Company's arrears reduction
8 forecasts to its actual arrears balances for
9 January, February, and March 2025, from the
10 Company's monthly Collection Activity Reports
11 filed in Case 91-M-0744, and found that while
12 the Company initially forecasted arrears
13 balances of \$1.670 billion, \$1.660 billion and
14 \$1.650 billion, respectively, as a result of its
15 arrears management program, actual arrears
16 balances were somewhat lower, totaling \$1.428
17 billion, \$1.387 billion and 1.340 billion,
18 respectively. On pages 7 and 8 of the Update
19 and Correction testimony of the Company's
20 Customer Operations Panel, the Company
21 acknowledges the variance, noting that the
22 reductions in arrears were currently trending
23 ahead of its original forecasts as a result of
24 the better-than-expected reductions. Given the

1 results of the Company's arrears reduction
2 efforts through March 31, 2025, we developed an
3 overperformance ratio of 81 percent by dividing
4 the Company's latest known actual arrears
5 balance of \$1.340 billion by the Company's
6 forecasted arrears balance of \$1.650 billion for
7 March 2025. We then applied the 81 percent
8 overperformance ratio to the Company's projected
9 arrears balance for December 31, 2025 of \$1.260
10 billion, as provided in the redacted response to
11 DPS-416, to reach our projected arrears balance
12 for December 31, 2025 of \$1.023 billion. To
13 recognize the impact of the Staff Consumer
14 Service Panel's recommendations to the Company's
15 proposed arrears reduction program, we held the
16 projected arrears balance for December 31, 2026
17 constant at the December 31, 2025 level.

18 Q. Why does the Panel's recommended methodology
19 result in a reasonable arrears forecast for the
20 RY?

21 A. On page 9 of the Update and Correction testimony
22 of the Company's Customer Operations Panel, the
23 Company indicated that as of April 2, 2025, it
24 had already hired 208 of the incremental

1 customer field representatives, referred to as
2 CFRs, under its proposed arrears management
3 program. Based on the information provided in
4 the redacted response to DPS-416, of the total
5 hired CFRs as of April 2, 2025, only 48 had been
6 hired prior to calendar year 2025, with an
7 additional 48 hired on January 10, 2025, 51
8 hired on January 31, 2025, 51 hired on February
9 28, 2025 and 10 hired between March 12 and April
10 2, 2025. On page 9 of the Update and Correction
11 testimony of the Company's Operations Panel, it
12 states that it expects to hire another 29 CFRs
13 by June 2025. As such, the Company was able to
14 achieve better-than expected arrears reductions,
15 or an overperformance ratio of 81 percent, in
16 the first quarter of 2025, despite the majority
17 of CFRs not being hired until, or after, January
18 10, 2025. Given the significant ramp up in CFRs
19 during and after the first quarter of 2025,
20 expecting the Company to be able to at a minimum
21 maintain its current overperformance ratio
22 through the end of calendar year 2025 is
23 reasonable. Furthermore, as previously
24 mentioned, maintaining the December 31, 2025

1 arrears balance through December 31, 2026 is a
2 reasonable approach considering the Staff
3 Consumer Service Panel's recommendation to
4 decrease the number of CFRs in the RY compared
5 to the Company's proposal. However, this still
6 is an increase in the number of CFRs compared to
7 the 68 included in the HTY, based on the
8 response to DPS-347, which allows the Company to
9 continue managing and reducing its arrears
10 balances during the RY more effectively than it
11 was able to in the HTY.

12 Q. What historical ratio of late payment charge
13 revenue to arrears balances is the Panel
14 recommending be applied to the projected average
15 arrears balance for the RY?

16 A. We recommend applying the latest known ratios of
17 12.2 percent for the Company's electric
18 operations and 2.7 percent for the Company's gas
19 operations, or a combined ratio of 14.9 percent,
20 for the 12-months ending March 31, 2025. These
21 ratios were developed based on the Company's
22 historical actual late payment charge revenues
23 provided in its original and supplemental
24 responses to DPS-513 and the Company's average

1 combined residential and non-residential arrears
2 balances over 60-days, from the Company's
3 monthly Collection Activity Reports filed in
4 Case 91-M-0744.

5 Q. Why did the Panel choose to use the latest known
6 ratio of late payment charge revenues to average
7 arrears balances for the 12-months ending March
8 31, 2025 as opposed to utilizing a ratio, or an
9 average ratio, for an alternative time period?

10 A. We calculated and reviewed the combined electric
11 and gas ratios for calendar years 2018 through
12 2024 of 13.1 percent, 12.4 percent, 1.3 percent,
13 3.6 percent, 13.9 percent 15.1 percent and 16.5
14 percent, respectively, using the data sources
15 previously discussed. However, we determined
16 that those ratios were not the best fit for
17 projecting the RY level compared to the latest
18 known 12-month ratio which better represents
19 what will occur in the RY.

20 Q. Why are the late payment charge revenue to
21 average arrears balance ratios for calendar year
22 2018 and 2019 not appropriate for forecasting
23 the Company's late payment charge revenues for
24 the RY?

- 1 A. For calendar years 2018 and 2019, the Company's
2 combined residential and non-residential average
3 arrears balance over 60-days, totaled only
4 \$0.353 billion and \$0.392 billion, respectively,
5 or approximately \$700 million less than our
6 projected average arrears balance for the RY.
7 Using the 2018 and 2019 ratios, which are based
8 on stale data and reflect customer payment
9 behavior prior to the COVID-19 pandemic, would
10 be inappropriate as they do not reflect the
11 current conditions nor the Company's
12 significantly increased level of current or
13 projected arrears balances. As a result, using
14 either of these ratios would have the potential
15 to significantly understate the late payment
16 charge revenues in the RY.
- 17 Q. Why are the late payment charge revenue to
18 average arrears balance ratios for calendar
19 years 2020 and 2021 not appropriate for
20 forecasting the Company's late payment charge
21 revenues for the RY?
- 22 A. The late payment charge revenue to average
23 arrears balance ratios of 1.3 percent and 3.6
24 percent for calendar years 2020 and 2021,

1 respectively, were significantly lower than all
2 other years reviewed. During this time frame,
3 the Company suspended late payment charges as a
4 result of the COVID-19 pandemic which resulted
5 in the lower ratios in those years. Because
6 2020 and 2021 reflect abnormal late payment
7 charge practices, using either of these ratios
8 to forecast the RY would severely understate the
9 late payment charge revenues in the RY where
10 there is no expectation that late payment
11 charges would be suspended.

12 Q. Why are the late payment charge revenue to
13 average arrears balance ratios for calendar
14 years 2022 through 2024 not appropriate for
15 forecasting the Company's late payment charge
16 revenues for the RY?

17 A. As the Company explains on pages 14 through 15
18 of the initial testimony of its Customer
19 Operations Panel, there were several periods
20 during these years where the Company paused its
21 credit and collection activity. From June 2022
22 through September 2022 and from January 2023
23 through April 2023, as a result of the
24 Commission's Order Authorizing Phase 1 Arrears

1 Reduction Program issued June 16, 2022 and Order
2 Authorizing Phase 2 Arrears Reduction Program
3 issued January 19, 2023 in Case 20-M-0266,
4 referred to as the Commission's bill relief
5 programs, the Company could not terminate
6 specific classes of customers for non-payment.
7 Additionally, the Commission's bill relief
8 programs, as claimed by the Company,
9 significantly reduced the outstanding arrears
10 balances of its residential and commercial
11 customers in the short term. Then, from
12 September 2023 through April 2024, the Company
13 voluntarily suspended credit and collections
14 activity during the implementation and
15 stabilization of its Customer Care and Billing
16 system. These pauses in the Company's credit
17 and collections activities during the noted
18 portions of calendar years 2022 through 2024 had
19 an impact on the Company's arrears balances,
20 write-offs and, as such, late payment revenues
21 during this time that are not representative of
22 the Company's typical operations. Therefore,
23 using the ratios for calendar years 2022 through
24 2024, during which there were significant

1 periods of time where the Company's collections
2 activities were paused, is not appropriate to
3 forecast a time period of normal collections
4 activities and could skew the forecast.

5 Q. Please summarize the Panel's forecast of RY late
6 payment charge revenues.

7 A. Applying our late payment charge revenue to
8 average arrears balances ratios of 12.2 percent
9 for the Company's electric operations and 2.7
10 percent for its gas operations to our projected
11 average arrears balance for the RY of \$1.023
12 billion results in a RY forecast of late payment
13 charge revenue of \$125.131 million for electric
14 and \$27.635 million for gas, respectively.

15 Q. Please quantify the Panel's recommended
16 adjustment to the Company's RY forecast of late
17 payment charge revenues.

18 A. Our adjustment results in an increase to the
19 Company's RY forecast of late payment charge
20 revenues of \$72.706 million and \$13.380 million
21 for electric and gas, respectively.

22 Q. Is the Panel recommending any other adjustments
23 to the Company's forecast of Late Payment Charge
24 Revenue in the RY?

1 A. Yes. As we have previously mentioned, the
2 Company adjusted its forecast to reflect
3 additional late payment charge revenues at a
4 rate of 0.52 percent for the Company's electric
5 operations and 0.42 percent for the Company's
6 gas operations associated with the Company's
7 proposed electric and gas rate increases. As
8 Staff's recommended forecasting methodology is
9 based on the ratio of late payment charge
10 revenues to arrears balances, and not as a
11 function of sales revenues, we are recommending
12 that the Company's proposed 0.52 percent and
13 0.42 percent ratios for its electric and gas
14 operations, respectively, be reduced to zero
15 percent and no additional late payment charge
16 revenues be imputed as a result of the proposed
17 rate increases.

18 New York Power Authority (NYPA) Variable and
19 Maintenance Revenue (Gas)

20 Q. Panel, what is the NYPA Variable and Maintenance
21 Revenue?

22 A. These revenues consists of two parts, the
23 variable revenue and revenue generated for
24 maintaining the Hunts Point Compressor. The

1 variable revenue represent payments the Company
2 receives from NYPA for recovering gas
3 transmission facility reinforcement costs and
4 include three components, variable, excess
5 variable, and variable balancing charge. The
6 maintenance revenue, also called Hunts Point
7 maintenance revenue, is charged on a per
8 dekatherm basis for volumes delivered to the
9 Tennessee gate stations when the Hunts Point
10 compressor is in operation. The amount of NYPA
11 variable and maintenance revenue depends on the
12 volume of gas delivered to meet generator load
13 and can vary from year to year due to factors
14 such as weather.

15 Q. How did Con Edison develop its RY forecast for
16 this revenue?

17 A. The Company explains on page 57 of the initial
18 testimony of its Accounting Panel that it uses
19 the historical average revenues of the past
20 three years, or October 1, 2021, through
21 September 30, 2024, to forecast the Rate Year
22 level.

23 Q. Did the Company explain why it used a three-year
24 historical average method to forecast the RY

1 level?

2 A. Yes. In the redacted response to DPS-649, the
3 Company explained that a three-year period was
4 used to capture the variability of the delivery
5 volumes.

6 Q. Does the Panel agree with the Company's proposed
7 methodology?

8 A. No. Although the use of three-year historical
9 revenues can smooth the variability over time,
10 information provided by the Company indicates
11 this revenue has been increasing consistently
12 over the past four years for the 12-months
13 ending September 30, 2021, through 2024, with
14 the HTY revenue reaching the highest level.
15 Specifically, in the redacted response to DPS-
16 649, the Company states that its actual NYPA
17 Variable and Maintenance Revenue for the 12-
18 month period ended September 30, 2021 was \$1.536
19 million; in the workpaper entitled AP-EG3, Sch
20 5, OOR provided in response to DPS-287, the
21 Company indicates that its actual NYPA Variable
22 and Maintenance Revenue for the 12-month periods
23 ended September 30, 2022, 2023 and 2024 was
24 \$1.559 million, \$1.843 million and \$2.139

1 million respectively. The workpaper shows that
2 the upward trend is mainly driven by increases
3 in variable revenue, which comprises the major
4 portion of this revenue. The Company's use of
5 the past three years' historical average to
6 forecast the RY level will understate this
7 revenue in the Rate Year by ignoring the year
8 over year increasing trend the Company
9 experienced over the past four years.

10 Q. What is the Panel's recommendation regarding
11 forecasting this revenue?

12 A. We recommend that the RY forecast be set the
13 historical level, i.e. \$2.139 million, which is
14 the highest level over the past four years. Our
15 recommendation properly captures the increasing
16 revenue trend and therefore, is a better RY
17 forecast.

18 Q. Is the Company expecting this revenue will
19 continue to increase in the Rate Year?

20 A. No, in response to DPS-649, the Company states
21 that the revenues will increase, decrease, or
22 remain the same based on the factors discussed
23 previously.

24 Q. Does the Panel agree with the Company's

1 explanation?

2 A. No. This revenue has consistently increased
3 over the past four years, as such, we believe
4 the trend will continue into the RY.

5 Q. What is the Panel's adjustment to NYPA Variable
6 and Maintenance Revenue?

7 A. Our proposal increases the Company's RY gas
8 revenue from \$1.847 million to \$2.319 million,
9 or by \$0.292 million.

10 **Operation and Maintenance Expenses**

11 **Fuel and Purchased Power**

12 Q. Please summarize the Company's forecast of fuel
13 and purchased power for the RY.

14 A. As shown on Schedule six of Exhibit___(AP-E3)
15 and Exhibit___(AP-G3) of the Company's Update
16 and Correction testimony, for the RY the Company
17 forecasted fuel and purchased power expense of
18 \$2,363.327 million for electric and \$784.719
19 million for gas.

20 Q. Does the Panel recommend any adjustments to the
21 Company's RY forecast of fuel and purchased
22 power?

23 A. Yes. We recommend that the Company's forecasted
24 fuel and purchased power expense be adjusted to

1 reflect the impact of Staff's sales revenue
2 forecast as recommended in the direct testimony
3 of the Staff Rates Panel.

4 Q. Please quantify the Panel's adjustment to the
5 Company's RY forecast of fuel and purchased
6 power.

7 A. The adjustment results in an increase to the
8 Company's RY forecast of fuel and purchased
9 power of \$3.541 million and \$11.657 million for
10 electric and gas, respectively.

11 Administrative and General (A&G) Capitalized

12 Q. Panel, please explain the nature of the A&G
13 capitalized line item.

14 A. As explained on page 73 of the initial testimony
15 of the Company's Accounting Panel, this line
16 represents the capitalized portion of A&G
17 overhead costs applicable to construction
18 activities, including general office salaries
19 and expenses. As such, this item reduces the
20 Company's total O&M expenses.

21 Q. How did Con Edison develop its RY forecast of
22 A&G capitalized costs?

23 A. On page 73 of the initial testimony, the
24 Accounting Panel explains that it increased the

1 HTY level of A&G capitalized costs by its
2 proposed labor escalation factors resulting in a
3 reduction to its total O&M forecast for the RY
4 of \$59.198 million for electric and \$12.168
5 million for gas.

6 Q. Did the Company revise its forecast in its
7 Update and Correction filing?

8 A. Yes. As stated on page 15 of Accounting Panel's
9 Update and Correction testimony, the RY forecast
10 of A&G capitalized costs was revised to increase
11 the HTY level by general inflation, as opposed
12 to labor escalation as originally proposed.
13 This results in a reduction to its total RY O&M
14 forecast of \$58.602 million for electric, and
15 \$12.045 million for gas.

16 Q. Does the Panel agree with the Company's proposed
17 methodology?

18 A. No. In response to DPS-38, the Company provided
19 its actual A&G capitalized costs for its
20 electric and gas businesses for the 12-month
21 periods ended September 30, 2020 through
22 September 30, 2024. Based on the information
23 provided, the Company's electric and gas A&G
24 capitalized costs have increased by 5.6 percent

1 from the 12-months ended September 30, 2020 to
2 September 30, 2021, 1.1 percent from September
3 30, 2021 to September 30, 2022, 14.9 percent
4 from September 30, 2022 to September 30, 2023,
5 and 15.2 percent from September 30, 2024. As
6 such, while the Company experienced a total
7 increase of 41 percent from the 12-months ended
8 September 30, 2020 to September 30, 2024,
9 inflation for the same time period totaled only
10 18.60 percent. In its response to DPS-510, the
11 Company explains that the upward trend was a
12 result of increased budget amounts for the
13 organizations that support the Company's
14 construction work. Further, the Company states
15 that it expected the upward trend to continue
16 into the RY consistent with its expectation that
17 the overall budget amounts for those
18 organizations would increase. Because the
19 Company expects the growth in its actual A&G
20 capitalized costs to continue, the Company's
21 updated proposal of using general inflation,
22 which has historically been much lower than the
23 Company's actual growth in its A&G capitalized
24 costs, to forecast the RY level is inappropriate

1 and would understate the RY forecast.

2 Q. How did the Panel develop its RY forecast of A&G
3 capitalized costs?

4 A. Given the continued increase in year-over-year
5 growth, we applied the annual growth rate for
6 the 12-months ended September 30, 2023 to the
7 12-months ended September 30, 2024 of 15.2
8 percent to the Company's actual A&G capitalized
9 costs for the 12-months ended September 30, 2024
10 to arrive at a reduction to total forecasted O&M
11 in the RY of \$76.577 million and \$15.740 million
12 for electric and gas, respectively.

13 Q. Quantify your adjustment to the Company's RY
14 forecast of A&G capitalized costs.

15 A. Our adjustment increases the Company's RY
16 forecast of A&G capitalized costs forecast by
17 \$21.034 million for electric and \$4.323 million
18 for gas.

19 Advanced Metering Infrastructure

20 Q. What does Advanced Metering Infrastructure (AMI)
21 expense represent?

22 A. AMI expense represents historical costs for the
23 maintenance of the AMI systems and
24 communications infrastructure.

1 Q. How did the Company calculate its RY AMI
2 expense?

3 A. The Company escalated the HTY amount by the
4 general escalation factor to arrive at the RY
5 balance.

6 Q. Does the Panel agree with the Company's
7 forecasted RY AMI expenses?

8 A. No, we do not. In its response to question five
9 of DPS-282, the Company states that the AMI
10 installation project was completed as of June
11 30, 2024, a time prior to the start of the Rate
12 Year. However, in its response to DPS-760, the
13 Company states that it included \$0.472 million
14 of AMI installation costs in the RY forecast.
15 These installation costs should be removed from
16 the RY forecast since the project is completed.

17 Q. Please quantify the Panel's adjustments.

18 A. The Panel has removed \$0.396 million and \$0.076
19 million from electric and gas RY AMI forecasts,
20 respectively.

21 Bargaining Unit Contract Cost

22 Q. What are bargaining unit contract costs?

23 A. As the Company explained in its response to DPS-
24 509, these are various costs that the Company

1 incurs in preparing for and engaging in the
2 negotiation of collective bargaining contracts
3 with its two unions, Local 1-2 Utility Workers
4 Union of America, which we will refer to as
5 Local 1-2 UWUA, and Local 3 International
6 Brotherhood of Electrical Workers, which we will
7 refer to as Local 3 IBEW.

