### Stakeholder Outreach and Responses

## 1. Introduction

Agricola Wind LLC (the Applicant), a wholly owned subsidiary of Liberty Renewables Inc., is proposing to construct and operate the Agricola Wind Project (the Facility), located in the Towns of Venice and Scipio, Cayuga County, New York. The proposed Facility is subject to rules for siting a major renewable energy facility under Article VIII of the New York State Public Service Law (hereafter referred to as Article VIII). Section 1100-2.9, sub-part (4) requires that *"in developing the application, the applicant shall confer with municipal planning representatives, the Office, and where appropriate, OPRHP and/or APA in its selection of important or representative viewpoints."* Pursuant to this requirement, Environmental Design and Research, Landscape Architecture, Engineering and Environmental Services, D.P.C. (EDR), as a representative of the Applicant, requested input from municipal planning, state agency, and other stakeholders in the 5-mile radius visual study area to assist in the identification of visually sensitive resources and locations that would be suitable for the development of photosimulations. This attachment to the Visual Impact Assessment (VIA; Appendix 8-A of the Article VIII application) includes the visual consultation materials that were provided to stakeholders, responses that were received, and a summary of the actions taken by EDR and the Applicant to include recommendations in the VIA.

## 2. Summary of Visual Outreach Effort

In June 2024, a visual consultation letter was sent by EDR to town and county planning, state agency, and indigenous nation representatives summarizing the results of a preliminary visual analysis for the Facility and requesting recommendations on visually sensitive resources within the visual study area and locations that would be suitable for the development of photosimulations. The consultation letter included the following attachments:

- **Attachment A** - Map figures showing the 5-mile visual study area, locations of the major proposed above-ground Facility components (the wind turbines, substations, MET towers, and ADLS towers), wind turbine I viewshed analysis results, viewpoint locations visited by EDR staff during field work, viewpoint locations which were identified for the development of photosimulations, identified visually sensitive resource locations, and preliminary landscape similarity zones.
- **Attachment B** – A viewpoint photolog including panorama compositions and single-frame photographs from 81 viewpoints visited during initial field work, noting the 14 Viewpoints that were identified by EDR for photosimulation development.
- **Attachment C** – A table listing identified visually sensitive resources and information on their locations and potential wind turbine visibility.
- **Attachment D** – A distribution list of town and county planning, State agency, Indigenous nation, and other representatives that EDR requested input from as part of the visual outreach process.

The viewpoint locations that were selected as candidates for photosimulation include:

- Viewpoint 2 from State Route 34 (Hamlet of Scipio, VSR ID # 64)
- Viewpoint 4 from State Route 34 (Fingerlakes Trailblazers Snowmobile Trail, VSR ID # 37)
- Viewpoint 8 from State Route 34 (Hamlet of Venice Center, VSR ID # 67)
- Viewpoint 14B from Burns Road
- Viewpoint 24 from Long Hill Road
- Viewpoint 36 from Indian Field Road (Fingerlakes Trailrunners Snowmobile Trail, VSR ID # 38)
- Viewpoint 40 from the Intersection of State Route 34B and Sherwood Road (Sherwood Equal Rights Historic District, VSR ID # 17)
- Viewpoint 51 from State Route 90 (Scenic Route 90 State Scenic Byway, VSR ID # 24)
- Viewpoint 59 from Owasco Flats Nature Preserve (VSR ID # 46, and Owasco Lake, VSR ID # 50)
- Viewpoint 62 from Owasco Bluffs Nature Preserve (VSR ID # 62)
- Viewpoint 65 from Rockefeller Road
- Viewpoint 71 from Jugg Street

### **3. Summary of Responses**

#### **Town of Scipio**

On July 6, 2024, EDR received a response email from Melissa Alford, a member of the Town of Scipio Planning Board, identifying an additional VSR (Ensenore Park). Additionally, the board expressed interest in potential visual effects of the Facility from snowmobile trails.

