Re: Letter of Sponsorship to use the Eagle E-Series electronic volume corrector.

Dear Secretary Phillips:

Central Hudson Gas & Electric Company is submitting to the State of New York Public Service Commission a request to approve the Eagle E-Series electronic volume corrector.

It is our intent to utilize the Eagle E-Series to measure the consumption of natural gas by our customers for billing purposes, pending approval by the State of New York Public Service Commission and a Central Hudson Engineering evaluation related to our specific applications.

The Eagle E-Series has two variants: one that acts as a traditional volume corrector, and one that is used to interface with auto-adjust turbine meters and calculate error based on the main and sensor rotor frequency signals of these meters.

The Eagle E-Series has improved memory and processing power, updated internal components including a digital pressure transducer, and expansion slots that allow for easy upgradability by the utility compared to the Eagle XARTU, which is currently approved for use in New York State. This corrector will provide Central Hudson with the latest version of a product that has proven to be very reliable over the years.

Please contact me at 845-334-3592 should you have any questions regarding this matter.

Sincerely,

Tim Dowd
