**CANISTEO WIND ENERGY LLC RESPONSE TO DPS-IR-02  
INTERROGATORY/DOCUMENT REQUEST**

**DPS-IR-02: Exhibit 4 – Land Use (DPS Staff – A.C. Davis)**

**Subject: Forest Tax Law Section 480-a properties**

1. *Application Exhibit 4, Section 4.q, Table 4-1 lists six participating properties indicated as enrolled in 480-a Forest Tax Law program that would be affected by forest clearing for Proposed Facility Components.*

a. *Provide copies of forest management plans for these properties, including maps of forest stands and access roads.*

**RESPONSE:**

Requested plans for the three landowners (covering six properties) have been provided with this response.

b. *Provide discussion of efforts to minimize impacts on enrolled acreage and coordinate Facilities locations with existing access or non-forested areas within the enrolled parcels.*

**RESPONSE:**

Section 22.c of Exhibit 22 contains a summary of steps taken to minimize impacts to plant communities important to wildlife, including forested lands. All these steps would apply to the Section 480-a properties. They include:

- Siting access roads along existing farm roads and ATV trails to the extent practicable;
- Coordinating component siting with landowners;
- Siting the turbines, the Project Substation, O&M Building and laydown yards in previously-disturbed areas, to the extent practicable;

- Avoiding native plant communities (including forested lands, successional old fields and shrublands, and open water/wetland habitat types) and prioritize siting in previously disturbed land (including agricultural lands and pasture lands) where practicable;
- Routing most buried ECS cables along access road corridors;
- Preventing construction vehicles from unnecessarily driving and parking outside the planned limits of disturbance;
- Following construction, grading temporary work areas to the approximate original contour and revegetating non-agricultural areas with native seed mixes;
- Minimizing impacts to wetland vegetation as discussed in Section 22n;
- Implementing comprehensive sediment and erosion controls specified in the Project SWPPP to minimize impacts to vegetation adjacent to construction areas;
- Hiring an environmental monitor, as discussed in Exhibit 12, Section 12e, to ensure adherence to the work limits and SWPPP requirements; and
- Limiting disturbance of, and the spread of, invasive species through measures discussed in Section 22p.

Re: ACE/PSC  
Canisteo Wind Energy Center/127 Turbines/453-590 Feet/290.7MW  
Multiple Towns/Villages, Steuben County  
17PR06147

Dear Mr. Miller:

Thank you for your ongoing consultation with the NYSHPO on behalf of Invenergy. We continue to review this undertaking in accordance with Section 106 of the National Historic Preservation Act of 1966.

These comments are those of the SHPO and relate only to Historic/Cultural resources. They do not include potential environmental impacts to New York State Parkland that may be involved in or near your project. Such impacts must be considered as part of the environmental review of the project pursuant to the National Environmental Policy Act and/or the State Environmental Quality Review Act (New York Environmental Conservation Law Article 8)

Our office is currently reviewing the Phase IB archaeological survey report recently submitted by Panamerican Consultants. Comments relating to the findings associated with this report and any specific archaeological concerns will be forthcoming.

Regarding above ground historic resources, our office received the Five Mile Visual APE Architectural Resources Survey (December 2018) prepared by Panamerican Consultants. This documentation reviewed nearly 400 properties within the identified Area of Potential Effect (APE). The survey area includes the four properties that are listed in the National Register of Historic Places. these properties include: The Town Line Church and Cemetery, the Northrup Hill School, the Canisteo Living Sign, and the Lincoln School. An additional 52 properties have been determined to be eligible for inclusion in the National Register. Of interest within the nearly 300 square-mile areas of visibility for the project was the identification of 49 cemeteries. Within this set of resources 13 were determined to be eligible for the Register, 1 was determined to not eligible and 35 remained undetermined due to lack of research information. A full list of evaluated resources is attached to this letter as Appendix A.

The listed and eligible resources identified in the survey report are diverse in both nature and their physical settings. Properties that will be in the view shed of the project include those in established village/hamlet settings as well as resources that occupy open rural agricultural settings. With few exceptions, the scale of the building stock is limited to the height of single and

two-story residential, commercial and agricultural buildings with few non-agricultural elements breaking the treetops in this sparsely populated area.

Although the full extent of potential impacts from the proposed undertaking cannot be fully assessed, the NYSHPO believes that sufficient information does exist to determine that the undertaking will have an *Adverse Effect* on cultural resources.