#### **Town of Venice**

On July 9, 2024, EDR received a response from Stefan McGonagle, Supervisor of the Town of Venice, noting the potential for visual impacts to towns, villages, and roadways throughout the study area. To discuss potential visual impacts and determine sensitive locations within the Town and neighboring towns and villages, EDR, the Applicant, and Town planning representatives met on July 24, 2024. At this meeting, EDR reviewed the provided outreach materials and digital mapping. The Town expressed interest in understanding potential visual effects from areas of concentrated settlement, including the Village of Moravia and hamlets throughout the study area, and identified an additional visually sensitive resource (the Venice Baptist Church).

### **4. Actions Taken**

EDR and the Applicant reviewed all recommendations and added Enesenore Park (VSR ID # 199) and Venice Baptist Church (VSR ID # 200) and completed additional field review to document views from these resources and other areas that were not visited during the initial field work effort. These viewpoints were subsequently assessed to determine if they would be appropriate for the development of photosimulations. Based upon the review of all viewpoints documented during field work, additional viewpoints were added

to the list of viewpoint locations for photosimulation development in response to feedback received during the outreach process and/or to evaluate visual contrast from other locations within the study area:

- Viewpoints 14A from Burns Road
- Viewpoint 28 from State Route 34
- Viewpoint 38 from Center Road (Hamlet of Scipioville, VSR ID # 65)
- Viewpoint 75 from the Moravia Center School (VSR ID # 55)
- Viewpoints 82, 86, and 89 from Owasco Lake (VSR ID # 50)
- Viewpoint 105 from Stewarts Corner Road (Venice Baptist Church, VSR ID # 105)
- Viewpoint 111 from East Venice Cemetery
- Viewpoint 113 from Island Park

The final selection of 21 candidate viewpoints included two viewpoints from snowmobile trails, two viewpoints from hamlets, one viewpoint from the Village of Moravia, and one viewpoint from the Venice Baptist Church. As described in Section 4.2.1 and 4.2.2 of the VIA, the distribution of selected viewpoints reflects the distribution of potential visibility within the VSA. A total of 18 views from 17 viewpoints were ultimately selected for the development of photosimulations (two separate views were selected from Viewpoint 14) and subsequent visual contrast evaluation by a rating panel of visual professionals. Facility components were determined to be substantially screened from view from four of the viewpoints. For these viewpoints (Viewpoint 40 from the Intersection of State Route 34B and Sherwood Road in the Town of Scipio, Viewpoint 59 from the Owasco Flats Nature Preserve in the Town of Moravia, Viewpoint 75 from the Moravia Central School in the Village of Moravia, and Viewpoint 105 from Stewarts Corner Road in the Town of Venice), wireframe renderings were prepared to illustrate the degree of screening provided by existing landscape features.

## Stakeholder Outreach and Responses

## Visual Consultation Letter

June 6, 2024

**Municipal Planning, State Agency, and Party List Representatives  
Per Attached Distribution List**

**RE:** Agricola Wind Project (ORES Matter No. 23-00064), Towns of Scipio and Venice, Cayuga County, New York  
Official Request for Stakeholder Input on Visually Sensitive Resources and Representative Viewpoints

Dear Municipal Planning, State Agency, or Party List Representative:

As you may be aware, Agricola Wind LLC. (the Applicant) is proposing to construct and operate the Agricola Wind Project (the Facility), an up to 99-megawatt (MW) wind energy generation facility in the Towns of Scipio and Venice, Cayuga County, New York (the Facility) consisting of up to 24 wind turbine generators and other associated infrastructure, including a substation, an Aircraft Detection Lighting System (ADLS) tower, and two meteorological towers. The proposed Facility is subject to review under Chapter XVIII, Title 19 of New York Codes, Rules, and Regulations (NYCRR) Part 900, §900-2.9 and Section 94-c of the New York State Executive Law (hereafter referred to as Section 94-c). In accordance with Section 94-c regulations, Exhibit 8, Visual Impacts, *"the applicant shall confer with municipal planning representatives, the Office, and where appropriate, OPRHP and/or APA in its selection of important or representative viewpoints."*

Pursuant to Section 94-c requirements, Environmental Design and Research, Landscape Architecture, Engineering and Environmental Services, D.P.C. (EDR), on behalf of the Applicant, is reaching out to state agencies and municipal planning representatives in the 5-mile visual study area to request your input in the identification of visually sensitive resources, proposed sensitive land-uses, and potential photosimulation locations. This information will help inform the content of a Visual Impact Assessment (VIA) that is being prepared to assess the potential visual effects associated with the Facility.

