Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 101.11

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 101 SHELLFISH AND FISH

§101.11 Bacterial standards; procedure governing enforcement.

(a) The Department, periodically, may take samples of shellfish without payment therefor for purposes of laboratory examinations. The results of such examinations shall be interpreted in accordance with the numerical system established by the American Public Health Association method of rating shellfish for coliform organisms, and when the total MPN rating for fecal coliform organisms exceeds 230 per 100 grams and total plate count of 500,000 colonies per gram, the shellfish shall be deemed contaminated.

(b) When the bacteriological examination reveals that the shellfish do not conform to the bacterial standards prescribed, and the bacterial content is in excess of such standards, the persons shipping such shellfish shall be notified in writing. Thereafter and within the time specified in the notice, the Department shall examine additional samples. If the bacterial content is found again to be in excess of the prescribed standards, and the cause thereof has not been removed, a second written notification shall be sent to the shippers. It shall specify that further samples shall be examined within a given time and, if the bacterial content is again found to be in excess of the bacterial standards, all

shipments from the same source may be excluded from the City.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

Subsection (a) is derived from S.C. §164 Reg. 5. The standards prescribed by this subsection do not differ to any great extent from those in the former Sanitary Code. They offer, however, a more accurate method for evaluation of examination results. The Department of Health is cognizant of the adoption by the National Shellfish Sanitation Workshop, in August, 1958, of E. Coli and Standard Plate Count standards for shellfish control purposes, but in view of the interim nature of these standards, adopted by the Workshop pending the results of a study by the N.S.S.W. to be conducted during two oyster harvesting seasons, it has been decided to retain for the present the tests and the standards hitherto used by the Department.

Subsection (a) was amended by resolution adopted on May 16, 1968 which eliminated the phrase "equals 2400 per 100 ml. or more" and added the word "fecal" and the language "exceeds 230 per 100 grams and total plate count of 500,000 colonies per gram."

Subsection (b) is derived without substantive change from S.C. §164 Reg. 6(part). The last sentence in Reg. 6 on the power of the Department to exclude shellfish which have been suspected of containing pathogenic bacteria or which have been found adulterated or misbranded has been omitted here because the subject matter has been adequately covered by §§71.05, 3.03; 73.03, 73.05 and 101.09.

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 101.13

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 101 SHELLFISH AND FISH

§101.13 Dealers in shellfish, permits; exception.

(a) No person shall keep, sell or offer for sale fresh shellfish whether at retail or at wholesale without a retail or wholesale shellfish dealer's permit, respectively, issued by the Commissioner. No permit is required, however, of restaurants or other eating places selling shellfish for consumption on the premises.

(b) As used in this section, at wholesale means a sale other than a sale direct to the consumer.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §§164(2)(part) and (3)(part) and §164 Reg. 13(part). The two categories of

wholesale dealers in shellfish established by the Sanitary Code on the basis of quantities sold per week have been omitted here, but are covered in Article 5 in the section dealing with permit fees. Retailers selling less than 50 lbs. of shellfish per week, are no longer exempted from the permit requirement. See Article 5 on General Permit Provisions.

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 101.15

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 101 SHELLFISH AND FISH

§101.15 Sale of shellfish from pushcarts or other vehicles prohibited.

No shellfish shall be held, sold or offered for sale from a pushcart or other vehicle in any street or public place.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §150a(paragraph 3). As revised, the section prohibits the sale of shellfish from pushcarts or other vehicles without excepting those stationed in designated public markets. This change reflects the actual practice of the Department; for some time no applications have been taken for permits to sell shellfish from vehicles. In view of this prohibition, S.C. §150a Regs. 1-7 have been omitted as unnecessary. S.C. §150a(paragraphs 1 and 2) providing for the sale of fish on the streets in such a manner as not to create a nuisance, has been omitted as

unnecessary; the problem is dealt with in section 3.11 of this Code.

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 101.17

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 101 SHELLFISH AND FISH

§101.17 Sale of shellfish from unapproved or excluded sources or from unauthorized suppliers or of shellfish containing antiseptics or preservatives prohibited.

No dealer in shellfish or other foods shall purchase or have in his possession, sell or offer for sale (1) shellfish taken from unapproved or excluded sources or (2) shellfish which contain antiseptics or preservatives or (3) shellfish received from a person other than a holder of a wholesale shellfish dealer's permit or a shipper registered pursuant to §101.03. A holder of a wholesale dealer's permit for a place of business located in the Borough of Richmond may, however, purchase or otherwise receive shellfish taken by a bayman pursuant to §§101.53 through 101.61.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived without substantive change from S.C. §§164(5), 165 Reg. 7(part), 164a Regs. 3(b) and 171(part). Mere receipt of shellfish into a dealer's premises has been held to constitute "possession" within the meaning of S.C. §164(5) (formerly S.C. §164(2)). **People v. Thompson and Potter Inc.,** 289 N.Y. 259, 45 N.E. 2d 432 (1942). "A contrary holding," said the court, "would render the enforcement of the Sanitary Code almost impossible and expose the consuming public to the dangers from which the Legislature sought to protect it."

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 101.19

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 101 SHELLFISH AND FISH

§101.19 Tagging generally.

No shipper shall ship or cause to be shipped into the City, nor shall any person sell, offer for sale or cause to be sold any shellfish, unless each shipping container is properly tagged in compliance with §§101.21, 101.23 and 101.25, and in the case of processed shellfish, unless each shipping container or receptacle is marked in compliance with §101.69.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §164 Regs. 8(part), 11 and 16(part). See §§101.31 and 101.33 on requirements for the labeling or marking of individual receptacles of shucked and frozen shellfish, respectively, when shipped inside

a shipping container, and §101.69 on requirements for processed shellfish. Wholesale dealers who purchase from bayman are to comply with the requirements of §101.61(a).

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 101.21

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 101 SHELLFISH AND FISH

§101.21 Tagging; shipper's tag.

(a) Every shipper shall affix to each shellfish shipping container a white or manila colored tag of waterproof quality, not less than two and five eighths inches by five and one half inches in size, made up in the printed form and setting forth the information as follows:

(b) On the front of the tag, the shipper shall insert in the blank spaces provided therefor:

(1) His state or province certificate or permit number preceded by the state abbreviation;

(2) The consignee's name and address;

(3) The contents together with the size and type of container;

(4) The date of shipment; and,

(5) In case of shell stock, the waters where taken and the bed number if any.

(c) On the back of the tag, the shipper shall insert his name and address.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §164 Reg. 8(part). Information as to waters where taken and the bed number is not required in case of shucked stock, as it is impractical in view of the practice of shucking establishments to blend stocks dredged from various grounds. For information to be supplied by wholesale dealers located in the City, see §101.23.

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 101.23

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 101 SHELLFISH AND FISH

§101.23 Tagging; wholesale dealer's duties; split lot tags.

(a) When a wholesale dealer in the City receives a container of shellfish, he shall immediately stamp, in the space provided therefor on the back of the detachable part of the shipper's tag, the date the shipment was received and enter the lot number he assigns to the shipment and the contents of the lot. When he sells such container, the wholesaler shall detach the detachable part of the shipper's tag and shall enter in the space provided on the stub remaining on the container his state of New York reshipper's permit number, or, if the reshipment is within the county where his place of business is located and no state of New York reshipper's permit is required, a code symbol which shall be assigned by the Department and the date of reshipment. The detached part of the shipper's tag shall be kept on file at the wholesale dealer's place of business for 60 days. The wholesale dealer need retain only one detachable part of the tags from any shipment consisting of several containers received on the same date from the same shipper and containing shellfish from the same source, if he assigns one lot number to the entire shipment and the detachable part of the tag retained by him shows the makeup of the entire lot. Every subsequent wholesaler who sells such container of shellfish shall enter his reshipper's State permit number or, if the reshipment is within the same county and no State permit is required, a

code symbol assigned by the Department, and the date of his reshipment in the space provided therefor on the remaining stub of the original shipper's tag.

(b) If a wholesale dealer divides the shellfish received in a single container into two or more containers, he shall also remove the stub of the original tag, stamp on the back thereof the date of splitting and keep it on file for 60 days as provided in subsection (a) of this section. Each split lot shall thereupon be provided with a split lot tag. The tag shall be securely attached. It shall be white or manila colored, of waterproof quality, two and one half inches by four and one fourth inches in size, made up in the printed form and set forth clearly and legibly the information as follows:

Form of front of split lot tag -

Form of back of split lot tag -

(c) The following information shall be inserted in the spaces provided therefor:

(1) The data appearing on the stub of the original tag;

(2) The contents, together with the size and type of container to which such split lot tag is attached; and,

(3) The name and address of the wholesale dealer splitting the container, in the space following words, "Original tag on file at premises of."

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

Subsection (a) is derived without substantive change from S.C. §164 Regs. 9(a) and 10(part).

Subsection (b) and (c) are derived without substantive change from S.C. §164 Reg. 9(b).

Rules of the City of New York

ARTICLE 101 SHELLFISH AND FISH

§101.31 Shucked shellfish; information required on individual receptacles.

Individual receptacles of shucked shellfish, when shipped inside a shipping container, shall have permanently recorded thereon the shucker's name and address or his state or province certificate or permit number preceded by abbreviation of the name of the state or province.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is new. Note that the receptacles when shipped individually and not packed into a shipping container are to be tagged pursuant to the provisions of §§101.19 through 101.25. Shucked shellfish which have been frozen are covered by §101.33. This section was amended by resolution of June 15, 1959, filed with the City Clerk on June 23,

1959, by substituting the word "or" for "and" before the words "his state or province certificate", thus providing for alternative means of marking the receptacles.

ARTICLE 101 SHELLFISH AND FISH

§101.55 Shellfish from City waters; taking of hard clams from approved areas.

(a) A bayman may dig, rake, tong or otherwise remove and sell for food purposes, hard clams from the approved area of Raritan Bay, and Princess Bay, New York shown on the United States Coast Geodetic Chart Number 369, dated July 5, 1954, and bounded and described as follows:

(1) East of a line from the "Cupola" at Red Bank (Staten Island) passing through Black Buoy "39" and through Conaskonk Point to the "Tank" at Union Beach (New Jersey);

(2) South of a line from channel monument "42" to red bell "30" thence to the end of the bulkhead or breakwater at the southerly tip of Crooks Point;

(3) West of a line from the end of the bulkhead or breakwater at the southerly tip of Crooks Point through red bell "14" (Flashing Red) to the State line; and,

(4) North of the New York-New Jersey state boundary line.

(b) All hard clams from the approved area of Raritan Bay and Princess Bay must be taken only during daylight hours.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

Subsection (a) is derived from S.C. §164a(2)(part). Note that a bayman must hold a permit from the State Conservation Department. See §101.01(f). The boundaries of the approved areas are those prescribed by the Notice of June 9, 1955 of the State Conservation Department (Bureau of Marine Fisheries; Shellfisheries Management Unit); they are wider than those found in S.C. §164a(2)(part).

Subsection (b) is derived without substantive change from S.C. §164a Reg. 1.

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 103 ESTABLISHMENTS ENGAGED IN PREPARING, PRESERVING OR SMOKING FISH

Health Code Reg. § 103.00 INTRODUCTORY NOTES

Article 103 contains provisions specifically applicable to establishments engaged in preparing, preserving or smoking of fish. These provisions apply in addition to, and are to be read together with, the provisions of Articles 71, 73 and 81 which apply to the food industry generally, and the provisions of Articles 131 and 135 which govern respectively buildings generally and commercial premises. The establishments regulated under this article require permits as wholesale food establishments or retail food establishments, pursuant to Articles 83 and 85 respectively.

Certain provisions concerning food establishments in the former Sanitary Code have been omitted. Separation of processing rooms required by S.C. §148 Reg. 86(1st paragraph) is no longer necessary; neither are the requirements formerly contained in S.C. §148 Regs. 96 and 97 that each smoked fish be labeled and that vehicles used in transportation of fish be marked.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

Health Code Reg. § 111.00 INTRODUCTORY NOTES

Article 111 dealing with milk and milk products and certain dairy products, and the related articles in this field, Article 113, Frozen Desserts, and Article 115, Formula Milk for Infants, constitute a revision of approximately one-fifth of the former Sanitary Code.

Article 111 is derived from S.C. §§2(31) through (50), 151 151a, 151c, 152, 153, 154, 155, 155a and Regulations, 155b, 155c and Regulations, 155d, 155e, 156 and Regulations, 157a, 158, 159, 159a, 159b and Regulations, 159c and 179.

The problem of milk control for New York City is one of tremendous magnitude. Every day New Yorkers consume about 3,200,000 quarts of fluid milk and, as noted in the Department's 1955-56 Annual Report, "the City's milk comes from 1,000,000 cows on 47,000 dairy farms scattered over New York, New Jersey, Vermont and parts of Pennsylvania. I t flows through 380 country milk stations and 35 bottling-pasteurizing plants within the City."

The New York City Board of Health has long played a pioneering role in protecting the public from bad milk and in assuring a continued supply of safe and wholesome fluid milk and milk products. The prevalence of milk-borne diseases, particularly infant diarrhea, was largely responsible for the inauguration of farm inspections in 1912. The success of the milk control program for New York City is demonstrated by the changed epidemiological picture; there have been no milk-borne diseases in New York City for more than a quarter of a century. As a result of this improvement of conditions, however, the regulations contained in this article of the revised Code are more restrictive than is realistically required by current needs. New technological advances, such as the almost universal use of mechanical refrigeration in retail stores and in the home, the development of effective means of in-place cleaning of equipment, and the more recent use of bulk holding tanks on dairy farms, and its concomitant effects on marketing practices and inspection of the raw milk supply, make appropriate further revision, along the lines outlined in a preliminary draft of this article. (Second Draft of Article 101 of the revision of New York City Sanitary Code, Milk and Milk Products, dated April, 1958). It is the goal of the Board of Health to assure a continued supply of safe and wholesome milk and milk products, produced under modern standards of sanitary science, without, at the same time, imposing restrictions on the farmer, the milk processor, and the distributor of milk and milk products, which may inhibit the further technological development of dairy science. This was emphasized in an official statement of the Board of Health of February 23, 1959 which reads in part:

"The Board has agreed that they will give further study to a number of Code requirements, which in the light of current knowledge and the best modern public health practices, may no longer be necessary. Elimination of such provisions now, the Board agreed, may substantially affect economic, trade and labor practices in the milk industry. For that reason, the Board was not willing to eliminate them without further study and consideration. Therefore, after adoption of the revised Code, the Board plans to review again, in detail, within the next year, those regulations of the milk and ice cream sections that do not appear to be necessary for public health protection."

Article 111 is concerned with virtually every health aspect of milk control, from the dairy cow on the farm through wholesale distribution of the finished product. In addition, there are specific requirements on containers and methods of dispensing milk and milk products to the consumer. The materials have been arranged so as to facilitate their use by Department personnel and the general public, including the dairy industry. The article is divided into three components: (1) general and administrative control, (2) standards for the product, and (3) control of the process of milk production.

Article 111 was substantially revised by resolutions of the Board of Health adopted on January 16, 1969 to provide greater uniformity with the United States Public Health Service Grade A Pasteurized Milk Ordinance of 1965 add with Part 3 of the New York State Sanitary Code (as revised concurrently with this resolution). Such revision will also facilitate reciprocity agreements between States and between the City and State of New York to reduce duplication of inspection, remove trade barriers and permit freer flow ofmilk and milk products which meet the uniformly high standards prescribed by this Code, the State Sanitary Code and the 1965 Public Health Service Grade A Pasteurized Milk Ordinance. These resolutions, therefore, go far in implementing the intent of the Board as hereinabove expressed.

Applicable sections of Article 111 were amended by resolution adopted on January 16, 1975 to provide standards for and permit the sale of ultra-pasteurized milk and milk products in conformance with the recently promulgated Federal standards of identity and quality therefore (21 CFR Part 18, revised September 18, 1973).

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 111.01

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.01 Scope.

(a) In addition to the provisions of this article, Articles 81, 131, 135, 143 and 151 of this Code apply to places in which milk or milk products are produced, handled, kept or stored, including but not limited to a dairy farm, transfer station, receiving station or milk processing plant, and Articles 71 and 73 of this Code apply to milk, milk products and food used in the production of milk products.

(b) Except as otherwise provided in §111.21, this article does not apply to the processing of (1) milk, cream, half and half, condensed milk, condensed skimmed milk, flavored milk drink or ice cream mix which has been sterilized and packed in hermetically-sealed containers of (2) sweetened condensed milk or sweetened condensed skimmed milk to be used for manufacturing purposes only, other than for manufacture of ice cream mix, frozen desserts or milk products, which is kept in containers of not less than ten gallons and which during manufacture is heated to at least 200°F for at least 15 seconds or its equivalent.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

Subsection (a) is new. The sanitary condition of places in which mild and mild products are sold, offered for sale, served or stored are governed also by the general food establishment provisions of this article (Article 81). Thus, S.C. §156 Regs. 140, 141, 142, 143,145(last sentence) and 149 are here omitted but are covered in the cited articles. See comparison, on the question of State control of milk sanitation, Public Health Law §1400. The subsection was amended by resolution adopted on January 16, 1969 to additionally apply its provisions to transfer stations.

Subsection (b) was derived without substantive change from S.C. §155(2) and §156 Reg. 5(3). Some detail regarding the type and color of containers of the named products for manufacturing purposes is omitted. The subsection was amended by resolution adopted on October 18, 1966 by adding milk, cream and half and half to the list or products to which Article 111 is not applicable. The subsection was further amended by resolution adopted on January 16, 1969 to amend the list of products to which Article 111 is not applicable by changing "flavored drink" to "flavored milk drink" in such list.

In People ex rel Cox v. Justices of the Court of Special Sessions, 7 Hun. 214 (Sup. Ct. General Term 1876), a conviction under the Sanitary Code for selling adulterated milk was upheld against constitutional objections. The court held that the Legislature had validly delegated to the Board of Health the power to enact such ordinances. Then in **Polinsky v. People,** 11 Hun. 390 (Sup. Ct. General Term 1877) **aff'd.,** 73 N.Y. 65 (1878) the ordinances were upheld notwithstanding the existence of a State statute covering the same offenses but prescribing a lesser penalty.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.03 Definitions.

When used in this title:

(a) Dairy farm means any place or premises where one or more cows or goats are kept and from which a part or all of the milk or milk products is provided, offered for sale or sold to a transfer station, receiving station or milk processing plant.

(b) Milk means the lacteal secretion of a cow or goat. Milk is not considered fit for human consumption unless (1) it is whole, fresh and clean, (2) is obtained by the complete milking of healthy cows which have been properly fed and kept as required by this Code or other applicable law or regulation, (3) is practically colostrum free and has not been obtained 15 days before and five days after calving, and (4) meets all other requirements of this Code.

(c) Prepasteurized milk means milk to be pasteurized or sterilized before sale to consumers.

(d) Milk product means cream, sour cream, cultured milk, cultured milk products, sterilized milk, sterilized milk products, enzyme milk, flavored milk drink, half and half, low sodium milk, modified milk, skimmed milk, modified skimmed milk, low fat milk or modified low fat milk. The term includes such products (1) whether sold or distributed as Approved, Certified or Certified Raw pursuant to this article or (2) whether manufactured as condensed, evaporated or concentrated or as sweetened condensed, sweetened evaporated or sweetened concentrated, but does not include any product to which this article does not apply as specified in §11.01 (b).

(e) Receiving station means any place, premises or establishment, other than a bulk processing plant, to which prepasteurized milk is brought from one or more dairy farms for the purpose of collecting the same for transportation to a transfer station, milk processing plant or frozen desserts plant.

(f) Transfer station means any place, premises or establishment, other than a receiving station, where milk or a milk product is transferred directly from one transport tank to another.

(g) Milk processing plant or processing plant means any place, premises or establishment, other than a frozen desserts plant, in which milk or a milk product is pasteurized, sterilized or otherwise processed.

(h) Pasteurization means the process of heating every particle of milk or a milk product continuously for the time and at the temperature specified in § 111.25 and cooling as required by such section; and pasteurized means, when applied to milk or a milk product, that the same has been subjected to this process.

(i) Ultra-pasteurization means the process of heating every particle of milk or milk product continuously for the time and at the temperature specified in §111.25 and cooling as required by this section; and ultra-pasteurization means, when applied to milk or a milk product, that the same has been subjected to this process.

(j) Sterilization means the process of heating milk or a milk product sufficiently to destroy the microorganisms present and packaging in a hermetically sealed container; and sterilized means, when applied to milk or a milk product, that the same has been subjected to this process.

(k) Hermetically-sealed means sealed air-tight by a process of fusion, wedging or crimping, or by any other method approved by the Department.

(l) Sanitization means the process of applying any effective method or substance acceptable to the Department to a clean surface for the destruction of pathogens, and of other organisms as far as is practicable, provided such treatment does not adversely affect the milk or milk product, the health of the consumer, or the equipment, utensil or container to which it is applied.

(m) Misbranded milk and milk products means milk and milk products (1) the labeling of which is false or misleading in any particular; or (2) which do not conform to their definitions as contained in this Code; or (3) which are not labeled in accordance with §111.61 of this article; or (4) which do not comply with §73.05 of this Code.

(n) Milk producer means any person who operates a dairy farm and supplies, offers for sale or sells milk or a milk product to a transfer station, receiving station or milk processing plant.

(o) Milk distributor means any person holding a permit to sell milk or a milk product to consumers, storekeepers or other distributors.

(p) Official laboratory means a laboratory operated by a governmental agency which performs biological, chemical or physical examinations of milk or milk products.

(p) Officially designated laboratory means a commercial laboratory, or milk industry laboratory authorized by the supervising state agency to perform examinations on samples of milk or milk products submitted by or for such agency.

(q) Person means any individual, partnership, corporation, company, firm, trustee or association.

(r) Qualified inspector means a person who holds a certificate issued by the State Commission or his duly designated representative qualifying such person to perform inspections of dairy farms for operators of transfer stations, receiving stations or milk processing plants.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section was revised and renumbered by resolution adopted January 16, 1969 to provide greater uniformity with related definitions of the State Sanitary Code and the 1965 U.S. Public Health Service Grade A Pasteurized Milk Ordinance.

Subsection (a), dairy farm, was amended by the resolution adopted January 16, 1969.

Subsection (b), milk is derived without substantive change from S.C. §2(31) and S.C. §156(2).

Subsection (c), prepasteurized milk, is new and has been substituted for the former term, raw milk, in this Article.

Subsection (d), milk products, is derived from S.C. §2(44). Homogenized milk is milk, not a milk product; the same is true of Vitamin D milk. Both terms are omitted. The term "Vitamin D milk products" is omitted. Formula milk is here omitted but is covered by Article 115. Definitions of dried milk (S.C. §2(36)) and dried skimmed milk (S.C. §2(37)) are omitted. Dried milk products are not regulated by this article but are subject to the general food provisions of this title. S.C. §2(34) and (35), definitions of condensed milk and condensed skimmed milk are covered by the instant definition and are omitted as separate definitions. Cultured milk, sterilized milk products, low fat milk and modified low fat milk were added and flavored drink was amended to flavored milk drink by the resolution adopted January 16, 1969.

Subsection (e), receiving station, was amended by the resolution adopted January 16, 1969.

Subsection (f), transfer station, is new.

Subsection (g), milk processing plant or processing plant, was derived from former subsection (c) and amended by the resolution adopted January 16, 1969.

Subsection (h), pasteurization, is new.

Subsection (i), sterilization, is new.

A new subsection (i) was added and former subsections (i) through (r) were relettered to be subsections (j) through (s) by resolution adopted on January 16, 1975 to provide standards for and permit the sale of ultra-pasteurized milk or milk products in conformance with the recently promulgated Federal standards of identity and quality therefor (21 CFR Part 18, revised September 28, 1973).

Subsection (j), hermetically-sealed, was added as subsection (f) by resolution adopted on October 18, 1966 and renumbered by resolution adopted January 16, 1969.

Subsection (k), sanitization, is new.

Subsection (l), misbranded milk, is new.

Subsection (m), milk producer, is new.

Subsection (n), milk distributor, is new.

Subsection (o), official laboratory, is new.

Subsection (p), officially designated laboratory, is new.

Subsection (q), person, is new.

Subsection (r), qualified inspector, is new.

24 RCNY 111.05

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.05 Transfer stations, receiving stations and milk processing plants; Class A permits.

(a) No person shall operate a transfer station, receiving station or milk processing plant without a permit issued by the Commissioner, and no person shall ship milk or a milk product into the City unless the transfer station, receiving station or milk processing plant from which the milk or milk product was obtained operates pursuant to such a permit issued by the Commissioner. Permits issued pursuant to this section shall be known as Class A permits. A Class A permit shall not entitle the holder thereof to sell, transport or distribute milk or milk products, other than prepasteurized milk or prepasteurized milk products, in the City of New York, unless he shall hold in addition, a Class B permit issued under §111.07.

(b) No Class A permit shall be issued until the Department is satisfied, after inspection, that the transfer station, receiving station or milk processing plant will be operated in accordance with the requirements of this code or unless the New York State Department of Health has certified that such stations or plants are and will continue to be operated in accordance with the requirements equivalent to those prescribed in this code and that the milk or milk products are

obtained from dairy farms approved as a source of supply pursuant to §111.13.

(c) Upon receipt of laboratory or inspection report or other findings that milk or milk products shipped into the City fail to meet the standards of this code, or where milk or milk products are shipped into the City during any emergency situation which may affect the sanitary quality of such milk or milk products, the Commissioner may authorize such inspections of the transfer station, receiving station or milk processing plant involved as, in his opinion, are necessary. The permittee shall bear the costs of such inspections as specified in §5.07 of this code.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. § 155(1) through (3)(part) and S.C. § 156 Regs. 1, 2(c)(part) and 166(part). It sets forth Class A permit requirements for receiving stations and milk processing plants.

Agriculture and Market Laws Article 21 requires all "milk dealer's" to obtain a State license. The quoted term is defined in Agriculture and Markets Law §2 53. On other required State licenses for persons in charge of receiving stations, milk plants and testing operations, see Agriculture and Markets Law §§57 and 57-a. The Public Health Law §1420 requires a permit to import milk and cream into New York State.

In **People v. Borden's Condensed Milk Co.,** 165 App. Div. 711,151 N.Y.S. 547 (2d Dept. 1915), **aff'd** 216 N.Y. 658, 110 N.E. 1046 1915), it was held that a permit issued by the Department of Health to operate a pasteurizing plant did not make lawful the public nuisances created by noisy processes.

Penalties for failure to obtain a license to operate a milk gathering station as required by the Agriculture and Markets Law were imposed in: **People v. Perretta,** 253 N.Y. 305,171 N.E. 72, 84 A.L.R. 636 (1930); **People v. Beakes Dairy Co.,** 222 N.Y. 416, 119 N.E. 115, 3 A.L.R. 1260 (1918); **People v. Shoemaker,** 228 App. Div. 314,239 N.Y.S. 71 (4th Dept. 1930), aff'd, without opinion 254 N.Y. 567, 173 N.E. 869 (1930); also see **Baldwin v. Burdick,** 243 App. Div. 250, 276 N.Y.S. 675 (3rd Dept. 1935).

For cases dealing with the power of the Commissioner of Agriculture to issue, deny the issuance of, or revoke a license to operate a receiving station see: **Application of Dairymen's League Co-Operative Assn. Inc.,** 282 App. Div. 69, 121 N.Y.S. 2d 857 (3d Dept. 1953), appeal dismissed, 306 N.Y. 595, 115 N.E. 2d 825 (1953); **Friendship Dairies, Inc. v. DuMond,** 284 App. Div. 147, 131 N.Y.S. 2d 51 (3rd Dept. 1954).

Subsection (a) was amended by resolution adopted on October 19, 1967, which added the last sentence.

Subsection (a) was further oriented by resolution adopted January 16, 1969 to additionally apply its provisions to transfer stations and to change the term raw milk to prepasteurized milk.

Subsection (b) was amended by resolution adopted January 16, 1969 to authorize the Commissioner to accept certification from the State Health Department that an applicant for a Class A permit complies with equivalent requirements in lieu of Department inspection for compliance with this code. This will enable the Department to phase out its country milk inspection program. Such amendment additionally applied the provisions of this subsection to transfer stations. It was further amended by resolution adopted on October 22, 1970, which deleted the phrase "Except as provided in subsection (c) of this section."

Subsection (c) was amended by resolution adopted on October 22, 1970, which eliminated the provisions relating to acceptance of certification by local health authorities of milk processing plants located outside the City shipping milk or milk products into the City for manufacturing purposes. The resolution also added the present provisions relating to

inspections of transfer stations, receiving stations and milk processing plants located outside the City.

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 111.07

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.07 Distribution of milk and milk products; Class B permit.

(a) No person shall possess, offer for sale, sell, give away, transport, whether for himself or others, deliver or distribute milk or a milk product without a Class V permit issued by the Commissioner pursuant to subsection (b) of this section. No such permit is required, however, for the sale or distribution of milk or a milk product directly to the consumer at a retail establishment.

(b) The Commissioner may issue a Class B permit to a person meeting the following requirements and under the following conditions and limitations:

(1) The Department is satisfied that the operations for which the permit is to be issued will be carried out in the manner required by this Code;

(2) The permittee will maintain or operate a depot which meets the requirements of §111.09, or use the facilities of

a milk processing plant or depot under a Class A or Class B permit, respectively, issued pursuant to this article as evidenced by a written authorization, which shall accompany his application, to use such facilities;

(3) He shall transfer milk or milk products only at the milk processing plant or depot concerned; and,

(4) He shall keep separate daily records of the type, quantity and source of all products purchased, stored or returned to the milk processing plant or depot concerned.

(c) A Class A or Class B permittee shall immediately notify the Department when a Class B permittee no longer uses facilities of the milk processing plant or depot operated by such Class A or B permittee. A Class A or Class B permittee who has authorized a Class B permittee to use his facilities and the person so authorized shall be jointly and severally responsible for all violations of this Code occurring at such facilities.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived without substantive change from S.C. §155 (1) through (3)(part) and S.C. §156 Reg. 3(part). Some unnecessary detail is eliminated. This section and the preceding and following sections continue the Class A, B and C permit structure and depot requirement of the former code.

The right of the Board of Health to require a permit for the sale of milk was upheld in **People ex rel Lieberman v. Vandecarr,** 199 U.S. 552,26 Sup. Ct. 144,50 L. Ed. 305 (1905), affirming 175 N.Y. 440, 67 N.E. 913 (1903). On the right of the Commissioner or Board to revoke a permit issued under this section see: **Stracquadanio v. Dept. of Health,** 285 N.Y. 93, 32 N.E. 2d 806 (1941) (also holding constitutional the limitation on the number of Class C permittees); **People, ex rel Lodes v Dept. of Health,** 189 N.Y. 187, 82 N.E. 187 (1907); **Metropolitan Milk and Cream Co. v. City of New York, et al.,** 113 App. Div. 377, 98 N.Y.S. 894 (1st Dept. 1906), **aff'd** without opinion 186 N.Y. 533, 78 N.E. 1107 (1906); **Silverman v. Dept. of Health,** 252 App. Div. 678, 300 N.Y.S. 979 (1st Dept. 1937); **Henry Morris Inc. v. Dept. of Health,** 234 App. Div. 99, 254 N.Y.S. 99 (1st Dept. 1931), appeal dismissed 260 N.Y. 660, 184 N.E. 135 (1931); **People ex rel Agins and Klugerman, Inc. v. Board of Health Of New York City,** 197 App. Div. 562, 189 N.Y.S. 507 (1st Dept. 1921); **In re Morris,** 128 Misc. 280,219 N.Y.S. 143 (Sup. Ct. N.Y. Co. 1926), **aff'd** without opinion 219 App. Div. 810, 220 N.Y.S. 890 (1st Dept. 1927).

For cases dealing with the power of the Commissioner of Agriculture and Markets to revoke a license to sell milk issued under the Agriculture and Markets law or to deny an application for such license see: **Elite Dairy Products Inc. v. Ten Eych,** 271 N.Y. 488, 3 N.E. 2d 606 (1936); **Application of Eckelman,** 283 App. Div. 276, 127 N.Y.S. 2d 287 (3d Dept. 1954); **Application of Williams,** 282 App. Div. 76, 121 N.Y.S. 2d 830 (3d Dept. 1953); **Application of Kraft Cheese Co., Inc.,** 263 App. Div. 761, 30 N.Y.S. 2d 920 (3d Dept. 1941); **Application of Linden Farms Milk and Cream Co. Inc.,** 257 App. Div. 737, 15 N.Y.S. 2d 658 (3d Dept. 1939); **People ex rel Levy Dairy Co. v. Wilson,** 179 App. Div. 416, 166 N.Y.S. 211 (3d Dept. 1917); **Dellwood Dairy Co., Inc. v. Brown,** 106 N.Y.S. 2d 749 (Sup. Ct. Nassau Co. 1951).

For cases dealing with license requirements governing milk dealers imposed by other cities and towns in the state of New York see: **Langs Creamery, Inc. v. City of Niagara Falls,** 251 N.Y. 343, 167 N.E. 464 **(1929); People ex rel Larrabee v. Mulholland,** 82 N.Y. 324, 37 A.R. 568 (1880); **People ex rel Schulz v. Hamilton,** 188 App. Div. 783, 177 N.Y.S. 222 (4th Dept. 1919); **Village of Herkimer v. Potter,** 124 Misc. 57, 207 N.Y.S. 35 (Sup. Ct. Herkimer Co. 1924); **People ex rel Shelter v. Dwen et al.,** 66 Misc. 24, 116 N.Y.S. 502 (Sup. Ct. Monroe Co. 1909); **People ex rel Staub v. Gilman,** 103 N.Y.S. 954 (Sup. Ct. Monroe Co. 1907).

Subsection (a) was amended by resolution adopted on October 19, 1967 which added the word "possess' and the

phrase "transport deliver." The resolution also eliminated the reference to Class A and Class C permits.

Subsection (b) was amended by resolution adopted on February 26, 1962 to make it optional for a Class B permittee to use his own depot or the facilities of a Class A permittee or another Class B permittee. The resolution also added paragraphs 3 and 4. Milk permit holders are required to comply with federal, state and other city laws. An executive order of the Commissioner makes it mandatory for an applicant for a milk permit to submit with the application proof that he has obtained a license from the State Department of Agriculture and Markets.

Subsection (c) was repealed by resolution adopted on October 19, 1967.

Subsection (d) was amended by said resolution to require a Class A or Class B permittee to notify the Department when a Class B permittee no longer uses the facilities of such Class A or Class B permittee. It also added the provision that joint occupants of a milk processing plant or depot shall be jointly and severally responsible for violations occurring at such facilities.

Subsection (d) was relettered subsection (c) and as so relettered was amended by resolution adopted on October 19, 1967 which eliminated reference to Class C permits.

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.09 Distribution of milk and milk products; depots.

A depot, whether or not part of a milk processing plant, shall have a properly constructed refrigerating room with a floor area and height sufficient to store products in a sanitary manner satisfactory to the Department. A refrigerating room constructed after August 1, 1939, shall be of such larger floor area as will permit all milk or milk products stored in the depot to be placed in the room as to allow for at least a two foot passageway between each four rows of stacked cases or cans but in no event shall the room have less than 100 square feet of floor space. If milk or milk products are handled in bulk, the depot shall have a washroom and, if splitting of milk, or splitting, standardization or bottling of milk products, or dumping of such products from bottles is performed, it shall have a milk handling room. A depot shall meet all additional applicable requirements of this Code. Class A and Class B permittees shall store all milk and milk products, except when transported for sale or distribution, at such depot under proper refrigeration and at no other place.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived without substantive change from S.C. §156 Reg. 3(2), (3) and (4)(a) and (b). Some of the detail has been eliminated. See also §111.07 concerning Class B and C permits.

This section was amended by resolution adopted on February 26, 1962 by adding the requirement that all milk and milk products, except when transported, shall be stored only at depots under proper refrigeration. The resolution also eliminated the restriction against joint occupancy.

This section was further amended by resolution adopted on October 19, 1967 which eliminated the reference to Class C permittees.

ARTICLE 111 MILK AND MILK PRODUCTS

§111.11 Distribution of milk and milk products; vehicles; vehicle identification.

(a) All vehicles used for transportation of pasteurized milk and milk products shall be constructed and operated so that the milk and milk products are maintained at 50°F or less and are protected from sun, freezing, and contamination.

(b) No vehicle, other than a tank truck, shall be used in the transportation or delivery of milk or a milk product unless an identifying plate has been issued by the Department. The plate shall be securely attached to the right side of the vehicle and shall be visible at all times. Plates shall be issued only for vehicles operated by permittees under this article. The issuance of identifying plates pursuant to this section shall be subject to applicable provisions of Article 5 of this Code relating to permits.

(c) No milk producer or milk distributor shall transfer, dip or ladle milk or milk products from one container or tank truck to another on the street, in any vehicle, store, or in any place except a milk processing plant, receiving station, transfer station or milk-house especially used for that purpose.

24 RCNY 111.13

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.13 General requirements; approval and supervision of dairy farms.

(a) No Class A permittee shall receive prepasteurized milk directly from a dairy farm unless the Department has approved the dairy farm as a source of supply. No such approval shall be given unless the Department is satisfied that such dairy farm meets the standards of §161.25, if located within the City, or §§111.63 through 111.73, if located outside the City or unless the New York State Department of Health has certified that such dairy farm is and will continue to be operated in accordance with requirements equivalent to those prescribed in this Code.

(b) A Class A permittee shall reinspect a dairy farm which has been approved as a source of supply by the Department and which ships prepasteurized milk directly to the plant or station concerned. Re-inspections shall be made by a qualified inspector designated or employed by such plant or station at least once every six months. The qualified inspector shall file with the Class A permittee concerned an inspection report containing such information on the operation and sanitary condition of the dairy farm as the Department may require.

(c) When a Class A permittee receives an inspection report from one of its qualified inspectors, which reveals that the milk from a dairy farm does not meet the standards of this Code, or that the dairy farm is operating in violation of the Code, the permittee shall immediately cease to accept milk from such dairy farm until further inspection by a qualified inspector designated by the permittee and receipt of an inspection report reveals that the milk meets the standards of this Code or that the dairy farm is again operating in accordance with the Code. Inspection reports, a record of every dairy farm from which milk is obtained and a record of rejection of milk shall be maintained by the milk processing plant, receiving station or transfer station concerned for at least two years.

(d) When, in the opinion of the Department, a dairy farm fails to meet applicable requirements of this Code, the Department may withdraw its approval of the dairy farm as a source of supply. No Class A permittee shall thereafter receive milk from such dairy farm until the Department again approves it as a source of supply.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §156 Regs. 2, 5(1) and 8. Dairy farms are to be reinspected at least twice a year. The former code required industry inspection of dairy farms on an annual basis only. The usual "deck inspection" of milk from each dairy farm is not practicable under the newer bulk holding tank and pick-up arrangements, so that the extra reinspections are necessary to insure a good supply of milk. If, as a result of a reinspection, it is ascertained that the dairy farm is not meeting the standards of this Code, acceptance of milk therefrom must cease until such time as further reinspection shows effective compliance with Code standards.

The right of a Department inspector to order a receiving station or processing plant not to accept milk from an unapproved farm was upheld in **Bellows v. Raynor,** 207 N.Y. 389, N.E. 181 (1913).

This section was amended by resolution adopted on January 16, 1969 to delete former subdivision (d) thereof and to conform its provisions to other amendments of this article adopted on the same date and designed to provide greater uniformity with the State Department of Health requirements and those of the 1965 U.S. Public Health Grade A Pasteurized Milk Ordinance and to authorize the Department to approve a dairy farm on the basis of certification by the State Health Department that such farm complies with requirements equivalent to those prescribed in this Code.

24 RCNY 111.15

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.15 General requirements; exclusion of unfit milk and milk products or milk or milk products obtained from unapproved sources.

(a) No person shall possess, offer for sale, sell, give away or distribute milk or a milk product if it is obtained from a transfer station, receiving station or milk processing plant or other source for which no permit has been issued pursuant to §§111.05 or 111.07 or if it is excluded from sale or distribution pursuant to this article.

(b) The Department may order that milk or a milk product be excluded from sale or distribution in the City if:

(1) Investigation, bacteriological or other sampling by the Department or by a local public health department or other government agency, reveals that milk or a milk product, whether raw or pasteurized, or a food ingredient used in the production of a milk product fails to meet the standards imposed by this title or that the sale or distribution of such milk or milk product may otherwise adversely affect the public health; or,

(2) Inspection or investigation by the Department or by a local public health department or other governmental agency reveals that the requirements of this title relating to physical facilities and layout, equipment or sanitary condition of a dairy farm, transfer station, receiving station, milk processing plant or vehicle or carrier used to transport milk or a milk product are not being complied with.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

Subsection (a) is derived in part from S.C. §151 and § 156 Reg. 5(2). It is a broad prohibition against the sale or distribution of unfit milk or milk products or the sale or distribution of milk or milk products obtained from unapproved sources. On State prohibitions of delivery of certain milk and milk products to milk plants and manufacturing establishments, see Agriculture and Markets Law

Subsection (b) is derived from S.C. §156 Regs. 4, 5(4) and 6. The Department is given broad authority to order that milk or milk products be excluded when the standards of this article are not being met. In addition to the authority here granted, the Department, by virtue of Title 1, has broad power to seize and condemn, suspend or revoke a permit and to inspect. S.C. § 153 relating to seizure and condemnation of adulterated milk or milk products is here omitted; it is covered by section 3.03.

This section is intended as a further means of protecting the public from unfit milk or milk products and is in addition to the provisions of Articles 71 and 73. It thus replaces part of S.C. §152 and §154 without creating a substantive change.

For early cases upholding the Departmental inspectors' methods of testing milk for adulteration, see: **People v. Butler,** 140 App. Div. 705, 125 N.Y.S. 556 (4th Dept. 1910); **People v. Bailey,** 136 App. Div. 130, 120 N.Y.S. 618 (3d Dept. 1909). In **People v. Kehoe,** 246 N.Y. 592, 159 N.E. 664 (1927), the defendants were convicted under the Penal Law of conspiring to bring into the City of New York cream from unapproved sources and the provisions of S.C. §156 Reg. 5 were held constitutional.

This section was amended by resolution adopted on January 16, 1969 to additionally apply its provisions to transfer stations and to milk or milk products found in the possession of a person.

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 111.17

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.17 Standards generally; milk and milk products to meet requirements of Code.

(a) No person shall possess, offer for sale, give away or distribute milk if any substance has been added thereto except Vitamin D when added pursuant to §111.31.

(b) No person shall possess, offer for sale, sell, give away or distribute a milk product unless it meets applicable standards imposed for such milk product by this article.

(c) No ingredient shall be added to a milk product unless it is expressly authorized by this article or is acceptable to the Department.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §155(1) (part). It is designed primarily to differentiate between milk and milk products. Milk is the lacteal secretion of a cow or goat. Nothing may be added to it except Vitamin D. It must be pasteurized except when sold as raw certified milk pursuant to §111.57. It may be homogenized. Note that §111.19 prohibits the sale of various types of milk, **e.g.,** Grade A or Grade B milk. S.C.§ 152 contained certain provisions governing adulteration of milk; these provisions are incorporated in specific requirements of this article as well as provisions of Articles 71 and 73.

Subsection (b) relates to milk products. The term is defined in §111.03 and there are specific standards or definitions in this Code for each authorized milk product.

S.C. §156 Reg. 57 which contained cross-references to certain regulations of the former code is omitted as no longer necessary in view of the format of the revised Code. This section replaces and covers the substance of S.C. §179, prohibition on the manufacture of imitation milk, cream or half and half. Agriculture and Markets Law §50 prohibits imitation or adulterated milk, cream or milk and cream.

For cases dealing with adulteration of milk, either by the addition of water or by the skimming of cream, under former sections of the Sanitary Code or State law see: **People v. Abramson,** 208 N.Y. 138, 101 N.E. 849 (1913); **People v. West,** 106 N.Y. 293, 12 N.E. 610 (1887); **People v. Kibler,** 106 N.Y. 321, 12 N.E. 795 (1887); **Verona Central Cheese Co. v. Murtagh,** 50 N.Y. 314 (1872); **People v. Timmerman,** 79 App. Div. 565, 80 N.Y.S. 285 (1st Dept. 1903), **aff'd,** 179 N.Y. 550, 71 N.E. 1136 (1904); **People v. Koster,** 121 App. Div. 852, 106 N.Y.S. 793 (1st Dept. 1907).

The Court of Appeals held constitutional a State statute similar to S.C. §§151 and 152 in a case involving the offer for sale of three cans of milk containing a foreign substance, formaldehyde. Although it was neither alleged nor proved by the State that formaldehyde is unwholesome or that it renders the milk less wholesome, or that fraud was involved, the court upheld the judgment for the plaintiff holding that the Legislature has the power to prevent the sale of impure milk. **People v. Bowen,** 182 N.Y. 1, 74 N.E. 489 (1905). **In People v. Hart,** 110 Misc. 714, 181 N.Y.S. 796 (Sup. Ct. 1920), it was held that the defendant violated the Agriculture and Markets Law by selling watered milk to a cheese factory even though the water was added accidentally and its was represented as "milk with an excess

Subsections (a) and (b) were amended by resolution adopted on January 16, 1969 to additionally apply their provisions to milk or a milk product found in the possession of a person.

Subsection (c) was added by resolution adopted on January 16, 1969 to effect the intent of the Board to maintain the identity of a milk product for the benefit of the consumer by limiting the ingredients which may be added thereto.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.19 Standards generally; designation of milk and milk products as Grade A, Certified or Certified Raw; other designations or grades prohibited.

No person shall possess, offer for sale, sell, give away or distribute milk or a milk product except under the designation of Grade A or, if the milk or milk product is produced in accordance with and meets the requirements of §111.57, under the designation of Certified or Certified Raw. No other designations or grades shall be used.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §156(1). It has been reworded as a general requirement that all milk or milk products sold or distributed in this City be designated Approved or Certified or Certified Raw. On labeling of

containers, see §111.61. Adulterated milk cannot be called by a different name or represented as something else so as to avoid prosecution **People v. Hart,** 110 Misc. 714, 181 N.Y.S. 796 (Sup. Ct. 1920). Also see: **Defiance Milk Products Co. v. DuMond,** 309 N.Y. 537, 132 N.E. 2d 829 (1956).

This section was amended by resolution adopted on January 16, 1969 to additionally apply its provision to milk or a milk product found in the possession of a person.

Section 111.19 was amended by resolution adopted on June 27, 1985 to allow the words "Grade A" to appear on milk and milk product labels. The U.S. Public Health Service requires milk plants selling interstate or supplying interstate carriers to use this designation.

The Schedule of Section Headings of Article 111 was further amended by resolution adopted on June 27, 1985 to amend the heading for §111.19.

24 RCNY 111.21

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.21 Standards generally; bacteria standards; sampling.

(a) Prepasteurized milk shall not contain more than 100,000 bacteria per cubic centimeter; however, prepasteurized milk which is shipped from a receiving station to a milk processing plant may contain not more than 300,000 bacteria per cubic centimeter after shipment and until pasteurized. Prepasteurized skimmed milk shall contain not more than 300,000 bacteria per cubic centimeter until pasteurized.

(b) Prepasteurized cream shall not contain more than 300,000 bacteria per cubic centimeter.

(c) Milk, skimmed milk, modified skimmed milk, flavored milk, flavored milk drink, low sodium milk, low fat milk, modified low fat milk, half and half and enzyme milk shall not contain more than 20,000 bacteria per cubic centimeter or more than 10 coliform organisms per cubic centimeter at any time after pasteurization and until delivered to the consumer.

(d) Cream shall not contain more than 50,000 bacteria per cubic centimeter or more than 10 coliform organisms per cubic centimeter at any time after pasteurization and until it reaches the consumer.

(e) Ultra-pasteurized milk, skimmed milk, modified skimmed milk, flavored milk, flavored milk drink, low sodium milk, low fat milk, modified low fat milk, half & half, enzyme milk, light cream, medium cream, and heavy cream shall not contain more than 1,000 bacteria per cubic centimeter, or more than (1) coliform organism per cubic centimeter at any time after ultra-pasteurization and until delivery to the consumer.

(f) Cultured milk and milk products shall not contain more than 10 coliform organisms per cubic centimeter at any time after pasteurization and before they reach the consumer.

(g) Sterilized milk and milk products shall be free of all micro-organisms when stored at room temperature (70-100°F) for a period of 60 days.

(h) Milk or a milk product which does not meet the bacterial standards of subsections (a) through (f), of this section shall not be possessed, sold or distributed. A permittee shall make bacteria counts of samples of milk or milk products for the purpose of determining whether the applicable bacteria standards have been met. Such bacteria counts shall be made in accordance with the latest edition of the publication, Standard Methods For the Examination of Dairy Products, issued by the American Public Health Association.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived without substantive change from S.C. §156 Reg. 50 although some clarifying changes have been made in the bacteria standards to conform to current practice.

This section was amended by resolution adopted on January 16, 1969 to provide bacteria standards of greater uniformity with the requirements of the State Health Department and the 1965 Public Health Service Grade A Pasteurized Milk Ordinance.

A new subsection (e) was added and former subsections (e) through (g) were relettered to be subsections (i) through (h) by resolution adopted on January 16, 1975 to provide bacterial standards for ultra-pasteurized milk and milk products for which Federal standards of identity and quality were recently promulgated (21 CFR Part 18, revised September 28, 1973).

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 111.23

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.23 Standards generally; temperature of prepasteurized, pasteurized and ultra-pasteurized milk and milk products.

Except as otherwise provided in §111.71, prepasteurized milk and milk products shall be maintained at 50 degrees Fahrenheit or less until processed. All pasteurized and ultra-pasteurized milk and milk products, except those to be cultured, shall be cooled immediately after pasteurization in approved equipment and shall be kept at a temperature of 45 degrees Fahrenheit or less. Every room in which milk or milk products are stored shall be equipped with an accurate thermometer. On delivery vehicles the temperature of milk and milk products shall not exceed 50 degrees Fahrenheit.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived without substantive change from S.C. §156 Reg. 216(part) and replaces S.C.§ 156 Reg. 127

and 70(part). Section 111.71 contains a requirement for cooling of milk at the dairy farm and provides that certain mornings and evenings milk need not be so cooled if delivered to a receiving station or milk processing plant within specified number of hours after milking. Section 111.25 contains the pasteurization requirement, and provides that the immediate cooling of the products, after holding at the required temperature, does not apply to sour cream or cultured milk products. The section replaces S.C. §156 Reg. 145 (first sentence) which required that "vessels in which milk or milk products are held for sale ... be kept in a tub, properly iced, or in an ice box or refrigerator .... It also replaces S.C. §152 (9th para.).

This section was amended by resolution adopted on January 16, 1969 to provide improved refrigeration temperature standards currently practicable by virtue of available mechanical refrigeration facilities and to provide greater uniformity with such standards as required by the State Health Department and the 1965 U.S. Public Health Service Grade A Pasteurized Milk Ordinance.

This section was further amended on January 16, 1975 to additionally apply its refrigeration temperature requirements to ultra-pasteurized milk and milk products for which Federal standards of identity and quality were recently promulgated (21 CFR Part 18, revised September 18, 1973).

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 111.25

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.25 Standards generally; pasteurization or ultra-pasteurization of milk and milk products required.

(a) No milk or milk product shall be possessed, offered for sale, sold, given away, distributed or used in the manufacture of food unless (1) the milk or milk product has been pasteurized or ultra-pasteurized pursuant to this section or (2) it meets the requirements for certified raw milk or a certified raw milk product pursuant to §111.57. No person shall ship prepasteurized milk or a prepasteurized milk product into the City unless it is to be pasteurized at a milk processing plant operating pursuant to §111.05 or a frozen desserts plant operating under a permit issued pursuant to Article 113, or unless it is certified raw milk or a certified raw milk product to be sold or distributed as such.

(b) Except as otherwise provided in subsection (c) or (d) of this section, milk or a milk product shall be pasteurized by one of the following methods or by some other equally effective method approved by the Department:

(1) Every particle is heated to a temperature of at least 145 degrees Fahrenheit and held at such temperature for at least 30 minutes; or

(2) Every particle is heated to a temperature of at least 161 degrees Fahrenheit and held at such temperature for at least 15 seconds.

(c) Milk products which have a higher milk fat content than milk and/or contain added sweeteners shall be pasteurized by one of the following methods or by some other equally effective method approved by the Department:

(1) Every particle is heated to a temperature of at least 150 degrees Fahrenheit and held continuously at or above such temperature for at least 30 minutes; or,

(2) Every particle is heated to a temperature of at least 166 degrees Fahrenheit and held continuously at or above such temperature for at least 15 seconds.

(d) Milk or a milk product designated and labeled as ultra-pasteurized shall be so processed that every particle thereof is heated to a temperature of at least 280 degrees Fahrenheit and held at such temperature for at least two (2) seconds either before or after packaging.

(e) Immediately after the required holding period, the milk or milk product, other than sour cream or a cultured milk product, shall be cooled to a temperature no higher than 45 degrees Fahrenheit as required pursuant to §111.23.

(f) Immediately after pasteurization, milk or a milk product shall be subjected to a phosphatase test in accordance with the latest edition of the publication, Standard Methods for the Examination of Dairy Products, issued by the American Public Health Association. Milk or a milk product which does not show a negative phosphatase shall be excluded from sale or distribution in the city.

(g) Ingredients other than lactic acid culture or flavoring shall be added to a cultured milk product prior to pasteurization.

(h) If milk or a milk product is to be homogenized, such processing shall take place prior to pasteurization and by a method acceptable to the Department.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

Subsection (a) is new in part although it is included by implication in the prior regulations. As to skimmed milk, it is derived without substantive change from S.C. §§156 Reg. 72(a) and (b)(part). It replaces S.C. §155c Reg. 3 which prohibited the sale of raw low sodium milk; raw low sodium milk is also prohibited even as a certified raw milk product (see §111.57). A requirement for pasteurization was held a valid exercise of the police power to protect public health, **People ex rel Ogden v. McGowan,** 118 Misc. 828, 195 N.Y.S. 286 (Sup. Ct. 1921), **aff'd** no opinion, 200 App. Div. 836, 191 N.Y.S. 946 (2d Dept. 1921).

Subsection (a) was amended by resolution adopted on January 16, 1969 to change the term raw milk to prepasteurized milk and to additionally apply its provisions to milk or a milk product found in the possession of a person.

Subsection (b) is derived from S.C. §156 Reg. 54(1). The requirement is stated as a substantive provision rather than as a definition. The temperature requirement during pasteurization is raised from 143°F to 145°F when held for 30 minutes and from 160°F to 161°F when held for 15 seconds, as a means of destroying Q fever organisms. This subsection was amended by resolution adopted on January 16, 1969 to except from its provisions those milk products covered by the new subsection (c) added by resolution on the same date.

Subsection (c) is new. It was added by resolution adopted on January 16, 1969.

Subsection (d) is also derived from §156 Reg. 54(1). It was formerly subsection (c) renumbered by resolution adopted on January 16, 1969.

Subsection (e) was formerly subsection (d) and was renumbered by resolution adopted on January 16, 1969.

Subsection (f) is derived without substantive change from S.C. §155d(5). It was formerly subsection (c) and was renumbered by resolution adopted on January 16, 1969.

Subsection (g) is derived without substantive change from S.C. §155b(1) but is broadened to include all milk products which may be homogenized. It was formerly subsection (f) and was renumbered by resolution adopted on January 16, 1969.

Subsections (a) and (b) were amended, a new subsection (d) was added and former subsections (d) through (g) were relettered to be subsections (c) through (h) by resolution adopted on January 16, 1975 to provide a pasteurization standard for ultra-pasteurized milk or milk products in conformance with recently promulgated Federal standards of identity and quality therefor (21 CFR Part 18, revised September 28, 1973).

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.29 Standards generally; reuse of milk and milk products for manufacturing purposes.

No milk or milk product shall be dumped for reprocessing from bottles or single service containers unless it is wholesome. After dumping, such milk or milk product shall not be offered for sale, sold, given away or distributed as milk or as sweet cream but may be reprocessed for manufacturing purposes, as follows:

(1) Milk may be reprocessed for flavored milk or flavored milk drink if such product is repasteurized after manufacture in the manner established pursuant to §11.25. Containers holding milk to be used for such purchase shall bear a label containing the words "MILK DUMPED AT" followed by the name and address of the place where dumping took place, and the words, "FOR MANUFACTURE OF FLAVORED MILK OR FLAVORED MILK DRINK"; or,

(2) Milk or a milk product may be repasteurized for reprocessing into sour cream, cultured milk products, frozen desserts, ice cream mix or for manufacturing purposes. Containers holding such milk or milk product shall bear a label containing the word, "MILK" or the .sine of the milk product followed by, "DUMPED AT," the name and address of

the place where dumping took place and the word, "FOR MANUFACTURING PURPOSES ONLY."

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived without substantive change from S.C. §156 Reg. 153. The reference to time of distribution in Reg. 153(3)(b) is omitted. The provisions of Reg. 153(1) relating to sanitary dumping operations are here omitted as a specific requirement; sanitary operations are required in all food establishments under Article 81 of this Code.

Subparagraph (1) of this section was amended by resolution adopted on January 16, 1969 to change the term flavored drink to flavored milk drink.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.31 Standards generally; addition of Vitamin D to milk and milk products.

(a) No person shall produce, possess, offer for sale, sell, give away or distribute milk or a milk product as Vitamin D milk, as a Vitamin D milk product or as possessing anti-rachitic quality or potency unless concentrate of Vitamin D has been added to the milk or milk product so that the Vitamin D content or potency is increased to at least 400 units for each quart. Vitamin D shall not, however, be added to skimmed milk. Except as to raw certified milk products, concentrate shall be added at the place of and prior to pasteurization.

(b) The Department may require that samples of Vitamin D milk or a Vitamin D milk product be tested or assayed for Vitamin D potency at the expense of the permittee at such times as the Department may require.

(c) As used in this section, unit means the International Unit of Vitamin D as set forth in the latest edition of the official United States Pharmacopoeia or supplement thereto.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §155a and Regulations. The section omits the Vitamin D processing permit and the Vitamin D transportation permit requirement. S.C. §155a (1) specified three means of increasing Vitamin D content: Feeding irradiated yeast to cows; direct irradiation of milk or a milk product with ultra-violet light or carbon arc lamp rays; and addition of concentrate of Vitamin D to milk or a milk product. The first two means are no longer practiced and, therefore, have been omitted. The requirement that samples be taken and tested, contained in Reg. 5, is retained but is restated in more general terms. Regs. 1, 6 and 7 are omitted. This section also replaces S.C. §152(16th para.). The labeling requirements of S.C. §155a Regs. 4(2) and (3) are included in §111.61. Note the prohibition on addition of Vitamin D to skimmed milk (see, also, §111.55).

Subsection (a) was amended by resolution adopted on January 16, 1969 to additionally apply its provisions to milk or a milk product found in the possession of a person as Vitamin D milk or milk product.

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.33 Standards generally; time of delivery.

No person shall possess, store, offer for sale, sell, give away or distribute milk, low sodium milk, low fat milk, skimmed milk, modified skimmed milk, cream or half and half after the expiration date indicated on the label required pursuant to §111.61. No person shall possess, store, offer for sale, sell, give away or distribute any such product the label of which bears an expiration date beyond the period specified in this section. The expiration date shall not be more than nine (9) calendar days following the date of pasteurization. However, in the case of such milk and milk products which have been ultra-pasteurized pursuant to subsection (d) of §111.25, the expiration date shall not be more than forty-five calendar days following the date of ultra-pasteurization. This section does not apply to cans of milk or cream to be used for manufacturing purposes or to milk and milk products which are not to be sold in the City of New York.

HISTORICAL NOTE

Section amended City Record July 9, 1999 eff. Aug. 8, 1999. [See Vol. 8 Statements of Basis and

Purpose No. 26]

Section in original publication July 1, 1991.

Notes:

This section was originally derived from S.C. §156 Regs. 51 and 155(4). The new Health Code which became effective on October 1, 1959 contained a §111.33 which read the same as it did prior to the amendment hereafter referred to which was adopted on June 14, 1966. That section was repealed by resolution adopted on May 20, 1960 after §1400 of the Public Health Law was amended by the State Legislature so as to prohibit local boards of health from adopting and enforcing milk dating regulations. When that section was again amended by the State Legislature during the 1962 session by removing such prohibition this section was reenacted by resolution adopted on March 6, 1962.

The section was amended by resolution adopted on June 14, 1966 which changed the dating requirement in relation to the period beyond which milk and other milk products may not be possessed or sold. Formerly such period was 54 hours after the day of distribution in the case of milk and 72 hours after distribution in the case of cream and half and half. Under the section as amended such period is 66 hours from the day of pasteurization and the former distinction in this respect between milk, cream and half and half was eliminated. In addition, the dating requirement was made inapplicable to the products enzyme milk, flavored milk and flavored drink.

This section was further amended by resolution adopted on January 16, 1969 to additionally apply its milk dating requirements to low fat milk and modified low fat milk.

This section was further amended by resolution adopted on January 16, 1975 to add a dating requirement for ultra-pasteurized milk and milk products for which Federal standards of identity and quality were recently promulgated (21 CFR Part 18, revised September 28, 1973).

This section was further amended by resolution adopted on November 16, 1978 to extend the period from 66 hours to 96 hours from the day of pasteurization in which milk and milk products may be possessed or sold.

Section 111.33 was amended by resolution adopted on June 18, 1987 to extend the time in which milk and milk products may be sold in the City due to improved sanitation and processing standards.

This section was further amended on June 29, 1999 to extend the period that ultra-pasteurized milk and ultra-pasteurized milk products may be possessed or sold from thirty to forty-five days after the date of ultra-pasteurization.

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.35 Milk.

(a) No person shall possess, offer for sale, sell, give away or distribute pasteurized milk if it contains (1) more than 88 and three tenths percent of water or fluids or (2) less than 11 and seven tenths percent by weight of milk solids or (3) less than three and four tenths percent by weight

(b) Milk packaged for sale outside the State may contain the minimum milk fat and milk solids which meets the standards of the State into which it is to be sold, provided that no label shall be used thereon unless approved in advance by the Department.

(c) Fresh cream or fresh skimmed milk may be added to or subtracted from fresh milk which meets the standards for milk prescribed by this Code, for purposes of standardization. Such standardization shall be performed at the place of pasteurization only.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived without substantive change from S.C. §152 (1st, 2nd and 4th paragraphs). Paragraphs 3, 8, 10 and the first and third unnumbered subsections of S.C. §152 are omitted as covered by specific prohibitions in this article or by the general pure food provisions of Articles 71 and 73. Note that Agriculture and Markets Law §46 defines the term "adulterated milk" as, **inter alia,** "Milk containing less than three per centum of fats." The issue of possible conflict between the State 3% butterfat standard and the City Sanitary Code's 3.3% butterfat standard has not been raised in the courts, although from the holding of the Appellate Division in **Kansas Packing Co., Inc. v. City of New York,** 284 App. Div. 398, 131 N.Y.S. 2d 351(1st Dept. 1954)aff'd 309 N.Y. 696, 128 N.E. 2d 411 (1955) in respect of former S.C. §140(a), such a question does exist.

This section was amended by resolution adopted on October 18, 1966, which revised the standards relating to fluids, milk solids and butter fat from 88.5%, 11.5% and 3.3%, respectively to 88.3%, 11.7% and 3.4%, respectively. The resolution also added subsections (b) and (c). These amendments were enacted to conform the New York City Health Code with §46 of the Agriculture and Markets Law as amended by Chapter 876 of the Laws of 1966.

§111.39 Cream and sour cream.

(a) No person shall possess, offer for sale, sell, give away or distribute cream or sour cream which contains less than 18 percent by weight of butter fat.

(b) No person shall possess, offer for sale, sell, give away or distribute sour cream which contains an acidity of less than two tenths of one per cent expressed as lactic acid after processing.

(c) Cream or sour cream shall be sold, respectively, either as light cream or light sour cream if it contains at least 18 percent by weight of butter fat, as medium cream or medium sour cream if it contains at least 25 percent by weight of butter at, or as heavy cream or heavy sour cream if it contains at least 36 percent by weight of butter fat.

(d) Cream is that portion of milk, rich in milk fat, which rises to the surface of milk on standing or is separated from it by centrifugal force and to which no substance has been added other than milk or skimmed milk for purposes of

standardization.

(e) Sour cream is cream which has been fermented by means of a lactic acid or other harmless milk culture.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

Subsection (a) is derived without substantive change from S.C. §152 (5th para.) except that it includes sour cream.

Subsection (a) was amended by resolution adopted on January 16, 1969 to additionally apply its provisions to cream or sour cream found in the possession of a person.

Subsection (b) is derived without substantive change from S.C. §§2(46) (part) and 152(14th para.).

Subsection (b) was amended by resolution adopted on January 16, 1969 to additionally apply its provisions to cream or sour cream found in the possession of a person.

Subsection (c) is derived without substantive change from S.C. §156 Reg. 52.

Subsection (d) is derived without substantive change from S.C. §2(33). The language "clean, pure, wholesome and unadulterated" which modified "milk" is here omitted but is covered in the definition of that term in §111.03 and in the general standards for milk and for all foods set forth in this title.

Subsection (e) is derived without substantive change from S.C. §2(46). The language "pure, clean, wholesome and unadulterated" modifying "cream" is here omitted as covered by the general pure food standards of Articles 71 and 73.

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.41 Cultured milk and milk products.

No person shall possess, offer for sale, sell, give away or distribute a cultured milk or milk product unless it is sold or distributed:

(1) As fat free cultured buttermilk if it contains not more than three tenths of one percent of butter fat. Ingredients which may be added are condensed skimmed milk, skimmed milk, skimmed milk powder, harmless lactic culture, water, sugar, fruit flavoring or certified colors; or

(2) As cultured buttermilk if it contains between two fifths of one and two and nine tenths percent of butter fat. Ingredients which may be added are condensed skimmed milk, skimmed milk, skimmed milk powder, harmless lactic culture, water, sugar, fruit flavoring, milk, cream, condensed milk, milk powder, butter oil or certified colors; or,

(3) As fat partially removed cultured milk if it contains between two fifths of one and two and nine tenths percent

of butter fat. Ingredients which may be added are condensed skimmed milk, skimmed milk, skimmed milk powder, harmless lactic culture, water, sugar, fruit flavoring, milk, cream, condensed milk, milk powder, butter oil or certified colors; or,

(4) As cultured milk if it contains not less than three percent of butter fat. Ingredients which may be added are condensed milk, condensed skimmed milk, milk powder, skimmed milk, skimmed milk powder, butter oil, harmless lactic culture, water, sugar, fruit flavoring or certified colors.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §155d (1), (2), (3) and (4). The name "cultured buttermilk-fat added" is modified to read simply, "cultured buttermilk." There has been some modification of the permitted ingredients for fat free cultured buttermilk. The labeling requirements are included in §111.63,. Section 73.05(2) contains a provision on foods sold for dietary purposes, so that the listing of calories on the label formerly in S.C. §152 (15th para.) is here omitted.

The first paragraph of this section was amended by resolution adopted on January 16, 1969 to additionally apply its provisions to cultured milk and to cultured milk or milk products found in the possession of a person.

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.55 Skimmed milk and modified skimmed milk.

(a) No person shall possess, offer for sale, sell, give away or distribute skimmed milk which contains more than three tenths of one per cent of butter fat.

(b) A food, other than a milk product or frozen dessert which is manufactured with skimmed milk obtained from milk which has been pasteurized, shall be repasteurized during the manufacturing process or shall be heated in a manner which affords protection at least equivalent to that afforded by pasteurization.

(c) No skimmed milk shall have Vitamin A or Vitamin D added thereto. No modified skimmed milk shall be offered for sale, sold, given away or distributed as being fortified with Vitamin A or Vitamin D unless:

(1) The requirements of §111.31 are met; and,

(2) At least 2,000 International Units of Vitamin A as set forth in the latest edition of the official United States

Pharmacopoeia or supplement thereto are added to each quart of the modified skimmed milk.

(d) Modified skimmed milk shall not be sold or distributed if the fortification with Vitamin A or Vitamin D causes a change of color of the product.

(e) Modified skimmed milk is the product made by adding milk solids not fat to skimmed milk. It shall contain not less than ten percent of milk solids not fat and not more than one half of one percent of milk fat.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section contains the particular requirements governing skimmed milk and modified skimmed milk. S.C. §156 Regs. 70 (part), 71, 72(c)(part) and (e), 75(d) and S.C. §158 are here omitted but are covered in other parts of this article governing milk products generally.

Subsection (a) is derived from S.C. §156 Reg. 73 and §2(32) (definitions of skimmed milk). The reference to State law is here unnecessary. That portion of S.C. §158 Reg. 72(b) which required skimmed milk to be maintained at 50°F until delivery to the consumer is omitted here, but is covered by the general temperature requirement of § 111.23.

Subsection (a) was amended by resolution adopted on January 16, 1969 to additionally apply its provisions to skimmed milk found in the possession of a person.

Subsection (b) is derived without substantive change from S.C. §156 Reg. 72(d). Reg. 72(a) and (b)(part) are here omitted but are covered by §111.25.

Subsection (c) is derived from S.C. §152(17th para.), §156 Reg. 75(c) and §2(50)(part) (definition). The Vitamin D requirements are included by a reference to §111.31.

Subsection (d) is derived without substantive change from S.C. §2(50) (part).

Subsection (e) is derived without substantive change from S.C. §2(50)(part).

§111.56 Low fat milk and modified low fat milk.

(a) No person shall possess, offer for sale, sell, give away or distribute low fat milk which contains less than five tenths of one percent of weight of butter fat or more than two percent by weight of butter fat. No low fat milk shall have Vitamin A or Vitamin D added thereto.

(b) Modified low fat milk is the product made by adding milk solids not fat to low fat milk. It shall contain not less than ten percent by weight of milk solids and shall conform to the butter fat standard for low fat milk as provided in subsection (a) of this section.

(c) No modified low fat milk shall be possessed, offered for sale, sold, given away or distributed as being fortified with Vitamin A or Vitamin D unless:

(1) The requirements of §111.31 are met; and,

(2) At least 2,000 International Units of Vitamin A, as set forth in the latest edition of the official United States Pharmacopoeia or supplement thereto, are added to each quart of modified low fat milk.

(d) Modified low fat milk shall not be possessed, sold or distributed if the fortification with Vitamin A or Vitamin D causes a change of color of the product.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section was added by resolution adopted on January 16, 1969 to authorize the sale of low fat milk and milk products, in current demand among many consumers who desire to limit fat intake or reduce obesity by ingesting foods of lower calorie value.

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 111.57

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.57 Certified milk and certified milk products.

(a) No person shall possess, offer for sale, sell, give away or distribute milk as certified milk or as certified raw milk, or a milk product as a certified milk product or as a certified raw milk product unless the milk or milk product is approved by a milk commission which is recognized by the Board pursuant to subsection (b) of this section. Such milk commission shall not approve the milk or milk product concerned unless it meets the standards el, and is produced, manufactured, handled, transported, sold or distributed in accordance with this Code and with additional regulations of the milk commission filed with the Department pursuant to subsections (b)(3) and (c) of this section.

(b) The Board may extend recognition to a milk commission which meets the following requirements:

(1) It is appointed by a medical society chartered by the State Medical Society;

(2) It submits to the Department a written statement signed by an official of the milk commission signifying the

intention of such commission to enforce the provisions of this Code and its own regulations governing the standards, source, production or manufacture, handling, transportation, sale and distribution of milk and milk products to be offered for sale, sold, given away or distributed as certified or as certified raw by such milk commission; and,

(3) It files with the Department a copy of the regulations adopted by such commission governing standards for good production or manufacture, handling, transportation and distribution of certified milk, certified raw milk, certified milk products and certified raw milk products.

(c) A milk commission which is recognized by the Board shall file with the Department a copy of any amendment to the regulations filed pursuant to subsection (b)(3) of this section. Such amendment shall not take effect until approved by the Board.

(d) Recognition of a milk commission shall be automatically suspended and may be withdrawn by the Board if:

(1) The milk commission fails to enforce applicable provisions of this Code or its own regulations as signified by such commission pursuant to subsection (b)(2) of this section; or,

(2) The medical society which appointed the milk commission revokes or suspends such appointment.

(e) A milk commission may by regulation or other control of the milk and milk products it supervises set standards which exceed the standards of this Code.

(f) The requirements governing labeling of containers set forth in §111.61 shall apply to certified milk, certified raw milk, certified milk products and certified raw milk products with the following modifications:

(1) Immediately preceding the word "MILK" or the name of the milk product, the word or words "CERTIFIED" or "CERTIFIED RAW" shall be appropriately included; and,

(2) The name and insignia or seal of the milk commission certifying the milk or milk products shall be included.

(g) No person shall possess, store, offer for sale, sell, give away, or distribute certified raw milk after the expiration date indicated on the label required pursuant to §111.61. No person shall possess, store, offer for sale, sell, give away or distribute any such product the label of which bears an expiration date beyond the period specified in this section. The expiration date shall not be more than 94 hours after six a.m. following packaging.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

Subsection (a) is derived from S.C. §156 Reg. 10(part). Compliance with the Code is made a condition of approval by the milk commission. That portion of subdivision (c) of Reg. 10 concerning appointment of the milk commission is included in subsection (b). The last paragraph of Reg. 10 is contained in subsection (e). Moreover, the filing and approval of regulations (part of subdivision (c)) is restated as a positive condition of recognition by the Board of a milk commission in subsection (b). Throughout this section the various types of certified milk and milk products are referred to generally, **ie.** the section would permit sale of any certified milk product. Agriculture and Markets Law §50a in effect requires a milk commission to follow standards of the American Association of Medical Milk Commissions.

Subsection (a) was amended by resolution adopted on January 16, 1969 to additionally apply its provisions to certified or certified raw milk and milk products found in the possession of a person.

Subsection (b) is derived without substantive change from S.C. §156 Reg. 10(part) and Reg. 11.

Subsection (c) restates the requirement of filing and approval of amendments to the regulations of the milk commission presently contained in Reg. 11 (last sentence).

Subsection (d) is new.

Subsection (e) is derived without substantive change from S.C.§156 Reg. 10 (last para.) but is stated in more affirmative language. S.C. §156 Reg. 12 is omitted.

Subsection (f) is derived from S.C. §156 Reg. 13. The labeling requirements of are made applicable with stated changes. The reference to section 111.61 eliminates the necessity for specific inclusion of subdivisions (a), (b), (c), (f), (g), (h) and the final paragraph of S.C. §156 Reg. 13.