8 Q. How did Con Edison develop its RY forecast of
9 bargaining unit contract costs?

10 A. As explained on page 73 of the initial testimony
11 of the Company's Accounting Panel, the Company
12 increased the HTY expense by inflation to reach
13 its RY forecasts of \$0.223 million for electric
14 and \$0.046 million for gas.

15 Q. When do the Company's current collective
16 bargaining contracts expire?

17 A. In its response to DPS-22, the Company provides
18 copies of its current collective bargaining
19 contracts which indicate expiration dates of
20 June 21, 2025 and June 24, 2028, for the Local 3
21 IBEW and Local 1-2 UWUA contracts, respectively.

22 Q. Did the Company indicate when contract
23 negotiations would commence with its unions?

24 A. In its response to DPS-509, the Company states

1 that it begins its efforts approximately six to
2 12 months in advance of the contract expiration.
3 As such, we would expect that at the time of our
4 testimony, the Company is currently engaging in
5 contract negotiations with Local 3 IBEW and will
6 not commence negotiations with Local 1-2 UWUA
7 until June 2027 at the earliest. Further, the
8 Company explains that contracts for Local 3 IBEW
9 have typically been four-year contracts
10 therefore, the next Local 3 IBEW contract is not
11 likely to expire until approximately June 2029.

12 Q. Does the Panel recommend any adjustments to the
13 Company's RY forecast of bargaining unit
14 contract costs?

15 A. Yes. Considering the Company's contract
16 negotiations are not expected to occur during
17 the RY, we recommend that the Commission remove
18 the entire \$0.223 million for electric and
19 \$0.046 million for gas from the RY forecasts
20 resulting in adjustments of \$0.212 million and
21 \$0.044 million, respectively, before inflation.

22 Employee Welfare Expense

23 Q. What is the nature of the Company's Employee
24 Welfare expense?

1 A. The Company's Employee Welfare costs are costs
2 incurred by the Company for several employee
3 benefits, including but not limited to, medical,
4 dental prescription drugs, vision coverage and
5 the Company's match for its thrift savings plan.
6 The amounts are net of capitalized amounts.

7 Q. How did the Company develop its Rate Year
8 forecast for Employee Welfare expense?

9 A. As shown in the Company's Exhibit___(CBP-12) and
10 Exhibit__(CBP-13), the Company's RY forecasts
11 for its electric and gas operations were derived
12 by adjusting its HTY level for allocation
13 changes, normalization adjustments, program
14 changes and escalations.

15 Q. What method did the Company use to escalate its
16 HTY costs level to its RY costs forecast?

17 A. As explained on page 66 of the initial testimony
18 of the Compensation/Benefits Panel, the
19 Company's HTY costs were escalated using three
20 different methods. First, a labor escalation
21 factor of 8.0 percent, or 4.0 percent per year,
22 is used to escalate employee benefits costs that
23 are a function of salaries and wages. Second, a
24 non-labor escalation factor of 9.41 percent is

1 used to escalate specific employee benefit costs
2 that are unrelated to salaries and wages, such
3 as stock purchase plan matching contributions
4 and employee wellness programs. Third, a health
5 care cost escalation factor was derived using
6 medical inflation rates based on historical
7 experience.

8 Q. What is the Company's Rate Year forecast for
9 Employee Welfare expense?

10 A. The Company's Rate Year forecast for Employee
11 Welfare expense is \$151.5 million for electric
12 and \$45.2 million for gas.

13 Q. Is the Panel recommending an adjustment to
14 Employee Welfare expense?

15 A. Yes. The Panel recommends that the Commission
16 adjust the Company's Rate Year forecast of
17 hospital insurance costs.

18 Q. Please explain.

19 A. As a starting point for the Rate Year forecast,
20 we recommend using the latest known 2025 health
21 insurance costs, which was provided by the
22 Company in its response to DPS-676. We then
23 applied the Gross Domestic Product Price Index
24 inflation index, or GDP-PI, to forecast the

1 total Rate Year health insurance costs. As
2 explained in the direct testimony of Staff
3 witness Daniel Gadowski, GDP-PI is the most
4 appropriate means of forecasting health
5 insurance increases. Our recommended adjustment
6 results in a decrease of the Company's RY
7 Employee Welfare expense of \$6.601 million for
8 electric and \$1.971 million for gas.

9 Q. Are there additional adjustments to the
10 Company's RY Employee Welfare expenses?

11 A. Yes. We recommend removing a portion of
12 Employee Welfare expense associated with the
13 Company's Customer Clean Energy Program (CCEP)
14 from the Company's RY Employee Welfare expenses
15 forecast. The CCEP is part of the Company
16 Energy Efficiency (EE) program. Pursuant to
17 Commission order issued on May 15, 2025 in Case
18 18-M-0084, in the Matter of a Comprehensive
19 Energy Efficiency Initiative (May 2025 Order)
20 the Staff Markets and Innovation Panel
21 recommends removing all EE related costs from
22 base rates. This adjustment decreases the
23 Company's RY Employee Welfare expense by \$0.751
24 million for electric and by \$0.136 million for

1 gas.

2 ERRP Major Maintenance (Electric)

3 Q. What is the nature of the ERRP Major Maintenance
4 cost component?

5 A. This cost component represents major maintenance
6 costs incurred at the Company's East River
7 repower plant for Units 1 and 2, which started
8 operations in 2005.

9 Q. Does the Company reconcile the costs associated
10 with ERRP Major Maintenance?

11 A. Yes. Pursuant to Commission's January 19, 2020
12 Order establishing Con Edison electric and gas
13 rates in Cases 19-E-0065 and 19-G-0060, to the
14 extent that the ERRP Major Maintenance costs
15 incurred by the Company vary from the amount
16 provided for in rates, the Company is required
17 to defer the variance for future recovery from
18 or credit to customers.

19 Q. Is there a deferred balance related to ERRP
20 Major Maintenance costs that either needs to be
21 recovered from or returned to customers?

22 A. Yes. As shown in the Company's workpaper
23 entitled "AP-EG3 Schedule 6 ERRP Major
24 Maintenance", provided in its response to DPS-

1 287, the Company projects that as of December
2 31, 2025, it will have a deferred credit balance
3 of \$9.438 million, which the Company proposes to
4 return to customers over a three-year period, or
5 \$3.146 million annually.

6 Q. What is the Company's projected spending over
7 the next five years?

8 A. As shown in workpaper AP-EG3 Schedule 6 ERRP
9 Major Maintenance, the Company projects over the
10 next five-year period, or from January, 2026,
11 through December 2029, that it will spend a
12 total of approximately \$61.900 million, or
13 approximately \$12.380 million on an average
14 annual basis.

15 Q. How did the Company develop its Rate Year
16 forecast of ERRP Major Maintenance expense for
17 its electric business?

18 A. The Company's forecast is derived by reducing
19 the average annual projected spending amount of
20 \$12.380 million by the annual credit
21 amortization amount of \$3.146 million to arrive
22 at its Rate Year forecast of \$9.234 million.

23 Q. Does the Panel agree with how the Company
24 developed its Rate Year forecast of ERRP Major

1 Maintenance expense?

2 A. No. Given the significant revenue requirement
3 increases requested by the Company in these
4 proceedings, in an effort to mitigate the rate
5 impact on customers and to address affordability
6 concerns, we recommend that the Commission deny
7 the Company's proposal to return the deferred
8 credit balance over three years, instead we
9 recommend it return the entire deferred balance
10 of \$9.438 million to customers in the Rate Year.

11 Q. What is your Rate Year forecast for ERRP Major
12 Maintenance expense?

13 A. Our Rate Year forecast for ERRP Major
14 Maintenance expense is \$2.652 million, or a
15 reduction of approximately \$6.292 million.

16 Company Labor

17 Q. How is the Company's labor expense presented?

18 A. As explained on pages 74 through 77 of the
19 initial testimony of the Company's Accounting
20 Panel, the Company broke out its labor expense
21 into the following categories: Advanced Metering
22 Infrastructure; Central Engineering;
23 Construction Management; Corporate and Shared
24 Services; Customer Energy Solutions; Customer

1 Operations; Electric Operations; Gas Operations;
2 Production; Steam Distribution; Substation
3 Operations; and System & Transmission
4 Operations. While the Panel recommends
5 adjustments that affect each individual labor
6 category, our testimony will discuss our
7 adjustments as a total labor adjustment combined
8 for all categories.

9 Q. How did the Company develop its Rate Year
10 expense forecast for Company labor?

11 A. The Company began with the expense level for the
12 Historic Test Year, and then adjusted that level
13 to reflect its request for incremental full-
14 time-equivalent employees, referred to as FTEs,
15 as proposed by the Company's various witnesses.
16 The Company then applied its labor escalation
17 factor of 6.58 percent, inclusive of a semi-
18 annual wage progression increase of 0.5 percent,
19 to arrive at its Rate Year forecast for Company
20 labor expense.

21 Q. How much labor expense does the Company request
22 in the Rate Year?

23 A. In the Company's Update and Correction filing,
24 it requests \$804.835 million for Electric and

1 \$200.354 million for gas.

2 Q. Does the Panel agree with the Company's RY
3 forecast of labor expense?

4 A. No. We recommend nine adjustments to the
5 Company's RY labor expense forecast, which we
6 will discuss in more detail below.

7 Q. Please explain the Panel's first adjustment.

8 A. Our first adjustment addresses the incremental
9 FTEs proposed by the Company. We quantified and
10 reflected in our revenue requirements any labor
11 adjustments recommended by other Staff Panels
12 and witnesses. The Company, in its Correction
13 and Update filing workpaper AP-3 Sch 6 Various
14 Company Labor Lines - Update Filing 20250408,
15 provided in its response to DPS-867, reflects a
16 total of 2,187 incremental FTEs for the Rate
17 Year. Other Staff Panels and witnesses
18 recommend reductions to the incremental FTEs
19 requested by Con Edison by 1,282, resulting in a
20 reduction to the Company's RY labor expense of
21 \$51.022 million for electric and \$8.691 million
22 for gas. Specifically: the Staff Electric
23 Infrastructure and Operations Panel removed 544
24 FTEs; Staff Gas Safety Panel removed 60 FTEs;

1 Staff Sales Forecasting Panel removed 2 FTEs;
2 Staff Shared Services Panel removed 50 FTEs;
3 Staff Utility Safety Panel removed 41 FTEs;
4 Staff Markets and Innovation Panel removed 19
5 FTEs; the Direct Testimony of Andrew Carpenter
6 removed 39 FTEs; Staff Gas Reliability Panel
7 removed four FTEs; and Staff Consumer Service
8 Panel removed 523 FTEs.

9 Q. Does the Panel also recommend any adjustment to
10 incremental FTEs requested by the Company?

11 A. Yes. In our second adjustment, we recommend
12 modifications to 10 requested FTEs in the
13 Company's Corporate Affairs program contained in
14 its Corporate and Services labor category.

15 Q. Please explain your adjustment.

16 A. The Company's response to DPS-752 states that it
17 plans to initiate the hiring process for the
18 eight manager and specialist positions in the
19 Corporate Affairs program in the first quarter
20 of 2027, however, the Company includes the costs
21 associated with these positions in the Rate
22 Year. As such, we adjusted these eight
23 positions out of the Rate Year. The Company
24 also proposes to hire two additional Directors

1 and two Senior Specialists. The response to
2 DPS-752 further states that the Company plans to
3 initiate the hiring process for these positions
4 in the second quarter of 2026. However, in its
5 initial testimony, the Company stated that one
6 Director and one Senior Specialist would be
7 hired as of start of the Rate Year and the other
8 Director and Senior Specialist will start
9 approximately March 1st 2026. Therefore, the
10 Panel recommends an adjustment to reflect hiring
11 these employees later in the Rate Year as
12 discussed by the Company in their response to
13 DPS-752.

14 Q. What is the impact of the Panel's
15 recommendations?

16 A. Our adjustments result in a reduction to Labor
17 Corporate & Shared Service expense of \$0.646
18 million for electric and \$0.193 million for gas.

19 Q. Please explain your third, fourth and fifth,
20 adjustments.

21 A. We recommend adjusting the Company's labor
22 escalation rate to remove the semi-annual wage
23 progression increase, impute an additional one
24 percent annual productivity related to the

1 incremental FTEs, and impute an additional one
2 percent annual productivity related to Rate Year
3 capital expenditures.

4 Q. What is the Company's proposed labor escalation
5 rate?

6 A. The Company uses a labor escalation rate of 6.58
7 percent for the 27-months period from October 1,
8 2024, through December 2026. The Company's
9 labor escalation rate includes a one percent
10 productivity imputation and a 0.5 percent semi-
11 annual wage progression.

12 Q. Please explain your third adjustment related to
13 the wage progression increases reflected in the
14 Company's forecast.

15 A. The semi-annual wage progression increases,
16 given in February and October, are step
17 increases designed to provide periodic increases
18 in union employee's wages from the hiring rate
19 to the top pay rate for a job title. These
20 increases, provided in the current union and
21 collective bargaining contracts, are awarded
22 semi-annually to employees who earn a
23 satisfactory performance evaluation. Employees
24 who receive satisfactory performance evaluations

1 continue to receive the step increase until they
2 reach the maximum rate of pay for the job title.

3 Q. Does the Panel agree with imputing step
4 increases?

5 A. No. We disagree with imputing step increases
6 for two reasons. First, the Company will
7 realize savings from employees who either are at
8 or near the top of the wage scale, leave the
9 Company, or are promoted to a new title, and are
10 then replaced by employees at or near the bottom
11 of the wage scale. These savings will offset
12 the costs associated with wage progression for
13 other employees. For some employees at Con
14 Edison, there are twelve progression increases
15 between the bottom and the top of the pay scale
16 for a given job title. Therefore, if a person
17 at the top of the pay scale retires and is
18 replaced by an employee at the bottom of the pay
19 scale, the Company will incur savings in the
20 amount of 12 progression increases. This type
21 of savings realized by the Company is not
22 accounted for in its labor calculation. Over
23 time, with the natural turnover of employees,
24 the progressive steps are averaged into any

1 given year. In years with a high rate of
2 turnover, the net costs associated with wage
3 progression could result in a net incremental
4 savings; in years with a low rate of turnover,
5 the progressive increments may result in a net
6 incremental cost. Over time, though, the
7 savings from seasoned employees at higher pay
8 level leaving, or being promoted to a new title,
9 and being replace with an employee at the bottom
10 of the pay scale, at a minimum, can offset the
11 costs of step increases for new employees.

12 Q. What is the second reason for disallowing step
13 increases?

14 A. In the Company's initial filing it requested an
15 additional 2,415 FTEs. This request was then
16 reduced to 2,187 FTEs in the Update and
17 Correction filing. Various Staff panels have
18 proposed to reduce that request by 1,290,
19 allowing 897 new FTEs. The Company's labor
20 forecast applies a wage progression increase to
21 those new employees during the RY, however these
22 employees will not be eligible for a wage
23 progression increase until after the RY.

24 Q. Has the Commission previously rejected Con

1 Edison's inclusion of wage progression increases
2 in labor forecasts?

3 A. Yes. In the rate order in Case 08-E-0539,
4 Proceedings on Motion of the Commission as to
5 the Rates, Charges, Rules and Regulations of
6 Consolidated Edison Company of New York, Inc.
7 for Electric Service (issued April 24, 2009) the
8 Commission concluded that the Company would
9 experience savings as employees at or near top
10 of the salary grade leave Con Edison and are
11 replaced by employees at the bottom of the
12 salary grade. The Commission noted that these
13 savings would offset the wage progression for
14 employees below the top pay rate.

15 Q. What is your adjustment related to wage
16 progression increases?

17 A. We recommend a decrease to the Labor expense
18 forecast of \$4.238 million for electric and
19 \$1.092 million for gas.

20 Q. Please explain your fourth adjustment to impute
21 an additional one percent annual productivity
22 related to incremental FTEs.

23 A. We recommend an additional one percent
24 productivity adjustment as a proxy to capture

1 the savings that should reasonably result from
2 the Company's hiring activities. As shown on
3 the Company's accounting workpaper AP-3 Sch 6
4 Various Company Labor Lines - Update Filing
5 20250408, provided in its response to DPS-867,
6 the Company forecasts an additional 2,187
7 incremental FTEs for the Rate Year, almost all
8 of which are projected to be hired prior to or
9 at the start of the Rate Year. The Company,
10 however, did not recognize additional
11 productivity gains or efficiencies resulting
12 from these additional employees outside of the
13 Commission's traditional one percent. While
14 Staff has recommended disallowing 1,290 of the
15 2,187 requested FTEs, the remaining 897
16 incremental employees the Company proposes to
17 hire, which represents a 6.5 percent increase to
18 the Company's total employee headcount, should
19 increase productivity as those new employees are
20 skilled workers that cover the Company's various
21 functional areas. Cost savings should be
22 expected due to enhanced efficiency or
23 productivity such as quicker response time and
24 service restorations, improved system plannings,

1 better customer service and communications, more
2 support for regulatory compliance, enhanced
3 renewable integration and more employees'
4 trainings and developments. As such, we
5 recommend imputing an additional one percent
6 annual productivity related to the incremental
7 FTEs Staff supports.

8 Q. How did you calculate the additional
9 productivity adjustment related to the
10 additional employees?

11 A. The Company imputed one percent annual
12 productivity in its labor escalation rate
13 forecast over the 27-month period from the end
14 of HTY through the end of RY, resulting in a
15 2.25 percent deduction to its labor escalation
16 rate. We recommend that the Commission adjust
17 the Company's labor escalation rate to reflect
18 an additional one percent productivity over the
19 same 27 months.

20 Q. Please quantify your additional one percent
21 productivity imputation relating to the hiring
22 of additional employees?

23 A. Our recommendation reduces Company's RY Labor
24 expense forecast by \$14.315 million for electric

1 and \$3.690 million for gas

2 Q. Please explain your fifth adjustment.

3 A. We recommend imputing an additional one percent
4 productivity adjustment to capture the
5 efficiency or productivity savings associated
6 with the Company's RY capital spending.

7 Q. How much capital investment related efficiency
8 or productivity gains has the Company reflected
9 in its current rate filings?

10 A. The Company, in its rate filing cover letter
11 dated January 31, 2025, claims it made several
12 efficiency efforts in which it leverages various
13 business processes and technology. It further
14 claims that it imputed an efficiency or
15 productivity adjustment in the current filings.
16 However, when asked in DPS-790 to quantify the
17 efficiency or productivity savings related to
18 its new capital investments, the Company stated
19 that it only reflected the Commission's
20 traditional one percent annual labor
21 productivity adjustment in its labor escalation.

22 Q. Is the Company's conventional one percent annual
23 labor productivity adjustment enough to capture
24 efficiency or productivity savings for the

1 Company's RY new capital investment?

2 A. No, considering the significant incremental FTEs
3 to be added, which we have discussed above, and
4 the magnitude of the Company's proposed new
5 capital investments to be implemented in RY, the
6 conventional one percent productivity adjustment
7 is far from enough.