To assist you in the identification of visually sensitive resources and candidate photosimulation locations, EDR has completed a preliminary visual analysis based upon the current Facility design, including viewshed analysis, field work, visually sensitive resource identification, landscape similarity zone identification, and recommendations for candidate photosimulation viewpoints. The results of this analysis are provided in this letter and its attachments.

## List of Attachments

### Attachment A: Figures

Figure 1: Visual Study Area and Facility Site

Figure 2: Visual Sensitive Resources and Viewshed

Figure 3: Landscape Similarity Zones

### Attachment B: Viewpoint Photolog

### Attachment C: Visually Sensitive Resources Table

### Attachment D: Distribution List

## Definitions of Specific Terms and Acronyms Used in this Letter

**Distance Zones** are defined in visual studies to divide a study area into distinct sub-areas based on the various levels of landscape and Facility detail available to the viewers. EDR has defined four preliminary distance zones for this study: Near-Foreground (0-300 feet), Foreground (300 feet- 0.5 miles), Middle Ground (0.5 – 4.0 miles), Background (4.0+ miles). Mapped locations of distance zones based upon the the major components of the Facility are shown in all figures included in Attachment A.

**Photosimulations** are images of a realistic three dimensional (3D) model of the proposed Facility superimposed on photographs of the existing landscape. The photosimulations accurately illustrate how the proposed Facility would appear upon completion and are used to evaluate the visual contrast of the proposed Facility with the existing visual environment.

**Viewshed Analysis** was performed to identify locations within the Visual Study Area (VSA) where there is potential for the wind turbines to be seen from ground-level vantage points based upon the current Facility design. This analysis considers the height and location of all surface features, including ground surface topography, existing structures, and existing vegetation. The viewshed analysis results are shown in Attachment A, Figure 2.

**Visual Impact Assessment (VIA)** is a study evaluating the potential visibility, appearance, and visual impact associated with a proposed project.

**Visual Study Area (VSA)** is defined as the area within a 5-mile radius of Facility Site in accordance with 94-c regulations. The VSA boundary is shown in all figures included in Attachment A.

## Visually Sensitive Resources

A variety of publicly available geospatial databases were consulted to identify Visually Sensitive Resources (VSRs) within the 2-mile radius VSA. Identification of VSRs was based on guidance provided by New York

State Department of Environmental Conservation Program Policy DEP-00-2 *Assessing and Mitigating Visual and Aesthetic Impacts* and the requirements of Section 94-c. In addition, EDR conducted a search for other resources that could be considered visually sensitive based on the type or intensity of use they receive. The category of VSRs identified for this VIA include the following:

- **Properties of Historic Significance.** National Historic Landmarks; Properties/Districts Listed on the State or National Registers of Historic Places (S/NRHP); Resources Eligible for Listing on the S/NRHP; National or State Historic Sites.
- **Designated Scenic Resources.** Rivers Designated as National or State Wild, Scenic, or Recreational; Adirondack Park Scenic Vistas; Sites, Areas, Lakes, Highways or Overlooks Designated or Eligible for Designation as Scenic; Scenic Areas of Statewide Significance; Other Designated Scenic Resources.
- **Public Lands and Recreational Resources.** National Parks, Recreation Areas, Seashores, and/or Forests; National Natural Landmarks; National Wildlife Refuges; Heritage Areas; State Parks; State Nature and Historic Preserve Areas; State Forest Preserve Land; Other State Lands; State Wildlife Management Areas and Game Refuges; State Forests; State Fishing/Waterway Access Sites; State and Federal Trails; Snowmobile/ATV Trails; Bike Trails/Routes; Other Trails; Palisades Park; Local Parks and Recreation Areas; Publicly Accessible Conservation Lands/Easements; Rivers and Streams with Public Fishing Rights Easements; Named Lakes, Ponds, and Reservoirs.
- **High-Use Public Areas.** State, U.S., and Interstate Highways; Schools; Cities and Villages; Hamlets.
- **Native American Lands.**