Subsection (g) is derived from S.C.§156 Reg. 15. The last sentence of the regulation is here omitted but is covered in Article 3. S.C. §156 Reg. 14 is here omitted but is covered in §111.91, governing use of containers generally.

Subsection (g) was repealed and reenacted by resolution adopted on September 17, 1981 to remove the requirement for obtaining and retaining a physician's prescription before selling or distributing raw certified milk. Enacted in its place are provisions regulating the dating, storage, sale or distribution of raw certified milk. The substitution is considered to be a more effective and practical method of protecting the public. References to raw certified cream, raw certified skimmed milk, and raw certified modified skimmed milk have been deleted since these products are not, and have never been produced.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.59 Cheddar, processed and soft cheese.

(a) No person shall produce, manufacture, offer for sale, sell, give away or distribute cheddar, processed or soft cheese unless:

(1) The milk or milk product from which the cheese is manufactured has been pasteurized pursuant to §111.25; or,

(2) The cheese, during the manufacturing process, is subjected to a heat treatment which, in the opinion of the Department, is equivalent to pasteurization; or,

(3) The cheese, after manufacturing, is subjected to an aging process by keeping it at a temperature of not lower than 35°F for at least 60 days.

(b) Each package of cheddar, processed or soft cheese shall bear a label, printed legibly in English, with the following information: (1) The name and address of the manufacturer, wholesale dealer, or distributor, retail seller or

packager of the cheese or, in lieu of such name and address, an identifying trademark, trade name or other identifying designation;

(2) The common name of the cheese concerned;

(3) If the cheese has been subjected to a heat treatment equivalent to pasteurization pursuant to §111.25 or if it is manufactured from milk or a milk product which has been pasteurized pursuant to §111.25, the word, "PASTEURIZED"; and,

(4) If the cheese has been aged pursuant to subsection (a)(3) of this section, a statement that the cheese has been aged for at least 60 days.

(c) When a trademark, trade name or other identifying designation is used pursuant to subsection (b)(1) of this section, the manufacturer, wholesaler or other person labeling the package of cheese shall file with the Department a statement which contains the trademark or other identifying designation used and the actual name and address of the manufacturer or wholesaler.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §151a. The definitions of cheddar cheese, processed cheese, soft cheese in that section and cheese in S.C.§2(48) have been omitted as unnecessary in that these terms have a generally accepted meaning, both to the general public as well as the trade.

Subsection (b) of this section was amended by resolution of June 15, 1959, filed with the City Clerk, June 22, 1959, as follows: In subdivision (4), the requirement that the labeling of cheese processed by aging bear a statement that it was aged at least 60 days, was substituted for the date of manufacture; subdivision (5) (as well as the former S.C. §151a), which dealt separately with blended cheese of the cheddar type, was eliminated as unnecessary.

24 RCNY 111.61

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.61 Labeling of containers.

(a) No milk or milk product shall be possessed, stored, offered for sale, sold, given away or distributed unless its container or bottle bears a label which meets the requirements of this section. Proof prints or drawings of each label shall be submitted to the Department prior to use and no label shall be used until approved by the Department as being in compliance with this Code.

(b) The label shall be located on the container or the outer cap of a bottle and shall be in the form of a circle, rectangle or other design. The label shall not, however, be located on the bottom of the container and shall be printed in dear and legible type which shall be in contrast to other printed or pictorial matter thereon by topography, layout or color. The label for cans used to hold milk and milk products for sale or distribution to food establishments, institutions or persons other than consumers as authorized pursuant to §111.91 may be printed on a tag which is securely attached to the can. Labels shall contain only the following information:

(1) The words "Grade A";

(2) The word "MILK" or the appropriate name of the milk product;

(3) The word "PASTEURIZED" or "ULTRA-PASTEURIZED" as the case may be except in the case of certified raw milk or a certified raw milk product;

(4) If the milk or milk product is homogenized, the word "HOMOGENIZED";

(5) The actual name of the Class A permittee processing the milk or milk product or, in lieu of such name, the name and address of the Class A or Class B permittee distributing the milk or milk product. The additional use of any trademark, trade name or other identifying designation is not precluded.

(6) The address of the milk processing plant where the milk or milk product is pasteurized or ultra-pasteurized. If a Class A permittee operates more than one plant, a symbol, known and satisfactory to the Department, indicating the address or location where pasteurization or ultra-pasteurization takes place may be used instead of the actual address. Such symbol may appear on the outer cap or on the top or other equally prominent place on the container provided it is clearly, legibly and conspicuously debossed and inked, branded or printed. However, if the Department finds such symbol unsatisfactory, then the address of the processing plant shall be printed on the label of the container;

(7) If Vitamin D has been added pursuant to §111.31, the words, "VITAMIN D ADDED";

(8) If Vitamin A has been added to modified skimmed milk pursuant to §111.55, the words, "VITAMIN A ADDED";

(9) If the milk or milk product is intended for manufacturing purposes, the words, "FOR MANUFACTURING PURPOSES ONLY-TO BE REPASTEURIZED OR ADEQUATELY HEAT TREATED";

(10) Such additional information as is required pursuant to subsections (c) through (1) of this section;

(11) In the case of milk, low sodium milk, skimmed milk, modified skimmed milk, low fat milk, modified low fat milk, certified raw milk, cream or half and half, the words "MAY BE SOLD UNTIL MIDNIGHT OF" shall be printed on the outer cap of glass or plastic bottles followed by expiration date which shall be placed in a space expressly reserved therefor on the label, or on the rim of the outer cap, provided the location thereof is satisfactory to the Department. In the case of containers other than glass or plastic bottles, the words, "MAY BE SOLD UNTIL MIDNIGHT OF THE DATE INDICATED ON TOP" shall be printed on the label and the expiration date shall be placed in a space expressly reserve therefor on the top of the container. The expiration date shall be as specified pursuant to §§111.33 or 111.37 and shall be expressed by the first three letters of the month followed by the numeral or numerals constituting the appropriate calendar date. Such date shall be dearly, legibly and conspicuously debossed and inked, branded or, where the date is placed on the rim of an outer cap, stamped in indelible ink, in a manner satisfactory to the Department, except that it may be deeply embossed without inking on aluminum outer cap of glass or plastic bottles. This subdivision does not apply to milk or milk products which are not to be sold in the City of New York.

(c) The label for a container holding goats' milk or a milk product produced from goats' milk shall be appropriately marked, "GOAT'S MILK" or "MADE FROM GOAT'S MILK" or with similar wording.

(d) The label for a container holding skimmed milk obtained from pasteurized milk shall contain the words, "FOR MANUFACTURING PURPOSES

(e) In complying with subsection (b) (2) of this section, a term descriptive of flavored milk, such as "CHOCOLATE MILK" may be used instead of the term, "FLAVORED MILK."

(f) In complying with subsection (b) (2) of this section, a term descriptive of flavored milk drink such as

"CHOCOLATE MILK DRINK" may be used instead of the term "FLAVORED MILK DRINK."

(g) The label required for a container holding low sodium milk shall contain the words, "CONTAINS LESS THAN 50 MILLIGRAMS OF SODIUM PER QUART."

(h) In the event of an emergency which destroys or makes unavailable a supply of containers or labels, the Department, in its discretion, may authorize the temporary use of other containers or labels which do not reflect, in all particulars, the information required by this section.

(i) No information shall be placed on the label required to appear on containers of milk or milk products pursuant to this section which is false or misleading in any particular. No information indicating grading of milk or milk products, other than as specified in this article, shall appear on the label or on any part of the container.

(j) If artificial color is added to a cultured milk product, the label shall contain the words, "CONTAINS ARTIFICIAL COLOR."

(k) If non-nutritive and/or artificial sweeteners are added to a milk product, the label shall contain the words "ARTIFICIALLY SWEETENED."

(l) If stabilizers, distillates, and similar ingredients are added to a milk product, the label shall contain their common or usual names.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from and replaces the detailed labeling requirements in S.C. § 155a Reg. 4 155b (2) and §156 Regs. 154, 155 (1), (2), (3), (6), (7) and (8), 156 and 158 S.C. Reg. 55, concerning labels for milk containing high butterfat, is omitted. Reg. 160, requiring tags to be saved, is omitted. See Agriculture and Markets Law §71 on registering a designating mark with the State Commissioner of Agriculture and Markets. S.C. §156 Reg.(5) and (6), relating to standardization outside of milk processing plants and to splitting of cans of milk or cream or half and half outside of such plants, are omitted. These practices are no longer employed.

Subsection (a) was amended by resolution adopted June 14, 1966 which prohibited the possession and storage of improperly labeled milk in a plant, depot or milk vehicle and added the requirement for submission of label proof prints or drawings for approval prior to their use.

The first paragraph of subsection (b) was amended by resolution adopted on September 28, 1960 to permit required labeling information to be included in rectangles and other designs, in addition to circles. This paragraph was further amended by resolution adopted June 14, 1966 which added in the second sentence the clause "and shall be printed * * * thereon".

The first paragraph of subsection (b) was further amended by resolution adopted on January 16, 1969 to delete the minimum dimension requirement for labels on containers and bottle caps.

Subdivision (1) of subsection (b) was amended by resolution adopted on June 14, 1966 by deleting "N.Y.C. Dept. of Health Approved" as a permissible phrase on labels. Subdivisions (5) and (6) of the subsection were also amended to clearly provide for the name of the processor or the name and address of the distributor and the address or location of the processing plant. The resolution also amended subdivision (9) by including the requirement that the label of milk or milk products intended for manufacturing purposes bear the words "TO BE REPASTEURIZED OR ADEQUATELY HEAT TREATED".

Subdivision (1) of subsection (b) of §111.61 was amended by resolution adopted on June 27, 1985 to allow the words "Grade A" to appear on milk and milk product labels. The U.S. Public Health Service requires milk plants selling interstate or supplying interstate carriers to use this designation.

Subdivision (3) of subsection (b) was amended by resolution adopted on January 16, 1975 to include a labeling designation for ultrapasteurized milk and milk products for which Federal standards of identity and quality were recently promulgated (21 CFR Part 18, revised September 28, 1973).

Subdivision (6) of subsection (b) was further amended by resolution adopted on January 16, 1975 to additionally apply its labeling provisions to ultra-pasteurized milk and milk products for which Federal standards of identity and quality were recently promulgated (21 CFR Part 18, revised September 28, 1973).

Subdivision (10) of subsection (b) was amended by resolution adopted on January 16, 1969 to additionally apply the new subsection (k)(l) added by the same resolution.

Subdivision (11) of subsection (b) was added by resolution adopted on the 6th day of March, 1962 after the State Legislature restored the right of the City of New York to enact and enforce milk dating regulations. The provisions of subdivision (11) were contained in former subdivision (9) prior to its repeal on May 20, 19601 after the State Legislature had prohibited local boards of health from adopting and enforcing milk dating requirements. It was amended by resolution adopted on June 14, 1966 to clarify the dating requirements by substituting an expiration date based on the day of pasteurization in lieu of the former more complex method of dating based on the day of distribution. Milk and skimmed milk in smaller than one quart containers sold or distributed to restaurants and eating places were excepted from the dating requirement since patrons are served milk in a glass and do not see the container or the bulk dispenser used. The individual containers distributed to schools were also excepted since this milk is consumed on the same day it is delivered. The resolution also excepted milk and milk products to be sold outside the City of New York from the dating requirements.

The first sentence of subdivision (11) of subsection (b) was amended by resolution adopted on January 16, 1969 to additionally apply its dating provision to the labels on low fat milk and modified low fat milk containers and bottles.

Subdivision (11) of subsection (b) was amended by resolution adopted on May 17, 1979 to delete the exception of dating of containers less than quart size.

Subdivision (11) of subsection (b) was amended by resolution adopted on September 17, 1981, to add certified raw milk, and §111.57, which regulates the sale or distribution thereof.

Former subsection (c) was repealed by resolution adopted June 14, 1966 since the practice of mixing fresh cream and cold storage cream no longer prevails.

Former subsection (d) was relettered subsection (c) by resolution adopted on June 14, 1966 and is derived without substantive change from S.C. §156(2).

Subsection (e) was repealed by resolution adopted on January 16, 1969, since skimmed milk and modified skimmed milk have received wide acceptability and recognition and the distinctive color requirement of their container is no longer felt necessary for their identification by the consumer.

Former subsection (e) was relettered subsection (d) by resolution adopted June 14, 1966, and is derived from S.C. §156 Regs. 72 (c) (part). All that is required here is that skimmed milk obtained from pasteurized milk be labeled for manufacturing purposes. See also, in this connection, § 111.55. The requirement that cans used for transportation or storage be of 20 or 40 quart capacity is omitted (S.C. §156 Reg. 75 (part)).

Former subsections (f) and (g) were relettered (e) and (f) respectively by resolution adopted on January 16, 1969

and are derived from S.C. §156 Reg. 156 with omission of some detail.

Subsection (f) was amended by resolution adopted on January 16, 1969 to conform its label provision to the change of the term flavored drink to flavored milk drink adopted by resolution on the same date.

Former subsection (h) was relettered subsection (g) by resolution adopted on January 16, 1969, and is derived without substantive change from S.C. §156 Reg. 155 (l), (f) and (g).

Former subsection (i), adopted by resolution on June 14, 1966, was relettered subsection (h) by resolution adopted on January 16, 1969.

Former subsection (j), added by resolution June 14, 1966, was relettered subsection (i) by resolution adopted on January 16, 1969. It replaces and broadens the requirements of S.C. §156 Reg. 54 (2) which prohibited labeling a container of milk or a milk product as pasteurized unless it is in fact pasteurized.

Former subsection (k) was relettered subsection (j) by resolution adopted on January 16, 1969 and is derived without substantive change from Column C (part) of S.C. §155d (4). Other labeling requirements are incorporated in the general requirements of this section.

Subsections (k) and (l) were added by resolution adopted on January 16, 1969 to provide informative labeling for the consumer on harmless ingredients which have been approved for inclusion in some milk products.

Rules of the City of New York

24 RCNY 111.63

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.63 Dairy farms; physical facilities and equipment.

(a) A milking barn, stable, or parlor shall be provided on a dairy farm in which the milking herd shall be housed during milking operations. The areas therein used for milking purposes shall (1) have floors constructed of concrete or equally impervious material; (2) have walls and ceilings which are dust-tight, smooth, painted or finished and in good repair; (3) have separate stalls or pens for cows, calves, and bulls; (4) be provided with natural and/or artificial light, well distributed for day and/or night milking; (5) be provided with sufficient air space and air circulation to prevent condensation and excessive odors; (6) not be overcrowded; and (7) have dust-tight covered boxes or bins, or separate storage facilities for ground, chopped or concentrated feed.

(b) A separate milkhouse shall be provided on a dairy farm which shall be used for no other purpose than milkhouse operations. There shall be no direct opening from the milkhouse into any barn, stable or any room used for domestic purposes, except that a direct opening between the milkhouse and the milking bar, stable or parlor is permitted when a tight-fitting, self-closing, solid door or doors, hinged to be single or double acting is provided for such opening.

The milkhouse shall (1) be provided with a smooth floor constructed of concrete or equally impervious material, graded to drain, and maintained in good repair; (2) have facilities for the disposal of liquid waste in a sanitary manner; (3) have accessible floor drains which shall be trapped if connected to a sanitary sewer system; (4) have walls and ceilings which shall be constructed of smooth material, painted or finished and in good repair; (5) be provided with adequate natural and/or artificial light; (6) be well ventilated; (7) be provided with water under pressure which shall be piped into the milkhouse; and (8) be equipped with a two-compartment wash-vat and adequate hot water heating facilities.

(c) A transportation tank, when used for the cooling or storage of milk on a dairy farm, shall be provided with a suitable shelter for the receipt of milk. Such shelter shall be adjacent to, but not a part of, the milkhouse and shall comply with the requirements for a milkhouse with respect to construction, drainage, light, ventilation and general maintenance.

(d) One or more toilets shall be provided on a dairy farm, conveniently located and constructed, operated and maintained in a sanitary manner. The toilet waste shall be inaccessible to flies and shall not pollute the soil surface or contaminate any water supply.

(e) Adequate hand-washing facilities shall be provided in the milkhouse and in or convenient to the milking barn, stable or parlor of the dairy farm and such facilities shall include running water, soap or detergent, and individual sanitary towels.

(f) An adequate quantity of water of a safe, sanitary quality shall be provided for milkhouse and milking operations from a supply which is easily accessible and properly located, protected and operated.

(g) Multi-use containers, utensils, and equipment used in the handling, storage, or transportation of milk or a milk product shall be made of smooth, non-absorbent, corrosion-resistant, non-toxic materials and shall be so designed and constructed as to be easily cleaned. All such containers, utensils and equipment shall be kept in good repair. Milk pails used for hand milking and stripping shall be seamless. No multi-use woven material shall be used for straining milk.

(h) Single-service articles shall be safe for their intended use, transported, stored and handled in a sanitary manner, and shall not be reused.

(i) No milking barn, stable or parlor, milkhouse or transportation tank shelter shall be constructed, reconstructed or structurally altered unless plans drawn to scale and specifications have been submitted to and approved by the Department.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is new. It was enacted by resolution adopted on January 16, 1969 to provide dairy farm standards of greater uniformity with those of the State Department of Health and the 1965 U.S. Public Health Service Grade A Pasteurized Milk Ordinance.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.65 Dairy farms; operations; sanitary requirements and conditions.

(a) The interior of a milking barn, stable or parlor, including its floors, walls, ceilings, windows, pipelines and equipment shall be maintained in a dean and sanitary manner, in good repair and free from any condition which may result in the contamination of the milk or the spread of disease among the animals. Swine, pigeons and fowl shall be kept out of the milking barns, stable or parlor. Cow drippings shall be removed at sufficiently frequent intervals and not less than once daily to prevent the soiling of the cows' udders and flanks. Soiled bedding shall be removed and dean bedding added as required. Manure packs shall be properly drained and shall provide a reasonably firm footing, and waste feed shall not be allowed to accumulate therein.

(b) Outdoor areas used for cows and goats and other areas surrounding the premises where dairy farm operations are conducted shall be graded and drained as to be free from standing water or other accumulations. Such areas shall be kept clean and free of conditions which might harbor or be conducive to the breeding of insects and rodents. Waste feed shall not be allowed to accumulate and swine shall be kept out of such areas.

(c) The interior of a milkhouse, including its floors, walls, ceilings, windows, tables, shelves, cabinets, wash vats, non-product contact surfaces of milk containers, utensils and equipment, and other milkhouse appurtenances shall be maintained in a clean and sanitary manner, in good repair and free from any condition which may result in the contamination of the milk. Only articles directly related to milkhouse activities shall be permitted in the milkhouse. The milkhouse shall be kept free of trash, animals, fowl or other birds, and vermin.

(d) Effective measures shall be taken on a dairy farm to prevent the contamination of milk, containers, utensils and equipment by insects and rodents and by chemicals used to control such vermin.

(e) The product-contact surfaces of all multi-use containers, utensils, and equipment used in the handling, storage, or transportation of milk shall be cleaned immediately after each use and sanitized before each reuse thereof in such a manner that it is free from dirt, bacterial or milk residue and presents no hazard to the milk supply.

(f) All containers, utensils, and equipment used in the handling, storage, or transportation of milk shall be (1) stored to assure complete drainage, unless stored in sanitizing solutions; (2) protected from contamination prior to use; and (3) handled in such manner after sanitization as to prevent the contamination of any product contact surfaces.

(g) Milking shall be done in the milk barn, stable or parlor. All brushing of milking cows shall be completed prior to milking. The flanks, udders, bellies and tails of all milking cows shall be free of visible dirt prior to milking. The udders and teats of milking cows shall be cleaned and treated with a sanitizing solution immediately prior to the time of milking, and shall be relatively dry before milking. Wet milking is prohibited. Surcingles, milk stools, and anti-kickers shall be kept clean and stored above the floor.

(h) Each pail or container of milk shall be transferred immediately from the milking barn, stable, or parlor to the milkhouse. No milk shall be strained, poured, transferred or stored unless it is properly protected from contamination.

(i) Hands of milkers, milkhandlers and milk haulers shall be washed clean and dried with an individual sanitary towel immediately following the use of the toilet, before milking, before performing any milkhouse or milkhandling functions, and immediately before resuming after the interruption of any milkhouse or milkhandling activity. Milkers, milkhandlers and milk haulers shall wear clean, washable outer garments while milking or handling milk, milk containers, utensils or equipment.

(j) Vehicles used to transport milk in cans from the dairy farm to the receiving station or milk processing plant shall be so constructed and operated as to protect their contents from sun, freezing and contamination. The interior and exterior of such vehicles shall be kept clean and no substance capable of contaminating milk shall be transported with milk.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.67 Dairy farms; operations; control of brucellosis, tuberculosis and mastitis in cows.

(a) No milk at a dairy farm shall be shipped to a transfer station, receiving station or to a milk processing plant or shall in any way be used in or as a food for human consumption unless:

(1) The cow from which the milk is obtained shall be from a herd which is located in a Modified Accredited Tuberculosis area as determined by the United States Department of Agriculture and the New York State Department of Agriculture and Markets; or, if the herd be located in an area which fails to maintain such accredited status, from a herd which has been accredited by the said Departments as tuberculosis free;

(2) The cow from which the milk is obtained shall be from a herd under a brucellosis eradication program which meets one of the following conditions: (aa) located in a Certified Brucellosis-Free Area as defined by the United States Department of Agriculture and enrolled in a testing program for such areas, or (bb) located in a Modified Certified Brucellosis-Free Area as defined by the United States Department of Agriculture and enrolled in the testing program for

such areas, or (cc) meeting United States Department of Agriculture and the New York State Department of Agriculture and Markets requirements for an individually certified herd, or (dd) participating in a milk ring testing program which is conducted on a continuing basis at intervals of not less than every three months or more than every six months, with individual blood tests performed on all animals in the herd showing suspicious reactions to the milk ring test, or (ee) having individual blood agglutination tests performed annually with an allowable maximum grace period not exceeding two months;

(3) The cow from which the milk is obtained has been given a physical examination, conducted by a veterinarian acceptable to the Department, when required under subsection (b) of this section; and,

(4) The cow from which the milk is obtained has been subjected to such physical, chemical or bacteriological tests and examination by a veterinarian acceptable to the Department as deemed necessary by the Department for the detection of any suspected disease in the cow or herd. Any diseased animal disclosed by such tests and diagnosis by such veterinarian shall be disposed of as the Department directs.

(b) No milk shipped by a dairy farm to a transfer station, receiving stations or to a milk processing plant shall in any way be used in or as food for human consumption unless an unfit milk screening test acceptable to the Department, such as the Whiteside Test, is made on such milk in accordance with the following requirements:

(1) The operator of the transfer station, receiving station or milk processing plant shall make such tests at intervals of not more than one month on the milk received by him from each dairy farm. The results of such tests shall be recorded, when made, in a manner acceptable to the Department and kept on file for a period of not less than one year.

(2) Where such screening tests shows evidence of abnormal milk, the operator shall immediately notify the dairy farm concerned to withhold all abnormal milk from delivery.

(3) A retest of all the milk from herds showing abnormal milk shall be made by the operator of the transfer station, receiving station or milk processing plant within seven days. When the retest shows that there is still evidence of abnormal milk, the operator may continue to receive milk from the dairy farm from which such abnormal milk originated but shall require such dairy farm to have a physical examination of its herd made by a veterinarian acceptable to the Department. Such physical examination shall be made within seven days after the retest. If not made within such period, the milk from such dairy farm shall not thereafter be accepted until such physical examination is made. Animals found on such examination to be producing abnormal milk shall be segregated. Results of such physical examination shall be recorded in a manner acceptable to the Department and filed with the operator within twenty-four hours after the examination.

(4) Notwithstanding that a physical examination of a herd has been made in accordance with subdivision (3) of this subsection, when more than two consecutive routine monthly screening tests of milk from a dairy farm show evidence of abnormal milk, the operator shall not accept milk from such farm unless the farm places its herd under an official New York State mastitis control program, or an equivalent program acceptable to the Department. The processor shall not accept milk from such farm longer than sixty days even if such farm's herd is under the supervision of an official New York State mastitis control program when unsatisfactory screening test results persist and an unsatisfactory test result at the end of sixty days shall have been confirmed by a direct microscopic count.

(5) Milk from dairy farms having a record of satisfactory monthly screening tests for a period of three consecutive months may be tested quarterly by the operator of the transfer station, receiving station or milk processing plant. When a quarterly test discloses evidence of abnormal milk the milk from such dairy farm shall again be tested on a monthly basis.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

Subdivision (1) of subsection (a) is derived from S.C. §156 regulation 56. The former reference to S.C. section 13 and regulations is changed to a reference to state tuberculin test requirements.

Subdivision (2) of subsection (a) is derived without substantive change from S.C. regulation 56a.

Subdivision (3) of subsection (a) originally derived from S.C. §156 regulation 202 was amended by resolution adopted September 22, 1965 which deleted the requirement for annual physical examination of cows and substituted the requirement that such examination be performed when necessary or required by subsection (b).

Subsection (b) was added by resolution adopted on September 22, 1965. The test procedure prescribed by such subsection is deemed a sounder program of mastitis and unfit milk control than annual herd examinations.

People v. Teuscher, 248 N.Y. 454, 162 N.E. 484 (1928), held constitutional a quarantine order imposed upon milk from cows which were not tuberculin tested. An ordinance of Milwaukee requiring milk coming into the city to be from tuberculin tested and TB free cows was held constitutional in **Adams v. City of Milwaukee,** 228 U.S. 572 (1913).

This section was amended by resolution adopted on January 16, 1969 to provide requirements for the control of disease in dairy cattle of greater uniformity with the requirements of the State Department of Health and the 1965 U.S. Public Health Service Grade A Pasteurized Milk Ordinance and to additionally apply its provisions to transfer stations.

Rules of the City of New York

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.68 Dairy farms, operations; exclusion of unfit milk.

No milk at a dairy farm shall be shipped to a transfer station, receiving station or to a milk processing plant or shall in any way be used in or as food for human consumption if:

(1) The milk is unclean; or,

(2) The milk contains blood, pus, manure, contamination from vermin or any other foreign or extraneous matter or substance; or,

(3) The animal from which the milk is obtained is not in a healthy condition; or,

(4) The milk is obtained from an animal 15 days or less before or up to and including five days after pasteurization or is otherwise not colostrum free; or,

(5) The teats or udder of the animal from which the milk is obtained is inflamed, diseased, or is in any way abnormal; or,

(6) Upon testing the milk by milking the first streams from each test through a fine metal mesh, dark colored cloth or on a dark plate, abnormal foremilk is discovered. All such foremilk, whether or not abnormal, shall be discarded; or,

(7) Abnormal foremilk is detected in any quarter of the udder. All of the milk from such animal shall be excluded; or,

(8) The milk contains penicillin or other antibiotics; or,

(9) The milk is in any other way abnormal or unfit for human consumption.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section requires that certain specified milk at a dairy be excluded. S.C. §152 (7th paragraph) is omitted.

Subdivision (1) is derived without substantive change from S.C. §2 (31) (part) and S.C. Reg. 203 (part).

Subdivision (2) is derived without substantive change from S.C. §156 Reg. 203 (first sentence) (part).

Subdivision (3) is derived without substantive change from S.C. §156 Reg. 203 (first sentence) (part).

Subdivision (4) is derived without substantive change from S.C. §2(31) (part), S.C. §152 (6th paragraph) and S.C. §156 Reg. 203 (first sentence) (part).

Subdivision (5) is derived without substantive change from S.C. §156 Reg. 206(1).

Subdivisions (6) and (7) are derived without substantive change from S.C. §156 Reg. 206(2).

Subdivision (8) is new.

Subdivision (9) is new. It is a general clause to insure exclusion of **any** abnormal milk.

This section was amended by resolution adopted on January 16, 1969 to delete the word "raw" therefrom, to additionally apply its provisions to transfer stations and thereby provide greater uniformity with related requirements of the State Department of Health and the 1965 U.S. Public Health Service Grade A Pasteurized Milk Ordinance.

ARTICLE 111 MILK AND MILK PRODUCTS

§111.71 Dairy farm; operations; cooling of milk.

Milk at a dairy farm shall be cooled immediately after milking to a temperature of 50°F required pursuant to §111.23 except that (1) mornings milk may be delivered without cooling to a receiving station or milk processing plant prior to ten o'clock before noon and (2) night's milk may be delivered without cooling to a receiving station or milk processing plant within four hours after milking.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §156 Reg. 216. The requirement for temperature control is included in §111.23, so that the instant section is concerned with the exception for raw milk which need not be cooled to 60°F if delivered

within specified time to a receiving station or milk processing plant.

This section was amended by resolution adopted on January 16, 1969 to delete the word "raw" and to require milk at a farm to be cooled to 50°F, in lieu of the former temperature control of 60°F, thereby providing greater uniformity with related requirements of the State Department of Health and the 1965 U.S. Public Health Service Grade A Pasteurized Milk Ordinance.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.75 Transportation of milk and milk products.

(a) The outside of a vehicle or carrier used to transport milk or milk products shall be appropriately and clearly marked "MILK,"MILK AND MILK PRODUCTS" or "MILK PRODUCTS." This subsection does not apply to the transportation of prepasteurized milk in cans from a dairy farm to a receiving station or processing plant.

(b) The tank holding prepasteurized milk or prepasteurized milk products delivered from a dairy farm, transfer station or receiving station to a milk processing plant shall have attached thereto a pink colored tag containing the following information:

(1) The words "REPASTEURIZED MILK" or the word "PREPASTEURIZED" followed by the appropriate name of the milk product;

(2) The number of quarts of gallons in the tank;

(3) The name and address of the milk processing plant to which the tank is being delivered; and,

(4) The name and address of the person shipping the tank and the name and address of the transfer station or receiving station where the tank was filled.

(c) A person shipping prepasteurized milk or a prepasteurized milk product shall prepare in triplicate a manifest, bill of lading or bill of sale which states (1) an identifying number of the lot or shipment, (2) the number of quarts or gallons in each container, (3) the name and address of the shipper and consignee, and (4) the date. The shipper shall retain one copy, and two copies shall accompany the shipment. One copy shall be kept by the carrier, and the other by the consignee. Each copy shall be kept on file for at least six months.

(d) After a tank has been filled with pasteurized milk or a prepasteurized milk product at a transfer station or receiving station, and prior to transportation to a milk processing plant, it shall be effectively sealed so as to prevent any access to the contents without first breaking the seal. All seals of openings of tanks attached to trucks shall be outside the dust proof housing. If a tank is to be filled at more than one station so as to receive its full capacity, the seal may be broken and immediately resealed after further filling operations.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

Subsection (a) is derived from S.C .§156 Reg. 7(1) and (3) but is limited to the requirement that the outside of the vehicle be appropriately marked. The last sentence is new. S.C. §156 Reg. 144 which prohibited transferring milk or milk products from one container to another on a public highway or ferryboat, Reg. 151 which prohibited dippers or similar utensils, untilled single service containers and detached tags or labels from being kept on a vehicle used to transfer milk or milk products, and Reg. 152 which prohibited water, preservatives or adulterants from being kept on such a vehicle are omitted. Article 81 contains a general sanitary standard for vehicles used to transport food.

Subsection (b) is derived from S.C. §156 Regs. 75(a) and 159(1). The subsection contains the labeling requirements for raw milk and raw milk products shipped to milk plants for pasteurization and other processing. Specific labeling requirements for milk brought into the City for manufacturing purposes, S.C. §156 Reg. 166(1) and (2) (c), are omitted; see, however, the general requirements for labeling in §111.61.

Subsection (c) is derived from S.C. §156 Reg. 76. It is made applicable to all raw milk or raw milk products; some detail has been omitted.

Subsection (d) is derived from S.C. §56 Reg. 159 (2) with elimination of some detail.

This section was amended by resolution adopted on January 16, 1969 to substitute the word "prepasteurized" for the word "raw" and to add the term "transfer station" to provide terminology of greater uniformity and related requirements of the State Health Department and the 1965 U.S. Public Health Service Grade A Pasteurized Milk Ordinance.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.77 Transfer stations, receiving stations and milk processing plants; physical facilities and equipment; general requirements.

A transfer station, receiving station and milk processing plant shall comply with the following requirements:

(a) The floors of all rooms in which milk or milk products are processed, handled, or stored, or in which milk containers, equipment and utensils are washed, shall be constructed of concrete or other equally impervious and easily cleaned material; and shall be smooth, properly sloped, provided with trapped drains and kept in good repair. Storage rooms for storing dry ingredients and/packaging material need not be provided with drains and the floors may be constructed of tightly joined wood and keep in good repair.

(b) Walls and ceilings of rooms in which milk or milk products are handled, processed, or stored, or in which milk containers, utensils, and equipment are washed, shall have smooth, washable, lightcolored surfaces and shall be in good repair.

(c) Effective means shall be provided to prevent the access of insects and rodents. All openings to the outer air shall have solid doors or glazed windows which shall be closed during dusty weather.

(d) All rooms in which milk and milk products are handled, processed or stored and/or in which milk containers, equipment, and utensils are washed shall be well lighted and well ventilated.

(e) In all processing plants, a separate room shall be provided for (1) pasteurizing, processing, cooling and packaging; and for (2) cleaning of milk cans and bottles, except where the general room shall be of such size, the equipment so located and the sequence of operations so arranged as to segregate the receiving, pasteurizing and bottling from the bottle washing and can washing operations in such manner as to effectively prevent contamination of the milk.

(f) In all establishments receiving or shipping milk in bulk transport tanks, a separate tank truck room for cleaning and sanitizing such tanks shall be provided in the plant or in a location acceptable to the Department.

(g) All transfer stations, receiving stations and milk processing plants shall be provided with toilet facilities which comply with the requirements of the New York State Department of Health or of this Code. Toilet rooms shall not open directly into any room in which milk and/or milk products are processed. Toilet rooms shall be completely enclosed and shall have tight-fitting, self-closing doors. Toilet rooms, dressing rooms and their fixtures shall be kept clean and in good repair and such rooms shall be well lighted and ventilated.'

(h) Water for drinking and sanitary needs of the occupants and for the operation of such establishments shall be of potable quality and shall be supplied under adequate pressure and in sufficient quantities.

(1) Water supply for milk processing plants located in the City of New York shall be from public supply system, except that a well water supply may be used as a secondary source if such well water conforms to the applicable provisions of Article 14 1 of this Code.

(2) For transfer stations, receiving stations and milk processing plants located outside of the City of New York the water supply shall conform to the requirements of the New York State Department of Health.

(3) Non-potable water shall be used for permitted limited purposes only, such as condensers and evaporators in refrigeration and air conditioning systems not connected with the potable water supply. All non-potable water lines shall be clearly identified and shall not be cross-connected with the potable water supply.

(i) Convenient hand-washing facilities readily accessible to the workrooms and toilet rooms shall be provided in such establishments, including hot and cold running water, soap, and individual sanitary towels or other approved hand drying devices. Handwashing facilities shall be kept in a clean condition and in good repair.

(j) All plumbing in such establishments shall conform to the applicable requirements of this Code or the requirements of the New York State Department of Health. Sewage and other liquid wastes shall be disposed of in a sanitary manner and shall be prevented from contaminating the water supply and water-supplied fixtures.

(k) All rooms in which milk and milk products are handled, processed, or stored, and/or in which containers, utensils, or equipment are washed or stored, shall be kept Clean, neat, and free of insects and rodents. Pesticides shall be safely used and in accordance with the label directions. Only equipment directly related to processing operations or to handling of containers, utensils, and equipment shall be permitted in the pasteurizing, processing, cooling, packaging, and bulk milk storage rooms.

(l) All sanitary piping, fittings, and connections which are exposed to milk and milk products, or from which liquids may drip, drain, or be drawn into milk or milk products, shall consist of smooth, impervious, corrosion-resistant, non-toxic, easily cleanable material. All piping shall be in good repair. Pasteurized milk and milk products shall be conducted from one piece of equipment to another only through sanitary piping.

(m) All multi-use containers, utensils and equipment with which milk or milk products come into contact shall be of smooth, impervious, corrosion-resistant, non-toxic material; shall be constructed and designed for ease of cleaning; and shall be kept clean and in good repair. After cleaning, all such multi-use containers, utensils and equipment shall be stored in such manner as to assure complete drainage, and shall be protected from contamination before reuse.

(n) All single-service containers, closures, caps, cap stock, parchment paper, gaskets and other single service articles with which milk or milk products come into contact shall be non-toxic; purchased and kept in sanitary tubes, wrappings or cartons; stored in a clean, dry place until used; and handled in a sanitary manner.

(o) No transfer station, receiving station or milk processing plant shall be constructed, reconstructed or structurally altered unless plans drawn to scale and specifications have been submitted to and approved by the Department.

(p) No new equipment used in the handling, storing, processing, pasteurizing, cooling, filling or conveying of milk or milk products and in the mechanical washing of bottles and cans shall be installed unless plans drawn to scale including the layout for such equipment and specifications have been submitted to and approved by the Department. No changes shall thereafter be made in or of new equipment installed without prior approval of the Department.

(q) All transfer station, receiving station and milk processing plant operations shall be so conducted and their equipment and facilities shall be so located as to prevent any contamination of milk or milk products, ingredients, equipment, containers and utensils. All milk or milk products or their ingredients which have been spilled, overflowed or leaked shall be discarded. Any processing or handling of products other than milk and milk products shall be performed in such manner as to preclude the contamination of the milk and milk products.

(r) Areas surrounding the premises where milk and milk products are handled, processed or stored shall be kept clean, properly graded and drained and free from conditions which may attract, harbor or be conducive to the breeding of insects and rodents, or which may otherwise constitute a nuisance.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is new. It was enacted by resolution adopted on January 16, 1969 to replace the former §111.77 repealed on the same date and to provide milk plant requirements of greater uniformity with those of the State Department of Health and the 1965 U.S. Public Health Service Grade A Pasteurized Milk Ordinance.

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.79 Milk processing plants; physical facilities and equipment; pasteurization equipment.

A milk processing plant shall have all necessary equipment for the effective pasteurization of milk or milk products as required pursuant to § 111.25. Pasteurizing equipment shall include thermometers and automatic temperature recording devices. No pasteurizing equipment shall be installed or placed in operation until the Department approves the design, construction and location of such equipment. Approval of equipment by the Department may be conditional or temporary, and the Department may order that unsatisfactory equipment be repaired or replaced within a specified period of time.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived without substantive change from S.C. §156 Reg. 129(a) but the method of approval by the Department is made more specific. S.C. §156 Reg. 129(b) and (c) (part) is omitted.

ARTICLE 111 MILK AND MILK PRODUCTS

§111.81 Transfer stations, receiving stations and milk processing plants; operations; emergency situations and reports of illness.

(a) When flooding, power failure, equipment breakdown or other emergency occurs which affects the operations of a milk processing plant, transfer station, or receiving station, the permittee shall immediately notify the Department.

(b) When a milk processing plant is notified of any illness of a person diagnosed by a physician which allegedly resulted from consuming milk or a milk product produced at such plant, the permittee shall immediately notify the Department. The Department may require the permittee, within 24 hours of the original report, to submit a written report giving such additional information concerning the illness as the Department may require. Reports shall not be subject to subpoena or inspection by persons other than the Commissioner or authorized personnel of the Department and shall not hi.; used as the basis for prosecution.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is new.

S.C. §156 Reg. 121 dealing with protection of surface coolers, Reg. 123 dealing with oil cup pans for use under beatings for shafting, have been omitted, and Regs. 135, 136, 137, 138 and 139, dealing with dirt testers, are omitted. Requirements governing general cleanliness, sanitary maintenance and regulation of employees are omitted from this article but are included in Article 81. Specifically, S.C. §146(b), §156 Regs. 53, 58, 122, 125, 126(part), 126(a)(part) and 150 are omitted.

The section heading and subsection (a) were amended by resolution adopted on January 16, 1969 to additionally apply their provisions to transfer stations.

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 111.83

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.83 Transfer stations, receiving stations, and milk processing plants; operations; inspection of pre-pasteurized milk and cans holding prepasteurized milk.

(a) When prepasteurized milk is received directly from one or more dairy farms either at a transfer station, receiving station or at a milk processing plant, a check shall be made of the can, tank or other container holding the prepasteurized milk for rust, corrosion or other similar conditions. An examination shall be made of each quantity of prepasteurized milk from each dairy farm, or if the prepasteurized milk is delivered in bulk from more than one dairy farm, of each quantity of such commingled prepasteurized milk. Examination shall consist of a check for abnormalities including odor, flavor, appearance, physical condition, bacterial flora and temperature. Examination for bacterial flora shall be made as required pursuant to §111.21. Results of examination shall be recorded on forms satisfactory to the Department and shall be kept on file for at least two years.

(b) When examination reveals that prepasteurized milk is contaminated, abnormal, or does not meet the bacterial standards of §111.21, it shall be rejected and shall not be sold or distributed in the City. The transfer station, receiving

station or milk processing plant permittee shall notify the owner or person in charge of a dairy farm whose milk is found to be or is suspected of being abnormal. If such person does not take immediate action to prevent future abnormalities of his milk supply, the permittee shall refuse to accept milk from such dairy farm until further inspection of the dairy farm is made by the Department pursuant to §111.13(c).

(c) When a can, tank, or other container is found to be rusted, corroded or otherwise unfit for use, it shall not again be used to hold milk or milk product, whether prepasteurized or pasteurized, until it has been repaired or retinned.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is new. It contains the requirements for "deck inspection" of raw milk at the receiving station or milk processing plant and is designed to insure that the milk is fit for eventual consumption. Agriculture and Markets Law §48 and §49 have detailed regulations on insanitary cans and receptacles.

This section was amended by resolution adopted on January 16, 1969 to change the term raw milk to prepasteurized milk and to additionally apply the provisions of this section to transfer stations for the purpose of achieving greater uniformity with related requirements of the State Department of Health and the 1965 U.S. Public Health Service Grade A Pasteurized Milk Ordinance.

24 RCNY 111.85

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.85 Transfer stations, receiving stations and milk processing plants; cleansing and sanitization; use of containers; solutions.

(a) Weigh cans, storage vats, mixing vats, coolers, filters, separators, pumps, pipes or other apparatus or equipment used in handling, storing, transporting or processing of milk or milk products shall be thoroughly cleaned immediately after use pursuant to subsection (b) of this section and shall be sanitized immediately prior to reuse pursuant to subsection (c) of this section.

(b) Cleansing shall be performed as follows:

(1) After use, each item shall be rinsed with water until all visible milk or milk products are removed;

(2) After rinsing, each item shall be washed in water at a temperature of not less than 110°F. A washing compound in concentration sufficient for removal of all dirt and grease detectable by sight or touch shall be used by scrubbing with

a brush or by spraying under effective pressure. Steel wool or similar materials shall not be used; and,

(3) After washing, each item shall be rinsed with warm water until all traces of the washing compound are removed and the item is clean.

(c) Sanitization shall be performed as follows:

(1) The item shall be exposed to live steam, under pressure, for at least two minutes; or,

(2) The item shall be exposed to water at a temperature of at least 180°F for a period of at least two minutes; or,

(3) The item shall have applied to it a sanitizing agent of such strength and in such manner as will effectively sanitize such item. The type, strength and manner of application of the sanitizing agent and the preparation and reuse of solutions of sanitizing agent shall be approved by the Department.

(d) No bottle shall be used to hold milk or milk product until it is cleansed sanitized as follows:

(1) It shall be cleansed by use of the soaker type of washer. Each bottle shall be submerged for at least five minutes in a solution of caustic alkali (sodium hydroxide of not less than three per cent concentration) or detergent and sanitizing agent acceptable as to type and strength by the Department. The solution shall be kept at a temperature of not less than 150°F during which time the bottle shall be brushed, sprayed or subjected to air water pressure spray in a manner acceptable to the Department. Each bottle shall then be rinsed with clean water and sanitized in the manner set forth in subsection (c) of this section or as otherwise acceptable to the Department; or,

(2) It shall be cleansed by hand or by some device other than soaker type of washer. Each bottle shall be soaked in or sprayed with water containing an alkali or other detergent acceptable to the Department at a temperature of at least 120°F, during which time the bottle shall be brushed, sprayed or subjected to air water pressure spray in a manner acceptable to the Department. Each bottle shall then be rinsed with clean water and sanitized in the manner set forth in subsection (c) of this section.

(e) If heat sanitization is used for the sanitization of bottles other than by steam jets projected into bottles, sanitizing apparatus shall be equipped with an automatic temperature recording device which will indicate and record the temperature at which the bottles are sanitized. Temperature records shall be kept on file for at least 60 days.

(f) Strengths of solutions and time of exposure required for chemical sanitization shall be as follows:

(1) For tanks, including those mounted on railroad and automobile trucks, where chlorine sanitization solution is applied by spraying, 250 parts of available chlorine by weight per million parts of water after application for not less than five minutes.

(2) For containers, apparatus and utensils other than tanks and bottles, where chlorine sanitization solution is pumped or allowed to flow over surfaces to be sanitized, and the contact therewith is continuous, at least 100 parts per million in solution after application for not less than two minutes; and,

(3) For bottles, if washed by hand or in "pressure type" washers, at least 50 parts per million for not less than 15 seconds. If previously cleansed and sanitized in a "soaker type" washer, at least 10 parts per million in solution, after application for not less than ten seconds.

(4) Where iodofor solutions are used as bactericides or sanitizers instead of chlorine solutions, the concentration of iodine shall not be less than 52.5 parts per gallon, after application for not less than two minutes, except that for bottles cleansed and sanitized in a "soaker type" washer, the concentration of iodine shall not be less than one part per million, after application for not less than 10 seconds. The concentration of iodine shall be determined by titration with sodium thiosulfate.

(g) Vessels or containers used for preparation or storage of chlorine solutions shall not be constructed of wood, metal or other substances readily affected by such solution. Chlorine solutions shall be prepared by dissolving in water sufficient liquid chlorine, calcium or sodium hypochlorite or similar chlorine compound to give at all times the content of available chlorine here prescribed as indicated by the orthotolidine test or starchiodine titration. Equipment and materials for the performance of the orthotolidine test or starchiodine titration shall be constantly available and used regularly. A chlorine solution shall not be used more than once in the sanitization of containers, apparatus or utensils used in the handling, storage or transportation of milk or milk products, except where the strength of available chlorine is maintained, as outlined above, but used or spent chlorine solution may be employed for treating floors, walls or other structural parts.

(h) Glass bottles or other containers used to hold milk and milk products, the cover caps for containers, plug caps, parchment paper used on cans and stock used in the manufacture of paper containers and cover caps shall be protected from contamination at all times. Before commencement of filling operations, the first plug cap or combined closure and plug cap from a package of such caps and the first sheet of parchment paper from a package of such paper shall be discarded. Containers shall be of such sanitary design and construction so as to prevent leakage, contamination or any other condition which may adversely affect the purity of the milk or milk products. A container shall be constructed so that it will withstand ordinary handling during its lifetime. If a waxed paper container is used, coating procedures shall be accomplished in such manner that excessive wax will not become detached from the inner surface of the container.

(i) Glass bottles and other containers used to hold milk and milk products shall be provided with a cover cap or closure which shall (5) protect the product from contamination, (2) cover the pouring lip of the containers and (3) be of such type that its removal and replacement can readily be detected. The requirements of clauses (2) and (3) shall not apply to a cap or closure on containers of sour cream and cultured milk products, proVided such cap or closure covers the lip of such containers to at least the widest outside diameter thereof.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived without substantive change from S.C.§156 Regs. 120, 124(1), 126(part), 126(a)(part), 126(b), 126(c), 126(d)(part), 146, 148 and 154a. Subsection (2) of Reg. 124 is omitted. Reg. 147 is omitted. The portion of Reg. 148 requiring that unfit containers be marked and condemned is omitted.

Subsection (c)(3) was amended by resolution of September 18, 1959, filed with the City Clerk September 22, 1959, to permit the use of any sterilizing agent approved by the Department, rather than a chlorine solution only. The amendment obviates the need for Board action whenever a new, acceptable sanitizing agent is developed.

Subsection (h) of this section was amended and subsection (i) was added by resolution of June 15, 1959, filed with the City Clerk June 23, 1959, so as to restore the exception for sour cream and cultured milk products which originally appeared in S.C. §156 Reg. 154a.

The specific requirement in subsection (d)(1) of this section for a 2% caustic alkali solution was upheld in **Kemiko Mfg. Co. v. Dept. of Health,** N.Y.L.J.p. 1 (Sup. Ct. May 3, 1937).

This section was amended by resolution adopted on January 16, 1969 to provide requirements and terminology therein of greater uniformity with those of the State Department of Health and the 1965 U.S. Public Health Service Grade A Pasteurized Milk Ordinance.

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 111.87

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.87 Milk processing plants; operations; pasteurization operations; filling of containers.

(a) A milk plant permittee shall notify the Department in writing of the normal daily period of pasteurization stating hours when pasteurization commences and the hours when pasteurization ends each day. Any change of pasteurization period shall be reported to the Department.

(b) Prior to daily commencement of pasteurization operation, a chart which bears the name and address of the milk processing plant, the date and an effective means of identifying the particular pasteurizing unit concerned shall be attached to the automatic temperature recording device for each pasteurizing unit in such a manner as will properly record temperature and time of processing. The following information shall be included on the chart:

(1) The word "MILK" or the appropriate name of the milk product;

(2) The quantity of milk or milk product pasteurized;

(3) The temperature as shown by a correct indicating thermometer at some designated time during the holding period of one pasteurization operation in the case of the holding method of pasteurization pursuant to §111.25 or during the forward flow in the case of the high-temperature, short-time method pursuant to such section;

(4) Explanation of any unusual occurrences;

(5) Signature of the person in charge of pasteurization operation; and,

(6) On at least one of the charts during a weekly period, a statement of the time accuracy of the recording device.

(c) Charts shall be kept on file at the plant for at least 60 days.

(d) Except as otherwise provided in this article, no milk or milk product shall be pasteurized a second time. This requirement does not apply, however, to cold storage cream or to milk or a milk product during the manufacture of a food other than another milk product.

(e) Immediately after pasteurization, milk or a milk product shall be placed by mechanical means in sterile containers which meet the requirements of §111.85. Containers shall be dosed immediately after filling, and filling operations shall be conducted so as to prevent contamination of the milk or milk product. Containers of light sour cream may be repacked at the depot of a Class B permittee if proper facilities are provided.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §156 Reg. 54(3) and Reg. 129(c)(part), (d), (e), (f), (g) and (h). The exception for cultured milk products to he filled at a depot is omitted but is retained for light sour cream.

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.89 Transfer stations, receiving stations and milk processing plants; operations; records.

(a) A Class A permittee operating a transfer station or receiving station shall keep records for at least six months showing the receipt and disposition of all quantities of prepasteurized milk or milk products at the station concerned.

(b) A Class A permittee operating a milk processing plant shall keep records for at least six months showing the receipt of quantities of prepasteurized milk, prepasteurized milk products and food ingredients used in the processing of milk products and the quantities of milk or milk products processed at the plant.

(c) A Class A permittee operating a milk processing plant and a Class B Permittee shall keep daily records showing the quantities delivered and establishments to whom delivered. Such records shall be retained for at least two months.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §156 Regs. 77 (as to skimmed milk) and 161. The purpose of the requirement as here included is to facilitate a check on the source of milk, milk products and raw ingredients, to ascertain the freshness of such substances.

The section heading and subsections (a) and (b) of this section were amended by resolution adopted on January 16, 1969 to additionally apply their provisions to transfer stations and to change the term raw milk to prepasteurized milk to provide greater uniformity with the requirements of the State Department of Health and the 1965 U.S. Public Health Service Grade A Pasteurized Milk Ordinance.

Subsection (c) was amended by resolution adopted on October 19, 1967 which eliminated the references to a Class C permittee.

***** Current through December 2009 ****

24 RCNY 111.91

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 111 MILK AND MILK PRODUCTS

§111.91 Sales and distribution.

(a) Except as provided in subsection (b), (c) and (d) of this section no milk or milk product shall be possessed, offered for sale, sold, given away or distributed unless it is in an individual container intended for consumer use which is filled in the manner prescribed pursuant to §111.87 at the milk processing plant where the milk or milk product is pasteurized. Such container shall not be opened until it comes into the control of the consumer or, if the milk or milk product is sold or distributed for consumption on the premises of a restaurant, until the milk or milk product is ready to be served to the consumer.

(b) Milk or milk products may be possessed, offered for sale, sold, given away or distributed in cans if it is to be used (1) by a wholesale milk dealer, (2) for manufacturing purposes at a food establishment, (3) for cooking purposes at a restaurant, or hospital or other institution giving care to persons or (4) at a hospital or other institution which is authorized to dispense loose milk pursuant to subsection (c) of this section.

(c) The Department may authorize a hospital or other institution giving care to persons to dispense milk or milk products from cans to glasses or other individual containers for consumption on the premises of such hospital or institution. No such authorization shall be given until the Department is satisfied that sanitary standards, equivalent to the standards set forth in applicable provisions of Article 81 of this Code are being met.

(d) A restaurant, hospital or other institution may dispense milk lowfat milk, modified lowfat milk, skimmed milk or modified skimmed milk from a special mechanical device, satisfactory to the Department, into glasses or other containers for consumer use on the premises of such establishment or institution. The special device shall be designed and constructed in such a manner that a container of the milk or milk product, which is filled and scaled at the milk processing plant where the milk or milk product is pasteurized, can be placed directly into the device and becomes part of the device so that the milk or milk product may be dispensed without necessity of pouring the milk or milk product into any other container. The device shall be so designed and constructed that milk or a milk product which is not homogenized will be kept mixed so as to insure that each portion of the fluid dispensed contains a proper proportion of the contents of the container. A multi-use container used as part of the special device shall be rinsed immediately after emptying and before its return to the milk processing plant. A single-service container used as part of the special device shall be discarded immediately after use and shall not be reused. The container shall be so designed that it cannot be opened or otherwise tampered with without breaking the seal affixed at the milk processing plant. The special device in addition to the requirements prescribed by this section, shall meet the requirements of §81.47.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §§159-b and 159-c. It has been reworded to avoid detailed standards and to relate to other relevant portions of the revised Code, particularly the cited section of Article 81. S.C. §§157a, emergency distribution of milk, 159, consumer use of certain containers, 158, on distribution and use of skimmed milk and modified skimmed milk (see also section 111.55), and 159a, on general limitations on insanitary use of containers, are omitted. Agriculture and Markets Law §70 prohibits the use of milk cans and other containers without the consent of the owner thereof.

An order of the Department of health of Albany prohibiting the sale of loose or dipped milk was upheld in **Mannix v. Frost,** 100 Misc. 36, 164 N.Y.S. 1050 (Sup. Ct. Albany Co.1917 aff'd without option, 181 App. Div, 961, 168 N.Y.S. 1118 (3d Dept. 1917).

Note that sanitary control of vending machines generally is covered by §81.47. See in this connection **Peoples Dairy v. City of Lackawanna,** 1 Misc, 2d 700, 149 N.Y.S. 2d 392 (Sup. Ct. Erie Co. 1956).

Subsections (a), (b) and (d) of this section were amended by resolution adopted on January 16, 1969 to additionally apply the provisions of subsections (a) and (b) to milk or milk products found in the possession of a person and to additionally apply the provisions of subsection (d) to lowfat milk or modified lowfat milk for the purpose of providing greater uniformity with the requirements of the State Department of Health and the 1965 U.S. Public Health Service Grade A Pasteurized Milk Ordinance.

§113.01 Definitions.

Frozen desserts. Frozen desserts means ice cream, frozen custard, French ice cream, French custard ice cream, artificially sweetened ice milk, fruit sherbet, non-fruit sherbet, water ices, non-fruit water ices, confection frozen without stirring, dairy confection frozen without stirring, manufactured dessert mix, frozen confection, melorine frozen dessert, parevine, frozen yogurt, freezer made shakes, freezer made milk shakes, dietary frozen dessert, whipped cream confection and bisque tortoni together with any mix used in making such frozen desserts as such products are defined in the regulations contained in Part 39 entitled "Definitions and Standards for Frozen Desserts" promulgated pursuant to the provisions of Article 4-A of the State Agriculture and Markets Law. In addition, any products which are similar in appearance, odor or taste, or are prepared or frozen as frozen desserts are customarily prepared and frozen, whether made with dairy products or non-dairy products are included as frozen desserts in this definition. Any operation producing chips or flakes of ice made from water with or without additives, served to the consumer with or without flavoring added by the operator or consumer is included as a frozen dessert within this definition, such operation being commonly known as a slush operation.

Frozen desserts mix. Frozen desserts mix means any frozen dessert before being frozen.

Retail frozen desserts plant or retail plant. Retail frozen desserts plant or retail plant means any place, or premises, or any part thereof, including specific applicable areas in retail stores, stands, hotels, restaurants, mobile food units, and other retail service food operations whether temporary or permanent where frozen desserts are manufactured, processed, assembled, frozen and stored for distribution or sale at retail directly to the consumer and shall include rooms or space where utensils or equipment are stored or washed and sanitized, or where ingredients for use in manufacturing the frozen desserts are stored.

Wholesale frozen desserts plant or wholesale plant. Wholesale frozen desserts plant or wholesale plant means an establishment in which frozen desserts or frozen desserts mix are manufactured for sale or distribution otherwise than for retail sale directly to the consumer on the premises where manufactured.

C-I-P. C-I-P means a cleaning and sanitizing procedure by which equipment, pipe lines, and other facilities are cleaned-in-place in accordance with procedures approved by the Department for permanently installed sanitary product-pipelines and cleaning systems.

Dispensing freezer. Dispensing freezer means the type of equipment which freezes or partially freezes frozen desserts to be served for sale to the consumer.

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 113 FROZEN DESSERTS

§113.15 Standards; pasteurization of frozen desserts mix.

(a) Pasteurization. All frozen desserts mix with the exception of water ice mix and flavoring agents used in frozen desserts shall be pasteurized.

(b) Pasteurization temperatures. Pasteurization of frozen desserts mix as required in subdivision (a) of this section shall be done in a plant and with equipment conforming to the provisions of this article, by heating every particle:

(1) to a temperature of at least 155 degrees Fahrenheit and held at such temperature for at least 30 minutes, or

(2) to a temperature of at least 160 degrees Fahrenheit and held at such temperature for at least 15 minutes, or

(3) to a temperature of at least 165 degrees Fahrenheit and held at such temperature, for at least 10 minutes, or by short term pasteurization with controls approved by the Commissioner.

(4) to a temperature of at least 175 degrees Fahrenheit and held at such

(5) to a temperature of at least 180 degrees Fahrenheit and held at such temperature for at least 15 seconds, or

(6) to a temperature of at least 200 degrees Fahrenheit and held at such temperature for at least three seconds, or

(7) to a temperature of at least 210 degrees Fahrenheit with no holding time, or to such equivalent temperature and period of holding as the Commissioner shall approve in writing.

(8) in the case of ice milk mix, to a temperature of at least 166 degrees Fahrenheit for at least 15 seconds, or

(9) to a temperature of at least 161 degrees Fahrenheit for at least 25 seconds.

(c) High temperature short time pasteurizers shall have the thermal limit controller set and sealed so that forward flow of product cannot start unless the temperature at the controller sensor is above the appropriate required temperature, and so that forward flow of product cannot continue during descending temperatures when the temperature is below the appropriate required temperature. The seat shall be so applied after test, by the representative of the Commissioner, and shall not be removed without immediately notifying the Commissioner. The system shall be so designed that no product can be by-passed around the controller sensor which. shall not be removed from its proper position during the pasteurization process.

(d) Cooling. After pasteurization all mix shall be cooled immediately to a temperature of not more than 50 degrees Fahrenheit until subject to freezing. Any milk, cream, and other fluid milk products other than sterilized, evaporated or sweetened condensed milk in hermetically sealed containers, shall also be stored at temperatures of not more than 50 degrees Fahrenheit. This requirement shall be deemed:

(1) to require the use of refrigerated vehicles or approved insulated containers in transporting frozen desserts mix from the manufacturing or other plant to retail manufacturers, and

(2) to apply to conveying mix from coolers or refrigeration units in manufacturing plants to freezers by means of pipes, tubing, or other means.

HISTORICAL NOTE

ARTICLE 113 FROZEN DESSERTS

§113.21 Physical facilities and equipment; general requirements.

(a) Equipment, apparatus and utensils used at a retail frozen desserts manufacturing establishment shall be made of stainless steel, or other impervious material which, in the opinion of the Department, will not rust, corrode or result in the contamination of the frozen desserts. Equipment and apparatus, including pipes, shall be constructed so as to be easily taken apart for cleaning, but stationary equipment and apparatus, of such design as will permit effective in-place cleaning, may be used. When, in the opinion of the Department, such stationary equipment and apparatus cannot be or is not being effectively cleaned in place, the Department may order the use of other appropriate equipment, apparatus and method of cleaning.

(b) All boiler and tool rooms shall be partitioned from rooms in which manufacturing, handling, or storing of frozen desserts take place.

(c) Storage of utensils and portable equipment used in processing, handling, or packaging of frozen desserts shall

be at least eight inches above the floor in dean, dry locations and in a self-draining position on racks constructed of impervious, corrosion-resistant material.

(d) All opened boxes of foods, ingredients, paper goods, utensils and other similar materials used in the manufacture or dispensing of frozen desserts shall be closed and protected against contamination when not in continuous use.

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 113 FROZEN DESSERTS

§113.23 Operations; general requirements; sanitization.

(a) Drainage from a washing room or washing area shall not be allowed to flow into any other room or area.

(b) No equipment or container shall be used if it is worn, rusted, corroded or is in such condition that it cannot be cleaned and sanitized.

(c) Cans used to store frozen desserts shall be used for no other purpose.

(d) Equipment, sanitary piping and utensils used in receiving, storing, processing, manufacturing, packaging and handling frozen desserts and ingredients thereof, and all product contact surfaces of pumps, and lines shall be kept clean. Packing glands on all agitators, pumps, and vats shall be inspected regularly and kept in good operating condition and dean. Before use, all equipment coming in contact with milk products or frozen desserts shall have an effective bactericidal and sanitizing treatment approved by the Department. Equipment not designed for C-I-P cleaning, shall be

disassembled, thoroughly cleaned and sanitized daily. Only cleaners, wetting agents, detergents, or other similar material that will not adversely affect or contaminate the frozen desserts or ingredients thereof may be used. Cleaning and sanitization shall be performed by a procedure approved by the Department. Steel wool, metal sponges or pads shall not be used. C-I-P cleaning shall be used only in the case of equipment and pipeline systems that are designed, constructed and installed with the approval of the Department for that type of cleaning and such equipment shall be cleaned daily.

(e) Sanitization shall be accomplished as follows:

(1) Immersion for at least one-half minute in clean, hot water at a temperature of a least 170 degrees Fahrenheit (or 77 degrees Centigrade)OF

(2) Immersion for at least one minute in a clean solution containing at all times at least 50 parts per million of available chlorine as a hypochlorite or 200 parts per million as an organic chlorine compound at a temperature of at least 75 degrees Fahrenheit (24 degrees Centigrade) or

(3) Immersion for at least one minute in a clean solution containing at all times at least 12.5 parts per million of available iodine and having a pH not higher than 5.0 and at a temperature of at least 75 degrees Fahrenheit (24 degrees Centigrade) or

(4) Rinsing, spraying, or swabbing with a chemical sanitizing solution of at least twice the strength required for that particular sanitizing solution in the case of equipment too large to sanitize by immersion. When chemicals are used for sanitization, a test kit or other device that accurately measures the parts per million concentration of the solution is to be provided and used. When hot water is used for sanitizing, an integral heating device to maintain the water temperature at a minimum of 170 degrees Fahrenheit (77 degrees Centigrade), and a numerically scaled indicating thermometer, accurate to plus or minus 2 degrees Fahrenheit (1.1 degrees Centigrade) for frequent checks of water temperature, are to be provided and used.

(5) Mechanical cleaning and sanitizing may be done by any type of machine or device approved by the Department. These machines and devices are to be properly installed, maintained in good repair, and operated to produce clean, sanitized equipment and utensils.

(f) Frozen desserts cabinets shall be kept dean, sanitary, neat, free from objectionable odor, and free from unnecessary utensils, dishes, or other material and products, other than the scoop necessary for dispensing the product. Such cabinets shall be kept closed except when necessary to dispense, remove or replenish supplies of products or during cleaning operations. The cabinet compartments or receptacles for frozen desserts shall not be used for any other purpose. Multi-use frozen desserts cans shall not be used for any purpose other than to store frozen desserts.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived in part from §113.29 and is new in part.

The unnumbered paragraph following paragraph (4) of subsection (e) of §113.23, was amended by resolution adopted on April 20, 1978 to indicate that the thermometer needed for checking the temperature of hot water used for sanitizing must be accurate to plus or minus 2 degrees Fahrenheit or 1.1 degrees Centigrade.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 113 FROZEN DESSERTS

§113.29 Mobile frozen desserts units, commissaries and depots.

Mobile frozen desserts units shall comply with all applicable provisions of the Health Code, except those which apply to boiler rooms, toilet facilities, and storage facilities.

(a) **Mobile frozen desserts manufacturing vehicles; minimum standards:**

(1) The interior shall be of sufficient size with equipment and fixtures conveniently located.

(2) A supply of potable water shall be provided. The capacity of the potable water supply tank shall be a minimum of 40 gallons. The tank(s) shall be tilted sufficiently to permit complete drainage and a suitable drain cock(s) shall be provided. Each water tank shall be so constructed as to be readily accessible for inspection and cleaning. The water inlet pipe shall be of removable flexible approved tubing, with the fitting for hose connections capped except when the tank(s) is being filled. Hose for connection to a potable water supply shall be provided and it shall be equipped with an

approved backflow prevention device.

(3) A double compartment sink with a swivel faucet, supplied with running hot and cold water shall be provided. It shall be large enough to accommodate the largest piece of equipment to be cleaned therein.

(4) Hand washing facilities, with running hot and cold water, soap and single service towels or mechanical hand dryer shall be provided.

(5) A suitable waste water tank with a capacity greater than the water supply tanks, shall be provided. The tank shall be tilted sufficiently to permit complete drainage and shall be provided with a drain cock. It shall be provided with a means of gauging the contents and shall be drained and flushed at least once each day and more frequently as may be necessary, and shall be maintained in a sanitary condition.

(6) A storage box or freezer, with refrigerated holding plate shall be provided for holding the various ingredients and frozen desserts. This box shall be of ample capacity, constructed of stainless steel or other approved non-corrosive material. It shall be provided with metal racks, platforms or shelves on which to store products or ingredients and equipped with an indicating thermometer. The floor shall be pitched towards a drain.

(7) Floors shall be of metal or other approved material and sloped to provide drainage. Junctures of floors, walls and adjoining fixtures shall be watertight and coved.

(8) The interior shall be adequately lighted. A minimum of 50 foot candles of light shall be provided on working surfaces.

(9) There shall be a partition or self-closing door between the driver's seat and the manufacturing and serving area, unless the vehicle is air conditioned.

(b) **Mobile frozen dessert units; minimum standards:**

(1) Mobile units shall be used only for the manufacture and sale of frozen desserts unless specified approval is applied for in writing and granted by the Department for the sale or storage of other food products. Such authorization shall appear on the permit granted to the operator of such mobile unit.

(2) A sufficient number of refuse and garbage cans, with covers, shall be provided. Cans or containers shall be so constructed and maintained, and located, as not to create a nuisance.

(3) Frozen desserts mix shall be in single service containers packed at the place of manufacture. Container capacity shall be sufficient, but not larger than needed for the manufacture of a single batch, unless some other satisfactory method of handling mix or some other size or type of container is approved by the Department.

(4) Flavors, syrups, fruits, and other ingredients used in making sundaes, shakes and other frozen desserts shall be kept in single service removable containers.

(5) Persons handling or manufacturing frozen desserts shall wear lightcolored, clean, washable outer garments, and head coverings.

(c) **Commissaries and depots:** All mobile units shall operate from a commissary or depot as authorized by permit. Such commissaries or depots shall have adequate facilities for cleaning and sanitizing of the mobile units they service. Instructions shall be posted in the commissary or depot service area as to proper cleaning of equipment, utensils and facilities. Commissaries or depots shall be maintained and operated in accordance with the following requirements:

(1) Walls shall be smooth, non-absorbent and clean.

(2) Premises shall be rodent and insect proof and free of harborages.

(3) The floor shall be constructed of concrete or other approved impervious material, shall be provided with a drain, sloped to such drain, and the juncture of the floor and walls shall be covered.

(4) There shall be provision for adequate ventilation. Ventilation facilities shall be screened or otherwise protected to prevent the entrance of insects, rodents, or other vermin.

(5) Adequate lighting, suitable toilet facilities, hand washing facilities equipped with hot and cold running water, soap and single service towels or air dryers, clothes lockers, and refuse containers shall be provided.

(6) A sufficient supply of hot and cold potable running water shall be provided and there shall be at least two large sinks, each of which is large enough to accommodate the largest piece of equipment to be washed. Drain beards of impervious material shall be provided.

(7) Hose and hose connections for supplying potable water to the mobile vehicles shall be provided. Water supply lines to hose connections shall be equipped with approved vacuum breakers or other devices to eliminate possible contamination from backflow. There shall be facilities for storing the hoses to achieve complete drainage and to avoid contamination.

(8) There shall be a metal pipe drying rack or its equivalent for utensils and equipment.

(9) There shall be suitable storage facilities or covered containers for all refuse and wastes.units are located and the area where food is stored.

(11) If frozen desserts, frozen desserts mix, flavors, syrups, fruit and other edible material are stored at a commissary, they shall be stored in rooms completely separated from rooms where cleaning and sanitizing is done, and such foods shall be kept at temperatures as will prevent spoilage and under conditions which will prevent contamination.

(12) Single service containers and other materials used in dispensing frozen desserts shall be stored in clean, dry rooms and shall be protected against contamination, dust and moisture.

(13) Prior approval shall be obtained from the Department for any change in a commissary or depot or for a change in location of the commissary or depot from which any mobile unit is to operate. The Department is to be notified whenever a mobile unit moves from one commissary or depot to another.

(14) Mobile units, before and after being cleaned and sanitized, may be stored outside of the commissary or depot, provided that electrical connections are provided for maintaining refrigeration, when necessary, and provided that the mobile units are not subjected to excessive smoke, dust, foul odors, or other possible contamination.

(15) A commissary or depot operator shall keep a daily record of the times during which each mobile vehicle serviced by him was cleaned and sanitized.

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 115 PRESCRIPTION FORMULA PREPARATION FACILITIES

§115.09 Preparation and sale on physician's or other health care practitioner's order.

No prescription formula preparation facility permittee shall prepare, offer for sale, sell, give away or distribute prescription formula except on the order of a physician or other health care practitioner authorized by State law to prescribe therapeutic diets. The order may be transmitted to the permittee orally or in writing.

HISTORICAL NOTE

Section added City Record Oct. 30, 2007 eff. Nov. 29, 2007. [See Vol. 8 Statements of Basis and

Purpose No. 60]

DERIVATION

Section in original publication July 1, 1991.

Note:

10 NYCRR §405.23 (c)(1) provides that in a hospital, "therapeutic diets shall be prescribed by the practitioner or practitioners responsible for the care of the patients." Practitioners that are authorized by the State Education Law to prescribe medications include licensed physicians, registered physician's assistants; registered specialist's assistants; certified nurse practitioners and licensed midwives.

§115.17 Labeling of containers.

Each container of prepared prescription formula for an individual shall be labeled with the following information:

(a) The name and telephone number of the prescription formula preparation facility;

(b) The words "INFANT FORMULA"; "CHILD FORMULA" OR "ADULT FORMULA" as applicable, or other words acceptable to the Department;

(c) The patient's name, medical record number or other institutional identification, and name of medical facility;

(d) If the prescription formula is prepared using commercially available infant formula, the infant formula brand name and additives, if any;

(e) Caloric density/volume;

(f) Expiration date and time;

(g) A statement that the prescription formula shall be kept under refrigeration at or below 40 degrees Fahrenheit (4.4 degrees Celsius);

(h) Prescription formulas for infants made from a powdered food base or a liquid base that has been modified shall be labeled to identify powder content, and shall include a statement that such prescription formulas shall be consumed or discarded no later than 24 hours after preparation. Other formula preparations shall include statement that such prescription formulas shall be discarded no later than 48 hours after preparation.

ARTICLE 115 PRESCRIPTION FORMULA PREPARATION FACILITIES

§115.19 Physical facilities, equipment and processing.

(a) Rooms and equipment used to prepare prescription formula shall be organized, cleaned and sanitized so as to prevent contamination, including cross-contamination by food substances, such as allergens, that the ordering physician or other health care practitioner has indicated may compromise an patient's health and safety.

(b) Facilities shall consist of separate rooms for preparation of infant and adult prescription formula and a separate room or rooms for washing and sanitizing containers and utensils. Such rooms shall not be used for any other purpose.

(c) During prescription formula preparation no other activities shall take place in the preparation room, doors leading to prescription formula preparation rooms shall be kept securely closed during preparation and only authorized personnel shall be allowed access to the prescription formula preparation room(s).

(d) Rooms shall be of such size as to prevent contamination of equipment and utensils.

(e) A preparation room shall have no exposed overhead water, steam or sewage piping and shall have an adequate number of conveniently located hand wash sinks operated by foot, knee or elbow controls.

(f) Floor drains of a washing room shall be separate from the drains of preparation rooms. A washing room shall have facilities and equipment and a supply of hot and cold running water adequate to enable proper cleaning and sterilization of containers and utensils. Racks shall be provided for the storing of clean containers and utensils.

(g) Equipment and apparatus used for preparation of prescription formula shall be of sanitary design and construction and allow effective cleaning and sanitizing. Equipment and apparatus shall be made of stainless steel or other impervious materials which will not rust, corrode or result in contamination. Sterilization equipment shall be equipped with recording and indicating thermometers.

ARTICLE 115 PRESCRIPTION FORMULA PREPARATION FACILITIES

§115.21 Packaging and sterilization.

(a) Prescription formula shall be packaged in individual single service food grade containers.

(b) Immediately after filling, a container shall be closed with a cover or cap which effectively seals and protects the mouth of the container. Containers with prepared infant prescription formula may be closed with new, unused, incised nipples which shall be protected with suitable outside fitted caps.

(c) Only sterile water shall be used in infant prescription formula preparation.

(d) Sterile water used to prepare infant prescription formula from a powder base shall be cooled to a temperature no lower than 158 degrees Fahrenheit (70 degrees Celsius) during preparation.

(e) Containers of prescription formula shall be sterilized in an autoclave unless the physician or other health care practitioner's order states that such formula shall not be sterilized, or if the label on a container of a commercially

manufactured infant formula base advises that such formula should not be sterilized after preparation.

