Description of Condition Levels Inspection Program

Condition Levels	Deficiency Description	Scheduled Repair
Level 1	Imminent safety hazard to the public or poses a serious and immediate threat to the delivery of power.	Repair as soon as possible but not longer than one week
Level 2	Likely to fail prior to the next inspection cycle and represents a threat to the safety and /or reliability should a failure occur prior to repair.	Repair within one year
Level 3	Does not present immediate safety or operational concerns and would likely have minimum impact on the safe and reliable delivery of power if it does fail prior to repair.	Repair within three years
Level 4	Condition found but repairs not needed at this time. Used to track atypical conditions that do not require repair within a five year timeframe.	Monitor only