Please note that the Historic Architectural Resources Survey that identifies S/NRHP-eligible resources is ongoing, and these resources have not been identified at this time. Once the survey is complete, any S/NRHP-eligible resources will be added to the VSR inventory. Attachment A, Figure 2 illustrates the location of each identified resource overlaid with the viewshed results and viewpoint locations. A list of all VSRs identified in the VSA with additional information on potential wind turbine visibility is included in Attachment C.

### Landscape Similarity Zones

Landscape Similarity Zones (LSZs) are subsets of a study area that are defined based on the similarity of various landscape characteristics including topography, vegetation, water, and land use patterns, in accordance with established visual assessment methods. Seven discrete LSZs within the VSA were defined in the VSA. The extent of each LSZ is shown in Attachment A, Figure 3, and a brief description of each LSZ is provided below. The LSZs will be described in greater detail in the VIA.

- **Forest LSZ:** Characterized by large, contiguous areas of mixed deciduous and coniferous vegetation. Typical views within this LSZ are short range and include substantial foreground screening. Where open views are available, they are often tightly enclosed by trees and other vegetation, such as views along roadway corridors or in small clearings. Vantage points on steep hillsides or on the

edge of the Forest LSZ may occasionally offer more long-range, outward views, particularly during leaf-off conditions and when adjacent to agricultural land.

- **Hamlet LSZ:** Characterized by traditional development pattern of the 19<sup>th</sup> and early 20<sup>th</sup> century consisting of small clusters of residential development along with occasional commercial, religious, and/or municipal structures in a rural setting. Views within this LSZ are generally short-range and feature residences and associated yard vegetation backed by trees and other vegetation or agricultural fields. However, open views are also available when adjacent to farmland and down street corridors.
- **Owasco Flats LSZ:** This LSZ includes Owasco Flats, a wet river bottom floodplain located at the southern end of Owasco Lake, and is characterized by large, inundated areas of herbaceous and/or shrubby vegetation and pockets of open water. Views typically feature a level foreground of vegetation interspersed with small trees that are backed or bordered by forested areas and hillsides. However, more open, long-range views are possible when adjacent to areas of open water within this zone.
- **Owasco Lake LSZ:** This LSZ includes Owasco Lake and its shoreline. Views from the water surface typically include a broad expanse of water in the foreground backed by trees, man-made structures, and wooded hillsides. Views from the shoreline are more variable due to steep hillsides and the mix of land uses on the topographic variations and mix of land uses, and typically include structures and vegetation in the foreground and the lake and wooded hillsides in the middle or background of the view. Because Owasco Lake is a character defining feature of the region and receives significant recreational use, sensitivity to visual quality in this zone is generally high.
- **Rural Upland LSZ:** Characterized by open, elevated agricultural land mixed with low-density residential development, woodlots, and farm complexes. Views typically include open agricultural fields with homes and agricultural structures dispersed along roadsides. Due to the elevated position of vantage points in this LSZ, expansive, long-distance views that include distant hills in the background are available from some locations. However, hedgerows, woodlots, adjacent forested areas, and roadside vegetation and structures often frame or limit long-distance views in certain directions.
- **Rural Valley LSZ:** Characterized by open agricultural land mixed with low-density residential development and woodlots that is dissected by a network of state, county, and local roads at low elevation. Views from within the Rural Valley LSZ typically include a relatively level and open foreground of agricultural fields that are backed by steep, wooded hillsides. However, hedgerows, woodlots, adjacent forested areas, and roadside vegetation and structures often frame or limit long-distance views in a particular direction.
- **Village LSZ:** Characterized by moderate to high-density residential and commercial development. Buildings and structures are arranged along an organized street pattern that tends to screen outward views and focus views along the main streets. Views within this LSZ are generally short-range and feature commercial buildings or residences and associated yard vegetation backed by trees and other vegetation. However, the edges of the Village LSZ (where there is typically less dense development) and large, open areas (such as sports fields) offer the opportunity for more open, unobstructed views of the surrounding landscape.