8 Q. How much does the Company propose to invest in
9 the RY?

10 A. The Company proposes \$6.938 billion of total new
11 capital investments during the RY, with
12 information technology (IT) investments of \$984
13 million. Of this, \$1.380 billion of total new
14 capital investments will be closed into service
15 before the end of Rate Year.

16 Q. Did the Company identify any potential savings
17 that should arise from its proposed capital
18 spending?

19 A. The Company provided various exhibits and
20 whitepapers to support its capital requests. On
21 numerous occasions, these exhibits and
22 whitepapers identified anticipated cost savings
23 resulting from either efficiency boosts due to
24 processes modernizations, automations, system

1 improvement, workflow streamlining, or
2 productivity enhancements. In the review of
3 these exhibits and whitepapers, we identified a
4 list of new projects where the Company stated
5 that specific efficiency boosts or productivity
6 enhancements would occur and asked that the
7 Company quantify potential savings associated
8 with these efficiency boosts or productivity
9 enhancements. The Company, however, in its
10 response to DPS-796 failed to provide the
11 quantified and measurable savings, citing
12 various reasons including that the savings have
13 been built into the costs requested, or that
14 "efficiency/productivity cost savings cannot be
15 quantified at this time due to the complex
16 nature of the improvements and stakeholder
17 activities involved".

18 Q. Does any other Staff Panel identify savings that
19 may result from the Company's capital project
20 budgeting and implementation processes?

21 A. Yes. As discussed in the Staff Management and
22 Operation Audit Panel direct testimony,
23 Recommendations VII-2 and IX-3 contained in the
24 Commission approved Implementation Plan under

1 the 2021 Management Audit, directed the Company
2 to more accurately estimate, track, and report
3 and reflect efficiency gains in its capital
4 budgeting and implementation processes. As
5 such, Staff Management and Operation Audit Panel
6 recommends these efficiency gains be captured by
7 a productivity adjustment.

8 Q. Considering the above, what is the Panel's
9 recommendation?

10 A. We recommend imputing an additional one percent
11 productivity adjustment to the Company's labor
12 escalation rate over the 12 months during the RY
13 to capture the efficiency or productivity
14 savings the Company failed to reflect in its RY
15 forecast. Our new capital investments related
16 productivity imputation results in a 2.66
17 percent labor escalation rate.

18 Q. Please quantify your adjustment of an additional
19 one percent productivity imputation related to
20 capital investments?

21 A. Our recommendation reduces Company's RY Labor
22 expenses by \$6.362 million for electric and
23 \$1.640 million for gas.

24 Q. Has the Commission ever set rates for a utility

1 with a productivity adjustment of more than one
2 percent?

3 A. Yes. The Commission has determined a
4 productivity adjustment of more than one percent
5 in a number of rate orders including Case 93-E-
6 1123, Long Island Lighting Company (issued July
7 3, 1995), Case 95-G-1034, Central Hudson Gas and
8 Electric Corporation (issued October 3, 1996),
9 Case 97-G-0949, St. Lawrence Gas Company (issued
10 January 22, 1998), and Case 08-E-0539, Con
11 Edison (issued April 24, 2009).

12 Q. What is the sixth adjustment the Panel
13 recommends?

14 A. We recommend an adjustment to address slippage
15 in the Company's planned hiring of its proposed
16 incremental FTE employees. Schedule 6 of
17 Company Exhibit___(AP-E3) and Exhibit___(AP-G3)
18 provides the incremental costs associated with
19 the new positions requested by the Company as
20 program changes for the Rate Year. While these
21 new positions, with the exception of those Staff
22 recommends be removed, may be necessary, the
23 projected start date for each new position
24 represents only an estimate and it is unknown

1 when, or if, these positions will actually be
2 filled in the Rate Year. The Company could fill
3 the positions either before, on, or after the
4 Company's projected start date, or not at all,
5 which would affect the actual labor expense
6 incurred in the Rate Year. Furthermore,
7 incremental positions could be filled by
8 existing employees, resulting in no incremental
9 cost to the Company, or a potentially lower
10 incremental cost if the existing employee is
11 transferred to a position with a higher salary.

12 Q. In the event the Company is unable to fill a
13 proposed incremental position, would the Company
14 recover the cost of those unfilled positions in
15 rates?

16 A. Yes. In the event the Company is unable to fill
17 a proposed incremental position, or fills the
18 position at a later date, the Company would
19 continue to receive cost recovery in rates for
20 the position based on the original estimate. By
21 applying a slippage adjustment to the proposed
22 staffing level for the Rate Year, we can account
23 for these potential variances in the Company's
24 actual hiring activity. Absent the application

1 of a slippage adjustment, we can reasonably
2 conclude that customers would be paying the
3 Company for incremental positions that are
4 vacant during all or part of the Rate Year.
5 Thus, customers would be paying for an FTE
6 without receiving the associated benefit.

7 Q. How did the Panel adjust the Company's Rate Year
8 forecast of labor expenses to reflect slippage
9 in the Company's planned hiring activities?

10 A. In DPS-469, the Company was asked to report on
11 the status of the FTEs that were approved in the
12 2023 Rate Order. The Company did not provide
13 the requested information. The Company did,
14 however, provide information to give the Panel
15 insight into the Company's hiring activities
16 over the last few years which showed that on
17 average it takes about 120.2 days from the time
18 a position is posted to the time Con Edison
19 actually fills the position. Absent additional
20 information, we utilized the time between the
21 posting of a position and the actual hiring date
22 of 120.2 days out of 365, or 33 percent, as a
23 proxy for our slippage adjustment. We recommend
24 this 33 percent slippage adjustment be applied

1 to the Company's FTE requests to estimate
2 slippage in the Company's planned hiring
3 activities for the Rate Year. This adjustment
4 reduces the Company's labor forecast by \$15.690
5 million for electric and \$2.547 million for gas.

6 Q. Did other Staff panels provide labor related
7 adjustments to this Panel?

8 A. Yes, the seventh adjustment comes from the Staff
9 Incentive Compensation Panel, which recommends
10 removing Con Edison's incentive-based
11 compensation for non-officer management
12 employees from the Company's RY electric and gas
13 labor forecast. The adjustment decreases the
14 Company's RY labor forecast by \$34.950 million
15 for electric and by \$9.742 million for Gas, to
16 reflect that panel's adjustments to Company's
17 Management Variable Pay program and decreases
18 the Company's RY Other Compensation forecast by
19 \$16.149 million for electric and \$4.818 million
20 for gas for costs associated with the Company's
21 Long-Term Incentive Pay program for non-officer
22 management employees.

23 Q. Besides the Staff Incentive Compensation Panel,
24 are there any other Staff Panels providing labor

1 related adjustments to this Panel?

2 A. Yes. The eighth and ninth adjustments come from
3 the Staff Markets and Innovation Panel. Pursuant
4 to the May 2025 Order, the Staff Markets and
5 Innovation Panel recommends removing the Energy
6 Efficiency related labor costs from base rates.
7 This results in a decrease in electric labor
8 costs of \$16.538 million and a decrease in gas
9 labor costs of \$2.919 million. The Staff
10 Markets and Innovation Panel also recommends a
11 reclassification of labor dollars associated
12 with the Customer Analytics, Reporting, and
13 Engagement program from electric to gas, which
14 results in a reduction of electric labor costs
15 by \$0.085 million and an increase in gas labor
16 costs by \$0.085 million.

17 Company Labor - Fringe Benefit Adjustment

18 Q. How did the Company develop its Fringe Benefit
19 Adjustment expense related to its Company Labor
20 forecast?

21 A. The Fringe Benefit Adjustment expense reflects
22 the change in fringe benefits, such as employee
23 welfare expenses and workers' compensation,
24 related to the increase in the number of

1 employees through program change requests
2 sponsored by various Company witnesses. The
3 Company applied a fringe benefit rate of 16.4
4 percent to the total of the labor-related
5 program changes. Then, the Company escalated
6 that amount by the general inflation factor to
7 derive the Rate Year Fringe Benefit Adjustment
8 expense.

9 Q. Does the Panel agree with the Company's proposed
10 fringe benefit rate?

11 A. No. We recommend two adjustments.

12 Q. What is the Panel's first adjustment?

13 A. In its response to DPS-304 the Company provides
14 an updated Authority Letter effective January
15 2025 with a revised fringe benefit rate of 16.58
16 percent. As such, we recommend updating the
17 Fringe Benefit factor accordingly. This results
18 in an increase to electric Fringe Benefit
19 expense of \$0.034 million and an increase to gas
20 Fringe Benefit expense of \$0.006 million.

21 Q. What is your second adjustment?

22 A. We recommend an adjustment to the Company's RY
23 Fringe Benefit Adjustment that tracks all Staff
24 panels' adjustments to the Company's forecasted

1 labor expense using the updated fringe benefit
2 rate. Specifically, the direct testimonies of
3 the Staff Electric Infrastructure and Operations
4 Panel, Staff Gas Safety Panel, Staff Sales
5 Forecasting Panel, Staff Shared Services Panel,
6 Staff Utility Safety Panel, Staff Markets and
7 Innovation Panel, Direct Testimony of Andrew
8 Carpenter, Staff Gas Reliability Panel, Staff
9 Consumer Service Panel, and finally this panel—
10 the Staff Accounting Panel. These Panels'
11 adjustments reduce the Company's RY labor
12 expense by a total of \$151.697 million for
13 electric and \$32.012 million for gas, resulting
14 in a Fringe Benefit expense tracking adjustment
15 that reduces the Company's RY Fringe Benefit
16 expense forecast by \$25.151 million to electric
17 and \$5.308 million to gas.

18 Q. Is there another adjustment recommended by the
19 Staff Markets and Innovation Panel?

20 A. Yes. Pursuant to the May 2025 Order, the Staff
21 Markets and Innovation Panel recommends removing
22 all EE related costs from base rates. This
23 results in a decrease in the Company's RY Fringe
24 Benefits forecast by \$2.712 million for electric

1 and by \$0.479 million for gas.

2 Corporate & Shared Services

3 Q. Does the Panel recommend any adjustment to the
4 Company's Corporate & Shared Service forecast?

5 A. Yes. In its supplemental response to DPS-1046,
6 the Company explains that in forecasting its RY
7 Corporate & Shared Services expense for its
8 electric and gas operations, it erroneously
9 reversed the sign of a normalization adjustment
10 to the HTY level, resulting in an understatement
11 of the RY forecast by \$27.160 million for its
12 electric operations and \$5.583 million for its
13 gas operations. We reviewed the underlying
14 supporting documentation provided in the
15 Company's above response and recommend a
16 correction for this error. The correction
17 increases the RY forecast of Corporate & Shared
18 Services expense by \$27.160 million for its
19 electric operations and \$5.583 million for its
20 gas operations.

21 Institutional Dues and Subscriptions

22 Q. Please explain the nature of the Company's
23 institutional dues and subscriptions expense.

24 A. This expense represents fees and dues paid by

1 the Company for various memberships and
2 associations.

3 Q. Is the Company seeking recovery of the
4 membership fees and association dues paid to
5 organizations that engage in lobbying
6 activities?

7 A. No. As explained on page 82 of the initial
8 testimony of the Company's Accounting Panel, the
9 Company excluded from its RY forecast all
10 membership fees and association dues.

11 Q. Did the Panel verify that the Company excluded
12 fees and dues paid to organizations who engage
13 in lobbying activities from its RY forecast of
14 institutional dues and subscriptions?

15 A. Yes. The Company's workpaper regarding its
16 initial testimony AP-3, Informational
17 Advertising CECONY 25, provided in its response
18 to DPS-287 contains a list of organizations to
19 which the Company pays membership fees and
20 organization dues. The Panel reviewed each
21 organization included in the list and verified
22 that the Company properly excluded from its rate
23 year forecast all amounts paid to Edison
24 Electric Institute (EEI) and American Gas

1 Association (AGA), which did engage in lobbying.
2 Regulatory Commission Expense - General and Research
3 & Development (R&D)

4 Q. Panel, what is the nature of the Company's
5 regulatory commission expense - general and R&D
6 line item?

7 A. Section 18-a of the Public Service Law provides
8 that the costs and expenses of the Department
9 and the Commission, which we will refer to as
10 the general assessment, as well as New York
11 State Energy Research and Development Authority
12 costs, which we will refer to as the NYSERDA
13 assessment, shall be paid by the public utility
14 companies, corporations, and persons subject to
15 the Commission's regulation. The Company's
16 regulatory commission expense - general and R&D
17 line item represents the portion of those costs
18 assessed to Con Edison.

19 Q. Briefly explain the Department's assessment
20 process.

21 A. The Department issues three bills, or
22 statements, as part of its assessment process.
23 In February, before the start of each New York
24 State, or NYS, fiscal year, which is the twelve-

1 months ending March 31, the Company is issued a
2 Statement of Estimated Assessment. The
3 assessments in this statement are developed
4 based on the NYS Executive Budget, as it was
5 originally proposed by the executive branch, and
6 the Company's adjusted intrastate revenues from
7 the calendar year ending two years prior. The
8 Company's Statement of Estimated Assessment
9 provides the estimated general assessment but
10 does not provide an estimated NYSERDA
11 assessment. In August of each State fiscal
12 year, the Company is issued a Statement of
13 Revised Assessment which updates the general
14 assessment to reflect the NYS Enacted Budget,
15 which has modifications of the Executive Budget
16 as passed by the legislature and signed by the
17 governor, and the Company's adjusted intrastate
18 revenues for the prior calendar year, and
19 reflects the NYSERDA assessment. Finally, in
20 October following the end of the State fiscal
21 year, the Company is issued a Final Statement of
22 Assessment which updates the total assessment to
23 reflect the actual, rather than budgeted,
24 expenditures incurred during the State fiscal

1 year. At this time, the Company's estimated
2 assessment is reconciled with its final
3 assessment resulting in a refund of any
4 overpayments made or a request for additional
5 payment of the remaining assessment owed.

6 Q. How did the Company develop its RY forecast of
7 regulatory commission expense?

8 A. As explained on page 91 of the initial testimony
9 of the Company's Accounting Panel, the Company's
10 RY forecast was based on the Statement of
11 Revised Assessment for the 2024/2025 State
12 fiscal year, excluding refunds. The Company
13 then applied its general inflation factor to the
14 2024/2025 estimated assessment to reach a RY
15 forecast of \$54.817 million for electric and
16 \$15.456 million for gas.

17 Q. Did the Company revise its forecast in its
18 Update and Corrections filing?

19 A. Yes. As stated on page 18 of the Update and
20 Corrections testimony of the Company's
21 Accounting Panel, the Company updated its
22 regulatory commission expense - general and R&D
23 forecast for the RY based on its Statement of
24 Estimated Assessment letter dated February 1,

1 2025, which results in a RY forecast of \$57.561
2 million for electric and \$16.224 million for
3 gas.

4 Q. Did the Company explain why it excluded refunds
5 from its RY forecast?

6 A. Yes. In its response to DPS-335, the Company
7 states that the assessment is calculated based
8 on budget information from the State and that
9 the Company cannot forecast whether a refund or
10 additional payment would be appropriate.

11 Q. Does the Panel agree that the RY forecast should
12 exclude an estimated refund?

13 A. No. As we explained earlier in our testimony, a
14 Final Statement of Assessment is issued
15 subsequent to the end of each State fiscal year
16 for the specific purpose of reconciling the
17 estimated assessment billed to utilities to the
18 final assessment, which is based on actual
19 expenditures incurred. As such, the assessment
20 process recognizes that the estimate will likely
21 differ from the final assessment. This is
22 further supported by the Company's Final
23 Statements of Assessment provided in response to
24 DPS-335 which shows that the Company made an

1 overpayment, and received a subsequent refund,
2 in each of the past seven State fiscal years for
3 which a Final Statement of Assessment has been
4 issued. Because the Company has historically
5 received a refund, excluding this component is
6 unreasonable and would result in an overstated
7 regulatory commission expense - general and R&D
8 forecast for the RY.

9 Q. How did the Panel develop its RY forecast of
10 regulatory commission expense?

11 A. Using the Final Statements of Assessment for the
12 2021/2022, 2022/2023, and 2023/2024 State fiscal
13 years, provided by Con Edison in response to
14 DPS-335, we calculated a three-year average
15 ratio of the Company's refund of its overpayment
16 to its estimated assessment of 12.2 percent. We
17 then reduced the Company's estimated assessment
18 for its electric and gas businesses by this
19 refund ratio to develop an estimated final
20 assessment of \$47.904 million for electric and
21 \$13.502 million for gas, prior to inflation.

22 Q. Please quantify your recommended adjustment to
23 the Company's RY forecast of regulatory
24 commission expense - general and R&D.

1 A. Our adjustment reduces the Company's RY forecast
2 by \$6.653 million for electric and \$1.875
3 million for gas.

4 Uncollectible Reserve - Customer

5 Q. What is the nature of the Company's
6 uncollectible reserve - customer expense?

7 A. As explained on page 93 of the initial testimony
8 of the Company's Accounting Panel, this expense
9 represents an allowance for the recovery of
10 write-offs of customer accounts receivables.

11 Q. Please summarize the Company's forecast of the
12 uncollectible reserve - customer expense for the
13 RY.

14 A. As shown on Schedule 6 of Exhibit___(AP-E3) and
15 Exhibit___(AP-G3) of the Company's Update and
16 Corrections filing, the Company forecasts an
17 uncollectible reserve - customer expense, prior
18 to the base revenue increases, of \$66.209
19 million for electric and \$21.071 million for
20 gas. These amounts were then adjusted to
21 reflect additional uncollectible reserve -
22 customer expenses associated with the Company's
23 proposed electric and gas rate increases by
24 applying the uncollectible factor adopted in the

1 2023 Rate Order of 0.60 percent to each
2 respective commodities proposed RY revenue
3 increase.

4 Q. How did the Company forecast its uncollectible
5 reserve - customer expense for the RY before the
6 incremental increase that tracks its proposed RY
7 revenue increase?

8 A. As explained on page 93 of the initial testimony
9 of the Company's Accounting Panel, the Company
10 proposed to use the same amount set in its
11 current rate plans as its RY forecast in these
12 proceedings, subject to a full reconciliation.

13 Q. Why did the Company use the levels in its
14 current rate plans to forecast the RY
15 uncollectible reserve - customer expense in
16 these proceedings?

17 A. As explained on page 93 of the initial testimony
18 of the Company's Accounting Panel, the Company
19 is actively addressing its high customer arrears
20 balances and, therefore, utilized an approach
21 consistent with its forecast of late payment
22 charge revenues, which we previously discussed.
23 Further, the Company states on page 112 that it
24 is unable to predict how quickly arrears levels

1 will decrease or when uncollectible expense
2 levels will increase which makes a proposed
3 forecast untenable.

4 Q. Why does the Company's efforts to actively
5 address its high customer arrears balances have
6 an impact on the Company's uncollectible reserve
7 - customer expense?