(f) Prepared infant prescription formula shall be properly cooled to and maintained at or below 40 degrees Fahrenheit (4.4 degrees Celsius) within one hour of preparation, except that prescription infant formula prepared from a powdered food base shall be cooled to 37 degrees Fahrenheit (2.8 degrees Celsius) within one hour of preparation, and maintained at or below 40 degrees Fahrenheit (4.4 degrees Celsius).

(g) Formula intended for persons other than infants shall be cooled to and maintained at temperatures recommended by the manufacturer of the formula base product, or Article 81, whichever temperature is lower.

(h) All prescription infant formula prepared from a powder base, or liquid containing amendments, shall be used or discarded within 24 hours of preparation. All other formula preparations shall be consumed or discarded within 48 hours of preparation.

24 RCNY Health Code Reg. 117.00

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 117 DAIRY FOOD PRODUCTS

Health Code Reg. § 117.00 INTRODUCTORY NOTES

Article 117, enacted by resolution adopted on January 16, 1969, contains provisions for the regulation of butter, malted milk, and cheddar, processed and soft cheese. These provisions have been transposed from Article 111 because they are dairy food products rather than milk products and therefore are subject to different environmental sanitation factors and are manufactured, distributed, and stored under different conditions.

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 117.01

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 117 DAIRY FOOD PRODUCTS

§117.01 Butter.

No person shall offer for sale, sell, give away or distribute butter if it contains less than 80 percent by weight of butter fat.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section was transposed from former §111.37 which was repealed and reenacted as §117.01 by resolution adopted on January 16, 1969 because it relates to a dairy food product rather than a milk product and therefore is subject to different environmental sanitation factors and is manufactured, stored and distributed under somewhat different conditions. This section was derived without substantive change from S.C. §152 (11th para.). The definition of butter in

the second unnumbered subsection of S.C. §152 was omitted as unnecessary as the provisions of Articles 71 and 73 cover the question of adulteration generally.

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 117.03

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 117 DAIRY FOOD PRODUCTS

§117.03 Malted milk.

Malted milk is a product made by combining milk with the liquid separated from a mash of ground barley, malt and wheat flour, with or without the addition of sodium chloride, sodium bicarbonate and potassium bicarbonate, in such manner as to secure the full enzymic action of the malt extract and by removing water.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section has been transposed from §111.51 which was repealed and reenacted as 117.03 by resolution adopted on January 16, 1969, because it relates to a dairy food product rather than milk product and therefore is subject to different environmental sanitation factors and is manufactured, distributed and stored under somewhat different

conditions. This section was derived without substantive change from the definition of malted milk in S.C. §2(43). The language "clean, pure, wholesome and unadulterated" before "milk" was omitted as covered in other parts of the article dealing with milk as well as the provisions of Articles 71 and 73.

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 117.05

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 117 DAIRY FOOD PRODUCTS

§117.05 Cheddar, processed and soft cheese.

(a) No person shall produce, manufacture, offer for sale, sell, give away or distribute cheddar, processed or soft cheese unless:

(1) The milk or milk product from which the cheese is manufactured has been pasteurized pursuant to §111.25; or,

(2) The cheese, during the manufacturing process, is subjected to a heat treatment which, in the opinion of the Department, is equivalent to pasteurization; or,

(3) The cheese, after manufacturing, is subjected to an aging process by keeping it at a temperature of not lower than 35°F for at least 60 days.

(b) Each package of cheddar, processed or soft cheese shall bear a label, printed legibly in English, with the following information:

(1) The name and address of the manufacturer, wholesale dealer, or distributor, retail seller or packager of the cheese, or, in lieu of such name and address, an identifying trademarker, trade name or other identifying designation;

(2) The common name of the cheese concerned;

(3) If the cheese has been subjected to a heat treatment equivalent to pasteurization pursuant to §111.25 or if it is manufactured from milk or a milk product which has been pasteurized pursuant to §111.25, the words, "PASTEURIZED"; and,

(4) If the cheese has been aged pursuant to subsection (a) (3) of this section, a statement that the cheese has been aged for at least 60 days.

(c) When a trademark, trade name or other identifying designation is used pursuant to subsection (b) (1) of this section, the manufacturer, wholesaler or other person labeling the package of cheese shall file with the Department a statement which contains the trademark or other identifying designation used and the actual name and address of the manufacturer or wholesaler.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section has been transposed from §111.59 which was repealed and reenacted as 117.05 by resolution adopted on January 16, 1969, because it relates to a dairy food product rather than milk product and therefore is subject to different environmental sanitation factors and is manufactured, distributed and stored under somewhat different conditions. This section was derived from S.C. §151a. The definitions of cheddar cheese, processed cheese, and soft cheese in that section and cheese in S.C. §2(48) have been omitted as unnecessary in that these terms have a generally accepted meaning, both to the general public as well as the trade.

Subsection (b) of this section was amended by resolution of June 15, 1959, filed with the City Clerk, June 22, 1959, as follows: In subdivision (4) the requirement that the labeling of cheese processed by aging bear a statement that it was aged at least 60 days was substituted for the date of manufacture; subdivision (5) (as well as the former S.C. §151a), which dealt separately with blended cheese of the cheddar type, was eliminated as unnecessary.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART A FOOD AND DRUGS

ARTICLE 121 OTHER FOOD ESTABLISHMENTS: DRY WAREHOUSES; EDIBLE EGG BREAKING; BAKERIES; MINERAL, SPRING AND OTHER WATERS; CARBONATED AND OTHER BEVERAGES

Health Code Reg. § 121.00 INTRODUCTORY NOTES

Article 121 contains provisions which apply specifically to dry warehouses, edible egg breaking establishments, bakeries, establishments importing, manufacturing or selling at wholesale mineral waters and establishments manufacturing carbonated and other beverages, respectively. As in the case of all other food establishments, the respective provisions in this article apply in addition to, and are to be read together with, the provisions of Articles 71, 73 and 81 which apply to the food industry generally, and the provisions of Article 131 and 135 which govern respectively buildings generally and commercial premises. The establishments regulated under this article with the exception of dry warehouses, require permits as wholesale food establishments or retail food establishments pursuant to Articles 83 and 85, respectively.

ARTICLE 121 OTHER FOOD ESTABLISHMENTS: DRY WAREHOUSES; EDIBLE EGG BREAKING; BAKERIES; MINERAL, SPRING AND OTHER WATERS; CARBONATED AND OTHER BEVERAGES

§121.03 Dry warehouses; disposition of food unfit for human consumption.

Food in a dry warehouse which has become apparently unfit for human consumption shall be kept separate and apart from wholesome food. The owner or person in charge of the dry warehouse shall notify the Department and the owner of the affected food of the presence of such food. If the food is found unfit it shall be denatured, marked "condemned" and removed either upon the order of its owner or of the Department.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §148c Reg. 12(part). Affected food is to be marked "condemned" and removed

upon the order of the owner, as well as upon the order of the Department. S.C. §148c Reg. 2 requiting that owners of food stored in dry warehouses be notified where there is danger of spoilage has been omitted as being primarily a matter of warehouseman-customer relationship. S.C. §148c Reg. 13 on reconditioning of food in dry warehouses has been omitted as unnecessary. S.C. §148c Reg. 1 is omitted as unnecessary.

VOLUME 8

STATEMENTS OF BASIS AND PURPOSE

1. Statement of Basis and Purpose in City Record June 9, 1995:

Subsection 7.13(d) of the New York City Health Code requires the Review Board of the Administrative Tribunal to "promptly issue a written decision" on each appeal, and further requires an appeal to be deemed granted if the Board "does not act on an appeal within ninety days after the notice of appeal is filed. . . ." This provision has resulted in several violations being dismissed on this technical ground.

Subsection 7.13(d) was adopted by the Board of Health in 1971 at a time when the Administrative Tribunal heard and processed fewer than 5,000 violations. The Tribunal caseload, now numbering approximately 17,000 cases, is expected to grow to as many as 25,000 notices of violation annually. Restricting the time that an appeal may remain open, thereby placing the burden of prompt action on the Department's Review Board, was and is a laudable objective for the Department. However, the increased volume of appeals over the years has made the requirement that an appeal be decided within ninety days unduly restrictive. Furthermore, dismissal of a violation after an appeal has been pending for ninety days without a decision is unduly harsh and not in the interests of public health. Other comparable State and City Tribunals do not have such self-imposed restrictions on their appellate processes.

The proposal would not entirely remove the requirement that appeals be decided in a timely manner, but mandate automatic dismissal of a violation only where the matter can not be decided within 180 days rather than 90 days.

2. Statement of Basis and Purpose in City Record June 9, 1995:

This amendment of the Health Code would clarify the requirements for appointment of the non-agency member of the Administrative Tribunal Review Board, simplify the appointment process for appointment by eliminating the need for bar association approval, and allow for the temporary appointment of members during absences and vacancies of regular members. Bar Association approval has proven to be a cumbersome requirement for the Department that adds unnecessary delay to the appointment process. Because the Review Board consists of three members and a decision requires a majority, absence or vacancies disrupt the timely hearing of appeals. Authorizing the Commissioner to appoint a temporary member in such cases will assure that a three member Review Board will be available to hear and decide appeals whenever required. The temporary appointment would be effective until such time as the Board of Health reviews and approves a permanent member.

2-A. Statement of Basis and Purpose in City Record June 9, 1995:

Statutory Authority

These amendments to the New York City Health Code ("Health Code") are promulgated pursuant to §§558 and 1043 of the New York City Charter ("Charter") and amendments to Title V of Article 5 of the New York State Public Health Law, codified at Public Health Law §570 **et. seq.** [Chapter 436 of the Laws of 1993]. Section 558(b) and (c) of the Charter empower the Board of Health to amend the Health Code and to include in the Health Code all matters to which the Department's authority extends. Section 1043 grants the Department of Health rulemaking powers. Pursuant to State legislation [Chapter 436 of the Laws of 1993] effective July 1, 1994, the New York City Commissioner of Health no longer serves as the permit issuing official for clinical laboratories and blood banks, nor does the Department regulate these entities. These responsibilities have been assumed by the New York State Department of Health.

Statement of Basis and Purpose

The Commissioner of Health of the City of New York and the New York City Department of Health have, for many years, been the permit issuing official and regulatory authority for clinical laboratories and blood banks in New York City. Effective July 1, 1994, pursuant to State law, codified at Public Health Law §570 **et seq.** (Chapter 436 of the Laws of 1993, amending Title V of Article 5 of the New York State Public Health Law), the New York State

Department of Health assumed these responsibilities. To reflect this State legislative change, the Department is proposing the repeal of various Articles and sections of the New York City Health Code governing clinical laboratories and blood banks. Although permit related activities are now reserved to the State, the Public Health Law as amended does explicitly preserve the Department's authority to promulgate rules for clinical laboratories and blood banks not inconsistent with State law, relating to the control, prevention or reporting of diseases or medical conditions, and to the control or abatement of public nuisances. Consequently, the Department is proposing the repeal and reenactment of Article 13 currently regulating clinical laboratories, to reflect the Department's continued authority in the area of clinical laboratories and blood banks.

Article 15 of the Health Code regulates the handling of live pathogenic organisms. Amendments are proposed to Article 15 to reflect the aforementioned changes in State law concerning the regulation of clinical laboratories, and to insure that all laboratories continue appropriate registration requirements related to live pathogens.

Article 16 of the Health Code is entitled "Handling of Recombinant DNA" and requires that individuals engaged in research, manufacture, use, storage, possession, or transportation of recombinant DNA obtain a certificate of registration issued by the New York City Health Commissioner. The Department is proposing the repeal of Article 16 because local regulation in the field has been pre-empted by virtue of New York State law. Specifically, New York State Public Health Law §3222(9) provides that, "No local authority shall enact or enforce any local law, ordinance, rule or regulation which would regulate or restrict recombinant DNA activity. Further, no local authority shall enact or duplicate any provision of this article as local law, ordinance, rule or regulation." Although this State law has been in effect for many years, Article 16 of the Health Code has never been formally repealed.

Article 17 of the Health Code is entitled "Blood Donations and Transfusions." This article addresses the qualifications of donors, the records that must be maintained when human blood and blood derivatives are drawn from blood donors, required laboratory tests to be performed on donors and recipients, and other such requirements related to blood donations and transfusions. Article 19 of the Health Code is entitled "Blood Banks" and requires blood banks to obtain a permit issued by the NYC Health Commissioner, specifies the qualifications of blood bank personnel, requires certain records to be maintained by a blood bank, and other similar requirements related to blood banks. As a result of State legislation amending Title V of Article 5 of the New York State Public Health Law, codified at §570 **et seq.** of the Public Health Law, the New York City Department of Health no longer regulates blood banking. Consequently, the Department is proposing the repeal of Articles 17 and 19. However, State law, as amended, does explicity preserve the Department's authority to promulgate rules for clinical laboratories and blood banks that are not inconsistent with State law, relating to the control, prevention or reporting of diseases or medical conditions, and to the control or abatement of public health nuisances. Therefore, the newly repealed and reenacted Article 13 is entitled Laboratories, defined to include clinical laboratories and blood banks and will embody requirements applicable to clinical laboratories and blood banks which continue to be within the Department of Health's authority.

Article 21 of the Health Code is entitled "Artificial Human Insemination." This article specifies who can perform artificial insemination, the testing required of the donor and the recipient, the bases for which to disqualify donors, and the records which must be maintained by the physician performing artificial insemination. The New York State Health Department, pursuant to §4360 of the Public Health Law regulates tissue banks. Tissue is defined to include human semen. [See also 10 N.Y.C.R.R. Part 52]. Facilities involved in artificial insemination are regulated in accordance with 10 N.Y.C.R.R. Subpart 52-B. For this reason and because the New York City Department of Health no longer regulates clinical laboratory testing (except as narrowly provided in Title V of Article 5 of the New York State Public Health Law) the Department is proposing the repeal of Article 21.

Amendments to Article 11 of the Health Code are proposed to reflect the fact that the Department no longer issues permits to clinical laboratories. In addition, various sections and/or subsections of Article 5 are repealed to reflect the fact that the Department no longer issues permits for clinical laboratories and blood banks.

3. Statement of Basis and Purpose in City Record Oct. 11, 1995:

Section 556 of the Charter grants the Department of Health jurisdiction to regulate all matters affecting health in the City of New York. Section 558(b) and (c) of the Charter empower the Board of Health to amend the Health Code and to include in the Health Code all matters to which the Department's authority extends. Section 1043 of the Charter grants the Department of Health rulemaking powers.

The purpose of this proposal is to remove unnecessary mandates upon kindergartens operated by the Board of Education. In New York City, although kindergartens conducted as part of an elementary school by the Board of Education do not require a permit issued by the Commissioner of Health, such kindergartens are regulated as day care services and are subject to the requirements set forth in Article 47 of the Health Code, governing day care. The Department proposes to amend the Health Code so that a kindergarten conducted as part of an elementary school by the Board of Education will no longer be regulated as day care in accordance with Article 47 but rather as a school in accordance with Articles 45 and 49 of the Health Code. However, the Department is proposing that such kindergartens adhere to the same standards applicable to lead abatement which are being proposed for existing day care services.

The mandates imposed upon kindergartens operated by the Board of Education by virtue of Article 47 are, for the most part, unnecessary and burdensome. Generally, kindergartens operated by the Board of Education are more appropriately regulated as schools in accordance with Articles 45 and 49 of the Health Code, which set forth the fundamental criteria needed to assure the health and safety of kindergarten children. The only exception to this rationale relates to the abatement of hazardous lead paint conditions found in kindergartens. In this regard, the Department believes that the same lead standards that we propose (in another resolution) for existing day care services also apply to kindergartens in public schools.

Article 49 provides for clinical services in schools under the supervision of the Department of Health. Health and safety issues for the kindergarten program of the Board of Education will be addressed by the Department of Health as part of its school health program designed to monitor health status and provide medically appropriate assistance for the well-being of the students.

In addition, public schools are subject to a comprehensive statutory and regulatory framework beyond the requirements set forth in the Health Code. [See for example, Education Law Section 2590, et seq., 8 N.Y.C.R.R. Part 100]. Furthermore, the Chancellor of the Board of Education is statutorily authorized to promulgate rules and regulations as deemed necessary. [Education Law Section 2590-h(16)]. A collective bargaining agreement between the Board of Education and the United Federation of Teachers encompasses issues that are also addressed in Article 47 of the Health Code. For example, the contract limits the class size of kindergartens, while Article 47 contains provisions relating to child/staff ratios. New York City public school kindergarten programs have the facilities and staff of the entire school system available to them as the need arises. The support system afforded such schools consists of paraprofessionals, guidance counselors, custodial personnel and safety personnel. Furthermore, New York courts have "long recognized that a Board of Education has a duty, arising from the fact of its physical custody over students, to exercise the same degree of care and supervision which a reasonably prudent parent would employ in the given circumstances." [**Logan v. City of New York,** 148 A.D.2d 167, 543 N.Y.S.2d 661 (First Department, 1989)]. Therefore, the Department believes that there are appropriate safeguards to provide for the health, safety and educational development of kindergarten children without further mandating the requirements set forth in Article 47 of the Health Code.

The following is noteworthy. The New York State Social Services Law which regulates day care outside of New York City, specifies that:

Child day care shall not refer to child care provided in: . . . (D) a kindergarten, pre-kindergarten, or nursery school for children three years of age or older, or after-school program for children operated by a public school district or by a private school or academy which is providing elementary or secondary education or both, in accordance with the compulsory education requirements of the education law, provided that the kindergarten, pre-kindergarten, nursery school, or after school program is located on the premises or campus where the elementary or secondary education is

provided. . . .

[Social Services Law Section 390(1)(a)(ii)(D)].

The Department's proposal is consistent with the regulatory approach in the rest of the State insofar as kindergartens conducted as part of an elementary school by a public school system are not regulated as day care. The Department is however, continuing to regulate as day care, pre-kindergartens and nurseries in the public schools as well as kindergartens, pre-kindergarten and nurseries in non-public schools. The reasons for these distinctions are that:

1. The Department believes that pre-kindergarten children and below require greater oversight by reason of developmental and behavioral factors associated with children under 5 years of age. Therefore, this proposal will continue the Department's regulation of pre-kindergartens and nurseries in the public schools.

2. The Department's Bureau of School Children and Adolescent Health has developed a comprehensive program for the public schools which is consistent throughout the City. This is not the case with the non-public schools. Therefore, limiting this proposal to the Board of Education is reasonable.

These proposed rules were not included in the Health Department's Regulatory Agenda, nor anticipated, because it is the result of recent analysis by the Department directed toward eliminating costly and unnecessary mandates.

4. Statement of Basis and Purpose in City Record Dec. 5, 1995:

These rules are promulgated pursuant to New York City Charter Section 1043 granting rulemaking authority to the Commissioner and Department of Health, and Section 17-324 of the New York City Administrative Code authorizing the Commissioner of Health to "make such rules as deemed necessary for the proper implementation and enforcement of this subchapter. . . ." In addition, Section 17-307(b)(2)(b)(i) requires the Commissioner or Department to set aside/designate, without increasing the number of full-term mobile food unit permits that may be outstanding pursuant to Section 17-307(b)(2)(a), two hundred (200) full-term permits for vending exclusively in the four boroughs of the Bronx, Brooklyn, Queens and Staten Island. Section 17-307(b)(2)(b)(ii) then requires the Commissioner to "establish a separate waiting list for each of the relevant boroughs to be administered in accordance with procedures established by rules of the commissioner." Finally, Sections 17-307(b)(2)(e) and Section 17-307(f)(3)(d) require the Commissioner to establish and maintain separate waiting lists for those seeking full-term permits that are not geographically restricted as well as those seeking temporary permits.

Section 17-307(b)(2)(a) fixes the maximum number of full-term mobile food unit permits that may be outstanding at any one time at three thousand (3,000) and prohibits the Department from issuing any permit in excess of 3,000. The Department may not issue new full-term permits until the number of such permits, which includes borough-specific permits, falls below the 3,000 mark. Section 17-307(f)(3) fixes the maximum number of temporary mobile food unit permits that may be outstanding at any one time at one thousand (1,000) and prohibits the Department from issuing any temporary permits in excess of 1,000. The Department may not issue new temporary permits until the number of such permits falls below the 1,000 mark. New Section 17-307(b)(2)(b)(i) requires that on and after March 15, 1995, the Department shall designate two hundred full-term permits without increasing the number of full-term permits which may be in effect beyond the 3,000 limit, for use exclusively for vending in the four boroughs of the Bronx, Brooklyn, Queens and Staten Island. The 200 full-term permits are to be evenly distributed among the boroughs: 50 each for vending exclusively in the Bronx, Brooklyn, Queens and Staten Island, respectively. Section 17-307(b)(2)(b)(ii) then requires the Commissioner to "establish a separate waiting list for each of the relevant boroughs to be administered in accordance with procedures to be established by rules of the commissioner." Section 17-307(b)(2)(e) and Section 17-307(f)(3)(d) require that the Commissioner also establish and maintain separate waiting lists for the issuance of full-term mobile food unit permits and temporary mobile food unit permits, the usage of which is not limited by geography.

No eligible person is to be issued more than one mobile food unit permit of any kind. A person is to be limited to

either a full-term, temporary or a full-term borough-specific permit. The Permits Division reports that the number of outstanding full-term mobile food unit permits is now approximately 200 below the "cap" at about 2,800 in number. It is the Department's experience that the demand for the city-wide permits far exceeds the availability as determined by the statutory maximum. It is expected that the demand for the borough-specific full-term permits will also exceed their more limited availability. Accordingly, a fair, orderly and efficient procedure is needed for persons (including partnerships, corporations or other business entities) to communicate to the Department their interest in applying for full-term and temporary mobile unit permits as well as the borough-specific full-term mobile food unit permits.

Section 19-02 of the proposed rules directs the Department to establish the six separate waiting lists. Section 19-03 provides that only those persons holding valid mobile food vendor licenses issued by the Department of Health at least ten days prior to the date that the Department establishes a list would be eligible for a place on the list. Sections 19-04 through 19-06 describe the notice to be provided to prospective applicants for a position on any of the waiting lists and the procedures for requesting a place on a list. Proposed Section 19-07 provides the Department's Permit Division with direction to determine the specified number of waiting lists positions that will be created on each of the six lists to ensure that a reasonable number of eligible candidates are available to fill the currently available positions and those that develop as vacancies arise. The remaining provisions of the new Chapter 19 specify how the waiting lists are to be administered to select persons eligible to apply for the various full-term and temporary mobile food unit permits made available when their number falls below the relevant statutory maxima.

5. Statement of Basis and Purpose in City Record Feb. 1, 1996:

The purpose of this rule is to describe those adjudicatory hearings which shall be conducted within the Department of Health, and those which shall be conducted by the New York City Office of Administrative Trials and Hearings ("OATH") pursuant to City Charter Section 1048. Charter Section 558 and Health Code Article 7 provide that the Administrative Tribunal is authorized and intended to conduct adjudicatory hearings in and for the Department of Health with respect to allegations of violations of the Health Code, the Administrative Code, the Sanitary Code, and other laws and regulations which the Department has the authority to enforce.

In addition to hearings conducted under Article 7, the Administrative Tribunal has also conducted adjudicatory hearings where the Commissioner or Department of Health is required to find facts in the exercise of statutory enforcement powers. **See, e.g.,** Health Code Article 3; Charter Sections 555, 556 and 562; Administrative Code Section 17-114, **et seq.;** State Sanitary Code, 10 N.Y.C.R.R. Sections 2.9, 14-1.10.

This amendment to Chapter 7 of Title 24 of the Rules of the City, would continue the jurisdiction in the Administrative Tribunal over adjudicatory hearings conducted pursuant to Health Code Article 7. Adjudicatory hearings conducted in connection with the exercise of the Commissioner's or Department's fact finding powers related to the public health would be conducted by OATH pursuant to its authority under the Charter. With regard to hearings conducted pursuant to Article 7 by the Administrative Tribunal, this rule retains the current procedures followed as to the findings of the Hearing Examiners, whereby findings and conclusions of the Hearing Examiners, are final, subject only to an appeal to the Review Board of the Administrative Tribunal (Health Code Section 7.13). As to other enforcement hearings, findings and conclusions of an OATH Administrative Law Judge are proposed and recommended to the Commissioner or his designee, who may adopt, reject or modify such recommendations. In addition, certain procedural matters are clarified in order to conform with the requirements of City Charter Section 1046.

OATH will continue to conduct, for the Department of Health, all adjudicatory hearings held pursuant to the Civil Service Law with respect to the fitness and discipline of Department employees, and its Administrative Law Judges will make proposed and recommended findings and determinations.

6. Statement of Basis and Purpose in City Record Mar. 12, 1996:

The size and design standards for non-processing mobile food unit pushcarts are set forth in Section 6-01 of

Chapter 6 of Title 24 of the Rules of the City of New York. Subdivision (d) of Section 6-01 prohibits the Commissioner/Department from granting a permit to ". . . any mobile food non-processing unit in excess of six and one-half feet in length or three and one-half feet in width, including all handles, extensions or protuberances." This proposed amendment to this rule would bring a relatively new design of mobile food vending pushcart into compliance with the Department's size requirements. These new pushcarts are designed so that the vendor vends while standing within the cart. These pushcarts are non-processing, enclosed on all sides and generally are used for the sale of coffee, bread and pastries. The enclosed nature of these carts protects the vendors from the weather while also offering substantial protection of food from outside contamination (i.e. from the weather, dust and handling of food by customers). The problem presented by these pushcarts is that, while the bodies of these units meet both the length and width requirements of existing Section 6-01(d) of the Rules of the City of New York, the wheels of these pushcarts protrude an additional six inches on each side, thereby increasing the total width of the pushcarts including the wheels to four and one-half feet, or one foot beyond that allowed by existing Section 6-01(d). The extra foot of wheel base and wheels is considered necessary for safety reasons, specifically to give the unit balance so that it does not topple over when moved. Therefore, due to this safety consideration, the Department proposes to amend Section 6-01(d) to allow the issuance of permits to the above described enclosed pushcarts which have wheels extending an additional six inches on either side beyond the body of the unit. The maximum width of the bodies of these units will remain unchanged at three and one-half feet. However, the wheels of these enclosed carts would be allowed to extend the allowable width of the pushcart to four and one-half feet. To implement this change the proposed amendment will repeal existing Section 6-01(d) in its entirety and reenact it as subsection (1) and (3) of a new Section 6-01(d). An entirely new subsection (2) will be added and contain the limited exception to the three and one-half foot maximum width requirement. In addition, in response to concerns expressed at the public hearing that mobile food units that exceed the specified dimensions by an inch or two would not pass future Departmental inspections, an identical provision will be added to subsections (1) and (2). That provision provides that mobile food units that do not exceed the nominal dimensions by more than two inches shall be deemed to conform with the specified dimensions.

7. Statement of Basis and Purpose in City Record Apr. 4, 1996:

Lead poisoning continues to be a serious public health concern, particularly among young children. Scientific evidence continues to demonstrate that even very low blood lead levels are harmful to children. Thus, regulatory efforts continue to be directed to lowering the risk of exposure to environmental lead.

When Article 47, Day Care Services, was substantially revised in 1988, subsection (e) of section 47.31 was adopted to require day care centers to be "lead free". Since its adoption, subsection (e) insofar as it establishes an absolute standard, has proven to be an unrealistic requirement. The Bureau of Day Care in collaboration with the Lead Poisoning Prevention Program having studied the application of section 47.31(e), now propose a more feasible and appropriate regulatory program, that will be enforceable, will provide a safe environment for children, and with which day care services will be able to comply.

The proposal would require peeling lead based paint and peeling paint of unknown lead content to be immediately abated in a manner that comports with the safety requirements of the Code and prevents exposure. This provision gives day care service operators a choice of either treating a peeling surface as a lead paint abatement project, or establishing that it does not contain lead and simply restoring the surface to an intact condition.

Effective May 1, 1997, all existing sites would be required to abate window sills and wells accessible to children, and window friction surfaces, and, when determined by the Department, other chewable or friction surfaces, which contain or are covered with lead based paint or paint of unknown content. Such surfaces are considered to be the primary sources of potential lead poisoning in day care services. Other surfaces that might be required to be abated would include, for example, a mouthable chair railing or a built-in cabinet with sliding doors constituting a friction surface. Window wells are of particular concern as they may contain accumulated lead dust from window friction surfaces and the outside.

Effective May 1, 1997, no new day care service would be issued a permit and no new services for which no permit is required would be authorized to operate where surfaces contain lead-based paint as defined in Section 173.14.

This proposed amendment would promote a lead safe environment for children in day care services and would eliminate the unrealistic mandate that these services be lead-free.

8. Statement of Basis and Purpose in City Record Apr. 4, 1996:

These amendments to the New York City Health Code ("Health Code") are promulgated pursuant to sections 558(b) of the New York City Charter ("Charter") and Article 30 of the Public Health Law. Section 558(b) of the Charter empowers the Board of Health to amend and repeal regulations in regard to any matter contained in the Health Code.

Article 30 of the Public Health Law-EMERGENCY MEDICAL SERVICES, made applicable in New York City pursuant to section 3014 of the Public Health Law [Ch. 1053 of the Laws of 1974], became effective on or about April 1, 1975 and established a comprehensive State-wide regulatory scheme for the planning, organization and operation of all emergency medical services and transport of the sick and disabled.

Article 25 of the New York City Health Code had been adopted by the Board of Health in 1966 to implement an earlier version of Article 30 of the Public Health Law which "contains a legislative finding that the regulation of such services is necessary to protect the public health, safety and welfare." [Introductory Notes, Article 25] For a number of years following its adoption, Article 25 governed the operation of ambulance and invalid coach services in the City of New York. Permits were required for owners and operators of the services and for technical staff of the ambulances who were not licensed physicians or nurses.

Article 30 requires local ambulance services to be organized and provided in accordance with plans established by regional emergency medical services councils and requires that vehicles be certified or registered by the State Department of Health. The state law and regulations (the State Emergency Medical Services Code, Part 800 of 10 N.Y.C.R.R.) are considerably more extensive in their requirements than Article 25 of the Health Code. However, although Article 30 has effectively replaced Article 25, Article 25 has never been repealed.

Further, Article 30 and its implementing regulations establish a comprehensive program of training and certifying emergency medical technicians, replacing the requirements of section 25.05 of the Health Code that emergency medical technicians who are not licensed physicians or nurses obtain permits from the Commissioner of Health. Consistent with the repeal of Article 25 in its entirety, the Department also proposes to eliminate from Article 5 of the Health Code all references to all permits formerly required for owners and operators of ambulance services or for medical emergency technicians, the term which describes emergency medical technicians in the Health Code.

Repeal of Article 25 and amendment of Article 5 were inadvertently omitted from the Department's Regulatory Agenda.

9. Statement of Basis and Purpose in City Record Apr. 4, 1996:

Section 11.03(a) of the Health Code requires the reporting of certain specific diseases and conditions to the Department within 24 hours of diagnosis. Section 11.03(a) is an important tool for maintaining surveillance of the occurrence of certain diseases which may require intervention by the Department of Health to prevent greater risk to the public health. During the past few months, the public has been alarmed at what it perceives as an increased incidence and/or prevalence of illnesses and fatalities accompanied by necrotizing fasciitis, streptococcal toxic shock snydrome or other invasive infections in which group A streptococcus has been isolated from normally sterile body tissues and fluids. Concern has been expressed that prevalence of invasive infections caused by group A streptococcus may have increased during the past 10-15 years. Toxic shock syndrome has been a reportable condition since October, 1994, when this section of the Health Code was last amended. This amendment will result in the continued reporting of toxic shock syndrome as well as the additional reporting of invasive infections caused by group A streptoccocus.

The Commissioner of Health, by letter dated April 14, 1995, notified all physicians in the City of New York that they are required to report invasive infections caused by group A streptococcus to the Department within 24 hours of diagnosis, pursuant to §11.03(b) of the Health Code, as an "unusual manifestation of a disease in an individual", because so little is known of its epidemiology, and it is impossible to properly and responsibly respond to public concern without such knowledge.

For the same reason, the Board is amending the Health Code to include cases of invasive infections caused by group A streptococcus among the diseases and conditions reportable pursuant to §11.03(a). Inclusion in the printed list of specific reportable diseases will eliminate any future uncertainty as to whether to report such cases and the Department will be able to more accurately monitor prevalence. It should also be noted that effective November 8, 1995, Group A Streptococcal invasive disease was added to the list of communicable diseases set forth in the State Sanitary Code by the State Public Health Council.

Statement Pursuant to Charter §1042-Regulatory Agenda

Amendment of Article 11 was included in the Department's Regulatory Agenda for FY 1995. This additional proposed revision reflects a need for closer surveillance of a specific disease which has become a matter of public concern since the last amendment of Article 11 in October, 1994.

10. Statement of Basis and Purpose in City Record June 14, 1996:

Section 11.03(a) of the Health Code requires the reporting of certain specific diseases and conditions to the Department. Section 11.03(a) is a critical tool for maintaining surveillance of the occurrence of certain diseases which may require intervention by the Department of Health in order to prevent greater risk to the public health.

The State Sanitary Code having the force and effect of law within New York City requires the reporting of numerous conditions, which reports must be forwarded by the Department to the New York State Department of Health. Effective November 8, 1995, the Sanitary Code was amended to require the reporting of "invasive antibiotic-resistant Streptococcus pneumonia infections." The New York City Health Code was amended, effective December 11, 1994, to require reporting in New York City of all infections caused by antibiotic-resistant S. pneumonia, not just those deemed "invasive." However, at the present time, after one full year of reporting, the Department proposes to limit reporting only to invasive (i.e., systemic) infections because reporting of all such infections is burdensome to persons required to report; less effective in monitoring trends of primary concern to public health; as well as to permit consistent reporting of the same disease entities which must now be reported to the New York State Department of Health. Invasive cases include antibiotic-resistant S. pneumonia infections associated with the isolation of resistant bacteria from a sterile site (e.g., blood, cerebrospinal fluid, pleural fluid).

Also effective November 8, 1995, hantavirus disease was designated as a reportable disease pursuant to the New York State Sanitary Code. Including hantavirus to the list of conditions reportable under the Health Code will explicitly conform the Health Code to the State Sanitary Code.

In addition, New York State Department of Health has proposed to add Ehrlichiosis to the list of communicable diseases reportable in this State. The Department proposes to add this disease to the list of reportable diseases in §11.03(a) of the Health Code. Although this disease is most prevalent in the lower Hudson Valley and Long Island regions of the State, these areas are frequented by large numbers of City residents for recreational purposes.

It is therefore proposed that §11.03(a) of the Health Code be amended to add hantavirus disease and Ehrlichiosis to the list of diseases and conditions which must be reported and to limit reporting of cases of antibiotic-resistant S. pneumonia to invasive infections only. These amendments will enable the Department to obtain consistent reports of and to monitor the occurrence of possibly newly prevalent disease entities occurring in the City of New York, add to our present knowledge of their epidemiology, and more effectively respond to new public health concerns.

Statement Pursuant to Charter §1042-Regulatory Agenda

This proposal was not included in the Health Department's Regulatory Agenda nor anticipated because it is the result of recent action taken by the New York State Department of Health as set forth in the New York State Sanitary Code.

11. Statement of Basis and Purpose in City Record June 14, 1996:

Between 1981 and 1989, several voluntary screenings for tuberculosis infection were conducted among NYC students. The results of these studies suggested tuberculin skin test postivity rates of 4.0 to 6.8 percent in this population. Further, after several decades of decreasing tuberculosis rates, tuberculosis incidence was rising in New York City and nationally (in 1993 the Board of Health declared a tuberculosis epidemic in the City of New York). In 1990, the Board of Health adopted Section 49.06 to require all new school entrants in grades pre-kindergarten to 12 to have a tuberculin skin test by the Mantoux method.

This mandate was implemented to meet the following objectives:

1) Identify children with tuberculosis disease and provide medication, medical monitoring and surveillance;

2) Identify tuberculosis infected children and provide them with preventive therapy;

3) Identify tuberculosis disease through investigation of family contacts who may be the source of infection to children;

4) Collect valid data on the prevalence of infection in school children;

The first three objectives have not been met through screening of new school entrants. First, despite screening more than 500,000 students, fewer than ten cases of active tuberculosis were found and none of these was infectious. School age children are at substantially lower risk for active tuberculosis disease than are adults. In NYC between 1991 and 1994, the rate of tuberculosis for persons 5-19 years old was 8.9 per 100,000 persons, with the lowest rate seen in individuals 5-14 years old, 6.4 per 100,000 persons. In contrast, for the same time period, adults 20 years and older had a rate of 55.8 per 100,000 with the highest rate in individuals 35-44 years old, 93.7 per 100,000 persons. Further, children with active tuberculosis are rarely infectious because they seldom have cavitary disease in their lungs and they do not produce a cough strong enough to spread contagious acid fast bacilli.

Second, the great majority of new school entrants were at low risk for infection. As the prevalence of tuberculosis infection becomes rare, it is less likely that someone with a positive test is actually infected and more likely that he or she has a falsely positive test. Therefore, many children for whom the probability of infection was low underwent unnecessary and costly evaluation and treatment, missing several days of school in the process.

In September 1995, the Centers for Disease Control and Prevention issued the following statement:

"Because broad-based school testing involves screening large numbers of low-risk children and because the majority of children who have pediatric TB are preschool age, generalized school screening as a public health measure is an ineffective method of detecting or preventing cases of childhood TB and should be discontinued." Morbidity and Mortality Weekly Report, Volume 44, No. RR-11, at 31 (September 8, 1995)

An Expert Advisory Panel, composed of leading national experts on pediatric tuberculosis, convened by the Commissioner of Health to advise the Department on the prevention and control of pediatric tuberculosis, concluded, "The panel recommends that the Health Code be amended to discontinue the section requiring citywide testing of all new entrants." (Prevention and Control Advisory Panel, Winter 1995).

The American Academy of Pediatrics takes the position that, "Routine tuberculin testing, including school-based

programs that include populations at low risk, has either a low yield of positive results or a large number of false-positive results and represents an inefficient use of limited health care resources." **Pediatrics,** Volume 97, No. 2, Page 282 (February 1996).

Third, there were so few cases of active tuberculosis among the new entrants that a contact investigation was a rare event. Source case tracing for tuberculin skin test positive school children is rarely revealing, is unproductive and is not recommended by any national body. Ultimately, the first line of protection for children is to identify and treat all adults with active tuberculosis until they are cured. Contact investigation of active cases is a far more efficient means of finding infected individuals than are general screenings.

The last objective, however, was met and enabled evaluation of the collected data for the 1991-1993 school years. With mandatory screening among new school entrant cohorts, there was an overall prevalence of 2.0 percent tuberculin skin test positivity. Older new entrants had the highest prevalence, with children 12 years and older having a 10.7% positivity rate and children less than 12 years old having a 1.5% positivity rate. Thus, children 12 years and older were at almost eight times greater risk of tuberculin skin test positivity than children younger than 12 years old. Further, among foreign-born students, those younger than 12 years old with reported Bacille Calmette Guerin (BCG) vaccination, rarely used in the United States, were four times more likely to be tuberculin skin test positive than students who were not vaccinated with BCG. In contrast, BCG-vaccinated students twelve years and older were only twice as likely to be positive compared to unvaccinated students. This finding is consistent with waning tuberculin sensitivity ("false positive") after BCG vaccination.

Because of the greater accuracy of tuberculin skin testing in older children, the proposal would require screening only those students entering New York City secondary schools who have not previously been in the New York City school system. However, subsection (g) of Section 49.06 will be amended to continue to authorize the Commissioner of Health to require the administration of the tuberculosis examination to any or all children in any or all public, parochial, or private schools, or in any part thereof when the Commissioner deems it essential for the protection of the public health.

In addition, the Department proposes to amend the definition of "significant reaction" to reflect the medical and epidemiologic recommendations of the Department as well as national bodies such as the Centers for Disease Control and Prevention, regarding the interpretation of a PPD skin test. Current recommendations consider as "significant" reactions of greater than 5, 10, or 15 millimeters depending on characteristics of the patient and the epidemiologic context. For example, for persons with HIV infection, close contacts of persons with TB, and persons who have abnormal chest radiographs with fibrotic changes consistent with inactive TB, a reaction of > = 5 mm is considered positive. For persons who have other risk factors such as individuals with certain medical conditions that increase the risk for progression from latent TB infection to active TB, a reaction of > = 10 mm is positive. For persons who are not in a high risk category or who are not exposed to a high risk environment, a reaction of > = 15 mm is positive.

To summarize, this amendment is proposed for the following principal reasons:

To adhere to recommendations of the Expert Advisory Panel on the "Prevention and Control of Pediatric Tuberculosis in New York City," and from the Centers for Disease Control and Prevention and the American Thoracic Society, to limit tuberculin skin test screenings to high risk groups; To respond to current epidemiologic trends of low tuberculosis incidence and infectiousness in younger school age children compared to adults andd adolescents; To improve the provision and monitoring of preventive therapy to those who can benefit most from it, such as infected secondary school students. To minimize unnecessary evaluation and treatment of uninfected new entrants, including falsely positive BCG-vaccinated children; a greater proportion of positive tests will represent true tuberculosis infection among older BCG-vaccinated children. To account for current public health recommendations regarding the interpretation of a tuberculin test.

This proposal was not included in the Health Department's Regulatory Agenda, nor anticipated because it is the

result of recent analysis on the part of the Department directed toward eliminating costly and unnecessary mandates.

12. Statement of Basis and Purpose in City Record June 14, 1996:

Article 81 of the New York City Health Code regulates the operations of food establishments for the purpose of preventing public health hazards. Article 83 regulates wholesale food establishments, commissaries and food service commissaries. Article 85 regulates retail food processing establishments. Article 86 regulates retail non-processing food establishments. Article 87 regulates restaurants and other eating places and authorizes the issuance of permits to these establishments by the New York City Department of Health. It is proposed that Article 81 be amended and Articles 83, 85, 86 and 87 repealed, assimilating the essence of Articles 83, 85, 86 and 87 into the amended version of Article 81. The proposals would amend a variety of provisions dealing with the preparation of food and the operation of food establishments. Further, it is recommended that the current permit scheme be simplified by replacing it with two permit types: food service establishment and non-retail food processing establishment. The purpose of such proposed amendments is to modernize the Health Code, to make it consistent with federal recommendations on the control of public health hazards and to make it consistent with New York State law and regulations.

The proposal to amend these regulations is the result of a recent initiative from the Office of the Mayor to review existing laws, policies and procedures affecting the restaurant industry and to reform the relevant regulations. The effect of the proposed amendments would be to significantly alleviate unnecessary regulatory burdens on restaurant operators. Under current law, the New York State Sanitary Code is applicable in New York City and is enforced by the Department of Health along with the New York City Health Code. The amendments to the Department's rules, if adopted, would conform the rules contained in Article 81 of the New York City Health Code to the provisions of the New York State Sanitary Code dealing with food service establishments. [Title 10 New York Codes, Rules and Regulations, Section 14-1]. Some of the more significant amendments proposed are as follows:

The proposed amendments add to Section 81.03 definitions of "food service establishment" [replacing food establishment and service food establishment], "non-retail food processing establishment" [replacing food processing establishment], "contaminated", "imminent health hazard", "potentially hazardous food", "sanitization", "food vending machine", "food vending machine commissary", "food vending operation", "controlled-location vending machine", "food grade" and any other terms which will add clarity to their meaning as used in this Article.

It is proposed that Section 81.05(b) [formerly 81.04(c)] be amended to make the submission of sketches or plans showing the floor layout, equipment, plumbing, ventilation, refuse storage facilities, sewage disposal facilities, and similar information an option of the Department for first time locations and major renovations, rather than a mandatory submission with every permit application. This would make the application process simpler and less costly for the food service establishment owner, thereby creating an atmosphere which encourages compliance. Section 81.07 [replacing 81.05] would be revised to include comprehensive requirements for the sanitary preparation of food to protect against contamination. This includes regulations for the manufacture, display, preparation, processing, storage and packaging of foods, for the personal hygiene of foodhandlers, and for the sources from which food may be obtained.

The proposed amendments also include a revision of Section 81.09 [formerly 81.07] to outline detailed requirements for the storage, refrigeration, thawing and cooking of potentially hazardous foods. The numerical (quantitative) bacterial standards have been deleted because, among experts, there is no agreement as to acceptable microbiological levels, and thus no nationally recognized standards. Adhering to heating time and temperature requirements will, however, ensure that microbiological contamination will be minimized.

Old Section 81.23(c) required that operators of food service establishments employ or engage the services of a custom applicator or exterminator certified by the New York State Department of Environmental Conservation to provide extermination services in order to maintain establishments free from rodents, insects and other pests. In the New York State Sanitary Code this is not a requirement and it is proposed that the amended Section 81.23(c) merely require extermination and preventive measures against pest control. Additionally, the revised section indicates that

pesticides should be properly labeled and authorized for use in accordance with Title 6 of the New York Codes, Rules and Regulations [N.Y.C.R.R.], Part 325, or any successor regulation.

It is proposed that Section 81.29 be amended to delete the subsection (3) specifications for open clothes racks or metal lockers for the street and work clothes of employees. Simpler requirements that dressing and locker areas not be located as to present a contamination hazard would be moved to Section 81.29(d). The proposed revision of Section 81.29 adds the Public Health Law requirement which indicates that food service establishments with a seating capacity of 20 or more, except those in operation on or before December 5, 1977, should provide toilet facilities for patrons. Provisions regarding the supply of toilet tissue and waste receptacles in toilet rooms are also proposed.

The amended Article 81 as proposed, would contain more detailed instructions for the sanitization of equipment and utensils starting with the definition of "sanitization" which was added to Section 81.03. Section 81.37 which covers cleaning methods for premises, equipment and utensils would be expanded to indicate the necessity for the installation of a heating device or fixture to maintain the water at the required temperature for hot water sanitization. In addition, it is proposed that a numerically scaled, indicating thermometer accurate to plus or minus 2 degrees Fahrenheit (1.1 degrees Celsius) should be available at the sink for frequent checks of water temperature. When chemical sanitization is used, the concentrations used should not leave toxic residues on treated surfaces. The proposed amendments mandate that a test kit or other device be used to measure the concentration of the sanitizing solution used.

It is suggested that subsections (b), (c) and (d) be added to the new Section 81.39 [formerly 81.41] to outline penalties for operating without a valid permit, for serious, repealed or persistent violations of any of the provisions of the Code, for interference with Department personnel in the performance of their duties and for operating an establishment so as to create an imminent hazard to public health. In the face of such a hazard, the Department would suspend a permit and order immediate cessation of operations, thereafter providing the establishment with an opportunity to be heard pursuant to rule of the Department. Methods for serving orders or notices on owners or operators are authorized by Sections 17-141 or 17-148 of the New York City Administrative Code as outlined in Subsection (e). The old Section 81.43 [Sealing up of insanitary establishments on order of Commissioner] and the old Section 81.45 [Vehicles used to transport food; cleanliness] would be absorbed into the proposed Section 81.39.

Pursuant to Article 2 of the New York State Agriculture and Markets Law and a memorandum of understanding between the New York State Department of Health and the New York State Department of Agriculture and Markets, effective March 1, 1986, the New York City Department of Health no longer exercises jurisdiction over food manufacturing. Food manufacturing is now under the purview of the State Department of Agriculture and Markets. Therefore, it is proposed that the old sections dealing with the pasteurization and labeling requirements for broken out eggs, the denaturing of inedible eggs and the marking of candled case eggs [81.48, 81.49, 81.51, 81.53] be deleted. It is also proposed that the requirement that operators of food service establishments notify the Department about complaints of patrons' illness allegedly resulting from food served in the establishment be transferred from the repealed Article 87 to Section 81.43. The section would specify that operators of food service establishments (and non-retail food processing establishments) also report to the Department any emergency occurrence such as fire, power outage or flood which might result in contamination of food.

It is also proposed that those provisions relating to permits for the above mentioned regulated activities, including fees, be amended to simplify and consolidate the multiplicity of classes into two permit types, and to appropriately adjust fees and expiration dates. The fees proposed for the two (2) new types of permits represent a consolidation of the fees currently collected for the twenty (20) permit classes proposed to be repealed. Although the redistribution of program costs over different permit types results in fee changes on a case by case basis among permitees, the proposal does not represent an overall fee increase in that they are based upon the current fee schedule. The effective date of this Resolution is proposed to be September 1, 1996 so as to ensure that the renewal cycle for existing permits can be completed under the current permit and fee structure.

Article 113 regulates frozen desserts. It is proposed that Section 113.19 be deleted. Labeling of frozen dessert

containers, packages and wrappers is regulated by the New York State Department of Agriculture and Markets and by federal regulations. A sign bearing nutritional information about dietary frozen desserts is not required in the New York State Sanitary Code, and presents an unnecessary burden to the operator.

13. Statement of Basis and Purpose in City Record Mar. 7, 1997:

This rule is promulgated pursuant to New York City Charter Section 1043 granting rulemaking authority to the Commissioner and Department of Health, Section 17-324 of the New York City Administrative Code authorizing the Commissioner of Health to "make such rules as deemed necessary for the proper implementation and enforcement of this subchapter . . ." and Section 17-307(b)(3) of the New York City Administrative Code requiring the Commissioner of Health to establish by rule procedures to create a waiting list for persons qualified to apply for and hold permits in accordance with the preferences of Section 17-307(b)(3).

Section 17-307(b)(2) fixes the maximum number of full-term mobile food unit permits that may be outstanding at any one time at 3,000 and prohibits the Department from issuing any permits in excess of 3,000. The Department may not issue new full-term permits until the number of such permits falls below the 3,000 mark. Section 17-307(b)(3) of the Administrative Code creates a limited exception to the 3,000 numerical limitation or "cap" on full-term mobile food unit permits imposed by Section 17-307(b)(2) and authorizes the Commissioner to issue an additional one hundred full-term permits to "natural persons who at the time of application for a permit hereunder are not holders of a full-term permit issued pursuant to paragraph three of this subdivision and have not had a full-term permit revoked or suspended."

Preference in the initial issuance of these permits, as well as in placement on a preference and/or waiting list is to be given to disabled veterans who previously held general vendor licenses (as further specified in Section 17-307), disabled veterans, disabled persons, and veterans in the order specified in Section 17-307(b)(3)(b). Section 17-307(b)(3)(a) provides that "[s]such permits shall be issued in the order in which applications for such permits are received in accordance with the preferences specified in subparagraph (b) of this paragraph and the procedures established by the commissioner." The Permits Division of the Department has made these one-hundred permits available for the first preference category specified in Section 17-307(b)(3). It is expected that the demand for these permits by members of the various preference categories will far exceed their availability. Accordingly, a fair, orderly and efficient procedure is needed for eligible natural persons desiring to apply for permits as they become available. This rule will provide a mechanism for issuing permits in order of preference and waiting list position within preference, will provide a procedure for natural persons, who are not already holders of a mobile food unit permit and/or have not had a full-term permit revoked or suspended, to communicate to the Department their interest in applying for one of these full-term permits, and for identifying the preference category to which they belong. Section 20-01 is a "Definitions" section. Section 20-02 directs the Department to establish a preference and/or waiting list. Section 20-03 provides that only natural persons holding valid mobile food vendor licenses issued by the Department at least ten days prior to the date that the Department establishes a preference and/or waiting list who also belong to one of the four preference categories specified in Section 17-307(b)(3)(b) would be eligible for a place on the list. Sections 20-04 through 20-06 describe the notice to be provided to prospective applicants to the list and the procedure for requesting a place on the list. Section 20-07 provides the Department's Permit Division with discretion to determine the specified number of full-term preference and/or waiting list positions that will be created to ensure that a reasonable number of eligible candidates are available to fill the currently available positions and those that develop as vacancies arise. The remaining provisions of the new Chapter 20 specify how any preference and/or waiting list is to be administered to select persons eligible to apply for these additional permits authorized by Section 17-307(b)(3) of the Administrative Code, when their number falls below the statutory maximum.

14. Statement of Basis and Purpose in City Record June 23, 1997:

These rules are promulgated pursuant to New York City Charter Section 1043 granting rulemaking authority to the Commissioner and Department of Health and various provisions of the New York City Health Code, namely, subdivisions (a) and (c) of Section 81.15, subdivisions (h) and (k) of Section 161.09 and subdivisions (b) and (e) of

Section 165.21. Section 81.15(a) of the Health Code requires that supervisors of food service establishments and non-retail food processing establishments obtain a certificate "issued by the Department subsequent to successful completion of a course in food protection, and passage of an examination administered by the Department". Subdivision (c) of Section 81.15 authorizes the Department to "conduct such food protection courses, or any part thereof, or approve courses conducted by others" and provides further that those "electing to enroll in such courses conducted by the Department may be charged a reasonable fee to defray all or part of the costs incurred by the Department for course registration, materials, training, testing and certificate issuance." Section 161.09(h) requires that persons "charged with the supervision of a pet shop or business for the sale or offer for sale of dogs, cats or other small animals . . . or similar type of operations . . ." obtain a "certificate indicating the successful completion of a course, acceptable to the Department, in the care and handling of such animals." Subdivision (k) of Section 161.09 provides that the Department "may conduct such courses or approve courses conducted by educational institutions" and that persons enrolling in courses given by the Department "may be charged a reasonable enrollment fee to defray all or part of the costs incurred by the Department in their administration." Section 165.21(b) requires that persons "charged with the operation of a bathing establishment" must obtain a "certificate indicating successful completion of a course in pool operation technology acceptable to the Department." Subdivision (e) provides that the Department "may conduct such courses or approve courses conducted by educational institutions" and that those electing to enroll in courses conducted by the Department "may be charged a reasonable enrollment fee to defray all or part of the cost incurred by the Department in their administration of the course."

The Department's Bureau of Environmental Health Services, at its Health Academy, currently conducts a number of full/supplemental training courses and issues certificates evidencing the successful completion of these courses. These certificates are required to be obtained pursuant to the New York City Health Code in order to operate certain businesses for which Department of Health permits are required. For example, pursuant to Section 81.15(c) the Department conducts a food protection course and issues a certificate evidencing successful completion of this course. Subdivision (c) further authorizes the Department to charge a reasonable fee to "defray all or part of the costs incurred by the Department for course registration, materials, training, testing and certificate issuance." At the present time, the fee payable to the Department by those enrolling in the Department's Food Protection Course offered at the Health Academy is one hundred dollars ($100.00), which includes testing and issuance of the required certificate. Similarly, as provided in Section 165.21(b) and (e), the Department offers at its Health Academy a pool operation technology course. The completion of this course or an outside course deemed acceptable by the Department is required by Section 165.21(b). Subdivision (e) authorizes the Department to charge a "reasonable enrollment fee to defray all or part of the cost incurred by the Department in their administration of the course." Currently, the fee payable to the Department by those enrolled in this course is one hundred thirty dollars ($130.00). The Department is also authorized to conduct a training course, pursuant to Section 161.09(h) and (k), that is required to be taken by any person who is charged with "the supervision of a pet shop or business for the sale or offer for sale of dogs, cats or other small animals . . . or similar type of operations. . . ." The Department is authorized to charge a reasonable fee to defray the costs it incurred in the administration of this course and currently charges a fee of eighty-five dollars ($85.00) to those taking this course.

These rules will codify for the first time the fees to be charged by the Department to those enrolling in the full/supplemental required training courses administered by the Department's Health Academy. These proposed rules will revise the fees that are currently being charged as well as establish a fee for a newly instituted Supplementary Food Protection Course also to be given at the Health Academy. The new fees are based upon a fee analysis conducted by the Department. This Supplemental Food Protection Course is to be required of those taking an outside food protection course approved by the Department. The required course will include training in the New York City Health Code, State Sanitary Code, applicable local laws and Departmental procedures, the administering of a final examination and the awarding of the Food Protection Certificate upon its successful completion. Proposed Section 21-01(a) generally outlines the contents of the Food Protection Course given by the Health Academy. Section 21-01(b) provides the fee payable to the Department by those taking this full course. Section 21-02(a) describes the contents of a newly instituted Supplemental Food Protection Course for those individuals opting to take an outside Food Protection course approved by the Department. Subdivision (b) prescribes the fee to be payable to the Department by those taking this supplemental

course. Proposed Section 21-03(a) outlines the contents of the Swimming Pool Technology Course given at the Health Academy and subdivision (b) establishes the fee to be payable to the Department by those enrolling in this course. Section 21-04(a) outlines the contents of the Animal Care and Handling Techniques Course conducted by the Department and Subdivision (b) prescribes the fee to be paid by those taking this course. Finally, Section 21-05 establishes the fee payable to the Department for a replacement certificate.

The proposed rules prescribing fees to be charged by the Department for the Food Protection Course, the Animal Care and Handling Course and the Swimming Pool Technology Course were included in the Health Department's Regulatory Agenda. Those rules establishing fees for the issuance of a Replacement Certificate and for the Supplemental Food Protection Course were not included in the Regulatory Agenda. The rule setting a fee for the Replacement Certificate was inadvertently omitted and this fact was only realized during the performing of the fee analysis unertaken to establish the amounts of the other fees. The rule setting a fee for the Supplemental Food Protection Course was not included in the Regulatory Agenda because making such course available was a regulatory reform decision that was not made until after the publication of the Regulatory Agenda.

15. Statement of Basis and Purpose in City Record July 15, 1997:

This proposal to repeal Article 53 and to amend subsection (a) of Section 5.07 of the New York City Health Code ("Health Code") is promulgated pursuant to Sections 558 and 1043 of the New York City Charter (the "Charter") as well as Section 390 of the New York State Social Services Law. Section 558(b) of the Charter empowers the Board of Health to amend or repeal the Health Code. Section 1043 grants the Department rulemaking authority. Section 390 of the Social Services Law regulates family day care.

Article 53 of the New York City Health Code, entitled "Family Day Care" was repealed and reenacted by resolution adopted on October 17, 1988 to enact updated and comprehensive requirements for family day care services. Family Day Care is "the regular day time care of at least three children under the age of twelve in the home of an unrelated provider . . . for more than five hours per week." [New York City Health Code, Section 53.01(a)]. Article 53 consists of various sections of law. Such sections include requirements relating to certificates of approval to operate a family day care service, physical facilities and equipment, supervision, health and medical care and the closing of a family day care service.

In 1990, the New York State legislature adopted Section 390 of the Social Services Law. In the interest of improving the quality of child care in the state, the law replaced a system of licensure with a system of registration for family day care providers. The Governor's Memorandum in support of the law recognized that under the system of licensure very few providers in New York State did in fact hold licenses as was required under the old law, and as such "the system is to a large extent unregulated." The purpose of the new system was to shift "the focus of the State's involvement from enforcement to support of family child day care [and to] extend government oversight." [McKinney's 1990 Sessions Laws of New York, Executive Memorandum, c. 750].

More specifically, the law adopted in 1990 preempted localities from regulating family day care. Section 390(12)(a) of the New York State Social Services Law provides that, ". . . [N]o . . . city . . . shall adopt or enact any law, ordinance, rule or regulation which would impose, mandate or otherwise enforce standards for sanitation, health, fire safety or building construction on a one or two family dwelling or multiple dwelling used to provide group family day care or family day care than would be applicable were such child day care not provided on the premises." Therefore, the provisions of Article 53 are explicitly preempted by State law and have no force and effect. This proposal is in keeping with the Department of Health's continuing interest in modernizing the New York City Health Code and repealing ineffective provisions.

This proposed repeal was not included in the Health Department's Regulatory Agenda, nor anticipated because it is the result of recent analysis by the Department directed towards eliminating the Department's regulation of areas no longer appropriately regulated by the agency, and eliminating mandates which are duplicative or unenforceable.

16. Statement of Basis and Purpose in City Record Aug. 15, 1997:

This proposed rule is promulgated pursuant to Sections 555, 556 and 1043 of the New York City Charter. Section 555 of the Charter affords the Commissioner all the powers and duties vested in the Department of Health. Section 556 of the Charter grants the Department of Health jurisdiction to regulate all matters affecting health in the City of New York. Section 1043 of the Charter grants the Department of Health rulemaking powers. In addition, Local Law 12 of 1997 which added Subchapter 7 of Chapter 3 of Title 17 of the Administrative Code of the City of New York, the Tattoo Regulation Act, empowers the Commissioner to promulgate rules regarding such matters as proper sterilization of tattoo equipment.

Section 181.15 of the New York City Health Code prohibits all tattooing in NYC, except that performed for medical purposes by a person licensed or otherwise authorized pursuant to the Education Law to practice medicine or osteopathy. Simultaneously with the proposal of this rule, the Department is proposing that the Board of Health repeal §181.15, thereby allowing licensing and regulation of tattooing pursuant to the Administrative Code and this new Commissioner's rule.

On March 12, 1997, Local Law 12 was signed by the Mayor of the City of New York, legalizing tattooing. The legislative intent of the newly enacted Subchapter 7 of Chapter 3 of Title 17 of the New York City Administrative Code, entitled the "Tattoo Regulation Act" is to "ensure that tattooists practice basic health and safety procedures . . . [and] . . . to permit the Department of Health to enforce safety standards for tattooists and impose penalties . . . for violations of such standards." Local Law 12 of 1997 specifically authorizes the Commissioner to promulgate regulations regarding such matters as sterilization of tattoo equipment, safe tattooing practices, and written examination of candidates for licensure.

Therefore, the Commissioner of Health proposes the rule herein to ensure the safe practice of tattooing in New York City. The Tattoo Regulation Act requires the licensing of the individual tattoo artist, after completion of an infection control written examination that is specific to the practice of tattooing. Essential components of safe tattooing include the use of single-use, disposable needles and ink cups and the use of standard barrier precautions, such as latex gloves, and procedures for disinfection and sterilization of non-disposable equipment.

A lecture will be offered at the Department's Health Academy or a location approved by the Department and/or through a Department approved instructor. Each applicant must pass a written examination prescribed by the Department before a license will be issued. A license will expire two years from the date of issuance.

17. Statement of Basis and Purpose in City Record Apr. 23, 1998:

Pursuant to Section 2903(15)(a) of the New York City Charter, the Department of Transportation issues special vehicle identification parking permits ("SVIPP" and also referred to as Parking Permits for People with Disabilities or "PPPD") to persons applying for such permits who are certified as having a "permanent disability seriously impairing mobility". A vehicle bearing such a permit when parked shall not be deemed to be in violation, with certain specified exceptions, of the rules and regulations governing parking in the city. Prior to the recent enactment of Local Law No. 43 of 1995, those persons claiming eligibility for a SVIPP due to a physical disability were required to possess a driver's license in order to be eligible to apply for a special vehicle identification permit. More specifically, eligibility for a SVIPP required that the applicant possess an operator's or chauffeur's license "with any restrictions indicating special devices or equipment required for the operation of a motor vehicle noted thereon." The medical certification to qualify for a SVIPP, or the determination not to certify, was required to be made by the Department of Health.

Local Law No. 43 of 1995 amended Section 2903(15) of the Charter by changing both the procedure by which an SVIPP is obtained from the Department of Transportation as well as the procedure for certifying a person as having a "permanent disability seriously impairing mobility." Section 2903(15)(a) as amended by Local Law No. 43 provides, in pertinent part, as follows:

The commissioner shall issue a special vehicle identification parking permit to a New York City resident who requires the use of a private automobile for transportation and to a non-resident . . . when such person has been certified by the department of health **or a provider designated by the department or the department of health,** who shall make such certification in accordance with standards and guidelines prescribed by the department or the department of health. . . ." [New York City Charter, Section 2903(15)(a), emphasis added].

Section 2903(15)(a), as amended, further provides that:

"A permit shall be issued to such person upon his or her application. A permit **shall also be issued to such person upon application made on such person's behalf by a parent, spouse, guardian or other individual having legal responsibility** for the administration of such person's day to day affairs." [emphasis added].

Until now, the Department's Employees Health Services Program has carried out its responsibility in this area by allocating approximately twenty-five hours of physician time per month on these SVIPP certification applications. SVIPP evaluations involve an initial examination and sometimes as many as two appeals by the applicant from the original decision by the Department of Health physician. These SVIPP examinations, in accordance with Section 2903(15)(e) of the Charter, must be held in each of the boroughs. This has led to delays because space and staff constraints allow scheduling of SVIPP examinations only once per month in the outer boroughs. In addition, due to the nature of physician staffing at the Employees Health Services Program, physician specialists sought by many applicants were not available. The scheduling, tracking and holding of these SVIPP certification sessions has involved a significant expenditure of time by Employee Health Services Program staff.

The intent of Local Law No. 43 of 1995 is to make SVIPP's more widely available as they will now be obtainable by the non-driver having physical disabilities (for example, persons who would not be able to qualify for a driver's license at all by reason of a physical disability). SVIPP applications will now be able to be "made on such person's behalf by a parent, spouse, guardian or other individual having legal responsibility for the administration of such person's day to day affairs." That fact is expected to increase the SVIPP workload of both Departments of Transportation and Health as an increased volume of SVIPP applications and certifications is anticipated.

Prior to the enactment of Local Law No. 43, the Charter mandated that the Department of Health perform all medical certifications of SVIPP applications submitted to the Department of Transportation. This function cannot be said to be a purely public health function or part of the mission of the Department. The Office of Nursing and Quality Improvement, of which the Employees Health Services Program is a part, believes that the SVIPP applicants as well as the Department's employees, would be better served if physicians and other staff of the Department no longer perform the SVIPP certifications. Local Law No. 43, which amended Charter Section 2903(15) provides this agency with the legal authority and the opportunity to designate providers/physicians to make SVIPP certifications "in accordance with standards and guidelines prescribed by . . . the department of health." These guidelines are found in 24 R.C.N.Y. Chapter 16.

In light of this authority vested in the Department to designate providers to perform SVIPP certifications, the Office of Nursing and Quality Improvement is proposing a change in the rules of the Department (24 R.C.N.Y. Chapter 16) to authorize the use of city-employed physicians, made available by the Health & Hospitals Corporation pursuant to a contract entered into by the Department with the Health & Hospitals Corporation and the Department of Transportation, to perform medical certifications of Special Vehicle Identification Parking Permit applications submitted to the Department of Transportation. This group of physicians shall be composed of practitioners in appropriate fields of medical specialization who are to be appointed by the Department to a two year renewable term. Persons are to be directed to particular physicians based upon their claimed impairment.

Applicants who are denied certification may appeal such determination. Such request for appeal must be made within fifteen business days of service of the decision on a form furnished with the decision. Where the denial of certification is based upon a determination that the person's medical history does not support a finding of permanent

disability seriously impairing mobility, the Department shall provide a review of the person's file by a physician other than the physician who denied such certification. Where the denial was based upon clinical findings or where the findings were inconsistent with the person's medical history, the Department shall provide a second assessment, which may include a physical examination by a physician selected by the Department other than the one who denied certification. The applicant/appellant will not be precluded from engaging his (her) own expert or specialist whose findings would be received and considered in the appeal.

The certification of a person for a SVIPP, or denial thereof, shall constitute a final agency determination when it is adopted by the Department. The certification or denial thereof is to be adopted unless it is appealed from by the applicant within fifteen business days of service of the decision denying the certification upon the applicant on a form received with the decision. The result of any appeal shall be final when it is adopted by the Department. A final determination denying certification shall preclude the filing of an SVIPP application for the same condition by or on behalf of such person unless such person demonstrates that the condition has significantly worsened.

Physicians selected to perform an SVIPP certification would be required to complete a certification form which specifies which, if any, of the Department of Health medical standards, amounting to a "permanent disability seriously impairing mobility", are met by the person. The validity of physician certifications will be monitored by the Employees Health Services Program through a selective review of determinations. The providers will be certified by the Department for two year renewable terms. As a result of these proposed rule changes, the Department's daily role in the SVIPP program will be minimized.

18. Statement of Basis and Purpose in City Record July 1, 1998:

Mayoral Executive Orders spanning the past two administrations have established several rights and procedures relative to domestic partnerships, including a procedure for City residents to register their domestic partnerships in the office of the City Clerk. Such orders have further provided, among other things, that (i) registered domestic partners are eligible for visitation rights in City hospitals and correction facilities; (ii) City employees with registered domestic partnerships are eligible for child care leave and bereavement leave on the same basis as those benefits are afforded to employees with regard to their spouses; and (iii) registered domestic partnership is evidence of the right to succession to tenancy rights in facilities operated by the New York City housing authority and the department of housing preservation and development. By the end of 1998, there were approximately 8,700 couples registered as domestic partners in New York City. More than 55 percent of those registered domestic partners who reported demographic information were heterosexual couples, and less than 45 percent were same sex couples. Almost forty percent of registered domestic partnerships have accessed City health benefits available to partners of City employees and retirees.

Consistent with the intent of such orders, the proposal would extend to domestic partners the same right to retain the benefits of veteran permits and licenses as is now accorded to spouses.

This rule is proposed at the request of the Administration, in conjunction with a citywide review of policies and practices relating to spouses and domestic partners. Therefore, it did not appear in the 1997 Regulatory Agenda.

19. Statement of Basis and Purpose in City Record July 1, 1998:

Article 81 of the New York City Health Code regulates the operations of food establishments for the purpose of preventing public health hazards. This Article applies to all food service establishments and non-retail food processing establishments, except as otherwise provided in the Code. It is proposed that Article 81 be amended to revise a number of provisions dealing with the preparation of food and the prevention of contamination.

In 1996, at the request of the Office of the Mayor, the Department of Health reviewed the regulations and laws affecting the food service industry. By amending Articles 5, 81 and 113 and repealing Articles 83, 85, 86 and 87 of the New York City Health Code, the Department modernized the Code, making it consistent with federal recommendations on the control of public health hazards, and making it consistent with the provisions of the New York State Sanitary

Code dealing with food service establishments. [Title 10 New York Codes, Rules and Regulations, Subpart 14-1]. The changes became effective September 1, 1996.

The current proposal to amend these regulations is the result of having enforced the 1996 revisions of Article 81 for over one year and having conducted a review of the regulations contained therein. It is now proposed that certain sections of Article 81 be amended further to clarify their meaning, to eliminate redundancies, to maintain consistency with more recent revisions to the New York State Sanitary Code, and to adopt an additional recommendation from the FDA 1997 Food Code on the control of public health hazards. Some of the more significant amendments proposed are as follows:

It is proposed that the temperature at which cold foods are required to be cooled, held, displayed and stored, be amended throughout Article 81 from 45 degrees Fahrenheit (7.2 degrees Celsius) to 41 degrees Fahrenheit (5 degrees Celsius). This temperature requirement is recommended in the FDA 1997 Food Code, and would reduce the amount of growth of some bacteria that are known to grow at 45 degrees Fahrenheit, especially in ready-to-eat foods. However, the current refrigeration equipment in most food establishments is not capable of cooling foods to 41 degrees Fahrenheit. It is therefore proposed that parts of Section 3-501.16 of the FDA 1997 Food Code be incorporated into Article 81, allowing potentially hazardous foods to be maintained at 45 degrees Fahrenheit, or between 41 and 45 degrees Fahrenheit, in existing refrigeration equipment that is not capable of maintaining foods at 41 degrees Fahrenheit or less, but only when the equipment is in place and already in use in the establishment. It is proposed further, that food establishments be required to upgrade or replace existing equipment to maintain food at 41 degrees Fahrenheit or less within 5 years of the proposed adoption of the temperature requirements.

It is proposed that the definition of a food service establishment, as it now appears in Section 81.03(i) be expanded to clarify that Article 81 is applicable to mobile food carts. Although Article 81 was intended to be applicable to all food service establishments, the Code does not explicitly mention mobile food units.

It is also proposed that Section 81.07(a) be amended to require that raw fruits and raw vegetables be thoroughly washed with potable water before serving. Washing removes the majority of pathogenic organisms and chemicals which may be present on the exterior surfaces of raw fruits and vegetables. This is a requirement of Section 14-1.81 of the Sanitary Code.

The amended Article 81, as proposed, would include two additional subsections of Section 81.07. It is suggested that the expanded section include the requirement that food packages, including hermetically sealed containers, be in good condition to protect the contents from contamination. This is, in part, a requirement of Section 14-1.31(a) of the Sanitary Code. It is also proposed that this section be expanded to include the requirement that only clean, whole eggs with shells intact and without cracks or splits, or pasteurized liquid, frozen or dry eggs or pasteurized dry egg products may be used, and that all containers in which shell eggs are received must identify the source. This is a requirement of Section 14-1.33 of the Sanitary Code.

In order to further maintain the Health Code's consistency with the Sanitary Code, it is proposed that Section 81.09(a)(4) be amended to require that every part of ground meat or foods containing ground meat are to be heated to 158 degrees Fahrenheit, with no time requirement (except poultry which must be cooked to 165 degrees Fahrenheit for 15 seconds), unless a consumer requests preparation of a single order of ground meat which must be prepared at a temperature less than 158 degrees Fahrenheit in order to comply with the request. The Sanitary Code was revised effective January 1, 1997 to include this temperature requirement. It is also a requirement of the U.S.D.A. regulations that govern commercial establishments that pre-cook ground meat prior to the freezing and packaging process.

Section 14-1.85 of the Sanitary Code now requires that metal stem-type, numerically scaled, indicating thermometers accurate to plus or minus two degrees Fahrenheit (1.1 degrees Celsius), or other acceptable devices made from materials that will not subject the product to contamination or toxic materials, are to be provided and used to determine that the internal cooking, holding or refrigeration of all potentially hazardous foods is done at the proper

temperature. It is proposed that Section 81.09 of the Health Code be amended to include this requirement.

Section 81.13 outlines the requirements for the health and clothing of foodworkers to prevent contamination of foods and food contact surfaces. It is proposed that the section be expanded to prohibit the unnecessary traffic of unauthorized persons in the food preparation, storage or warewashing areas, except for brief authorized visits and tours, if steps are taken, during such visits or tours, to ensure that all foods and food contact surfaces are protected from contamination. The prohibition is a requirement of Section 14-1.180(c) of the Sanitary Code.

It is proposed that supervisors of mobile food non-processing units not be required to obtain a Food Protection Certificate. In Section 81.15, supervisors of all food service establishments and non-retail food processing establishments are required to complete courses in food protection. Since mobile food non-processing units are prohibited from preparing or processing foods and typically sell only fruits, candies, pretzels or boiled hot dogs, it is not necessary to require that operators of these units take a 15-hour food protection course.

Section 14-1.88(c) of the Sanitary Code requires that all artificial lighting fixtures located over, near or within food storage, preparation, service or display facilities, and facilities where utensils and equipment are cleaned and stored, must be covered with guards. Currently, Section 81.19(b) only requires such guards above food processing equipment or open containers of food. It is suggested that the section be amended to conform to the Sanitary Code requirements.