We determined that the introduction of up to 127 453 to 590-foot tall, ultramodern, kinetic wind turbines will forever alter and change the rural setting, which itself is a significant element in much of the survey area. It is this largely unchanged rural setting that serves as the backdrop for the architectural, cultural and scenic tourism heritage of the involved communities.

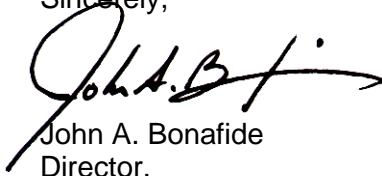

At this point in time we have concluded our evaluation of eligible resources and the potential impacts to those resources associated with this project. We believe it is a reasonable next step to progress to the development of appropriate mitigation to offset the visual impacts associated with this undertaking. The recently submitted survey report included a section relating to generic project mitigation options. This information is consistent with previous guidance provided by the NYSHPO and should serve as a reasonable template for ongoing Section 106 consultation relating to this undertaking.

Depending upon the number of affected resources and the scale of the project, we generally recommend a mitigation fund of between \$1,500 to \$2,000 per turbine unit (or per proposed megawatt depending upon the scale turbine field) as a starting point for the consultation. To establish more meaningful mitigation program under Section 106, we suggest that a more robust outreach effort be made to contact local historians and historical groups/societies/museums. Your consultants should work directly with these individuals and groups to help establish meaningful mitigation projects.

The next step in this process will be for the U.S. Army Corps of Engineers to review this effect finding and to determine how best to proceed under Section 106.

At this point in time the NYSHPO has no further comments on the submitted report. If you should have any questions, please contact me at [john.bonafide@parks.ny.gov](mailto:john.bonafide@parks.ny.gov) or (518) 268-2166.

Sincerely,

John A. Bonafide  
Director,

## Route 417/36 Scenic Byway

The proposed Route 417/36 Scenic Byway, in the spectacular Appalachian foothills of New York, links together Pinnacle State Park and Stony Brook State Park. The natural landscape of brooks, rivers and streams, created by glacial movement, provides recreational opportunities to hikers, bikers, canoers and kayakers as well as anglers and golfers. In addition to the spectacular view and recreational opportunities, the history of farming and the Amish who settled the area is written into the Byway.

**Themes:** Scenic, Recreational, Natural, Historic  
**Length:** 63.2 miles  
**Region:** Finger Lakes  
**Connects:** Pinnacle State Park and Stony Brook State Park  
**Information:**

**CANISTEO WIND ENERGY LLC RESPONSE TO DPS-IR-04  
INTERROGATORY/DOCUMENT REQUEST**

**DPS-IR-04: Wind Power Facilities and Local Laws (DPS Staff – A.C. Davis)**

**Subject: Setback Requirements & Turbine Heights – Town of Troupsburg**

1. *Application Exhibit 6 at section Table 6-1 in Section 6.a.3 indicates that the Town of Troupsburg has a 500 feet Tip Height Limit. Application exhibit 31 section 31.i indicates that CWE will comply fully with each local law identified in Table 31-2, with the exception of LL#1 of 2012 of Troupsburg turbine height limit. Exhibit 6.b.7, Table 6-2 indicates that of the ten wind turbine models under consideration, five of those models have Tip Heights of less than 500 feet.*

*a. Provide an explanation and justification as to why the Application is not proposing to utilize a turbine model that can comply fully with the height limit of the Town of Troupsburg.*

**RESPONSE:**

The Applicant proposed a larger turbine model being aware that the Town of Troupsburg was considering a proposed wind law allowing for taller Tip Height models which had been discussed during a public hearing. Subsequently, the Town did pass the new law which does not limit turbines by Tip Height.

*b. Provide documentation of any discussions the Applicant has had with the Town of Troupsburg regarding height and setback provisions in the municipal wind law.*

**RESPONSE:**

As documented in the PIP Tracking Report, CWE discussed the project with Town Board members on November 9, 2016. The Applicant was also present at the Troupsburg Town

Board meeting on March 14, 2018 during which there was a public hearing regarding the proposed law. See the most recent PIP tracking report on the DMM site (Item No. 186).

*c. Provide an explanation as to whether the Town of Troupsburg has indicated a relationship between setback distances and height limit; and whether turbines exceeding the height limit would be subject to greater setback distances.*

**RESPONSE:**

The recently adopted Town of Troupsburg wind law establishes a relationship between property line setbacks and turbine tip height but does not contain a height limit.