8 A. As the Company explains on page 111 of the
9 initial testimony of its Accounting Panel, aged
10 arrears go through a collection process and, if
11 unpaid, eventually result in customer
12 termination and a conversion of the aged arrears
13 to uncollectible expense. In addition, the
14 Company states that it instituted deferred
15 payment agreement plans which provide customers
16 with needed flexibility, however these
17 agreements also result in customers paying small
18 amounts against their outstanding balance, which
19 delays termination for those that ultimately do
20 not pay. As a result, the Company claims it can
21 be years before arrears balances translate to
22 uncollectible expenses even when the Company's
23 field operations are fully funded. Further, the
24 Company explains on page 112 that as write-offs

1 lag arrears, the Company's uncollectible expense
2 is expected to increase in the upcoming years to
3 track the elevation in arrears but should then
4 decrease and stabilize once arrears do the same.

5 Q. Does the Panel agree with the Company that a
6 reasonable RY forecast of uncollectible reserve
7 - customer expense cannot be determined?

8 A. No. The Company's write-offs are primarily
9 driven by its arrears balances in that the
10 write-offs represents the portion of the
11 Company's arrears balance that it no longer
12 expects to collect from its customers. As such,
13 and consistent with our position for forecasting
14 the Company's late payment charge revenue for
15 the RY, a reasonable forecast for the Company's
16 uncollectible reserve - customer expense can be
17 developed by using a historical ratio of write-
18 offs to average arrears balances and then
19 applying that ratio to the projected level of
20 average arrears in the RY. The methodology we
21 recommend allows us to develop a RY forecast of
22 uncollectible reserve - customer expense that
23 takes into account the Company's recent write-
24 off and arrears history as well as the resulting

1 impact of the Company's arrears reduction
2 efforts.

3 Q. What historical ratio of customer write-offs to
4 arrears balances does the Panel recommending
5 applying to the projected average arrears
6 balance for the RY?

7 A. We recommend applying the latest known ratio of
8 17.8 percent for the Company's combined electric
9 and gas operations, for the 12-months ending
10 March 31, 2025. This ratio was developed based
11 on the Company's historical actual customer
12 write-offs provided in response to DPS-828 and
13 the Company's average combined residential and
14 non-residential arrears balances over 60-days,
15 from the Company's monthly Collection Activity
16 Reports filed in Case 91-M-0744.

17 Q. Why did the Panel choose to use the latest known
18 ratio of write-offs to average arrears balances
19 for the 12-months ending March 31, 2025 as
20 opposed to utilizing a ratio, or an average
21 ratio, for an alternative time period?

22 A. We calculated and reviewed the combined electric
23 and gas write-offs to average arrears balance
24 ratios for calendar years 2018 through 2024 of

1 15.6 percent, 16.3 percent, 7.4 percent, 6.6
2 percent, 6.3 percent, 11.7 percent, and 15.8
3 percent, respectively, using the data sources
4 previously discussed. While the write-off to
5 average arrears balance ratio has fluctuated
6 during this time period, the volatility from
7 2020 through 2023 can be attributed to COVID-19
8 related disruptions and the Company's suspension
9 of collections and are not expected to repeat
10 during the RY as we previously discussed in the
11 late payment charge revenue section of our
12 testimony. The return to higher write-off to
13 average arrears balance ratios in 2024 and the
14 most recent 12-months ended March 31, 2025
15 suggests the ratio has stabilized and has
16 returned to pre-pandemic levels. The latest
17 known ratio, therefore, reflects current
18 conditions and provides a reliable proxy for
19 forecasting write-offs for the RY. Further, we
20 did not make additional adjustments to our
21 forecasting methodology to specifically account
22 for the time lag between arrears and write-offs.
23 While we recognize that a lag exists, and has
24 always existed, our use of the latest known

1 ratio which is broadly consistent with pre-covid
2 levels, is based on the Company's actual
3 historical experience, not on assumptions or
4 speculation, and reflects how arrears and write-
5 offs have behaved over time.

6 Q. Please summarize the Panel's forecast of RY
7 uncollectible reserve - customer expense.

8 A. Applying our write-off to average arrears
9 balances ratio of 17.8 percent to our projected
10 average arrears balance for the RY of \$1.023
11 billion, which we previously discussed, results
12 in a combined RY forecast of write-offs for the
13 Company's electric and gas operations of
14 \$181.940 million. We then allocated the
15 combined RY write-offs to the Company's electric
16 and gas operations based on each commodity's
17 share of HTY operating revenues, from which
18 arrears balances, and ultimately write-offs,
19 originate, to derive our RY forecast of
20 uncollectible reserve customer expense of
21 \$143.725 million for electric and \$38.214
22 million for gas.

23 Q. Please quantify the Panel's recommended
24 adjustment to the Company's RY forecast of

1 uncollectible reserve - customer expense.

2 A. Our adjustment increases the Company's forecast
3 of uncollectible reserve - customer expense in
4 the RY by \$77.516 million for electric and
5 \$17.143 million for gas.

6 Q. Is the Panel recommending any other adjustments
7 to the Company's forecast of uncollectible
8 reserve - customer expense in the RY?

9 A. Yes. As we previously mentioned, the Company
10 adjusted its forecast to reflect additional
11 uncollectible reserve - customer expenses at a
12 rate of 0.60 percent for the Company's electric
13 and gas operations associated with the Company's
14 proposed electric and gas rate increases. As
15 our forecasting methodology is based on the
16 ratio of write-offs to arrears balances, and not
17 as a function of sales revenues, we recommend
18 that the Company's proposed 0.60 percent ratio
19 for its electric and gas operations be reduced
20 to zero percent and no additional uncollectible
21 reserve - customer expenses be imputed because
22 of the proposed rate increases.

23 Inflation

24 Q. Did the Company develop its RY forecast of

1 certain O&M expenses by inflating the HTY
2 expenses by GDP inflation?

3 A. Yes. As shown in Schedule 6 of Exhibit___(AP-
4 E3) and Exhibit___(AP-G3) of its initial filing,
5 the Company developed its RY forecast by
6 increasing the HTY expense by an inflation rate
7 of 5.02 percent.

8 Q. What period does this inflation rate reflect?

9 A. The inflation rate reflects the period from the
10 end of the HTY through the Rate Year, or October
11 1, 2024 through December 31, 2026.

12 Q. Did the Company revise its forecasted inflation
13 rate?

14 A. Yes. As explained on page 14 of the Update and
15 Correction testimony of the Company's Accounting
16 Panel, the Company updated its forecasted
17 inflation rate to 5.51 percent.

18 Q. Do you agree with the Company's forecasted
19 inflation rate of 5.51 percent?

20 A. No. In testimony, Staff witness Daniel Gadomski
21 forecasts an inflation rate of 6.62 percent for
22 the period October 1, 2024 through December 31,
23 2026.

24 Q. Did the Panel apply Staff's forecasted inflation

1 rate to the O&M expenses increased by GDP
2 inflation?

3 A. Yes. Our adjustment increases the forecasted
4 electric and gas O&M expenses by \$2.109 million
5 and \$1.795 million, respectively.

6 Q. Does Staff Witness Gadomski's inflation rate
7 recommendation impact any of the Company's other
8 forecasts?

9 A. Yes. As explained on page 19 of the initial
10 testimony of the Company's Accounting Panel, the
11 Company also used inflation to forecast its
12 materials and supplies, as well as all of its
13 prepayments, excluding property tax. Therefore,
14 we updated these forecasts to reflect Staff's
15 recommended inflation rate, which increases the
16 Company's forecasted electric and gas materials
17 and supplies and prepayments, other than
18 property tax prepayments, by \$5.246 million and
19 \$0.757 million for electric and gas,
20 respectively.

21 **Taxes Other Than Income Taxes**

22 **Property Taxes-Overall Review**

23 Q. Please provide a brief description of the
24 Company's property tax expenses.

1 A. As stated on pages seven and eight of the
2 initial testimony of Witness Stephanie Merritt,
3 the Company pays the majority of its property
4 taxes to New York City, which we will refer to
5 as NYC, which has a four-class tax system and
6 four different tax rates. Most of the Company's
7 properties fall within Class 3 which contains
8 utility property and Class 4 which contains all
9 commercial and industrial property, as well as
10 all other properties not included in the other
11 three classes. In addition to NYC, the Company
12 also pays property taxes to municipalities in
13 Westchester, Orange, Rockland, Dutchess and
14 Putnam Counties as well as property taxes on its
15 gas storage facilities in West Virginia and
16 Mississippi, which the Company refers to as
17 "Westchester and Other."

18 Property Taxes- New York City Forecast

19 Q. How did the Company develop its RY forecast of
20 NYC property tax expenses?

21 A. As summarized on pages 12 and 13 of the initial
22 testimony of Witness Merritt, to develop its RY
23 forecast of NYC property taxes, the Company
24 increased the 2024/2025 real estate and special

1 franchise values by the estimated effect of the
2 net plant changes in electric and gas plant to
3 arrive at the RY assessment values for its Class
4 3 and Class 4 property. Then, the Company
5 applied its estimated tax rates to its assessed
6 value forecasts in order to reach its initial RY
7 NYC property tax expense forecast of \$2.491
8 billion for electric and \$0.538 billion for gas.
9 On April 10, 2025, the Company submitted its
10 Update and Correction filing. As explained on
11 pages five through nine of the updated testimony
12 of Witness Merritt, the Company updated its RY
13 forecast to reflect the actual NYC fiscal year
14 2025/2026 tentative assessments, changes in the
15 Company's capital forecast, updates to the NYS
16 Real Property Tax Law, which we will refer to as
17 RPTL, Section 626-Credit for the NYC Special
18 Franchise Receipt Taxes and changes to the
19 estimated tax rates applied to forecast the RY.
20 These changes resulted in an updated NYC
21 property tax expense forecast for the RY of
22 \$2.486 billion for electric and \$0.510 billion
23 for gas.

24 Q. How did Witness Merritt derive her estimated NYC

1 tax rates as updated in the Company's Update and
2 Correction filing?

3 A. As explained on pages seven and eight of the
4 updated testimony of Witness Merritt, to
5 forecast the property tax rates for NYC, the
6 Company developed a five-year average annual
7 growth rate for its Class 3 and Class 4 tax
8 rates of 0.002 percent and 0.148 percent,
9 respectively. The average annual growth rates
10 were then applied to the actual fiscal year
11 2023/2024 tax rates to arrive at the forecasted
12 tax rates for Class 3 and Class 4 properties.

13 Q. Did the Company use the latest known Class 3 and
14 Class 4 tax rates to develop its growth rates
15 and forecasted tax rates for the RY?

16 A. No. Despite the fact that the fiscal year
17 2024/2025 NYC tax rates are currently known, the
18 Company developed its five-year average annual
19 growth rates beginning with fiscal year
20 2018/2019 and ending with fiscal year 2023/2024.
21 The fiscal year 2023/2024 rates, as opposed to
22 the latest known fiscal year 2024/2025 rates,
23 were then also used as the starting point to
24 which the average annual growth rates were

1 applied.

2 Q. What is the Company's rationale for excluding
3 the fiscal year 2024/2025 property tax rates
4 from the development of its forecasted property
5 tax rates in the current filings?

6 A. As explained on page 14 of the initial testimony
7 of Witness Merritt, the Company considers the
8 Class 3 property tax rate for fiscal year
9 2024/2025 of 11.181 percent, which decreased
10 7.440 percent from fiscal year 2023/2024, to be
11 an outlier, and therefore, used an alternative
12 approach to forecast the future property tax
13 rates. The Company further explained on page
14 seven of the updated testimony of Witness
15 Merritt that its modified approach was taken due
16 to significant factors that resulted in a lower
17 NYC Class 3 property tax rate for fiscal year
18 2024/2025 compared to fiscal year 2023/2024.

19 Q. Please briefly describe the first factor that
20 resulted in a lower NYC Class 3 property tax
21 rate for fiscal year 2024/2025 compared to
22 fiscal year 2023/2024.

23 A. As explained in more detail on pages 14 through
24 16 of the initial testimony of Witness Merritt,

1 the first factor resulting in a lower 2024/2025
2 Class 3 property tax rate was the sharp increase
3 in the citywide Class 3 taxable assessed values.
4 Citywide Class 3 taxable assessed values
5 increased by \$4.4 billion, or by 20.13 percent,
6 from fiscal year 2023/2024 to fiscal year
7 2024/2025 compared to an average increase of
8 3.75 percent for Class 1 and Class 2 tax
9 citywide taxable assessed values and 2.31
10 percent for Class 4 citywide taxable assessed
11 values.

12 Q. How does an increase in the Class 3 citywide
13 taxable assessed values result in a decrease to
14 the Class 3 property tax rate?

15 A. As the Company explains on page 16 of the
16 initial testimony of Stephanie Merritt, property
17 tax is the main revenue source to balance local
18 municipal budgets so if the assessed value
19 increases, the tax rate may decrease and still
20 yield the necessary municipal revenue. In other
21 words, to determine the Class 3 tax rate, the
22 Class 3 tax levy, or the amount of municipal
23 revenues to be collected by NYC from the Class 3
24 properties within its jurisdiction, would be

1 divided by the total Class 3 citywide taxable
2 assessed value. As such, all else equal, as
3 Class 3 citywide taxable assessed values
4 increase, a lower Class 3 tax rate would be
5 needed to collect the same Class 3 tax levy.

6 Q. Briefly describe the second factor that resulted
7 in a lower NYC Class 3 property tax rate for
8 fiscal year 2024/2025 compared to fiscal year
9 2023/2024.

10 A. The Company explains on pages 17 and 18 of the
11 initial testimony of Witness Merritt that the
12 2024 legislative amendment to adjust the
13 standard five percent cap on the Class Shares
14 that affects how property taxes are calculated
15 and distributed among NYC's four property tax
16 Classes also contributed towards a lower Class 3
17 property tax rate for fiscal year 2024/2025
18 compared to fiscal year 2023/2024. The
19 legislative amendment was enabled by Chapter 210
20 of the Laws of New York of 2024, which codified
21 an exception to allow the NYC Council the
22 discretion to adjust the standard five percent
23 Cap on Class Shares to a lower percentage. The
24 NYC Council exercised its discretion and lowered

1 the standard five percent Cap on Class Shares to
2 0.09 percent in order maintain the same Class 1
3 property tax rate for Fiscal Year 2024/2025 as
4 for fiscal year 2023/2024. As a result of the
5 redistribution of the tax burden, the Class 3
6 property tax rate decreased from 11.639 percent
7 to the current rate of 11.181 percent for fiscal
8 year 2024/2025.

9 Q. Does the Panel agree that the fiscal year
10 2024/2025 Class 3 tax rate is an outlier?

11 A. No. On pages 28 through 35 of the initial
12 testimony of Witness Merritt, the Company
13 explains in detail NYC's complex tax rate
14 process, which considers various factors
15 including the NYC budget, revenue sources other
16 than property taxes, class share proportions,
17 and assessed values, as well as limitations
18 imposed on the tax levy and class shares, all of
19 which can produce very different results from
20 one year to the next. The Company states that
21 it considered the Class 3 tax rate of 11.181
22 percent for fiscal year 2024/2025, a decrease of
23 7.440 percent from the previous year, to be an
24 outlier, and therefore normalized it out of its

1 five-year average annual growth rate. However,
2 the tax rate level is not unheard of and can
3 hardly be considered an outlier given the
4 numerous factors that can influence the property
5 tax rates in a given year. This is apparent
6 from the Summary of Historic NYC Property Tax
7 Rates from fiscal year 2000/2001 through
8 2024/2025, provided by the Company in
9 Exhibit___(PTP-4), which shows tax rates as high
10 as 12.826 percent (fiscal year 2020/2021) and
11 tax rates as low as 10.540 percent (fiscal year
12 2000/2001) for Class 3 property. Further, while
13 the current decrease from fiscal year 2023/2024
14 to 2024/2025 of 7.440 percent is the highest
15 decrease seen in Class 3 property tax rates at
16 least since fiscal year 2000/2001,
17 Exhibit___(PTP-4) indicates similar levels of
18 decreases of 5.2 percent (fiscal year 2022/2023
19 to 2023/2024) and 6.5 percent (fiscal year
20 2013/2014 to 2014/2015) and percentage increases
21 as high as 9.9 percent (fiscal year 2001/2002 to
22 2002/2003 average rate) and 8.8 percent (fiscal
23 year 2016/2017 to 2017/2018). As such, the
24 current decrease of 7.440 percent, although on

1 the higher end, remains in line with the overall
2 variability historically observed in the NYC tax
3 rate process. Furthermore, the purpose of the
4 traditional five-year average methodology is to
5 incorporate, while smoothing out, the actual
6 year-over-year fluctuations in property tax
7 rates to provide a more stable and realistic
8 growth rate for predicting the tax rates for
9 future periods. Excluding specific fluctuations
10 undermines the purpose of the average and risks
11 overstating the forecast, especially when those
12 fluctuations are consistent with the level of
13 variability seen in the past.

14 Q. Does the Panel believe that the 2024/2025 Class
15 3 tax rate can be considered an outlier due to
16 the increase in the Class 3 citywide taxable
17 assessed values?

18 A. No. The Company explains on page 15 of the
19 initial testimony of Witness Merritt that the
20 citywide Class 3 taxable assessed values for
21 fiscal year 2024/2025 increased by \$4.4 billion,
22 or by 20.13 percent, from fiscal year 2023/2024.
23 We recognize that the year over year assessed
24 value increase was significantly higher than

1 that experienced in prior fiscal years, with the
2 second highest increase in the last 10 years
3 being an increase of 12.7 percent from fiscal
4 year 2022/2023 to fiscal year 2023/2024,
5 however, we do not believe that this significant
6 increase in citywide Class 3 taxable assessed
7 values creates a NYC class 3 tax rate that can
8 be considered an outlier, and that should
9 therefore be ignored when estimating future
10 Class 3 tax rates. On the contrary, we view the
11 significant increase in citywide Class 3 taxable
12 assessed values as a reason why the Class 3
13 2024/2025 tax rate should be included in the
14 five-year average growth rate, as well as be the
15 starting point to which the growth rate is
16 applied.

17 Q. Please explain why the Panel believes the
18 increase in Class 3 citywide taxable assessed
19 values from fiscal year 2023/2024 to 2024/2025
20 supports the use of the 2024/2025 Class 3
21 property tax rate as the basis to which the
22 five-year average growth rate is applied?

23 A. While the significant increase in the Class 3
24 citywide taxable assessed value resulted in a

1 reduction in the NYC Class 3 tax rates greater
2 than what could have occurred had the increase
3 not been as high, it resulted in a Class 3 tax
4 rate that, all else equal, we would expect to
5 continue going forward. Based on the NYC Tax
6 Fixing Resolutions adopted by the City Council
7 each year, which authorizes the tax rates to be
8 used for each class and the levy of real
9 property taxes for the fiscal year, the Class 3
10 NYC property tax rate for any fiscal year is
11 determined by dividing the Class 3 property tax
12 levy by the Class 3 citywide assessed value for
13 that year. As such, assuming an equal Class 3
14 property tax levy, future Class 3 property tax
15 rates would not increase from the current level
16 of 11.181 percent unless there was a
17 corresponding future decrease in the Class 3
18 Citywide taxable assessed value.