Section 81.21(d) of the Health Code deals with the proper discharge of waste water and condensation from refrigerators. It is proposed that this section be repealed and replaced by requirements which are more extensive and which apply not only to refrigerators but to other types of equipment that require the proper discharge of waste water and condensation.

It is proposed that Section 81.23 be amended to include requirements for the proper storage of poisonous and toxic materials including bactericides, cleaning compounds, insecticides and rodenticides. The section should be amended further to prohibit the spraying of insecticides in food preparation and service areas, while food is being processed, prepared or served, or where unprotected food, clean utensils or containers are displayed or stored. This is a requirement of Section 14-1.60 of the Sanitary Code.

Section 14-1.115 of the Sanitary Code requires that mechanical dishwashing machines be equipped with thermometers to check their operation. It is proposed that this requirement be added to Section 81.37(e) of the Health Code. It is also proposed that Section 81.37 be expanded to add the requirement that drainboards of adequate size be provided and used for the proper handling of soiled items prior to washing and of clean items following sanitization. This is a requirement of Section 14-1.114 of the Sanitary Code.

20. Statement of Basis and Purpose in City Record Dec. 30, 1998:

This amendment to the New York City Health Code is promulgated pursuant to Sections 558 and 1043 of the New York City Charter ("Charter"). Section 558(b) and (c) of the Charter empower the Board of Health to amend the Health Code and to include in the Health Code all matters to which the Department's authority extends. Section 1043 grants the Department of Health rulemaking authority.

Environmental Health Services is responsible for supervising and regulating the public health aspects of the food supply that is commercially prepared, distributed, and served throughout New York City. This jurisdiction inclues the permitting and regulation of food services establishments.

Beginning October 12, 1995 the Department began making restaurant inspection reports more easily available to the general public. A person seeking the most recent inspection report for up to five restaurants needed only to make his or her request in writing to the Department. There is no charge for these reports. For those requests for more than five inspection reports, a charge of 25 cents per page continues to be assessed pursuant to the Freedom of Information Law.

In 1995, within the context of the administration's Regulatory Reform for the Restaurant Industry initiative, the Department was asked to review all laws, regulations, policies, and procedures under its purview that affect restaurants, and in the course of the review to identify regulations that were outdated or unnecessarily burdensome. Toward this end, the Department completed a thorough review of the New York City Health Code provisions relating to the restaurant industry, as well as the New York State Sanitary Code (10 N.Y.C.R.R. Subpart 14-1), identifying requirements that might be clarified, simplified, or eliminated without compromising our commitment to the protection of public health.

The revision of the food sections of the Code, which became effective on September 30, 1996 repealed Section 87.15, which had been added on October 28, 1971 and which read as follows:

(a) A restaurant or eating place shall make available for examination by any prospective patron or customer who requests it, the most recent inspection report of the Department.

(b) A restaurant or eating place shall post a sign in a conspicuous place near its public entrance or entrances advising that a copy of the most recent inspection report of the Department is available for examination by any prospective patron or customer who requests it. Such sign shall be printed in clear and legible type and in such manner as to be readily visible to patrons and customers.

There is no comparable requirement in the New York State Sanitary Code.

The rationale for repeal included the opinion that the requirements were ineffective and generally unenforceable in that a restaurant could, if it so chose, easily thwart the intent of the provisions by simply telling a patron that the inspection report could not be found at that particular point in time. The Department also felt that the procedure that had been established in 1995 for responding to requests for reports provided a more reliable way for the public to obtain the last report.

It has recently come to the attention of the Department that the public is unaware that these reports are easily available by mail. The Department has recently added an option to its 24-hour complaint and information line whereby a person can leave a message requesting the most recent inspection report for up to 5 food service establishments, and will receive them at no cost. To better inform the public, the Department is proposing that all food service establishments be required to post a sign informing the public of the telephone number to call to obtain the most recent inspection report.

Therefore, it is proposed that Article 81 be amended to require that food service establishments post a sign in a conspicuous place that is near its public entrance or entrances advising that a copy of the most recent inspection report may be obtained from the Department by calling a telephone number at the Department that will be printed on the sign, and providing the name and the address of the establishment, and that the sign must be printed in clear and legible type and in such a manner as to be readily visible to patrons and customers. It is also proposed that mobile food vending units be exempted from this requirement.

This proposal was not published in the Department's regulatory agenda because the need for wider notice of the availability of Department inspection report was unanticipated at the time Health Code §87.15 was repealed.

21. Statement of Basis and Purpose in City Record Dec. 30, 1998:

Introduction

It is proposed that the Health Code be amended to repeal provisions relating to veterinary public health which are no longer applicable in the City; clarify a recent Health Code amendment regarding licensing of dogs; deregulate private horse stables; and reflect current considerations in control of animal diseases that may be transmitted to humans.

Section 11.65

Rabies remains epizootic in New York City, and the Department erxpends considerable resources monitoring dogs' vaccination status and investigating dog bite incidents to prevent or rules out any risk to the public or an individual's health. Section 11.65 of Article 11 ("Reportable Diseases and Conditions") of the New York City Health Code prescribes requirements for reporting, observation and control of animals affected with or suspected of having various diseases communicable to humans. Sections 11.65(e) through (g) currently specify measures for isolation and observation of animals subject to rabies that have bitten a person. Animals "subject to rabies" inclue any animals capable of contracting or transmitting the disease. Section 11.65(e)(1) specifies that a person owning, possessing or controlling a dog or other animal that is subject to rabies and has bitten a person must confine and observe the animal for 10 days. No change is proposed with respect to the periods of observation applicable to dogs and cats.

However, rather than prescribing specific observation and isolation periods in the Code, it is proposed that the applicable Code sections referring to the period of observation be amended to reflect current veterinary practice and national and state regulatory requirements, particularly those in the State Sanitary Code, recognizing that rabies virus may follow a different course or progression in different animals. This will afford the Department flexibility and permit it to exercise its discretion in prescribing appropriate, varying peeriods of confinement and observation for different animals, and clarifying the instructions for notification to the Department of events observed during and at the conclusion of the period of confinement and isolation.

Section 11.03

It is further proposed that section 11.03(a), which includes "animal bite" as a condition reportable to the Department, be amended to require reporting of any exposure to an animal subject to rabies, not only bites of these animals. The State Sanitary Code, 10 N.Y.C.R.R. 2.14, defines "exposure" as "introduction of the rabies virus into the body of a human or animal" and includes a bite within that definition. It is proposed that all references to animal bites in section 11.65 be amended accordingly.

Article 161

The Department proposes to repeal various provisions of Article 161 ("Animals") which are no longer applicable or which presently serve no public health purpose, and to clarify the applicability of these and other provisions.

Private Horse Stables. It is proposed that private horse stables maintained by a natural person or a family on its own property to house horses for their own exclusive recreational, non-commercial use be removed from Health Code regulation. That is, a permit would no longer be required for these non-commercial stables. While the Department would no longer inspect these facilities on a regular basis the Department would retain its inspectorial authority in cases of complaints for example. In addition the sanitary requirements of Section 161.23, as well as certain specified provisions of Article 135, would continue to apply to these types of private horse stables. There are currently only a very small number of private family-owned stables maintained for recreational use in the City. While these stables would, in effect, be deregulated by the Department, all stables would continue to be subject to public nuisance and humane laws and regulations.

Cows. As the Board anticipated (see Notes, Health Code section 161.25), there are no longer any dairies in the City, nor are there likely to be any new dairies opening, and no cows are kept in the City for the sale of milk. Section 161.25 regulating the provision and maintenance of stables for cows should be repealed. Section 161.09(f), which prohibits keeping cows for production and sale of milk without a permit and the provision for issuance of permits for keeping cows contained in section 5.07(a) of the Code should be repealed accordingly.

Dog Licensing. In 1990, the American Society for the Prevention of Cruelty to Animals (the "ASPCA") ceased issuing ddog licenses in the City of New York pursuant to the New York City Dog Licensing Law, L. 1894, c. 115, as amended, and the Department assumed the licensing authority pursuant to section 161.04 of the Health Code, adopted by Board resolution on June 26, 1990. This section as adopted retained a provision that ASPCA-issued licenses in effect

on July 1, 1990 would remain in effect until their expiration date. Such licenses have long since expired. Inasmuch as their is no longer any need for any reference to the ASPCA's licensing authority, this section should be amended accordingly.

Dog licensing remains an indicator of responsible pet ownership. To increase the numbers of dogs licensed by the Department, section 161.15(b) of the Health Code was amended by Board resolution adopted in December, 1997, to require permittee pet shops and shelters to "transfer possession, title, ownership, control or custody of any dog to a prospective purchaser or adopter" only upon receipt of a license application and fees. State and City law clearly and explicitly require that every dog permanently owned, possessed or harbored in the City must be licensed. It is proposed that this subsection be further amended to include among such transfers those from a shelter to an owner reclaiming his/her unlicensed dog from the shelter.

Rabies Vaccination andd Parasite-Free Certification. In 1973, section 161.06 was adopted requiring "deworming" or providing veterinary certification that a dog or cat was free of intestinal helminths before the animal is offered for sale, sold, or given away to another person. It is proposed to expand this section to require treatment for, or certification that an animal tested free of any parasitic infection. It is also proposed that this section be amended to require that upon change of ownership of a dog or cat, certification of the animal's vaccination against rabies be provided to the new owner. This amendment would require no change in veterinary practice, or in the vaccination requirements of section 11.65 of the Code, but would require disclosure of vaccination status on transfer of ownership of dogs and cats.

Vicious or Dangerous Animals. It is proposed that section 161.07 ("Vicious or dangerous animals") be amended to correct a reference in the definition of a "vicious or dangerous animal" in section 161.07(a). This subsection presently excepts from the definition animals "properly registered under 161.09(a)" (trained guard or attack dog). The reference should be to section 161.09(k), as renumbered. A further amendment is proposed to section 161.07(d) which would subject dogs owned, kept, trained for, or engaging in dog fighting to the same control measures, i.e., examinations and seizures, and sanctions as other vicious or dangerous animals.

Individual Caging of Dogs and Cats. It is proposed that section 161.17 be amended to allow for the presence of more than one animal in a cage if a veterinarian determines that for medical or humane reasons it would benefit the animal(s) to be caged with one or more companions, or if the animals would be injured if separated from their companions. The original requirement for housing one animal in a cage was intended to be a rabies control measure. However, many animals, particularly those who have been raised and housed together for long periods of time, fail to thrive in such situations and if a veterinarian certifies that it is medically indicated for dogs to be caged together, determining the rabies vaccination status of each animal would be the responsibility of the veterinarian. It is further proposed that this section be amended to clearly state that nothing in the Health Code prohibits congregate "socialization" or play areas in permitted boarding facilities if all animals have been properly vaccinated against rabies, and certified as free of other illnesses which may be transmitted to humans or animals.

22. Statement of Basis and Purpose in City Record Feb. 16, 1999:

Section 6-03 of Chapter 6 of Title 24 of the Rules of the City of New York, as originally enacted by the Department of Health, exempted any "concessionaire" of a "governmental agency" from the numerical limitations on the total number of full-term and temporary mobile food unit permits that could be issued by the Department pursuant to the New York City Administrative Code. A 1996 amendment to §6-03 further exempted concessionaires from the limitation on the number of full-term and temporary mobile food permits that could be issued to any one person pursuant to Local Law 15 of 1995. In 1996, §17-307(g) of the Administrative Code, which provided rules to be followed in determining how a permit can be ascribed or attributed to a person not necessarily named as the permittee of record, was also added as a provision from which concessionaires of governmental agencies were exempt. A "concessionaire" was defined in §6-03(a) as "any person, partnership, corporation or other business entity which has been authorized by a governmental agency to operate one or more mobile food units in an area within the jurisdiction of

such governmental agency." A "governmental agency" was defined in this same provision as "any agency, board, bureau, commission, department or other similar entity of the City of New York." Only the Department of Parks and Recreation has utilized the "concessionaire" exemption from the numerical limitations or "cap" imposed on the total number of full-term and temporary mobile food unit permits and the exemption from the limitation on the issuance of multiple permits. Multiple full-term and temporary mobile food unit permits have been issued by the Department to concessionaires of the Department of Parks and Recreation operating in parks under the jurisdiction of that agency. Due to a 1998 Decision and Order of the Supreme Court, Appellate Division, First Department, however, §6-03 of the Rules of the City of New York must now be changed. In **Precision Carts Inc. v. The City of New York et al.,** 672 NYS2d 346 (1st Dept. 1998), the Appellate Division held that the concession agreements entered into by the Department of Parks and Recreation and a private for-profit mobile food vendor "to operate concessions at seven locations within a city park are illegal pursuant to Local Law 15 of 1995 . . .". It further provided that the Department of Health was "without authority" to adopt regulations exempting a "private for-profit corporation" from the one-permit-per-person limitation of Local Law No. 15. The City's motion for leave to appeal to the New York Court of Appeals was denied in late November of 1998.

In light of the above, §6-03 of Chapter 6 of Title 24 of the Rules of the City of New York must be changed to conform with the law as interpreted in the **Precision Carts** decision. This proposal will repeal the existing §6-03 of the Rules of the City of New York in its entirety and reenact it in a manner consistent with the literal meaning of the appropriate Administrative Code provision. As the Appellate Division has determined that the exemptions previously granted by the Department in §6-03 may not be granted to private for-profit corporations, such as those hitherto granted to concessionaires of the Department of Parks and Recreation, all references to concessionaires will be deleted in the proposed new §6-03. The Department will no longer issue mobile food unit permits, either full-term or temporary, to a "concessionaire" of a governmental agency as previously defined but, rather, will issue the permits directly to the governmental agency. Finally, the Department is also proposing to add a new §6-03(b)(4) specifying the Department's authority to exempt City agencies from the permit fee requirement.

Statement Pursuant to Charter §1042-Regulatory Agenda

The proposal to repeal and reenact §6-03 of Title 24 of the Rules of the City of New York to allow only governmental agencies, and not their concessionaires, to be exempt from §§17-307(b)(2), 17-307(f)(3), 17-307(g) and 17-308(c) of the New York City Administrative Code was not included in the regulatory agenda because it was not until a final court decision in late 1998 that the need to change §6-03 became apparent and necessary.

23. Statement of Basis and Purpose in City Record Apr. 14, 1999:

Local Law 15 of 1995 amended §17-307(b)(2)(c) of the Administrative Code to prohibit the issuance of more than one mobile food unit permit, whether full-term or temporary, to any "person", as that term is defined in §17-306. The intent in so restricting the issuance of mobile food unit permits was to prevent the accumulation of large numbers of permits by any one individual, corporation or other business entity as well as the illegal leasing or other transfer of such permits by some of these multiple permit holders. Local Law 27 of 1997 created a limited exception to the "one permit per person" rule by authorizing the issuance of multiple temporary mobile food unit permits to "exclusive distributors or manufacturers who held multiple temporary food vendor permits before local law 15 for the year 1995 divested them of their additional permits. . . ."

Pursuant to §17-307(f)(3)(a)(ii)(B), as added by Local Law 27, any person who is an exclusive distributor or manufacturer of a food product, as those terms are defined in §17-306 of the Administrative Code, "and who on February third, nineteen hundred ninety-five was an exclusive distributor or a manufacturer of such food product who held more than one temporary permit issued pursuant to this subchapter, may be issued the number of additional temporary permits such person held on February third, nineteen hundred ninety-five and, in addition, may continue to hold one full-term permit. . . ." These multiple temporary permittees may be issued up to a maximum of sixty temporary permits pursuant to Local Law 27. The purpose for creating this exception to the "one permit per person rule" of Local

Law 15 of 1995 was to correct what the City Council found was an "unintended effect" of the 1995 law; namely, the hardship the "one permit per person rule" had on multiple temporary permittees who are exclusive distributors or manufacturers of a food product such as ice cream sold on a seasonal basis. These exclusive distributors or manufacturers rely on their ability to maintain a certain number of pushcarts or vehicles that can legally sell their food products on the city streets during a limited season. Without more than one temporary permit, the City Council found that these exclusive distributors or manufacturers "cannot maintain the requisite number of pushcarts or vehicles they need during their limited vending season to stay in business. . . ."

Local Law 27 of 1997, specifically §17-314.1(d)(2) thereof, authorizes an exclusive distributor or a manufacturer issued more than one temporary mobile food unit permit to lease a vehicle or pushcart owned by such exclusive distributor or manufacturer with the Department of Health temporary permit affixed thereto to a licensed food vendor. The control and responsibilities attendant to the permit remain with the permittees. In order to lease a vehicle or pushcart, such exclusive distributor or manufacturer must submit proof of ownership for such vehicle or pushcart as well as the lease agreement which sets forth, among other things, the food product which may be primarily sold using such vehicle or pushcart. Such leasing is also contingent upon the approval of the lease agreement by the Department. Section 17-314.1(d)(2) requires that the Department promulgate rules establishing the standards by which the Department will evaluate such lease agreements. Even those leases that were entered into before these lease approval rules are promulgated must be submitted for review after these rules become finalized. Proposed §6-04 of Chapter 6 contains the requirements and standards to be used by the Department to evaluate the lease agreements submitted by multiple temporary permittees seeking to lease their carts or vehicles as authorized by Local Law 27 of 1997.

Statement Pursuant to Charter §1042-Regulatory Agenda

This proposal to promulgate this rule establishing standards to be used to evaluate lease agreements submitted for approval pursuant to Local Law 27 of 1997 by multiple temporary permittees and licensed food vendors was not included in the City Record because the law setting forth this Departmental requirement was not enacted until May 5, 1997.

24 Statement of Basis and Purpose in City Record May 18, 1999:

This amendment to the New York City Health Code ("Health Code") is promulgated pursuant to Sections 556, 558 and 1043 of the New York City Charter. Section 556 of the Charter grants the Department of Health jurisdiction to regulate all matters affecting health in the City of New York. Section 558(b) and (c) of the Charter empower the Board of Health to amend the Health Code and to include in the Health Code all matters to which the Department's authority extends. Section 1043 of the Charter grants the Department of Health rulemaking powers.

The Department proposes the repeal and reenactment of Article 71 and the repeal of Articles 73, 75 and 77 of the New York City Health Code. Existing Article 71 consists of general provisions for food, drugs, devices and cosmetics. Existing Article 73 consists of more specific provisions governing food (for example, adulterated or misbranded food and food additives). Existing Article 75 consists of specific provisions governing drugs and devices (for example, adulterated or misbranded drugs and devices, and drugs dispensed by prescription). Existing Article 77 consists of specific provisions governing cosmetics (for example, adulterated or misbranded cosmetics). The consolidation of essential public health provisions in a new Article 71 governing food and drugs will simplify the Code, eliminate redundant provisions, particularly those that are within the jurisdiction of other agencies and retain provisions having a direct bearing on public health.

These amendments are proposed in furtherance of the Department's regulatory reform efforts, and the need to modernize archaic provisions of the Code. The substantive areas governed by the articles proposed to be repealed is comprehensively regulated by other levels of government (for example, the State Education Department, the State Department of Agriculture and Markets and the Federal Food and Drug Administration). It is no longer necessary or desirable for the Department to duplicate efforts in areas already extensively regulated, or to retain provisions which are

no longer enforced by the Department.

Devices and cosmetics are regulated by the New York State Education Department and the Federal Food and Drug Administration. Provisions governing devices and cosmetics currently in Articles 71, 75 and 77 are not enforced by the Department. Consequently, proposed new Article 71 does not govern devices or cosmetics. Similarly, the dispensing of drugs (covered in existing Article 75) is extensively regulated by the State Education Department, and the Board of Pharmacy in particular. Controlled substances (including the dispensing of such substances) are extensively regulated by the State and Federal government (Article 33 of the Public Health Law and 21 U.S.C. §801 **et seq.,** respectively). Further, the Board of Regents defines unprofessional conduct in the practice of pharmacy. [8 N.Y.C.R.R. Section 29.7].

25. Statement of Basis and Purpose in City Record July 9, 1999:

The Department of Health requires the reporting of 70 diseases and conditions pursuant to Article 11 of the New York City Health Code. Mandatory reporting enables the Department to detect outbreaks and describe disease trends over time.

Vibrio parahaemolyticus and other non-cholera **Vibrio species** are bacteria that can cause acute gastroenteritis, skin infections, and bacteremia in humans. In persons with underlying medical illness, such as alcoholics, diabetics, persons with liver disease, or compromised immune systems, infection can cause serious, potentially fatal illness.

Recent outbreaks of **V. parahaemolyticus** have been associated with consumption of contaminated shellfish from the Pacific Coast and the Gulf of Mexico. In August to September 1998, for the first time, consumption of molloscum shellfish from Long Island Sound was linked to an outbreak of **Vibrio parahaemolyticus.**

In light of the recent outbreak, and evidence of colonalization of Long Island waters, the Department proposes designating **Vibrio species** infections as a reportable disease pursuant to the New York City Health Code. By making **Vibrio species** infections reportable, the Department of Health will be able to monitor the occurrence of disease in the New York City population, provide baseline data relating to the epidemiology of the disease, and most importantly, detect outbreaks of **Vibrio species** infections in a timely fashion.

Statement Pursuant to Charter §1042-Regulatory Agenda

This proposal was not included in the Health Department's Regulatory Agenda nor anticipated because it is the result of a recent outbreak of **V. parahaemolyticus** and reflects a need for surveillance of **Vibrio species** infections.

26. Statement of Basis and Purpose in City Record July 9, 1999:

The Board of Health has been petitioned by Bruce W. Krupke, Executive Vice President, New York State Dairy Foods, Inc. to amend §111.33 of the New York City Health Code to remove any reference to ultra-pasteurized milk and ultra-pasteurized milk products. This petition further suggests the adoption of a voluntary dating system that would allow individual milk processors to apply an expiration date anywhere from forty-five (45) days to sixty (60) days after the date of ultra-pasteurization.

Section 111.33 of the New York City Health Code regulates the dating of milk and milk products to be sold in the City of New York. This provision currently states as follows:

"No person shall possess, store, offer for sale, sell, give away or distribute milk, low sodium milk, low fat milk, skimmed milk, modified skimmed milk, cream or half and half after the expiration date indicated on the label required pursuant to §111.61. No person shall possess, store, offer for sale, sell, give away or distribute any such product the label of which bears an expiration date beyond the period specified in this section. The expiration date shall not be more than nine (9) calendar days following the date of pasteurization. However, in the case of such milk and milk products which have been ultra-pasteurized pursuant to subsection (d) of §111.25, the expiration date shall not be more than

thirty calendar days following the date of ultra-pasteurization. This section does not apply to cans of milk or cream to be used for manufacturing purposes or to milk or milk products which are not to be sold in the City of New York."

In order to ensure the wholesomeness of milk and milk products, the New York City Health Code has required that milk processors provide an "expiration" date on containers. This date is defined as the last day that the particular milk and milk products may be sold or distributed in New York City. In 1987, the Health Code was revised to extend this time period from ninety-six (96) hours to nine (9) days for pasteurized milk and milk products, and from fifteen (15) days to thirty (30) days for ultra-pasteurized milk and ultra-pasteurized milk products.

After having completed a thorough review of information provided to the Department by the New York State Department of Agriculture and Markets, the University of Pennsylvania, Cornell University as well as documents provided to us by the New York State Dairy Association, and also surveying surrounding municipalities regarding their regulations, it is proposed that §111.33 of the New York City Health Code be amended to extend the expiration date of ultra-pasteurized milk and ultra-pasteurized milk products from thirty (30) calendar days following ultra-pasteurization to forty-five (45) days following ultra-pasteurization. The amendment would have a favorable fiscal impact on this City's dairy industry by making its product more competitive in interstate commerce and would impose no public health risk or have a fiscal impact upon the general public.

27. Statement of Basis and Purpose in City Record Apr. 5, 2000:

The Bureau of Inspections within the Department of Health is charged with the responsibility for ensuring the safety of food that is commercially prepared, distributed and served throughout the City, whether the food is sold or provided free of charge. The Bureau's jurisdiction includes food service establishments and non-retail food processing establishments. Article 81 of the Health Code sets forth requirements for the operation of food service establishments for the purpose of preventing public health hazards. Establishments, such as "soup kitchens", which are run by religious, fraternal or charitable organizations which provide prepared food free of charge to the needy, are required to satisfy the applicable requirements of Article 81. The Department proposes that provisions in Article 81 addressing the required food protection course be amended to include provisions which are relevant to the particular structure and functions of these establishments.

Since the 1980s, religious organizations and other community groups have set up emergency food programs to feed the hungry on a regular basis. These programs commonly referred to as "soup kitchens" typically serve cooked or prepared meals on-site at no cost to the patron. Some kitchens provide individual bags or packaged prepared meals to the individuals they serve. Many "soup kitchens" receive funding from federal, state and/or local government sources. These include the Federal Emergency Management Act and Shelter Program (FEMA), the New York State Department of Health Hunger Prevention and Nutrition Assistance Program (HPNAP), the New York City Human Resources Administration Office of Domestic Violence and Emergency Intervention Services and the Emergency Food Assistance Program (EFAP). Government agencies, through a contractual agreement, provide monies and other services to non-profit organizations whose main purpose is to feed the hungry. In addition, food may be received from the community, which may include food drives or donated food from local grocery stores and restaurants.

Currently, §81.15 of the Health Code specifies that supervisors of food service establishments and non-retail food processing establishments complete a course in food protection. Such course is a comprehensive five day course culminating in an examination. It is proposed that §81.15 be amended to exempt food service establishments operated by religious, fraternal or charitable organizations, that are open to the public for the purpose of providing prepared food free of charge to the needy from the standard five day food protection course. It is proposed that these establishments be subject to a modified version of the food protection course covering the basic principles of safe food preparation.

The proposed amendments to §81.15 seek to account for the special nature of food service establishments operated by religious, fraternal or charitable organizations, that are open to the public for the purpose of providing prepared food free of charge to the needy. "Soup kitchens", and other such establishments, operate with limited funding and consist of

staff who are mostly transient volunteer workers.

The proposed §81.15(a)(2) requires the person responsible for the supervision of the food preparation or processing in these food service establishments operated by religious, fraternal or charitable organizations to obtain a certificate issued by the Department after successfully completing the modified course in food protection which could either be offered by the Department or by others approved by the Department. These individuals would be exempt from the examination requirement and would not be charged a fee for taking the course conducted by the Department. In addition, these individuals would not be required to take the Department's supplemental food protection course required pursuant to §21-02 of Title 24 of the Rules of the City of New York, which course provides training regarding the New York City Health Code, the State Sanitary Code and other relevant laws. The certificate issued to an individual in a food establishment operated by religious, fraternal or charitable organizations may be used by the certificate holder while he or she works at any such establishment. In addition, a person holding the certificate must be on the premises during all hours of operation. However, any person who has obtained a food protection certificate to supervise a regular food service establishment or a non-retail food processing establishment would not be required to complete the modified "soup kitchen" course.

Under the current §81.15(d), "the Department may require the holder of . . . certificate to complete a refresher course when the Department finds continuing violations of the Code or when a food borne outbreak implicates food processed in the establishment . . ., or when the Department determines that such a course is necessary to acquaint a supervisor with current developments in food protection principles." It is proposed that the language in subsection (d) be amended to indicate that holders of any food protection certificate-either the comprehensive food protection course or the modified course-may be required to complete a refresher course in food protection. Further, it is proposed that the Department may when it deems necessary to protect the public require the holder of a certificate to take a refresher course in food protection.

Section 81.15(e) of the Code currently requires that upon registration or upon applying for a certificate, two full-face photographs be taken of the applicant, one of which will be affixed to the certificate and the other maintained in the Department's records. It is proposed that this subsection be amended to exempt individuals covered under §81.15(a)(2) from the photograph requirement in order that there be no cost incurred by these individuals.

28. Statement of Basis and Purpose in City Record Oct. 5, 2000:

It is proposed that §13.05 of the New York City Health Code be amended to require that, within 24 hours of identifying any culture or sub-culture as **Mycobacterium tuberculosis** complex, clinical laboratories forward such cultures to the New York City Department of Health (the Department) for deoxyribonucleic acid (DNA) or other molecular analysis.

In the 1990s, New York City experienced a dramatic epidemic of multidrug-resistant tuberculosis (TB). In response, the New York City Department of Health (the Department) developed what has become an internationally recognized program which focuses on interruption of transmission through active identification of all TB patients and emphasis on treatment completion with an appropriate medication regimen (e.g., directly observed therapy). Improved laboratory services, strengthened infection control, and increased knowledge among health care providers about TB treatment and prevention are other necessary components of the successful strategy. These efforts have resulted in a 61% decrease in cases between 1992, the height of the epidemic, and 1999, and a reduction in multidrug-resistant TB by over 90%, from 441 cases to 31 cases by 1999.

This period also witnessed the development of molecular analysis of the DNA of the organism causing TB. This innovative laboratory technique distinguishes between strains of **Mycobacterium tuberculosis,** the causative agents of TB, isolated from different patients. People who have disease with organisms that have the same DNA pattern are presumed to be infected with the same TB strain and are therefore linked to each other in some way. The availability of DNA analysis has increased the effectiveness of the Department's TB Control program on two levels: by identifying TB

cases with the same infecting organism (i.e., "clusters") which are presumed to be the result of recent transmission, and by verifying laboratory contamination (or "cross-contamination") of a patient's specimen which, once verified, allows for discontinuation of unnecessary treatment. Laboratory contamination in this context means that a positive tuberculosis culture result is not due to disease in a patient, but rather contamination from another specimen in the laboratory.

Localized outbreaks, or "clusters" of TB in New York City, have been validated and independently identified by means of DNA analysis. The use of this technology was essential in determination of the extent of recent and on-going transmission in TB outbreaks in residential facilities, extended family networks, prison settings, patients with HIV/AIDS, and patients with multidrug resistant TB. DNA analysis also allowed the Department to rule out outbreaks in settings such as residential facilities for persons with AIDS and schools. This knowledge allows the Department to avoid resource intensive outbreak investigations of suspected but, without DNA analysis, unconfirmed secondary cases in public settings, and to better direct resources to TB control efforts in areas of known transmission.

This technology also enables the Department to identify patients with false-positive **Mycobacterium tuberculosis** cultures where a "false-positive" laboratory culture is not the result of active tuberculosis disease in the person whose specimen is being examined, but inadvertent contamination from another specimen growing **Mycobacterium tuberculosis** in the laboratory. This phenomenon is not entirely unexpected, since some degree of cross-contamination can occur even with standardized procedures. A citywide survey conducted in 1991 documented that almost 3% of tuberculosis patients had falsely positive cultures. As a result of this survey, the Department's TB Control Program implemented a surveillance system to identify possible cross-contamination of specimens with retrospective reviews of cases to identify those that have the characteristics of potential cross-contamination. Cross-contamination may be suspected where the patient does not manifest clinical symptoms consistent with TB, or has had a negative smear with only one positive culture. When such cases are identified, the patient's physician is notified of the possibility of cross-contamination so that he or she can make a determination of patient's diagnosis based on the clinical picture. If the physician determines that the potentially contaminated specimen is consistent with the clinical picture, unnecessary treatment may be suspended.

Currently, the Department's TB Control Program reviews histories of patients with suspected contamination and cultures from these patients are requested retrospectively from the laboratories for DNA analysis. Once cross-contamination is verified, unnecessary treatment for tuberculosis may be discontinued. The TB Control Program also occasionally accompanies New York State Department of Health microbiology laboratory staff on visits to laboratories which report false-positive results, to assist in identifying deficiencies and recommending corrective action.

In 1999, investigations resulted in identification of 39 patients with a false positive culture and/or diagnosis based on review of laboratory and medical records and discussions with physicians. However, the time from the initial identification of a positive culture to confirmation of contamination was usually three to six months. During this period, most of these patients had already received many months of multidrug treatment for TB.

At present, DNA analysis of **Mycobacterium tuberculosis** is available only for evaluation of selected isolates, in about 10% of all TB cases in New York City. These include patients whose isolates are suspected of being contaminants, patients identified as part of outbreak investigations, and patients with multidrug-resistant TB strains. The Department's current program is further limited by delays in DNA analysis. This analysis is generally only requested after an outbreak investigation has been conducted and secondary cases are discovered or suspected or after contamination is suspected. Results are received on average four weeks (range 2-11 weeks) after the request; a delay reflecting unstandardized long term storage practices at different laboratories, and the need for the isolate to be thawed and regrown for DNA analysis. Most laboratories maintain for each patient one isolate of TB identified in their laboratory for one year, after which it is generally destroyed. If a patient is retrospectively suspected as a possible source case in an outbreak and more than a year has elapsed, it may be impossible to establish by laboratory examination any DNA link between the patient and more recent cases. Furthermore, isolates older than one year often become unviable for DNA analysis due to contamination by molds.

By finding the source or index case retrospectively, the Department has also learned that traditional contact investigations often fail to identify links among active TB patients. Traditional contact investigation relies on interviewing patients about persons they may have exposed and where these exposures could have taken place. Exposures occur in a wide number of settings and patients may not recall all the places they have been or all the people they were in contact with while they were infectious, despite extensive interviews. By performing DNA analysis on all culture-positive cases the Department will be able to clearly identify where TB is being transmitted in order to better target our control efforts.

The Department does not know the extent to which unidentified transmission occurs in health care facilities in the City to either health care workers or patients. TB acquired in health care facilities is often identified after patients are discharged, or after health care workers are no longer working at facilities. Epidemiologic links for transmission in such settings are often not made by routine interviews. The results of DNA analysis would allow the Department to identify transmission in health care facilities and determine where additional control measures are needed.

In view of these difficulties in verifying and identifying the sources of cases, the Department proposes that the Health Code be amended to require submission within 24 hours of positive TB cultures or subcultures by all clinical laboratories in the City to the Department, which will conduct DNA analysis on one isolate for each active case. This amendment will enable the Department to:

1. Identify laboratory cross-contamination so that clinicians can be notified of possible cross-contamination quickly to prevent unnecessary treatment of patients;

2. Assess recent tuberculosis transmission in outbreaks in order to redirect contact investigations;

3. Determine the extent and dynamics of on-going transmission to focus program epidemiologic investigations and interventions for specific geographic areas and populations; and

4. Identify nosocomial transmission not identifiable by conventional methods.

It is estimated that 1,400 new tuberculosis cases will be diagnosed each year; 1,000-1,100 of these will be culture-positive and will be eligible for DNA analysis.

Currently, approximately 60% of culture-positive TB patients identified in New York City have isolates referred from various laboratories to the Department's Public Health Laboratories-Mycobacteriology Unit, for routine susceptibility testing. Because many of these isolates may also be used for DNA analysis, laboratories submitting these isolates would not be required to submit additional isolates for DNA confirmation, and the additional burden on the laboratory community of submitting specimens is somewhat mitigated. However, universal DNA analysis, is not possible until **all** laboratories are required to send to the Department, within 24 hours of growth, the initial culture or subculture of every **Mycobacterium tuberculosis** culture-positive patient identified in the laboratory.

The current voluntary system for DNA analysis dramatically underestimates the extent of transmission in New York City and hampers the Department's ability to promptly respond to outbreaks and cross-contamination. By prospectively analyzing at least one isolate for every culture-positive TB patient in the City in a standardized fashion, results of DNA analysis could be available within two weeks of identification. The lapse in time between identification of clusters and in identifying contamination will be reduced substantially, by approximately 2 to 12 months. It is anticipated that DNA analysis of all patients' initial isolates will also increase the rate of detection of contamination and significantly reduce the duration of inappropriate treatment with anti-tuberculosis medications for these patients. By evaluating DNA fingerprints of all culture-positive TB patients, the Department will further limit the spread of TB by identifying specific areas of ongoing transmission and improving TB control efforts, reducing New Yorkers' exposure to infectious TB, decreasing patient care expenditures and, ultimately, reducing pain and suffering for New Yorkers.

Tuberculosis control programs in other jurisdictions have reported dramatic results after instituting universal DNA

analysis. As a result of a Centers for Disease Control (CDC) grant and participation in a national study sponsored by CDC, the State of Maryland currently prospectively conducts DNA analysis for all culture-positive TB patients. Due to this policy, public health authorities recently found an outbreak of TB among the transgender community that may not have otherwise been discovered since epidemiologic links were not disclosed in interviews. The investigation enabled the Department's TB Control Program to retrospectively identify related cases in New York City. Had the Department prospectively conducted DNA analysis, it could have directly discovered the outbreak in the City several months before notification by the CDC or Maryland public health authorities. Other successful TB control programs employing universal DNA analysis, such as that in the Netherlands, have demonstrated highly beneficial outcomes in cluster identification and containment of outbreaks.

The amendment further proposes that information obtained from DNA analysis receive the same degree of protection of confidentiality afforded other patient information maintained by the Department pursuant to Health Code §11.07.

In summary, the Department believes that universal DNA analysis for all culture-positive TB patients is necessary to render New York City's TB control activities more effective, to avoid administration of unnecessary anti-tuberculosis treatment to those New Yorkers diagnosed on the basis of a "false positive" **Mycobacterium tuberculosis** culture, prevent transmission in confirmed outbreak situations, and identify locations where additional screening and prevention are needed to interrupt TB transmission. Comments in support of the proposal were received from the State Department of Health and the U.S. Centers for Disease Control and Prevention.

29. Statement of Basis and Purpose in City Record Apr. 3, 2001:

Although the number and severity of childhood lead poisoning cases continues to decline, lead poisoning remains a problem in New York City. The goal of eliminating lead poisoning in New York City can be further served by clarifying and updating certain reporting requirements of the Health Code, and providing direct access to individual blood lead test information about New York City children to the health care providers responsible for lead poisoning screening and treatment. Article 11 of the Health Code would be amended to clarify New York City's blood lead test reporting requirements and to establish a children's blood lead registry authorizing direct access by children's health care providers. It is further proposed that §173.14 (Safety standards for lead abatement) be amended to permit the Department to charge a fee for issuing certificates to persons who complete dust wipe sampling courses offered by non-Department of Health training programs, so that the Department may recoup the costs incurred in approving such courses and issuing the necessary certificates.

Blood lead testing is a critical measure for helping to protect children's health. The longer an elevated blood lead level in a child is undetected, the greater the risk to that child of adverse health consequences. Mandated timely reporting of all blood lead levels provides the Department with surveillance data necessary to monitor blood lead levels of individual children, directing allocation of resources for prevention, environmental investigation and intervention and treatment in areas at greatest risk, and assisting in effective planning to improve screening rates. Although current New York State and City laws and regulations are designed to establish comprehensive requirements for reporting of children's blood lead test results, there are gaps in some reporting requirements.

1. **Amend Article 11 to include a new Health Code §11.06-Blood Lead Reporting and Children's Blood Lead Registry**

a. Reporting of blood lead levels below 10 micrograms/deciliter.

In accordance with §§11.03 and 11.05 of the New York City Health Code, physicians, administrators of health care facilities and clinical laboratories, must now report to the Department, in writing, within 24 hours, results of blood tests of 10 or more micrograms of lead per deciliter (mcg/dL) of whole blood. In addition, all clinical laboratories are required to report results of all blood lead tests to the New York State Department of Health (NYS DOH) and to the

local health officer in whose jurisdiction the subject of the test resides pursuant to 10 N.Y.C.R.R. Subpart 67-3. If the laboratory reports electronically to NYS DOH, NYS DOH is required to notify the local health officer of the test results and the laboratory is deemed to have satisfied NYS DOH requirements. State regulations do not explicitly require health care providers to report test results to the local health officer unless the blood lead test result is equal to or greater than 45 mcg/dL. The City Department of Health tracks children's blood lead levels and performs environmental investigations in accordance with Health Code §173.13 when there is a receipt of a report of one blood lead level of 20 mcg/dL or greater, or two reports at levels of 15-19 mcg/dL for specimens taken three months apart. The Department also notifies parents and providers of the need to repeat tests when it receives reports of children's blood lead levels at 10 mcg/dL and greater.

Reports of blood lead test results below 10 mcg/dL are used by the Department for planning, educational, outreach and surveillance purposes. Also, when matched to children who are known "cases," test results below the environmental intervention threshold become a factor in a decision by the Department to discontinue case and/or environmental follow-up. There is, however, no urgent need to receive such reports within 24 hours.

The new provisions in §11.06(a) are intended to clarify reporting requirements, and to capture the results of blood lead test results which are less than 10 mcg/dL which are not reported electronically to the State by clinical laboratories. They are also intended to clarify the intent of the original proposal by requiring that providers who analyze blood lead specimens without submitting the specimen to a clinical laboratory for analysis must report to the Department results less than 10 mcg/dL. Reports are required within five (5) business days.

Section 11.03 is amended to cross reference the additional blood lead test reporting requirements in §11.06.

b. Establishing a Children's Blood Lead Registry

State law requires children's primary health care providers to assess children between the ages of six months and six years at every well child visit, or at least annually, for "high dose lead exposure" using a risk assessment instrument, and to screen or refer their patients for lead screening as necessary. Such providers are also required to screen or refer each child for blood lead screening at or around one and two years of age. Non-primary health care providers, e.g., emergency care providers, must inquire whether children who seek their care have been appropriately assessed and tested, and if not, test or refer these children for lead testing. In addition, as managed care programs increase and more children are enrolled in managed care, the Department has been receiving requests from health care providers associated with managed care organizations for information about children's lead screening history, to assist such providers in assessing children's risks and needs for new or further testing.

To facilitate the exchange of such information, the Department is adding a new §11.06 authorizing establishment of a children's blood lead level registry, modeled on the Department's Citywide Immunization Registry ("CIR"), which will allow access by health care providers to their patients' blood lead test results, enabling providers to track their patients' blood lead testing history and provide appropriate follow-up blood lead tests and medical care as necessary.

Because many children in New York City may have no regular health care provider, it is imperative that individual health care providers have access to complete lead testing histories for their patients so that they may determine when testing is needed. The creation of a blood lead test registry that is accessible to health care providers, with appropriate security provisions, can help health care providers identify children who need lead testing, thereby increasing screening rates throughout the City. Direct access to lead test results will enable such health care providers to evaluate their patients' current lead testing status and order needed tests or provide appropriate medical care for their patients.

The Department originally proposed that the Board repeal provisions applicable to lead poisoning reporting in §11.03, incorporating provisions for reporting all blood lead test results in the new §11.06. The original proposal would have raised the blood lead level at which reporting within 24 hours is required from 10 mcg/dl to 15 mcg/dl. After the public hearing, review of the comments received, and a Board discussion at its meeting on December 13, 2000, the

proposal was amended to retain the requirement that blood lead test results of 10 mcg/dl or higher be reported to the Department within 24 hours and to clarify the reporting requirements pertaining to blood lead test results less than 10 mcg/dl. The lead poisoning reporting provisions in §11.03 are amended only to the extent of cross-referencing additional reporting requirements in §11.06.

2. **Amend Health Code §11.07(d) to assure confidentiality of blood lead test registry records.**

Records of children's blood lead tests maintained by the Department would be subject to the same confidentiality requirements as that afforded the immunization registry pursuant to Health Code §11.07(d), and this section is amended accordingly to include reference to the children's blood lead registry.

3. Amend Health Code §173.14(c) to prescribe fees for issuing dust wipe sampling course certificates for completion of non-Department of Health training courses.

This amendment authorizes the Department to charge an administrative fee for the costs incurred by the Department for evaluating the training of persons who complete approved courses for dust wipe sampling and for providing a certificate.

In December, 1999, the Board adopted amendments to Health Code §173.14 which authorized the Department to administer such dust wipe training courses, charge a fee for attendance, and issue certificates to persons who complete its courses successfully. Since the Department is also authorized to approve courses given by other trainers, it is proposed that the Health Code be further amended to prescribe fees to cover costs of issuing certificates to individuals who complete dust wipe sampling courses conducted by Department-approved training organizations.

The Department is currently conducting this dust wipe course for a fee ($52.00), as authorized by Health Code §173.14(c)(2)(cc), to defray any costs incurred for course registration, materials, training, and certification. The Department has been approached by various organizations requesting approval to offer the course. The Department is developing procedures for approving these courses and proposes to issue certificates to individuals who pass approved courses. The Department will maintain records of all individuals who receive these certificates and provide such information to D.H.P.D. or other persons on request.

The Department will charge a fee of $15.00 either for issuing certificates to individuals who have taken and passed approved courses, or for issuing replacement certificates to individuals whose certificates were either lost or destroyed.

30. Statement of Basis and Purpose in City Record June 28, 2001:

The New York City Department of Health currently requires the reporting of 72 diseases and conditions, pursuant to Article 11 of the New York City Health Code. Mandatory reporting enables the Department to identify unusual cases, detect outbreaks, and to recognize and describe trends over time.

The Department of Health jproposes to update §§11.03 and 11.49 of the New York City Health Code to (1) specify additional methods of reporting, including by facsimile or electronic transmission, (2) ensure compliance with additional reportable diseases mandated by the New York State Department of Health in the New York State Sanitary Code, (3) delete certain diseases that were recently removed from the Sanitary Code, (4) add additional human diseases and conditions of current public health importance, (5) modify the requirements for monitoring acute cases of typhoid fever and management of long-term typhoid carriers, and (6) modify the mandated reporting of poisonings to specifically address pesticide exposures.

Section 11.03 currently requires that healthcare providers, hospitals and laboratories report to the Department in writing within 24 hours of diagnosis. With the advent of the ability to send reports by telephone, facsimile or electronic transmission, the Department proposes to modernize this section of the Health Code to authorize such communications. In addition, §11.03(c) will be updated to specify additional diseases that require immediate notification by telephone,

including acute arboviral infections, botulism, brucellosis, diphtheria, measles, poliomyelitis, hantavirus, Q fever, smallpox and, tularemia.

It is proposed that the following diseases of increasing public health concern be added to §11.03(a) to ensure compliance with the recent modifications to the New York State Sanitary Code: **Streptococcal pneumoniae** invasive disease; and Group B streptococcal invasive disease. The State Sanitary Code is effective in New York City and the Health Code must be at least as stringent as the State Sanitary Code. [Public Health Law §228].

It is proposed that the following diseases of minimal public health concern be deleted from §11.03(a) in resonse to the recent modifications to the New York State Sanitary Code: histoplasmosis, Reye's syndrome, and typhus. Although the sporadic occurrence of these diseases will no longer be reportable, disease clusters or unusual manifestations of these illnesses would remain reportable under §11.03(a).

It is proposed that the following diseases of potential public health importance be added to §11.03(a): Q fever, smallpox, transmissible spongiform encephalopathies and acute arboviral infections. Reporting of Q fever and smallpox is proposed owing to the highly infectious nature of these diseases, although naturally occurring incidence is unlikely. For the purposes of public health readiness and surveillance, reporting is proposed. Arboviral infections have recently become of public health concern particularly in the form of the West Nile Virus. Spongiform encephalopathies such as Creutzfeldt-Jakob disease, have become a matter of concern because of recent outbreaks in Europe. Popularly characterized as mad-cow disease, no cases have been found in the United States.

Currently pesticide poisoning is reportable under §11.03(a) which provides that poisoning by drugs or other toxic agents is reportable to the Department. It is proposed that §11.03(a) be modified to specifically refer to pesticide poisoning and to clarify what must be reported with regard to suspected and confirmed cases. This modification will be consistent with the reporting requirement of the New York State Sanitary Code §22.11, **Reporting of pesticide poisoning,** and §22.12, Reportable laboratory tests for pesticide poisoning. In an effort to increase surveillance for pesticide poisonings, reporting of symptomology as well as laboratory results would be required.

It is further proposed that §11.49 concerning the isolation and exclusion for typhoid fever and long-term public health case management for typhoid carriers be amended. The proposed changes emphasize that the primary public health concern regarding convalescent typhoid cases and long-term carriers relate to the potential for transmission only in high risk settings, such as food establishments, healthcare institutions and child care settings. Further, the proposed changes with regard to typhoid are based on a standard of reasonable certainty in the absence of evidence-based research. The recommendation presented in subsection (e) to shorten the period of supervision necessary to certify a chronic carrier as non-contagious are consistent with guidelines published by the American Public Health Association and state health department codes. There exists very limited medical research concerning the duration required to certify a typhoid carrier as non-contagious. The discovery of the effectiveness of quinolone antibiotics in eradicating the typhoid carrier state and the experience of health departments suggests that three consecutive negative stool cultures, over a three-month period, is sufficient proof of non-contagion.

Chronic carriers who have not had their gall bladder removed nor have received an adequate course of antibacterial therapy are currently required to submit to supervision for a period of five years. Experience and reason suggest that this time period is excessive. There is limited available data to determine a more appropriate length of supervision. One health department review suggests that the probability of a positive culture after three consecutive, monthly negative cultures is low. As an added precaution due to the lack of evidence, this period for non-treated individuals has been extended to six negative stool specimens over a six-month period.

Statement Pursuant to Charter §1042-Regulatory Agenda

Although amendment of §11.03 was anticipated in the annual regulatory agenda, certain diseases have been added as a result of recent events, such as West Nile Virus and European outbreaks of transmissible spongiform

encephalopathies. Section 11.49 was not included on the Regulatory Agenda because analysis of these public health changes was undertaken during the analysis of §11.03.

31. Statement of Basis and Purpose in City Record June 28, 2001:

Article 41 of the New York City Health Code governs facilities that provide services for pregnant women and newborns. According to the Article, a "maternity or newborn service" includes facilities or a part of a hospital where "deliveries are performed as a regular" practice, where women receive obstetric care, and where newborn infants receive care. The definition excludes a pregnant woman's residence and physician's office where deliveries are not regularly performed. Article 41 was adopted by the Board of Health to provide clinical standards for medical practice, staff, equipment and facilities in all maternity or newborn services.

Maternity and newborn services are comprehensively regulated by the New York State Department of Health as indicated below and therefore, it is no longer appropriate for the Department to enforce Article 41 of the Health Code.

New York State law provides that New York State Department of Health . . . "shall have the central, comprehensive responsibility for the development and administration of the state's policy with respect to hospital and related services . . ." [Public Health Law §2800]. Pursuant to New York State Public Health Law §2812, the New York City Department of Health no longer regulates clinical facilities, including abortion facilities, hospitals and clinics. These responsibilities have been assumed by the New York State Department of Health. Specifically, Public Health Law §2812 provides the following:

Notwithstanding the provisions of any general, special or local law, or any city charter or administrative code to the contrary, no county, town, village or city shall enact and enforce regulations and standards for hospitals, except for hospitals maintained and operated by the health services administration of the City of New York or the New York City Health and Hospitals Corporation.

Article 28 of New York State Public Health Law regulates all aspects of hospital operations (including diagnostic and treatment centers). New York State Department of Health specifically regulates maternity and newborn services which are part of an inpatient hospital. [10 New York Codes Rules and Regulations (N.Y.C.R.R.) §405.21]. Further, birth center services which are diagnostic and treatment centers are also regulated by New York State Department of Health [10 N.Y.C.R.R. Part 754].

Further, in 1972, the New York Court of Appeals specifically held that the regulation of the practice of medicine was reserved to the State pursuant to the State Education Law, §6520. **Robin v. Incorporated Village of Hempstead,** 30 N.Y. 347; 334 N.Y.S.2d 129 (1972).

The Department does retain public health jurisdiction and nuisance abatement authority with regard to matters including vital records, access to information and records required for epidemiologic investigations and the investigation and abatement of health nuisances and enforcement of Health Code provisions including, but not limited to Articles 3, 11, 13 and Title V (Vital Statistics).

32. Statement of Basis and Purpose in City Record June 28, 2001:

The repeal of Article 42 of the New York City Health Code is promulgated pursuant to Sections 558 and 1043 of the New York City Charter. Sections 558(b) and (c) of the Charter empower the Board of Health to amend the Health Code and to include in the Health Code all matters to which the Department's authority extends section 1043 grants the Department of Health rulemaking powers.

Article 42 was enacted by the Board of Health in 1970, after the New York State Penal law decriminalized abortions performed within the first trimester of pregnancy. The Penal Law was amended to provide that an abortion performed by a physician with consent of the pregnant woman within twenty-four weeks of pregnancy is a "justifiable

abortional act", and therefore not subject to criminal prosecution.

Article 42 was adopted by the Board to provide clinical standards for physicians and facilities with regard to medical practice, staff, equipment and facilities where abortions are performed. Article 42 provides detailed rules governing the operation of "Abortion Services," including definitions of "qualified obstetrician", "qualified surgeon," and "registered professional nurse." Article 42 required registration of Abortion Services with the New York City Department of Health and specified both the physical and operational characteristics of such clinical services, including such matters as transportation facilities, elevators, admission rooms, examination and laboratory facilities, operating rooms and recovery rooms. Specification of equipment included anesthesia equipment, transfusion equipment and blood supply, sterilization equipment, and various rooms and environmental controls.

Article 42 is no longer enforceable because it is pre-empted by New York State law and regulations. New York State law provides that New York State Department of Health ". . . shall have the central, comprehensive responsibility for the development and administration of the state's policy with respect to hospital and related services . . ." [Public Health Law $2800].

Pursuant to New York State Public Health Law §2812, the New York City Department of Health no longer regulates clinical facilities, including abortion facilities, hospitals and clinics. These responsibilities have been assumed by the New York State Department of Health. Specifically, Public Health Law §2812 provides the following:

Notwithstanding the provisions of any general, special or local law, or any city charter or administrative code to the contrary, no county, town, village or city shall enact and enforce regulations and standards for hospitals, except for hospitals maintained and operated by the health services administration of the city of New York or the New York city health and hospitals corporation.

New York State Department of Health specifically regulates diagnostic and treatment centers providing abortion services. [10 New York Codes Rules and Regulations (N.Y.C.R.R.) Part 756]. New York State Department of Health regulations also govern inpatient hospitals performing abortions [10 N.Y.C.R.R. §405.12(c)]. Further, the State Sanitary Code, in effect in the City of New York, regulates induced termination of pregnancies. [10 N.Y.C.R.R. §12.20]. Further, the practice of medicine is regulated by New York State [Education Law, §6520 **et seq.**].

Also, in 1973, the U.S. Supreme Court decided **Roe v. Wade,** 410 U.S. 113, which set forth constitutional principles related to the State's authority to regulate abortions. More recently the Supreme Court reaffirmed Roe's recognition of a woman's right, ". . . to choose to have an abortion before viability and to obtain it without undue interference from the State." **Planned Parenthood v. Casey,** 505 U.S. 833, 846 (1992).

Further, in 1972, the New York Court of Appeals specifically ruled that the State's purpose and design [was] to pre-empt the subject of abortion legislation and occupy the entire field so as to prohibit additional regulation by local authorities in the same area. **Robin v. Incorporated Village of Hempstead,** 30 N.Y. 347, 350; 334 N.Y.S.2d 129, 131 (1972). Moreover, the **Robin** Court held that the regulation of the practice of medicine was also reserved to the State pursuant to the State Education Law, §6520. Insofar as Article 42 purports to regulate the practice of medicine, it is pre-empted by §6520. Therefore, Article 42 is obsolete, and the Department of Health is pre-empted from regulating or setting standards for abortions.

The Department does retain public health jurisdiction and nuisance abatement authority with regard to matters including vital records, access to information and records required for epidemiologic investigations and the investigation and abatement of health nuisances and enforcement of Health Code provisions including, but not limited to Articles 3, 11, 13 and Title V (Vital Statistics).

33. Statement of Basis and Purpose in City Record Dec. 27, 2001:

Article 11 of the New York City Health Code currently requires the reporting to the Department of Health

approximately 70 diseases and conditions occurring as human cases and three diseases of animals communicable to humans which have not yet affected any person. Such mandatory reporting enables the Department to identify unusual cases, detect outbreaks, and recognize and describe trends over time.

At its meeting on June 13, 2001, the Board approved a proposal to amend §11.03 of the Health Code to add to the list of reportable diseases several diseases of current public health importance, including Q fever, a disease of animals which is communicable to humans. Among the human diseases currently reportable to the Department are several which are animal diseases "communicable to humans." Section 11.65 of the Health Code currently requires reporting to the Department of only three animal diseases if the diseases affect only animals: anthrax, glanders and rabies. For the reasons stated below, it is proposed that a new §11.64 be adopted related to reporting and control of additional diseases of animals communicable to people; that §11.65, which currently provides for reporting of three animal diseases communicable to humans (rabies, anthrax and glanders) and control of animals exposed to or affected with rabies, be repealed and reenacted, and incorporate measures only for rabies control; and that both §11.65 and §11.66 reflect current pre- and post-exposure rabies control recommendations of the U.S. Centers for Disease Control and Prevention.

I. Adopt a new §11.64

Following the 1999 outbreak of West Nile virus in the northeastern United States, the U.S. General Accounting Office ("GAO") conducted a review of the outbreak and the public health response to it. The GAO listed in its key lessons that "links between public and animal health agencies are becoming more important. Many emerging diseases, including West Nile, affect both animals and humans. So do many viruses or other disease-causing agents that might be used in bioterrorist attacks. The length of time it took to connect the bird and human outbreaks of the West Nile virus signals a need for better coordination among public and animal health agencies."

The Department recognizes this need, and proposes to update and supplement the numbers of animal communicable diseases now reportable pursuant to §11.65 which are of public health concern because they can be transmitted to humans. A new §11.64 of the Health Code would establish additional requirements for veterinarians and others in New York City to report additional specific diseases of animals to the Department, some immediately upon diagnosis or suspicion that the disease is present and others within 24 hours of diagnosis, as well as requiring immediate reporting of any unusual disease manifestation or outbreak or suspected outbreak of any disease, of known or unknown etiology, occurring in three or more animals. Section 11.64 will also specify who should report, the information to be reported, the measures which may be implemented by the Department for investigation and control, and the confidentiality to be afforded the reports and records generated pursuant to these provisions.

A. Immediate reporting of suspected diseases requiring an acute response.

In accordance with the new §11.64(a)(1) the Department would receive immediate reports on either diagnosis or suspicion of certain diseases when the disease is suspected only in animals. Anthrax, brucellosis, glanders, plague, Q fever, and tularemia have been identified by the U.S. Centers for Disease Control and Prevention as diseases with a high potential as intentional infectious agents. Required reporting of suspect cases directly to the Department of Health when a diagnosis is first suspected: 1) provides an additional means of surveillance for these diseases of humans; 2) may provide the earliest warning of a natural or intentional outbreak with potential spread to humans and other animals; and 3) allows the Department to quickly evaluate the potential public health consequences of the infected animal(s) and take necessary measures to prevent further morbidity in animals or humans.

It is proposed that cases of rabies in animals currently reportable pursuant to §11.65 of the Code, be made reportable in accordance with the new §11.64, so that requirements for reporting of all animal diseases and conditions communicable to humans will be found in one section, to clarify and emphasize the importance of such reporting, and to allow for a rapid response to be implemented. If an animal is found to have rabies, it remains critical that all people having contact with the animal be identified as soon as possible and evaluated for possible post-exposure prophylaxis. Specific updated requirements for control and management of animals which may have been exposed to rabies would

continue to be found in the reenacted §11.65.

Experience with West Nile Virus in 1999 and 2000 has shown that not all disease entities can be accounted for in a reportable disease list. New and emerging diseases of public health significance occur in both animals and humans. The inclusion of a requirement to report unusual disease presentations in animals will establish a formal procedure for more rapidly identifying unusual diseases which may be a threat to public health.

B. Reporting of other animal diseases on diagnosis.

In addition to the diseases above which would be reported when a diagnosis is first suspected, the Department proposes that the Board require prompt reporting of the following diseases in animals, for the following reasons, but only when a diagnosis is confirmed:

-Arboviral encephalitis occurs most commonly among horses in this area, typically due to Eastern Equine or West Nile encephalitis. As we have learned from the West Nile virus experience, newly introduced viruses may affect species not previously recognized to be at risk. Making the occurrence of these diseases in animals reportable will aid in the detection of future introductions or outbreaks as early as possible.

-Outbreaks of avian chlamydiosis have been reported in aviaries and pet stores. Infected birds shed the causative agent, **Chlamydia psittaci,** in their feces. Aerosolized droplets containing the bacteria can infect people in close proximity to those infected birds. Infection in aviaries or pet stores poses a risk of infection to employees, as well as the public. By requiring reporting of any case of avian chlamydiosis, the Department will better be able to intervene when infected birds pose a risk of infection to people.

-Leptospirosis is difficult to detect in people because of the highly variable clinical presentation of the disease. Sporadic human cases and outbreaks do occur in the United States. In 2000, the Department confirmed the first human leptospirosis case in New York City in over 10 years. Outbreaks and sporadic cases also occur in dogs in New York City, including three dogs in 2000. It is assumed that the primary source for leptospirosis in urban environments is contaminated rat urine. Requiring veterinarians and other animal health professionals to report this disease directly to the Department provides an additional means to detect potential sources of infection for humans before human cases occur.

C. Measures to investigate and control animal diseases.

Section 11.64 would authorize the Department to initiate any investigation and control measures appropriate and necessary on receipt of reports of animal diseases of public health concern, similar to the measures required and authorized with respect to human cases in the State Sanitary Code (10 N.Y.C.R.R. §2.6). Although the Department's authority to take such measures is broadly delineated in applicable law (see, e.g., §556 of the New York City Charter: ". . . the department shall have jurisdiction to regulate all matters affecting health in the city of New York . . ."), and the State Sanitary Code requires the Commissioner and/or the Department (as the local health officer) to take certain measures in rabies control, no other provisions of applicable law specify the kinds of action the Department could take for investigation and control of a broad range of diseases initially reported only in animals.

II. Repeal and reenact §11.65 and amend §11.66 to incorporate current pre- and post-exposure rabies control recommendations.

It is proposed that, as reenacted, §11.65 not duplicate reporting requirements for rabies, anthrax and glanders, which will be included in the new §11.64; and that the reenacted §11.65 and amended §11.66 incorporate the most recent recommendations for rabies control and vaccination. See, U.S. CDC and National Association of State Public Health Veterinarians, Inc., **Compendium of Animal Rabies Prevention and Control,** Morbidity and Mortality Weekly Report, 50, No. RR-8, May 25, 2001.

As reenacted, §11.65 will apply current regulatory and professional veterinarian recommendations for control of animals capable of contracting rabies which are affected with or have been exposed to rabies; management requirements for such animals would continue to distinguish between animals for which there are U.S. Department of Agriculture approved vaccines and which are actively vaccinated, and those animals which are not actively vaccinated or for which no vaccine is currently approved. The reenacted §11.65 includes updated definitions of "actively" or "currently" vaccinated animals and "primary" and "booster" vaccinations. As in the existing section, the Department includes directions for management of animals which are either known to have been exposed to rabies or suspected of having been exposed to another animal with an unknown rabies history. To be "exposed" to rabies an animal must have been bitten, scratched or otherwise had contact with a rabid animal's saliva or infectious material. Based on current CDC recommendations for post exposure management of animals exposed to rabies, where the animal causing the exposure is not known or available for observation, but where the exposed animals are actively vaccinated, the reenacted §11.65 would enable owners to observe their animals for a period of 45 days, rather than surrender the animals to the Department for direct observation by the Department. The requirement that the owner "confine and observe" the animal has been replaced by the term "closely observe" since it is not necessary for an owner to keep the animal either confined to the owner's premises during such period of observation. Section 11.65 would also change the requirements for observation of animals which are not currently vaccinated against rabies in accordance with the above-cited recommendations. The reenacted §11.65 retains provisions which allow the Commissioner to take certain extraordinary measures to control the spread of rabies in the event that prevalence of rabies in specific areas of the City requires the declaration of a rabies "epizootic" (the animal equivalent of an epidemic).

It is further proposed that subsection (a) of §11.66 be amended to incorporate by reference the definitions of "actively" and "currently" vaccinated animals and "primary" and "booster" vaccination which will now be found in §11.65, and which do not need to be repeated in §11.66, and to amend subsection 11.66(d) to require that all dogs and cats in New York City regardless of the length of time the animals are in the City, including animals owned by non-residents, and animals in the City temporarily for exhibition purposes, be actively vaccinated against rabies. Upon adoption of the new §11.64, reenactment of §11.65 and the amendment of §11.66, the list of Section Headings in Article 11 would also be amended appropriately.

The only testimony and written comment received at the public hearing was submitted by a New York City veterinarian on behalf of the executive board of the Veterinary Medical Association of New York City. The Department does not believe that any amendments are required based on this comment. However one minor clarification was made in §11.65(b) based upon Department consideration. Specifically, the original proposal contained the phrase "capable of contracting and transmitting rabies." This phrase has been further amended to state "capable of transmitting rabies."

34. Statement of Basis and Purpose in City Record Apr. 4, 2002:

The Board of Health has amended Article 48 (Summer Day Camps, Children's Overnight Camps, Children's Traveling Summer Day Camps and Municipal Camps) of the New York City Health Code, to modernize and enhance the safety and well-being of the children attending camps in the City of New York, and to harmonize the Health Code with the current provisions of the New York State Sanitary Code, Subpart 7-2 (Children's camps).

In New York City, there are approximately 755 summer day camps, 12 traveling summer day camps, 4 overnight camps, and 5 camps where 20% of the campers are physically or mentally disabled, most of which are operated by the New York City Housing Authority, Board of Education and Department of Parks and Recreation, non-public schools and not-for-profit charitable organizations such as the Salvation Army, churches and synagogues.

The children's camps operating in New York City are permitted and regulated by the Department's Bureau of Regulatory and Environmental Health Services, Office of Field Operations/Inspections (OFO/I). The Bureau has the primary responsibility for enforcing Article 48 of the Health Code as well as Subpart 7-2 (Children's Camps) of the New York State Sanitary Code. These regulations prescribe standards of safety, services and operations designed to protect the health and well-being of children who attend and participate in children's camps.

The Department has been advised that the State Department of Health is planning to propose that the State Public Health Council further amend Subpart 7-2 of the Sanitary Code. When such amendments are adopted, the Department will again need to amend the Health Code. However, the proposals to amend the Health Code contained herein are deemed to be immediately necessary for the reasons stated.

Amend §48.07 Permit application; issuance and renewal

Each year the OFO/I permits and inspects all of the nearly 800 camps in New York City. Currently, Article 48 and Subpart 7-2 of the New York State Sanitary Code require an application for a permit to be submitted within thirty days of commencement of camp operation, or by June 1 for a camp which plans to begin operating on July 1. In addition to a pre-permit inspection, the application and permit process includes verification of address, ownership, tax exemption status and staff qualifications, including reports from the New York State Department of Social Services Central Register of Child Abuse and Maltreatment and of criminal convictions reported by the camp director, and the camp's written safety plan. A Fire Department inspection report is also required as part of the permitting process. Each year, however, many of the children's camps begin to operate without first obtaining a permit. To allow sufficient time for Department review, §48.07 (Permit; application, issuance and renewal) is being amended to require permit applications to be submitted within sixty days of commencement of operation, to allow for application by mail if the application is submitted to the Department at least ninety days before starting operation, and to require applications to be submitted **only** in person between sixty and ninety days before starting operation. In-person submission will enable OFOI staff to immediately identify all missing or erroneous materials and documentation in applications and written safety plans and expedite issuance of permits.

As part of the annual permit application process, prior to issuance of a permit, the Department is further amending this section to require camp directors to attend an annual orientation session offered by the Department to review the regulatory requirements pertaining to camps.

Repeal and reenact §48.09 Staff qualifications

Operators of children's camps in New York City have reported that they have had difficulty finding staff with the qualifications currently required by the Health Code, in a timely manner. In the event that a camp is unable to recruit sufficient qualified staff, the number of campers enrolled in the program must be reduced and/or the recreation program limited to passive activities. Children's camps operating in New York City provide an invaluable service and are heavily relied on by working parents. To enable camps to hire qualified staff and serve the maximum number of children safely and effectively, the Board is amending the Health Code by repealing §48.09, now titled "Personnel; qualifications; ratios; records" and replacing this section with a reenacted §48.09, "Staff qualifications" and a new §48.12, "Supervision" incorporating staff and counselor qualifications and counselor to camper ratios. These provisions will reflect and be consistent with staff qualifications and ratios required by Subpart 7-2 of the Sanitary Code. The Health Code title "waterfront supervisor" would be replaced with the Sanitary Code's "camp aquatics director."

Repeal and reenact §48.11 Written safety plan

A camp's written safety plan establishes a blueprint for safe operation of a camp, including staff qualifications and duties, facility operation and maintenance, fire safety, medical requirements, policies and procedures for general and activity-specific safety, staff training and camper orientation. The Department reviews plans for all new applicants and amended plans for established camps. Currently, §48.11 (Programs) requires creation of the written safety plan as well as staff training and camper orientation. The Board is repealing and reenacting §48.11 reflecting the more detailed and current requirements of the State Sanitary Code §7-2.5(m), and requiring a single written safety plan which covers all areas of camp operations, policies and procedures.

The Board is further amending existing provisions in §§48.07(a), 48.15(a)(6), and 48.19(p) and (q), which refer to portions of the written safety plan and which are inconsistent with the proposed provisions.

Adopt a new §48.12 Supervision

Currently, counselor to camper supervision ratios are included in §48.09 of the Code, with personnel qualifications and records requirements. The Board is adopting a new §48.12 which focuses only on counselor to camper supervision ratios. The new §48.12 incorporates the requirement that the camp operator provide adequate supervision and that a definition of "adequate supervision" as currently stated in §48.11(f) of the Code and in §7-2.5(n) of the State Sanitary Code, be included in this section. The section includes counselor to camper ratios for passive activities as defined in §7-2.5(b)(1) of the State Sanitary Code.

Repeal and reenact §48.13(a) Safety standards for activities: Swimming and Aquatic Activities

Section 48.13(a) (Safety standards for activities: Swimming) is being repealed and reenacted to create revised and expanded provisions intended to further safeguard children against accidental drowning. Pursuant to §§48.13(a)(1) and 165.37 of the Health Code and §6-1.7 of the State Sanitary Code, the Department of Health is required to investigate all drownings which occur at children's camps permitted by the Department, and to report the results of such investigations to the New York State Department of Health. The amendments incorporate measures to address the results of such investigations. The reenacted subsection outlines the safety standards for all swimming and aquatic activities including requirements for facilities and equipment, staff responsibilities, camper safety, and off-site aquatic activities. Foremost among the changes to the subsection is the requirement that a progressive swimming instructor [as defined in §48.09(g)] should assess the swimming ability of each camper prior to allowing the child to participate in aquatic activities in order to reduce the risk of non-swimmers being grouped with swimmers for such activities. The reenacted §48.13(a) outlines extensive requirements for the protection of non-swimmers.

Repeal and reenact §48.13(b) Safety standards for activities: Riflery

Currently §48.13(b) outlines safety standards for riflery. Mortality and morbidity reports demonstrate the alarming accessibility and incidence of firearm use by children. Therefore, all current provisions related to riflery are being repealed and the reenacted §48.13(b) specifically prohibits riflery as a camp activity in all children's camps operating in the City of New York. The Department has determined that allowing children to engage in any activity involving the use of firearms does not reflect a sound public health policy.

Amend §48.13(d) Safety standards for activities: Horseback Riding

The outdated standard for horseback riding headgear is being updated to require that such headgear meet the standards specified in §1265 of the New York State Vehicle and Traffic Law.

Repeal and reenact §48.15(f) Safety standards for facilities: Food Sanitation

Section 48.15(f) is being reenacted to incorporate all provisions of Article 81 (Food Preparation and Food Establishments) of the Code, with the specific exception of not requiring an additional permit to operate a food service establishment. Article 81 was amended in 1996 and again in 1998 to modernize its provisions, to reflect recommended federal guidelines on the control of public health hazards and to make them consistent with the New York State Sanitary Code. The current provisions for food safety outlined in §48.15(f) are vague, outdated and not consistent with Article 81. Supervisors of food operations at all camps will be required to successfully complete a food protection course approved by the Department and food which is prepared off the premises, brought from home, or which is carried off-site on trips, shall be subject to the holding and handling requirements outlined in Article 81.

Repeal and reenact §48.17(k) Health and medical care

The current §48.17(k) requires that all injuries, illnesses and reportable diseases are to be reported to the camp health director. The subsection is being updated to include requirements for reporting to the Department all injuries or illnesses currently reportable pursuant to the State Sanitary Code and to add a requirement for reporting instances which

require the administration of epinephrine.

A number of changes were made in the resolution after the public hearing based on testimony and written comments from the New York State Department of Health and the Children's Aid Society. In response to the State's comments changes were made to clarify requirements for aquatics safety, staff to camper ratios, staff responsibilities and qualifications, record keeping, reporting of diseases, incidents and conditions, and the written safety plan so that requirements of the Health Code are in harmony with those of the Sanitary Code. In response to the Children's Aid Society comment, the requirements for attending the Department's orientation session were amended so that not every camp director needs to attend a session annually before a permit is issued.

35. Statement of Basis and Purpose in City Record July 16, 2002:

Pursuant to §2903(a)(15)(a) of the New York City Charter, the Department of Transportation issues Special Vehicle Identification Parking Permits (SVIPP), also known as Parking Permits for People with Disabilities (PPPD), to persons applying for such permits who are certified as having a "permanent disability seriously impairing mobility". A vehicle bearing such a permit while parked shall not be deemed to be in violation, with certain specified exceptions, of the rules and regulations governing parking in the City. Prior to the enactment of Local Law No. 43 of 1995, which amended §2903(a)(15)(a) of the Charter, those persons seeking a SVIPP due to a physical disability had to possess a driver's license in order to be deemed eligible to apply. The determination certifying an applicant for a SVIPP, or the determination to not certify an applicant, was made by the Department of Health. Prior to 1998, the Department of Health's Employees' Health Program exclusively carried out these responsibilities, allocating a certain amount of physician time per month to these SVIPP certification applications. The medical criteria/standards followed by these physicians in determining eligibility for these permits were codified in 24 R.C.N.Y. Chapter 16.

Local Law No. 43 of 1995 made SVIPP permits more widely available as it made eligible for the first time the non-driver having physical disabilities (for example, children and persons who were not able to qualify for a driver's license by reason of their physical disability). This was expected to increase the workload of both the Departments of Transportation and Health due to an increase in the volume of SVIPP applications. At the same time as widening the availability of the SVIPP, Local Law No. 43 provided the Department of Health with the legal authority and opportunity to designate providers/physicians to make the SVIPP certifications "in accordance with standards and guidelines provided by . . . the department of health". These guidelines were found in 24 R.C.N.Y. Chapter 16, which prior to 1998 contained solely the medical criteria/standards referred to above.

