Date: February 5th, 2026

Dear Honorable Michelle L. Phillips,

Brooklyn Union Gas, doing business as National Grid, is requesting Commission approval for the use of the Dresser Model 6 Transfer Prover pursuant to the guidelines and regulations of the New York State Public Service Commission, 16 NYCRR Part 227, Approval of Types of Gas Meters and Accessories. National Grid intends to replace existing Dresser Model 5 Transfer Provers with the Model 6 for the testing of diaphragm, rotary, and turbine meters for commercial/industrial gas customers.

The Dresser Model 6 is a portable, database-controlled system used for verification and testing of rotary, turbine, and diaphragm meters. For the past twenty years, NYS gas meter operations have been using the Dresser Model 5 Transfer Prover for verification and testing of rotary, turbine, and diaphragm meters. The Model 6 is the next iteration of the Dresser Transfer Prover product line. The Model 6 Transfer Prover is identical to the Dresser Model 5 Transfer Prover previously approved by the Commission on February 23, 1993, with the exceptions noted in the attachment included with this letter (Dresser Model 6 Prover vs Model 5 Prover).

Thanks for your consideration in the evaluation and approval of the Dresser Model 6 Transfer Prover. I have attached additional documents including the manufacturer's literature, product brochure, and in-house testing results.

I, Wilson Li, do hereby affirm that the contents of this document are true to the best of my knowledge.

X *Wilson Li*

Wilson Li

Senior Engineer