19 Q. Does the Panel have reason to believe that there
20 will be a decrease in the Class 3 Citywide
21 assessed values for the fiscal year impacting
22 the Company's property taxes in the RY?

23 A. No. Based on the NYC Tax Fixing Resolutions we
24 reviewed, the NYC Class 3 citywide assessed

1 values have increased year over year for every
2 fiscal year since at least 2013/2014. As such,
3 we would not expect a sudden decrease to occur
4 in fiscal years 2025/2026 or 2026/2027.

5 Q. Does the Panel agree that the 2024/2025 Class 3
6 tax rate can be considered an outlier due to the
7 2024 legislative amendment to adjust the
8 standard five percent cap on the Class Shares?

9 A. No. The Company explains on page 33 of the
10 initial testimony of Witness Merritt that in
11 most years, the NYC Legislature has passed
12 annual laws lowering the five percent overall
13 cap for Class 1, the effect of which has been to
14 cause the other classes to bear more of the
15 overall tax burden than would have been the case
16 under the five percent limit. Further, on page
17 34, the Company explains that this shift is the
18 primary reason for the increase in the Class 3
19 tax rate year over year where Class 3 has
20 historically been burdened by this legislation.
21 In response to DPS-353, the Company further
22 indicates that in its last three rate case
23 proceedings, it did not normalize out the impact
24 of this legislation on the NYC Class 3 and Class

1 4 tax rates when forecasting its property tax
2 expenses for the respective rate plans. As it
3 is not an unusual occurrence for the NYC
4 Legislature to pass amendments lowering the 5
5 percent cap on class shares, the impact of the
6 legislation for the 2024/2025 fiscal year should
7 not be treated as an extraordinary or one-time
8 occurrence that should be normalized out of the
9 forecast. Further, it is inappropriate to
10 exclude the impact of the amendment for the RY
11 forecast in these proceedings where it happens
12 to result in a lower Class 3 tax rate, while the
13 impact has been included in prior proceedings
14 where it has contributed to a higher Class 3 tax
15 rate, and therefore a higher forecasted property
16 tax expense.

17 Q. Does the Panel agree that the fiscal year
18 2024/2025 tax rates should be normalized out of
19 the five-year average?

20 A. No. As previously discussed, the process
21 utilized to determine the NYC tax rates is
22 complex and involves a multitude of different
23 factors, all of which can produce different
24 results from year to year. As such, the five-

1 year average growth rate should take into
2 account all of the outcomes of the NYC tax rate
3 process to reasonably estimate its impact on
4 future tax rates. Therefore, excluding the
5 2024/2025 NYC tax rates from the five-year
6 average would be inappropriate. Further, given
7 our expectation that Class 3 Citywide taxable
8 assessed values will continue to increase in
9 future fiscal years, the five-year average
10 growth rate should be applied to the latest
11 known fiscal year 2024/2025 property tax rates.

12 Q. What growth rate does the Panel recommend be
13 used to forecast the NYC property tax rates for
14 Class 3 and Class 4 property, respectively, for
15 the RY period?

16 A. We recommend using growth rates for its Class 3
17 and Class 4 tax rates of -2.262 percent and
18 0.423 percent, respectively.

19 Q. How did the Panel develop its average annual
20 growth rates for Class 3 and Class 4 property?

21 A. Our rates are developed based on the five-year
22 average growth in property taxes beginning with
23 fiscal year 2019/2020 and ending with fiscal
24 year 2024/2025. We then applied those growth

1 rates to the fiscal year 2024/2025 Class 3 and
2 Class 4 property tax rates on an annual basis to
3 forecast the tax rates for future fiscal years.

4 Q. Does the Panel have any other adjustments to the
5 Company's forecast of NYC property tax expense
6 for the RY?

7 A. Yes. We recommend an adjustment to the
8 "Iroquois Adjustment" component of the Company's
9 RY forecast.

10 Q. Please explain the nature of the "Iroquois
11 Adjustment" component of the Company's RY
12 property tax forecast.

13 A. As the Company explains in its redacted response
14 to DPS-386, the "Iroquois Adjustment" is the
15 Company's reimbursement of its share of the
16 property taxes paid for the metering and
17 regulating facility at the Hunts Point Station
18 in the Bronx, NY pursuant to the terms of the
19 O&M agreement between the Company and Iroquois
20 Gas Transmission System, L.P.

21 Q. How did the Company develop the "Iroquois
22 Adjustment" component of its RY forecast?

23 A. As it explains in its redacted response to DPS-
24 386 and further demonstrated in the Excel

1 workpapers provided in response to DPS-867, the
2 Company based its RY forecast of the "Iroquois
3 Adjustment" on the current market value, and the
4 resulting taxable/billable assessed value of
5 \$14.805 million, for the facility and its
6 forecasted property tax rates.

7 Q. Does the Panel agree with the Company's
8 methodology?

9 A. No. In its redacted response to DPS-386, the
10 Company provides the fiscal year 2025/2026
11 tentative assessment for the metering and
12 regulating facility at the Hunts Point Station
13 which provided a tentative market value of
14 \$30.110 million, a tentative Industrial and
15 Commercial Incentive Program (ICIP) tax
16 exemption of \$4.950 million and a tentative
17 taxable/billable assessed value of \$8.599
18 million. As such, we recommend that the
19 "Iroquois Adjustment" component of the Company's
20 property tax expense be updated to reflect the
21 now available tentative taxable/billable
22 assessed value of the property of \$8.599
23 million.

24 Q. Does the Company agree that the forecast should

1 be updated to reflect the 2025/2026 tentative
2 assessment?

3 A. No. In its response to DPS-925 the Company
4 states that it is the Company's practice to
5 forecast the property taxes for the "Iroquois
6 Adjustment" based on the final taxable assessed
7 value for the most recent fiscal year that is
8 published by the NYC Department of Finance, or
9 DOF, on May 25 of each year. The Company
10 further states that the taxable/billable
11 assessed value for fiscal year 2025/2026 is, at
12 the time this testimony is being written,
13 tentative and not yet final and therefore may be
14 subject to change.

15 A. Does the Panel agree that the forecast should be
16 based on the 2024/2025 final assessed values?

17 Q. No. While we understand that the 2025/2026
18 tentative assessed values are just that,
19 tentative, and are therefore subject to change
20 before final assessed values are provided by the
21 NYC DOF on May 25, 2025, using the latest known
22 estimates provided directly from the NYC DOF as
23 the basis for the RY forecast in this proceeding
24 is reasonable and appropriate. Moreover, it is

1 consistent with the Company's own practice of
2 updating its RY forecast to reflect the actual
3 NYC fiscal year 2025/2026 tentative assessments
4 for its special franchise, Class 3 and Class 4
5 properties, from the final fiscal year 2024/2025
6 assessed values reflected in its initial
7 forecast, as explained in the update and
8 corrections testimony of Witness Merritt.

9 Q. Is the Panel concerned that the final 2025/2026
10 assessed value for the "Iroquois Adjustment"
11 could vary from the tentative 2025/2026 assessed
12 value used in its forecast?

13 A. No. As the Company states in response to DPS-
14 925, the final NYC fiscal year 2025/2026
15 assessed values will be published by the NYC DOF
16 on May 25, 2025. If the final fiscal year
17 2025/2026 assessed value varies from the
18 tentative fiscal year 2025/2026 assessed values
19 utilized by Staff, the Company can update its RY
20 forecast as appropriate to reflect the final
21 2025/2026 assessed values during the rebuttal
22 phase of these proceedings.

23 Q. Please quantify the Panel's adjustments to the
24 Company's forecast of NYC property taxes for the

1 RY.

2 A. Our adjustments result in a RY forecast for NYC
3 property taxes of \$2.236 billion, or a reduction
4 to the Company forecast of \$0.250 billion for
5 its electric operations and \$0.457 billion, or a
6 reduction to the Company RY forecast of \$0.053
7 billion, for its gas operations.

8 Property Taxes- Westchester & Other Forecast

9 Q. How did the Company develop its RY forecast of
10 Westchester and Other property tax expenses?

11 A. As explained on pages 20 through 24 of the
12 initial testimony of Witness Merritt, the
13 Company first established a base level of
14 electric and gas property taxes based on the
15 actual property taxes paid in calendar year
16 2024. Then, the Company applied a 2.92 percent
17 five-year average annual escalation rate based
18 on historical tax payments for calendar years
19 2019 to 2024 to its base property tax level.
20 Finally, the Company made additional adjustments
21 to capture projected changes in assessed values
22 in the RY to reflect the incremental additions
23 to plant in service forecasted by the Company.
24 The Company's methodology results in an initial

1 RY forecast of \$179.026 million for electric and
2 \$77.468 million for gas. Subsequently, as
3 explained on pages 9 through 11 of the updated
4 testimony of Witness Merritt, the Company
5 updated its Westchester and Other forecast to
6 reflect changes in the Company's capital
7 forecast, corrections and updates to the
8 effective property tax rates utilized to
9 determine the property taxes associated with the
10 Company's incremental additions, and updated
11 property tax savings as a result of a settlement
12 between the Company and the Town of Cortlandt.
13 As such, the Company stated that these changes
14 resulted in an updated Westchester and Other
15 property tax expense forecast for the RY of
16 \$186.508 million for electric and \$80.737
17 million for gas.

18 Q. Did the Company explain why it forecasts
19 incremental property taxes on net plant on top
20 of the five-year average increase in property
21 taxes paid?

22 A. Yes. The Company states on pages 23 and 24 of
23 the initial testimony of Witness Merritt and
24 corrected on pages 2 and 3 of the update and

1 corrections testimony of Witness Merritt, that
2 the Company does not expect taxes in each of the
3 next several years to increase by the average
4 2.92 percent. The Company points to the recent
5 increase in the total property taxes paid of
6 7.99 percent from 2023 to 2024 stating that it
7 believes that the 2.92 percent five-year average
8 escalation percentage, in addition to the
9 forecasted property taxes associated with the
10 incremental additions to plant in service based
11 on net plant changes, is the most reasonable
12 method based on available information at the
13 time of its testimony.

14 Q. Does the Panel have concerns with the Company's
15 forecast of its Westchester and Other property
16 tax expense for the Rate Year?

17 A. Yes. Based on its response to DPS-389, the
18 Company's 2.92 percent growth rate was derived
19 based on the \$32 million increase in property
20 taxes paid from 2019 to 2024, of which increases
21 in assessed values contributed \$55 million
22 offset by lower property tax rates of \$23
23 million. As such, we are concerned that the
24 Company's adjustment to capture projected

1 changes in assessed value in the RY based on the
2 Company's forecasted capital expenditures is a
3 double count of projected growth in assessed
4 values that has already been captured and
5 projected using the Company's five-year average
6 annual escalation rate.

7 Q. Does the Company agree that the additional
8 adjustment is duplicative?

9 A. No. In response to DPS-388, the Company states
10 that the incremental additions to plant are not
11 already captured by the growth projected as a
12 result of the Company's proposed five-year
13 average annual escalation rate because the
14 incremental plant additions are not included on
15 the municipal tax rolls as of the taxable status
16 date and the valuation date, and therefore
17 subject to property taxes in those years.
18 Further, the Company states that because utility
19 property in NYS is based on a cost approach
20 known as Reproduction Cost New Less
21 Depreciation, the valuation for real property
22 and any incremental changes that occur after the
23 valuation date are not currently assessed.

24 Q. Does the Company's explanation address Staff's

1 concerns?

2 A. No. The Company explains on pages 10 and 11 of
3 the initial testimony of Witness Merritt that
4 property taxes increase for three reasons: the
5 tax rate increases, the assessed value of the
6 taxable property increases, or both the tax rate
7 and assessed value increase. The Company
8 explains that the primary driver of assessment
9 increases is due to the growth of the value of
10 the Company's property and equipment through new
11 infrastructure investment, and changes in the
12 market value due to the annual Class
13 Equalization Ratios, the application of the
14 Handy-Whitman construction index, and changes in
15 depreciation that include physical depreciation,
16 as well as functional and economic obsolescence.
17 The Company further states in its response to
18 DPS-388, that the Company's 2.92 percent
19 proposed five-year average growth rate measures
20 the taxes paid from these changes based on the
21 most recent historical property tax payment
22 information from calendar years 2019 through
23 2024 to forecast future year property taxes.
24 By applying the 2.92 percent five-year average

1 annual growth rate, which reflects the trend in
2 the actual taxes paid by the Company resulting
3 from changes in both tax rates and assessed
4 values, to the 2024 base level of property taxes
5 paid, the Company is forecasting not only the
6 impact of changes in tax rates as well as the
7 assessed values of existing taxable properties,
8 but also the impact of changes in assessed
9 values resulting from growth in the Company's
10 infrastructure investments. This is apparent
11 from the Company's response to DPS-388 in which
12 the Company provides a list of both the
13 incremental plant additions as well as new
14 incremental properties subject to assessment
15 that hit the assessment rolls from 2018 to 2023.
16 As such, making an additional adjustment to
17 increase the Company's property tax forecast for
18 incremental capital expenditures on top of the
19 projected growth is duplicative and ignores the
20 actual historical trend in the property taxes
21 paid by the Company and is therefore
22 inappropriate.

23 Q. How did the Panel forecast the Company's
24 Westchester and Other property tax expense for

1 the rate year?

2 A. We applied the Company's proposed five-year
3 average annual growth rate of 2.92 percent to
4 the Company's actual property taxes paid in 2024
5 for its electric and gas businesses, as detailed
6 in the Company's updated Excel workpapers
7 provided in response to DPS-867, on an annual
8 basis to reach our RY forecasts of \$175.356
9 million for electric and \$75.550 million for
10 gas.

11 Q. Please quantify the Panel's adjustments to the
12 Company's RY forecast of Westchester and Other
13 property tax expense.

14 A. Our adjustments reduce the Company's forecast by
15 \$11.152 million for its electric operations and
16 \$5.187 million for its gas operations.

17 Payroll Taxes

18 Q. Please explain how the Company calculated its
19 Rate Year payroll tax forecast?

20 A. The Company began with the HTY level, then
21 increased this amount by applying a payroll tax
22 rate of 15.75 percent to the forecasted labor
23 increase associated with the incremental FTEs it
24 requested.

1 Q. What comprises the 15.75 percent payroll tax
2 rate?

3 A. The Company's payroll tax rate of 15.75 percent
4 includes a 6.20 percent FICA Social Security
5 rate, a 1.45 percent FICA Medicare rate, a 6.0
6 percent federal unemployment rate, and a 2.10
7 percent NYS unemployment rate. The Company
8 applied these rates to every dollar associated
9 with their new FTE requests to derive the
10 increase in the payroll tax forecast.

11 Q. Does the Panel have any adjustments to the
12 Company's payroll tax expense forecast?

13 A. Yes, we have three adjustments.

14 Q. Explain your first adjustment.

15 A. Applying the Company's payroll tax rate to the
16 entire labor increase amount overstates the RY
17 payroll tax by ignoring the salary caps for
18 various payroll tax components. Specifically,
19 for 2025, FICA Social Security is limited to the
20 first \$160,200 earned; federal unemployment is
21 limited to the first \$7,000 earned; and NYS
22 unemployment is limited to the first \$12,300
23 earned. Any salary in excess of the above caps
24 will be not subject to the respective payroll

1 tax.

2 Q. What is the Panel's recommended method to
3 forecast the RY payroll taxes?

4 A. Due to the complexity of trying to apply the
5 various payroll tax rates to only a portion of
6 the labor expense increase, we recommend using
7 the historical effective payroll tax rate to
8 forecast RY payroll tax expense. The historical
9 effective payroll tax rate, which inherently
10 reflects the payroll tax rate limits previously
11 discussed, is 9.88 percent for electric and 7.73
12 percent for gas.

13 Q. How did you calculate these rates?

14 A. In response to DPS-823, the Company provided its
15 electric and gas labor costs and the actual
16 payroll taxes it paid for the HTY. The Company
17 reported electric labor of \$647.414 million and
18 payroll taxes of \$63.935 million, resulting in
19 an effective payroll tax rate of 9.88 percent.
20 The Company reported gas labor of \$169.886
21 million and payroll taxes of \$13.135 million
22 resulting in an effective payroll tax rate of
23 7.73 percent.

24 Q. What is your second adjustment?

1 A. We recommend an adjustment to the payroll tax
2 expense forecast to track the reduction in labor
3 expense supported by various Staff witnesses.
4 Applying the effective payroll tax rates of 9.88
5 percent and 7.73 percent to the reduced labor
6 expense results in a reduction of the Company's
7 RY payroll tax expense by \$24.229 million for
8 electric and \$4.918 million for gas.

9 Q. What is your third adjustment?

10 A. The Staff Markets and Innovation Panel
11 recommends that removing all CCEP related costs
12 from base rates. This results in a decrease in
13 RY payroll tax expense forecast of \$1.302
14 million for electric and \$0.230 million for gas.

15 Q. Do you have any other comments regarding the
16 Company's payroll tax calculation?

17 A. Yes. In response to DPS-823, the Company states
18 that it failed to include a 5.4 percent FUTA Tax
19 credit in its RY payroll tax calculation. This
20 credit reduces the Company's payroll tax rate
21 from 15.75 percent to 10.35 percent. If the
22 Commission does not adopt our adjustment to
23 forecast payroll taxes based on the historical
24 effective payroll tax rate, we recommend the

1 Commission use the corrected rate of 10.35.

2 Revenue Taxes

3 Q. Does the Panel have any adjustments to the
4 Company's Rate Year forecast of revenue taxes?

5 A. Yes. We recommend that the Company's forecasted
6 revenue taxes be adjusted to reflect the impact
7 of Staff's electric and gas sales revenues as
8 recommended in the direct testimony of the Staff
9 Forecasting Panel. Our adjustment results in an
10 increase to the Company's forecasted Rate Year
11 revenue taxes of \$0.456 million for electric and
12 \$1.365 million for gas.

13 State and Federal Income Taxes

14 Q. What are the new Internal Revenue Service, or
15 IRS, tax law changes or rulings that are
16 reflected in the Company's current rate filings?

17 A. The Company reflects the impact of following new
18 IRS tax law changes or rulings for Safe Harbor
19 rules, including the associated excess deferred
20 federal income tax (EDFIT) balances, and the
21 June 4, 2024 IRS Private Letter Ruling (PLR) on
22 standalone company net operating loss
23 carryforward (NOLC) and Corporate Alternative
24 Minimum Tax (CAMT) regulations. The Safe Harbor

1 rules impact both the Company's federal income
2 tax expenses and accumulated deferred income
3 taxes (ADIT); while the IRS June 2024 PLR and
4 CAMT tax regulations only impact the Company's
5 ADIT balance in rate base.