In light of the authority vested in the Department of Health by Local Law No. 43 to designate providers to perform SVIPP certifications, the Department in 1998 amended the rules of the Department (24 R.C.N.Y. Chapter 16) to authorize the use of City-employed physicians made available by the Health and Hospitals Corporation, pursuant to a contract with the Health and Hospitals Corporation and the Department of Transportation, to perform medical certifications of Special Vehicle Identification Parking Permit applications submitted to the Department of Transportation. Other changes to the rules were enacted at this same time, including a provision specifying the "Form of Certification" to be made [24 R.C.N.Y. §16-03] and a separate provision establishing a formal appeal process for those applicants denied certification [24 R.C.N.Y. §16-05].

As noted above, these Department rules were last amended in 1998. In December of 1997, the Department of Health, in accordance with the authority granted to it by Local Law No. 43, designated a provider to perform the SVIPP certifications by entering into a contract with the Department of Transportation and the Bellevue Hospital Center (BHC), a Health and Hospitals Corporation facility. Pursuant to this contract, Bellevue agreed to assign physicians to perform SVIPP certifications in accordance with the Department's rules as specified in 24 R.C.N.Y. Chapter 16, as amended. Since entering into this agreement, BHC physicians have examined the majority of SVIPP applicants. The Department of Health's Employees' Health Program continues to monitor the validity of BHC physician certifications through a review of determinations and also holds clinics in each of the boroughs outside Manhattan for SVIPP applicants who choose not to be examined at the BHC.

Throughout the above period, since approximately 1997, a Task Force in the Mayor's Office of Operations has monitored the operations of the SVIPP program. The Task Force's mission is to ensure that the services provided to permit applicants is appropriate and prompt. It is composed of representatives from the Departments of Health and Transportation, the Bellevue Hospital Center, the Mayor's Office for People with Disabilities and is chaired by a member of the Mayor's Office of Operations. Over the past three years it has become apparent to the Task Force members that additional changes need to be made to the Department of Health's rules (24 R.C.N.Y. Chapter 16) in order to ensure that they are more consistent with effective management of the SVIPP program.

Based upon the recommendations of the Task Force, the Department's Bureau of Human Resources, of which the Employees' Health Services Program is a part, has proposed and is now adopting a number of changes to 24 R.C.N.Y. Chapter 16. First, §16-01 of Chapter 16 of Title 24 is amended to also refer to these SVIPP permits issued by the Department of Transportation as "Parking Permits for People with Disabilities" ("PPPD"). The Departments of Transportation and Health as well as the BHC have come to refer to Special Vehicle Identification Parking Permits by this alternate name, and as a result, the permits are more commonly known to the public as Parking Permits for People with Disabilities, or PPPD. Second, §16-02 is amended to update and add to those conditions deemed to constitute a permanent disability seriously impairing mobility. Third, §16-03 is modified to eliminate both the requirement that physicians in appropriate fields of specialization be appointed to two year renewable terms and the requirement that "persons shall be directed to particular physicians based upon their claimed impairment". An SVIPP applicant will not be automatically referred to a specialist for examination. Instead, specialists will be used for initial SVIPP assessments only in those cases where the examining physician/non-specialist deems it necessary. Fourth, §16-04 is amended to eliminate both the requirement that the Certification Form "include a complete applicant/patient medical history" and the requirement that it "specify clinical findings and a diagnosis that supports a determination of a permanent disability seriously impairing mobility". Instead, the Certification Form will state only whether or not the applicant has a "permanent disability seriously impairing mobility". Clinical findings and diagnoses may contain confidential medical information of applicants/patients that need not be disclosed to the Department of Transportation or elsewhere. Fifth, §16-04 is amended to indicate that certain certifications will require later re-evaluation by the Department of Health or BHC in order to determine whether the disabling condition has improved to the point that a SVIPP is no longer needed. With advances in medical therapy and technology, a disabling medical condition deemed "permanent" at the time of initial examination and certification may, after some future medical intervention, no longer exist to the point that a SVIPP is warranted. Section 16-05 is amended to extend the period for filing an appeal to a certification denial from fifteen to thirty business days, in order to allow applicants more time to gather additional information from their physicians to substantiate their claims. Finally, §16-05 is further amended to provide for the use of specialists to perform second assessments on behalf of the Department or provider if deemed necessary by the Department or provider.

36. Statement of Basis and Purpose in City Record Jan. 14, 2003:

Chapter 22 of the New York City Charter, as amended by the electorate in the General Election on November 6, 2001 (Questions 5 and 4), merged the New York City Department of Health and the City Department of Mental Health, Mental Retardation and Alcoholism Services into a single agency, the Department of Public Health. On July 29, 2002, the Mayor signed Local Law 22 of 2002 which further amended Chapter 22 and various other provisions of the Charter and the Administrative Code of the City of New York, changing the name of the merged agency to the "Department of Health and Mental Hygiene," retroactive to July 1, 2002. The Charter amendment necessitates amendment of various Health Code provisions which currently specifically identify the "Department" and "Commissioner" as the "Department of Health" and "Commissioner of Health," respectively.

Wherever the term "Department" is defined as "Department of Health" or "Commissioner" is defined as "Commissioner of Health" or where there is a requirement that signs or warnings be posted referring to the Department or Commissioner of Health or another government agency is mentioned in the same Health Code provision referring to the "Department," the provision has been amended making a specific reference to the Department (or Commissioner) of Health and Mental Hygiene. In other provisions, where there is a reference to the "Department of Health" or

"Commissioner of Health" the phrase has simply been shortened to the "Department" or "Commissioner" in accordance with the respective amended definitions in §1.03 of the Health Code.

In addition, where the change in Department name appears in a provision referring to another agency which no longer exists, or has been replaced by a successor agency, these references have been updated.

37. Statement of Basis and Purpose in City Record Jan. 14, 2003:

The New York City Department of Health and Mental Hygiene (the "Department") has proposed that the Board of Health amend section 81.05(c) of the New York City Health Code (the "Health Code") to prohibit operation of a food service establishment or non-retail food processing establishment ("food establishment") unless a request for a pre-permitting inspection is submitted to the Department not less than 21 days before the establishment commences operations.

The Department's Bureau of Food Safety and Community Sanitation (the "Bureau") is charged with the responsibility of monitoring the safety of food that is commercially prepared, distributed and served throughout New York City, whether the food is sold or provided free of charge. The Bureau's jurisdiction includes all food service establishments and non-retail food processing establishments, as defined in section 81.03(j) and (p) of the Health Code.

Among the Bureau's many responsibilities is to inspect food establishments prior to the issuance of a permit. **See** Health Code §81.05. The purpose of these "pre-permitting inspections" is to assess whether the condition of the establishment may present a danger to the health or safety of the consumer or to the public. Health Code §81.05(d). The demand for pre-permitting inspections is substantial, as the Bureau receives approximately 250 applications for food establishment permits each month. An operator of a food establishment currently must submit an application at least 21 days before starting operations. **See** Health Code §81.05(c). If the Department does not inspect the establishment during this 21-day period, the establishment may commence operations without a permit on the 22nd day and continue operating until the Department makes an inspection and issues a permit or issues an order to cease operations. **Id.**

Although Health Code §81.05(c) requires a food establishment operator to apply for a permit not less than 21 days before the start of operations, the operator is not required to notify the Department in advance of, or even subsequent to, the date he or she commences operations. Because the Bureau does not know when a food establishment intends to start operating, it must conduct all pre-permitting inspections within the 21-day period set forth in Health Code §81.05(c), or as soon as possible thereafter, in order to protect the public from exposure to unpermitted food establishments that may not be constructed, maintained, or operated in compliance with the Health Code.

The Bureau's experience is that food establishments frequently are not prepared to undergo inspection during the 21 days following submission of a permit application. Thus, multiple attempted inspections are required. A sampling of fiscal year 2002 data indicates that 73% of permit applicants required multiple pre-permitting inspections. Multiple incomplete inspections significantly deplete Department resources.

To remedy this problem, the Department has proposed that Health Code §81.05(c) be amended to prohibit operation of a food establishment unless a request for a pre-permitting inspection is submitted to the Department, after filing a permit application, and not less than 21 days before opening for business. This will allow the Bureau to conduct pre-permitting inspections on a date and time prearranged by the food establishment and the Bureau, which should reduce the incidence of multiple pre-permitting inspections.

No testimony or written comment on the merits of the proposal was received at the public hearing and no changes have been made to the proposal.

37-A. Statement of Basis and Purpose in City Record Jan. 14, 2003:

In the course of enforcing New York City Health Code (the "Health Code") provisions applicable to mobile food vending operations, the New York City Department of Health and Mental Hygiene (the "Department") has found that a significant percentage of food vendors lack an adequate understanding of basic food handling and sanitary practices, which may endanger public health. Requiring all mobile food vendors to successfully complete a food protection course that provides instruction on mobile food vending operations can minimize this public health risk.

Accordingly, sections 81.15(a) and 89.03(b) of the Health Code have been amended, to require all applicants for mobile food vendor licenses to successfully complete a food protection course. Health Code §81.15(d) has also been amended to clarify that the Department may require a certificate holder to take a food protection course for the listed reasons, as opposed to a "refresher" course.

Basis to Amend Health Code §§81.15(a)(1) and 89.03(b)

The Department's Bureau of Food Safety and Community Sanitation (the "Bureau") is charged with the responsibility of monitoring the safety of food that is commercially prepared, distributed and served throughout New York City, whether the food is sold or provided free of charge, in a food service establishment and non-retail food processing establishment. A food service establishment is "a place where food is provided for individual portion service directly to the consumer, whether such food is provided free of charge or sold and whether consumption occurs on or off the premises or is provided from a pushcart, stand or vehicle." Health Code §81.05(j). All mobile food vending, including commissaries, are either food service establishments or non-retail processing establishments, and thus fall within the scope of the Bureau's jurisdiction.

There are approximately 10,000 Department-licensed individual mobile food vendors currently operating in New York City, and the Department issues approximately 4,000 mobile food unit permits annually. A mobile food unit is "any food establishment which is readily movable, including, but not limited to, vehicles, pushcarts and stands, and on or in which food is prepared, stored, served, distributed, transported, offered for sale or sold at retail or given away without charge." Health Code §89.01(c). There are two types of mobile food units: processing and non-processing. A mobile food processing unit is "a mobile food unit on or in which foods are prepared or processed, or on or in which potentially hazardous foods are handled." Health Code §89.01(d). Foods typically sold from processing units include kebab, gyros, falafel, baked potatoes, soft ice cream, and roasted nuts. A mobile food non-processing unit, on the other hand, is "a mobile food unit on or in which foods other than potentially hazardous foods are handled and on or in which foods are not prepared or processed." Health Code §89.01(e). Foods typically sold from such units include fruit, candy, pretzels, bottled soft drinks, pre-packaged ice cream, and boiled hot dogs.

A licensed food vendor may operate both types of mobile food units described above. However, currently only a food vendor who operates a processing unit is required to successfully complete a food protection course pursuant to Health Code §81.15(a)(1), as are supervisors of all other food establishments. The Department conducts food protection courses at its Health Academy, and also approves courses conducted by others. The current curriculum is the same, or nearly the same, for every course. Among the topics covered are microbiology, harmful pathogens, epidemiology of food borne disease, and the principles and implementation of food safety procedures known as Hazard Analysis Critical Control Point (HACCP).

Although no food protection course in New York provides training on how to safely handle food on a mobile food vending unit, all mobile food vendors were required to complete a food protection course until June 16, 1998, when the Board of Health amended the Health Code to eliminate the requirement. The Department supported that amendment because the only food protection courses then available focused solely on activities that operators of mobile food non-processing units do not perform, namely, handling potentially hazardous foods and preparing or processing food. Thus, the benefits of the course were minimal and substantially outweighed by the costs to the Department and food vendors.

The Bureau has since found, however, that a significant percentage of mobile food vendors do not observe basic

food handling and sanitary practices, and that such lapses may endanger public health. Bureau data indicate that food vendors failed nearly 40 percent of operational inspections in fiscal year 2002. Food vendors fared only slightly better in fiscal years 2001, 2000, and 1999, when they failed 36, 35, and 36 percent of field operational inspections, respectively.

This high percentage of failed inspections is attributable, in part, to the fact that many supervisor/operators of mobile food processing units do not complete a food protection course. Since 1999, the Department has issued nearly 2,000 violations to licensed food vendors for handling potentially hazardous food or preparing or processing food without a food protection certificate. Eighty-eight percent of violations were issued to operators of processing units. The inspections data also suggest that the current food protection course is inadequate for mobile food vendors. Mobile food vending differs from conventional food establishment operations in several important respects, including lack of immediate direct access to sinks and toilets. Moreover, mobile food units generally are operated outdoors on crowded streets and exposed to rain, snow, and extreme heat and cold. The present food protection course does not account for such differences. The Department expects to remedy this problem by establishing a new curriculum for all mobile food vendors, in conjunction with these Health Code amendments.

Health Code §§81.15(a)(1) and 89.03(b) have accordingly been amended to require all mobile food vendors to complete a food protection course before receiving a license. The initial course to be offered will be specifically directed to food vendors, require attendance for two eight hour sessions, and will cover such topics as personal hygiene, cleaning of equipment and utensils, and principles of food safety and handling in a practical setting that simulates actual vending conditions.

Health Code §81.15(a)(1), which currently exempts operators of mobile food non-processing units from the list of food handlers who must successfully complete a food protection course, has been amended to eliminate this exemption.

Health Code §89.03(b) currently provides that "[n]o person shall act as a food vendor without first having obtained a license issued by the Commissioner and a badge issued by the Department." In the Department's initial proposal, Health Code §89.03(b) would have been amended to add that no licenses shall be issued to a mobile food vendor on or after July 1, 2003, unless the applicant submits a certificate showing that the applicant has successfully completed a food protection course approved by the Department. After the proposal was published, it became apparent that because of the City's fiscal constraints, it would be necessary to further amend this provision so that this requirement will not be effective until after January 1, 2004.

Basis to Amend Health Code §81.15(d)

This provision currently authorizes the Department to require certificate holders to complete a "refresher" food protection course in various circumstances, whenever "deemed necessary by the Department for the protection of public health." However, the meaning of the term "refresher" is ambiguous. For example, it is unclear whether a "refresher course" includes a course with a new or different curriculum, such as the proposed course for food vendors. The Department should have the discretion to determine what type of course must be completed in any of the circumstances specified in subsection (d). The word "refresher" has, accordingly, been deleted.

Two persons testified at the public hearing and one written comment was submitted, opposing reinstatement of the requirement that all food vendors have a food protection certificate. One person testified in favor of the requirement. For all the reasons already stated above, the Department does not believe that any further amendments are required based on the testimony or written comment. Clarifying changes have, however, been made in the Notes to subsection (a)(1) of §81.15 and subsection (b) of §89.03 based upon suggestions of the New York City Law Department, and the effective implementation date of these amendments has been changed from July 1, 2003 to January 1, 2004.

38. Statement of Basis and Purpose in City Record Mar. 25, 2003:

On December 30, 2002, the Mayor signed Local Law 47 of 2002 which substantially amended the New York City

Smoke-Free Air Act (Chapter 5 of Title 17 of the New York City Administrative Code) (hereinafter, the "Act"). The extensive changes require repeal and re-enactment, rather than amendment, of the applicable rules of the Department of Health and Mental Hygiene (the "Department") to enable the Department to implement and enforce the Act.

Under the Act, as amended, smoking is prohibited as of March 30, 2003 in nearly every indoor area in the City where people work. Smoking is now prohibited in all indoor areas of all restaurants, regardless of patron capacity, and in all bars, except for certain existing tobacco bars, owner operated bars and bars whose owners elect to construct separate smoking rooms with strict environmental controls to prevent indoor emission of smoke. The amended Act permits smoking in an enclosed room at tobacco promotion public events whose primary purpose is promoting use of tobacco products. However, such events may be held in a single facility on no more than five (5) days per calendar year. Smoking is prohibited in membership associations. However, not-for-profit membership associations which have no employees may register with the Department if they wish to allow smoking on premises they control. Smoking is prohibited in all but a small portion of outdoor dining areas of restaurants. The Act requires registration of tobacco bars, the above-referenced membership associations, and owner operated bars which wish to allow smoking; requires notice to be filed with the Department of tobacco promotion public events and for owners to file architectural or engineering plans for construction of separate smoking rooms in bars; and for the Department to promulgate rules related to enforcement of provisions applicable to such entities and events.

Accordingly, as repealed and reenacted, Chapter 10 of Title 24 of the Rules of the City of New York (R.C.N.Y.) defines and indicates the construction of words and terms used in the rules; establishes rules applicable to eligible owners or operators of entities who apply for the referenced registrations to allow smoking, and rules applicable to entities required to provide notice to the Department of tobacco promotion public events where smoking will be allowed. The rules specify requirements for separate smoking rooms in bars and the enclosed room in other facilities where smoking may be permitted pursuant to the Act.

Response to Public Comments

Written comments and oral testimony were received at the hearing from 17 individuals and organizations. Additional written comments were received from five organizations and from government agencies affected by the rules. Several comments objected to various provisions in the amended Act, without suggesting any changes in the proposed rules. Many comments expressed approval of the rules, without reservation, and others expressed either approval or disapproval and requested further changes or clarification in the rules as they apply to various entities. For the reasons stated, the following changes have been made in the rules:

Signs. Signs shall be posted indicating that smoking is permitted in any entity which has registered with the Department, or filed required notices. Such signage requirements now appear in §§10-04(a); 10-05(c); 10-06(f); 10-07(h); and 10-08(d). Because smoking will now be prohibited in every part of commercial buildings, there is no need for multiple "no-smoking" signs. Section 10-12(a) has been amended to require such postings only in the lobby and at such other locations deemed necessary by building owners.

Ashtrays. The Act allows ashtrays to be present in smoke-free areas only if ashtrays are offered for sale or, at elevators and entrances to hotels or motels, to provide a receptacle for extinguishing cigars and cigarettes. Several comments expressed concern that ashtrays may be "offered for sale" and then used impermissibly in places where smoking is prohibited. The current Act makes it a violation to have ashtrays in any area where smoking is prohibited except if they are being offered for sale. In view of the extensive applicability of the Act to premises previously permitting smoking, the Department believes it is appropriate to specify the conditions under which such ashtrays may be offered for sale. Accordingly, §10-11(a) has been amended to specify that ashtrays offered for sale in smoke-free areas, except in retail stores, shall be kept within a display case or another area visible to, but not accessible to patrons, and shall not be present or used in any smoke-free area. Section 10-11(b) has been further amended to specify that this subsection applies exclusively to ashtrays and signs posted in hotel and motel locations where ashtrays are permitted so that patrons may extinguish cigars, cigarettes and pipes prior to entry into the hotel or motel, or into elevators in hotels

and motels.

Separate smoking rooms in bars. The Act allows only bars to have these rooms, which must be constructed in compliance with requirements of the City's Building Code. An entity which is not a bar within the definition in the Act at §17-502(b) may not have or use such a room. Accordingly, the Department has added to §10-09(c) a requirement that the operator provide proof that the location in which such room shall be provided is a bar.

Restaurant bars. The amended Act retains the definition of a "restaurant bar." Accordingly, §10-09 has been amended to include explicit requirements for adding a separate smoking room to a restaurant with a restaurant bar.

Fees for processing applications for registrations of owner operated and tobacco bars and membership associations, and reviewing notices of tobacco promotion public events and plans for separate smoking rooms in bars. Although the number of such applications and filings is presently unknown, the Department anticipates expenditure of considerable staff and other scarce non-personnel resources in reviewing applications, notices and plans; maintaining correspondence and meeting with applicants whose filings are incomplete; and maintaining records and creating a public information data base to notify the public about which entities have complied with provisions of applicable law, and may allow smoking on their premises and at specified events. Accordingly, the rules applicable to each entity or event contain a provision for a maximum fee of $100.00 to be paid by any entity submitting an application for an initial or renewal registration as a tobacco bar, owner operated bar or a membership association or by any entity filing plans for a separate smoking room in a bar or by any person filing a notice of a tobacco promotion public event.

The Department received several comments and suggestions whose implementation it believes would not serve to further the intent of the Act, or which would excessively limit the Department's power to enforce the Act, or which would require the Department to exceed its enforcement powers. Such comments stated, e.g., that the Department should apply smoking prohibitions applicable to indoor areas of bars to any outdoor areas used by the bars (not authorized in the Act); revise the definition of "incidental" as it applies to the tobacco product public events and specify permissible foods and beverages; and make the effective date of the amended Act as applied to separate smoking rooms in bars September 26, 2003 (not authorized in the Act). Two comments were received stating the writers' opinion that the Commissioner lacks authority to revoke or suspend permits issued by the Commissioner when there has been willful or continuous violation of the Act and the rules. The Department does not agree with these comments. Although the Act states that the Department "shall seek to obtain voluntary compliance with this chapter by means of publicity and education programs, and the issuance of warnings where appropriate" [Act, §17-507(f)], the Act also provides that the monetary penalties for violations of the Act "shall be in addition to any other penalty imposed by any other provision of law or regulation thereunder." [Act, §17-508(k), as amended.] New York City Health Code §5.17(b) provides that "when . . . a permit is issued by the Commissioner, he may suspend or revoke such permit for willful or continued violation of this Code or for such other reason as he determines is sufficient grounds for suspension or revocation." In view of the intent of the Act, i.e., to minimize, if not eliminate the deadly effects of second-hand smoke, the Department believes it is appropriate and necessary to utilize the full range of the Department and Commissioner's regulatory and enforcement powers to further such intent. This provision serves to notify persons holding Department permits that these powers will be utilized to protect the non-smoking public from such effects in whatever manner may be authorized by applicable law.

Statement Pursuant to Charter Section 1042-Regulatory Agenda

The proposed rule change was not included in the Department's FY2003 Regulatory Agenda because the Local Law requiring the rule change was enacted after the Regulatory Agenda was promulgated.

March 20, 2003

I hereby find pursuant to §1043(e)(1)(c) of the New York City Charter that there is a substantial need for the simultaneous implementation of the rule repealing and reenacting Chapter 10 of Title 24 of the Rules of the City of New

York, Smoking Under the New York City Smoke-Free Air Act (the "rule") to enable such rule to take effect on March 30, 2003, the same day as the amendments to the New York City Smoke-Free Air Act (the "SFAA").

The implementation of the revised rule before the thirty-day post-publication period required by Charter §1043(e)(1)(c) is necessary to avoid any period of time in which the SFAA (Chapter 5 of Title 17 of the Administration Code of the City of New York) as amended by Local Law 47 of 2002 is in effect without implementing regulations. Most of the amendments to the SFAA become effective March 30, 2003 in accordance with §25 of the SFAA amendments, which also provides that "the department of health and mental hygiene may promulgate rules prior to such date necessary to carry out the provisions of this local law; . . ." Adherence to the thirty-day post-publication requirements set forth in §1043 of the Charter would mean that the rule would not take effect until at least some time in mid-April.

The amended SFAA prohibits smoking in nearly all workplaces in the City, including nearly all indoor areas where smoking was previously allowed, such as bars, offices, and premises and businesses offering bingo games, billiards and bowling. The rule that is being repealed is not consistent with the amended SFAA. Simultaneous implementation of the new rule and the amended SFAA on the same day will help avoid potential public and regulatory confusion, and simplify public education and understanding of the law and the rule.

Thomas R. Frieden, M.D., M.P.H. Commissioner Department of Health and Mental Hygiene

Approved by Michael R. Bloomberg, Mayor

38-A. Statement of Basis and Purpose in City Record Jan. 14, 2003:

In response to a proposal by the Department's Division of Environmental Health (DEH), subsection 3.12(a) of the Health Code has been amended to increase the minimum penalty for a violation of the Health Code from the current amount of one hundred dollars ($100) to two hundred dollars ($200); subsection 3.12(b) is amended to increase the minimum penalty for a person, corporation or entity engaging in an activity without a required license, permit or registration authorized by the Department from two hundred dollars ($200) to one thousand dollars ($1,000), and a new subsection 3.12(c) was adopted to provide that when a person duly served with a notice of violation of a provision of the Health Code fails to appear for a hearing and is found in default, the recommended penalty for such violation shall be doubled, but not above the applicable maximum.

These amendments originate in the DEH Bureau of Food Safety and Community Sanitation ("BFSCS") which is charged with the responsibility of monitoring the safety of food that is commercially prepared, distributed and served to the public throughout the City, whether food is sold or provided free of charge. The BFSCS's jurisdiction includes all food service establishments and non-retail food processing establishments. Ninety percent of the Notices of Violations heard annually at the Department's Administrative Tribunal have been issued by public health sanitarians employed in the BFSCS to food service establishments (restaurants and related businesses).

In June 1990, Section 3.12 of the NYCHC was amended to establish a minimum monetary penalty of $100 for all violations of the Health Code. In January 1994, Section 3.12(a) of the NYCHC was further amended to increase the maximum fine for violations of the Health Code from $1,000 to $2,000. Minimum penalties were not increased.

Hearing Examiners at the Administrative Tribunal determine, after a hearing, what fine should be assessed for each violation of the Health Code. Many Department programs submit recommended fine schedules to the Administrative Tribunal.

Recommended fines are based on Department program assessments of the seriousness of the violations of various provisions of law enforced by each program. For many respondents operating food service establishments, the BFSCS has noted, the current minimum penalty codified in the Health Code, which forms the basis for its recommended penalty schedule, is too low to result in any significant behavioral changes. To enhance the Department's ability to enforce the

Health Code, and increase the deterrent value of the fines assessed at the Administrative Tribunal, the minimum fine has been increased from $100 to $200 per violation sustained.

Civil penalties and consistent periodic inspections are intended to serve as a deterrent to violation of the Health Code by persons, corporations or other entities subject to the provisions of the Health Code. The range of fines for violations, therefore, must be set at levels which preclude their payment as an acceptable cost of doing business, with the expectation that such fines will be more effective in securing compliance with the laws, deterring repeat violations and therefore more protective of public health.

Since 1996, the BFSCS has noted a measurable increase in the compliance rate (percent of inspections passed) of food service establishments, an improvement attributable both to more stringent enforcement initiatives and to increases in recommended penalties for violations of the Health Code. In 1994, the BFSCS reorganized its food establishment inspection program, and at the same time recommended an increase in the minimum fine for certain "critical" violations from $100 to $200. In 1996, BFSCS recommended increasing the minimum fines for public health hazards from $200 to $300. The Department believes that increasing the mandatory minimum penalty in the Health Code, thereby establishing a higher minimum basis for this and other Department programs recommended penalty schedules, will have a further salutary effect.

For similar reasons, subsection (b) of Section 3.12 is being amended to increase from $200 to $1,000 (the current recommended minimum penalty), the mandatory codified minimum penalty for anyone engaging in or conducting a business without the permit, license or other authorization required by the Health Code. This penalty, too, is intended to deter violations of the Health Code which adversely affect the public health, by increasing the cost of engaging in an activity or business subject to a Department permit, license or authorization without the necessary authorization.

Finally, as noted above, the Department has historically recommended that all fines be doubled when respondents fail to appear and are found to be in default after proper service of the Notice of Violation, in accordance with Section 7.07(d) of the Health Code. Section 3.12 has been further amended to add a new subsection (c) to specify that failure to appear at a hearing will result in the doubling of penalties for violations sustained by Administrative Tribunal hearing examiners.

BFSCS programs rely on education, notices and warnings, as well as civil penalties imposed at the Administrative Tribunal to obtain voluntary compliance with applicable provisions of law. When such measures do not achieve Health Code compliance, harsher methods of enforcement may be resorted to, resulting in ordering non-compliant establishments to be closed and allowd to reopen only if they are able and willing to change their methods of operation to avoid the occurrence of further public health hazards.

These Health Code amendments, which would be applicable to all Health Code violations, would provide the most significant support for enforcement activities within the DEH. In addition to restaurant inspections (Article 81), the DEH enforces Health Code public health and safety requirements in bathing establishments (Article 165), summer day camps (Article 48), temporary food establishments (Article 88), mobile food vending (Article 89), veterinary public health (Article 161), pest control (Article 151), lead (Sections 173.13, 173.14 and 173.15), window guards (Section 131.15) and radiation (Article 175).

Three persons testified at the public hearing, stating that they were or represented mobile food vendors and that they opposed the increased minimum penalty in subsection 3.12(a), the increased penalty for not having a license or permit in subsection 3.12(b) and the new penalty for persons who default pursuant to subsection 3.12(c) because such provisions will create a hardship for food vendors cited for violations of Article 81, but will not deter the commission of violations by such vendors. For all of the reasons stated above, the Department does not agree with this conclusion, and believes that higher minimum penalties will discourage commission of the violations and will benefit the public health. Accordingly, the amendments have not been changed.

STATEMENT PURSUANT TO §1042-REGULATORY AGENDA

The proposed rule was not included in the Department's regulatory agenda, nor anticipated, because it is the result of recent analysis and conclusions by the Department concerning methods of improving enforcement of and compliance with the Health Code.

39. Statement of Basis and Purpose in City Record June 19, 2003:

In light of the tragic events of September 11, 2001, this country, and New York City in particular, has been at a heightened state of alert. Since September 11th, there has been an increasing concern that terrorists or nations hostile to the United States might intentionally release smallpox virus or other contagious microorganisms. In light of this concern the federal government for example, has established by federal law and regulations enhanced control of dangerous biological agents and toxins. (**See** 42 U.S.C. Section 262a and 42 C.F.R. Part 73).

In order for the Department to improve its ability to effectively control and contain potential catastrophic disease epidemics due to contagious microorganisms such as smallpox, there was a need to strengthen the Health Code provisions that address detention of patients with certain suspected or confirmed contagious diseases, as well as their potential contacts. For example, as laboratory confirmation for these diseases may take several hours or days, it is essential that these provisions clearly apply to not only suspect cases but, also to their potential contacts during the time period after the suspect case is first identified and evaluated, while awaiting the test results.

Smallpox is of great concern because 1) the virus is infectious via aerosol exposure; 2) it is rapidly transmissible from person to person; 3) worldwide immunity to the virus has waned; 4) it causes an illness with severe morbidity and mortality; and 5) it has the potential to cause outbreaks that could easily overwhelm the medical care and public health sectors. The ability to control a smallpox outbreak will depend on rapid isolation of suspect and confirmed cases, and the immediate identification and vaccination of their contacts.

However, smallpox is not the only contagious disease that can cause potentially catastrophic epidemics with an immediate threat to public health. A pneumonic plague outbreak also would require immediate isolation of suspected or confirmed cases and, in some circumstances, contacts of those cases. Moreover, today there also is a concern about the emergence of new diseases or the threat that a microbial pathogen could be bioengineered to be more rapidly transmissible from person to person and/or cause a more severe disease. Further, new molecular biology techniques may be used to alter naturally occurring organisms into even more virulent pathogens. For example, state-sponsored bioweapons programs could develop plague strains that were resistant to normally effective antibiotics, or novel viruses could be created that combined the typical mortality of Ebola infection with a highly communicable respiratory virus (e.g., influenza). A bioengineered virus like this would result in a public health emergency of enormous proportions, requiring rapid and effective public health responses in order to contain and control it. For certain diseases, there may be no effective treatment or preventive measures, so that isolation and detention of cases and contacts may be the only public health measures available to control the outbreak.

The Health Code amendments set forth herein (i.e., amendments to Sections 11.01 and 11.55 of the Health Code) enable the Department to take some of the necessary steps to face the imminent and severe threats to the public's health that would occur if smallpox or other highly contagious disease outbreaks, whether natural or intentional, occurred in New York City.

A suspected or confirmed smallpox outbreak will be used here to illustrate the rationale underlying these amendments to Section 11.55. However, it should be noted that the causes of infectious disease outbreaks, especially those resulting from previously unknown organisms, are not immediately determined after clusters of apparently related illnesses are first recognized. For example, West Nile virus was not identified immediately as the cause of the unusual 1999 encephalitis outbreak in New York City. If an unknown infectious disease outbreak occurred and it appeared to be contagious, (e.g., contacts of suspect cases were becoming ill with similar symptoms) and resulted in severe morbidity

and/or mortality, then conservative infection control measures would need to be implemented. These might include detention of individuals who have been or may have been exposed to suspected or confirmed cases until the cause of the illness was determined and appropriate preventive and treatment measures could be implemented, or until the case and/or contacts were deemed no longer infectious or potentially infectious.

It is important to realize that section 11.55 of the Health Code, prior to these amendments, authorized the detention of cases, contacts and carriers, as well as suspected cases, suspected contacts and suspected carriers who are endangering public health. Furthermore, the definition of "case" in the Health Code includes both a diagnosed instance of a reportable disease, as well as a person showing clinical signs of a reportable disease, but who may not yet be diagnosed as such (i.e., a likely or suspected case). Accordingly, a contact of a case includes a contact of an unconfirmed case. Similarly, a suspected contact of an unconfirmed case was, and will continue to be, within the ambit of section 11.55. The prior version of section 11.55 of the Health Code authorized the detention of these individuals only if there was a determination that the health of others "is" endangered. In situations such as the one described above, when it may be prudent to detain even those who may have been exposed to a catastrophic disease, it would be impossible to say that a particular individual "is" a present danger, at least until the medical situation was better determined. Therefore, the Department amended the Health Code to clarify that individuals who "may be" a danger can be detained. This particular class of individual would be a contact of a suspected case and would have to be released in accordance with the provisions of subdivision (c)(4).

I. DETECTION OF AND RESPONSE TO A SMALLPOX OUTBREAK:

Historically, smallpox was a disease that often was introduced to an area by one person, and then resulted in successively increasing waves of additional cases, as each person transmitted the disease to their close contacts. The second wave would then generate an even larger third wave, and so forth. To contain and control a smallpox outbreak, it was critical to identify as many of the patients in each wave as quickly as possible through active surveillance, and to promptly vaccinate each case's household, workplace, and social contacts, followed by the vaccination of the contacts' contacts (ring vaccination). If public health authorities achieved this successfully, the outbreak would be brought under control.

The Department has provided all acute care facilities in NYC with guidelines for the management of suspected smallpox patients in their facilities. They have been directed to establish effective triage procedures so that patients with fever and a rash (i.e., with signs of possible smallpox infection) would be identified promptly and placed rapidly in an appropriate isolation room. These maneuvers would minimize the likelihood that contagious patients would transmit their infections to patients, visitors, or hospital personnel.

Clinicians also have been asked to use a diagnostic algorithm developed by the federal Centers for Disease Control and Prevention (CDC) for evaluation of patients with suspected smallpox infection. Patients would be considered low, moderate, or high risk suspected smallpox patients, depending upon a distinct set of clinical criteria. All moderate and high risk patients would be evaluated immediately by Department medical personnel, who would collect clinical specimens and arrange for immediate transport to the CDC. Between 24 and 72 hours might be needed for the CDC to conduct the initial tests and report the results to the Department. During that time period, contacts of the suspect case might need to be detained, in order to ensure that they could be located and vaccinated if the suspect case was found to be infected with smallpox. In addition, if the case was confirmed, contacts who were not vaccinated would have to continue to be detained until they were determined not to be a potential danger to others. Such measures would be necessary in order to contain an outbreak of a devastating disease in its early stages.

II. RESPONSES TO OTHER COMMUNICABLE DISEASE WHICH MAY BE DISSEMINATED OR TRANSMITTED FROM PERSON TO PERSON, AND MAY POSE AN IMMINENT AND SIGNIFICANT THREAT TO THE PUBLIC HEALTH RESULTING IN SEVERE MORBIDITY OR HIGH MORTALITY:

The public health response needed to contain potentially catastrophic outbreaks caused by other contagious

pathogens would depend upon the nature of the organism involved. For example, if a strain of smallpox was used that was not prevented by the current vaccine, then isolation and detention could be the only control measure available to public health authorities. An antibiotic-resistant strain of pneumonic plague also would require rapid isolation and detention of all known or suspect cases and contacts, until a reliable antibiotic strategy could be identified and implemented to treat infected patients and to prevent infection in their contacts. Otherwise, the outbreak might continue to spread from person to person, resulting in higher mortality and significant social disruption, if not unrest. Finally, if New York City was attacked with a novel virus with which physicians and medical researchers had no prior experience, public health again would need to rely upon isolation and possibly detention to control the outbreak, pending characterization of the virus and elucidation of treatment and preventive measures that could prove effective in those infected and exposed, respectively.

The Department's authority with regard to the protection of public health is extremely broad. For example, Section 3.01(c) of the Health Code states that, "Subject to the provisions of this Code or other applicable law, the Department may take such action as may become necessary to assure the maintenance of public health, the prevention of disease, or the safety of the City and its residents." Also, Section 11.03(b) of the Health Code provides that, "The Department shall conduct such investigation as may be necessary to ascertain sources or causes of infection, to discover contacts and unreported cases, and shall take such steps as may be necessary to prevent morbidity and mortality." The prior version of Section 11.55 of the Health Code authorized the detention of individuals upon a determination that the health of others "is" endangered by such individuals. In the example of smallpox described above, it would be necessary to detain individuals who are not currently infectious, but who certainly would present a danger to others if the suspect case were to be confirmed. Therefore, the Department amended section 11.55 to include authority to detain when the health of others is "or may be" endangered by a contact of a suspected case. The Department also amended the definition of non-household contact in paragraph (i) of Section 11.01 to clarify that it includes an individual who may have been in close association with a case or carrier.

Mindful that the prior version of Section 11.55 of the Health Code authorized detention with regard to any communicable disease, the Department amended section 11.55 so as to authorize detention only with regard to smallpox, pneumonic plague, or any other communicable disease that, in the opinion of the Commissioner, may be disseminated or transmitted from person to person, and may pose an imminent and significant threat to the public health resulting in severe morbidity or high mortality. It should be noted that the Department will not treat HIV/AIDS as a communicable disease triggering this section. A decade ago there were attempts by medical organizations to compel the NYC Health Commissioner and State Public Health Council to add HIV infection to the list of communicable and sexually transmissible diseases. NYS refused to take such action and New York's highest court, the Court of Appeals, affirmed that decision. **New York State Society of Surgeons v. Axelrod,** 77 N.Y. 2d 677, 572 N.E.2d 605 (1991).

In order to provide the flexibility needed to act quickly, and in recognition of the fact that, for example, contacts of suspected cases may not need to be detained in a medical facility, the amendments allow the Commissioner, as opposed to the Board, to designate an appropriate medical facility, premises or other appropriate facility as the location where individuals may be detained. The amendments require, as appropriate, that the individual have his or her medical condition and needs assessed on a regular basis and be detained in a manner consistent with recognized isolation and infection control principles.

III. LEGAL CONSIDERATIONS ATTENDANT TO DETENTION:

It is well recognized that the main business of safeguarding the public health is done by local boards of health. **Grossman v. Baumgartner,** 17 N.Y.2d 345, 218 N.E.2d 259, 271 N.Y.S.2d 195 (1996). In the seminal United States Supreme Court decision **Jacobson v. Massachusetts,** which upheld the constitutionality of a regulation enacted by the board of health providing for mandatory smallpox vaccination, the Court states, "the liberty secured by the Constitution of the United States to every person within its jurisdiction does not import an absolute right in each person to be, at all times and in all circumstances, wholly freed from restraint." 197 U.S. 11, 26 (1905).

The Department adopted these amendments, appreciating that civil commitment is a deprivation of liberty requiring due process protection. **Addington v. Texas,** 441 U.S. 418, (1979). Courts have recognized that the same procedural safeguards provided, for example, in a criminal trial are not required when imposing a quarantine to protect the public against a highly communicable disease. **Morales v. Turman,** 562 F.2d 993 (1977). "[D]ue process is flexible and calls for such procedures and protections as the situation demands." **Morrissey v. Brewer,** 408 U.S. 471-481 (1972).

"The extent of the due process required depends on the nature and duration of the restraint." Lawrence O. Gostin, **Public Health Theory and Practice in the Constitutional Design,** 11 Health Matrix: Journal of Law-Medicine 265, 309 (2001). In considering the due process protections which are constitutionally required as a result of the proposed amendments, the Department considered and weighed the following:

(1) The private interest affected by the governmental action; (2) The risk of an erroneous deprivation of these interests through the procedures used, as well as the probable value, if any, of added or substitute procedural requirements; and (3) the government's interest and the fiscal and administrative burdens that the additional or substitute procedural requirement would involve. **Matthews v. Eldrige,** 424 U.S. 319, 335 (1976).

Accordingly, the Department has amended section 11.55 to add many procedural safeguards that comply with the due process requirements of the Constitution. For example, individuals who are detained for a period of less than three business days are provided with an opportunity to be heard and to have their individual circumstances assessed. Those detained for a longer period may require the Department to seek a court order within three business days. The Department then must obtain a court order within sixty days, even if the detained individual has not requested release. This does not mean that an individual would necessarily be detained for such periods. Amended subdivision 11.55(c) specifies the medical and epidemiologic circumstances under which an individual must be released.

Notice of the detainee's rights is provided to each detainee in writing. For individuals detained for more than three (3) business days, this includes the right to be represented by an attorney provided by the City of New York.

These procedural safeguards are similar to those applicable to the detention of non-adherent tuberculosis patients, found in section 11.47 of the Health Code, which Section has been upheld by the courts. **See City of New York v. Doe,** 205 A.D. 2d 469, 614 N.Y.S.2d 8 (1994); **See also, City of New York v. Antoinette R.,** 630 N.Y.S.2d 1008 (1995).

IV. POST PUBLICATION CHANGES:

After publication of the proposed rule, the Department suddenly had to react to cases of "suspect" and "probable" severe acute respiratory syndrome ("SARS"), a new emerging communicable disease. In an effort to prevent the transmission of SARS, the Department ordered one suspect case of SARS to be detained in a health facility and another person was ordered to remain at home. This experience underscored the need to clarify that not all of the same due process protections are required when an order to a person to remain at home is not being physically enforced, e.g., by guards outside the home. A new subdivision (l) was added which provides that when a person is ordered to remain at home, or at some other premises of his or her choosing which is acceptable to the Department, and the order is not being physically enforced, the Department is required to offer such a person an opportunity to be heard by the Department. The new subdivision also makes it clear that the other due process protections that are required for Section 11.55 custodial detention orders are not applicable to these non-custodial orders.

An additional change was made which eliminates the requirement that there be a separate statement of rights issued to a person who is served with an order of detention. The initial proposal to amend Section 11.55 already required the Department to incorporate within each individual order of detention a statement of the rights of any person detained. The Department determined, based on its experience in issuing similar orders, that the requirement for a separate statement of rights was redundant and served no useful purpose.

STATEMENT PURSUANT TO SECTION 1042-REGULATORY AGENDA

This proposal was not included in the Regulatory Agenda because it is the result of recent analysis by the Department as to the need to strengthen existing provisions to address the possibility of new, emerging diseases or of a terrorist act.

40. Statement of Basis and Purpose in City Record Sept. 11, 2003:

Until July 1, 1994, the New York City Department of Health and Mental Hygiene (the "Department") licensed and regulated clinical laboratories and blood banks in the City of New York. Effective July 1, 1994, the New York Public Health Law was amended and such functions were assumed in their entirety by the New York State Department of Health (the "SDOH"). The amended Public Health Law preserves the Department's authority to promulgate rules for clinical laboratories and blood banks, not inconsistent with State law, relating to control, prevention and reporting of diseases and medical conditions, and to control or abatement of public health nuisances. Public Health Law §580(3)(a). Following the enactment of the amended Public Health Law provisions, various provisions of the New York City Health Code regulating clinical laboratories (Article 13), blood donations and transfusions (Article 17) and blood and plasma banks (Article 19) were repealed (e.g., Articles 17 and 19) or repealed and reenacted (e.g., Article 13) in 1995 by the Board of Health. However, no action was taken at that time by the Department to repeal or amend related regulations in Title 24. Because all of the activities and entities subject to such regulations are now comprehensively regulated by SDOH, these regulations are no longer needed.

Accordingly, the following provisions of Title 24 are being repealed and the listing of Chapter headings in Title 24 amended as follows:

Chapter 2-"Method and Criteria for Approval of Clinical Laboratories for Training." This provision's criteria and standards for laboratory personnel qualifications and training are no longer needed since laboratory personnel qualifications are currently established and enforced by SDOH.

Chapter 3-"HIV/HTLV-III/LAV Antibody Testing." These provisions date from a period when the City comprehensively regulated clinical laboratories and blood banks and HIV testing had just become available. The SDOH now comprehensively regulates and licenses these entities, including required HIV testing procedures. Accordingly, these provisions are no longer needed.

Chapter 13-"Standards for Licensing Clinical Laboratories in Forensic Toxicology." As noted in the paragraph concerning Chapter 2, above, this provision is no longer needed in view of the SDOH's current regulation and licensing of clinical laboratories and establishment of qualifications of their staffs.

Chapter 14-"Required Decontamination Procedures." These provisions, specifying procedures for decontamination and disposal of infectious materials in clinical microbiology laboratories and in non-microbiology clinical laboratories and blood banks, have been replaced by federal standards for disposal of medical waste, incorporated into City and State law. See, e.g., New York Public Health Law §§1389-aa et seq., New York Environmental Conservation Law §§27-1501 et seq., Administrative Code of the City of New York §16-120.1.

Chapter 15-"Standards for Approval of a Blood Bank as a Training Facility," This provision, which specifies criteria for a blood bank training program, is no longer needed in view of the SDOH's comprehensive regulation and licensing of blood banks and their personnel.

The listing of Chapter headings is also being amended to reflect the repeal of these provisions, as well as the name of the Department which has been known as the "Department of Health and Mental Hygiene" since July 29, 2002, pursuant to Local Law 22 of 2002.

41. Statement of Basis and Purpose in City Record Dec. 17, 2003:

The Board of Health is amending Section 3.07 of the Health Code ("Orders of the Board, Commissioner or

Department") by adding a new subdivision (b) which clearly specifies that service by mail (first class, certified, or registered) of orders of the Commissioner and Department is a legally sufficient form of service. Such service may be made upon any person, officer, department or employee as specified in section 17-141 of the Administrative Code of the City of New York (the "Administrative Code"). The Department will be required to maintain records attesting to the form of service used and the identity of the person or entity served in each instance. Personal delivery of such orders will remain a legally acceptable alternative manner of service.

The Department issues many thousands of orders annually. Most of these orders are issued pursuant to the Commissioner's general authority to order the abatement of nuisances and/or compliancce with specific provisions of the Health Code. **See,** Charter Sections 555, 556 and 558 and Administrative Code Sections 17-113 and 17-114. Examples include orders to abate lead hazards or to install window guards in children's homes. Other orders are issued pursuant to existing Board of Health resolutions, historically dealing with the occurrence or presence of certain conditions or things that the Board deems to be public health nuisances. Examples are rat infested buildings, garbage strewn properties and vacant lots that create harborages conducive to vermin. In many cases where pest control orders of the Commissioner are issued, the premises subject to the orders are abandoned buildings and vacant lots where there is no landlord or managing agent on site. Service of orders by mail has been a legally accepted alternative form of service under such circumstances.

As amended, Section 3.07 of the Health Code explicitly authorizes service of all orders of the Commissioner or Department (but not orders of the Board) in a manner similar to that authorized by §5.19 of the Health Code for service of notices of orders of the Commissioner denying, suspending or revoking permits, and by §7.05 of the Health Code for service of notices of violation returnable to the Department's Administrative Tribunal. Pursuant to §5.19 of the Health Code, service of notices of orders of the Commissioner denying issuance of a permit or suspending or revoking permits may be made by mail. To initiate an action at the Administrative Tribunal, §7.05 of the Health Code authorizes service of notices of violation by certified or registered mail addressed to any person upon whom personal service could be made at the address of the alleged violation, or at the address of the permittee listed on the permit.

Pursuant to both the Administrative Code and their own rules, other City agencies are authorized to use service by mail as an alternative means of service of many of these agencies' orders and notices. Section 19-152(f) of the Administrative Code, for example, specifically authorizes the Department of Transportation to serve its notices or orders to property owners with respect to repairing sidewalks and lots, personally or by certified or registered mail, return receipt requested, addressed to the person whose name appears on city records as being the owner of the premises. If service is refused, ordinary mail service and posting on the premises is authorized. Section 27-2095(a)(3) of the Administrative Code authorizes the service of notices of violation and other notices and orders upon owners of dwellings or managing agents of dwellings by mail to their latest business or residence address. Pursuant to its rules, the Conflicts of Interest Board is authorized to serve notices, orders and other documents upon public servants, by personal delivery to the public servant or by first class mail to the public servant's last known residence or actual place of business. See, 53 R.C.N.Y. §2-05(d).

No comments were received following publication of and public hearing on the proposal and no changes have been made.

42. Statement of Basis and Purpose in City Record Mar. 24, 2004:

Statutory Authority

Amendment of Chapter 10 of Title 24 of the Rules of the City of New York is authorized by §§389(b) and 1043(a) of the New York City Charter (the "Charter"). Charter §389(b) provides that "heads of mayoral agencies shall have the power to adopt rules to carry out the powers and duties delegated to the agency head or the agency by or pursuant to federal, state or local law." Charter §1043(a) authorizes each agency to "adopt rules necessary to carry out the powers and duties delegated to it by or pursuant to federal, state or local law." These rules are further authorized pursuant to

Local Law 47 of 2002 which amends various provisions of Chapter 5 of Title 17 of the New York City Administrative Code (the "Administrative Code") (the "Smoke-Free Air Act") and which provides that "the department of health and mental hygiene may promulgate rules . . . necessary to carry out the provisions of this local law; . . ."

Statement of Basis and Purpose

Local Law 47 of 2002, most of which became effective on March 30, 2003, substantially amended the New York City Smoke-Free Air Act (Chapter 5 of Title 17 of the New York City Administrative Code) (hereinafter, the "SFAA" or the "Act"). These extensive changes required repeal and re-enactment of the applicable rules of the Department of Health and Mental Hygiene (the "Department") to enable the Department to implement and enforce the amended SFAA. On March 26, 2003, the Governor signed into law a bill substantially amending Article 13-E of the Public Health Law (hereinafter the "State law" or "PHL") pertaining to "Regulation of Smoking in Certain Public Places." The State law provisions on smoking became effective on July 24, 2003 statewide and apply to all jurisdictions within New York State. Remaining intact is §1399-r of the State law which states, in pertinent part, that

Nothing herein shall be construed to restrict the power of any . . . city . . . to adopt and enforce additional local law, ordinances, or regulations which comply with at least the minimum applicable standards set forth in this article. Section §17-513.2 ("Construction") of the SFAA provides that The provisions of this chapter shall not be interpreted or construed to permit smoking where it is prohibited or otherwise restricted by other applicable laws, rules or regulations.

Under the amended SFAA, smoking has been prohibited since March 30, 2003 in nearly every indoor area in the City where people work or congregate. However, the Department (as the enforcement officer of the State law) finds that it is necessary to harmonize certain provisions of the rules implementing the SFAA with the amended State law to minimize confusion or uncertainty about how the Department will enforce these laws. The provisions of the rules to be addressed include:

I. Amendments related to the effective date of the State law. The SFAA permits smoking on the premises of certain entities, e.g., tobacco bars ["cigar" bars in the State law, essentially the same as the SFAA tobacco bars; under the SFAA such bars had to be in operation as of December 31, 2001, under the State law only since December 31, 2002; see, PHL §1399-q(5)], owner operated bars and not for profit membership associations, until September 26, 2003, if these entities held a good faith belief that they would qualify to register with the Department after September 26, 2003. The State law was effective July 224, 2003, and provides no grace periods for cigar bars and membership associations wishing to allow smoking on their premises. Since the operation of the State law makes grace periods moot after July 24, 2003, and the City SFAA provides that the grace periods expire on September 26, 2003, the rules postponing enforcement of these smoking prohibitions until September 26, 2003 have been repealed.

II. Waiver of the State law. The City's SFAA, as amended, repealed provisions authorizing the Commissioner to issue waivers. The State law, however, retains such a provision. Section 1399-u of the State law provides that the Department (as the enforcement officer of the State law) may grant a waiver from the application of a specific provision of the State law where the applicant for the waiver establishes that compliance would cause "undue financial hardship" or that "other factors . . . render compliance unreasonable." While the Department is not authorized to grant waivers of any provisions of the City SFAA, it will evaluate an application for a waiver of the State law prohibitions only if the granting of the waiver would not otherwise violate the City's SFAA. The Department is therefore amending Chapter 10 by adding a new §10-15, setting forth the Department's policy for granting such waivers. Incorporated in this new section is a provision that waivers would be automatically invalidated by changes in ownership, size or location of the entity, since waivers would only be granted to a specific entity which has demonstrated individual circumstances justifying a waiver.

The State law prohibits smoking in all bars but those it calls "owner operated" bars and/or in separate smoking rooms in any bars. Other exceptions in the City SFAA allowing smoking in enclosed rooms for patients of certain residential health care facilities and in buildings housing tobacco businesses were also not included in the stricter State

law. But see, PHL §1399-o (14) allowing smoking by patients in enclosed rooms in certain nursing homes and day treatment programs. The Department's rules implementing the City SFAA allowed smoking in such entities. Because of the State law prohibitions, the Department is amending §10-02(b) (tobacco businesses), §10-05 (enclosed rooms for patients of residential health care and day treatment facilities and programs), §10-06 (owner operated bars), and §10-09 (separate smoking rooms in bars) to provide that smoking may only be allowed in such entities if they have been granted a waiver of the State law. After obtaining a waiver, such entities may apply for registration or other approval for smoking under the SFAA. For example, a bar seeking either to register as an owner operated bar or approval for a separate smoking room would first need to submit evidence satisfactory to the Department to establish that undue financial hardship or other factors render compliance with the State law unreasonable, and request and receive a waiver of the State law, before any application for registration or approval to allow smoking will be considered.

III. Tobacco promotion public events. The State law allows such events to be held in any premises on two (2) days per calendar year, compared with the five (5) days in the City SFAA, and §10-04(d) of the rules has been amended accordingly. **See** PHL 1399-q(7). The rules have been further amended to allow persons in control of premises where such events are held to request a waiver to allow up to five (5) events to be held annually.

IV. Membership associations. Both the SFAA and the State law allow smoking in membership associations which have no employees. The Department has amended §10-08 of the rules applicable to membership associations to clarify that smoking may be allowed in premises owned or operated by membership associations when members and their guests are present, but that smoking may not be allowed when the public is invited to attend events, including, but not limited to, bingo games. While the City SFAA requires registration of these associations, the State law does not. Because the City law is more restrictive in this respect, the registration requirement is being retained. To enhance the Department's ability to enforce the limitations on smoking in such places, this section is being further amended to provide that where a membership association is found in violation of these rules three or more times within any two-year period, the association's registration may be subject to rescission.

V. Definitions. The State law includes outdoor seating areas in its definition of "bars" and the definition of "bars" in §10-01(b) has been amended accordingly. **See,** PHL 1399-n(1). A new definition has also been added for "State law" and the following subdivision re-lettered as well.

VI. Smoking Prohibited in Enclosed Areas. With some specific exceptions, the intent of the amended SFAA has been to prohibit smoking in "enclosed" areas where the public and/or employees may be exposed to second-hand smoke. In the amended SFAA, many exceptions allowing smoking under the earlier law were deleted, including, for example, those in sports arenas and stadiums. See, Administrative Code §17-503(a)(11). The amended SFAA, however, is silent as to the plain meaning of the word "enclosed" and since the law went into effect, the Department has received complaints of smoking in some partially enclosed areas where there would be a substantial likelihood of exposure of non-smokers to second-hand smoke if smoking were allowed. For clarification, therefore, and to provide notice as to how the Department will enforce the SFAA, the Department is amending subdivision (a) of §10-02 of these rules to provide that prohibitions on smoking shall be enforced in all regulated "enclosed" areas, including those which have a partial overhead covering, roofing or ceiling.

VII. Section headings. A listing of section headings, which was inadvertently omitted from earlier amendments, is included as section 1 of this proposal.

43. Statement of Basis and Purpose in City Record June 8, 2004:

Statutory Authority

This amendment to Chapter 21 of Title 24 of the Rules of the City of New York is authorized pursuant to Sections 389 and 1043 of the New York City Charter granting rulemaking authority to the Commissioner and Department of Health and Mental Hygiene as well various provisions of the New York City Health Code, specifically subsections (a)

and (c) of Section 81.15 and subsection (b) of Section 89.03. Subdivision (1) of subsection (a) of Section 81.15 provides that "no person who is charged with supervision of the operations of a food service stablishment . . . shall engage or be employed in such capacity unless he or she obtains a certificate issued by the Department subsequent to successful completion of a course in food protection, and passage of an examination administered by the Department." It provides further "no person required to have a license issued pursuant to Section 89.03(b) of this Code shall be issued such license unless he or she obtains such a certificate." Section 89.03(b) provides that no mobile food vendor license ". . . shall be issued to any person after January 1, 2004 unless such person submits proof satisfactory to the Department of successful completion of a food protection course in accordance with section 81.15 of this Code." Section 81.15(c) provides that persons enrolling in such food protection courses conducted by the Department "may be charged a reasonable fee to defray all or part of the costs incurred by the Department for course registration, materials, training, testing and certificate issuance."

Statement of Basis and Purpose

On December 12, 2002, the Board of Health adopted a resolution amending §§81.15(a) and 89.03(b) of the Health Code to require that all applicants for mobile food vendor licenses successfully complete a course in food protection. Specifically, §81.15(a) was amended to require that all mobile food vendors, including those operating non-processing units, must successfully complete a food protection course, pass an examination administered by the Department and obtain the certificate evidencing the course's successful completion in order to obtain a mobile food vendor license. Section 89.03(b) was also amended to specify that no food vendor license would be issued to any person after January 1, 2004 unless they submit proof satisfactory to the Department of successful completion of the food protection course (the certificate) in in accordance with §81.15.

Prior to these amendments, mobile food vendors operating processing units had been required to successfully complete a food protection course, as were all supervisors of other food establishments. Those operating mobile food non-processing units, however, were not so required. The Department conducts its general food protection course at the Health Academy but also has approved courses administered by others. The courses given, however, do not provide training on how to safely operate a mobile food unit. As licensed mobile food vendors may operate both processing and non-processing units, and due to Bureau of Food Safety and Community Sanitation data evidencing a high percentage of violations issued to food vendors and failed operational inspections by these vendors, it was decided that all mobile food vendor licensees would be required to successfully complete a food protection course.

The inspection data compiled by the Bureau suggested that the food protection course offered to supervisors of food establishments was inadequate for mobile food vendors. Mobile food vending differed from conventional food establishments in important respects. For example, unlike restaurants, mobile food vendors do not usually have access to facilities such as sinks and toilets. Mobile food units are also generally operated outdoors on crowded streets and in all kinds of weather. The general food protection course did not deal with how to cope with such circumstances.

As a result of the adoption of this amendment to Chapter 21 of Title 24 of the Rules of the City of New York, the Health Academy is authorized to provide more relevant instruction to mobile food vendors as part of a new food protection course tailored specifically to the mobile food vendor experience. The Department has prepared this course to last for eight hours and to be given over a two day period. The course will provide training/instruction to mobile food vendors in areas/principles deemed necessary by the Department to ensure compliance with the requirements of the New York City Health Code, the State Sanitary Code and other applicable laws and Departmental rules and procedures. For example, the course given is expected to cover such areas as personal hygiene, the cleaning of equipment and utensils and principles of food safety and food handling in a setting that simulates actual mobile food vending conditions.

Pursuant to §81.15(c) of the Health Code, the Department ". . . may conduct such food protection courses, or any part thereof. . . ." This provision also provides that those ". . . electing to enroll in such courses conducted by the Department may be charged a reasonable fee to defray all or part of the costs incurred by the Department for course

registration, materials, training, testing and certificate issuance." As a result of a fee analysis performed by the Department's Bureau of Financial Systems and Analysis, it has been determined that the cost per registrant to the Department in administering the newly instituted Food Vendor Food Protection Course is fifty-six dollars ($56.00).

As a result of the adoption of this amendment, Chapter 21 of Title 24 of the Rules of City of New York now codifies the fee to be charged for the new food protection course for mobile food vendors to be administered at the Health Academy. Section 21-06 entitled Mobile Food Vendor Food Protection Course has been added to Chapter 21. Subsection (a) of this section outlines the contents of the Food Protection Course for mobile food vendors. Subsection (b) prescribes the fee to be payable to the Department by those taking the course.

Statement Pursuant to Section 1042-Regulatory Agenda

The proposal to amend Section 81.15 of the Health Code to require that a food protection course be taken by every licensed food vendor, including those operating non-processing units, was included in the Fiscal Year 2003 Regulatory Agenda. The proposal to amend Chapter 21 of Title 24 of the Rules of the City of New York to codify a fee for the new food protection course was not included in the 2004 Regulatory Agenda because the necessity for this amendment was not realized until after the FY 2004 Regulatory Agenda was published.

44. Statement of Basis and Purpose in City Record July 30, 2004:

Introduction

The Board of Health has amended various provisions of the Health Code to harmonize current provisions of the Health Code, applicable to public and private lead poisoning prevention activities and safe lead-based paint work practices in child-occupied dwelling units and children's group day care and public kindergarten programs, with Local Law 1 of 2004 (Local Law 1) and current regulations of the U.S. Environmental Protection Agency ("EPA").

Over the past 30 years there has been a dramatic decline in childhood lead poisoning; however, childhood lead poisoning remains a significant public health concern. Elevated blood lead levels have been associated with intelligence deficiencies, reading and learning disabilities, reduced attention span, hyperactivity and behavior problems. The ingestion of household dust containing lead from deteriorating or abraded lead-based paint is believed to be a primary factor in lead poisoning occurring in children under six years of age.

In 1960, the Board of Health amended the Health Code to ban the use of lead-based paint on residential interior surfaces. In 1970, the Health Code was further amended to provide that the Department investigate a child's home for possible environmental lead hazards when there is a report of a child with an environmental intervention blood lead level ("EIBLL"). Local Law 1 of 1982, the City's first lead poisoning prevention law, amended the Housing Maintenance Code (Title 27 of the Administrative Code of the City of New York) to require owners to correct lead-based paint hazards in dwelling units in multiple dwellings where children under seven years of age resided, but was never fully implemented. Its provisions were interpreted as requiring abatement of all lead-based paint, not just deteriorating lead-based paint, despite the nearly universal consensus that requiring abatement of intact lead-based paint could result in increasing children's risk of lead poisoning. In 1999, after many years of litigation relating to implementation of Local 1 of 1982, the City Council enacted Local Law 38, repealing Local Law 1, to create a more pragmatic and workable approach to housing maintenance than was possible under Local Law 1 of 1982. However, on July 1, 2003, New York's highest court invalidated Local Law 38 on the grounds of inadequate review under the State and City environmental quality review laws and on February 5, 2004, the City Council, overriding the Mayor's veto, enacted Local Law 1 of 2004, repealing Local Law 1 of 1982 and Local Law 38 of 1999.

In 1992 the U.S. Congress enacted Title X-the Residential Lead-Based Paint Hazard Reduction Act (Title X), to develop a national strategy to build the infrastructure necessary to elimate lead-based paint hazards in federally assisted housing. Throughout the 1990's, federal agencies sponsored studies and assessments to help determine how to best prevent lead poisoning in young children. The U.S. Department of Housing and Urban Development ("HUD") initially

published guidelines for lead hazard assessment and remediation in 1995. Comprehensive HUD regulations did not become effective, however, until September 15, 2000, and are applicable to lead remediation in federally subsidized housing. It was not until March 1, 1999 that EPA's regulations for "abatement" of lead-based paint by certified workers and firms became effective in New York State.

Since 1993, Health Code §173.14 has specified procedures and methods for correcting lead-based paint hazards when ordered or directed by the Department, or, in some cases, when correcting violations placed by the City's Department of Housing Preservation and Development (HPD) pursuant to Title 27 of the Administrative Code of the City of New York (hereinafter "Administrative Code" or "Housing Maintenance Code"). Section 173.14 has been amended periodically by the Board to reflect prevailing safety standards and legal requirements. Methods and work practices for lead based paint abatement are specified in the Health Code and generally prohibited any person from performing an "abatement" if the person had not complied with applicable laws requiring training, licensing, certification, or other authorization. However, as noted, it is only since March 1, 1999 that EPA regulations have specified training, certification and work rules for firms and personnel performing various lead-based paint activities. See, e.g., EPA regulations at Title 40 Code of Federal Regulations Part 745 ("40 CFR 745").

EPA's rules now govern procedures and requirements for the certification of individuals and firms engaged in certain lead-based paint activities state-wide, and work practice standards for performing the activities defined in EPA's rules. These rules require certain changes in the Health Code. For example, EPA's rules define "abatement" as any measure or set of measures designed to permanently eliminate lead-based paint hazards, and any firm or individual performing abatement as defined by EPA must be EPA-trained and certified. EPA's definition of abatement excludes activities that are not designed to permanently correct lead-based paint hazards, such as renovation, remodeling, or repair activities that may incidentally result in a reduction or elimination of lead-based paint hazards or disturbing lead-based paint. Furthermore, EPA's certification requirements do not apply to interim controls or other operations and maintenance activities designed to temporarily, but not permanently, reduce lead-based paint hazards. EPA also does not regulate individuals or firms engaged in non-abatement activities.

Local Law 1 of 2004 requires owners of older multiple dwellings in which a child under seven resides to identify and remediate lead-based paint hazards. There is also a broad requirement for remediation of lead-based paint hazards whenever a tenant vacates a rental unit. Local Law 1 defines remediation as the "reduction or elimination of a lead-based paint hazard by wet scraping and repainting, removal, encapsulation, enclosure, or replacement . . . or other method approved by the commissioner of health and mental hygiene." Local Law 1 does not specify a preferred method to be utilized in remediation. Although the method of remediation is optional, Local Law 1 requires lead dust clearance testing after correction of HPD violations and after voluntary repairs by owners which disturb two or more square feet of lead-based paint per room in housing subject to the law. Local Law 1 also specifies minimum training and certification requirements for individuals and firms engaged in remediation and conducting final lead dust clearance testing.

Local Law 1 also provides that the work practices in HPD rules "shall be no less stringent than the safety standards required by the commissioner of health and mental hygiene whenever such commissioner shall order the abatement of lead-based paint hazards pursuant to §173.13 of the health code or a successor rule. . . ." See, e.g., Administrative Code §27-2056.11(a)(1). This and other requirements in Local Law 1 have resulted in parallel, nearly identical, work practices rules in both the amended Health Code and HPD rules.

There are differences between HPD's final rules and the Health Code, particularly pertaining to the use of wet scraping and repainting. This method was considered an "exclusive interim control" in Local Law 38, but is only one of several methods of remediation in the new Local Law 1 and in the proposed amended Health Code. While the amended Health Code no longer allows this as a method of "abatement" its limited use will be allowed in certain circumstances. Although EPA rules do not define wet scraping and repainting as a method of abatement, this method of lead-based paint hazard reduction will continue to be an acceptable way to correct violations, both pursuant to HPD rules and when ordered by the Department in certain circumstances. In the Notice of Intention to amend published for public comment,

the Department initially proposed that wherever the term "abatement" appears in the current Health Code with respect to lead-based paint and lead hazards, the term "remediation," a broader and more inclusive term, but used. In response to comments received objecting to this change in all cases, the final resolution retains the term "abatement" in §173.13(d)(2) with respect to children with environmental intervention blood lead levels. The work practices governing remediation of lead-based paint hazards incorporate the provisions of Local Law 1, EPA rules applicable to "abatements" and nearly all the current provisions of existing Health Code §173.14 are reorganized according to the magnitude and permanence of the remediation work. Local Law 1 adds a new Chapter 9 ("Lead-Based Paint in Day Care Facilities") to Title 17 of the Administrative Code, imposing some additional requirements are lead-based paint hazard remediation and inspections on group day care operators and the owners of the buildings in which day care is located, which will need to be have been harmonized with existing provisions in Article 47 of the Health Code. Although Local Law 1 imposes no new requirements for remediation of lead-based paint hazards in Department of Education-operated kindergartens, the Department has imposed in the past, and proposes that the Board continue to impose, the same requirements for preventing exposure of children under six in public kindergartens to lead-based paint hazards as may be applicable to day care, pre-kindergarten classes and non-public kindergartens. See, e.g., Health Code §§45.12 and 47.44.

Amend Health Code §173.13 ("Lead Paint")

1. Amend Health Code §173.13(a) by adding a provision to enhance enforcement of the prohibition in both Health Code §173.14 and Local Law 1 of dry sanding and scraping. This provision requires places of business selling paint or paint removal products to post a warning sign alerting consumers to the prohibition of this method in dwellings, day care centers and schools. This section is being further amended to authorize enforcement by the City's Department of Consumer Affairs, which currently inspects hardware and paint suppliers in the City to enforce laws restricting sales of box cutters and spray paints.

2. Amend Health Code §173.13(d)(1) to better reflect national recognition, federal guidelines, and the Department's experience in identifying and ordering remediation of lead hazards in housing, other buildings, and the areas surrounding such structures, in which children may reside or spend time, but which are not subject to the lead poisoning prevention provisions of the Housing Maintenance Code. Such premises include owner-occupied cooperative, condominium and one- and two-family homes, and commercial buildings in which children's institutions and programs are located, or to which children at risk may have access. While the Department has exercised its general nuisance abatement authority (see, e.g., Health Code §3.11), in ordering the abatement of lead hazards on building exteriors, from fire escapes or yard soil and even at a museum exhibition of soft lead tiles, Health Code §173.13(d)(1) is being amended to include a provision authorizing the Department to order the remediation of any leaded substances it finds which may present a hazard to children.

3. Amend §173.13(d)(1) to authorize the Department to order remediation of lead-contaminated dust in a dwelling unit where the source of the lead-contaminated dust is not a condition of the dwelling in which the unit is located.

4. Amend §173.13(d)(2) to change the mandatory environmental intervention action level for a lead poisoned child from a single 20 mcg/dL or greater blood lead level to a single 15 mcg/dL or greater. Local Law 1 amends Title 17 of the Administrative Code to provide for this intervention level.

5. Add a provision to §173.13 concerning the disposition of objections to Department orders to remediate lead hazards. From 1970 to 1997, the Department used X-ray fluorescent analysis (XRF) equipment for sampling lead-based paint. The particular model of the machine used became outdated in the early 1990's, because it was not able to adjust for composition of the substrate of building components in calculating the value of lead on surface paint. Because of these equipment limitations, the Department's orders to abate nuisance were subject to routine challenge by owners submitting contrary results of laboratory analysis of paint chip samples. The process of removing paint chips further damaged deteriorated lead painted surfaces and contestations delayed the correction of confirmed lead-based paint hazards in dwellings where children with an EIBLL resided. In 1997, the Department purchases XRF equipment that

self-adjusts for substrate composition. At the same time, a new Health Code definition of lead-based paint was adopted which incorporated federal definitions and the availability of federal calibration standards for XRF equipment. This has resulted in the Department generally rejecting the challenges of owners who simply submitted results that differed from the Department's. This Department practice was challenged in two suits, but upheld by the courts. See, e.g., 601 **Realty Corp. v. City of New York Department of Health,** 269 AD2d 268, 703 NY2d 458 (AD 1st Dept. 2000). Processing such contestations unacceptably delays remediation of surfaces in the home of a lead poisoned child and promotes the taking of paint chips from deteriorating surfaces, further endangering such children. Currently, objections to Department orders are considered only if the objector presents evidence that the Department's XRF equipment is not functioning or was not calibrated properly, not merely because the onwer's XRF or laboratory sampling results are different than the Department's. Two comments objecting to this amendment were received, but for the reasons already stated, no change has been made in the resolution.

Repeal and re-enact Health Code §173.14

1. Add definitions to Health Code §173.14(b). Define "abatement" as a set of measures specifically designed to permanently correct lead-based paint hazards, consistent with the federal definitions [24 CFR 35.110 (1999) and 40 CFR 745.223 (1997)]; "remediation" as the reduction or elimination of a lead-based paint hazard (Local Law 1, Administrative Code §27-2056.2); and "disturbance" as any action taken which breaks down, alters or changes lead-based paint (15 RCNY Chapter 1). Other applicable definitions of terms in the rules generally adopt the same definitions in Local Law 1 or in EPA rules.

2. Add provisions to Health Code §173.14(c), tracking Local Law 1 and EPA rules, differentiating training and credentialing requirements for abatement, other remediation of lead-based paint hazards, and disturbance of lead-based paint in the course of conducting other non-ordered repair and maintenance activities.

3. Amend the administrative requirements of Health Code §173.14(c).

(i) Notification of commencement of work requirements. Local Law 1 [§27-2056.11(a)(2)(ii) of the Administrative Code] requires building owners or their representatives to notify the Department prior to performing work that will disturb greater than 100 square feet of paint per room or involve removing two or more windows. Comments received from owner and housing rehabilitation organizations indicated that such requirements would be excessively bureaucratic and burdensome and served no useful purpose. Comments supporting the notice requirement stated that the notice requirement was not "unreasonable." No change has been made in the resolution.

(ii) Recordkeeping. Currently, Health Code §173.14(c)(3) requires building owners to maintain records for seven years; Local Law 1 [§27-2056.17 of the Administrative Code] requires building owners to maintain records for ten years.

4. Amend training and certification requirements in Health Code §173.14(c)(2) to harmonize EPA, Local Law 1 and Department remediation requirements. EPA regulations (40 CFR Part 745, Subpart L) specify that firms, inspectors, risk assessors, supervisors, project designers and workers performing abatements be EPA certified. Local Law 1 specifies that only the **firms** engaged to perform work to remediate HPD violations, or non-violation work that disturbs greater than 100 square feet of paint per room or which involves the removal of two or more windows must be certified to perform lead abatements in accordance with 40 CFR Part 745, Subpart L. See, §27-2056.11(a)(2)(ii) of the Administrative Code. The amended Health Code requires that all **abatement** activities be performed only by firms and personnel who are EPA certified, but that only the firms require EPA-certification to conduct other lead-based paint remediation activities regulated by Local Law 1 or the Health Code, and that their workers be HUD trained. However, all work ordered by the Department pursuant to Health Code §173.13(d)(2) to correct interior lead-based paint hazards where there is a child with an environmental intervention blood lead level will be termed "abatements" and will require use of EPA-certified workers.

5. Workers performing work other than abatement. Local Law 1 specifies that persons performing work that disturbs from two to 100 square feet of paint per room or does not involve the removal of two or more windows must have successfully completed a course on lead safe work practices offered or approved by HUD or the Department. See, §27-2056.11(a)(2)(i) of the Administrative Code. HUD regulations specify training requirements for persons performing interim control work (including remediation by the method of wet scraping and repainting) as defined in federal regulations. See, 24 CFR §35.1330(a)(4). The amended Health Code requires workers performing such remediation pursuant to Local Law 1 [see, §27-2056.11(a)(2)(i) of the Administrative Code] to be trained in accordance with these HUD regulations. Local Law 1 exempts from its worker training requirements any worker performing work that disturbs lead-based paint surfaces consisting of less than (a) two square feet of peeling lead-based paint per room or (b) ten percent of the total surface area of peeling paint on a type of component with a small surface area, such as a window sill or door frame in a multiple dwelling unit or day care facility. See, §§27-2056.11(a)(2)(iii) and 17-912 of the Administrative Code.