## Field Review

EDR personnel conducted field review within the VSA on March 12, 2024. During field review, EDR staff members traveled public roads and visited public vantage points throughout the VSA to confirm the results of the viewshed analysis and obtain photographs to document existing views/visual character for subsequent development of photosimulations. Field review resulted in documentation of 81 representative viewpoints. Photographs for each viewpoint, including a panorama composition illustrating the view context and a single-frame photograph illustrating the most open, unobstructed view anticipated to be available towards the Facility Site, are included within Attachment B (Viewpoint Photolog). The viewpoint locations are illustrated in Attachment A, Figures 2 and 3.

## *Visually Sensitive Resources*

**EDR and the Applicant are formally requesting feedback from you to identify additional VSRs.**

Please review the mapped locations of VSRs identified to date in Attachment A, Figure 2 and listed in Attachment C. The Applicant believes the list of the VSRs included herein represents a substantially complete inventory of the VSRs within the VSA. Please let us know whether there are any additional sites/locations that are visually sensitive and that you believe should be added to the inventory and subsequently evaluated in the VIA. If so, please provide the name, location, and a brief description for each resource.

## *Proposed Land Use*

**EDR and the Applicant are requesting feedback from you to identify any proposed land uses that may be sensitive to visual impact.**

Pursuant to Section 94-c requirements, "proposed land uses" are required to be considered as part of the viewpoint selection process. Publicly available zoning codes, comprehensive plans, and local laws for each town within the VSA will be reviewed to identify current and future land uses within the VSA. However, the Applicant anticipates instances in which a municipality is in process of completing updates to existing zoning codes, comprehensive plans, or local laws. In addition, it is recognized that projects/developments may be pending or currently under review by town boards, planning boards, or the zoning board of appeals. Please provide information outlining amendments to local codes or laws and/or information regarding proposed projects and/or land uses that should be considered in the VIA.

## *Photosimulation Locations*

**EDR and the Applicant are requesting feedback from you in the selection of viewpoints for the production of photosimulations.**

The Applicant is considering 14 viewpoints for the production of photosimulations, as described in the table below. These viewpoints were selected to represent the range of visual change that could occur with the proposed Facility in place from the various distance zones, LSZs, and VSRs identified within the study area.

As mentioned previously, a full viewpoint photolog including a representative photograph from each viewpoint can be found in Attachment B, and viewpoint locations are illustrated in Attachment A, Figure 1.