6 Q. Please describe how you reviewed these new IRS
7 tax law changes or rulings in the Company's rate
8 filings.

9 A. First, we obtained an understanding of the new
10 laws or rulings. We then checked that the
11 Company's facts and circumstance were applicable
12 and consistent to those new laws or rulings.
13 After these steps, we reviewed the Company's
14 income tax workpapers to ensure the Company
15 properly and accurately reflected related
16 amounts in its electric and gas RY revenue
17 requirement forecast. In our review, other than
18 the NOLC deferred tax assets (DTA) issue we
19 identified, which we will discuss further later
20 in our testimony, we did not find any issue that
21 necessitates an adjustment to the Company's RY
22 forecast for its income tax expense and ADFIT
23 balance in rate base.

24 Q. Please discuss the Company's proposals regarding

- 1 EDFIT balance related to the Safe Harbor rules.
- 2 A. The Company, on pages 9 through 10 of its Income
3 Tax Panel's initial testimony, states that it
4 identified an \$80.1 million tax benefit
5 resulting from its adoption of the Safe Harbor
6 rules on the income tax accounting method change
7 for gas repairs. The Company's adoption of this
8 change in accounting method results in its
9 unamortized EDFIT expense that was previously
10 classified as protected under normalization
11 rules being reclassified as unprotected EDFIT.
12 Under IRS rules, the Commission has authority to
13 decide the disposition of any unprotected EDFIT
14 balances.
- 15 Q. What is the Company's proposal for refunding, or
16 amortizing, the \$80.1 million tax benefit?
- 17 A. The Company proposes to pass the benefit back to
18 gas customers using a three-year amortization
19 period, commencing at the beginning of the RY.
- 20 Q. Does the Panel support the Company's proposal?
- 21 A. Yes. We recommend the Commission amortize this
22 amount over three years to help to mitigate the
23 revenue requirement increases determined in this
24 proceeding.

1 Q. Please explain the NOLC DTA issue.

2 A. According to the requirements set forth in the
3 June 4, 2024 IRS PLR, a public utility should
4 include in its ratemaking process a deferred tax
5 asset related to its NOLC on a standalone basis
6 to comply with normalization provisions under
7 the Internal Revenue Code. The NOLC DTA balance
8 can be broken down between "protected" and
9 "unprotected" in accordance with IRS
10 normalization rules using a with and without
11 accelerated tax depreciation method; only the
12 "protected" NOLC DTA is allowed to be included
13 in ratemaking by the Commission. Specifically,
14 the protected NOL DTA should be included in rate
15 base as an offset to the ADIT liability balance,
16 resulting in an increase in the revenue
17 requirement.

18 Q. Did the Company reflect any NOLC DTA balance in
19 its initial filing?

20 A. Yes. As shown in Schedule 5 of its Exhibit__ (AP
21 E-2) and Exhibit__ (AP E-2) of its initial
22 filings, the Company's Accounting Panel includes
23 the NOLC DTA balance through its 2023 filed tax
24 return in its electric and gas rate filings.

1 Specifically, the Company reflects a RY NOLC DTA
2 balance of \$4.963 million for electric and
3 \$284.886 million for gas.

4 Q. Did the Company update its RY NOLC DTA balance
5 in its April 2025 Correction and Updates
6 filings?

7 A. Yes, as explained on page 2 through page 3 of
8 the Update and Corrections testimony of the
9 Income Tax Panel, the Company reflects two
10 updates to its RY NOLC DTA balances in its rate
11 base. The Company first updated its gas RY NOL
12 DTA balance to remove the "unprotected" NOL DTA
13 from its RY rate base forecast, leaving only the
14 "protected" balance in to follow IRS
15 normalization rules. This update decreases the
16 rate base amount for gas customers. The
17 Company's second update was to include its NOLC
18 DTA amounts for 2024 through 2028. The Company
19 has updated its NOLC for 2024 year-end activity
20 and forecasted NOLC DTA activity from 2024
21 through 2028.

22 Q. Does the Panel recommend any adjustments to the
23 Company's updated NOL DTA balances reflected in
24 its electric and gas rate bases?

1 A. Yes. We recommend adjusting the RY NOLC DTA
2 balances contained in the Company's April Update
3 and Corrections filings to reflect the latest
4 balances. The Company explained in its response
5 to question 1 of DPS-886, that it has a further
6 update to its 2026 to 2028 (Rate Years 1, 2 and
7 3) NOLC DTA balances after its April 2025 Update
8 and Corrections testimony. Specifically, the
9 latest update reduces the Company's RY NOL DTA
10 balance from \$97.848 million to \$70.854 million,
11 or by \$26.994 million for electric, and from
12 \$26.098 million to \$18.898 million, or by \$7.2
13 million for gas. We recommend that the RY
14 electric and gas revenue requirement be adjusted
15 to reflect this update of NOL DTA balances.

16 Q. Please quantify your adjustment.

17 A. Our recommendation reduces the Company's
18 electric RY rate base NOLC DTA balance by \$8.492
19 million and gas RY rate base NOLC DTA balance
20 by \$2.265 million.

21 Q. Please explain the CAMT.

22 A. The CAMT is a 15 percent minimum tax imposed on
23 large corporations in the U.S. A corporation
24 becomes an "applicable corporation" for a

1 taxable year, and thus subject to the CAMT, if
2 its average annual Adjusted Financial Statement
3 Income, or AFSI, for the three-taxable-year
4 periods ending with the year prior to the
5 taxable year, exceeds \$1 billion or if the
6 corporation met this threshold for any prior
7 taxable year. The CAMT was first introduced
8 under the Inflation Reduction Act of 2022, but
9 the IRS has not yet issued final regulations to
10 implement this law.

11 Q. How does a corporation calculate its CAMT
12 liability?

13 A. The calculation of the CAMT liability includes a
14 comparison of the regular tax liability and the
15 CAMT liability. When the CAMT liability is
16 higher than the regular tax liability, the
17 incremental amount can be carried forward
18 indefinitely to offset a future regular tax
19 liability. In a future year, when regular tax
20 liability exceeds the CAMT liability, the CAMT
21 credit carryforward can be used to reduce the
22 regular tax liability up to the CAMT liability,
23 such that the taxpayer is paying the CAMT
24 liability instead of the higher regular tax

1 liability.

2 Q. Did the Company's initial testimony include
3 estimated future CAMT liability and estimated
4 CAMT credit carryforward DTA amounts for its
5 electric and gas customers?

6 Q. No. Due to the uncertainty surrounding whether
7 the IRS would adopt the proposed regulations
8 without change, the Company did not reflect the
9 related estimates in its RY ADFIT balance
10 forecast.

11 Q. Did the Company reflect the impact of CAMT in
12 its April Update and Correction testimony?

13 A. Yes, but only partially. Based on the AFSI test
14 described previously, the Company expects that
15 it became an "applicable corporation" subject to
16 CAMT for taxable year 2024, therefore only
17 reflected an estimated 2024 CAMT liability and a
18 CAMT carryforward DTA in its RY rate base
19 forecast. The Company explains on page 5 of its
20 Update and Correction testimony of its Income
21 Tax Panel that it did not reflect any future
22 CAMT liability or CAMT credit carryforward DTA
23 for tax years 2025 through 2028 because the IRS
24 has not issued the final regulations on

1 calculating the CAMT liability, and therefore
2 uncertainty remains regarding the estimated
3 amount. The Company proposes to reconcile any
4 future impact to the CAMT amounts included in
5 rate base. We will discuss our position on the
6 Company's reconciliation proposal subsequently
7 in the "New Deferral Mechanism" portion of our
8 testimony.

9 **Rate Base**

10 Prepaid Property Taxes

11 Q. Please summarize the Company's prepaid property
12 tax forecast for the RY.

13 A. As shown on Schedule 3 of Exhibit___(AP-E2) and
14 Exhibit___(AP-G2) of its Update and Correction
15 filing, the Company forecasts prepaid property
16 taxes for the RY of \$533.560 million for
17 electric and \$112.971 million for gas.

18 Q. Does the Panel recommend any adjustments to the
19 Company's RY forecast of prepaid property taxes?

20 A. Yes. We recommend adjusting the Company's
21 forecasted prepaid property taxes to reflect our
22 adjustments to the Company's forecast of
23 property tax expense for the RY. Our adjustment
24 results in a reduction to the Company's RY

1 prepaid property tax forecast of \$53.098 million
2 for electric and \$11.445 million for gas.

3 Cash Working Capital Allowance

4 Q. Please summarize the Company's cash working
5 capital allowance for the RY.

6 A. As shown on Schedule 3 of Exhibit___(AP-E2) and
7 Exhibit___(AP-G2) of its Update and Correction
8 filing, the Company forecasted a RY cash working
9 capital allowance of \$226.765 million for
10 electric and \$54.074 million for gas.

11 Q. Does the Panel recommend any adjustments to the
12 Company's RY forecast of its cash working
13 capital allowance?

14 A. Yes. We recommend that the Company's forecast
15 of its cash working capital allowance for the RY
16 be reduced by \$41.765 million for electric and
17 \$7.418 million for gas to account for Staff's
18 adjustments to the Company's RY forecast of O&M
19 expenses.

20 **Amortization of Regulatory Deferrals**

21 Q. Explain the amortization of regulatory
22 deferrals.

23 A. As discussed in detail on page 31 of the initial
24 testimony of the Company's Accounting Panel,

1 these amounts represent the Company's proposal
2 for crediting or charging customers for a
3 variety of deferred credits or deferred charges.

4 Q. What is the net amortization amount that the
5 Company is proposing to collect from or refund
6 to customers in the RY?

7 A. As stated on page 32 of the initial testimony of
8 the Company's Accounting Panel, the Company
9 reflected a net amount to be collected from its
10 electric and gas customers in the RY of \$149.086
11 million and \$30.988 million, respectively. In
12 its Update and Correction testimony, the Company
13 updates its balances and, as shown on Schedule 4
14 of Exhibit__ (AP-E3) and Exhibit___ (AP-G3),
15 proposes to collect \$131.638 million and \$22.595
16 million from electric and gas customers,
17 respectively, in the RY.

18 Q. Does the Panel recommend any adjustments to the
19 Company's forecasted amortization of regulatory
20 deferrals?

21 A. Yes. We recommend adjustments to the
22 amortization of the following regulatory
23 deferrals: Brooklyn Queens Demand Management
24 Program, referred to as BQDM; Pension and Other

1 Post Employment Benefit, referred to as Pension
2 & OPEB; Site Investigation Remediation, referred
3 to as SIR, Energy Efficiency New Energy New
4 York, referred to as NENY, Energy Efficiency
5 Carrying Charge and Sales and Use Tax Refund.

6 BQDM Deferral

7 Q. Please describe the Company's BQDM deferral.

8 A. As explained on page 37 of the initial testimony
9 of the Company's Accounting Panel, the BQDM
10 Program deferral reflects the recovery from
11 electric customers of BQDM program expenditures.
12 Based on schedule 4 of Exhibit___(AP-E3) of its
13 updated filing, the Company projected a
14 regulatory asset balance, or monies to be
15 collected from customers, as of December 31,
16 2024, of \$27.006 million for its electric
17 operations. The Company proposes to amortize
18 the balance, plus forecasted expenditures in the
19 RY of \$8.520 million, over a 10-year period,
20 resulting in a collection from customers in the
21 RY of \$3.553 million for electric.

22 Q. Please describe the Panel's adjustment to the
23 BQDM Program deferral.

24 A. In its response to DPS-755, the Company explains

1 that it updated its total forecasted BQDM
2 expenditures to \$1.400 million in CY 2025 and
3 \$13.965 million in the RY from its original
4 estimates of \$9.030 million and \$8.520 million
5 included in its initial filing. The Company
6 further states that the updated estimates were
7 not reflected in the Company's April 10, 2025
8 Update and Correction filing. As such, our
9 adjustment properly updates the BQDM Program
10 deferral to reflect the updated spending
11 estimates provided in the Company's response to
12 DPS-755.

13 Q. Please quantify your adjustment.

14 A. Our adjustment reduces the RY amortization by
15 \$0.219 million for a total RY amortization
16 expense of \$3.334 million. A concomitant
17 adjustment was also made to reduce the Company's
18 RY unamortized BQDM Program regulatory asset
19 balance in rate base by \$1.081 million for
20 electric.

21 Pension and OPEB Deferral

22 Q. In its current filings, how does the Company
23 project its RY pension and OPEB deferral
24 balance?

1 A. The Company's pension and OPEB deferral balances
2 represent the difference between the forecasted
3 pension or OPEB amounts included in rates in
4 prior years and the actual expense incurred.
5 However, the Company proposes to exclude the
6 deferral accrued during a portion of its linking
7 period from its projected RY deferral balance.
8 Specifically, the Company stated, on page 36 of
9 its Accounting Panel's initial filing testimony,
10 "For rate-making purposes, the Company has
11 adjusted the September 30, 2024 balance to
12 exclude the effect of deferrals recorded for the
13 period January 1, 2023 to September 29, 2024.
14 Further, the Company has excluded forecasted
15 deferrals from the projected Rate Year balance."
16 Q. Did the Company update the deferral amounts?
17 A. Yes, as provided in its response to DPS-912, the
18 Company updated the deferral amounts in its
19 April 10, 2025, Correction and Update filing,
20 however, the updated balance still does not
21 reflect the pension and OPEB deferral accrued
22 during January 1, 2023 through December 31,
23 2024, and the projected deferral accrued for
24 twelve months in 2025.

1 Q. Did the Company explain why it excluded these
2 amounts from the deferral balance?

3 A. Yes. In its response to DPS-432, the Company
4 explains that during the period January 1, 2023
5 through September 30, 2024, the Company
6 experienced non-cash actuarial gains in its
7 pension and OPEB expense activity. These
8 resulted in lower pension and OPEB expenses
9 compared to the targets in rates, which were, in
10 fact, pension credits that had reduced the
11 Company's revenue requirement. These gains were
12 not supportive of cash flows available to the
13 Company, resulting in additional costs needed to
14 finance operations. As such, the Company
15 believes any additional pass back of such gains
16 via base rate amortization would be overly
17 burdensome. In addition, the Company argues
18 that future non-cash actuarial losses may offset
19 such gains.

20 Q. Did the Company exclude any such amounts in its
21 last rate cases?

22 A. No. In recent rate cases, the Company has
23 deferred the difference between allowed and
24 actual pension and OPEB expense, regardless of

1 whether it was positive or negative, as required
2 by the Commission's Pension and OPEB Policy
3 Statement, issued September 7, 1993 in Case 91-
4 M-0890, referred to as the Policy Statement.

5 Q. Does the Panel agree with the Company that the
6 deferral amounts for this period should be
7 excluded from the RY deferral balance?

8 A. No. The Panel does not agree with the Company's
9 rationale for two reasons. First and foremost,
10 the Company's proposal is inconsistent with the
11 Commission's Policy Statement. It is important
12 to note that the Policy Statement provides equal
13 protection to the Company and its customers.
14 The continuity of its application is essential
15 to ensure that those protections continue,
16 therefore the various provisions of the Policy
17 Statement must be followed in their entirety and
18 cannot be viewed as a pick and choose menu of
19 options.

20 Q. What does the Policy Statement say regarding
21 pension and OPEB deferrals?

22 A. The Policy Statement makes no distinction
23 between positive or negative allowances or
24 deferrals and clearly states that the difference

1 between the rate allowance and actual pension
2 expense must be deferred. Appendix A, pages 2
3 and 3 of the Policy Statement states, "the
4 companies shall defer the difference between 1)
5 the rate allowances for pensions, less any
6 pension rate allowance the company is directed
7 to use for OPEB purposes, and 2) pension expense
8 determined as required by this Statement of
9 Policy." Similar language for OPEBs is included
10 in Appendix A, page 10. Pension and OPEB
11 expenses include, among other things, the
12 expected return on plan assets, which by its
13 nature could be an expense, if the plan assets
14 are expected to lose value, or income, if the
15 assets are expected to gain value. The notion
16 that if the return on those assets is larger
17 than the other components of pension or OPEB
18 expense, resulting in a negative expense, then
19 the benefit should go to shareholders, rather
20 than ratepayers, is unfair and inaccurate.
21 Ratepayers funded the amounts that were included
22 in the pension and OPEB rate allowances,
23 therefore, any gains due to market conditions or
24 other causes should accrue to ratepayers.

1 Q. What is the Panel's second reason?

2 A. As explained on pages 27 and 28 of the initial
3 testimony of the Company's Accounting Panel, the
4 Company included a modification to its Earning
5 Base/Capitalization, referred as EBCAP,
6 adjustment in rate base to address the Company's
7 cash shortfall concerns resulting from negative
8 pension and OPEB expenses. We support the
9 Company's EBCAP adjustment proposal to alleviate
10 its cash shortfall during the RY. As such, the
11 Company's concerns regarding additional costs
12 associated with financing these amounts have
13 been addressed.

14 Q. What adjustment does the Panel recommend?

15 A. The Panel recommends including the effect of the
16 deferrals for the period January 1, 2023 through
17 December 31, 2024, which is a credit, or monies
18 due to ratepayers, of \$275.875 million for
19 electric, \$56.702 million for gas, in the
20 pension and OPEB deferral balance. We also
21 recommend including the effect of the deferrals
22 for the twelve-months ending December 31, 2025,
23 which is estimated to be \$75.081 million for
24 electric and a credit of \$28.783 million for

1 gas.

2 Q. Please quantify your adjustment

3 A. Our adjustments change the Company's electric
4 pension & OPEB deferral annual amortization from
5 a collection of \$16.219 million to a refund of
6 \$50.712 million, or a decrease of annual rate
7 recovery of \$66.931 million; and the gas pension
8 & OPEB deferral annual amortization level from a
9 collection of \$3.334 million to a refund of
10 \$25.161 million, or a decrease of annual rate
11 recovery of \$28.495 million. A concomitant
12 adjustment was also made to reduce the Company's
13 RY unamortized pension and OPEB balance in rate
14 base by \$123.597 million for electric and
15 \$52.620 million for gas respectively.

16 SIR Deferral

17 Q. Please describe the Company's SIR deferral.

18 A. The Company explains on pages 36 through 37 of
19 the initial testimony of the Company's
20 Accounting Panel that the SIR deferral
21 represents the recovery for SIR Expenditures
22 including MGP, Superfund, Appendix B, Astoria,
23 Underground Storage Tank, and other remediation
24 sites.

1 Q. Does the Panel have any adjustments to the SIR
2 deferral?

3 A. The Staff Site Investigation and Remediation
4 Panel direct testimony recommends adjusting the
5 amortization to reflect a historical
6 underspending adjustment, which reduces the
7 amount the Company collects from customers per
8 year by \$6.673 million and \$1.993 million for
9 electric and gas, respectively. We reflected
10 this reduction in the revenue requirements. A
11 concomitant adjustment was also made to reduce
12 the Company's RY unamortized SIR balance in rate
13 base by \$4.929 million for electric and \$1.471
14 million for gas.