6. The Department is conducting an ongoing public health education campaign to increase awareness of potential lead hazards to young children from exposure to leaded dust and debris resulting from even minimal home repairs and maintenance, and the Health Code requires that signs be posted at places where paints are sold and paint scrapers are sold or rented warning that dry scraping of lead-based paint is prohibited in the City in any building where children reside. The Health Code, Local Law 38, HPD rules and Local Law 1 contain provisions prohibiting dry scraping and sanding as a method of removal of lead-based paint, but the signage requirement is new and not mandated by any law. To enhance enforcement of this provision, Health Code §173.13(a) has been further amended to authorize enforcement by the City's Department of Consumer Affairs which already inspects hardware and paint stores to enforce laws restricting sales of box cutters and spray paints.

7. Workers remediating lead-based paint hazards violations pursuant to Department orders (other than when ordered to permanently abate lead-based paint), issued pursuant to Health Code §§45.12, 47.44 and 173.13(d)(1), HPD orders or violations issued under §27-2056.11(a)(1) of the Administrative Code, or where any work disturbs greater than 100 square feet of paint per room or involves the removal of two or more windows pursuant to §27-2056.11(a)(2)(ii) of the Administrative Code, will be required to be minimally trained in accordance with HUD regulations. See, 24 CFR §35.1330(a).

8. Add requirements in Health Code §173.14(c)(2)(bb) for qualifications of persons performing lead-contaminated clearance dust tests after the completion of non-abatement work that disturbs lead-based paint. Local Law 1 requires lead-contaminated dust clearance testing at the completion of all work performed in compliance with Department orders; to correct HPD violations pursuant to §27-2056.11(a)(1) of the Administrative Code; that disturbs areas consisting of (a) two or more square feet of peeling lead-based paint per room or (b) ten percent of the total surface area of peeling paint on a type of component with a small surface area, such as a window sill or door frame, pursuant to §27-2056.11(a)(2)(i) and (ii) of the Administrative Code; on turnover, pursuant to §27-2056.8 of the Administrative Code; and in day care facilities, pursuant to §17-912 of the Administrative Code. Health Code §45.12 requires that lead-based paint work performed in kindergartens operated by the City Department of Education must be performed in accordance with Health Code §173.14, and dust wipe tests by similarly trained personnel will also be required after the completion of such work in these facilities.

9. As repealed and re-enacted, Health Code §173.14(e)(1)(I)(iii) specifies that no person shall perform a lead-contaminated dust clearance test unless such person is a third-party, who is independent of the owner and firm that performs the work. Section 27-2056.11(b) of the Administrative Code also specifies that no person shall perform a lead-contaminated dust clearance test unless such person has successfully completed a course approved or administered by the Department, EPA or HUD. HUD regulations specify training requirements and courses for persons performing clearance dust testing following work other than abatement. Health Code §173.14(c)(2)(A) requires all persons performing any abatement work, including dust test sampling, to be EPA certified. Health Code §173.14(c)(2)(B) specifies training of persons performing work disturbing lead-based paint, or paint of unknown lead content, in Department of Education kindergartens and work conducted in compliance with orders issued by the Department to

remediate lead-based paint hazards, when such work would not be considered an "abatement." See, HUD regulations 24 CFR 35.1340(b)(1). Although one comment requested that the requirement for dust testing to be conducted by an independent third party be deleted as economically burdensome, the Department does not believe that such a change would benefit the public health.

10. Revise work methods and occupant protection standards in Health Code §173.14(d) and (e). Local Law 1 specifies that the rules for an owner correcting HPD violations, or doing any work that disturbs more than 100 square feet of lead-based paint per room without a violation, shall be no less stringent than those utilized in complying with an order issued pursuant to Health Code §173.13. The Health Code amendments accordingly specify work methods and occupant protection practices in buildings constructed before January 1, 1960, where children under 7 reside, for various types of lead-based paint activities. Required preparation of the work area is categorized in subdivision (e) as follows: (1) work to remediate lead-based paint hazards pursuant to a Department order, an HPD violation or non-ordered work that disturbs over 100 square feet of lead-based paint per room; (2) work performed that disturbs small or moderate amounts, i.e., two to 100 square feet per room, of lead-based paint, and the same amounts of non-ordered work performed in a day care facility or a Department of Education kindergarten; and (3) work performed in a dwelling unit upon turnover.

11. Remediation work to comply with a Department order or correct an HPD violation, or non-ordered work that disturbs more than 100 square feet of lead-painted surfaces per room, shall require that floors be cleaned before commencing work. In conducting work that disturbs lead-based paint in accordance with §17-911 (day care services), §27-2056.11(a)(2)(i) of the Administrative Code, or §45.12 (kindergartens) of the Health Code additional requirements would include using multiple layers of plastic or equivalent sheeting as needed to prevent dust from contaminating the floor; and, where applicable, turning off forced air systems in the work area and sealing off any vent openings in the work area with polyethylene.

12. Work to remediate lead-based paint hazards on turnover would require preparation of the work area using the procedures described above. However, since the dwelling unit will not be occupied while work is in progress, clean-up procedures are only specified at completion of all work, followed by lead-contaminated clearance dust testing.

13. In response to public comments, additional provisions have been added to §173.14(d) and (e), reflecting HPD's final rules, to clarify under what conditions occupants of units undergoing work that disturbs lead-based paint must be relocated; and under what conditions occupants who do not relocate may have temporary access to work areas which have been adequately cleaned, but have not been cleared for "permanent re-occupancy" because work has not been completed, or where work has been completed and lead-contaminated dust test results have not been received.

Additional changes in subdivisions (d) and (e) have been made, deleting as unnecessary a provision which required a one hour delay after final cleaning before collecting lead-contaminated dust clearance test samples, and clarifying that only objects in the work area required pre-work cleaning, and that only doors and cabinets covered with lead-based paint or paint of unknown lead content require re-hanging or other treatment to avoid binding.

Subdivision (h) of §173.14 has been further amended to add that the Commissioner or designee may also issue modifications of the application of provisions in §173.13, when compliance with orders issued pursuant to such provisions present practical difficulties or unusual hardships. Articles 45 and 47 already contain a similar provision and do not require further amendment.

To facilitate use of this complex section, a new table of contents has been added to §173.14.

Repeal §173.15 ("Unsafe lead based paint work practices")

This section authorized the Department to respond to complaints of unsafe lead-based paint work practices, and its substantive provisions have been incorporated within §173.14 of the Health Code. The provision was originally adopted to implement Local Law 38 of 1999, and was modeled on the procedures in the repealed Health Code §173.14(c)(1)(cc).

Local Law 1 of 2004 includes such a provision in a new §17-185 of the Administrative Code, mandating that the Department respond to such complaints. It may be found in subdivision (f) of the Health Code §173.14, as re-enacted.

Amend §§47.44 and 45.12

Amend §47.44 ("Lead Based Paint Restricted") of Article 47 ("Day Care Services") to harmonize Health Code provisions for remediation of lead-based paint hazards in day care services with new provisions added to Title 17 of the Administrative Code (Chapter 9: "Lead-Based Paint in Day Care Facilities") and amend §45.12 ("Lead Based Paint Restricted: Kindergartens") to track §47.44. The amendments to §47.44 include a new declaration of nuisance, modeled on that in §173.14, which will enable the City to recover its costs in remediating lead-based paint hazards in day care services whenever the Department determines that the operator of the day care service or the owner of the building in which the service is located who was ordered to remediate lead hazards has failed to substantially comply with such order. The resolution as adopted contains a new provision, similar to the provision in HPD's rules, establishing a procedure for owners or operators of day care services to present evidence opposing Department orders to remediate peeling paint of unknown lead content, by demonstrating that such paint does not contain lead. Each of these sections has also been further amended by adding provisions referencing the definitions in §173.14 of the Code.

Statement of Need for Immediate Implementation

I hereby find, pursuant to §1043(e)(1)(c) of the New York City Charter, that there is a substantial need for the immediate implementation of amendments to Articles 45, 47 and 173 of the New York City Health Code ("amendments") adopted by the Board of Health (the "Board") harmonizing such provisions with Local Law 1 of 2004 ("New York City Childhood Lead Poisoning Prevention Act of 2003", hereinafter "LL 1") and with the rules of the New York City Department of Housing Preservation and Development ("HPD"), amending Chapter 11 of Title 28 of the Rules of the City of New York concerning lead-based paint, to enable such amendments to take effect on August 2, 2004, the day LL 1 and HPD's rules take effect.

The implementation of the amendments before the expiration of the thirty-day post-publication period required by Charter §1043(e)(1)(c) is necessary to avoid inconsistencies between the Health Code and LL 1 and the HPD rules for any period of time. Adoption of these amendments has required (a) an initial meeting of the Board on May 19, 2004 to approve the publication of the amendments in the City Register: (b) a public hearing held thirty days after the publication of the amendments; and (c) a second meeting of the Board to consider and adopt the amendments. The notice of intention to amend the Health Code was published in the City Record on May 21, 2004 and a public hearing held on June 23, 2004. The Board met to consider the public comments and adopted the final amendments on July 22, 2004. Adherence to the thirty-day post-publication requirements set forth in §1043 of the Charter would mean that these amendments would not take effect until some time in late August, after HPD's rules are in effect.

Local Law 1 and HPD's rules contain extensive and complex provisions for lead-based paint remediation in multiple dwellings occupied by children under seven years of age, and in day care services caring for children under six years of age. Local Law 1 requires that the work practices in HPD's rules be "no less stringent than the safety standards required by the commissioner of health and mental hygiene whenever such commissioner shall order the abatement of lead-based paint hazards pursuant to §173.13 of the health code or a successor rule. . . ." See, Administrative Code §27-2056.11(a)(1). HPD's rules were published in the City Record July 2, 2004, and will take effect on August 2, 2004. Simultaneous implementation of the amendments to the Health Code, the HPD rules and Local Law 1 on the same day will help avoid potential public and regulatory confusion.

Thomas R. Frieden, M.D., M.P.H. Commissioner Department of Health and Mental Hygiene

Approved by Michael Bloomberg, Mayor

45. Statement of Basis and Purpose in City Record Oct. 21, 2004:

Unintentional carbon monoxide poisonings may result from malfunctioning gas or fuel-burning equipment in homes (for example, furnace, oil burner, stove or hot water heater). Recently, carbon monoxide leaked from a building's heating system in the Murray Hill section of Manhattan, leading to two deaths and two critical cases of carbon monoxide poisoning.

The New York City Department of Health and Mental Hygiene currently requires that poisonings by drugs or other toxic agents be reported to the Department within 24 hours. [Health Code §11.03(a)]. Although not specifically identified in §11.03, carbon monoxide poisoning is currently required to be reported to the Department as a poisoning. The Department believes providers would be more aware of the requirement that carbon monoxide poisoning must be reported if carbon monoxide poisoning is specifically defined and identified in the Health Code as a reportable condition. Of course, the Department also intends to educate providers that carbon monoxide poisoning is reportable to the Department. Improvement in reporting carbon monoxide poisoning to the Department (to the Poison Control Center) by health care providers such as emergency room staff and laboratories, is critical in order to activate Fire Department emergency response and improve community safety. For these reasons, it is proposed that §11.03(a) be amended to specifically refer to and define carbon monoxide poisoning.

The Health Code is amended to require reporting of all carboxyhemoglobin greater than 10% for the following reason. There is a difference between the usual COHb levels of smokers and non-smokers. Smokers generally have a COHb level of about 5-10%, whereas non-smokers normally have less than 3% COHb. Setting the level to accommodate both groups at, for example, 15% would not be protective of non-smokers. However, an appropriate level for non-smokers, 3.5%, would result in too many false positives. Having two different levels for the two different populations would also be problematic because it would rely on self-reporting of smoking status and may differ by the magnitude and duration of a person's tobacco use as well as complicationg the reporting requirements medical personnel. A level of 10% COHb has been determined by the Department to be the action level because it is protective and should at the same time keep false positives to a minimum.

Section 11.03(c) of the Health Code is amended to require immediate telephone reporting of carbon monoxide poisoning to the Department. Similar to diseases such as acute arboviral infections, anthrax, botulism and plague, where immediate telephone reporting to the Department is required, immediate telephone reporting of carbon monoxide poisoning should benefit the public by enabling the swift investigation and appropriate preventative action, including rapid referral by the Department to the Fire Department. prompt identification of poisoned individuals and immediate reporting should result in immediate deployment and investigation by the New York City Fire Department to prevent any additional carbon monoxide exposure-related illnesses and/or deaths in the affected building or area.

46. Statement of Basis and Purpose in City Record Dec. 17, 2004:

Disease surveillance is a primary function of the Department and is a cornerstone to the overall health of New York City: without disease surveillance, it is difficult to determine the extent of disease and the need for intervention. Disease surveillance, and laboratory surveillance in particular, is a vital component of New York City's bioterrorism preparedness infrastructure. By closely monitoring clinical laboratory reports, the Department is able to observe and promptly investigate diseases and conditions required to be reported to the Department (including those potentially related to bioterrorism (BT) agents). To this end, it is essential that clinical laboratory reports be obtained as soon as possible once the result of the test is available. Electronic clinical laboratory submissions are critical for effective and timely interventions.

Electronic clinical laboratory reporting is of great benefit to the Department because: 1) Electronic clinical laboratory reporting enhances the Department's surveillance infrastructure and bioterrorism preparedness capabilities; 2) It brings the Department closer to the Centers for Disease Control and Prevention (CDC) electronic surveillance standards as defined in the Public Health Information Network (PHIN) initiatives; 3) It improves the completeness, timeliness, and accuracy of reports; 4) It provides an integrated system for the standardization of reporting methodologies for the reporting of mandatory reportable conditions; and 5) It allows for seamless delivery of electronic

data to the Department program area's databases. In contrast, paper reporting is, in general, slow and often incomplete, and reportable conditions are often underreported. In addition, paper reports require the additional step of data entry, which is eliminated when reports are received electronically.

The Department has been accepting clinical laboratory reports in electronic format for several years as part of the Electronic Clinical Laboratory Reporting System (ECLRS) project. The Electronic Clinical Laboratory Reporting System (ECLRS) is a web-based reporting system initially developed by the New York State Department of Health (NYSDOH) that provides laboratories with a uniform interface for reporting diseases and conditions such as tuberculosis (TB), sexually transmitted diseases (STD), communicable diseases (CD), HIV, lead, and cancer. ECLRS enables participating laboratories to use recognized standards to report positive test results over secure channels to the NYSDOH and the Department. Data confidentiality is ensured by the use of 128-bit encryption technology for both data transmission and data storage.

Both hospital-based and commercial clinical laboratories in New York City are targeted for full ECLRS implementation. Complete ECLRS implementation means that the clinical laboratory is electronically submitting every reportable condition testing in house at that laboratory. There are approximately 127 laboratories (including commercial laboratories and hospital-based laboratories) currently operating in New York City. Of the commercial laboratories in New York City, approximately 22% (14/65) have been enrolled in ECLRS; of the hospital-based laboratories, approximately 82% (51/62) have been enrolled in ECLRS. Of those facilities enrolled in ECLRS, few are submitting all reportable conditions electronically to the Department.

The Department is amending §13.03(c) of the New York City Health Code to require that effective July 1, 2006, clinical laboratories must report to the Department electronically test results that are associated with diseases and conditions required to be reported to the Department, in a format specified by the Department.

Clinical laboratories experiencing temporary equipment failure, prolonged inability to obtain access to the Internet, or other extenuating circumstances, may submit paper reports for a limited period of time, but only with the specific approval of the Department. In addition, the Department may on its own initiative allow paper reports in a particular circumstance as a result of a deficiency in the Department's electronic reporting system.

The Department also amended the definition of clinical laboratory in §13.01(b) to clarify that a clinical laboratory is defined as a regulated facility pursuant to State law, holding a permit issued by the New York State Department of Health and operating within New York City or testing specimens taken from New York City residents.

47. Statement of Basis and Purpose in City Record Feb. 18, 2005:

These rules incorporate inspection evaluation procedures used by the New York City Department of Health and Mental Hygiene ("DOHMH" or the "Department") Bureau of Food Safety and Community Sanitation ("BFSCS") in conducting food service establishment ("FSE") and non-retail processing establishment inspections, as those terms are defined in §81.03 of the New York City Health Code (the "Health Code"), but do not apply to inspections by BFSCS of mobile food vending units, or to its inspections of FSEs to determine compliance with the New York City Smoke-Free Air Act (Chapter 5, Title 17 of the Administrative Code of the City of New York).

In March 2003, in an attempt to reduce the incidence of food borne illness in New York City, particularly that occurring outside the home, the Department revised its inspection evaluation procedures. At the time, the Department reviewed results of studies conducted by the US Centers for Disease Control and Prevention ("CDC"). Such studies show that while most food borne illness results in several days of gastroenteritis with symptoms of abdominal pain, vomiting, diarrhea and fever, the impact to the United States economy is tremendous, costing over $6.5 billion a year. More importantly, for some, infections caused by bacteria such as Salmonella or Listeria, after eating contaminated food, can be fatal. The CDC estimates that each year in the United States more than 75 million people become ill after eating improperly handled or prepared food; 320,000 of these individuals require hospitalization and over 5,000 die

from food borne illness. DOHMH receives more than 4,000 reports annually of bacteria and viruses that cause food borne illness in New Yorkers. The best current scientific knowledge is that about half of food borne illness results from exposures outside of the home. In order to better protect the public's health DOHMH revised its restaurant inspection evaluation tool to more accurately reflect the overall safety of establishments and to facilitate further reductions in the risk of food borne illness when New Yorkers eat out.

The new rule provides that results of FSE inspections be expressed as a "score," using a point system. Although inspection procedures will remain essentially the same as they have been for at least the past 20 years, scoring the results of such inspections will better reflect the overall sanitary condition of FSEs and provide a more objective method of evaluating the public health risks presented by the operation of any particular FSE. DOHMH Public Health Sanitarians will continue to conduct a "critical control point" (CCP) inspection, a methodology recommended by the US Food and Drug Administration (FDA) for preventing food safety hazards or food borne illnesses from occurring. The rationale for the scoring system is consistent with current public health food safety trends and federal recommendations. See, e.g., US FDA **Food Code** (2001); **Report of the FDA Retail Food Program Database of Food Borne Illness Risk Factors** (August 10, 2000). A point value will be assessed for each violation. A total of 28 or more points in critical and/or general violations will be considered a "failed" inspection, which requires a compliance inspection by the DOHMH. Each violation will be assigned a base point value, with additional points added to a violation, as necessary, to reflect increasing severity or magnitude of the violation. The severity or magnitude measurement factor is called a **"Condition."** The more severe or pervasive the violation, the greater the point value for that violation.

Public Health Risk Factors

The scoring system weighs the points assessed for different categories of violations to reflect "risk factors" for food borne illnesses that have been identified in studies conducted by the federal Centers for Disease Control and Prevention (CDC). These risk factors have been determined to be the leading causes of food borne illness. A food service manager's knowledge of food safety principles is key to reducing illnesses caused by food. These risk factors are:

· Improper personal hygiene practices.

· Improper handwashing and bare hand contact with ready-to-eat foods.

· Improper cooking and holding temperatures.

· Food from an unapproved source.

· Cross contamination of food and food equipment.

The scoring system is designed to give food service operators a clearer understanding of what they must do to prevent disease and guide them in complying with the laws and rules that govern operation of an FSE in New York City. Table 1 in §23-06 summarizes the number of points that are assigned for a violation, and accounts for the severity of violations ("Conditions").

Most CDC "risk factors" are referred to as **Public Health Hazards (PHH)** by the DOHMH. These are violations that are known to contribute directly to food borne illness. **PHHs** are marked with an asterisk (*) on the **Inspection Work Sheet,** included in the rule as Appendix A of Chapter 23. Because of the risks these **Public Health Hazards** pose, they are assigned a greater initial point value than that assigned to other critical violations. **Public Health Hazards** must be corrected at the time of the inspection or the establishment may be ordered closed, in accordance with §23-06(b) of the rule and §81.39 of the Health Code. **Pre-Permit Serious Items** (identified with a "+" on the **Inspection Work Sheet**) must be corrected prior to approval for issuance of a new permit.

Critical violations continue to occur in large numbers in New York City, although the data show that things are

improving. Between April 2003 (when the scoring system was initiated) and October 2004, among the most commonly cited critical violations associated with risk factors for food borne illness was cross-contamination of food and food equipment, a violation which was cited on a significant percentage of food services establishment inspections. Other risk factors, such as improper personal hygiene practices of food workers, and improper handwashing and bare hand contact with ready-to-eat foods, were also common violations cited during this period. However, the Department's data show that in the year following implementation of the scoring system, the average number of all critical violations decreased significantly.

Conditions

Evaluating the severity of a violation and considering critical and individual general violations as part of the overall score offer a clearer picture of the sanitary condition of the establishment. The scoring system enables the DOHMH to monitor, report and deal with increases in the incidence and severity of violations at a food service establishment, and better prevent the occurrence of public health hazards. **Condition** levels provide the DOHMH and the FSE operator with a clearer picture of the overall sanitary condition of an establishment.

Determining the Score for an Inspection

Using Appendix B of Chapter 23 as a guide, the Department inspector will assign a numeric point value to each violation. The point value signifies the seriousness of each violation. In other words, the higher the condition number, the more serious the violation. **Conditions** range from **Condition I,** the least serious condition with the lowest point value, through **Condition IV,** the most serious condition with the highest point value. **Condition V** violations, in most instances, are reserved for a failure to correct any Public Health Hazard condition noted by the health inspector at the time of the inspection. When a **Condition V** violation is assigned 28 points, it is considered an automatic failure of the inspection. The DOHMH will schedule a compliance inspection following any failed inspection to determine if a food service establishment has made the necessary corrections to comply with the Health Code or other applicable law, and is operating in a sufficiently safe manner. A compliance inspection is a full sanitary inspection performed in the same way as an initial inspection.

Issuing Notices of Violation

On a full sanitary inspection, the DOHMH will issue a "notice of violation" when an FSE has one or more critical violations and/or more than 14 points of accumulated general violations. General violations are cited individually on the written report or notice of violation to encourage food service operators to better understand and correct less serious violations, as well as those that are more serious. A notice of violation will not be issued when an establishment has no critical violations, and has accumulated 14 or fewer general violation points on a full sanitary inspection. However, a notice of violation may be issued after a partial inspection conducted in response to a complaint, where the complaint is substantiated.

Response to Public Comment

The Department has reviewed the comments received and has made changes in the appendices with respect to the following violation categories:

Canned foods. If cans are only severely dented, the violation will be considered general (9A). If cans are swollen, leaking, or rusted, the violation will continue to be considered a critical violation (3D).

Milk products. Milk and milk products found past their stamped expiration date, in violation of Health Code §111.33, if being served or held for service in an FSE, will be considered a general violation (9B).

Thawing procedures. Improper thawing of frozen foods has been downgraded to a general violation (9C).

Facilities for washing, rinsing, and sanitizing dishes and utensils. Failure to install such facilities will be considered a pre-permit violation (5I+). However, lack of test kits, immersion baskets, or failure to maintain adequate concentration of sanitizing solution, and similar violations, will be downgraded to a general violation (see, e.g., 10K).

Food contact surfaces. Failure to clean and sanitize food preparation surfaces such as cutting boards after use where possible contamination may occur will continue to be considered a critical violation (6D). However, discolored, pitted, scratched, or deeply grooved cutting boards will be cited as a general violation (9D).

In addition, the category previously designated as "6H Other" at the end of the listing of critical violations in Appendix A, has been retitled "Other Criticals" and for statistical purposes is broken down into subcategories (7A through 7F).

The statement regarding the Scope of the Rules in §23-01 has been modified to indicate that the inspection procedures do not apply to inspections conducted to determine compliance with the New York City Smoke-Free Air Act.

Statement of Need for Immediate Implementation

I hereby find, pursuant to §1043, subdivision e, paragraph (1), subparagraph (c) of the New York City Charter, that there is substantial need for the implementation of the new rule in Chapter 23 of Title 24 of the Rules of the City of New York, codifying the inspection procedures for food service establishments, upon publication of such rule in the **City Record.** As noted in the rule's Statement of Basis and Purpose, the Department of Health and Mental Hygiene (the "Department") will be better able to meet the public's expectation that food provided at food service establishments is wholesome and being prepared in sanitary surroundings. Additionally, the new rule enables the Department to return to the use of a handheld computer in the field for recording inspection results, which will make its inspection process more effective and efficient. The ability to transmit inspection results from the handheld computer software to the Department's Food Safety and Community Sanitation Tracking System will improve the Department's ability to track inspection results and perform compliance inspections when they are needed.

There is accordingly substantial need for the implementation of the inspection scoring system and attendant inspection procedures before the thirty day waiting period provided by New York City Charter §1043(e)(1)(c) because such scoring system is risk based, and therefore more protective of the public health, than the current inspection evaluation methodology being used by the Department.

Thomas R. Frieden, M.D., M.P.H. Commissioner of Health and Mental Hygiene

Michael Bloomberg, Mayor February 16, 2005

48. Statement of Basis and Purpose in City Record July 19, 2005:

The New York City Department of Health and Mental Hygiene's amendments will expand the current age range for required reporting of immunizations from age seven and under [see New York City Health Code §11.04(a)(1)] to age eighteen and under. The Department's amendments will also allow reporting of immunizations administered to persons age nineteen and over, with written consent of the person immunized [see New York City Health Code §11.04(a)(3)] or the person's legal guardian. The immunizations will be reported to the Department's existing Citywide Immunization Registry (CIR).

The Department's goals for collecting reports of immunizations to a broader age range is to reduce the rates of illness, disability and death from vaccine-preventable disease outbreaks, and to improve outreach and follow-up of adolescent and high-risk adult populations. Tracking immunizations through the CIR will help to improve immunization coverage in adolescent and high-risk adult populations, thereby preventing the spread of vaccine-preventable diseases such as hepatitis B. In addition, vaccine wastage will be avoided by preventing unnecessary "duplicate" vaccinations to

adolescents and high-risk adults because records are lost and no vaccination history is available.

These amendments will enable the Department to measure coverage in adolescent vaccination campaigns. Older children are now required to be up-to-date with immunizations such as hepatitis B and varicella for school entry. Many children receive these immunizations after they reach their eighth year of age. In addition, a large number of school-age children immigrate to New York City every year, and often arrive without an immunization record. The CIR will create a record of the immunizations given to these children and track their immunization status going forward. By capturing immunizations given to older children, the CIR will be able to assist schools with compliance, prevent children from being over-immunized, and assist in targeting the children that are lacking vaccinations, thus preventing the spread of vaccine-preventable disease.

Additionally, all post-secondary school institutions (colleges, professional schools, etc.) require compliance with certain vaccinations. For college, New York State law requires an MMR, and other professional schools require additional immunizations. CIR can hold and provide records for these adult populations to use in order to satisfy entrance requirements and avoid unnecessary, duplicate vaccinations. CIR will also work with the colleges and professional schools to identify and target those individuals that actually need vaccinations, thereby increasing immunization coverage in student populations and preventing the spread of vaccine-preventable diseases.

A registry is a useful tool, especially for individuals who have fragmented care and/or a disrupted family environment. These include individuals who are homeless, in foster care, or are living in shelters or correctional facilities. The CIR will help these individuals by keeping their immunization histories and making them available, as needed, to health care providers and agencies such as health plans, schools (i.e., elementary, middle, and high schools as well as colleges and professional schools), summer camps, and correctional facilities. By making these immunization histories available, CIR will help health care providers and agencies determine which vaccinations an individual needs, and avoid unnecessary vaccinations. Immunization coverage in these populations will increase, thereby preventing the spread of vaccine-preventable disease.

The registry can be a very helpful tool for capturing and tracking high-risk adolescent populations who get immunized with hepatitis A and B vaccines in adolescent clinics. By capturing those immunizations, the CIR will assist in preventing over-immunization as well as identifying and targeting those that lack immunizations, thereby increasing immunization rates and preventing the spread of vaccine preventable diseases.

The registry can be used as an accountability tool for doses administered under the Vaccines for Children program (VFC). A large proportion of children living in NYC (67%) are eligible for VFC. To use the CIR as a tool to account for VFC vaccine doses administered by providers, the reporting requirement must be expanded through 18 years. Improving accountability for VFC vaccine by using the CIR will help to reduce vaccine wastage and should ensure that providers receive an adequate supply of vaccine for their patients eligible to receive VFC vaccine.

These amendments will also enable the Department to monitor uptake of flu vaccine. This will help the Department to evaluate the impact of broader flu vaccine coverage on the prevention and control of influenza outbreaks.

The Department anticipates that expanding the age range for required reporting of immunizations administered through age eighteen will not impose a heavy additional burden on providers. The volume and frequency of immunizations administered to children age eight through eighteen is low in comparison with the high level of immunizing in the first two years of life. The majority of providers have already established a routine for reporting immunizations administered to children age seven and younger. While it will be necessary for providers to adjust this routine, the amount of additional effort is not considered to present a major barrier to compliance. An increasing number of immunization registries across the United States now collect reports of immunizations administered to persons of all ages.

The Department's amendment to allow for voluntary reporting of immunizations administered to adults, with

written consent, should be particularly helpful in facilitating the Department's plan to establish partnerships with providers and health plans to improve for example, flu, pneumococcal and/or hepatitis A or B vaccine coverage for various high risk individuals (for example, homeless, living in shelters, etc.)

49. Statement of Basis and Purpose in City Record July 19, 2005:

The Department of Health and Mental Hygiene (the "Department") enforces provisions of the New York City Health Code ("Health Code") and other applicable law intended to protect the wholesomeness of food served directly to the consumer throughout the City, including food that is commercially prepared, and sold or distributed for free, by food service establishments, a broad category which includes restaurants, caterers (non-retail food processing establishments), mobile food vending units, and mechanical food dispensing devices. This resolution amends various Health Code provisions regarding the storage temperature of potentially hazardous cold foods, and re-numbers a provision authorizing the Commissioner to impose more stringent requirements on a food service establishment to prevent the recurrence of imminent health hazards.

Holding potentially hazardous cold foods

On June 15, 1998, the Board of Health amended various provisions of Article 81 ("Food Preparation and Food Establishments") of the Health Code, adopting new, more stringent, temperature requirements for maintenance of potentially hazardous foods consistent with standards of the 1997 US FDA **Food Code.** For cold foods, the FDA-recommended maintenance standard of 41 degrees Fahrenheit (5 degrees Celsius) or lower was adopted in amendments to §§81.03(b) and 81.09(a), (c), (e), (f), (g), (h) and (k) of the Health Code, replacing 45 degrees Fahrenheit (7.2 degrees Celsius). This standard is intended to further retard the growth of some bacteria that are known to grow at 45 degrees Fahrenheit in ready-to-eat potentially hazardous foods. Through an oversight at the time, however, required maintenance temperatures for potentially hazardous cold foods in several other provisions of the Health Code were not amended. The amendments in this proposal substitute the more protective 41 degree Fahrenheit temperature requirement for refrigeration of potentially hazardous cold foods as follows: Health Code §47.37(d) (storage of milk for children in day care services); §81.09(b) (storage of intact shell eggs); §81.41(a)(3) (maintenance of potentially hazardous cold foods in dispensing devices); §88.09(a) (maintenance of potentially hazardous or perishable cold foods by temporary food service establishments, e.g., booths at street fairs); §115.17(d) (labeling of formula milk); and §115.27(a) (post-sterilization formula milk cooling and keeping). The temperature requirements in §111.23 (post-pasteurization milk cooling and keeping temperatures) are not being amended, since the Department will, in the near future, request that the Board repeal nearly all of Article 111 ("Milk and Milk Products"), with the possible exception of its dating provisions, since the Department no longer regulates dairy product processing.

Refrigerated holding equipment

In the resolution adopting the above-referenced refrigeration temperature requirements in 1998, the Board added a new subdivision (k) to §81.09 allowing food service establishment operators to continue to use existing refrigerated holding equipment, regardless of whether such equipment was able to maintain the more stringent cold holding temperature. This provision also states, however, that within five years, or by July 1, 2003, all refrigeration equipment in food service establishments must be able to maintain cold foods at the lower temperature. Since §81.09(k) has expired, and is no longer applicable, it is being repealed.

Renumber §81.09(j)

Subdivision (j) of §81.09, which was included in the repeal and re-enactment of Article 81, effective September 1, 1996, is being deleted from §81.09 and renumbered as a separate section of Article 81 of the Health Code. This subdivision authorizes the Department to impose additional requirements on a food establishment whenever necessary to prevent the occurrence of "public health hazards." This clarifies the Department's interpretation that notwithstanding the original placement of this provision in §81.09, "public health hazards" include not only conditions related to

handling of specific potentially hazardous foods, but hazards resulting from such other insanitary conditions as repeated and uncorrected infestations of pests, improper use of toxic chemicals (cleaning supplies and pesticides), poorly maintained, dirty or inoperative equipment, facilities and plumbing, which threaten the health or safety of the establishment's patrons. In addition, since the term "public health hazards" is not defined in either the Health Code or in Part 14 of the State Sanitary Code, the provision refers to prevention of recurrent "imminent health hazards," a term which is defined in both Article 81 and the Sanitary Code.

Changes made in response to public comments

The Department's original proposal to amend the Health Code included a new §81.10 allowing food service establishments to use time as the public health control for holding potentially hazardous ready-to-serve foods. At the public hearing, comments were received from food service establishment industry representatives raising questions concerning handling of ready-to-eat comminuted meat products, procedures in pizzerias, take out food items, and hanging poultry. The Department is currently reconsidering the appropriate approach to these issues. Therefore, the Department has asked the Board to withdraw consideration of the proposed addition of this new section until these issues can be resolved.

50. Statement of Basis and Purpose in City Record July 21, 2005:

NOTICE OF EMERGENCY ADOPTION, EFFECTIVE IMMEDIATELY,

OF AN AMENDMENT TO TITLE 24 OF THE RULES OF THE CITY OF

NEW YORK ADDING CHAPTER 25 ("SERVICE OF FINAL ORDERS

IN ASSISTED OUTPATIENT TREATMENT")

Statutory Authority

Amendment of Title 24 of the Rules of the City of New York is authorized by §389(b) and 1043(a) and (h) of the New York City Charter (the "Charter"). Charter §389(b) providews that "heads of mayoral agencies shall have the power to adopt rules to carry out the powers and duties delegated to the agency head or the agency by or pursuant to federal, state or local law." Charter §1043(a) authorizes each agency to "adopt rules necessary to carry out the powers and duties delegated to it by or pursuant to federal, state or local law." Section 1043(h) authorizes a City agency to engage in emergency rulemaking in order to address "an imminent threat to health, safety, property or a necessary service."

Statement of Basis and Purpose

Pursuant to Charter §552, the Division of Mental Hygiene of the Department of Health and Mental Hygiene is the "local governmental unit for purposes of the mental hygiene law," and the executive deputy commissioner heading that Division "has the powers of a director of community services of a local governmental unit" as set forth in the state mental hygiene law. Under MHL §9.60(b), which creates a program of "assisted outpatient treatment," the director of community services for the City of New York is responsible for the administration of the assisted outpatient treatment program in New York City, and is further defined as a "director" pursuant to MHL §9.60(a)(2).

Recent amendments to MHL §9.60(j)(6), §4 of Chapter 158 of the Laws of 2005 of New York State, provide as follows:

"The director shall cause a copy of any court order issued pursuant to this section to be served personally, or by mail, facsimile or electronic means, upon the assisted outpatient, the mental hygiene legal service or anyone acting on the assisted outpatient's behalf, the original petitioner, identified service providers, and all others entitled to notice under

subdivision (f) of this section."

This provision is effective June 30, 2005, see §11(a) of Chapter 158 of the Laws of 2005 of New York State.

In order to implement the requirement that the Department "cause" these court orders to be served, the Department is promulgating a rule that where the Department is not the petitioner, and the petitioner is an inpatient hospital, such hospital shall serve the order personally on the subject of the petition. This rule will ensure that the subject of the petition is timely served, and will facilitate service of the order either at the court hearing on the petition, if the order is available at that time, or prior to the time that the subject is discharged from the hospital. The provision of an affidavit of service to the Department will be evidence of service in the event that there are collateral attacks on the validity of the order due to non-service. Finally, requiring the petitioners to provide the Department with a copy of the order will ensure that the Department is notified about all orders so that it is able to perform its statutory duties under the assisted outpatient program to arrange for and monitor the delivery of a package of services consistent with the court order.

Finding of Immediate Threat

It is hereby certified that the immediate effectiveness of this emergency rule relating to assisted outpatient treatment is necessary to prevent an immediate threat to health, safety, property, and a necessary service. I hereby make the following finding of immediate threat to health, safety, property, and a necessary service necessary in order to establish that an emergency rulemaking is required.

Amendments to the New York State Assisted Outpatient Treatment (AOT) program statute, also known as Kendra's Law, are effective on June 30, 2005. The legislation resulting in those amendments was introduced in the New York State Assembly on June 20, 2005. Without provisions for service of AOT court orders in place as of the effective date of the new amended statute, AOT court orders may be subject to collateral attack and may not be effective. Those eligible for the AOT program constitute a high-risk group of the mentally ill.

It is therefore hereby certified that the immediate effectiveness of a rule relating to service of final orders in assisted outpatient treatment is necessary to address an immediate threat to health, safety, property, and a necessary service.

Thomas R. Frieden, M.D., M.P.H. Commissioner New York City Department of Health and Mental Hygiene

Michael R. Bloomberg, Mayor July 11, 2005

51. Statement of Basis and Purpose in City Record Oct. 6, 2005:

Statutory Authority

This rule is promulgated pursuant to New York City Charter §§389(b) and 1043(a) and §17-188(f) of the New York City Administrative Code. Section 1043(a) of the Charter provides that each "agency is empowered to adopt rules necessary to carry out the powers and duties delegated to it by or pursuant to federal, state or local law". Section 389(b) similarly provides that the "heads of mayoral agencies shall have the powers to adopt rules to carry out the powers and duties delegated to the agency head or the agency by or pursuant to federal, state or local law. Section 17-188(f) of Chapter 1 of Title 17 of the Administrative Code authorizes the Commissioner of the Department of Health and Mental Hygiene to "promulgate such rules as may be necessary for the purpose of implementing the provisions of this section, including, but not limited to, rules regarding the quantity and location of automated external defibrillators to be placed in a particular public place or general category of public place; the form of notice in which the availability of automated external defibrillators in a public place shall be made known to the public and any accompanying fee; and any information on the use of automated external defibrillators that must accompany and be kept with each automated external defibrillator. . . ."

Statement of Basis and Purpose

This rule is required to be promulgated pursuant to §17-188 of the Administrative Code, specifically subsections (b), (c), (f) and (j) thereof, and is necessary for that law's proper implementation and enforcement. The general purpose of §17-188 of the Administrative Code is to make "automated external defibrillators" available in the "publicly accessible areas" of certain "public places" in order to encourage persons to "voluntarily and without expectation of monetary compensation" provide first aid or emergency treatment using an automated external defibrillator that has been made available pursuant to this section, to a person who is unconscious, ill or injured. . . .". Section 24-01 of a new Chapter 24 of Title 24 of the Rules of the City of New York provides the meaning of specific words and terms used in this rule and in §17-188 of the Code and further provides that the meaning of other words and terms used in the rule are as specified in §17-188 of the Code. In response to a comment received, the definition of "publicly accessible areas" in §24-01(b)(3) has been modified. The revised version makes clearer that this definition was not intended to exclude employees but rather to clarify which areas within these public places are open to the public. The definition of "membership" in former §24-01(b)(4) has been deleted from the final version because §631 of the New York State General Business Law ("GBL") reflects the State Legislature's intent to preempt the area of automated external defibrillators in health clubs, as now set forth in §627-a of the "GBL". Section 627-a, which went into effect on July 20, 2005, establishes statewide requirements relating to the provision of automated external defibrillators in health clubs. Therefore, consistent with §631 of the "GBL", those provisions of Local Law 20 of 2005 as they relate to health clubs and related facilities defined in §17-188(a)(3)(vii) of the Code are of no force and effect. The definition of "membership" as it relates solely to health clubs and related facilities has been deleted.

Section 24-02 provides that those required to make automated external defibrillators available pursuant to §17-188 must in implementing this rule also comply with the requirements of §3000-b of the New York State Public Health Law in connection with the acquisition, possession and operation of automated external defibrillators. Section 24-03 provides necessary guidance as to the appropriate location and quantities of automated external defibrillators that must be maintained pursuant to the new law. According to §24-03(a), the owner or operator of a public place, as defined in §17-188(a)(3) of the Code and limited by §17-188(e) of the Code, must "place at least one automated external defibrillator(s) in a prominent location in that public place." Subsection (b) of this section provides that the automated external defibrillator(s) is to be "located or placed so that this equipment can be obtained in a timely manner". Section 24-04 entitled Required Notice: Signage Information, provides the information that is required to appear on the wall sign informing the public as to the availability of an automated external defibrillator at that location and specifies where that wall sign should be placed. It also identifies information that must be included on a second sign and provides that this second sign may be placed either on a wall or on the face of the storage container in which the automated external defibrillator is contained. In response to a comment, changes to §24-04 reducing the minimum height of the lettering on the required signage and allowing the use of the abbreviation "AED" have been made. The Department determined that the use of the abbreviation and the size reduction in lettering would not affect legibility and that these changes were necessary to ensure that the language could be accommodated on the signage. Upon further consideration, the Department has deleted paragraph (ii) of subsection (e) of §24-04 as unnecessary. The reference to a paragraph (i) has, accordingly, also been deleted. The content of former paragraph (i) remains as subsection (e) of §24-04. Section 24-05 specifies what must be contained in a required written Site-Specific Response Plan and provides that the Plan must be made available to the Department upon its request.

In response to a comment, the definition of "On A Regular Basis" in §24-01(b)(7) was modified to increase the number of senior centers that would be required to make an automated external defibrillator available by reducing the number of hours of services per week, including lunch, that a senior center has to provide before it is required to have an automated external defibrillator. A definition of "Advanced Life Support" [§24-01(b)(8)] and a section entitled "Nursing Homes" [§24-06] have been added as the Department determined that there existed a need to provide guidance to nursing homes as to which facilities would have to make automated external defibrillators available and the number of trained responders that must be specifically required in those facilities.

52. Statement of Basis and Purpose in City Record Dec. 16, 2005:

The New York City Department of Health and Mental Hygiene ("Department") is required by law to protect and promote the health of all New Yorkers. This requirement includes the prevention and control of chronic disease as well as communicable disease. The Bureau of Chronic Disease Prevention and Control, in the Division of Health Promotion and Disease Prevention, oversees the Diabetes Prevention and Control Program. Diabetes, a life-long disease, has recently become epidemic in New York City (NYC) and is a major public health problem. The prevalence of diabetes in NYC has doubled in the past ten years. The NYC 2003 Community Health Survey (CHS) estimates that 9% (530,000) of adult New Yorkers and 20% of adults over 65 have diagnosed diabetes. People may have diabetes an average of 4-7 years before being diagnosed, and it is estimated that another 265,000 may have diabetes and not yet know it. Diabetes is now the fourth leading cause of death in New York City, moving up from 6th in 2002. This epidemic condition requires similar or greater urgency in public health response to that traditionally accorded to infectious disease monitoring and control.

For infectious and non-infectious health conditions, including blood lead levels and communicable diseases, laboratory-based reporting has proven to be an efficient and reliable way to collect surveillance data. Other sources of surveillance data include New York State chronic disease registries, such as for cancer and the dementias, which are populated by case reports from clinicians. Of historical interest, Dr. Hermann Biggs, a prominent figure in public health, instituted a practice of requiring doctors to report all cases of tuberculosis (TB) to the city, provided free testing in the Department of Health laboratory and introduced methods for follow-up care in the 1890s. His approach provided the guideline to address the TB epidemic with the emergence of drug resistant forms of TB in NYC in the 1990s.

The laboratory reporting of Hemoglobin A1C (A1C), a measure of bloodglucose control reflecting average blood sugar levels over the past 3 months, can be used for public health surveillance and monitoring of trends of blood sugar control in people with diabetes. Evaluating these trends can be used to:

· Plan programs in the Diabetes Prevention and Control Program,

· Measure outcomes of diabetes care, and thereby

· * Direct more efficient interventions to health care institutions, health care providers and people with diabetes.

For example, the A1C registry can be used by the Department to report a roster of patients to clinicians, stratified by patient A1C levels, highlighting patients under poor control (e.g., A1C>9.0%) who may need intensified follow-up and therapy. The registry can also be used to direct resources to people with diabetes under poor control. This intervention approach has been used by the National Institute of Health funded Vermont Diabetes Information System (VDIS). The VDIS is a regional registry-based decision support and reminder system, targeted to primary care providers and their patients with diabetes. The registry is populated automatically by electronically submitted test results, including A1C, from clinical laboratories across Vermont. These results are reported back to clinicians daily and quarterly, and to patients when they have elevated values or are overdue for testing. The system is a promising approach to utilizing a registry to improve quality of care and clinical outcomes by focusing the attention of primary care providers on a population approach to delivering care.

The Department, consistent with the position of the national American Diabetes Association, recommends that people with diabetes have their A1C measured every 3-6 months. The goal for A1C is less than 7.0%, which is considered "good" blood sugar control (average blood sugar of 170 mg/dL). Despite many cost-effective treatments, diabetes care in the US remains sub-optimal. The 1999/2000 National Health and Nutrition Examination Survey (NHANES) estimates that only 37% of US adults with diabetes have an A1C < 7.0% and 20% have an A1C>9.0% ("poor" blood sugar control). In New York State, 31% of diabetic patients in commercial managed care and 42% in Medicaid Managed Care have an A1C>9.0%.

There is strong evidence that with tight blood sugar control (A1C < 7.0%), the small blood vessel complications (eye disease, kidney disease and peripheral nerve disorders) of diabetes can be reduced by over 25%. For every drop of

1% (e.g., from 9% to 8%), there is a 35% reduction in small blood vessel complications. Keeping the average blood sugar (A1C) under 7.0% can prevent many diabetes-related complications and deaths.

The Department has amended Article 13 of the NYC Health Code to address this epidemic. Amendment of current law to include the reporting of A1C will advance the public health approach to surveillance and management of the epidemic of diabetes. The reporting of all A1C test results is important for program planning, education, outreach, disease management and surveillance purposes. The Department has provided stringent confidentiality requirements that would prevent the sharing of diabetes diagnoses with anyone other than the patient or the treating medical providers. In the case of a minor, this information would be disclosed to the minor's parent or legal guardian. This information therefore, could not be used, for example, to make it more difficult for persons with diabetes to obtain or renew a driver's license, health insurance, life insurance, etc.

The Department requires that laboratories be mandated to report blood tests identified by the following terms:

a) For A1C and/or the appropriate LOINC codes **(www.loinc.org).**

Synonyms/Inclusions:

· HgbA1c

· HgbA1c by HPLC

· HbA1c

· Glycohemoglobin A1C

· Gycolhaemoglobin

· Glycohemoglobin

· Glycated Hgb

· Glyco-Hb

· GHb

· Ghb

Exclusions:

· Hgb

· Hemoglobin

· Hb

· Hb without reference to glycated or glycosylated or A1C

· Glycohemoglobin total

The Department requires that all laboratories that report through the Electronic Clinical Laboratory Reporting System (ECLRS) via file up-load method be required to report A1C in an electronic format defined by the Department's Bureau of Integrated Data Systems in cooperation with the Diabetes Prevention and Control Program. The provision of this data should represent a minor burden on laboratories already participating in electronic reporting, requiring minimal

one-time programming changes in order to submit the additional tests.

The creation of a clinical laboratory based A1C registry is a promising approach to guide the Department in achieving the goal of preventing diabetes-related complications and death by the improvement of blood glucose control in New Yorkers with diabetes. In addition, the Department has amended §13.03(a)(1) of the Health Code regarding what information must be reported by clinical laboratories for any and all reportable conditions. Specifically, the Department requires the reporting of the date of birth and address of the person from whom the specimen was taken. These elements are already required by the New York State Department of Health to be reported by laboratories to public health authorities. [**See** Laboratory Reporting of Communicable Diseases 2004, issued by New York State Department of Health].

For more information about diabetes and this proposal, see
http://www.nyc.gov/html/doh/downloads/pdf/diabetes/diabetes-presentation-a1c-registry.pdf

53. Statement of Basis and Purpose in City Record Dec. 16, 2005:

Section 11.03 of the Health Code identifies the various diseases and conditions, which are required to be reported to the Department. The Department amends §11.03(a) of the Health Code to designate as reportable certain diseases/conditions that have recently emerged, or have become of greater public health concern, and to remove certain diseases that are of diminished public health concern. A number of the diseases/conditions, which the Department has added to its list of reportable diseases/conditions are currently required to be reported to the Department pursuant to the New York State Sanitary Code, applicable in New York City [**See** Public Health Law §228]. In addition, §11.03 is amended to clarify the time frame and manner of reporting to the Department.

Furthermore, the Department amends §11.64 of the Health Code with regard to animal diseases. Specifically, certain animal diseases are being added to the list of those required to be reported to the Department immediately and modifications are made regarding the manner of reporting to the Department in relation to animal diseases.

Additions to §11.03(a)

· Hepatitis D, Hepatitis E and other suspected infectious viral hepatitides

The Department amends §11.03(a) of the Health Code such that "Hepatitis D" (also known as "Delta Hepatitis"), "Hepatitis E" and "other suspected infectious viral hepatitides" are added to the list of reportable diseases and conditions. Hepatitis D, or Delta Hepatitis, is clinically similar to Hepatitis B. It can be severe, and it is always associated with a coexistent Hepatitis B infection. Infection can be self-limited or may become chronic. Outbreaks of Hepatitis D have been documented in certain countries in Africa and South America, and have been most commonly linked to injecting drug use. Hepatitis D can be controlled through Hepatitis B vaccination efforts. Therefore, it is important for Hepatitis D to be reported in a timely fashion.

Hepatitis E is clinically similar to Hepatitis A; there is no evidence of a chronic form. Hepatitis E most often occurs in developing countries with inadequate sanitation. In 2003, two Hepatitis E outbreaks were documented in Japan, associated with consumption of raw meat. By adding Hepatitis E to the list of reportable diseases, the Department is able to more accurately describe the epidemiology of this infection, particularly in New York City residents returning from travel to developing countries, as well as to recognize local transmission. Given the continued recognition of new strains of viral hepatitides, the Department has added "other suspected infectious viral hepatitides" in order to facilitate the identification of new Hepatitis viruses.

· Influenza caused by novel influenza viral strain with pandemic potential

The Department amends §11.03(a) of the Health Code such that "Influenza caused by novel influenza viral strain with pandemic potential" is added to the list of reportable diseases and conditions.

This terminology would include influenza infections caused by novel or re-emergent animal or human influenza viruses that are causing, or have the potential to cause, a pandemic. Influenza viruses with pandemic potential are further defined as viruses that may or are causing increased morbidity and/or mortality in humans, and which either have, or may develop, the capacity to spread efficiently from person to person.

Widespread epizootics due to a highly pathogenic influenza virus, such as avian Influenza A (H5N1), have been intermittently reported among wild and domestic birds in Asia since 1997. The most recent epizootic began in early 2004 and has been difficult to eradicate. Countries that have had confirmed Influenza A (H5N1) include China, Thailand, Vietnam, Laos, Indonesia, Cambodia, South Korea and Japan. Large culling operations have taken place to prevent further spread of the virus among fowl, and to reduce the risk of transmission to humans, with variable success.

To date, there have been 108 confirmed cases of human Influenza A (H5N1) in Vietnam (87), Thailand (17) and Cambodia (4). Among these, 54 (50%) patients have died. There is still no definitive evidence of sustained person-to-person transmission of Influenza A (H5N1)-the prerequisite for any influenza strain demonstrating a pandemic potential-and it is believed that most human H5N1 cases have resulted from direct contact with infected birds or surfaces contaminated with excretions from infected birds. However, the concern remains regarding the potential for reassortment among avian and human influenza viruses. Such a reassortment could result in a new strain capable of sustained person-to-person transmission, with the potential to set off a global influenza pandemic.

· Influenza, laboratory-confirmed

The Department amends §11.03(a) of the Health Code such that "Influenza, laboratory-confirmed" is added to the list of reportable diseases and conditions. Influenza is a common cause of respiratory illness in the United States during the months of October through May. Influenza illness results in significant morbidity and mortality yearly among the very young, the elderly, and those persons with chronic illness. The Center for Disease Control and Prevention estimates national mortality from influenza illness is approximately 36,000 deaths per year. Outbreaks of influenza in long-term care facilities and in communities can also challenge an already burdened healthcare system. A pandemic of influenza would have the capability to cause substantial illness and death, disruption of healthcare and other social services, and widespread panic. The yearly impact of influenza illness and the possibility of a pandemic give impetus for enhancing current influenza surveillance systems for early detection of illness and implementation of control measures.

Influenza is currently reportable in many states, including New York. The Department requires only laboratories that electronically submit files through the Electronic Clinical Laboratory Reporting System (ECLRS) to report positive influenza laboratory test results. Laboratories that do not use the ECLRS reporting methods above may of course, report positive influenza test results but are not required to report. The addition of laboratory-confirmed influenza enhances influenza reporting and surveillance efforts and provides more comprehensive and complete information on influenza activity, including season-to-season comparisons of the number of cases and age groups affected. Adding laboratory confirmed influenza to the reportable disease list also brings the Health Code into compliance with the New York State Sanitary Code, which was amended to include laboratory-confirmed influenza on December 1, 2004.

· Influenza-related deaths of children less than 18 years of age

The Department amends §11.03(a) of the Health Code such that "Influenza-related deaths of children less than 18 years of age" is added to the list of reportable diseases and conditions. Influenza is a well-recognized cause of mortality in the elderly and individuals with preexisting health conditions. Pediatric deaths have been thought to account for a small fraction of overall annual influenza mortality. During the 2003-04 influenza season, reports of influenza-related deaths in children brought this problem into greater focus. More information on severe influenza in children is needed to understand the epidemiology and target appropriate prevention. There were 142 influenza-related pediatric deaths nationally, five of which occurred in New York City, from October 11, 2003 to March 22, 2004. Preliminary data suggests that previously well children over the age of 2 years were affected, a group not presently targeted for

vaccination. There were fewer cases of influenza-related pediatric deaths in 2004-05, with 33 cases in the United States and only 2 laboratory confirmed cases in New York City. More information is needed on the risk factors for infection, complications, therapeutics, causes of deaths and strain genetics in order to construct an effective prevention strategy.

· Monkeypox

The Department amends §11.03(a) of the Health Code such that "Monkeypox" is added to the list of reportable diseases and conditions. Monkeypox is a viral illness and a member of the **Orthopoxvirus** group. It is primarily an illness of rodents but can cause disease in primates including man. The illness manifests with pustular lesions that resemble smallpox and can be fatal in up to 10% of cases. Person-to-person transmission has been documented in outbreaks. In June of 2003, the first ever outbreak of human monkeypox occurred in the United States. An imported rodent from Africa infected domestic prairie dogs that then infected 72 humans in 6 Midwestern states. Adding monkeypox to the reportable disease list also brings the Health Code into compliance with the New York State Sanitary Code, which was amended to include monkeypox on July 11, 2003.

· Severe Acute Respiratory Syndrome

The Department amends §11.03(a) of the Health Code such that "Severe Acute Respiratory Syndrome (SARS)" is added to the list of reportable diseases and conditions. SARS emerged in the Guangdong Province of China in the fall of 2002 and rapidly gave rise to outbreaks in 29 countries, particularly in health care settings. After a non-specific viral prodrome, the disease can cause pneumonia and death particularly in the elderly or infirm. Evidence has shown that a coronavirus is the causative agent. In 2003, the United States had eight confirmed SARS cases; none were in New York City. Due to the explosive potential for nosocomial outbreaks should a single case of SARS occur, especially if the patient is not rapidly placed in isolation, it is necessary for the Department to immediately be notified of a suspect or confirmed case of SARS. Adding SARS to the reportable disease list also brings the Health Code into compliance with the New York State Sanitary Code, which was amended to include SARS on February 25, 2004.

· Shiga toxin-producing **Escherichia coli** (STEC)

The Department amends §11.03(a) of the Health Code such that "Shiga toxin producing **Escherichia coli** (STEC)" is added to the list of reportable diseases and conditions. The prior case definition and reporting for **E. coli** O157:H7 required modification to accommodate changes in clinical laboratory practice. This revision allows reporting of illness caused by other serotypes of pathogenic Shiga toxin-producing **E. coli** (STEC). **E. coli** O157:H7 infection was made reportable in October 1994 in recognition of its public health importance as a serious foodborne pathogen. Other serotypes of Shiga toxin-producing **E. coli** are also capable of causing diarrhea, hemorrhagic colitis, and hemolytic uremic syndrome (HUS). Non-O157 enterhemorrhagic E. coli (EHEC) have caused several outbreaks of diarrhea and HUS in the United States and, in small studies, have been isolated from diarrheal stool samples with similar frequency as **E. coli** O157:H7.

· **Staphylococcus aureus** with reduced susceptibility to Vancomycin (SARSV)

The Department amends §11.03(a) of the Health Code such that "**Staphylococcus aureus** with reduced susceptibility to Vancomycin (SARSV)" is added to the list of reportable diseases and conditions. **Staphylococcus aureus (S. aureus)** is an important source of nosocomial infections, causing diseases ranging from mild skin and soft tissue infections to potentially fatal systemic diseases like invasive necrotizing pneumonia, endocarditis and toxic shock syndrome. During the 1950s, widespread resistance to penicillin developed and in the 1970s, resistance developed to the newer class of semisynthetic pencillinase resistant antimicrobials (e.g., methicillin, oxacillin) leading to increasing use of vancomycin to treat methicillin resistant **S. aureus** (MRSA). By the late 1990s, resistance to vancomycin was beginning to be reported in a few locations around the world and in late 2002, the first two cases of vancomycin resistant **S. aureus** (VRSA) were documented in the United States. Vancomycin is ineffective in the treatment of VRSA, which is defined as having a Minimum Inhibitory Concentration (MIC) >32 ug/mL. However, we know that

there are **S. aureus** that have intermediate sensitivity to vancomycin, defined as VISA (vancomycin intermediate **S. aureus**), with MICs between 8-16 ug/mL, and vancomycin is less effective in treating these organisms.

Emerging resistance to one of the last remaining effective antimicrobials for **S. aureus** makes it critical to identify suspected resistant or intermediately susceptible organisms so that measures can be put in place rapidly to curtail its transmission within the health care setting. Since MRSA are known to be highly transmissible in health care settings, it is reasonable to assume that SARSV isolates would be no less transmissible given the opportunity. Identification of SARSV infection in a health care setting should prompt a thorough epidemiologic investigation and implementation of control measures to prevent transmission. By making **Staphylococcus aureus** with reduced susceptibility to Vancomycin (SARSV) reportable, the Department is better able to monitor the incidence of this emerging nosocomial pathogen. Tracking trends over time would allow the Department to monitor the effectiveness of these measures in limiting the spread of SARSV in health care settings.

· Vaccinia disease

The Department amends §11.03(a) of the Health Code such that vaccinia disease is added to the list of reportable diseases and conditions. In 2003, smallpox vaccination resumed, as part of bioterrorism preparedness planning in the event of a smallpox outbreak. Over 500,000 persons have been vaccinated in the United States, including 369 in New York City and although the rates of some adverse events were less than expected, adverse events that had not been previously recognized were also identified, such as myocarditis/pericarditis. Smallpox vaccination of health care and public health response teams is expected to continue in New York City to ensure sufficient staff capacity to respond to the initial patients affected by a smallpox outbreak, should one occur due to an intentional release of the virus. Continued surveillance of adverse events is necessary to ensure safe and proper usage of the vaccine and to expedite optimal treatment of individuals with more severe adverse events. By making vaccinia infections reportable, the Department is better able to monitor for complications of smallpox vaccination efforts among persons vaccinated as well as their contacts, and request on a timely basis vaccinia immune globulin and/or cidofovir to treat severe adverse reactions, when indicated.

The term "vaccinia disease" shall mean:

1. Persons with vaccinia infection due to contact transmission; and,

2. Persons with the following complications from vaccination: eczema vaccinatum, erythema multiforme major or Stevens-Johnson syndrome, fetal vaccinia, generalized vaccinia, inadvertent inoculation, myocarditis or pericarditis, ocular vaccinia, post-vaccinial encephalitis or encephalomyelitis, progressive vaccinia, pyogenic infection of the vaccination site, and any other serious adverse events (i.e., those resulting in hospitalization, permanent disability, life-threatening illness or death).

Adding vaccinia disease to §11.03(a) is consistent with the New York State Sanitary Code, which was amended to include vaccinia disease on December 17, 2003.

Deletions from §11.03(a)

· Hepatitis, Non-A, Non-B

The Department amends §11.03(a) of the Health Code such that "Hepatitis, Non-A, Non-B" is removed from the list of reportable diseases and conditions, since such terminology is no longer necessary. The term "Non-A, Non-B" hepatitis was coined some thirty years ago to describe hepatitis that was transmitted similarly to hepatitis B but failed to react on standard serological tests. Medical knowledge and technology have advanced such that numerous viruses (designated by the letters A, B, C, D, E, and G) have been found to cause hepatitis. The majority of hepatitis infections formerly classified as Non-A, Non-B are believed to be due to hepatitis C. The Department amends §11.03(a) such that the known types of hepatitis viruses are reportable as specified above.

· Visceral larva migrans (Toxocariasis)

The Department amends §11.03(a) of the Health Code such that visceral larva migrans (Toxocariasis) is removed from the list of reportable diseases and conditions. Visceral larva migrans (VLM) is a helminth infection caused by **Toxocara canis** and other species. Dogs are the normal host and infection in humans, particularly young children, can result in fever, liver enlargement and rarely death. Dog feces are the major environmental source and eggs can remain viable even under harsh conditions. In 1978, New York State passed a law banning the disposal of canine and feline waste on streets and parks in large cities, including New York City. [**See** Public Health Law §1310]. Three cases of VLM have been reported since 1989 and none since 1992.

Additions to §11.64

The Department amends §11.64 of the Health Code to add Influenza caused by novel influenza viral strain with pandemic potential; Monkeypox and Severe Acute Respiratory Syndrome (SARS) to the list of animal diseases required to be reported to the Department immediately by telephone. As discussed above, these diseases present an epidemic threat to public health. In light of the significant risk to public health, the Department also amends §11.64 of the Health Code to require acute arboviral encephalitis in animals to be reported to the Department immediately, instead of within 24 hours of diagnosis.

54. Statement of Basis and Purpose in City Record June 30, 2006:

The New York City Department of Health and Mental Hygiene is required by law to protect and promote the health of all New Yorkers. This requirement includes the prevention and control of chronic disease, as well as communicable disease. The Department's Bureau of Chronic Disease Prevention and Control, in the Division of Health Promotion and Disease Prevention, supports programs which promote increased physical activities and nutrition to prevent chronic diseases. The Bureau of Day Care, in the Division of Environmental Health, enforces Article 47 ("Day Care Services") of the Health Code, which regulates public and private group day care services operating within New York City. The Bureau of Tuberculosis Control in the Division of Disease Control supervises reporting, control and prevention of tuberculosis in the City.

The Department has requested the Board of Health to amend various provisions relating to operation of day care services regulated by Article 47 of the Health Code. The affected provisions include §47.27(d), which has been amended to update requirements for day care staff tuberculosis testing and followup; §47.35(b), which has been amended to require increased indoor and outdoor play; adding a new §47.36 to require structured and guided physical activities and establish limits on sedentary TV viewing; and §47.37(b) and (c), which have been amended to update requirements for nutritional standards.

Tuberculosis testing and followup

Currently, Health Code §47.27(d) requires new employees and volunteers who work in sites that provide day care services for children to be medically evaluated for tuberculosis infection at hire and annually thereafter. This requirement dates from a time when tuberculosis rates were considerably higher than they are currently. Tuberculosis rates in New York City are at an all-time low although rates of newly reported cases continue to be high in certain populations within New York City (e.g., immigrant communities), and new tuberculosis infections are increasingly uncommon. Day care and other teachers are not considered to be among the populations at high risk for tuberculosis disease and infection, and no national body recommends annual testing for this group. See, e.g., "Targeted tuberculin testing and treatment of latent tuberculosis infection," US Centers for Disease Control and Prevention ("CDC"), MMWR, June 9, 2000. In view of these circumstances, this provision has been amended to eliminate annual retesting of day care staff for tuberculosis infection.

It is still important to monitor tuberculosis infection in new day care staff because they will be working with children, a vulnerable population. Children are at high risk of progressing from latent tuberculosis infection to active

tuberculosis disease. The purpose of testing staff and volunteers at hire is to intervene when there is evidence of tuberculosis infection to prevent such individuals from progressing from latent tuberculosis infection to active tuberculosis disease. This can be achieved by testing all day care staff when they are initially hired, and requiring reporting only of those persons with latent infection to the Department.

The amended provision also requires day care operators to report to the Department the names of newly hired staff found to be infected with latent tuberculosis, so that the Department may determine whether such staff were placed on treatment, and, if treatment was started, what was the final outcome. The Bureau of Day Care currently receives calls from day care operators requesting guidance when staff tuberculosis testing is positive. Requiring a formal report to the Department's Bureau of Tuberculosis Control will facilitate this Bureau's ability to improve completion of preventive treatment. Reports received will be considered confidential, in accordance with Health Code §11.07, and staff testing positive will not be compelled to undergo treatment for latent tuberculosis infection. Examination forms and instructions for their completion will continue to be provided by the Department, and will be modified to include instructions on reporting positive test results.

The amended provision preserves the Department's authority to order further tuberculosis testing of day care services staff and children at any time if deemed necessary for epidemiological investigation.

Obesity prevention

Obesity is epidemic in New York City, and it begins early in life. Being obese in childhood increases the likelihood of adult obesity, which is associated with diabetes, high blood pressure, high cholesterol, heart disease, and cancer. Nationally, childhood obesity more than doubled over the past two decades, from 7% in 1980 to 16% in 2002. U.S. Department of Health and Human Services ("DHHS"), **The Surgeon General's Call to Action to Prevent and Decrease Overweight and Obesity,** 2001. In 2003, a joint Department and Department of Education survey found that as early as kindergarten, 21% of children were obese. DOHMH, Vital Signs, June 2003. A 2004 study of NYC children ages two to four enrolled in the Special Supplemental Nutrition Program for Women, Infants and Children ("WIC") found that 22% were obese. Nelson, et al., American Journal of Public Health, 94, 2004. This level is more than 50% higher than national data reported by the CDC Pediatric Nutrition Surveillance System that 14% of two- to four year-old children from low-income families were obese in 2000. Sherry, et al. Archives of Pediatric and Adolescent Medicine, 158, 2004.

Obesity increases risks of diabetes, heart disease, stroke, cancer and other health problems. Fortunately, obesity is preventable and if obesity rates decrease, so will chronic disease and associated mortality. This epidemic requires similar urgency in public health response to that traditionally accorded to infectious disease monitoring and control. Left unabated, the CDC estimates that among children born in 2000, one of three will develop diabetes during their lifetime; this applies to one of every two Hispanic children. Narayan, et al. JAMA, 290, 2003.

Enhanced outdoor and indoor physical activities

Section 47.35(b) of the Health Code currently provides only that "[a]dequate periods of outdoor play shall be provided daily for all children, except during inclement weather." This provision has been amended to require that children be appropriately dressed for outdoor play and that in inclement weather, safe, active indoor play be substituted. In addition, a new §47.36 has been added to establish a required minimum number of minutes of structured and guided physical activity daily. Both the CDC and the National Association for Sport and Physical Education ("NASPE") recommend that toddlers and preschoolers receive a total of at least 60 minutes of physical activity per day, and that young children not be sedentary for more than 60 minutes at a time, except when sleeping. U.S. Department of Health and Human Services ("DHHS"), **Healthy People, 2010,** 2000; DHHS, **Physical Activity and Health: A Report of the Surgeon General,** 1996; NASPE, **Active Start: A Statement of Physical Activity Guidelines for Children Birth to Five Years,** 2002. This requirement is reduced proportionately for children who spend less than a full day in a day care service.

Limits on television viewing

An additional challenge to obesity prevention is the increasing amount of passive, sedentary time that children spend in front of the television. Television viewing is positively associated with an increase in body-mass index ("BMI"). Among children in the longitudinal Framingham Children's Study, those who watched the most television had the greatest increase in body fat when followed from age four to age 11. Proctor, et al., Int'l Journal of Obesity, 27(7), 2003. A study of three- to four-year-od children found that television viewing was a significant predictor of BMI over three years, and that it became an even stronger predictor over time. Jago, et al., Int'l Journal of Obesity, 29(6), 2005. Evidence from the Institute of Medicine also indicates that food and beverage marketing targeted to children ages 12 and under leads them to request and consume high-calorie, low-nutrient products. Institute of Medicine, **Food Marketing to Children and Youth,** 2006.

Excessive television and other sedentary viewing undermine the establishment of healthy behaviors in early childhood. Consistent with the recommendations of the Amercian Academy of Pediatrics ("AAP"), this new Health Code provision sets limits on television viewing in the group day care environment. In order to address the negative impact of television on children, the AAP recommends against television viewing for children younger than two years of age. For older children, the AAP recommends no more than one to two hours per day of quality, educational screen time. AAP Position Statement, **Television's impact on children,** 2002. Section 47.36(b) limits passive sedentary activities such as television viewing in group day care services to no more than 60 minutes per day. The limitation on passive sedentary activities is also to be applied proportionately to children who spend less than a full day in a day care service.

Nutritional standards

Section 47.37(b) of the Health Code currently states that "Food shall be supplied to children which is . . . sufficient in amount, varied according to a diet approved by the Department . . ." This language was written during a time when insufficient amounts of food were the major concerns affecting nutritional health, and when the Department maintained a Bureau of Nutrition with many nutritionists to review and approve day care menus. This language has been updated in order to address the current environment of obesity and the need for guidance on appropriate kinds of foods and portion sizes for children. The updated language also now accurately reflects the role and capacity of the Department in establishing nutritional guidelines, but not directly approving each day care service's diet plan.

In accordance with this amended provision, the Department will establish and distribute, or approve, nutrition standards and guidelines. The amended provision also establishes limits on beverages served by day care services. In order to reduce energy imbalance and juice overconsumption, the proposed regulations would only allow juice to be provided to children over eight months of age, and only 100% juice would be permitted. In the original proposal, children over six months of age would have been limited to consuming no more than six ounces of 100% juice per day. As a result of a comment from the New York State Department of Health Division of Nutrition Child and Adult Care Food Program ("CACFP"), the age limit has been increased to eight months to be consistent with CACFP regulations. Beverages with added sweeteners would not be permitted. Since parents and caregivers rarely set limits on juice consumption and since juice can be consumed more quickly than its whole fruit equivalents, children are prone to over-consume juice. Although juice has some benefits, it offers no nutritional advantage over whole fruit. In fact, juice lacks the fiber of whole fruit, and is more concentrated with sugars and calories.

When milk is served, children ages two and older may receive only low-fat (1%) or non-fat (skim) milk, unless medically indicated. Although potable drinking water supplies are already required by §47.39, a new paragraph (iv) of §47.37(b) requires that water be made easily accessible to children throughout the day, including at meals.

These beverage standards are consistent with the AAP Position Statement, **The Use and Misuse of Fruit Juice in Pediatrics,** [Pediatrics, 107(5), 2001] and the American Heart Association's "Dietary Recommendations for Children and Adolescents: A Guide for Practitioners." Pediatrics, 117(2), 2006; USDA/DHHS, **U.S. Dietary Guidelines,** 2005.

In addition, §47.37(c), which applies to food provided by parents, has been similarly updated to provide guidance to parents, through materials provided or approved by the Department, regarding current nutritional standards.

Because of the addition of a new §47.36, the Table of Section Headings has also been amended.

55. Statement of Basis and Purpose in City Record June 21, 2006:

At its December 14th 2005 meeting, the Board of Health adopted various amendments to Article 11 of the Health Code. For example, various diseases/conditions were made reportable to the Department in §11.03(a). Section 11.03(c) amended the time frame for reporting the various diseases and conditions. Subsequently, the Department noticed an inadvertent omission in §11.03(a). That is, there were 4 diseases/conditions that were included in §11.03(c) regarding time frame for reporting but were inadvertently omitted from the actual list of reportable diseases/conditions in §11.03(a). These four diseases/conditions are the following: Glanders, Melioidosis, Staphylococcal enterotoxin B poisoning and Viral hemorrhagic fever. It is important to note that despite the absence of these specific diseases/conditions in §11.03(a), they are already required to be reported to the Department pursuant to the New York State Sanitary Code, which is applicable in New York City by virtue of Public Health Law §228. [**See** 10 NYCRR §§2.1 and 2.10.]

Therefore, the Department hereby amends §11.03(a) of the Health Code to include the following diseases/conditions:

· Glanders

· Melioidosis

· Staphylococcal enterotoxin B poisoning

· Viral hemorrhagic fever.

56. Statement of Basis and Purpose in City Record Dec. 11, 2006:

The Department of Health and Mental Hygiene (the "Department") enforces provisions of the New York City Health Code ("Health Code") and other applicable law relating to food served directly to the consumer throughout the City, including food that is commercially prepared, and sold or distributed for free, by food service establishments, a broad category which includes restaurants, caterers and mobile food vending units. The Department also regulates non-retail food processing establishments, such as mobile food vending commissaries, as defined in Health Code §89.01, which supply food for mobile vending units.

Background

Restaurants (the term is being used interchangeably with "food service establishments" or "FSEs") are an important source of daily food intake for New York City residents: an estimated one third of daily caloric intake comes from foods purchased in restaurants. Assuring safe and healthy dining options is a public health priority. The Department issues permits and inspects all New York City FSEs and non-retail food processing establishments, as defined in §81.03(j) and (p) of the Health Code. The public health concern addressed by this amendment is the presence of trans fat in foods served in restaurants, which represents a dangerous and entirely preventable health risk to restaurant goers. Yet New York City restaurant patrons currently have no practical way to avoid this harmful substance.

Accordingly, the Board of Health has amended Article 81 of the New York City Health Code to restrict the service of products containing artificial trans fats at all FSEs. The Department is charged with preventing and controlling diseases, including chronic disease, through approaches, that may address individual behavior or the community environment. By restricting FSEs from serving food that contains artificial trans fat, except for food served in the

manufacturer's original sealed package, we can reduce New Yorkers' exposure to an avoidable hazard in the food environment that is associated with increased heart disease risk.