Viewpoint	Location, Coordinates	Municipality	Reason for Recommendation
2	State Route 34 42.78082°N, 76.55862°W	Town of Scipio	Representative view from the Middle Ground distance zones and the Hamlet of Scipio. Additionally, this view is from a state route and is expected to have a high degree of viewer exposure.
4	State Route 34 42.77000°N, 76.55800°W	Town of Scipio	Representative view from the Foreground distance zone and Rural Upland LSZ. Additionally, this view is from a VSR and a state route and is expected to have a high degree of viewer exposure.
8	State Route 34 42.74138°N, 76.55666°W	Town of Scipio	Representative view from the Middle Ground distance zones and the Hamlet of Venice Center. Additionally, this view is from a state route and is expected to have a high degree of viewer exposure.
14B	Burns Road 42.75683°N, 76.53422°W	Town of Scipio	Representative of one of the few close-range, unobstructed views that are anticipated to be available of the proposed substation.
24	Long Hill Road 42.73839°N, 76.49407°W	Town of Venice	Representative of one of the few close-range, unobstructed views that are anticipated to be available of the proposed Aircraft Detection Lighting System and meteorological towers.
36	Indian Field Road 42.72110°N, 76.56718°W	Town of Venice	Representative view from the Rural Upland LSZ, Middle Ground distance zone, and southwestern portions of the study area.
40	Intersection of State Route 34B and Sherwood Road 42.76101°N, 76.62131°W	Town of Scipio	Representative view from the Middle Ground distance zone and several VSRs, including two NRHP-listed resources. Additionally, this view is from a state route and therefore is expected to have a high degree of viewer exposure for through-travelers.
51	State Route 90 42.66751°N, 76.54407°W	Town of Genoa	Representative view from the Middle Ground distance zone, Rural Valley LSZ, and the Scenic Route 90 State Scenic Byway.
59	Owasco Flats Nature Preserve 42.75547°N, 76.46499°W	Town of Moravia	Representative view from the Owasco Lake LSZ, Middle Ground distance zone, and the Owasco Flats Nature Preserve, which is a fairly popular, publicly accessible recreational resource within the study area.
62	Owasco Bluffs Nature Preserve 42.82963°N, 76.49788°W	Town of Niles	Representative view from the Owasco Lake LSZ, Middle Ground distance zone, and the Owasco Bluffs Nature Preserve, which is a popular, publicly accessible recreational resource within the study area.
65	Rockefeller Road 42.80582°N, 76.47857°W	Town of Niles	Representative view from Rural Upland LSZ, Middle Ground distance zone, and eastern portions of the study area.
71	Jugg Street 42.7647°N, 76.40889°W	Town of Moravia	Representative view from Rural Upland LSZ, Background distance zone, and eastern portions of the study area.
Reserved	Photography from Owasco Lake was not captured during field review due to seasonal conditions at that time. Additional field review is planned to document views from the lake, which will result in the production of photosimulations from two viewpoints located on Owasco Lake or its shoreline.		

June 6, 2024

Please review the recommended viewpoints and provide feedback regarding whether these viewpoints are appropriate, or if there are any additional locations that you would like to be considered as candidate viewpoints for photosimulation development.

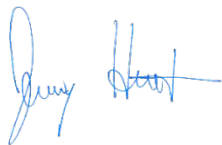

**In order to provide sufficient time to incorporate your feedback into the Visual Impact Assessment, we request that any responses by July 5, 2024.**

All future correspondence regarding the VIA for the Facility will be by email, unless otherwise specified. Please confirm your email address from the distribution list or, if missing, please provide your email address in your response to this letter. Please direct any future correspondence specific to the visual assessment, visual resources, and photosimulations, including responses to this request, to the contact below. If you would like to meet to discuss the information presented in this letter, please send a request to the contact below. Please note email responses in excess of 15 megabytes will not be received. If you do not receive confirmation of email receipt, please call 315.471.0688 extension 684 and leave a voicemail for Jessey Horvat.

**Importance:** High

Supervisor McGonagle:

I had a brief conversation with Brian on July 12 and he suggested I pass along a few dates for a virtual meeting to discuss the visual outreach request. We will have maps and photos at the ready so that you can provide some feedback in lieu of a formal written response to the request. This will be carefully documented in the visual impact assessment report along with any specific request you may have.

To start I please select from one or more of the following dates and times:

Wednesday July 24 1pm to 3pm  
Tuesday July 30 3pm to 5 pm

I think we can complete this exercise in less than 2 hours, but I wanted to keep the full block open just in case.

I look forward to hearing back from you.

Best Regards,

**Gordon W. Perkins, GISP**

You don't often get email from [supervisor@veniceny.com](mailto:supervisor@veniceny.com). [Learn why this is important](#)

[EXTERNAL SENDER]

Hi Greg,

We are struggling with fulfilling this request. The visual impact of the wind towers will be widespread. The neighboring towns and villages are impacted as well as the vistas of anyone traveling on any of the roads that run across the ridges. Are we supposed to list all the roads that currently have an unobstructed view of the ridges upon which these wind units will be placed?