15 Energy Efficiency NENY Deferral

16 Q. Please describe the Company's Energy Efficiency
17 NENY program deferral.

18 A. As explained on page 34 of the initial testimony
19 of the Company's Accounting Panel, the Energy
20 Efficiency NENY deferral reflects the recovery
21 of energy efficiency program costs. Based on
22 schedule 4 of Exhibit___(AP-E3) and
23 Exhibit___(AP-EG) of its update and corrections
24 filing, as of December 31, 2025, the Company

1 projects a regulatory asset balance, or monies
2 to be collected from customers, of \$916.886
3 million for its electric operations and \$350.974
4 million for its gas operations. The Company
5 proposes to amortize the balance, plus
6 forecasted expenditures in the RY of \$255.583
7 million for electric and \$101.085 million for
8 gas, over a 15-year period, resulting in
9 collections from customers in the RY of \$78.165
10 million for electric and \$30.137 million for
11 gas.

12 Q. Please describe Staff's adjustment to the above
13 Energy Efficiency NENY deferral.

14 A. As explained in the Staff Markets and Innovation
15 Panel's testimony, Staff recommends removing
16 these amounts from base rates which results in a
17 reduction to the RY amortization from \$78.165
18 million for electric and \$30.137 million for gas
19 to zero for both businesses. A concomitant
20 adjustment was also made to remove the Company's
21 RY unamortized Energy Efficiency NENY deferral
22 regulatory asset balances from rate base.

23 Energy Efficiency and Demand Management Carrying
24 Charge Deferral

1 Q. Please describe the Company's Energy Efficiency
2 and Demand Management, or DM, Carrying Charge
3 deferral.

4 A. As explained on page 34 of the initial testimony
5 of the Company's Accounting Panel, the Energy
6 Efficiency and DM Carrying Charge deferral
7 reflects the carrying charges accrued on energy
8 efficiency program over- and under-spending in
9 accordance with the energy efficiency program
10 reconciliation mechanism in the Company's
11 current rate plans. Based on schedule 4 of
12 Exhibit___(AP-E3) and Exhibit___(AP-EG) of its
13 updated filing, the Company projected a
14 regulatory asset balance, or monies to be
15 collected from customers, as of December 31,
16 2025, of \$15.068 million for its electric
17 operations and \$1.258 million for its gas
18 operations. The Company proposes to amortize
19 the balance over a three-year period, resulting
20 in a collection from customers in the RY of
21 \$5.023 million for electric and \$0.419 million
22 for gas.

23 Q. Please describe Staff's adjustment to the above
24 Energy Efficiency and DM Carrying Charge

1 deferral.

2 A. As explained in the Staff Markets and Innovation
3 Panel's testimony, the panel removed these
4 amounts from base rates which results in a
5 reduction to the RY amortization from \$5.023
6 million for electric and \$0.419 million for gas
7 to zero for both businesses. A concomitant
8 adjustment was also made to remove the Company's
9 RY unamortized Energy Efficiency and DM Carrying
10 Charge deferral regulatory asset balances from
11 rate base.

12 Sales and Use Tax Refund

13 Q. In the Company's Update and Correction filing,
14 did the Company include the costs to achieve the
15 Sales and Use Tax Refund in its RY projected
16 deferral balance?

17 A. Yes, the Company reflects costs to achieve the
18 Sales and Use Tax Refund of \$5.656 million for
19 electric and \$1.162 million for gas in its RY
20 projected deferral balance.

21 Q. Did the Company explain why it reflected the
22 costs to achieve the Sales and Use Tax Refund in
23 its RY projected deferral balance?

24 A. Yes, in its response to DPS-890, the Company

1 explained that in this rate case proceeding, it
2 seeks to establish a treatment of costs to
3 achieve sales and use tax refunds that matches
4 the Company's deferred sales and use tax
5 refunds. Previously, the Company has not
6 reflected any such costs in the associated
7 regulatory liability.

8 Q. Does the Panel agree with including the costs to
9 achieve the Sales and Use Tax Refund in the
10 associated regulatory liability?

11 A. Yes, the Panel agrees that the cost to achieve
12 the sales and tax refund should be included in
13 the deferral. However, the Panel does not agree
14 with the Company's amount for the cost to
15 achieve the refund.

16 Q. Please explain.

17 A. The Company has already collected a portion of
18 the cost to achieve in its current rate
19 proceedings. In its supplemental response to
20 DPS-890, the Company states that in its previous
21 rate proceedings, Case 22-E-0064 and Case 22-G-
22 0065, it included the costs to achieve its sales
23 and use refunds as regular O&M expense under the
24 "Finance and Accounting Operations". The

1 Company provided a table in response to question
2 two indicating that \$0.680 million for electric
3 and \$0.140 million for gas was included in the
4 Company's last rate proceedings in the HTY on
5 which the rate year allowances were based.

6 Q. What is the Panel's adjustment to the Other
7 Sales and Tax Refund deferral?

8 A. We began with the HTY in the Company's last rate
9 proceedings of \$0.680 million for electric and
10 \$0.140 million for gas, based on the Company's
11 response to DPS-890, and escalated it by the
12 then approved GDP escalation factors to reach
13 the amount included in each of the three rate
14 years under the 2023 Rate Order. As the Company
15 is already collecting these amounts in current
16 rates from customers, we then reduced the
17 proposed amount of \$5.656 million for electric
18 and \$1.162 million for gas by the amounts
19 already collected in current rates, i.e. \$2.356
20 million for electric and \$0.484 million for gas,
21 to reach our recommended incremental deferral
22 amount for future recovery from customers. Our
23 adjustment increases the amount due back to
24 electric customers by \$0.785 million or a total

1 credit of \$4.725 million for the RY, and
2 decreases the amount to collect from gas
3 customers by \$0.162 million or a total expense
4 of \$0.219 million for the RY.

5 Q. What is the Panel's incremental allowance for
6 cost to achieve other sales and tax refund
7 recommendation?

8 A. The Panel's incremental allowance for cost to
9 achieve is \$3.300 million and \$0.678 million for
10 electric and gas respectively. A concomitant
11 adjustment was also made to the Company's RY
12 unamortized Sales and Use Tax balance in rate
13 base.

14 Audit of Pre-Rate Year Deferrals

15 Q. Has the Panel completed its audit of the
16 Company's deferral balances as of December 31,
17 2024?

18 A. No, we have not completed the audit of all
19 deferral balances as of December 31, 2024. We
20 will endeavor to complete the audit on open
21 deferral balances and report back to the
22 Commission on any areas of disagreement that
23 cannot be resolved through the traditional
24 deferral audit process. However, until such

1 time, these deferral balances are still subject
2 to future Staff adjustments.

3 **Reconciliation and Deferral Mechanisms**

4 **New Deferral Mechanism**

5 Q. Does the Company propose any new reconciliation
6 or deferral mechanisms?

7 A. Yes. On pages 113 to 115 of the initial
8 testimony of the Company's Accounting Panel, the
9 Company proposes the following new
10 reconciliation or deferral mechanisms:
11 Affordable Multifamily Electrification Pilot
12 reconciliation (Electric); Sulfur Hexafluoride
13 Standards reconciliation (Electric); New York
14 City Revocable Consent Fees reconciliation;
15 Wildfire Responses reconciliation and Management
16 Audit Costs reconciliation. Further, on page 19
17 through 20 of the Company's Update and
18 Correction testimony of its Accounting Panel,
19 the Company proposes a new reconciliation
20 related to Corporation Alternative Minimum Tax,
21 or CAMT.

22 Affordable Multifamily Electrification Pilot deferral
23 (Electric)

24 Q. Please explain the Company's proposal for its

1 Affordable Multifamily Electrification Pilot
2 reconciliation.

3 A. On page 113 of the initial testimony of the
4 Company's Accounting Panel, the Company proposes
5 an affordable multifamily electrification pilot
6 that will help provide incremental electric bill
7 credits to certain low-income customers whose
8 landlords electrify their residential buildings.
9 This program provides incremental bill credits
10 to minimize the financial impact of the
11 conversion.

12 Q. Does Staff agree with the Company's proposal?

13 A. No. The direct testimony of the Staff Markets
14 and Innovation Panel discusses Staff's rationale
15 for denying this request in detail.

16 Sulfur Hexafluoride Standards deferral (Electric)

17 Q. Please explain the Company's proposal for its
18 Sulfur Hexafluoride Standards reconciliation.

19 A. On page 114 of the initial testimony of the
20 Company's Accounting Panel, the Company proposes
21 to defer incremental compliance costs associated
22 with phasing out gas-insulated equipment
23 containing sulfur hexafluoride due to a New York
24 State Department of Environmental Conversation

1 (DEC) rule that was adopted at the end of 2024.

2 Q. Does Staff agree with the Company's proposal?

3 A. No. The Staff Electric Infrastructure and
4 Operations Panel discusses the rationale for
5 denying this request in detail.

6 New York City Revocable Consent Fees deferral

7 Q. Please explain the Company's proposal for its
8 New York City Revocable Consent Fees
9 reconciliation.

10 A. On page 114 of the initial testimony of the
11 Company Accounting Panel, it states that "New
12 York City has recently begun requiring revocable
13 consents for utility installations in New York
14 City locations outside the traditional right-of-
15 way. New York City has not indicated the scope
16 of the implementation, so the Company is unable
17 to fully analyze cost impacts and incorporate
18 forecasts into its revenue requirements. The
19 Company proposes to defer incremental compliance
20 costs for recovery in its next electric and gas
21 base rate case."

22 Q. Does the Panel agree with this request?

23 A. No. We are testifying to a one-year rate plan
24 for the Company's electric and gas businesses.

1 Reconciliation mechanisms are generally not
2 employed for a single-year rate plans as the
3 risk that exists in the context of a multi-year
4 rate plan does not exist in a single-year rate
5 plan. The Company may file a deferral request
6 for the Revocable Consent Fees, if it believes
7 it meets the Commission's requirements for
8 deferral accounting treatment.

9 Wildfire Response deferral

10 Q. Please explain the Company's proposal for its
11 Wildfire Response deferral.

12 A. On page 115 of the initial testimony of the
13 Company's Accounting Panel, the Company states
14 "wildfire risk is becoming a pressing challenge
15 for many utilities whose facilities are in areas
16 increasingly vulnerable to drought. Taking into
17 account this escalating risk, the Company is
18 proposing to establish a deferral for
19 incremental costs incurred to respond to
20 wildfire events."

21 Q. Does the Panel agree with this request?

22 A. No. The Staff Electric Resilience and
23 Reliability Performance Mechanism Panel
24 discusses the rationale for denying this

1 request.

2 CAMT Reconciliation

3 Q. Please explain the Company's proposal for its
4 CAMT reconciliation.

5 A. On page 19 through 20 of the Update and
6 Correction testimony of the Company Accounting
7 Panel, it proposes to reconcile any future CAMT
8 liability and the impacts on its CAMT credit
9 carryforward DTA balances included in rate base.
10 The Company would calculate the difference
11 between the amount included in the revenue
12 requirement and the actual amounts in the three-
13 year period, or 2026-2028, and defer the impact
14 of the increase/decrease to rate base, inclusive
15 of a carrying charge, for disposition in the
16 Company's next electric and gas rate cases.

17 Q. Does the Panel agree with the Company's proposal
18 for the CAMT reconciliation?

19 A. Considering the uncertainty surrounding CAMT
20 issue and the fact that we are testifying to a
21 one-year rate plan, we only partially support
22 the Company's CAMT reconciliation proposal.
23 Specifically, the Company should only be allowed
24 to reconcile the revenue requirement impact

1 associated with the CAMT issue in the Rate Year
2 (i.e., 2026 tax year). The reconciliation
3 should not cover any period after the RY. In
4 the event the revenue requirement effects of any
5 future CAMT liability and the impacts on its
6 CAMT credit carryforward DTA balance in rate
7 base beyond 2026 are extraordinary and material,
8 the Company may petition the Commission to seek
9 authority to defer the extraordinary costs.

10 Q. Panel, other than the above new deferrals or
11 reconciliations proposed by the Company, does
12 any Staff Panel or witness recommend any new
13 reconciliation mechanism?

14 Q. Yes. As discussed in Staff Consumer Services
15 Panel testimony, Staff recommends a one-way
16 downward only reconciliation for costs
17 associated the Company's customer outreach and
18 education program.

19 **Proposed Modification of Existing Mechanisms**

20 Q. Does the Company propose to modify any of its
21 existing deferral mechanisms?

22 A. Yes. On pages 116 to 127 of the initial
23 testimony of the Company Accounting Panel, it
24 proposes to modify the following reconciliation

1 or deferral mechanisms: Electric and Gas Net
2 Plant reconciliation; Property Tax
3 Reconciliation; Interference O&M Reconciliation;
4 Energy efficiency reconciliation; Long Term Debt
5 Rate Reconciliation; and Legislative,
6 Regulatory, and/or Related Actions
7 Reconciliation.

8 Electric & Gas Net Plant Reconciliation

9 Q. Briefly explain the Company's existing electric
10 and gas net plant reconciliations.

11 A. Under the 2023 Rate Order, the revenue
12 requirement impact of the Company's actual
13 electric and gas net plant, excluding net plant
14 associated with AMI and Customer Service System
15 implementation, is subject to a downward only
16 reconciliation, with the potential of a limited
17 upward reconciliation for certain interference
18 costs. The rate plans also include an
19 adjustment to the electric and gas net plant
20 reconciliations to account for certain Non-Wires
21 and Non-Pipeline Alternative programs
22 implemented during the rate plans.

23 Q. Is the Company proposing to modify its existing
24 electric and gas net plant reconciliation

1 mechanisms?

2 A. Yes. On pages 116 through 120 of the initial
3 testimony of the Company's Accounting Panel, Con
4 Edison proposes it be permitted to recover
5 carrying charges on the amount of net plant that
6 exceeds the aggregate net plant target through a
7 surcharge. Additionally, the Company proposes
8 that the current electric and gas net plant
9 reconciliations be modified to fully reconcile
10 all interference capital and New Business
11 capital costs.

12 Q. Did the Company explain why it proposes
13 surcharge recovery of the carrying charges on
14 the amount of net plant that exceeds the
15 aggregate net plant target?

16 A. Yes. On page 119 and 120 of the initial
17 testimony of the Company Accounting Panel, it
18 states that under Generally Accepted Accounting
19 Principles, referred to as GAAP, accruals of net
20 plant carrying charges require a recovery
21 mechanism that provides for full recovery within
22 24-months. As such, the Company proposes a
23 surcharge mechanism be utilized for carrying
24 charges unless recovery is imminent to be

1 consistent with GAAP rules and to avoid any
2 potential issues with appropriately recognizing
3 the Company's accruals or deferrals on its
4 financial statements.

5 Q. Does Staff agree with the Company's proposed
6 modifications to fully reconcile all
7 interference and New Business capital costs?

8 A. No. The direct testimony of the Staff Municipal
9 Infrastructure Support Panel addresses Staff's
10 concerns with the Company's proposed
11 modification to fully reconcile all interference
12 capital and why it should be denied. The direct
13 testimony of the Staff Electric Infrastructure
14 and Operations Panel addresses Staff's concerns
15 with the Company's New Business capital and why
16 it should be denied.

17 Q. Does the Panel agree with the Company's proposal
18 for surcharge recovery?

19 A. No, we disagree with the Company's proposal for
20 surcharge recovery. In DPS-680, the Company
21 cited to Financial Accounting Standards Board,
22 referred to as FASB, Accounting Standards
23 Codification, referred to as ASC, 980-605-25-4
24 in support of its claim that GAAP rules require

1 carrying charges on net plant to be fully
2 recovered within 24-months of the accrual of
3 those carrying charges. FASB ASC 980-605-25-4,
4 however, applies to the recognition of
5 additional revenues specifically under an
6 alternative revenue program. According to FASB
7 ASC 980-605-25-2, alternative revenue programs
8 can generally be categorized as Type A programs,
9 which adjust for billings for the effects of
10 weather abnormalities or broad external factors
11 or to compensate the utility for demand-side
12 management initiatives, or as Type B programs,
13 which provide for additional billings (incentive
14 awards) if the utility achieves certain
15 objectives, such as reducing costs, reaching
16 specified milestones, or demonstratively
17 improving customer service. The deferred
18 carrying charges on net plant balances in excess
19 of the amount allowed in rates do not represent
20 deferred revenues under either a Type A or Type
21 B alternative revenue program, but instead
22 reflect a cost that was already incurred by the
23 Company which it has deferred for future
24 recovery from customers.

1 Q. Did the Company receive any guidance from its
2 external auditors on this topic?

3 A. No. In response to IR DPS-680, the Company
4 indicates that it did not receive any guidance
5 from its external auditors regarding the
6 recovery of the accrual of carrying charges on
7 net plant within 24-months of the accrual.

8 Q. What does the Panel recommend?

9 A. Since the deferred carrying charges on the
10 variation between the Company's actual and
11 allowed net plant balances are not subject to
12 the 24-months collection requirement cited by
13 the Company and the Company has not received any
14 alternative guidance from its external auditor,
15 we recommend that the Company's proposal for
16 surcharge recovery be denied.

17 Q. Does Staff agree with the Company's proposed
18 modifications to fully reconcile all
19 interference and New Business capital costs?

20 A. No. The direct testimony of the Staff Municipal
21 Infrastructure Support Panel addresses Staff's
22 concerns with the Company's proposed
23 modification to fully reconcile all interference
24 capital and why it should be denied by the

1 Commission. The direct testimony of the Staff
2 Electric Infrastructure and Operations Panel
3 addresses Staff's concerns with the Company's
4 New Business capital and why it also should be
5 denied by the Commission.

6 Property Tax Reconciliation

7 Q. Is the Company currently authorized to reconcile
8 the difference between its actual property tax
9 expenses and the property tax expense allowance
10 set in rates?

11 A. Yes. In the 2023 Rate Order, the Commission
12 authorized the Company to defer 90 percent of
13 the difference between its actual property tax
14 expenses and the allowance reflected in rates
15 subject to a cap on the Company's ten percent
16 share of the variance equal to ten, five, and
17 five basis points on common equity in each rate
18 years 1, 2, and 3, respectively.

19 Q. Is the Company proposing to continue this
20 reconciliation in the current proceeding?

21 A. Yes, but with a modification. As explained on
22 pages 121 and 122 of the initial testimony of
23 the Accounting Panel, the Company proposes a
24 full and symmetrical reconciliation of property

1 taxes with any variance between the Company's
2 actual property tax expense and the level set in
3 rates to be recovered through surcharge. The
4 Company further states that a reconciliation for
5 property taxes is needed regardless of whether a
6 single year rate order or multi-year rate plan
7 is adopted.