Basis for restricting service of products containing artificial trans fat.

Heart disease is New York City's leading cause of death. In 2004, 23,000 New York City residents died from heart disease and nearly one-third of these individuals died before the age of 75. Scientific evidence demonstrates a clear association between increased trans fat intake and the risk of coronary heart disease. Most dietary trans fat is found in partially hydrogenated vegetable oil ("PHVO")-oil that has been chemically modified. Scientific studies which examine the change in cholesterol levels when trans fat is replaced with currently available heart healthy alternatives conservatively estimate a reduction of 6% in coronary heart disease events such as heart attacks. Even in the most conservative estimates, based on replacing trans fat primarily by saturated fat-an unlikely outcome given the widespread trend to healthier fats by food producers-a significant although smaller reduction in coronary heart disease events is still expected. Other scientific studies, based upon observing large groups of people over time estimate that up to 23% of coronary heart disease events could be avoided by replacing trans fat with healthy alternatives. Because an estimated one third of dietary trans fat comes from foods purchased in restaurants, the continued presence of PHVO in restaurant foods represents an important contribution to cardiovascular risk for New York City diners.

Dietary trans fat increases the risk of heart disease by elevating LDL ("bad") cholesterol, and lowering HDL ("good") cholesterol. Because of its negative effect on "good cholesterol", trans fat appears to be even worse than saturated fat. The Institute of Medicine ("IOM") reviewed the scientific evidence and concluded that there is "a positive linear trend between trans fatty acid intake and total and LDL concentration, and therefore increased risk of coronary heart disease". The 2005 Dietary Guidelines for Americans, issued by the United States Department of Agriculture ("USDA"), recommends that dietary intake of trans fat be "as low as possible" and the American Heart Association guidelines issued in June 2006 recommend that trans fat intake be kept below 1% of total energy intake. In January of 2006, the FDA's mandatory listing of trans fat content on the nutrition facts labels of packaged foods came into effect.

Approximately 80% of dietary trans fat is found in industrially-produced PHVO, which is used for frying and baking and is present in many processed foods. Approximately 20% is naturally occurring and is found in small amounts in dairy and meat products from ruminant animals.

The artificial trans fat found in PHVO is produced when hydrogen is added to vegetable oil in a process called hydrogenation. Common FSE sources of artificial trans fat include: foods fried in partially hydrogenated vegetable oils; margarine and vegetable shortening; prepared foods such as pre-fried French fries, fried chicken, taco shells and donuts; baked goods such as hamburger buns, pizza dough, crackers, cookies, and pies; and pre-mixed ingredients such as pancake and hot chocolate mix.

Figure 1. Sources of Trans Fat in the U.S. Diet

The major source of dietary trans fat, found in PHVO, can be replaced with currently available heart healthy alternatives. Denmark has recently successfully removed artificial trans fat by limiting industrially produced trans fat content in food to 2% of total calories from fat. In addition, in June 2006 the Canadian Trans Fat Task Force issued a report recommending that Canada limit trans fat in food service establishments to 2% of total fat content in margarines and vegetable oils and 5% of total fat content in all other food ingredients. "Zero grams" trans fat packaged foods in the US, both new products and those already in production, have been extensively marketed since the labeling requirement for packaged foods became effective in January of 2006. Many manufacturers have reformulated a number of their existing products that are now widely available as "zero grams" trans fat (defined by the FDA as < 0.5 grams per serving) on supermarket shelves. A recent **New England Journal of Medicine** article reports that industry and government representatives agreed that the restriction of trans fat in Denmark "did not appreciably affect the quality, cost or availability of food." This experience demonstrates that artificial trans fat can be replaced without consumers

noticing an effect. Acceptable healthier alternatives to PHVOs include traditional mono and poly unsaturated vegetable oils (e.g., canola, corn, olive, etc.) that have not been hydrogenated, as well as newly developed oils such as those made from specially cultivated varieties of soybeans, safflowers, and sunflowers. Further, many of the newer trans fat-free oils have long "fry lives"r and other favored characteristics of PHVOs. Educational and enforcement efforts will seek to promote a shift to healthier fats. In response to increased demand, US companies are expanding production of products that will increase the market supply of alternatives to hydrogenated oils.

Consumer trans fat consumption and the contribution of FSEs

National surveys show that Americans spend almost half (47%) of their food dollars eating out. One third of daily caloric intake comes from foods purchased in restaurants. The continued presence of artificial trans fat in restaurant foods needlessly increases the risk for heart disease for all of our city's residents.

Consumer concern about trans fat in food is evidenced by the increase in national sales of products labeled "no trans fat" by 12% to $6.4 billion for the 52 weeks ended October 2, 2004, compared with the previous 52-week period. Nutrition ranks second after taste as the factor most frequently influencing food puchases. Moreover, artificial trans fat can be replaced with heart-healthier oils and fats without changing the taste of foods.

Prevalence of use of partially hydrogenated vegetable oil in NYC FSEs

In June 2005, the Department launched the Trans Fat Education Campaign. The campaign called on all NYC FSEs to voluntarily remove FHVO from the foods they were serving. This was supported by extensive educational outreach to food suppliers, consumers and to every licensed restaurant in New York City.

To assess use of PHVO-containing products by FSEs, the Department conducted two surveys: one prior to the campaign (May 9 through June 10, 2005) and another nine months after the campaign (April 3 through May 5, 2006).

In both the 2005 and 2006 survey findings, the prevalence of PHVO-containing oils used for frying, baking or spreads was approximately 50% at FSEs where product content could be determined. While a lack of labeling or product identification of some products precludes a precise estimate of the prevalence of use, the data show that PHVO use remained common and has not declined substantially despite the Trans Fat Education Campaign.

Why focus on trans fat over other fats?

The IOM conclusion that there is no safe level of artificial trans fat consumption is in contrast to other dietary fats which, when consumed in moderation, are a natural part of a healthy diet. Artificially produced trans fat is relatively new to our food supply and confers no known health benefit. Because healthy, inexpensive alternatives exist for the most common source of trans fat, PHVO, their continued use by FSEs poses an unnecessary public health threat.

Why use 0.5 grams per serving of trans fat as a threshold?

Current FDA labeling regulations allow manufacturers of foods packaged for direct sale to consumers in retail markets to list trans fat content as "0 grams" if the product contains less than 0.5 grams per serving. This allows for the presence of naturally occurring trans fat in meat and dairy foods as well as newer "low trans fat" foods, which may have PHVO listed as an ingredient. The proposed provision intentionally allows for products that have less than 0.5 grams per serving (evidenced either on a Nutrition Facts label or in information provided by the manufacturer) in order to accommodate most of the newly formulated low trans fat margarines on the market, and allows for substitute spreads.

Response to comments

The Department received more than 2,200 written and oral comments in favor of the amendment, and 70 comments opposed to the proposed amendment. It was brought to the Department's attention that the term "margarine"

is found in some ingredients lists on labels of products, and that margarines may contain artificial trans fat. While only subdivision (d) of the original proposal included the term "margarine," the proposal has been amended to clarify that it is intended to restrict use of margarine that contains artificial trans fat. In addition, since some comments stated that in practice it could take longer to reformulate recipes to accommodate the restriction on artificial trans fat in baked goods and deep fried yeast dough and cake batter, the proposal has been amended. Accordingly, the effective date of the restriction on use of oils, margarines and vegetable shortenings containing artificial trans fats that are used for frying and as spreads will remain July 1, 2007, but the effective date for oils and shortenings used for deep frying yeast dough and cake batter and for all other foods containing artificial trans fat has been extended to July 1, 2008.

57. Statement of Basis and Purpose in City Record Dec. 11, 2006:

The Department of Health and Mental Hygiene (the "Department") enforces provisions of the New York City Health Code ("Health Code") and other applicable law relating to food served directly to the consumer throughout the City, including food that is commercially prepared, and sold or distributed for free, by food service establishments, a broad category which includes restaurants, caterers and mobile food vending units. The Department also regulates non-retail food processing establishments, such as mobile food vending commissaries, as defined in Health Code §89.01, which supply food for mobile vending units.

Background

Restaurants (the term is being used interchangeably with "food service establishments" or "FSEs") are an important source of daily food intake for New York City residents: an estimated one third of daily caloric intake comes from foods purchased outside of the home. Assuring safe and healthy dining options is a public health priority. The Department issues permits and inspects all New York City FSEs and non-retail food processing establishments, as defined in §81.03(j) and (p) of the Health Code. Although federally mandated nutrition labeling on food products for sale in supermarkets facilitates informed choice, consumers lack such essential information to make healthy choices when eating in restaurants. Calorie information, if provided at the time of food selection, would allow New Yorkers to make more informed choices. Accordingly, Article 81 of the New York City Health Code is being amended to require that information on calorie content values of menu items be available to patrons of FSEs at the time of ordering when such information is otherwise made publicly available by or on behalf of the FSEs.

The Department is charged with preventing and controlling diseases, including chronic disease, through approaches that may address individual behavior or the community environment. By requiring posting of available information concerning restaurant menu item calorie content, so that such information is accessible at the time of ordering, this Health Code amendment will allow individuals to make more informed choices that can decrease their risk for the negative health effects of overweight and obesity associated with excessive calorie intake.

Obesity is epidemic

According to measured height and weight data from the National Health and Nutrition Examination Survey (NHANES), the obesity rate among U.S. adults more than doubled over the past three decades from 14.5% in 1971-1974 to 32.2% in 2003-2004. In New York City, more than half of adults are overweight and one in six is obese. Obesity begins early-21% of New York City kindergarten children are obese. People who are overweight are at increased risk for diabetes, heart disease, stroke, high blood pressure, arthritis, and cancer. Diagnosed diabetes more than doubled over the past decade and now affects three quarters of a million New Yorkers.

If rates of obesity continue to rise unabated, it has been estimated that one in three children (and half of Hispanic children) born in 2000 will develop diabetes in his or her lifetime.

'Away from Home' food consumption increasingly fuels obestity and chronic illness

Americans are increasingly eating meals away from home. In 1970, Americans spent 26% of their food dollars on

foods prepared outside their homes while by 2006 they spent almost half (48%) of their food dollars eating out. As previously noted, the average American consumes about one third of calories from foods from restaurants. Children eat almost twice as many calories when they eat out than when they eat at home.

Nutrition labeling works and is supported by consumers and leading experts

Since 1994, the federal Nutrition Labeling and Education Act (NLEA) has made nutrition information available to consumers on packaged foods purchased in retail stores. This information is widely used. Three-quarters of American adults report using food labels, and about half (48%) report that nutrition information on food labels has caused them to change their food purchasing habits. However, NLEA explicitly exempts restaurants from nutrition labeling requirements, and at most restaurants, people can only guess the nutrient content of foods at the point of purchase. Current voluntary attempts by some food service establishments to make available nutrition information are inadequate particularly because the information is usually not displayed where consumers are making their choices and purchases. When FSEs' nutrition information is available on the internet, patrons need to have access to off-site websites. Such information may also be available in brochures, on placemats covered with food items, or on food wrappers, where the information is hard to find or difficult to read and only accessible after the purchase is made. Thus the information provided has little impact on choice.

Without calorie information, it is difficult for consumers to compare options and make informed decisions. People do not accurately guess the calorie content of foods and beverages, and calorie information will help guide food choices. Recent studies found that 9 out of 10 people underestimated the calorie content of less-healthy items by an average of more than 600 calories (almost 50% less than the actual calorie content). When calorie information was provided on food items, consumers chose high-calorie items 24% to 37% less often.

Additional marketing research has shown that providing nutrition information affects consumer attitudes and purchasing intentions. Consumers consistently underestimate the nutrient levels in food items and overestimate the healthfulness of restaurant items. When consumers are made aware of nutrition information at the point of purchase, disease risk perceptions increase, attitudes toward the product change, and purchasing intentions for unhealthy products decrease. Presenting nutrition information on restaurant menus empowers consumers and influences food choices.

Studies consistently show that consumers would like to have this information. Six nationally representative polls have found that between 62% to 87% of Americans support requiring restaurants to list nutrition information.

A key recommendation of a recent Food and Drug Administration-sponsored expert group report on obesity and eating away from the home was that, "Away-from-home food establishments should provide consumers with calorie information in a standard format that is easily accessible and easy to use. Participants believe that information should be provided in a manner that is easy for consumers to see and use a part of their purchasing and eating decisions. Information should be provided for any standard menu item offered on a regular and ongoing basis that is prepared from a standardized recipe, whether the item is an entire meal or a meal component. Non-standard items, including daily specials and experimental items, may be exempted. Information should be provided for the standard menu item as usually offered for sale (i.e., the base product, in the portion size as offered for sale), since most means of providing information cannot easily account for changes due to customization and special orders."

Changes to Health Code to require calorie labeling

New York City needs to address the rapidly growing twin epidemics of obesity and diabetes. Calorie labeling is a public health intervention to help address these problems. Providing simple, point-of-purchase calorie information would allow consumers to make more informed food choices in restaurants just as they currently can in supermarkets.

As amended, Health Code §81.50 requires FSEs that make calorie information for standardized menu items publicly available (published by or on behalf of the FSE) on or after March 1, 2007, to post such calorie (kcal)

information on menu boards and menus, next to each menu item (Figure 1). Of course, in order for the calorie information to be accurate, such a requirement can only be implemented for food items that are standardized with regard to portion size, formulation, and ingredients. Therefore, it is expected that the proposal would apply only to the approximately 10% of New York City food service establishments that serve food menu items in portions that are standardized for size and content and currently post calorie information on these items. Posting of calorie content information will be required for any menu items for which calorie content has been made publicly available. Calorie amounts shall be posted in a size and typeface at least as large as the price or name of the menu item. This provision does not require any FSE to engage in analysis of the nutrition content of its menu items, but does require restaurants that make such information publicly available to their customers to post it in plain sight, so it is available at the time of ordering. By doing so, these FSEs will enable New Yorkers to have the information they need to make more informed choices.

MENU Calories Price

HAMBURGER 280 .89

CHEESEBURGER 330 .99

FISH FILET 470 1.99

CRUNCHY CHICKEN 550 2.79

4 OZ HAMBURGER 430 2.29

EXTRA BIG HAMBURGER 540 2.29

BIG BIG BURGER 590 2.39

GRILLED CHICKEN 450 2.89

8 OZ BURGER 760 2.99

FIGURE 1: Example of Menu Board with Calorie Labeling

Only FSEs that make nutritional information publicly available on or after March 1, 2007, such as in brochures, signage, websites, or other means, will be required to post calorie information. Posted calorie content information will be calculated in accordance with 21 CFR §101.9(c)(1)(i) or its successor regulation. FSEs would not be precluded from providing additional nutrition information voluntarily.

The Department's restaurant inspectors would be responsible for enforcing the requirement that nutrition information is provided on menu boards and menus.

Changes made in response to public comments

Substantial support was received for the proposal in written comments and oral testimony. Of the approximately 2,200 written and oral comments received, all but 22 supported the amendment. The proposal has been further amended in response to the comments and for clarity. To clearly identify the number of calories displayed as in Figure 1, above, FSEs will be required to place the word "calories" or "cal" as a heading above the column listing the number of calories, or adjacent to the calorie content value for each menu item. In response to comments that requiring display of the median calorie content value for menu items offered in a range of flavors or varieties could be confusing, the proposal has been amended so that FSEs will now be required to display the range (minimum to maximum) of calories applicable to all flavors or varieties rather than calculating the median number of calories for the menu item. Finally, FSEs will also be allowed to exercise flexibility in how they display calorie information at the point of purchase, subject to the

Department's prior approval.

58. Statement of Basis and Purpose in City Record Dec. 11, 2006:

In the City of New York, the Department's Bureau of Tuberculosis Control is responsible for carrying out the Department's duties under the Public Health Law, Charter, Health Code and State Sanitary Code of preventing transmission of tuberculosis (TB) disease and securing treatment for persons who have or are suspected of having TB. While the Department has been highly successful during the past decade in controlling TB transmission, including transmission of disease caused by highly resistant strains of TB, the challenge for the Department is to identify and prevent further illness from developing in populations currently at highest risk for TB exposure and disease. A first step in such efforts is testing for TB infection and use of an accurate test is essential. When active disease is ruled out in a person with positive test results, the Department recommends that such persons receive treatment for latent TB infection (LTBI) to prevent future development of active disease.

The tuberculin skin test administered by the Mantoux method (TST) has been used to screen for **Mycobacterium tuberculosis** infection for over a century. However, the TST has several disadvantages and there has been much interest in developing a new test to better detect TB infection. Recently a new blood-based test, QuantiFERON;rM-TB Gold (QFT-G; Cellestis Limited, Carnegie, Victoria, Australia), was approved by the U.S. Food and Drug Administration (FDA). The U.S. Centers for Disease Control and Prevention (CDC) released guidelines in December 2005 that stated that QFT-G can be used in all settings in which the TST is used. QFT-G is an enzyme-linked immunosorbent assay (ELISA) that detects the release of interferon-gamma (IFN-**y**) in whole blood from sensitized persons when it is incubated with mixtures of synthetic peptides that simulate proteins present in **M. tuberculosis.** QFT-G has shown similar sensitivity and better specificity than the TST. Additionally, QFT-G results are not subjective like the TST and the test only requires one patient visit. Two other blood-based TB tests, including a new version of QFT-G, are currently being reviewed by the FDA and are expected to receive approval in the near future. There has been increasing demand for QFT-G in the community and soon it likely will be offered by many non-DOHMH providers. Blood-based tests are expected to become the standard means of detecting TB infection. Therefore, it is important that the Health Code reflect the availability of these tests and the change in TB control practice.

Accordingly, all provisions of the Health Code that pertain to tuberculosis testing, currently only referring to skin testing, are being amended to allow use of both tuberculin skin testing administered by the Mantoux method and the new FDA approved blood-based tuberculosis diagnostic test, or any other FDA approved blood-based test. The affected provisions include §11.03 ("Disease and conditions reportable") and §11.47 ("Tuberculosis; reporting, examination, exclusion, removal and detention") in Article 11 ("Reportable Diseases and Conditions"); §45.09 ("Staff") in Article 49 ("General Provisions Governing Schools and Children's Institutions") and §49.06 ("Mandatory tuberculosis examination") in Article 49 ("Schools"). Amendments to provisions relating to required tuberculosis examinations for day care services staff in Article 47 were adopted by the Board of Health at its June, 2006 meeting.

Additionally, the tuberculosis examination requirement for home employees in §11.48 ("Home Employees; testing for tuberculosis; referral.") has been repealed, as no longer serving any substantive public health purpose. Since 1974, this provision has required that home employees, working for eight or more hours weekly in a household occupied by children aged six and under have pre-employment and annual tuberculin skin tests. The tested employee is required to present to the employer a written certification from a physician indicating that he or she is "free of tuberculosis in a communicable form." Although §11.48(c) requires this certification to be retained by the employee and "exhibited to a duly designated representative of the Department on request," it is impossible to know if this testing requirement has been complied with in any regard. Moreover, the current view of the purpose of conducting screening for tuberculosis infection is to identify individuals with latent infection in order to provide treatment to prevent active tuberculosis disease. Although Department records show that there are, on average, four cases of active tuberculosis per year reported as occurring among private home employees, none of these cases were reported as a result of pre-employment or annual screening.

59. Statement of Basis and Purpose in City Record June 20, 2007:

The New York City Department of Health and Mental Hygiene (Department) is amending §11.03(a) of the New York City Health Code (Health Code) to remove "urethritis, non-gonococcal" (commonly referred to as "NGU") from the list of reportable diseases/conditions because there is no longer a public health value in having this reported to the Department.

NGU was made a reportable disease/condition with the intent that it serve as a surrogate measure of **Chlamydia trachomatis** infection in the male population. At the time NGU was made reportable, there were very limited diagnostic tests for **Chlamydia trachomatis,** and men were not routinely tested or screened for that infection. There are now highly sensitive and specific tests for **Chlamydia trachomatis** which may be performed on male urethral and urine specimens, and males are being tested and screened for this infection with increasing frequency, and reported to the Department. For this reason, reports of NGU are no longer likely to represent **Chlamydia trachomatis** infection, and in any event, monitoring reports of laboratory-confirmed **Chlamydia trachomatis** infection is the best means of measuring the burden of that disease in the population. Therefore, the Department hereby amends §11.03 of the Health Code by removing NGU from the list of reportable diseases/conditions.

60. Statement of Basis and Purpose in City Record Oct. 30, 2007:

The Commissioner received a petition from a permittee, Infant Formula Laboratory Services, Inc., to commence rule making under Article 9 of the New York City Health Code (Health Code) to amend Article 115 ("Formula Milk for Infants") of the Health Code. Richard Miller, President of the Infant Formula Laboratory Services, Inc., to amend Article 115 to allow for an exception in §115.27 ("Operations; sterilization of formula milk") that would allow a physician to ask that a specific formula be prepared under aseptic conditions and not be sterilized after preparation.

In response to the petition, the Department proposes that Article 115 be repealed and reenacted, to update all of its provisions, not just those pertaining to sterilization of prepared infant formula. As reenacted, Article 115 reflects and is consistent with current practices, and applies to other child and adult formula preparations.

In addition, the Board of Health is repealing in its entirety Article 116 ("Infant Formula in Hermetically Sealed Containers") as its provisions are outdated, and because production of infant food formula, including nutritional standards, labeling requirements and good manufacturing practices, are comprehensively regulated by the Federal Food and Drug Administration (FDA).

Background

There is only one formula preparation facility in the New York Metropolitan area. The Infant Formula Lab Service is a private family owned and operated business which prepares customized infant, toddler, child, and adult nutritional formulas and delivers the prepared formulas to medical facilities. These formulas are prepared from commercially manufactured formula preparations, that are modified, reconstituted and/or re-formulated upon the order of a physician or other authorized practitioners to meet individual nutrition needs of newborn, pediatric and adult hospitalized patients. Many hospitals, including those operated by the City's Health and Hospital Corporation, use the services of Infant Formula Lab Service because they no longer operate formula rooms in their own facilities. As an infant formula permittee in New York City, Infant Formula Lab Service is required to comply with Articles 115 and 81 ("Food Preparation and Food Establishment"), and other provisions of the Health Code, and under current rules must sterilize all infant milk products prepared. However, the manufacturers of some formulas, whether powdered or liquid, or made with milk or other protein-based food products may specify on their labels that no further sterilization or heat treatment be used following preparation, as sterilization reportedly destroys nutrients. The American Dietetic Association in its **Guidelines for Preparation of Formula and Breastmilk in Health Care Facilities** endorses the use of sterile water, hand antisepsis techniques, sanitization of equipment and utensils, and aseptic (clean or no-touch) technique. Thermal heating is not recommended as a routine method for preparation of infant formula.

The most recent 2004 guidelines of the American Dietetic Association (ADA) for institutional infant feeding preparation do not recommend terminal heating in all cases:

Terminal heating (pasteurization) is not recommended as a routine method for preparation of formulas for infants in health care facilities, because of potential alteration of the nutritive and physical characteristic of the prepared formula. Terminal heating is a method of heat processing formula used to kill vegetative forms of microorganisms where the formula is heated to a temperature of 180 degrees Fahrenheit (82 degrees Celsius) and then is rapidly cooled to a safe temperature. Most facilities are not able to pasteurize milk. Some formulas for infants, such as those containing free amino acids or small peptides, will be nutritionally compromised by terminal heating. Unless oxygen is eliminated from the head space of the bottles, the degradation of Vitamin C will slowly continue, even though the formula is refrigerated. Other potential problems include changes in the physical elegance of the product and other nutrient degradation with extreme and prolonged heating (greater than 212 degrees Fahrenheit).. .Some health care facilities have used autoclaves (steam under pressure) for terminal heating of infant formulas. This method frequently exposed the product to excessive heat, which may result in the carmelization of sugars, physical changes, chemical changes and nutrient loss. Manufacturers of formulas for infants recommend that autoclaves not be used to prepare formula in health care facilities. Autoclaves may be appropriately used only to sanitize empty bottles or equipment*.1

Article 115 is derived from §174 of the City Sanitary Code and Regulations. The original Sanitary Code provision was adopted in 1947, and revised without substantive change in 1959 when it was included in the first publication of the Health Code. It has been amended only twice since then, in 1971 and 2005. Article 115 is now substantially outdated, fails to recognize that infant formula is prepared with other than milk-based food products, and is not applicable, for example, to the following non-milk based preparations.

· Soy-based formulas, suitable for infants who cannot tolerate lactose in most milk-based formulas or who are allergic to the whole protein in cow milk and milk-based formulas. The soy protein is a specific protein isolate fortified with L-methionine, combinations of corn maltodextrin, sucrose, or corn syrup solids provide carbohydrate; and vegetable blends to provide fat. These formulas are marketed in powdered, liquid concentrate, and liquid ready-to-eat forms.

· Protein hydrolysate-based formulas, for infants with milk allergy or intolerance to intact protein. These formulas are marketed in powdered, liquid concentrate, and liquid ready-to-eat feed forms. Enzymatically hydrolyzed casein, fortified with selected amino acids, provides nitrogen; combinations of corn syrup solids, maltodextrin, or sucrose provide carbohydrate; and vegetable oil blends provide fat. One protein hydrolysate-based product also includes medium chain triglyceride (MCT) oils as a fat source.

· Amino acid-based formula, for infants who do not tolerate formulas based on cow milk proteins, soy protein isolate, or casein hydolysate. At least one amino acid-based formula currently marketed in the United States contains corn syrup solids, free amino acids, and a vegetable oil blend as sources of macronutrients. This amino acid-based formula is available only in powdered form, and loses nutrients if sterilized after being reconstituted.

New Provisions of Article 115

In addition to substituting the term "prescription formula" for the term "formula milk" throughout the article, Article 115 includes the following changes. Changes made in response to public comments are included.

The title has been changed from "Formula Milk for Infants" to "Prescription Formula Preparation Facilities" to reflect the new scope and applicability of the article. The listing of section headings has been amended accordingly to reflect the changes in the section headings of the article.

§115.01 Scope. Reflects the change in applicability from formula milk for infants to all kinds of prescription formulas; indicates that facilities regulated by the article are considered "non-retail food processing establishments" and thereby subject to all applicable provisions of Article 81 of the Code.

§115.03 Definition. The new definition of prescription formula includes not only milk-based formulas but other protein-based formula products such as soy protein-based formulas, protein hydrolysate-based formulas, and amino acid-based formulas. It includes powdered or liquid foods with a basic ingredient of milk, milk constituent, or other liquid or powdered protein-based food which is prepared for an individual infant, child, or adult in accordance with a prescription by a physician or other health care practitioner.

§115.05 Permit. This section has been changed to eliminate permission to operate before a permit has been issued.

§115.07 Compliance with Code. This section has been changed to eliminate reference to specific articles of the Code, and to require compliance with all applicable provisions of the Code.

§115.09 Preparation and sale on physician's or other health care practitioner's order. The original proposal reflected the fact that many orders for modifications of manufactured formula are transmitted by hospital dietitians, eliminating preparing formula in response to requests from nurses, or parents. In response to a comment from two State chapters of the American Academy of Pediatrics, however, that dietitians in hospitals may not lawfully prescribe therapeutic diets, this provision has been further amended to reflect current State law. 10 NYCRR §405.23(c)(1), e.g., provides that "therapeutic diets in a hospital shall be prescribed by the practitioner or practitioners responsible for the care of the patients." In a note to this section, the Department has listed practitioners who are authorized by law to prescribe medications for patients.

§115.11 Standards; ingredients. This section has been amended to eliminate references to milk produced pursuant to Article 111 ("Milk and Milk Products") of the Code. Except for milk dating, Article 111 is also considerably out of date and milk production standards are established and enforced by federal and state authorities.

§115.13 Standards; sterilization and purity of prescription formula preparations. This section has been amended to eliminate the requirement that all prescription formula preparations be sterilized, but continues to require that production facilities and equipment be maintained in sanitary, aseptic conditions, and that samples be periodically analyzed for microbiological contamination pursuant to a schedule approved by the Department. Products which fail such analysis are to be embargoed in accordance with applicable provisions of the Health Code.

§115.15 Time of delivery. Previously titled "Standards; time" this section originally required, instead of delivery on the day of the order, delivery of prepared prescription formula to the person ordering the formula within 24 hours of preparation, to preserve the safety and nutritional quality of the formula. However, in response to comments received referencing the World Health Organization's 2007 guidelines for "Safe preparation, storage and handling of powdered formula," this provision has been further amended to clarify that prescription infant formula preparations that are either prepared from a powder base, or a liquid base that has been amended, be timely delivered so that they may be consumed or destroyed within 24 hours of preparation. Other formula preparations may be consumed or discarded no later than within 48 hours of preparation.

§115.17 Labeling of containers. Previously titled "Standards; labeling" this section now requires labeling of the individual containers of prescription formula, rather than the cartons in which the containers are delivered, and requires labels to include information recommended by the ADA and U.S. Centers for Disease Control and Prevention. Reconstituted powdered infant formula, and liquid infant formula that has been amended must be labeled with a 24 hour use by or discard time, and if made from powder base, be clearly marked as reconstituted from "powdered" formula. To further clarify the labeling requirement in response to a comment, the Code will allow more than one label to be attached to the container if necessary, so that not all information needs to be included on a single label.

§115.19 Physical facilities, equipment and processing deletes provisions that are duplicative of those in Article 81 relating to sanitary conditions required for a non-retail food processing establishment, but retains those that are unique to a facility required to maintain aseptic conditions and to separate preparation and utility functions. A prescription formula preparation facility, as a non-retail food processing establishment, is required to have all food preparation

activities supervised by a holder of an approved food protection certificate, in accordance with §81.15 of this Code. Separate rooms are to be used for the preparation adult and children's formula. Preparation rooms must be organized to prevent unsanitary contamination of product and equipment, and to avoid possible allergic reactions and other adverse health effects that may be caused by cross-contamination from different kinds of formula bases.

§115.21 Packaging and sterilization. Lowers holding temperatures of prepared prescription formulas from the current 41° F to 40° F in accordance with ADA Guidelines for Preparation of Formula and Breast Milk in Health Care Facilities for control growth of **E. sakazakii** in manufactured powered infant formula. In response to a comment, attaching a 2007 version of the World Health Organization's guidelines for "Safe preparation, storage and handling of powdered infant," a new subdivision (d) has been added to require that sterile water used in preparation of infant powder based formula be cooled to a temperature no lower than 158° F (70°C) since such a practice was found to dramatically reduce the risk of bacterial infection. As initially published, subdivision (e) [relettered as subdivision (f)] of §115.21 requires that reconstituted powdered formula be cooled to 37° F (2°C to 4°C) within one hour of preparation. Relettered subdivision (f) of §115.21 is derived from ADA Guidelines for Preparation of Formula and Breast Milk in Health Care Facilities and the Food and Agriculture Organization of the United Nations and the World Health Organization's report on Enterobacter sakazakii and Other Microorganisms in Powdered Infant Formula recommended temperatures for cooling and maintaining reconstituted powdered infant formula to prevent infection with certain microorganisms, including, but not limited to, **E. sakazakii.** Prepared prescription formula must be packaged in individual single service food grade containers, and closed with a cover or cap that effectively seals and protects the mouth of the container. Containers may be closed with suitable, incised nipples protected with fitted outer caps. Containers of prescription formula shall be sterilized unless other processing is required by the physician or practitioner's order, or the manufacturer's label on the package for a specific formula.

§115.23 Records. This provision retains certain record keeping requirements of current §115.29 that are relevant to modern operations of the prescription formula preparation facility, but eliminates those that are no longer applicable.

Finally, Article 116 ("Infant Formula in Hermetically Sealed Containers") should be repealed in its entirety since the FDA now regulates manufacturing of all such formulas. See, 21 CFR Parts 106, 107.

61. Statement of Basis and Purpose in City Record Nov. 13, 2007:

The Department of Health and Mental Hygiene is adopting two amendments to Chapter 6 ("Food Units") of Title 24 of the Rules of the City of New York ("RCNY"). First, the Department clarifies that the removal or transfer of a decal on a mobile food vending unit by persons other than employees of the Department shall constitute an illegal

transfer that will result in the revocation of such permit or decal. Second, the Department is codifying the current practice of distinguishing violations received by mobile food vendor licensees. Since 1986, applicants for new and renewal licenses and permits have been required to pay only the fines and penalties accumulated for serious violations classified as "A" violations as a prerequisite before renewing or receiving a new license or permit. Fines and penalties accumulated for other less serious "B" violations must still be paid, but the satisfaction of such fines and penalties was not a prerequisite for the renewal or receipt of a license or permit. This rule classifies all violations by mobile food vendors of any provisions of the New York City Health Code ("Health Code"), the State Sanitary Code [10 NYCRR Chapter 1] ("Sanitary Code"), and Chapter 6 of these rules as "A" violations for which fines and penalties must be paid before renewal or issuance of any mobile vending license or mobile vending unit permit. The rule also codifies certain violations of Title 17 of the Administrative Code issued for improper street placement of mobile food units and unlicensed mobile vending as "A" violations.

Applicable Law

Mobile food vending in New York City is regulated by Subchapter 2 ("Food Vendors") of Chapter 3 of Title 17 of the Administrative Code; Articles 5, 81 and 89 of the Health Code; Part 14 of the Sanitary Code and Chapters 6 and 20 of 24 RCNY. Pertinent to the rule change are the following provisions of these laws and rules applicable to renewal and issuance of mobile vending licenses and permits:

Administrative Code §17-317(b) provides that the Commissioner "shall not issue or renew a food vendor license . . . if the applicant, licensee, . . . failed to pay any fine, penalty or judgment duly imposed pursuant to the provisions of this subchapter or any rules promulgated thereunder."

Health Code §5.05(f) bars the Commissioner from issuing a license or permit unless "there are no fines, penalties or forfeitures imposed by the Administrative Tribunal established by Article 7 which are due and payable by the applicant or the permittee."

Notices of violations ("summonses" or "NOV's") for which civil penalties are sought are adjudicated at the Environmental Control Board ("ECB"), in accordance with Administrative Code §17-325(d). Criminal summonses are returnable to Criminal Court. ECB's penalties for Health Code, Administrative Code and Chapter 6 mobile vendor violations are now codified in ECB's rules. See, 15 RCNY §31-107 ("Food Vendor Administrative Code Penalty Schedule") and §31-110 ("Health Code and Miscellaneous Food Vendor Violations Penalty Schedule"). These fines and penalties will be unaffected by the rule change.

Basis for rule regarding "A" violations

In 1981 certain mobile food vendor licensees challenged the Administrative Code provision that requires vendors to pay all fines and penalties for violations of the Administrative Code and Health Code prior to receiving or renewing a license or permit. See, **George Iliopoulos v. Koch** (Sup. Ct. NY Co.), Index No. 9342/81. In 1986, the City and plaintiffs settled the action, the City agreeing that it would deny renewal or issuance of mobile vending licenses and permits only for non-payment of fines and penalties imposed for specific serious violations deemed "A" violations. Fines and penalties accumulated for other less-serious "B" violations would still need to be satisfied, but such satisfaction has not been a condition for the renewal or issuance of a mobile vending license or permit. **Iliopoulos** further distinguishes "A" and "B" violations for determining which violations may be predicates for denial, revocation or suspension of mobile vending licenses and permits pursuant to Administrative Code §17-317(a)(2). This provision authorizes the Commissioner, after due notice and an opportunity to be heard, to refuse to issue, suspend or revoke a mobile vending permit or license if an applicant, licensee, permittee, or their employees "have been found guilty of four or more violations of this subchapter or any rules promulgated pursuant thereto within a two-year period or have been found guilty of a violation of the provisions of part fourteen of the state sanitary code or of the New York city health code, . . ."

This rule maintains the original **Iliopoulos** "A" classification of certain Title 17 mobile vending violations, related to street placement of carts, pedestrian public safety and adds to the "A" list vending foods without a license or permit. The New York City Police Department, which is also authorized to enforce these provisions of the Administrative Code, supports continuing these distinctions.

The rule eliminates any classifications for violations of applicable provisions of the Health Code, State Sanitary Code and Department regulations for a number of reasons. The passage of time, the repeal and reenactment of Article 81, and the Department's experience with mobile vending enforcement have made it clear that categorizing Health Code and Sanitary Code violations as more or less serious serves no public health purpose, since the only purpose in issuing summonses and trying to collect fines and penalties for such violations is to secure compliance with these important public health safeguards. If some Health Code violations are not punishable, and fines and penalties for such violations are not payable, why should any vendor ever comply with those Health Code provisions? As noted above, §17-317(a)(2) of the Administrative Code athorizes the Commissioner to revoke a food vending license if the licensee has been found in violation of four violations of the Administrative Code in a two-year period, but only one violation of the Health Code or Sanitary Code during the same period, indicating that more weight is to be accorded compliance with the Health Code and Sanitary Code. Finally, when the Board of Health repealed and reenacted Article 81 of the Health Code in 1996, it eliminated, renumbered and combined many of the Health Code violations previously categorized in the **Iliopoulos** stipulation as "A" violations, and added important new provisions to protect the public health to that Article.

It should also be noted that, while Department rules that codify the Department's inspection procedures for food service establishments classify violations as critical and general, all fines and penalties imposed on fixed location food service establishments for all sustained or defaulted violations of the Health Code and Sanitary Code must be paid before any such establishment's operator may renew its permit. See, 24 RCNY Chapter 23; Health Code §5.05(f). Accordingly, the classification of all mobile vendor Health Code and Sanitary Code violations as "A" violations is consistent with the Department's rules, as well as with the intent of the Health Code and the Administrative Code.

Although a comment on the proposed change questioned the Commissioner's authority to make this rule change, the rule is clearly within the Commissioner's authority under the New York City Charter. Moreover, the Department continues to believe that the best interests of the public will be served by a rule which emphasizes the gravity of violations of Article 81 of the Health Code and the Sanitary Code.

Basis for rule to clarify "transfer" and "assignment" of decals and licenses

The rule further amends Chapter 6 by adding a provision to clarify which mobile vending industry practices will be regarded as prohibited transfers or assignments of vendor licenses, permits, and the decals or insignias that are affixed to mobile vending units. Health Code §5.11 provides that the "purported or attempted transfer of a permit to a person not named therein as permittee . . . automatically revokes such permit." Health Code §5.13 holds permittees accountable for complying with the conditions of the permit and the Health Code and makes them jointly and severally liable for violations committed by their agents or employees. The Department is not proposing to prevent permittees from employing or authorizing other licensed vendors from operating their carts. However, licenses, permits and decals shall be subject to immediate seizure by Department inspectors if, upon inspection, the Department observes evidence of a prohibited transfer of a license, permit or decal. Under this rule, a prohibited transfer of a decal will include the removal, for any reason, of a decal from the vending unit to which the decal was applied by the Department inspector at the time the unit passed inspection, and its reattachment to or use on the same or another vending unit, by anyone but a Department inspector. If a cart is in an accident, otherwise damaged, or requires repairs affecting the part of the cart unit to which the Department attached the decal, removal of the Department decal by anyone other than authorized Department inspectors is explicitly prohibited. Reinspection of the cart and attachment of a new decal by the Department will be required in every such instance. The rule is intended to enable the public, as much as possible, to buy food only from carts that have passed Department inspection. When the Department identifies an improper decal transfer, it will act to revoke both the mobile vending unit permit and the permittee's mobile vending license. This rule

provides further notice to vendors that such practices constitute illegal transfers and are prohibited.

Use by a person other than the licensee of a licensed vendor's blue paper license or badge is also prohibited and the rule authorizes the immediate seizure of a vendor's blue paper license or laminate badge when either is found being used unlawfully by a person to whom it was not issued. The Department's concern is that only a food vendor who has a required food protection course and complied with all other legal duties be authorized to prepare and sell food to the public.

62. Statement of Basis and Purpose in City Record Mar. 17, 2006:

Section 11.03 of the Health Code identifies the various diseases and conditions, which are required to be reported to the Department. Section 11.03(a) of the Health Code is being amended to designate as a reportable disease "herpes infections in infants aged 60 days or younger (neonatal)." Neonatal herpes is a serious, potentially life-threatening condition, and local data are needed to provide reliable measures of the incidence of this disease.

Neonatal herpes (herpes infection in the newborn period) is the most serious outcome of maternal genital herpes infection. Its complications include neurologic devastation of the infant, and neonatal death. In addition to its serious outcomes, neonatal herpes is also one of the most common among all congenital and perinatal infections. Estimates of the incidence of neonatal herpes vary widely across regions of the US, from approximately 1/1,500 to 1/3,200 live births each year. Given the number of live births in the United States each year, these rates correspond to approximately 1300 to 2800 cases per year nationwide, making neonatal herpes more common than other reportable congenital and perinatal infections including congenital syphilis, rubella syndrome, perinatal HIV infection and gonococcal ophthalmia. Neonatal herpes is currently a reportable condition in seven states (Connecticut, Florida, Louisiana, Massachusetts, Nebraska, South Dakota and Washington).

Local data are needed regarding the incidence of neonatal herpes to:

1) Identify missed opportunities for prevention, and permit systematic assessment of gaps in provider knowledge.

There is an increasing potential to prevent neonatal herpes. Type-specific serologic tests for herpes are commercially available, amplification tests such as PCR have increased the sensitivity of diagnostic testing, antiviral therapy can be used to reduce viral shedding; and Cesarean delivery of infants born to mothers presenting with genital lesions can reduce the likelihood of perinatal transmission.

For infected infants, early institution of antiviral therapy is critical to prevent disseminated disease, and death, yet multi-center studies of neonatal herpes show that delays in instituting appropriate therapy persist. Such delays are likely due to provider failure to include neonatal herpes in the differential diagnosis for a febrile neonate, or failure to recognize clinical signs.

By making neonatal herpes infections reportable, the Department will be able to investigate cases of neonatal herpes to determine whether gaps in provider recognition of cases, or knowledge of prevention or treatment strategies could have contributed to the outcome of neonatal herpes, and to address gaps in knowledge with provider education and training. Making neonatal herpes reportable may be expected to increase awareness of the condition among both providers and the public, and has been strongly advocated in the peer-reviewed public health literature.*10

2) Prepare for the availability of a herpes vaccine and monitoring the effectiveness of vaccine use.

A vaccine for herpes simplex type 2 is currently in phase III trials and will likely be available for use in the next 8-10 years. Measures of the burden of neonatal disease are needed to establish a baseline from which to monitor the population impact of herpes vaccines. A failure of vaccine to impact upon neonatal herpes infection rates would suggest that an appropriate target group(s) was not being vaccinated, and would permit re-targeting of vaccination strategies.

3) Provide a reliable and accurate means to measure of disease burden.

Currently available approaches to quantifying neonatal herpes are inadequate. Though neonatal herpes is usually-but not exclusively-managed on an in-patient basis, there is no ICD-9 code specific to neonatal herpes so it is not possible to accurately measure the burden of disease using hospital discharge data. While estimates of disease incidence from other regions of the US are useful, local data are paramount because neonatal herpes incidence is likely proportional to genital herpes in women of child-bearing age, and the epidemiology of genital herpes may be expected to differ from region to region as herpes simplex type 1 and type 2 seropositivity varies between different population subgroups in the US defined by race/ethnicity and age.

4) Identify outbreaks of disease

The Department has recently been involved in the investigation of multiple cases of post-natally acquired neonatal herpes, associated with out-of-hospital circumstances. These cases, not congenitally or perinatally acquired, came to the Department's attention because hospitals and providers considered these instances reportable as `unusual manifestations of disease.' Making neonatal herpes reportable would ensure that such instances are reported, and thus enable the Department to identify outbreaks of this disease in a timely fashion, identify the source, and intervene to prevent subsequent cases.

No oral testimony was received at a public hearing on this proposal, but four written comments supported the proposal. Although one comment suggested that the age of infants for whom reporting is required be extended to one year of age, the Department is requiring only reporting for infants 60 days or younger, as occurrence in this age group is of the greatest concern.

63. Statement of Basis and Purpose in City Record Dec. 27, 2007:

Chapter 23 was added to the Department's rules in 2005 to codify inspection procedures of the Bureau of Food Safety and Community Sanitation (BFSCS) of restaurants and other kinds of food service establishments operating pursuant to Department permits. These procedures are intended to result in objective evaluations of sanitary inspections, establishing a system of point values for sanitary violations of Article 81 of the New York City Health Code (the Health Code) and Subpart 14-1 of the New York State Sanitary Code (10 NYCRR Chapter 1).

In December 2006, the Board of Health amended Article 81 of the Health Code, adding a new §81.08 that restricts service of foods containing artificial trans fats in all food service establishments. This Health Code provision is intended to improve the health of patrons, but will not affect Department determinations regarding the cleanliness of an establishment and whether food is uncontaminated by filth or vermin, or cooked, cooled and otherwise held and processed at temperatures to control microbial growth, so that it may be eaten with minimal risk of pathogenic food borne illness, and the Department's policy will be to exclude trans fat violations in calculating the score on a sanitary inspection. These violations will not be considered in determining whether a food service establishment passes or fails a sanitary inspection, and will not be included in the charts of violations appended to Chapter 23.

Accordingly, the Department proposes to amend Chapter 23 to clarify that violations not specifically included in the charts of violations in Appendix 23-A and Appendix 23-B of this Chapter will be excluded from the Chapter 23 sanitary inspection scoring procedures. Other provisions of Chapter 23 are being amended for consistency, including addition of a new definition for the term sanitary inspection.

64. Statement of Basis and Purpose in City Record Jan. 28, 2008:

Section 11.03 of the Health Code is being amended to designate as electronically reportable laboratory test results for the following diseases/conditions that can cause widespread illness in the community, have recently emerged, or have become of greater public health concern:

· Rotavirus (RV),

· Norovirus (NV) (formerly the Norwalk agent),

· Respiratory Syncytial Virus (RSV),

· Varicella (VZV),

· Methicillin Resistant **Staphylococcus aureus** (MRSA).

Section 11.03 of the Health Code is being amended to require electronic laboratory reporting to the Department of positive rotavirus, norovirus, RSV, VZV and MRSA test results; separate reporting by healthcare providers will not be required for these diseases. Section 11.03 of the Health Code is also being amended to remove scarlet fever as a reportable disease/condition. In addition, §11.03 of the Health Code is being amended to create a new subdivision (d) to require electronic laboratory reporting of antibiotic susceptibility profiles for reportable bacterial infections. Finally, §11.03 of the Health Code is being amended to create a new subdivision (e) to describe the manner of laboratory reporting for any of the reportable diseases/conditions listed in §11.03(a).

Additions to §11.03

Section 11.03 of the Health Code is being amended to add the following diseases of increasing public health concern as reportable conditions:

· Viral infections that cause community-wide seasonal illness

Several viral agents cause seasonal outbreaks that affect many NYC residents. Some of the most common agents are rotavirus (RV) and norovirus (NV), both major causes of seasonal gastroenteritis; and respiratory syncytial virus (RSV), a major respiratory pathogen.

Rotavirus

Rotavirus is the leading cause of severe diarrheal illness in both the developed and the developing world. It is estimated to be responsible for over 400,000 physician visits, 200,000 emergency department visits and 50,000 hospitalizations with direct and indirect costs of approximately $1 billion in the US alone.

Seasonal epidemics occur in the late winter and can rapidly spread in day care and other group care settings. In 1998, a rotavirus vaccine was approved but was removed from the market a year later when a link between the vaccine and cases of infant intussusception were noted. A new live, oral viral reassortment vaccine (RotaTeq;ot) was licensed for use in the US in February 2006, and was recommended by the Advisory Committee for Immunization Practices for use in infants in August 2006.

Electronic laboratory reporting and surveillance for rotavirus is necessary in order to quantify the burden of illness in NYC, identify the onset of seasonal epidemics, track the age-specific attack rates and geographic distribution as well as quantify the magnitude and to monitor trends over time. When the new vaccine is in more widespread use, this data will be valuable in evaluating vaccine effectiveness. Knowledge of the seasonal appearance of rotavirus in NYC could additionally prove useful in crafting prevention messages.

Norovirus

The Norovirus family of viruses was first identified in 1972 during an outbreak of gastroenteritis in an elementary school in Norwalk, Ohio. Seasonal epidemics of gastroenteritis have been noted to occur in NYC through reports of outbreaks in schools, nursing homes and other institutional settings. Emergency department surveillance data suggests that large citywide outbreaks of diarrhea beginning every fall since 2001 are attributable to norovirus. In the past several

years, outbreaks on cruise ships have been a common and vexing problem.

Norovirus testing is not yet available in most commercial laboratories and in anticipation that this will become available in the near future, the Board of Health is amending the Health Code to include electronic reporting of positive norovirus laboratory tests. Tracking the appearance and severity of the illness through laboratory reports will help inform the medical community and support prevention messages.

Respiratory Syncytial Virus (RSV)

RSV can be a life-threatening illness in premature and low birth weight infants and is a major cause of pneumonia and lower respiratory track illness in young children. Infections in older children and adults are responsible for significant absences from school and work resulting in lost productivity.

Electronic laboratory reporting of RSV is necessary in order to quantify the burden of illness in NYC, identify the onset of seasonal epidemics, track the geographic spread, as well as quantifying the magnitude and to monitor trends over time. Knowledge of the seasonal appearance of RSV in NYC could additionally prove useful in alerting clinicians to suspected RSV in patients presenting with respiratory symptoms and implementing prevention efforts, as well as providing data to evaluate future vaccine initiatives.

Estimates from emergency department chief complaint surveillance suggest that norovirus and rotavirus combine for over 30,000 excess emergency department visits in NYC annually. RSV is increasingly recognized as a pathogen in adults resulting in hospitalizations in the elderly and absences from work. The seasonal appearance of these agents in the community is poorly understood and there is no data to assess trends and severity. Therefore, §11.03 of the Health Code is being amended to include and make reportable laboratory diagnosed (by rapid and culture methods), confirmed cases of rotavirus, norovirus and respiratory syncytial virus.

· Varicella

Varicella (chicken pox) is caused by primary infection with Varicella Zoster Virus (VZV). Primary infection with VZV is generally mild and self-limited, but complications occur and include: secondary skin infections, pneumonia, central nervous system manifestations, and Reye syndrome. In the pre-vaccine era, hospitalization rates were 2-3 per 1,000 cases and 1 death per 60,000 cases. Persons at greater risk for complications include children 1 year of age, persons 15 years of age, pregnant women, and those who are immunocompromised. Prior to the availability of an effective vaccine, nearly all children developed VZV infection in early childhood; the national number of annual cases was estimated to be approximately 4 million. With licensure of a live-attenuated varicella vaccine in 1995 and subsequent introduction into the routine immunization schedule in 1996, there has been an 83%-93% reduction in cases. In addition, significant reductions in varicella mortality and hospitalization have been demonstrated, including in NYC. In 2005, an estimated 87.5% (± 5.4%) of children 19-35 months of age had received varicella vaccine. In spite of these gains, outbreaks of varicella have continued, especially within the primary schools. Much of this disease is due to `break-through' disease, i.e., cases among previously vaccinated individuals. In 2006, the Advisory Committee on Immunization Practices recommended the implementation of a routine 2-dose varicella vaccination program for children, with the first dose administered at age 12 months and the second dose at age 4--6 years, with a second dose catch-up varicella vaccination for children, adolescents, and adults who previously had received 1 dose to further reduce the risk of infection. While previously, the diagnosis of varicella was most often based solely on clinical criteria, in the post-varicella vaccine era, there have been an increasing proportion of mild or atypical presentations, necessitating the increase use of varicella diagnostics.

Electronic laboratory surveillance for varicella will allow the Department to quantify the burden of illness in NYC, identify cases and outbreaks and institute control measures to prevent ongoing transmission, assess the completeness and effectiveness of vaccination, and help identify pockets of under-vaccination for intervention. Case-based reporting of varicella is recommended by both the Council of State and Territorial Epidemiologists and the Centers for Disease

Control and Prevention. While most varicella infections are clinically diagnosed, it is anticipated that as cases continue to decline, laboratory diagnosis will become increasingly more important and represent the majority of cases. Therefore, §11.03 of the Health Code is being amended to include and make reportable laboratory diagnosed, confirmed cases of varicella.

· Methicillin Resistant **Staphylococcus aureus** (MRSA)

Case reports and outbreaks have documented the emergence of community associated (CA) MRSA in the US over the past decade. While CA-MRSA predominately causes skin and soft tissue infections (such as furuncles and abscesses), reports of clusters of pediatric deaths and necrotizing pneumonia due to CA-MRSA highlight the seriousness of this disease. Although CA-MRSA has been generally assumed to be more susceptible to antibiotics, recent trends suggest a higher level of resistance is the norm.

CA-MRSA outbreaks have occurred in prisons, sports teams, among men who have sex with men (MSM) and intravenous drug users. In 2004, the Department began an investigation of risk factors for CA-MRSA transmission among patients diagnosed at one large commercial laboratory in NYC. Preliminary results indicate an increased risk in MSM, although risk factor data collection and analysis is not yet complete. Generalization of the results of this investigation is limited because the case reports are not representative of the entire NYC population, as it only includes patients who are diagnosed at one commercial laboratory. Little is known about the risk factors for sporadic cases, particularly those occurring in children and medically underserved populations. To better understand the epidemiology of CA-MRSA in New York City and to develop targeted prevention strategies, population based surveillance is necessary.

Therefore, §11.03 of the Health Code is being amended to require electronic reporting of laboratory-confirmed Methicillin Resistant **Staphylococcus aureus** (MRSA).

· Antibiotic sensitivity profiles for reportable bacterial diseases

The discovery and mass production of antibiotics in the last century is responsible for the reduction in mortality of many bacterial diseases. However, many bacteria have adapted by developing resistant mechanisms rendering many antibiotics useless against them. The time it takes for industry to discover, synthesize, test, receive approval, mass produce and market new drugs is falling behind the speed at which bacteria develop resistance. Newer approaches to reducing antibiotic resistance are needed. It is important to monitor susceptibility patterns of community acquired bacterial pathogens in order to inform clinicians of the current local antibiotic resistance rates. This information when updated on a regular basis can help physicians target empiric therapeutic regimens against specific pathogens pending final susceptibility results on their patients' specimens. Furthermore, tracking antibiotic susceptibility testing (AST) results is critical to support public health initiatives to reduce antibiotic resistance in community pathogens. The data is invaluable for both designing programs to target specific bacterial diseases with high rates of resistance and communities where prevalence rates are higher, as well as assessing the impact of such programs to promote appropriate and judicious antibiotic use.

As an example, gonorrhea (GC) is a common sexually transmitted bacterial which can cause urethritis in men, and cervicitis in women. The serious sequelae of GC infection include pelvic inflammatory disease and infertility in women. There were more than 11,000 cases of gonorrhea diagnosed and reported in NYC in 2006. Over the past decades, GC has developed resistance to several commonly used antibiotic treatments, with the result that fewer drugs can be used to treat the infection. Until very recently, there were two classes of antibiotics recommended for the oral treatment of GC infection, the fluoroquinolones and the cephalosporins. In April 2007, national data were published showing increases in fluoroquinolone (FQ) resistant GC. This has led the CDC to issue national recommendations that FQ be abandoned for treating GC. In NYC, recommendations were issued in 2004 that FQ be abandoned for treating GC in certain population subgroups. Cephalosporins are now the only remaining recommended oral treatment option for GC.

Monitoring AST patterns among GC is of public health importance because if GC develops increasing resistance to available antibiotics there will need to be public health action such as recommending increased dosage or combination regimens or changes in the mode of administration (e.g., that GC be treated with an injection, rather than oral regimen).

Section 11.03 of the Health Code is being amended to require electronic laboratory reporting of antibiotic susceptibility profiles for reportable bacterial infections on all bacterial organisms that are reportable under § 11.03 and for which laboratories perform, or refer for antibiotic susceptibility testing. This requirement includes both traditional broth and agar based methods of antibiotic susceptibility testing and newer molecular based methods that assay for the genetic determinants of antimicrobial resistance. When necessary for the protection of the public health, susceptibility data on other non-reportable organisms may be required to be reported at the discretion of the Department. Therefore, §11.03 of the Health Code is being amended by creating a new subdivision (d) to require electronic laboratory reporting of antibiotic susceptibility profiles for reportable bacterial infections.

Also, §11.03 of the Health Code is being amended to create a new subdivision (e) to describe the manner of laboratory reporting for any of the reportable diseases/conditions in §11.03(a). Clinical laboratories shall report to the Department in a manner specified by the Department, including through the use of the electronic reporting system utilized by the New York State Department of Health.

Deletion From §11.03

Section 11.03 of the Health Code is being amended to remove scarlet fever from the list of reportable diseases/conditions because of the absence of a laboratory confirmed diagnosis and diminished public health concern.

65. Statement of Basis and Purpose in City Record Jan. 28, 2008:

Table of Contents

I. Background

II. Obesity is epidemic and is a serious and increasing cause of disease

III. The obesity epidemic is mainly due to excess calorie consumption-often away from home

IV. Chain restaurants serve food that is associated with excess calorie consumption and weight gain

V. Calories in restaurant foods: distorted consumer perceptions and a misleading information gap lead to unhealthy choices

VI. Point-of-decision calorie information helps consumers

VII. Voluntary activities by restaurants to supply calorie information fall woefully short

VIII. Leading health authorities recommend posting of calorie information

IX. Mandating calorie information for restaurant chains is feasible

X. Changes to Health Code to require posting of calorie information

XI. Response to public comments

I. Background

Regulation of food service establishments is a core public health function. The Health Department enforces

provisions of the Health Code, the State Sanitary Code, Public Health Law and other applicable laws relating to food served directly to consumers throughout the City. This includes regulation of food that is commercially prepared and sold by food service establishments, a broad category which includes restaurants.

Restaurants (the term is being used interchangeably with "food service establishments" or "FSEs") are an important source of food for New York City residents: an estimated one third of daily caloric intake comes from foods purchased and prepared outside of the home, and this proportion is increasing. Assuring safe and healthy dining options is a public health priority. The Department issues permits to and inspects all New York City FSEs, as defined in §81.03(j) and (p) of the Health Code.

The Department is charged with preventing and controlling disease, including chronic diseases. Obesity is epidemic in the United States and in New York City, and is an important risk factor for many chronic diseases including heart disease, stroke, diabetes, cancer, and asthma. Federally mandated nutrition labeling on standardized food products for sale in supermarkets facilitates informed choice: nearly three quarters of consumers report that they look at calorie information on the Nutrition Facts Panel, and about half indicate that nutrition information affects their food choices. However, consumers lack easily accessible information to make informed choices when eating in restaurants. Calorie information provided at the time of food selection in FSEs would enable New Yorkers to make more informed, healthier choices and can reasonably be expected to reduce obesity and the many related health problems which obesity causes.

On December 5, 2006, the Board of Health adopted a resolution amending Article 81 of the Health Code by adding a new §81.50. The regulation was to become effective on July 1, 2007 and mandated that any FSE that made calorie information publicly available on or after March 1, 2007 post such information on its menus and menu boards. The provision was challenged in a lawsuit brought by the New York State Restaurant Association. On September 11, 2007, a federal judge in the United States District Court for the Southern District of New York held that Health Code §81.50 as adopted was preempted by 21 U.S.C §343(r) because, to the extent it applied only to restaurants which had voluntarily provided calorie information, it regulated nutrient content claims and was therefore preempted by §343(r).

Although §81.50 was found to be preempted because of the specific way it was written, the Federal court clearly affirmed the authority of local governments to mandate that restaurants disclose nutritional information:

The majority of state or local regulations-those that simply require restaurants to provide nutrition information-therefore are not preempted. Such regulations impose a blanket mandatory duty on all restaurants meeting a standard definition such as operating ten or more restaurants under the same name . . . There is no voluntary aspect to such a disclosure requirement and no basis for arguing that the mandated disclosures are more properly considered the regulation of voluntary claims subject to [21 USC] § 343 (r). **New York State Restaurant Association v. New York City Board of Health, et al.,** 07 Civ. 5710 (RJH), USDC SDNY, 9/11/07.

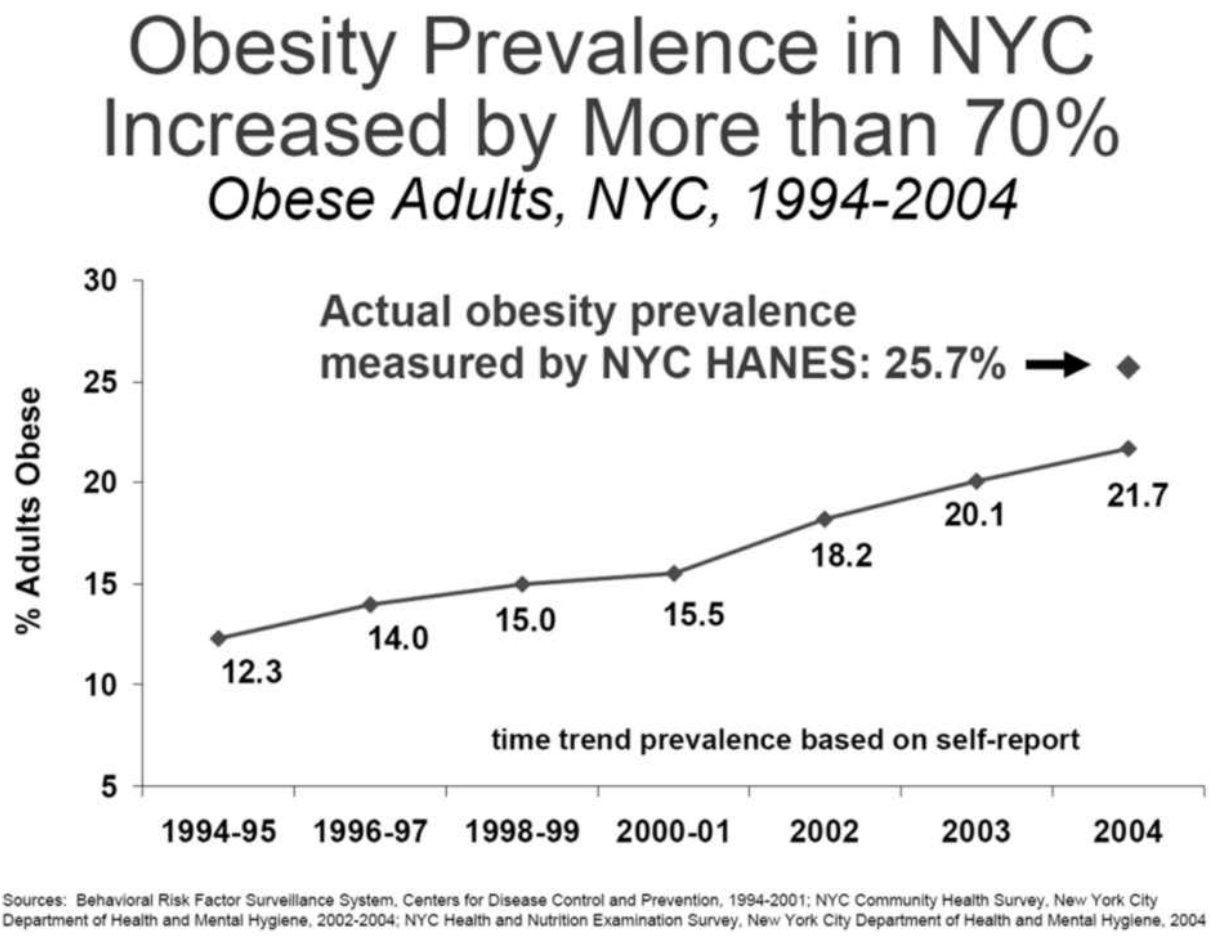
The Department proposed that the Board of Health repeal Health Code §81.50 and reenact a new §81.50, and notes that the Department has clear authority consistent with 21 U.S.C. §343(q) to mandate that restaurants disclose nutritional information. The new §81.50 requires that information on calorie content values of menu items be clearly visible to patrons of FSEs at the time of ordering for menu items that are served in portions, the size and content of which are standardized, at food service establishments in the City of New York which are one of a group of fifteen or more food service establishments doing business nationally under the same name, and offering for sale substantially the same menu items.

II. Obesity is epidemic and is a serious and increasing cause of disease

An obesity epidemic currently undermines the health of many Americans in general and New Yorkers specifically. According to measured height and weight data from the National Health and Nutrition Examination Survey (NHANES), the proportion of U.S. adults who are obese more than doubled over the past three decades. While 14.5% of Americans

were obese in 1971-1974, the proportion rose to 32.2% by 2003-2004.

In New York City, obesity prevalence has increased by more than 70% in the past decade. More than half (54%) of New York City adults are overweight or obese, and 1 in every 5 adults is obese; 43% of elementary school children are overweight or obese.



Sources: Behavioral Risk Factor Surveillance System, Centers for Disease Control and Prevention, 1994-2001; NYC Community Health Survey, New York City Department of Health and Mental Hygiene, 2002-2004; NYC Health and Nutrition Examination Survey, New York City Department of Health and Mental Hygiene, 2004

Obesity is a risk factor for heart disease, stroke, cancer and diabetes-4 of the 5 leading causes of death in New York City in 2005, with 40,771 deaths (more than 70% of all deaths). These conditions cause enormous and preventable human suffering and use more of society's resources than even the most prevalent communicable diseases. In fact, obesity, and, with it, diabetes, are the only widespread health problems in this country and in this City that are getting worse-and getting worse rapidly.

To illustrate just one aspect of obesity's toll, diabetes has more than doubled in New York City in the past decade, and hospitalizations for long-term complications of diabetes have been rising steadily. In 2004, there were 4,865 people on dialysis or receiving kidney transplants in New York City due to diabetes. There were 3,040 lower extremity amputations in 2005 due to diabetes. We estimate that approximately 9,000 New Yorkers have been blinded by diabetes, and that more than 100,000 New Yorkers have eye damage from diabetes. This burden of preventable diabetes complications is not evenly distributed across New York City residents: African-Americans, Latinos and the poor are disproportionately affected.

III. The obesity epidemic is mainly due to excess calorie consumption-often away from home

Weight gain occurs when more calories are consumed than are expended. Small calorie excesses over time have a cumulative effect. Eating out, and eating extra calories while eating out, contributes disproportionately to the excess calorie intake that fuels the obesity epidemic.

Today more people eat out, and they eat out more often. In 1970, Americans spent 26% of their food dollars on foods prepared outside their homes; by 2006 they spent almost half (48%). At present, one third of total calorie consumption is outside the home. A large, representative national survey (the Continuing Survey of Food Intake by Individuals) conducted over two decades, from 1977 to 1996, shows that calorie intake from restaurant/fast food doubled as a percentage of energy intake for Americans over the age of 2. Further, while eating out at restaurants, diners typically eat more than at home. In the same national survey, adult men who ate food away from home during the previous 24-hour period weighed 1 kg more than men of the same height who did not. Children eat almost twice (1.8 times) as many calories when eating out as compared to eating at home. In a cross-sectional study of boys and girls in three age groups, those aged 12-19 years who consumed foods away from home were more likely to have a higher Body Mass Index (BMI) percentile. In sum, this increase in calories, often consumed away from home, translates to an increase in body weight in both adults and children.

The increase in consumption of away-from-home foods has been facilitated by the expansion of restaurant chains, which serve food that is easily available, inexpensive, and high in calories. Nationally, restaurant chains-both fast food and casual dining chains-comprise a growing share of customer traffic. Between 2005 and 2009, the number of fast food establishments is projected to increase from 266,300 to 287,437 establishments.

Further, over time fast food and other chain restaurant food has been served in increasingly large portion sizes, an increase that parallels the obesity epidemic. For example, since the 1970s, the typical serving size for soft drinks increased by 49 calories, for French fries by 68 calories, and for hamburgers by 97 calories. Although these portion sizes are now considered "normal" by consumers, a single meal may have far more than a single meal's appropriate share of the total recommended daily calorie allowance.

To obtain more information about patterns of food consumption in New York City restaurant chains affected by the December 2006 Health Code amendment, the Department conducted a large survey in a representative sample of major restaurant chains in New York City. The survey, conducted in March through June 2007, collected information from 11,835 diners at a random sample of 275 restaurants, representing 13 restaurant chains. As patrons left the restaurant, they were asked to supply their restaurant receipt and to answer several brief questions, including details of the purchase not reported on the receipt, whether the purchase was only for themselves, whether they saw or used any available calorie information, and if so, whether this affected their purchase.

Using the receipts along with published calorie information, the Department was able to examine several issues, including the calorie content of food and beverage selections. For the 7,308 patrons who purchased one or more items, for themselves only, at one of 11 major restaurant chains surveyed on a weekday between 12 noon and 2 PM-a total of 168 locations across the five boroughs-the average calorie purchase was 824 calories (preliminary data). About one third (33.2%) of patrons purchased more than 1,000 calories; 8.7%, more than 1,400 calories. For reference, a woman over 25 years of age with average (i.e. little) physical activity is advised to consume 1,800 calories per day.

IV. Chain restaurants serve food that is associated with excess calorie consumption and weight gain

While eating at restaurants away from home in general is associated with increased calorie intake, most research has focused on fast food. About 90% of restaurant chains in New York City serve fast food. There is abundant data to show that people who eat at fast food establishments consume more calories. Two important analyses draw on the Continuing Surveys of Food Intakes conducted in the mid 1990's. The first, a 1994-1996 survey of 17,370 adults and children, found that adults who ate at fast food restaurants consumed 205 more calories per day than those who did not, and children ate 155 more calories. In the second survey of more than 9,000 adults, mean energy intake on days when fast food was consumed was 206 calories higher than on other days. This increase in calories would result in a three

pound weight gain each year if a consumer were to eat fast food only once each week. In the second survey, fast food contributed more than one third of consumers' daily calorie intake. Similarly, in a study of nearly 900 women, called Pound of Prevention, increased frequency of eating at fast food restaurants was associated with higher total energy intake. This association has also been shown among adolescents and children. A study of 4,746 students age 11-18 years found that regular fast food consumption was associated with 800 extra calories per week in boys and 660 extra calories per week in girls. Such a calorie excess could translate into a weight gain of 10 pounds or more per year. An increase of 129 calories per day among high versus low frequency consumers of fast food was also reported in a large national cohort of adolescent girls.

Many studies document that increased calorie intake observed with consumption of fast food results in weight gain. In a study of over 9,000 adults, eating fast food increased the prevalence of overweight by 27-31%; among 3,394 adults in the Coronary Artery Risk Development in Young Adults Study (CARDIA), fast food eating was positively associated with BMI, and higher levels of fast food consumption correlated with a higher BMI. This same association has been found in different contexts, for example among Mexican children in San Diego, where 4-7-year-old children were twice as likely to be obese if they ate in fast food restaurants, and among Minnesota secondary school students. Follow up studies further strengthen the evidence for a causal association between easting fast food and weight gain. In a study of 3,031 adults (part of CARDIA) who were followed up for 15 years, baseline fast food intake was directly associated with increases in body weight. Similarly, in a study of almost 10,000 adolescents, more days of fast food consumption at baseline predicted increases in BMI at 5 year follow-up.

Some studies specifically examine other settings and support the conclusion that sit-down chains, and not only fast food chains, serve food associated with increased caloric intake and weight gain. One study compared food selections made by adolescents who were asked to order a dinner meal from both sit-down chain restaurants and fast food restaurants. Meals selected at Chili's, Denny's and Outback Steakhouse had even higher calorie content than at comparison restaurants McDonald's and Taco Bell.

V. Calories in restaurant foods: distorted consumer perceptions and a misleading information gap lead to unhealthy food choices

Consumers neither know nor estimate accurately the calorie content of food purchased in restaurants. Furthermore, guesses typically underestimate calories. A recent poll asked 523 adults to identify which of the four breakfast choices from Denny's Restaurants had the fewest calories and which of the four menu items from McDonald's had the most calories. Only 11% gave correct answers. Respondents were more likely to guess that Denny's French toast and syrup (1,003 calories) had fewer calories than fried steak and eggs (464 calories). Similarly, a recent study found that 9 out of 10 people underestimated the calorie content of less-healthy items, and did so by an average of more than 600 calories (almost 50% lower than the actual calorie content). This is consistent with the other findings that consumers underestimate calories and overestimate the healthfulness of restaurant items.

Even experienced nutrition professionals have difficulty accurately estimating the calorie content of restaurant food. In one study, these professionals underestimated calories in restaurant food by 200 to 600 calories. For example, dietitians estimated on average that a typical diner hamburger with onion rings meal had 865 calories, when it actually had 1,550 calories. If even experienced professionals in the field of nutrition underestimate the calorie content of restaurant foods, consumers are even more likely to underestimate caloric content of menu choices. Without calorie information, it is difficult for consumers to compare options and make informed decisions.

The systematic underestimation of calories suggests that consumers have distorted perceptions of calorie content and **de facto** have been misled to view oversized, high-calorie portions as "normal" portions, containing acceptable numbers of calories. For example, a breakfast meal at MacDonald's offers the selection of a "Big Breakfast" (790 calories) or a "Deluxe Breakfast" (1,140 calories). In the absence of calorie information, how would a consumer know that a "Big Breakfast" contains slightly over half the calories of a "Deluxe Breakfast"? Or that a Deluxe Breakfast, when served with butter and syrup, as pictured and provided at no extra charge, comes to 1,400 calories. Add a large orange

juice (250 calories) and breakfast comes to 1,650 total calories. For most New Yorkers, this breakfast is close to their recommended calorie intake for the entire day.

Differences in calories among various options are not always intuitively obvious, and a far lower calorie option is often available within a group of similar products. For example, calories in cheeseburgers at Burger King vary more than three-fold, not even counting the fries and drinks: Cheeseburger-330 calories, Whopper Junior with cheese- 410 calories, Double Whopper with cheese- 990 calories, or a Triple Whopper with cheese-1,230 calories. The price differential for increasing a portion size often does not correlate with the resulting calorie difference. A McDonald's $1.79 order of medium fries has 380 calories; an 11% price increase to a $1.99 order of large fries is a 50% calorie increase. Increasing the serving size of a healthy-sounding Starbuck's Green Tea Frappuccino from its small $3.75 version to the 32% more expensive large version results in a 76% increase in calories, from 370 to 650 calories.

There is a calorie information gap. This gap is contributing to people choosing higher calorie items and to the obesity epidemic. Providing information about the calorie content of foods and beverages being served in chain restaurants in a time, place, and manner that can inform decisions will help bridge this gap. Provision of calorie information on menu and menu boards is an important way to accomplish this goal.