Please advise.

Thanks  
Steff

**Subject:** Agricola Wind - Visual Outreach and Proposed Land Use Consultation

Dear Andy,

This email is regarding the Agricola Wind Project proposed in the Towns of Venice and Scipio, Cayuga County, New York. On behalf of the Applicant (Agricola Wind Project, LLC), we are reaching out to you to request the Town's input on visual outreach and proposed land use consultation materials. This information will be used to assess potential impacts to visual resources and proposed land uses in the vicinity of the proposed project. Please see further details below and attached.

### **Visual Outreach**

We are requesting your input in the identification of visually sensitive resources,

proposed sensitive land-uses, and potential photosimulation locations. This information will help inform the content of a Visual Impact Assessment (VIA) that is being prepared to assess the potential visual effects associated with the Facility.

A letter with additional instructions and information on the Facility visibility, identified visually sensitive resources, and the locations that we have selected for the development of photosimulations can be downloaded from the EDR SharePoint site through the following link. Your contributions should include publicly accessible locations that may be sensitive to visual change and are important to you and the local community.

 [2024-06-06 Visual Outreach Consultation Letter](#)

We ask that your responses be provided by July 5, 2024, so that we can ensure your input is included in the analysis.

### **Proposed Land Use Consultation**

We are requesting information regarding any proposed or recently approved land use developments located within 5 miles of the Project (e.g., renewable energy projects, distribution centers, self-storage facilities, etc.). For further details, please see the attached letter and map.

Thank you in advance for your participation. We look forward to receiving your input.

Sincerely,

**Greg Redling**

**Subject:** RE: Agricola Wind Project (ORES Matter No. 23-00064) - Visual Outreach  
**Date:** Wednesday, July 24, 2024 3:21:00 PM

---

Appreciate your input Melissa, and apologies for the delay in getting back to you.

We did not initially identify Ensenore Park, so we'll be sure that it is added to the visually sensitive resource inventory and addressed in the Visual Impact Assessment report. We currently plan to include two simulations from snowmobile trails near the proposed turbines in the Town of Scipio (Viewpoint 4) and from Town of Venice (Viewpoint 36) and will take a second look to consider whether an additional photosimulation from a different vantage point on a snowmobile trail would be valuable to include in the report.

Thanks again,

**Jessey Horvat**

[EXTERNAL SENDER]

Hi Jessey,

The only two comments/questions that have come up from the board in regard to this particular study is how the turbines may visually effect Ensenore Park on Owasco Lake, and how they may visually impact the snowmobile club. I'm happy to discuss these further with you if they have not already been taken into account.

Aside from that, we have no further comments or suggestions to add to your study, but look forward to reviewing the results.

Thank you,

Melissa Alford

Hi Jessey,

The Planning Board will be discussing the Visual Sensitivity Study this Wednesday. Could you give me a ring either today or tomorrow for some further clarification? I'm anticipating a number of questions, and it would be helpful to have some of those cleared up or prepared for ahead of time.

My schedule is fairly flexible, and am available from 8AM-7PM today and tomorrow.

Thank you,

Melissa Alford

[EXTERNAL SENDER]

Hi Jessey,

Thanks for the information share. I will continue to look over the many pages and make notes as needed. But first and foremost, I'd like to bring this screenshot to your attention. The location of this particular turbine is directly across from our house in a field that contains the spring (see red dot on pic) that is our only water source to this property. It is also a secondary water source for my step-dad's property. We have legal rights to that spring, and as we discussed with Scott Biggar a couple of months ago, the disruption and/or destruction of that ground water fissure would be detrimental to our livelihood and the future of our farm. Scott understood the precarious situation, the inability to mitigate this in a way that would be satisfactory to all parties, and said that the turbine would need to be relocated as far down that field as possible (see red arrow).

The current placement of the turbine does not appear to be taking those concerns into consideration.

Please reach out with any questions for further clarification.

Happy to help.

Melissa Alford