8 Q. Does the Panel agree with the Company's request
9 for a reconciliation of property taxes in these
10 proceedings?

11 A. No. We are testifying to one-year rate plans
12 for the Company's electric and gas businesses.
13 Reconciliation mechanisms are generally not
14 employed for a single-year rate plan as the
15 Company's property taxes can be reasonably
16 forecasted for the Rate Year and therefore the
17 risk that exists in the context of a multi-year
18 rate plan does not exist in a single-year rate
19 plan.

20 Q. Does the Company agree that property taxes can
21 be reasonably forecasted?

22 A. No. On pages 27 through 38 of the initial
23 testimony of Witness Merritt, the Company
24 explains in greater detail that in NYS, property

1 taxes are the main revenue source to balance
2 local municipal budgets which are strongly
3 influenced by the state of the economy and,
4 moreover, that the majority of its property
5 taxes are assessed by NYC where the property
6 classification system adds complexity and
7 uncertainty. The Company states that, as such,
8 NYC's tax adjustment process can produce very
9 different property tax rates from one year to
10 the next and that the degree of possible
11 variability results in an inability to
12 reasonably forecast property taxes for the RY.

13 Q. Does the Company's explanation of its inability
14 to reasonably forecast property tax expense
15 change the Panel's position?

16 A. No. While we agree that estimating property
17 taxes can be difficult, especially considering
18 NYC's tax rate process, this difficulty does not
19 mean that a reasonable forecast cannot be
20 determined, especially for the RY. For example,
21 in the 2023 Rate Order, a rate allowance of
22 \$1.902 billion for electric and \$0.439 billion
23 for gas was forecasted for the first rate year
24 of the Company's rate plan, or calendar year

1 2023. Based on the attachment provided in the
2 Company's response to DPS-337 the Company's
3 actual property tax expenses for calendar year
4 2023 varied by only -0.23 percent and 0.59
5 percent, for electric and gas, respectively,
6 from the forecasted rate allowances. The
7 minimal variances between the Company's actual
8 property tax expenses and its forecasted rate
9 allowances for the first rate year of its
10 existing rate plan demonstrate that despite
11 difficulties in forecasting property taxes,
12 including NYC's complicated tax rate process, a
13 reasonable estimate can still be made.
14 Moreover, according to the established procedure
15 timeline in the current proceedings, by the time
16 the Company submits its rebuttal filing, the
17 Company will be able to update its NYC property
18 tax forecast to reflect the then available final
19 assessment values and Class 3 and Class 4 tax
20 rates for fiscal year 2025/2026 resulting in a
21 portion of the Rate Year forecast being known at
22 the time rates are set. Finally, in the event
23 there was any extraordinary or unforeseen
24 circumstances that result in the Company's

1 actual property taxes for the RY to materially
2 vary from the allowances provided for in rates,
3 the Company may have the ability to file a
4 deferral petition with the Commission to seek
5 authority to defer extraordinary expenses for
6 future recovery.

7 Q. Has the Commission previously allowed a full
8 reconciliation mechanism for property taxes for
9 a single-year rate plan?

10 A. Yes. As noted on page 40 of the initial
11 testimony of Witness Merritt, the Commission
12 approved the full reconciliation of property
13 taxes in the one-year rate order in Case 08-E-
14 0539, which we will refer to as the 2009 Rate
15 Order, which was a fully litigated rate case.
16 In the 2009 Rate Order, Con Edison was allowed a
17 full reconciliation for a single rate year due
18 to the potential risk to property taxes because
19 of the economic downturn that began in the fall
20 of 2008.

21 Q. Does the Panel believe that the same conditions
22 exist in the current proceeding that existed
23 during the economic downturn?

24 A. No. When the 2009 Rate Order was issued on

1 April 24, 2009, the 2008 economic recession,
2 which did not end until June 2009, caused
3 greater uncertainty around the Company's
4 property tax forecasts. As discussed in the
5 direct testimony of the Staff Finance Panel, the
6 current financial markets are nowhere near as
7 volatile as they were during the 2008 economic
8 recession.

9 Q. Does the Panel disagree with the Company's
10 proposal for any other reasons?

11 A. Yes. We are concerned that a full
12 reconciliation would reduce the Company's
13 incentive to minimize its property tax expenses,
14 as ratepayers would be responsible for paying
15 100 percent of those expenses. As such, the
16 Company's motivation to aggressively challenge
17 property taxes could be diminished because of it
18 bearing none of the financial risk.

19 Q. Did the Company address this concern in its
20 testimony?

21 A. Yes. On pages 39 and 40 of the initial
22 testimony of Witness Merritt, the Company states
23 that it has a long history of actively fighting
24 to reduce the Company's property tax burden.

1 Further, the Company states challenges to unfair
2 assessments, litigation, lobbying efforts to
3 seek favorable legislation and aggressively
4 pursuing available property tax benefits are all
5 a normal course of business for the Company.

6 Q. Does this alleviate the Panel's concern?

7 A. No. While the Company has actively fought to
8 reduce its property tax burden, it has done so
9 under rate plans that have typically included
10 property tax reconciliations subject to a
11 sharing arrangement between the customers and
12 the Company of any variances and, therefore, the
13 incentive to mitigate its property tax expenses
14 is reflected in the "long history" the Company
15 has of disputing its property tax burden to earn
16 incentives.

17 Q. What is the Panel's final concern with the
18 Company's proposal for a full and symmetrical
19 property tax reconciliation?

20 A. The Company's property tax reconciliation
21 proposal is inconsistent with its proposal to
22 continue to retain 14 percent of any property
23 tax refunds net of the costs to achieve those
24 refunds, as explained on pages 121 and 122 of

1 the initial testimony of the Company's
2 Accounting Panel. It is not reasonable for the
3 Company to be responsible for none of the
4 variance in property tax expense while being
5 allowed to retain a portion of the benefits
6 associated with any property tax refunds it
7 receives.

8 Interference O&M Reconciliation

9 Q. Is the Company currently authorized to reconcile
10 its non-Company labor interference expenses with
11 the levels set in rates?

12 A. Yes. Under the 2023 Rate Order, if the actual
13 non-Company labor interference expenses vary
14 from the level in rates for any rate year, then
15 100 percent of the variation below the target
16 will be deferred for the benefit of customers,
17 and 80 percent of the variation above the target
18 within a band of 15 percent will be deferred for
19 recovery from customers with limited exceptions
20 as set forth in the 2023 Rate Order.

21 Q. Is the Company proposing to continue its
22 existing non-Company labor interference expense
23 reconciliation?

24 A. Yes, but with a modification. As explained on

1 pages 122 and 123 of the initial testimony of
2 the Company's Accounting Panel, the Company
3 proposes that a full and symmetrical
4 reconciliation mechanism replace the mechanism
5 currently in effect.

6 Q. Does Staff agree with the Company's proposed
7 modification to the existing non-Company labor
8 interference expense reconciliation?

9 A. No. As explained in the direct testimony of the
10 Staff Municipal Infrastructure Panel, the
11 Company's proposed modification of the existing
12 reconciliation should be denied by the
13 Commission.

14 Long Term Debt Cost Rate

15 Q. Does the Company propose modifying its
16 reconciliation associated with long-term debt
17 costs?

18 A. Yes. The Company proposes to true-up the
19 entirety of its weighted average cost of long-
20 term debt. Under the 2023 Rate Order, the
21 Company is currently allowed to true-up its
22 actual weighted cost of Variable Rate Debt,
23 including costs associated with retirement and
24 financing of the Variable Rate Debt, to the cost

1 reflected in the rate plan.

2 Q. Does Staff agree with this modification?

3 A. No. The direct testimony of the Staff Finance
4 Panel addresses Staff's concerns with the
5 Company's proposed modification and why it
6 should be denied.

7 Energy Efficiency reconciliation

8 Q. Does the Company propose modifying the
9 reconciliation associated with its energy
10 efficiency costs?

11 A. Yes, as explained on page 124 of the Company's
12 initial accounting panel testimony, the Company
13 wants to continue the three-year cumulative
14 mechanism with a modification to account for new
15 future budgets.

16 Q. Does the Panel have any recommendations
17 regarding the Company's proposed modifications
18 to the energy efficiency reconciliation?

19 A. The Commission addressed this issue in Case 18-
20 M-0084, In the Matter of a Comprehensive Energy
21 Efficiency Initiative issued May 15, 2025.

22 Legislative, Regulatory, and/or Related Actions
23 Provision

24 Q. Please describe the Company's existing deferral

1 authorization regarding legislative, regulatory,
2 and related actions.

3 A. The 2023 Rate Order allows the Company to defer
4 any change in revenues, costs, or expenses,
5 equating to ten basis points of return on equity
6 or more on an annual basis, resulting from laws,
7 rules, regulations, orders or other requirements
8 or interpretations of law if not anticipated in
9 the forecasts and assumptions upon which rates
10 were established.

11 Q. Please describe the Company's proposed
12 modification to this deferral.

13 A. As explained on pages 125 through 127 of the
14 initial testimony of the Accounting Panel, the
15 Company proposes two changes to this deferral
16 authorization. First, it proposes to clarify
17 that in the case of revenue deferrals, it can
18 recover the deferral using a surcharge as
19 opposed to waiting until its next base rate
20 proceeding.

21 Q. Did the Company explain why it seeks to clarify
22 this language?

23 A. Yes. On pages 125 through 126 of the initial
24 testimony of the Accounting Panel, the Company

1 explains that under GAAP, different treatment is
2 afforded to the deferral of costs and expenses
3 than the deferral of revenues. Under GAAP, the
4 deferral of revenues must be recovered within
5 24-months from the end of the period in which
6 the deferral is recorded. As such, the Company
7 proposes to clarify the deferral language
8 authorized by the Commission to avoid any
9 potential issues with appropriately recognizing
10 deferrals on its balance sheet in accordance
11 with GAAP.

12 Q. What is the second change the Company proposes
13 to its legislative, regulatory, and related
14 actions deferral?

15 A. The Company proposes to clarify or change the
16 language so that the provision can be applicable
17 to changes in capital expenditures and the
18 Company can accrue carrying charges on
19 incremental net plant that stems from any action
20 covered in this provision.

21 Q. Does the Panel agree with the Company's proposed
22 changes to the legislative, regulatory, and
23 related actions provision?

24 A. No, we do not agree. The existing provision is

1 a result of a negotiated joint proposal for
2 multi-year rate plans. Such deferrals are not
3 appropriate in one-year litigated rate cases.
4 In the event there are any extraordinary or
5 unforeseen circumstances resulting from
6 legislative, regulatory, and related actions for
7 the RY which result in revenues or expenses to
8 materially vary from the allowances provided for
9 in rates, the Company may seek deferral
10 authority by petitioning the Commission.
11 Furthermore, if the Company wishes to extend
12 such deferral to carrying charges on incremental
13 plant it can request to do so in the context of
14 said deferral petition.

15 **Discontinuation of Existing Mechanisms**

16 Uncollectible Expense & Late Payment Charge

17 Reconciliations

18 Q. Is the Company currently authorized to reconcile
19 its late payment charge revenues and
20 uncollectible expenses with the levels set in
21 rates?

22 A. Yes. Under the 2023 Rate Order, the Company is
23 authorized to defer the difference between its
24 actual late payment charge revenues and

1 uncollectible expenses with the levels included
2 in rates in each rate year, with the variance
3 being recovered from or refunded to customers
4 via surcharge or sur-credit, as applicable. The
5 2023 Rate Order further provides that the
6 deferral amount would be fully reconciled with
7 the cumulative actual write-offs for the period
8 January 1, 2020 through December 31, 2025.

9 Q. What is the Company proposing regarding its
10 existing late payment charge revenue and
11 uncollectible expense reconciliations in these
12 proceedings?

13 A. As explained on pages 110 through 113 of the
14 initial testimony of the Accounting Panel, the
15 Company proposes to continue both the late
16 payment charge revenue and uncollectible expense
17 reconciliations. The Company states that its
18 significantly elevated arrears balances and
19 number of customers in arrears relative to pre-
20 pandemic levels, along with its inability to
21 predict how quickly arrears levels will decrease
22 or when uncollectible expense levels will
23 increase considering time lag between the two,
24 makes the forecast for uncollectibles untenable

1 and necessitates the continuation of the
2 uncollectible expense reconciliation. The
3 Company states that its proposal will allow
4 customers to pay, and the Company to recover,
5 the actual level of uncollectible expense
6 incurred in each Rate Year rather than the
7 amount in an unreliable forecast. Further, the
8 Company states that it expects its arrears
9 reduction efforts to lead to a reduction in late
10 payment charge revenues and an increase in
11 uncollectible expenses levels, the timing of
12 which the Company claims is not possible to
13 accurately estimate. Therefore, paired with the
14 intertwined nature of late payments and
15 uncollectible expenses, the Company states that
16 it is appropriate to continue both
17 reconciliations.

18 Q. Does the Panel agree with the continuation of
19 the Company's existing late payment charge
20 revenue and uncollectible expense
21 reconciliations?

22 A. No. We disagree with the continuation of the
23 uncollectible expense and late payment charge
24 reconciliations and recommend they end with the

1 current rate plan on December 31, 2025.

2 Q. Why does the Panel disagree?

3 A. As previously stated, the Company claims that
4 its significantly elevated level of arrears
5 compared to pre-pandemic levels, proposed
6 arrears reduction program and associated impacts
7 on arrears, late payment charge revenues and
8 uncollectible expenses, and time lag between
9 arrears and write-offs leads to what the Company
10 claims to be untenable and unreliable forecasts.
11 We agree that the Company's proposed forecasts
12 of its late payment charge revenue and
13 uncollectible expenses for the RY, which are
14 based on the amounts allowed in the 2023 Rate
15 Order and reflect stale data, do not
16 appropriately reflect current and future arrears
17 balances or collections activities and likely
18 represent unreliable RY forecasts for which a
19 reconciliation could be considered. However, as
20 discussed in detail previously in our testimony,
21 we believe that a reasonable forecast of late
22 payment charge revenue and uncollectible
23 expenses, which takes into account the Company's
24 elevated arrears balances and arrears reduction

1 program, as well as Staff's recommendations, can
2 be made for the RY. As such, reconciliation
3 mechanisms for these items are not needed in the
4 context of a one-year rate proceeding as the
5 forecasts recommended by Staff represent a
6 reasonable estimate of what will occur.
7 Additionally, if the Company's actual late
8 payment charge revenues and uncollectible
9 expenses vary significantly from what was
10 forecasted in rates, the Company could file a
11 petition with the Commission seeking authority
12 to defer those extraordinary and material
13 variances.

14 Recovery of a Portion of the Gas Revenue Requirement
15 through a Rate Adjustment Mechanism

16 Q. Panel, are you aware of Consolidated Edison,
17 Inc.'s (CEI) 2024 Securities and Exchange
18 Commission (SEC) 10-K filing in which CEI states
19 in the "other Regulatory Matters" section that
20 Con Edison initiated a review of various gas and
21 steam main welds?

22 A. Yes. We are aware of CEI's 10-K filing dated
23 February 20, 2025, in which CEI discloses at
24 pages 129-130 non-conforming welds on the gas

1 system. The filing raises accounting concerns
2 that the costs associated with the non-
3 conforming welds may be encompassed in - and
4 thus reflected in - the HTY and the Company's
5 proposed RY revenue requirement.

6 Q. Panel, when would you be able to determine
7 whether such costs are included in the HTY
8 and/or the RY?

9 A. We will not know until the Company completes its
10 investigation and any necessary remedial actions
11 at some point in the future.

12 Q. Panel, in light of the uncertainty as to whether
13 such costs are in the HTY and Rate Year, do you
14 have a recommendation to protect customers from
15 these costs for which customers should not be
16 responsible?

17 A. Yes, we recommend that the Commission require
18 that a portion of the gas revenue requirement be
19 recovered through an adjustment clause, which we
20 refer to as a rate adjustment mechanism, subject
21 to refund to customers. This rate adjustment
22 mechanism would be designed to provide for
23 recovery of the affected portion of the gas
24 revenue requirement and will continue to be

1 recovered through the rate adjustment mechanism,
2 subject to Commission audit, review, vetting,
3 and refund, until such a time as the Commission
4 determines that the Company has fully satisfied
5 its burden of proof with regard to the
6 expenditures made in conjunction with the
7 investigation and remediation of the non-
8 conforming welds.

9 Q. Panel, what portion of the Company's gas revenue
10 requirement do you recommend the Commission
11 direct be collected through the rate adjustment
12 mechanism?

13 Q. We recommend that the Commission require
14 recovery of not less than \$100 million of the
15 Company's gas revenue requirement through the
16 rate adjustment mechanism, subject to refund.

17 Q. Has the Commission required recovery of a
18 portion of a utility's revenue requirement
19 through an adjustment clause subject to refund
20 in prior rate orders in instances where similar
21 issues were raised?

22 A. Yes, the Commission has done so in two previous
23 rate orders where similar facts and
24 circumstances occurred. Specifically, the order

1 issued on April 24, 2009 approving electric
2 rates for Con Edison in Case 08-E-0539 (2009
3 Rate Order) and the order issued on August 12,
4 2021 setting the revenue requirements of The
5 Brooklyn Union Gas Company (KEDNY) and KeySpan
6 Gas East Corporation (KEDLI) in Cases 19-G-0309
7 and 19-G-0310 (2021 KEDNY & KEDLI Order). In
8 both instances, during the pendency of the
9 utilities' rate proceedings, the companies and
10 regulators were reviewing certain unknown
11 amounts of O&M and capital expenditures that
12 might be included in the Company's historic test
13 period and requested in the rate year.

14 Q. Please describe the Commission's directive in
15 the 2009 Rate Order.

16 A. On page 346 of the 2009 Rate Order, the
17 Commission directed Con Edison to file tariff
18 amendments necessary to continue the adjustment
19 clause mechanism established in Case 07-E-0523
20 and to modify such clause to recover, in the
21 same manner as the Company's delivery revenue
22 requirement is recovered in base rates, a
23 portion of the Company's revenue requirement
24 equal to the amount determined by the Commission

1 (which was \$254.4 million). The Commission also
2 directed that the tariff specify that this
3 portion of the revenue requirement shall be
4 subject to refund based on the Commission's
5 audit and review of the Company's capital
6 expenditures at issue.

7 Q. Please discuss the Commission's determination in
8 the 2021 KEDNY and KEDLI Order.

9 A. On pages 225 through 226 of the 2021 KEDNY &
10 KEDLI Order, the Commission directed KEDNY and
11 KEDLI to file tariff amendments to establish an
12 adjustment clause mechanism to facilitate the
13 provision of refunds that may be directed by the
14 Commission.

15 Q. In the Panel's opinion, in light of the
16 Company's February 2025 10-K disclosing the gas
17 weld issue, do you believe that it would be
18 appropriate for the Commission to follow an
19 approach similar the 2009 Rate Order and 2021
20 KEDNY & KEDLI Order?

21 A. Yes. Following a similar approach here would be
22 appropriate to shield ratepayers from costs that
23 as ratepayers and customers they are not
24 responsible for.

- 1 Q. Does this conclude the Panel's testimony at this
- 2 time?
- 3 A. Yes.