Children are particularly vulnerable to the promotion of fast foods, and have been specifically targeted for such promotion by restaurant chains. The major chains use marketing strategies directly aimed at children; children who view such television advertisements are about 50% more likely to eat fast food, and to eat the brand that is most popular. Given the epidemic of childhood obesity, it is reasonable to conclude that providing calorie information at these chains can help parents make more informed choices for their children, who lack the knowledge and experience to understand how promotional strategies affect their preferences.

Other marketing practices mislead consumers to unhealthy choices by using images to suggest healthfulness; by building the impression that oversized dishes constitute "normal" meals; and by pricing policies which increase price only slightly while vastly increasing portion sizes. This latter practice may contribute to the observation that fast food is consumed disproportionately by the poor.

VI. Point-of-decision calorie information helps consumers make informed, healthier food choices

Consumers notice and use nutrition information when it is made available at the point of purchase. Since 1994, the federal Nutrition Labeling and Education Act (NLEA) has made nutrition information available to consumers on packaged foods purchased in retail stores. Three quarters of American adults report using food labels, and about half (48%) report that nutrition information on food labels has caused them to change their food purchasing habits. The calorie section is both the most prominent, and the most frequently consulted part of the Nutrition Facts Panel on packaged foods, with 73% of consumers reporting that they look at calorie information on the Nutrition Facts Panel.

Food served in restaurants is not subject to federal nutrition labeling requirements. With nutrition information, consumers are 24%-37% less likely to select high-calorie items. In the previously mentioned DOHMH interview and receipt study, the Department was able to examine the impact of point of purchase calorie information at Subway sites, New York City's second largest chain with 315 locations. At the time of the study, undertaken before §81.50 became effective, Subway posted nutritional information for some of its products on a sticker placed on a display case near the cash register-a manner far less prominent than that mandated by §81.50. Nevertheless, among the 1,816 Subway patrons sampled at 47 randomly selected Subway locations, nearly one third (30.8%) reported seeing calorie information (preliminary data). Patrons who saw calorie information purchased items containing 48 fewer calories than those who did not see this information. Furthermore, patrons who said calorie information had affected their selection were correct-they chose items with 92 fewer calories. That their report matched the data from their receipts that documented lower-calorie choices is consistent with findings that when consumers say they will change choices based on calorie information, they often actually do so.

Based on the best estimates, if the reduction in calories in covered FSEs were similar to what occurred at Subway, over the next five years at least 150,000 fewer New Yorkers would be obese, resulting, among many other health benefits, in at least 30,000 fewer cases of diabetes, and possibly many more than that.

Point-of-decision prompts have proved effective in promoting other healthy activities. For example, signs placed near elevators or escalators to encourage people to "take the stairs" increase stair usage by approximately 54%.

Prominent posting of calorie information will make the calorie content of foods served in these settings much more apparent. Because of this, it is reasonable to anticipate that some restaurant chains will improve menu offerings to lower their caloric content. Starbucks, for example, which began providing calorie information, reformulated some of its baked goods with slightly reduced sizes and hence fewer calories. Analogously, in anticipation of, and following the effective date of the FDA's requirement for trans fat content on the Nutrition Facts Panel in 2006, manufacturers reformulated their products to contain less trans fat.

To change the trajectory of the obesity epidemic, which has been relentlessly upward for more than two decades, requires small, permanent calorie reductions across the population. If, as can reasonably be suggested, patrons of these establishments reduce their caloric intake by even 5-10% after seeing calorie information, there would be substantial reductions in obesity, diabetes, and obesity- and diabetes-related illnesses as a result of this measure.

VII. Voluntary activities by restaurants to supply calorie information fall woefully short

Some restaurants voluntarily provide nutrition information to their patrons, but most of these efforts have failed to inform the vast majority of consumers. Patrons at the 13 major chains sampled in the interview and receipt study mentioned above were asked whether they a) saw and b) used calorie information while in the restaurant in the period before §81.50 was in effect. Taking a weighted average and excluding Subway, only 3.1% of customers (1 in 32)-reported seeing calorie information (Table 1).

Table 1. Percent of consumers who reported seeing calorie information at certain New York City food service establishments covered under the previous Health Code §81.50, May-June 2007, preliminary data

Brand # of Sites # of Customers Interviewed* % of Customers who Reported Seeing Calorie Information in the Restaurant

Dominos 10 57 0.0%

Papa Johns 5 222 0.0%

Popeyes 7 512 0.6%

Dunkin Donuts 70 2,756 1.3%

Starbucks 37 1,285 2.7%

Au Bon Pain 2 166 3.7%

Burger King 20 1,033 3.8%

Yum Brands (Taco Bell, KFC, Pizza Hut) 21 861 4.6%

McDonald's 45 2,593 4.7%

Wendy's 11 474 6.9%

Subway 48 1,906 31.3%

*** Survey customer totals vary slightly due to exclusion of customers with missing data for calorie analyses.**

These restaurants' activities to make calorie information available to their patrons are woefully inadequate. Although a company such as McDonald's purports to have conducted extensive social science research in order to provide accessible, consumer-friendly nutrition information, this information was not noticed by 95% of New York City survey participants-even **after** they had purchased their food-and, therefore, can have little or no impact on choice. The reasons for such dismal results are not hard to identify. The information is usually not displayed where and when consumers make their purchases. Instead it is found in brochures, on placemats covered with food items, or on food wrappers, where the information is hard to find, difficult to read, and only accessible after the purchase is made. Patrons have to ask for information or search for it in advance on the internet. Furthermore, each food service establishment uses different formats, making it cumbersome to find. As a means to help patrons make informed and healthier choices, almost all present voluntary displays of nutrition information fail.

VIII. Leading health authorities recommend posting of calorie information

Calories are recognized as the single most important element of nutrition information to address the obesity epidemic. The Food and Drug Administration's Obesity Working Group (OWG) concluded its 2005 work with a report entitled "Calories Count" whose executive summary stated:

"The OWG's recommendations are centered on the scientific fact that weight control is primarily a function of balance of the calories eaten and calories expended on physical and metabolic activity . . . The recommendations contained in this report therefore focus on a "calories count" emphasis for FDA actions . . . OWG Principal Recommended Action Items . . . Calories: Issue an advance notice of proposed rulemaking (ANPRM) to solicit public comment on how to give more prominence to calories on the food label. As examples, increasing the font size for calories, including a percent Daily Value (%DV) column for total calories, and eliminating the listing for calories from fat."

While calories are just one component of nutritional choice, they are a critically important component. Unburned calories are stored as fat, regardless of whether the calories come from fats, carbohydrates or proteins. Studies of dietary intake in the United States have found that people are eating more calories, in contrast to most other aspects of dietary intake, which have improved. Average calorie intake for Americans over age 2 increased by nearly 200 calories per day, from 1,791 to 1,985 calories, between 1977 and 1996. Restaurants and fast food were the fastest growing source of calories in this period.

Leading health organizations and experts recognize that the calorie information gap contributes to food choices, with serious health consequences, and should be addressed to promote healthy food choices. The Institute of Medicine found that existing efforts fall far short of providing information in a simple accessible format. A Food and Drug Administration-sponsored expert group made its leading recommendation for away-from-home foods as follows:

"Away-from-home food establishments should provide consumers with calorie information in a standard format that is easily accessible and easy to use. Participants believe that information should be provided in a manner that is easy for consumers to see and use as part of their purchasing and eating decisions. Information should be provided for any standard menu item offered on a regular and ongoing basis that is prepared from a standardized recipe, whether the item is an entire meal or a meal component. Non-standard items, including daily specials and experimental items, may be exempted. Information should be provided for the standard menu item as usually offered for sale (i.e., the base product, in the portion size as offered for sale), since most means of providing information cannot easily account for changes due to customization and special orders."

During the public comment period for §81.50, the support received from organizations of health professionals was overwhelming. Organizations that submitted statements supporting the proposed resolution included the: American

Medical Association, American Diabetes Association, American Cancer Society, National Hispanic Medical Association, New York Academy of Medicine, Medical Society of the State of New York, and a wide range of prominent New York medical and community institutions. Consumers also support such measures: six nationally representative polls showed most consumers (62-87%) support requiring restaurants to list nutrition information.

IX. Mandating calorie information for restaurant chains is feasible, will reach many consumers, and can be reasonably expected to have a health impact

Subway, the only store that had posted calorie information at the point-of-purchase at the time of the Health Department's study, subsequently posted its calorie information in compliance with Health Code §81.50, making it much more prominent and demonstrating the feasibility of implementing this rule. See Figure 1. By putting calorie information where almost all consumers will look to make their selection-the menu board, menu or item tags-viewing this important nutrition information will become the public's default dining experience. No extra step or search will be required. Making a preferred behavior the default is a core public health strategy.

Figure 1. Subway Menu Boards in Manhattan on July 2, 2007

Chain FSEs represent an appropriate focus for regulation for three reasons. First, restaurant chains use highly standardized menu items and can readily measure or estimate accurate calorie counts. Second, these major chains represent a substantial and disproportionate share of restaurant meals. While restaurant chains make up approximately 10% of NYC's 23,000 restaurants, they account for a much larger proportion of restaurant **meals** than suggested by their

number (i.e., far more than 10% of meals). Data from The NPD Group, a major market research company, indicate that, in 2007, major chain restaurants in the NYC metropolitan area accounted for more than one third of all restaurant traffic-34.7%-more than 3-fold their representation among food service establishments overall. In fact, we estimate that this regulation has the potential to affect consumer choices involving at least 145 million meals in New York City per year, and possibly as many as 500 million or more. And third, as outlined above, chain restaurants typically serve food that is clearly and disproportionately associated with obesity.

X. Changes to Health Code to require posting of calorie information

Providing calorie information is a public heath intervention to help address the rapidly growing twin epidemics of obesity and diabetes. Providing clear and comprehensible point-of-purchase calorie information allows consumers to make more informed and healthier food choices in restaurants.

Accordingly, Health Code §81.50 has been repealed and reenacted to require that information on calorie content values of menu items be available to patrons of FSEs at the point-of-decision for all menu items that are served in standardized portions. The food service establishments covered by this provision would be any establishment in the City of New York that is one of a group of 15 or more food service establishments doing business nationally under the same name and offering for sale substantially the same menu items, regardless of whether such food service establishments are owned and operated by the same entity. Fifteen was found to be an appropriate cut-off to focus on chains with standardized menus, and will cover the vast majority of such chain restaurant locations.

This Health Code amendment will cover approximately 2,400 restaurants (10% of all FSEs). Clear and conspicuous posting of calorie information would be required on all menu boards and menus, as well as on food item display tags, adjacent or in close proximity, to the menu item, using a font and format that is at least as prominent in size as that used to post either the name or price of the menu item. This provision requires covered FSEs to make such information available to their customers in plain sight at the point-of-decision.

The prior version of §81.50 that is being repealed required that calorie information be included next to the listing of each menu item, and that calorie content values be posted in a size and typeface at least as large as the name or price of the menu item (and for menu boards, whichever size was larger). It also included an option for FSEs to propose alternative designs for making information available to patrons, but these alternative designs had to be at least as prominent as the means set forth in the Rule. The reenacted rule instead provides one, more flexible standard for displaying calorie information, incorporating the lessons learned by the Department from its analysis of many proposed alternative designs and its discussions with industry representatives. All of the alternative design elements that were considered approvable have been incorporated into the reenacted rule. Calorie information will have to be displayed as prominently as either the menu item's name or price, but not whichever is larger as was required by the former §81.50. Calorie information can be clearly associated with, rather than adjacent to, the menu item name or price, on the menu board or menu. Calorie information will also be provided on item tags where food is displayed. Information on item tags can substitute the use of ranges on the menu board where applicable. And, the current version allows for separate displays of calorie content information at drive-through windows. Because some of the alternative designs reviewed by the Department used font and background colors with poor contrast, however, a "format" requirement is being added to the equal prominence standard to ensure that calorie information can be easily read.

Under the prior rule, menu items for which calorie information was typically not made available, such as combination meals, would not have been covered. Because application of the reenacted rule will not be based on the prior provision of calorie information, calorie information for all menu items, including combination meals, will now be required to be posted.

In light of queries received about the definition of a menu, specific definitions of menus and menu boards were added.

This rule mandates posting only of calories, the single most important piece of nutrition information, at the point of selection. FSEs are, of course, not be precluded from providing additional nutrition information voluntarily. FSEs are also free to add disclaimers about possible slight variations from listed calorie content.

The Department's restaurant inspectors will be responsible for enforcing the requirement that nutrition information is provided on menu boards and menus.

In summary, the reenacted Health Code §81.50 is an important part of an integrated public response to the epidemic of obesity-the only condition of widespread public health importance in this country and this city that is getting worse, and getting worse rapidly. The restaurants covered by this calorie information regulation provide a large and increasing proportion of food consumed by New Yorkers, and consumption of high-calorie food in these establishments increases the risk of obesity, and with it, diabetes, heart disease, stroke, asthma, and cancer. Calories are by far the single most important piece of nutritional information, and currently this information is not accessible to consumers, who are unaware of and generally underestimate caloric content. There are consensus recommendations, broad evidence, and widespread scientific support for the rationale and soundness of this measure and its impact on health.

The measure is a narrowly tailored minimum requirement that has already been proven feasible to implement and does not in any way restrict communication of additional nutritional information. The rule focuses on chain restaurants, where the measure can be readily and accurately implemented, which account for a large and disproportionate proportion of meals served, and which serve food whose consumption has been clearly associated with excessive calorie intake and with obesity.

XI. Response to public comments

The Department received a total of 82 individual oral and written comments on the notice of intention: 65 were in favor, 13 were opposed and four were neither in support nor opposed.

In response to comments about certain menu items, such as salads where consumers choose from a range of standardized ingredients to create a fully customized offering, and where ingredients are posted on the menu, calorie information could be presented in one of two ways. It might be provided separately for each standardized ingredient. Alternatively, consistent with section 81.50 (c)(4)(i) of the rule, a range of calorie content information could be provided for a variety of ingredients, whether differentiated by type of ingredients or price.

66. Statement of Basis and Purpose in City Record Mar. 13, 2008:

The Department enforces provisions of the Health Code and other applicable laws intended to protect the safety of food served directly to the consumer throughout the City, including food that is commercially prepared and sold, or distributed for free, by food service establishments (FSEs), a broad category that includes restaurants, caterers (non-retail food processing establishments), mobile food vending units, and cafeterias.

The Board of Health hereby amends Article 81 of the Health Code to establish requirements enabling FSEs to use reduced atmosphere packaging food processing techniques that are not specifically addressed within either Article 81 or the State Sanitary Code. These processing techniques include reduced oxygen packaging (ROP) for storage and preservation of food, cook chill and **sous vide** processing. These new provisions codify minimal standards for such processes.

When Article 81 was repealed and reenacted in 1996, the food processing techniques that this amendment regulates were not commonly used in New York City FSEs. Increasingly, however, operators of FSEs are using food preparation techniques, including **sous vide** and cook chill processing, that are not currently regulated by specific provisions of Article 81 or the New York State Sanitary Code. Used properly, these techniques can extend the shelf life of a product and may improve the taste and quality of foods. However, these processing techniques, which extract air,

can create a significantly anaerobic environment that inhibits the growth of aerobic spoilage organisms, but may support pathogens that are either facultative (organisms capable of living under varying conditions, with or without oxygen) or anaerobic (able to live without oxygen), such as **Bacillus cereus, Staphylococci,** Listeria monocytogenes**, Clostridium perfringens**, and **Clostridium botulinum,** and it is therefore important to establish minimum food safety requirements for ROP processing.

Amend §81.03 Definitions

The following terms and definitions used in regulating these processes are being added to this section: aquatic animals, Hazard Analysis and Critical Control Point (HACCP) plan, critical control point, critical limit, cook chill processing, reduced oxygen packaging, packaging, **sous vide,** water activity (A_W), and the "pH" symbol for the negative logarithm of the hydrogen ion concentration.

Amend §81.06 Prevention of imminent health hazards

This section has been amended, adding a new subdivision (b), that describes the content of a HACCP plan whenever such plans are required by the Department or the Health Code to prevent the occurrence of imminent health hazards, and a new subdivision (c), prohibiting processing and preparation of certain foods without Department approval, and relettering the current provision as subdivision (a). The proposed HACCP plan requirements are modeled on those in the FDA 2005 Food Code §§8-201.12 and 8-201.14. When HACCP plans are required, they must be submitted to DOHMH for approval, then maintained at an FSE and be made available to DOHMH inspectors for review upon request. This provision explicitly authorizes the Department, as applicable, to require that an FSE submit additional information so that it may determine that food safety is not compromised by use of a proposed food processing technique, and it authorizes the Department to maintain the confidentiality of trade secrets that may be contained in HACCP plans when requested by an FSE.

The new provisions codify minimal standards for developing and implementing a HACCP plan. The HACCP plan outlines the FSE's formal procedures for use of the specific technique and when properly applied by the FSE enables safe use of the technique. HACCP plans were developed by the FDA's National Advisory Committee on Microbiological Criteria for Foods. Their use is widely recommended in the FDA's Food Code in a variety of potentially hazardous food preparation and processing techniques that the FDA considers high risk, where combinations of time and temperature differ from those specified in the Food Code, State Sanitary Code and Health Code, to promote food safety.

HACCP plan preparation requires consideration of each of the following:

1) Hazard analysis and risk assessment: the potential hazards associated with food processes at all stages are identified and the likelihood of occurrence is assessed.

2) Identification of critical control points (CCPs) in a process. CCPs are any points, procedures or operational steps that can be controlled during the process to eliminate a hazard or minimize its likelihood for occurrence.

3) Establishing critical limits for each CCP; determining target levels and tolerances to ensure each CCP is under control.

4) Establishing a monitoring schedule for each CCP. The system should ensure control of each CCP by scheduled testing, i.e., measuring temperature.

5) Establishing corrective action to be taken when a deviation occurs at a CCP, i.e., when monitoring indicates a CCP is out of control.

6) Establishing a record keeping-system to document each HACCP step.

7) Establishing a verification procedure enabling an FSE's food protection certificate holder, chef, and the Department to determine if the food processing operation conforms to the requirements of the HACCP plan.

Adding a new §81.12 Reduced oxygen packaging; cook chill and **sous vide** processing.

Reduced Oxygen Packaging

These new amendments to the Health Code will better inform FSE permittees of correct and safe procedures when utilizing reduced oxygen packaging (ROP) techniques, and will promote safer food processing by FSEs. ROP techniques include the following processes, which are defined in §1-201.10(B) of the 2005 FDA Food Code:

(1) Vacuum packaging, in which air is removed from a package of food and the package is hermetically sealed so that a vacuum remains inside the package.

(2) Modified atmosphere packaging, in which the atmosphere of a package of food is modified so that its composition is different from air but the atmosphere may change over time due to the permeability of packaging material or the respiration of the food. Such packaging includes reduction in the proportion of oxygen, total replacement of oxygen, or an increase in the proportion of other gases such as carbon dioxide or nitrogen.

(3) Controlled atmosphere packaging, in which the atmosphere of a package of food is modified so that until the package is opened its composition is different from air, and continuous control of that atmosphere is maintained, such as by using oxygen scavengers[1]11 or a combination of total replacement of oxygen, nonrespiring food, and impermeable packaging material.

(4) Cook chill packaging, in which cooked food is hot filled into impermeable bags which have the air expelled and are then sealed or crimped closed. The bagged food is rapidly chilled and refrigerated at temperatures that inhibit the growth of psychrotrophic pathogens.

(5) **Sous vide** packaging, in which raw or partially cooked food is placed in a hermetically sealed, impermeable bag, cooked in the bag, rapidly chilled and refrigerated at temperatures that inhibit the growth of psychrotrophic pathogens.[2]12

These processing techniques, which extract air, can create a significantly anaerobic environment that prevents the growth of aerobic spoilage organisms. These aerobic organisms are responsible for the off-odors, slime, and texture changes that are also warning signs of spoilage. The benefits of ROP include its ability to prevent degradation or oxidative processes in food products; retard the amount of oxidative rancidity in fats and oils; prevent color deterioration in raw meats caused by oxygen; and shrinkage of the food by preventing water loss.

Sous Vide

Sous vide, a specialized ROP cooking process, simply means "under vacuum." **Sous vide** cooking is favored by some food scientists and operators of FSEs who claim it provides the best possible heat transfer coefficient between the heat source and packaged foods during cooking, enables consistency of taste and texture, and makes it possible to store cooked products at a proper (i.e., under 38 F (3.3°C)) holding temperature for longer periods of time. There has been an increase in demand for **sous vide** processed foods which contain little or no chemical preservation, and are given a mild heat treatment in order to achieve a fresh cooked taste. **Sous vide** products rely on a combination of minimal processing and storage under controlled chill conditions to prevent growth of pathogenic organisms and achieve microbiological safety, unlike conventional thermally processed products which rely on thermal destruction of any pathogens present.[3]13 The **sous vide** cooking process is a pasteurization step that reduces bacterial load but is not sufficient to sterilize a product; thus making the food shelf-stable without temperature controls.[4]14 Psychrotrophic **C. botulinum** types E and B are the organisms of most concern to minimally processed chilled foods with an extended shelf life as they may be able to grow during storage and produce a powerful neurotoxin which, if ingested, would cause botulism.

Additionally, these organisms are able to survive the mild heat treatment and continue to live and grow in an oxygen free environment.

In **sous vide** processing, vacuum packaged cooked, partially cooked, raw ingredients or combinations of ingredients require immediate refrigeration or frozen storage until the package is thoroughly cooled. The process may involve some or all of the following steps:

(1) Preparing raw materials (this step may include cooking or partial cooking of some or all ingredients);

(2) Packaging the product, application of vacuum, and sealing of the package;

(3) Cooking the product for a specified and monitored time/temperature;

(4) Storage of the cooked product at or below 34 F (1.1 C) for 30 days, or 72 hours at 38 F (3.3 C); and

(5) Reheating of the **sous vide** packaged items to at least 140 F (60C) before opening and service.

Holding Temperatures for ROP Products

The new regulation requires that cold holding temperatures for all ROP products, regardless of processing methods, be lower than the cold holding temperatures currently provided for potentially hazardous foods in the Health Code. Most food borne pathogens are either anaerobes (able to multiply without oxygen) or facultative (able to multiply either with or without oxygen), requiring special care to control their growth. Refrigerated storage temperatures of 41F (5C) may be adequate to prevent growth and/or toxin production of some pathogenic microorganisms but **C. botulinum** and Listeria monocytogenes are better controlled at temperatures at or below 38F (3.3°C). Controlling these pathogens will control the growth of other food borne pathogens as well.

Packaging of Aquatic animals Using an ROP Method

The FDA **Food Code** currently recommends against ROP processing of any aquatic animal product at the retail level except frozen aquatic animals. Accordingly, this amendment will prohibit FSEs from processing fresh, unfrozen aquatic animals by ROP methods.

The Department supports stringent requirements for preparation and storage of aquatic animals processed by **sous vide** because research has shown that aquatic animals are subject to outgrowths of **C. botulinum** type E when improperly heated.[5]15**C. botulinum** type E is naturally occurring in marine organisms, and will grow at refrigeration temperatures as low as 37.2°F (2.9°C.). Aquatic animals that may contain this microorganism include, but are not limited to salmon, trout, herring, whitefish, cod, plaice, eel, pollack, flounder and flatfish. The localization of contaminating spores of **C. botulinum** type E differs among aquatic animal species. Some aquatic animals species are contaminated in the intestines and viscera, some in the gills and the peritoneum, while others are contaminated on the outer surfaces (skin and fins). In some cases, strains have been isolated from internal organs and surface area of the same aquatic animals.

The presence of spores in the internal organs and skin of fish is a reflection of the general contamination of the environment, feed and water of the harvest area. However, the germination of spores, growth of vegetative cells and production of toxins in fishery products is due to a number of factors: the exposure of aquatic animals to temperature danger zones between time of harvest and delivery to food service or processing establishments; further exposure to temperatures in the danger zone during preparation or processing in the establishments; subjection to mild heat treatments or insufficient cooking temperatures; untrained or careless food workers' introduction of spores into the tissues and carcasses of the aquatic animals during preparation; and subsequent subjection of the finished (fishery) products to refrigerated storage temperatures warmer than 38°F (3.3°C).

Factors that may control **C. botulinum** type E growth and toxin production include efficient heat treatment (194° F or 90° C for 10 minutes), restricted shelf life, pH below 4.6, and holding temperatures at or below 37.4°F (3°C). In order for a food borne type E botulism outbreak to occur, a combination of the following four prerequisites must be present: the aquatic animals is already contaminated by type E spores from the environment; processing of the food is inadequate to inactivate type E spores, and there are inadequate holding temperatures, or the product is recontaminated after processing; or food is consumed without cooking or after insufficient heating. Thus, relative to other proteinaceous foods, there is concern that aquatic animals and aquatic animal products may be undercooked and that pathogens could survive in apparently cooked products. To require that aquatic animals be frozen during all stages of processing eliminates these hazards.

Sous Vide Cooking Temperatures

Cooking temperatures are one of the prime factors that control the growth of pathogens in food. For cooking temperatures to be effective in reducing pathogens, the following factors are to be considered: the pathogenic bacteria count prior to cooking; the initial holding temperature of the raw product; and the product mass and characteristics that affect the time the product takes to reach its intended internal cooking temperature. To eliminate microorganisms and pathogens through cooking, the product must be held at a sufficient temperature for a specified kill time. Cooking temperatures in the Health Code are based, in part, on the biology and chemistry of specific pathogens that are associated with certain protein-based foods, and are also required to be consistent with the New York State Sanitary Code.[6]16 To assure that heat treatment of a **sous vide** product is safe, the Department will require that FSEs cook food to temperatures required by §81.09 of the Health Code.

Requiring a Hazard Analysis Critical Control Point (HACCP) Plan for ROP

The use of the Hazard Analysis Critical Control Point or HACCP approach is probably the single most important strategy for controlling the safety of a food product. It has been demonstrated scientifically that the application of a combination of different multiple inhibitory factors like water activity (A_w) of 0.91 or less, pH of 4.6 or less, and high levels of competing microorganisms can impede the growth of these virulent facultative anaerobic organisms in vacuum packaged foods. However, **sous vide** and cook chill processes lack these barriers, and therefore depend on monitoring of critical limits, such as time and temperature for safety.[7]17 A HACCP plan is the recognized standard for monitoring critical limits in food processes and assuring food safety. The lack of inhibitory factors (e.g., aerobic bacteria) makes **sous vide** and other ROP processes high risk for transmission of food borne illness.

The importance of a HACCP plan for ROP methods of food processing like **sous vide** in FSEs begins with an understanding that the raw food received from the wholesale supply system is normally contaminated with either or both vegetative cells and/or spores of pathogenic microscopic organisms, some naturally occurring in their environment (e.g. finfish and other seafood),[8]18 and that the majority of the most virulent are either anaerobes or facultative anaerobes,[9]19 with a competitive advantage enabling them to survive and grow better in reduced oxygen environments,[10]20 such as vacuum sealed food bags, than in the presence of aerobic spoilage organisms. In addition, several studies have shown that further contamination of food, growth of pathogens, and production of toxins more often than not occur in the FSE due to the exposure of food to unsanitary environmental factors and production processes, such as preparation and preservation of food by untrained and inexperienced food workers. Since scientific evidence has shown that the inactivation of some of these pathogens, especially their spores, and destruction of toxins require temperatures far higher than the minimal heat processing usually employed for the production of most vacuum packaged foods, like **sous vide**, documented application of safety procedures must therefore be guaranteed,[11]21 and the only tested, proven and up-to-date procedure that guarantees drastic reduction of hazards to a safe level is use of a HACCP plan.

The new §81.12 of the Health Code will allow FSEs to package and process food using cook chill or **sous vide** methods, provided they submit and obtain approval from the Department for a HACCP plan conforming with the new §81.06(b) of the Health Code for each food item to be processed using one of these techniques.

67. Statement of Basis and Purpose in City Record Mar. 13, 2008:

The New York City Department of Health and Mental Hygiene (the Department or DOHMH) is required by law to protect and promote the health of all New Yorkers. The Bureau of Child Care, in the Department's Division of Environmental Health, enforces Article 47 ("Day Care Services") of the Health Code, which regulates public and private group day care services operating within New York City.

Background

At its October 24, 2007 meeting, the Board of Health approved for publication for public comment a further resolution to repeal and reenact Article 47, updating its provisions, and harmonizing them with comparable provisions of the New York Social Service Law (SSL) and the regulations of the State Office for Children and Family Services applicable to child day care in other parts of the State. An earlier resolution was authorized for publication by the Board of Health at its meeting in March, 2007, and a public hearing was held April 19, 2007. This resolution contains changes made in response to comments received at both hearings. The major difference between the two resolutions was the removal of the application of Article 47 to child care programs for children between the ages of three and five who attended any elementary schools.

Child care programs are essential for many working families. Beyond providing child development, education, recreation and a safe and structured environment for children while their parents work, they contribute to the emotional and social growth of children by building a sense of community, fostering intergenerational relationships, and providing first hand experiences in areas of learning. Children develop skills that strengthen character and promote friendships.

There are currently 2,084 group day care services in New York City holding DOHMH permits, 40 LYFE ("Living for the Young Family through Education") programs operated by the New York City Department of Education (DOE) in schools (offering infant toddler care for children of DOE students) and 1,065 private and/or religious organizations known to DOHMH which provide day care services. Under the current Article 47, neither DOE nor religious schools are required to hold a permit to operate a day care service if the service is part of an elementary school. DOE kindergartens are also exempt from any permit requirements. Although most other Article 47 requirements are currently applicable to "NPR" (for "no permit required") day care services operated by religious schools, unless complaints are received, they have in the past rarely been inspected.

In the Notice of Intention published March 13, 2007, the Department proposed that religious schools' early child care programs be required to obtain permits. This aspect of the proposed Health Code reenactment received favorable comment from children's advocacy organizations, but was opposed by the operators of the religious schools. Initially, at the request of the NPR community, the public comment period was extended, and the Department discussed with the organizations operating such schools how to reconcile their desire not to have their religious instruction programs be regulated at all with the Department's efforts to require that essential health and safety needs of the youngest children attending such school programs be addressed. These discussions resulted in a decision by the Department to recommend to the Board that this proposal be further amended so that no programs for children ages three through five in any public or non-public elementary school would be subject to the provisions in Article 47. Instead, the most compelling requirements affecting pre-kindergarten and kindergarten school children's health and safety will be incorporated in an amended Article 45 ("General Provisions Governing Schools and Children's Institutions"). Accordingly, Article 47 as originally published has been further revised to delete from the definition of "child care service" all pre-kindergarten and kindergarten programs operated within or as part of an elementary school. However, a child care service will continue to be defined as any program providing services for children younger than three years of age regardless of whether the program is located within or is part of an elementary school, provided that the majority of children in the school-based program will not have their third birthday before December 31st of any calendar year. In addition, the Article provides for voluntary permitting for school-based child care services for children three through five years of age.

There has been no substantive revision of Article 47 since 1988, and professional standards and expectations, as well as the regulatory environment for day care have changed considerably since that time. In 1997, the State assumed regulation (through registration and licensing) of all residential based group family and family day care homes for smaller groups of children under six years of age, including those in this city, and for all school age child care programs, generally after school programs for children ages five through 12. At the same time, the State Office of Family and Children's Services was designated to adopt rules for various kinds of day care programs statewide. These rules do not apply to Article 47 group child care facilities in New York City, but have served as a model, wherever practicable, for many provisions of the reenacted Article 47. The amended definition of "child care service" is consistent with the definition of "child day care" in state Social Services Law §390 (1)(a)(ii)(D), which excludes "a kindergarten, pre-kindergarten, or nursery school for children three years of age or older, . . . operated by a public school district or by a private school or academy which is providing elementary or secondary education or both, in accordance with compulsory education requirements of the education law, provided that the kindergarten, pre-kindergarten, nursery school, or after school programs is located on the premises or campus where the elementary or secondary education is provided."

Article 47 Changes

The Department received a substantial number of comments from the public in response to publication of both resolutions. The resolution adopted by the Board contains substantially the same text as that contained in the original resolution published for public comment in April, 2007, with further revisions made in response to public comments on teacher qualifications, teacher training requirements and instructional swimming. Further substantive changes to the original proposal are described in each of the following section summaries.

§47.01 Definitions. Most of the terms used in this Article are newly defined. The term "child care service" replaces the term "day care service" and will apply to any program, day or night, that provides child care services for three or more children under six years of age for five or more hours per week, and that operates for more than 30 days during any 12-month period. Neither the term nor this Article will be applicable to pre-kindergarten or kindergarten classes that are a part of or are located within any public or non-public elementary school, except for those offering child care services for children under three years of age. The Department of Education's (DOE's) LYFE infant/toddler programs, which are not otherwise regulated, are the only DOE-based child care programs that will need a DOHMH permit. In response to comments, it has been further clarified that kindergarten or pre-kindergarten classes that are within or "part of an elementary school" may be located in separate buildings than the elementary school, but must be under identical ownership, operation, management and control. All programs for children under three years of age regardless of where located will require permits from the Department. Additional definitions have been included for the terms "Fill and draw pool" and "Spa pool" to clarify those terms when used in the new provisions allowing swimming and the term "volunteer."

§§47.03, 47.05, 47.07 and 47.09 Permit requirements. Article 47 no longer exempts from permit requirements any child care service which otherwise comes within the revised definition. Prospective permittees will be required to attend pre-permit orientation where DOHMH staff will outline Article 47 requirements and answer questions. All permits will now be for two years. Permits will only be issued if all pre-permitting staff child abuse registry and criminal justice screening requirements are complied with, and the written health and safety plan required by §47.11 has been submitted and approved by DOHMH. Operators of school based child care services that are no longer required to hold permits under Article 47 may voluntarily apply for and be issued permits, if they need to demonstrate that they are in compliance with Article 47's requirements.

§47.11 Written safety plan. This is a new requirement. The written health and safety plan will aid in maintaining the health, safety and security of children and staff members. The written safety plan is intended to serve as the standard operating policies and procedures for the safe operation of a child care service. The plan will cover how the requirements of Article 47 are to be implemented with respect to medical supervision and health of children, medication administration, facility operation, maintenance, fire safety, specific activity safety, staff training, parent/child

orientation, and proper supervision. An initial plan will be reviewed and approved for all new permit applicants and updated as necessary upon permit renewal or if there are substantial changes in program operation. The Department will provide a model for preparing such plans.

§§47.13, 47.15, 47.17 Teaching staff qualifications. These provisions have been updated and are consistent with current New York State Department of Education requirements for early childhood certified teachers, as well as OCFS regulations. In response to public comments, §47.13 has been further amended to allow current group teachers with a baccalaureate degree and five years' teaching experience to continue to hold these positions.

§§47.19 and 47.21 Criminal justice and child abuse screening and corrective action plans. The current requirements have been expanded and set forth in greater detail, and are consistent with those imposed on State regulated child care programs by OCFS. Corrective action plans will be required if staff are reported as having confirmed or pending criminal histories or child abuse complaints, and the permittee elects to maintain the staff person at the child care service. The Department will provide models for preparing such plans.

§47.23 Supervision; staff to child ratios and group size. These provisions have been reformatted in charts for simplification and easy reference. All staff/child ratio requirements remain the same. For infant/toddler programs, staff ratios have been changed to allow either one teacher for every four children (1:4) or one teacher for three children (1:3); programs that maintain only a 1:4 staff ratio must demonstrate through their Written Safety Plan that they have a staff to child ratio of 1:3 available if they need to safely evacuate children younger than 12 months of age during emergencies. In addition, in response to a comment from the Administration for Children's Services the staff: child ratio the staff:child ratio for a group of children of mixed ages may be determined by the predominant age of the children in the group, provided the children are of contiguous ages.

§§47.25, 47.27, 47.29, 47.31, 47.33 Health of children and staff. These provisions have been updated as necessary to reflect current pediatric recommendations for well-child care, and other Health Code requirements for control of communicable diseases, and to incorporate regulations for administration of medication to children that are consistent with those of the OCFS (see, 18 NYCRR Part 18-1 and Part 18-2). The requirement that new staff hires be tested for tuberculosis infection has been eliminated since this group is at relatively low risk for tuberculosis. There is also a new provision that requires that medical information maintained in the child care service be confidential. The provisions are otherwise in most respects substantively the same as those in the current Article 47.

§47.35 Personal hygiene practices. This section consolidates various existing provisions.

§47.37 Training. Current §47.19 (d) requires training in establishing a health plan, recognizing and controlling infectious diseases and child abuse prevention. This new provision is modeled on training required for OCFS licensed programs elsewhere in the State, makes the educational director responsible for training, specifies a number of new training requirements and authorizes the DOHMH to approve or certify certain kinds of trainers. The Department initially received comments objecting to the extended training, and requesting that training frequency be reduced, since training in many areas may not be necessary for certified teachers, and that most child care services lack resources to support such training. In response to initial comments, the Department reduced the amount of training required and received comments supporting the need for additional training, especially for uncertified teaching staff. In an effort to strike a balance in the final resolution, minimum training is required for all staff in child abuse prevention and recognition, for teaching staff in infection control, and additional training is required for less qualified infant and toddler, night program and assistant teachers.

§47.39 Space allowance. This section consolidates similar current provisions in §47.29

§47.41 Indoor physical facilities. This section restricts infant/toddler programs to the first (ground) floor and one below ground level floor to facilitate evacuation of the youngest children in emergencies. Child care services for older children will be restricted to the third or lower floors for the same reason. Window guards will be required for all

windows because the Department believes that there is no "safe" distance to the ground for any child with access to an open window.

§47.43 Plumbing. This section consolidates provisions in current §47.39, makes child:toilet ratios applicable to children over 24 months of age; and requires toilet facilities for all children to be as close as practicable to classrooms and play areas. The requirement as originally published, requiring toilet facilities to be adjacent to classrooms and play areas of children under three years of age, would have been impossible for many existing facilities to comply with.

§47.45 Ventilation and lighting. This section is derived from current §47.29 (f) and (g), with additional requirements for control of specific defined indoor air quality nuisances.

§47.47 Outdoor play areas. This section is derived from current §47.35, and clarifies safety criteria for resilient surfaces under play equipment, and adds restrictions on use of rooftop play areas in non-fireproof buildings.

§47.49 General sanitation and maintenance. This section is derived from current §47.31 and adds requirements for use of environmentally sensitive cleaning products in accordance with Education Law §409-i.

§47.51 Rodents, insects and other pests prohibited; pesticide application notice. Current provisions in §47.31 have been amended and a requirement for notification of parents when pesticides are applied has been added, in accordance with Social Services Law § 390(c).

§47.53 Pet animals. This section has been amended to be consistent with Article 161 of this Code.

§47.55 Equipment and furnishings. New section including provisions from current §§47.31, 47.33 and 47.39, adding a prohibition on use of stackable cribs. The section has been further modified in response to comments to allow pillows to be used when recommended by a child's health care provider for orthopedic support.

§47.57 Safety; general requirements. Includes provisions from current §§ 47.29 and 47.41; adds requirements addressing concerns on heat advisory days; explicitly prohibits co-location of new child care services in buildings that contain environmental hazards such as dry cleaners, gas stations and power plants. In response to public comments, the original prohibition on swimming has been modified; subdivision (i) enables child care services to offer instructional swimming but maintains a requirement of barriers to water access.

§47.59 Fire safety. Includes provisions from current §§47.41 and 47.46.

§47.61 Food and food safety. Includes provisions from current §47.37; requires the person in charge of food operations to hold a food protection certificate issued pursuant to §81.15 of this Code. No child care service will also be required to hold a permit pursuant to Article 81, but will be responsible for compliance with that Article.

§47.63 Lead-based paint restricted. Renumbers current §47.44; adds restrictions on lead in soil in outdoor areas of a child care facility used by children.

§47.65 Transportation. Renumbers current §47.43; adds requirements for child restraints in vehicles transporting children.

§47.67 Child development policies, program, rest periods and clothing. Renumbers current §47.33; updates requirements for appropriate use of surveillance technology.

§47.69 Night care. Renumbers current §47.46; adds requirements for maintaining information about child's bedtime routines; limits time in night care to 12 hours.

§47.71 Physical activity and limits on television viewing. Renumbers and combines current §§47.35 and 47.36; and is otherwise unchanged.

§47.73 Required postings. Renumbers §47.03; adds notice about obtaining copies of inspection reports by calling the City's 311 telephone information number.

§47.75 Modification of provisions. Renumbers §47.47 without substantive change.

§47.77 Closing and enforcement. Renumbers and clarifies current § 47.49; adds provisions that operating a child care service without a permit shall be deemed an imminent health hazard and shall result in the closing of the service; authorizes the Department to close a service for imminent health hazards; allows Department discretion to allow continued operation with additional requirements of child care services with imminent health hazards to promote maximum degree of child safety; and authorizes Department to padlock facilities that have been ordered closed but that continue to operate in violation of a Commissioner's order. Imminent health hazard is defined in new §47.01 as any condition, such as lack of adequate supervision, that could be expected to be result in illness, physical injury or death of a child or children in care. Observation of such conditions would result in immediate closure of a child care program. Such a provision will harmonize Article 47 with more modern provisions of OCFS regulations for State-regulated child care programs, and reflect the policies and concerns underlying related child health and safety regulations, such as those governing day camps in Subpart 7.2 of the New York State Sanitary Code and Article 48 of the Health Code.

§47.79 Construction and severability. Applies the provisions in Health Code §3.33 specifically to this Article.

68. Statement of Basis and Purpose in City Record Mar. 13, 2008:

As part of a comprehensive review of the Health Code to assess its efficacy in protecting the public health, various provisions of the Health Code are being updated to assure that it provide the adequate legal tools for the Board and the DOHMH to effectively address the City's current and future public health needs. As part of this broad revision of the Health Code, Article 1 is repealed and reenacted so as to, in large part, update definitional terms used throughout the Code and to eliminate outdated terms.

69. Statement of Basis and Purpose in City Record Mar. 13, 2008:

Certain sections of Article 9 of the Health Code are amended pursuant to a comprehensive review of the Health Code. As a result of this assessment of the Health Code, §§9.01, 9.03, 9.05 and 9.07 are amended to eliminate unnecessary terms and language. Importantly, the amendment would allow the public to submit petitions electronically by facsimile or electronic mail.

In accordance with Charter Subdivision 1043(f), any person may petition an agency to consider the adoption of any rule and each agency is to prescribe by rule the procedure for submission, consideration and disposition of such petitions. Article 9 provides procedures for how the public may petition the Board to adopt a rule in the Health Code.

70. Statement of Basis and Purpose in City Record June 11, 2008:

Local Law No. 9 of 2008 amends Subchapter 2 of Chapter 3 of Title 17 of the Administrative Code of the City of New York by authorizing the Commissioner of Health and Mental Hygiene to issue up to one thousand (1000) newly created "fresh fruits and vegetables permits", as defined in §17-306(r) of the Administrative Code. Unlike other full term permits issued pursuant to Subchapter 2, these permits authorize the holders thereof to vend only "fresh fruits and vegetables". "Fresh fruits and vegetables" is defined, in part, in §17-306 (q) as the "unprocessed unfrozen raw fruits and vegetables that have not been combined with other ingredients."

Local Law 9 also establishes a new type of pushcart called a "green cart", which must comply with standards established by the Commissioner, and which is to be used exclusively by those issued fresh fruits and vegetables permits. No food vendor issued a fresh fruits and vegetables permit shall be authorized to vend from other than a "green cart" or vehicle or to vend any food other than fresh fruits and vegetables from the vehicle or green cart for which the fresh fruits and vegetables permit was issued. The initial issuance of these 1000 fresh fruits and vegetables permits shall

be phased in over a two year period. No more than five hundred (500) permits shall be issued during the first year of permit availability, with no more than one-half designated for use in each borough to be issued during the first year. During the second year of permit availability, the Commissioner may issue the remaining 500 permits along with any permits not issued during the first year of permit availability. Each of the 1000 fresh fruits and vegetables permits issued pursuant to Local Law 9 shall be designated for use exclusively in the designated areas of boroughs in the numbers authorized by that law. Local Law 9 further requires that preferences shall be given in the issuance of fresh fruits and vegetables permits and in the placement on any borough specific waiting lists for such permits to persons on any existing mobile food unit permit waiting list on the effective date of this local law, with additional preference given to those on these lists who are also disabled veterans, disabled persons and veterans, in that order of priority. Disabled veterans, disabled persons and veterans who are not on any existing mobile food unit permit waiting lists shall also be given preferences, as specified in §17-307(b)(4)(e).

It is the Department's experience that the demand for mobile food unit permits generally exceeds their availability as fixed by statutory maximums. Accordingly, it is anticipated that the demand for fresh fruits and vegetables permits will also exceed their limited availability. Accordingly, a fair, orderly and efficient procedure is needed for persons to communicate to the Department their interest in applying for fresh fruits and vegetables permits and for the Department to issue these permits. A new Chapter 26 is adopted. Section 26-02 of the rule directs the Department to establish five separate waiting lists, one for each borough of the City. Section 26-03 establishes preferences to be given on these borough specific waiting lists to certain categories of persons, specifically to those persons on any existing mobile food unit waiting list on the effective date of Local Law No. 9 of 2008, with additional preference to be given to those on existing waiting lists who are also disabled veterans, disabled persons and veterans, in that order of priority or preference. Section 26-03 further provides that preferences on these borough specific fresh fruits and vegetables permit waiting lists shall also be given, as specified in §17-307(b)(4)(e), to those not on any existing mobile food unit permit waiting lists on the effective date of Local Law 9 of 2008 but who are disabled veterans, disabled persons and veterans, in that same order of priority. Section 26-04 provides that only those persons holding valid mobile food vendor licenses at least ten (10) days prior to the Department's establishment of the borough specific waiting lists for fresh fruits and vegetables shall be eligible for placement on any of the lists established pursuant to this Chapter. Section 26-05 describes the notice to be provided to prospective applicants for newly issued fresh fruits and vegetables permits and for those seeking position(s) on any of the waiting lists. Section 26-06 describes the procedures to be followed for requesting position(s) on these lists. The remaining provisions of new Chapter 26 specify how the waiting lists are to be established and administered for those seeking fresh fruits and vegetables permits.

The original proposal published for public comment was slightly modified to take into consideration borough choice rankings assigned by waiting list applicants, in addition to any preference category or additional preference within a preference category, prior to the randomization and establishment of a borough specific waiting list. Section 26-03 was changed to provide that, among those applicants having the same weighted value based on any preference category and additional preferences within that category, borough rankings identified by persons on their waiting list applications would be a factor in their placement on borough specific waiting lists. Section 26-07, as modified, goes further in specifying that "those applicants specifying a borough as a preferred choice in which to operate shall be given preference on that borough's waiting list over those identifying that borough as a lesser choice." These changes were made to the original proposal because it will lead to a more orderly result after randomization and list establishment. The names of persons within the highest preference group and selecting a particular borough would be randomized followed by randomization of those persons in the highest group who ranked that same borough as their second choice, followed by those in the highest preference category selecting that borough as their third choice etc. More importantly, taking borough choice rankings into consideration before randomization and list establishment should result in giving potential vendors, within the limitations of their preference group, their first borough of choice and thereby maximizing the likelihood that they will apply for a permit and commence vending fresh fruits and vegetables.

Finding of Substantial Need for Earlier Implementation

I hereby find, pursuant to §1043, subdivision e, paragraph (1), subparagraph (c) of the New York City Charter, that

there is a substantial need for the immediate implementation of Chapter 26 of Title 24 of the Rules of the City of New York. This rule is necessary for the implementation of Local Law No. 9 of 2008, which becomes effective June 11, 2008. This law authorizes the Commissioner of Health and Mental Hygiene to issue up to one thousand newly created "fresh fruits and vegetables permits" authorizing the holders thereof to vend only fresh fruits and vegetables in designated areas and in numbers authorized by that law. Chapter 26 articulates the procedure to be followed by persons to communicate to the Department their interest in applying for fresh fruits and vegetables permits and for the Department to issue these permits. It provides for the establishment of five borough specific permit waiting lists and assigns preferences to be given on these borough specific waiting lists to various categories of persons, in accordance with the local law.

Local Law No. 9 is scheduled to become effective on June 11, 2008 and these rules are necessary for the law's effective implementation. The Notice of Intention to adopt Chapter 26 of Title 24 of the Rules of the City of New York was published in the City Record on April 10, 2008 and a public hearing on this rule was held on May 13, 2008. In addition, the notice to comment on the rule was extended until May 29, 2008. Adherence to the thirty day post-publication requirement set forth in §1043 of the Charter would mean that this rule would not take effect until some time after June 11, 2008. Simultaneous implementation of this rule on the effective date of the law, June 11, 2008, would allow for the law's immediate implementation and help avoid public and regulatory confusion.

71. Statement of Basis and Purpose in City Record June 11, 2008:

Local Law No. 9 of 2008 amended Subchapter 2 of Chapter 3 of Title 17 of the Administrative Code authorizing the Commissioner of Health and Mental Hygiene to issue up to one thousand (1000) newly created "fresh fruits and vegetables permits", as defined in §17-306(r) of the Administrative Code, which unlike other full-term permits issued pursuant to Subchapter 2, solely authorizes the holder thereof to exclusively vend "fresh fruits and vegetables". Local Law No. 9 of 2008 also established a new type of pushcart called a "green cart," which is defined in §17-306(s) of the Administrative Code as a "pushcart used exclusively by those issued fresh fruits and vegetables full-term permits" and which "must also have a distinctive and easily recognizable appearance in accordance with rules to be established by the commissioner". Section 6-01(m)(1) of Title 24 of the Rules of the City of New York provides that all green carts shall have permanently affixed on two sides of each cart either identical permit plates or identical permit decals that are easily identifiable and distinguishable from all other pushcart decals. Section 6-01(m)(2) provides that all green carts must use the distinctive and readily identifiable green cart umbrella to be provided by the Department. During the initial two-year phase in period that fresh fruits and vegetables permits are to be offered such umbrellas shall be provided, on a one time basis, free of charge to cart owners. Thereafter, for all replacement umbrellas and umbrellas provided by the Department after the initial two-year phase in period, green cart owners will be required to pay a fee to the Department reimbursing it for the cost it incurred in purchasing each such umbrella. Section 6-01(m)(2) would further require that green cart umbrellas be safely secured and maintained in good condition and repair at all times and that they be used whenever the green carts are being used to vend.

Finding of Substantial Need for Earlier Implementation

I hereby find, pursuant to §1043, subdivision e, paragraph (1), subparagraph (c) of the New York City Charter, that there is a substantial need for the immediate implementation of this amendment to Chapter 6 of Title 24 of the Rules of the City of New York. This rule is necessary for the implementation of Local Law No. 9 of 2008, which becomes effective June 11, 2008. This law authorizes the Commissioner of Health and Mental Hygiene to issue up to one thousand newly created "fresh fruits and vegetables permits" authorizing the holders thereof to vend only fresh fruits and vegetables in designated areas and in numbers authorized by that law. Local Law No. 9 also establishes a new type of pushcart called a "green cart" which must comply with standards established by the Commissioner, and which is to be used exclusively by those issued these permits. Local Law No. 9 also requires that a "green cart" have a "distinctive and easily recognizable appearance in accordance with rules to be established by the commissioner". This amendment to Chapter 6 of Title 24, specifically the addition of §6-01(m), requires that all green carts have permanently affixed on two sides of each green cart either identical permit plates or identical permit decals that are easily identifiable and

distinguishable from all other pushcart decals. It also requires that all green carts use a distinctive and readily recognizable "green cart" umbrella to be provided by the Department.

Local Law No. 9 is scheduled to become effective on June 11, 2008 and this rule is necessary for the law's effective implementation. The Notice of Intention to adopt Chapter 6 of Title 24 of the Rules of the City of New York, by adding a new §6-01(m), was published in the City Record on April 10, 2008 and a public hearing on the rule was held on May 13, 2008. In addition, the comment period was extended until May 29, 2008. Adherence to the thirty day post-publication requirement set forth in §1043 of the Charter would mean that this rule would not take effect until some time after June 11, 2008. Simultaneous implementation of this rule on the effective date of the law, June 11, 2008, would allow for the law's immediate implementation and help avoid public and regulatory confusion.

72. Statement of Basis and Purpose in City Record June 11, 2008:

Local Law No. 9 of 2008 amended Subchapter 2 of Chapter 3 of Title 17 of the Administrative Code authorizing the Commissioner of Health and Mental Hygiene to issue up to one thousand (1000) newly created "fresh fruits and vegetables permits", as defined in §17-306(r) of the Administrative Code, which unlike other full-term permits issued pursuant to Subchapter 2, solely authorize holders thereof to exclusively vend "fresh fruits and vegetables". Local Law No. 9 of 2008 also established a new type of pushcart called a "green cart," which is defined in §17-306(s) of the Administrative Code as a "pushcart used exclusively by those issued fresh fruits and vegetables full-term permits" and §17-307(b)(4)(b) of the Administrative Code designates specific police precincts within the City of New York within which fresh fruits and vegetables permits may be used. Pursuant to §17-307(b)(4)(c) of the Administrative Code, however, the commissioner may within eight months of its effective date exempt by rule any such police precinct upon determining that the rate of consumption of fresh fruits and vegetables in that precinct is not substantially lower than the citywide average and that the precinct does not have an elevated rate of nutrition-related health problems compared to the rest of the city.

Local Law No. 9 of 2008 was enacted to make fruits and vegetables more accessible in underserved neighborhoods. Since its enactment, the Department has refined its ability to estimate the rate of consumption of fruits and vegetables in those police precincts where fresh fruits and vegetables permits may be used pursuant to §17-307(4)(b) of the Administrative Code. Using consumption data at the zip code level, more precise estimates of consumption in each precinct were calculated than were previously derived from larger area estimates. Citywide, 14.5 percent of residents reported when surveyed that they had consumed no fruits or vegetables on the previous day. With its revised methodology, the Department now estimates that the rate of consumption of fruits and vegetables is not lower than the citywide average in two police precincts currently covered by Local Law No. 9, specifically the 45th precinct in the Bronx and the 72nd precinct in Brooklyn. The Department has also evaluated the health status of the residents of these two precincts, comparing their rates of hospitalization for heart disease, cancer and diabetes, as well as their rates of obesity and diabetes, with the overall rates for city residents. All of the specified hospitalization rates for these two precincts were either comparable to or lower than the citywide averages. According to self-reported survey data, rates of diabetes were comparable to the citywide average for both precincts; the rate of obesity was comparable to the citywide rate for one precinct, but was higher than the citywide rate for the other. Taken together, these multiple data points fail to demonstrate that either precinct has an overall elevation of nutrition-related health problems compared to the rest of the City. Based on these findings, the Department proposes that the 45th and 72nd police precincts be exempted by rule as designated areas within which fresh fruits and vegetables permits may be used to vend.

Finding of Substantial Need for Earlier Implementation

I hereby find, pursuant to §1043, subdivision e, paragraph (1), subparagraph (c) of the New York City Charter, that there is a substantial need for the immediate implementation of this amendment to Chapter 6 of Title 24 of the Rules of the City of New York removing two police precincts from those areas previously designated for vending by those issued fresh fruits and vegetables permits. This rule, which adds a new §6-01(o) to Chapter 6, is necessary for the

implementation of Local Law No. 9 of 2008, which becomes effective June 11, 2008. Local Law No. 9 of 2008 authorizes the Commissioner of Health and Mental Hygiene to issue up to one thousand newly created "fresh fruits and vegetables permits" authorizing the holders thereof to vend only fresh fruits and vegetables in designated areas and in numbers authorized by that law. Local Law No. 9 also designated the police precincts within the City in which fresh fruits and vegetables permits may be used, specifically areas within the City where the rate of consumption of fruits and vegetables was below the citywide average.

Pursuant to §17-307(b)(4)(c) of Local Law No. 9 the Commissioner of Health & Mental Hygiene is authorized within eight months of the effective date of this law to ". . . exempt by rule any such police precinct upon determining that the rate of consumption of fresh fruits and vegetables in that precinct is not substantially lower than the citywide average and that the precinct does not have an elevated rate of nutrition related health problems compared to the rest of the city." Since the enactment of this law the Department has refined its ability to estimate the rate of consumption of fruits and vegetables in those police precincts where fresh fruits and vegetables permits may be used pursuant to Local Law No. 9. With its revised methodology the Department now estimates that the rate of consumption of fruits and vegetables is not lower than the citywide average in two police precincts currently covered by Local Law No. 9, specifically the 45th and 72nd precincts. The Department has also evaluated the health status of the residents of these two precincts using newly obtained data and has determined that neither precinct has an overall elevation of nutrition-related health problems compared to the rest of the City. Based upon these findings, the Department intends that the 45th and 72nd precincts be exempted by rule as designated areas within which fresh fruits and vegetables permits may be used to vend.

Local Law No. 9 is scheduled to become effective on June 11, 2008 and this rule is necessary for the law's effective implementation. The Notice of Intention to amend Chapter 6 of Title 24 to exempt these two precincts from the coverage of Local Law No. 9 was published in the City Record on April 28, 2008 and a public hearing on the rule was held on May 29, 2008. Adherence to the thirty day post-publication requirement set forth in §1043 of the Charter would mean that the rule would not take effect until some time after June 11, 2008. Simultaneous implementation of this rule on the effective date of the law, June 11, 2008, would allow for the law's immediate implementation and help avoid public and regulatory confusion.

73. Statement of Basis and Purpose in City Record June 26, 2008:

Introduction

As part of a comprehensive review of the Health Code to assess its efficacy in protecting the public's health, the Article 7 of the Health Code has been updated so that it can provide the adequate legal tools to effectively address the City's current and future public health needs relative to the Department's Administrative Tribunal. Several of the provisions are without substantive change but have been reorganized such that the Article and its provisions flow in a more coherent and streamlined manner. The revisions reflect modern thinking about public health, public health law and due process. The revisions also reflect the current practices of the DOHMH and the Administrative Tribunal, including enforcement needs within the DOHMH and the need to conform the Article to the City Administrative Procedure Act as provided for in the New York City Charter. To that end, the Board has repealed and reenacted Article 7 as provided below. Changes made in response to public comments are indicated as well.

Section 7.01

This section officially establishes the Administrative Tribunal pursuant to §558 of the Charter.

Section 7.03

This section establishes the jurisdiction, power and duties of the Administrative Tribunal and its hearing examiners. The Tribunal's practices must be consistent with §1046 of the City Charter, thus ensuring compliance with the City Administrative Procedure Act. In addition to the powers provided for in current Article 7, certain powers have

been added that are inherent to the orderly conduct of hearings, such as the issuance of subpoenas for testimony or other evidence that is under the control of DOHMH and the authority to bar from continued participation in a hearing any person, including a party, authorized representative or attorney, witness or observer, who engages in disorderly, disruptive or obstructionist conduct, in order to maintain order and decorum and allow for efficient and expedient hearings.

Section 7.05

§7.05 provides for the organization of the Administrative Tribunal. The head of Adjudications at the Administrative Tribunal will be the Director who is responsible for the conduct of hearings and for all adjudicative matters of law, except that he or she will not be vested with the powers and duties of the Review Board. The Director appoints hearing examiners to exercise the powers and duties and discharge the responsibilities of the Administrative Tribunal with regard to adjudications. In this connection, the Director is able to assign hearing examiners to conduct hearings, and also delegate any or all of the powers vested in him or her, but is not able to delegate the powers and duties of the Review Board. Finally, §7.05 provides that the hearing examiners will be subject to the applicable rules of conduct promulgated pursuant to the New York City Charter.

Section 7.07

This section is substantively derived from the prior section in Article 7 describing procedures concerning a "finding" of violation. The actual document informing the respondent of the violation is entitled the "notice of violation." Referencing to the "notice of violation" rather than the "finding" of violation reflects DOHMH practice and the proper title. Changes to the procedures include a presumption that when a notice of violation includes the report by the person who made the inspection resulting in the notice of violation, such report is prima facie evidence of the facts contained therein. In addition, this section now clarifies that an amendment may not be made to the notice of violation if the amendment alleges new violations that have occurred since the original notice of violation or if the proposed amendment is not within the scope of the original notice of violation. Such subsequent or extraneous actions should afford the respondent the benefits, rights and duties associated with the receipt of a new notice of violation.

Section 7.09

This section changes the method by which a respondent must respond to a notice of violation by eliminating the concept of requiring a written answer. To reflect programmatic practice, conserve resources of the DOHMH and to provide additional convenience for the DOHMH and respondents, the changes facilitate adjudicatory efforts by allowing for and encouraging adjudications by mail in addition to the option of appearing in person or by an authorized representative at the scheduled hearing. Subdivision (a) specifies who, in addition to the respondent, may appear as an authorized representative on behalf of the respondent. In connection with mail adjudications, this section also provides additional guidance on mail adjudication procedures, including allowing the hearing examiner to request more evidence from the respondent in addition to the evidence submitted and allowing the hearing examiner to deny a mail adjudication request and adjourn the matter for a hearing. With the mail adjudications, the new provision indicates that when a notice of violation or related notice sets forth a penalty that may be paid in full satisfaction of the violations, the respondent may admit to the violations charged and pay the penalty by mail in the manner and time provided for in the notice. This type of payment shall constitute an admission of liability and will waive the respondent's rights to a hearing and appeal. This allows a respondent who simply wants to pay the penalty to do so without having to appear at a hearing. In response to public comment, paragraph (2) of subdivision (a) has been amended to delete any requirement that an affidavit be submitted by registered representatives. In addition, subdivision (c) has been clarified to provide that after a hearing has begun, adjournment requests must be addressed to the hearing examiner, regardless of prior administrative adjournments.

Subdivision (d) sets forth the rules for issuing default decisions where there is an unexplained failure to appear. Such default orders may be issued only by a hearing examiner. A default decision may be reconsidered in appropriate

circumstances. In such cases a hearing could be rescheduled so as to avoid prejudice to the respondent. In response to public comment, subdivision (d) has been clarified to change the term "received" to "postmarked" in providing for reopening or reconsideration of a default decision. Subdivision (e) explains the procedures for admitting the violations charged and paying a penalty by mail.

Section 7.11

§7.11 is derived largely from, and retains many of the provisions of prior §7.09. It addresses procedures for and guidance on hearings, including but not limited to provisions specifying that hearings are open to the public, that a respondent may present evidence, examine and cross examine witnesses, request the presence of the issuing inspector, that a record of the proceedings must be made and maintained, and requirements for the writing and service of hearing examiner decisions. This section also eliminates references to written answers. In response to a public comment, paragraph (2) of subdivision (f) has been amended to limit the number of times the hearing examiner may adjourn a hearing when a Department inspector has not appeared.

Section 7.13

The new §7.13 provides for the issuance of subpoenas related to a hearing in compliance with the Charter in order to allow for gathering appropriate and relevant evidence in a timely and orderly manner necessary for an expedient hearing.

With respect to a subpoena request subsequent to the commencement of a hearing, a hearing examiner may issue subpoenas to compel the production of any DOHMH record or document for examination or to compel the appearance of persons currently employed by DOHMH to give testimony if such production or testimony is reasonably related, relevant and necessary to the adjudication at issue.

Section 7.21

New §7.21 requires that "professional" representatives, those that represent two or more respondents in a calendar year, register with the Tribunal. The section also specifies the rules of conduct for authorized representatives to follow and allows for registered representatives to be barred from representing respondents at the Tribunal as a consequence of violating those rules or engaging in other specified behavior, including the submission of false or forged evidence. Prior §7.21, regarding the computation of time, has been renumbered as §7.23.

The following sections largely remain the same as their predecessor sections: §7.15 Disqualification of hearing examiners; §7.17 Review Board; §7.19 Disqualification of member of Review Board and §7.21, now proposed §7.23, Computation of time. An error of omission in §7.17 (c) has been corrected to provide that a notice of appeal must be filed by a respondent within 30 days of the Tribunal giving or mailing a decision to the respondent.

74. Statement of Basis and Purpose in City Record June 26, 2008:

The New York City Department of Health and Mental Hygiene (the Department or DOHMH) is required by law to protect and promote the health of all New Yorkers. The Bureau of Child Care, in the Department's Division of Environmental Health, enforces Article 47 ("Day Care Services") of the Health Code, which regulates public and private group day care services operating within New York City. At its meeting in March, 2008, the Board of Health adopted a resolution to repeal and reenact Article 47 ("Child Care Services"). Reenacted Article 47 excludes from the definition of "child care service" any school based instructional programs for children ages three through five, regardless of the kind of school offering such programs.

Article 47 is scheduled to go into effect on September 1, 2008. In 1995, school-based kindergartens (for children who are or who will be age five by December 31 of the school year) operated by the Board of Education were specifically exempted from the definition of "day care service" and were at the same time included in the regulatory

scope of Article 45 ("General Provisions Governing Schools and Children's Institutions") of the Health Code. With the exception of Board (now Department) of Education kindergartens, Article 47 has been applicable to all day care and instructional programs for children under six in all non-public schools. Religious organizations' day care services, which are not required to hold a permit under Article 47 have nevertheless been subject to almost all other Article 47 requirements except for staff criminal justice and child abuse screening.

In the next two years, both Article 45 and Article 49 ("Schools") of the Health Code which together regulate schools operating in New York City are scheduled for substantive revision as part of a project to modernize the entire Health Code. However, on September 1, 2008, the effective date of the repealed and reenacted Article 47, and until Articles 45 and 49's substantive revisions are adopted by the Board, a gap would exist in regulations covering the health and safety of school children ages three through five. Accordingly, the Department is proposing that the Board approve for publication and public comment a resolution that incorporates in a new Article 43 supplementary provisions applicable to schools providing programs for this age group. Child care programs for children younger than three would continue to be considered "child care services" and will require Article 47 permits regardless of whether they are located within or are part of a school.

ARTICLE 43 PROVISIONS

Article 43 contains many of the same provisions for health and safety that are applicable to child care services providing care to the same age groups regulated in accordance with repealed and reenacted Article 47, with some exceptions. The Department recognizes that all public and many non-public schools are subject to and regulated by the State and federal law, and we have no intention of duplicating and imposing a further layer of regulation where there are applicable similar laws and rules already in place. For example, some federal funding programs require school safety plans, particularly for evacuations in emergencies. If a school has a comprehensive safety plan, Article 43 will not require the person in charge of the school to duplicate or amend it. If school personnel are already required by any applicable law to be fingerprinted and undergo criminal justice record screening and review, as are all staff of public schools in this state, this Article will not require further fingerprinting or screening. The Article will not duplicate, but will supplement, requirements for child health in the regulations of the Chancellor of the City Department of Education. The specific sections proposed are as follows:

§43.01 Definitions. These definitions are intended to clarify terms used in the Article. In response to public comments received, changes were made to the definition of "school" to acknowledge that the local department or board of education may also determine whether the school provides an equivalent compulsory education. The definition of three-year-old was amended to indicate that if a school year begins in a month other than September, all children attending classes for three-year-olds must attain their third birthday within four months of the start of the school year.

§43.03 Scope and applicability. The Article is intended to supplement other provisions of the Health Code already applicable to schools, with particular reference to children ages three through five.

§43.05 Notice to the Department. The Department does not propose to issue permits to, license or register schools. However, to respond to complaints it is necessary to know of the existence of schools that provide classes for children in these age groups. Accordingly, we are requiring that a notice be filed with the Department on or before the effective date of the Article, and that notices thereafter be filed whenever new schools are established, or contact information for existing schools changes.

§43.07 Written safety plan. These provisions are essentially the same as those in Article 47, but exempt from this requirement schools that have already adopted the same or similar plans.

§43.09 Staff supervision. The Department is proposing that ratios of staff to children in Article 47 should also apply to school-based classes for the same age groups. To meet the ratios, the proposal would allow that staff providing supervision may include parents or other volunteers. This section also requires that staff maintain direct line of sight

observation of each child. In response to comments that the ratios would be very difficult to achieve in some non-public schools, the ratio of staff to five-year-olds in subdivision (b) has been changed from 1:15 to 1:25, to be comparable to current Department of Education staffing for kindergarten classes. Subdivision (c) has been amended to allow adults other than parents or volunteers to be counted as staff.

§43.11 Health; staff. This provision is essentially the same as in Article 47.

§43.13 Criminal justice and child abuse screening of current and prospective personnel and

§43.15 Corrective action plan. These provisions are essentially the same as in Article 47 (see, §§47.19 and 47.21). However, any school that is already required to fingerprint staff under any law would be exempt from these requirements. Corrective action plans would be maintained at the school by the person in charge, and be made available for Department inspection upon request.

§43.17 Health; child admission criteria; §43.19 Health; daily requirements; communicable diseases, and §43.21 Health; emergencies. These provisions are essentially the same as requirements in Article 47 (see, §§47.25, 47.27, 47.29, 47.31, 47.33).

§43.23 Lead-based paint restricted. This requirement is the same as current §45.12, a provision that will remain in this Article, but will be repealed in the substantive revision and modernization of Health Code provisions applicable to schools generally. Lead surveys are required annually for schools with interior surfaces that have lead-based paint, or paint of unknown lead content.

§43.24 Modification of provisions. This is a standard provision of most articles of the Health Code and essentially the same as §47.75 in Article 47.

75. Statement of Basis and Purpose in City Record June 26, 2008:

Introduction

As part of a comprehensive review of the Health Code to assess its efficacy in protecting the public health, the DOHMH proposed that Board of Health update various provisions of Article 3 of the Health Code to assure that it provide the adequate legal tools for the Board and the DOHMH to effectively address the City's current and future public health needs. The revisions reflect modern thinking about public health and legal preparedness subsequent to the September 11, 2001 terrorist attacks. The revisions reflect current law, policies and practices, and address the needs of the DOHMH regarding such matters as authorizing a rapid response by the Commissioner in the event of a public health emergency, the inspection of records and proceedings of the DOHMH, and the protection of the privacy of persons who are the subjects of such information. Pursuant to this review and assessment of the Health Code, the Board repealed and reenacted Article 3. The substance of the salient changes is as follows:

§3.01(b). Currently, subdivision (b) of §3.01 implies that pursuant to §556(c) of the Charter the DOHMH has an affirmative duty to ensure compliance with the Health Code and other relevant law. However, after §3.01(b) was adopted, §556(c) of the Charter was amended and no longer mandates that the DOHMH ensure compliance with the Health Code or any other provisions of law.

Instead, the Charter now provides that the DOHMH has the "jurisdiction to regulate all matters affecting health in the city of New York and to perform those functions and operations performed by the city that relate to the health of the people of the city . . ." It also provides in §556(a) that the DOHMH has the jurisdiction to enforce "all provisions of law applicable in the area under the jurisdiction of the DOHMH for the preservation of human life, for the care, promotion and protection of health and relative to the necessary health supervision of the purity and wholesomeness of the water supply and the sources thereof; . . .". The proposed amendment to subdivision (b) of §3.01 will harmonize the Health Code with the amended Charter.

§3.01 (c) and (d). Existing subdivision (c) of §3.01 provides that the DOHMH may take such actions as may become necessary to ensure the care and safety of the public health and, that subject to the directions of the Board, the Commissioner may establish procedures to be followed during an emergency declared by the Board. Since September 11, 2001, there have been concerns raised regarding the adequacy of the public health emergency powers of the Commissioner and how those powers interact with the powers and procedural requirements of the Board. The current subdivision (c) hampers the Commissioner's ability to act and respond rapidly to an emergency owing to the procedural requirements it sets forth and the need to await the further direction and discretion of the Board. The current subdivision (c) would seem to require in any emergency that the Commissioner wait for the Board membership to meet pursuant to the procedures as set forth in Public Officers Law and to direct how the Commissioner may actively respond to the public health emergency.

For example, in the event of a bioterrorist attack on the city where mass quantities of a virulent contagious agent may have been unleashed and disseminated, the current Health Code would seem to require that the Commissioner wait for the Board to formally declare a public health emergency and then for its direction before he or she is able to implement procedures to be followed that are not provided for in the Health Code. However, in a situation such as this, it would likely not be feasible or even prudent to postpone a response pursuant to these procedural requirements. Indeed, in such an emergency event, it is questionable as to whether the Board will be able to comply with these requirements. While this example illustrates a public health emergency from an act of bioterrorism, the application of this subdivision would include any and all emergency scenarios impacting the public health within the DOHMH's jurisdiction, such as, for example, the emergency concerns created by the power outage in August 2003. The blackout left all of New York City without electricity and much of its population without water or any means of communication. Indeed, it is likely that there may also be occasions when, because of transportation or communications interruptions, it might even be difficult to assemble the Board to convene a meeting.

A new subdivision (c) retains the first sentence of current subdivision (c) and repeals substantive concepts addressing procedures in the event of an emergency and addressed these issues in a new subdivision (d). The new subdivision (d) enhances the authority needed by the Commissioner to respond effectively, efficiently and appropriately in the event of an imminent or existing emergency affecting the public health and necessitating immediate action.

The amended powers of the Commissioner as set forth herein will allow the Commissioner to act immediately to prevent an imminent threat or respond to existing emergency circumstances as may be appropriate and necessary upon the Commissioner's declaration of a public health emergency. A public health emergency may be declared in conjunction with, or independent of, a declaration of a local state of emergency by the mayor or a declaration of a disaster emergency by the governor. The amendments to this subdivision create a more timely and efficient response in a public health emergency by removing procedural obstacles. In addition, upon the declaration of a public health emergency, the Commissioner may establish procedures to be followed for the protection of public health. These procedures may also include the suspension, alteration or modification of any provision of the Health Code, or the exercise of any power that the Board may have to respond to an emergency.

Enhancing the Commissioner's powers does not mean that the Board would be removed from the emergency response process. The Commissioner's actions would be effective only until the next meeting of the Board, which would have to be held within five business days if a quorum of the Board can be convened and, if not, then as soon as reasonably practicable. At that time, the Board would review the need for continuing, modifying or terminating any of the actions of the Commissioner. Thus, while the amended powers of the Commissioner will allow the Commissioner to respond immediately, the time-limited delegation of authority, for example, to suspend, alter or modify the Health Code, combined with the mandatory Board review of actions, will serve a precautionary function and enable full participation and input by the Board of Health. The Commissioner's and Board's authority to act in such situations is consistent with the Charter and other applicable law, including Article 2-B of the State Executive Law (authorizing the governor and mayors of localities to declare emergencies). Subdivision (d) also sets forth the manner in which orders issued thereunder are to be served.

Finally, subdivision (e) makes it clear that the authority granted to the Commissioner by this section is distinct from powers that he or she may have under other laws, and that such authority may be exercised in conjunction with other powers.

§3.03. Currently §3.03 consists of two subdivisions, (a) and (b). This section has been reorganized, dividing current subdivision (a) into several subdivisions and relettering current subdivision (b) as a new subdivision (e), rendering subdivision (a) easier to read and comprehend. Subdivision (a)'s paragraphs enumerate the conditions whereby the DOHMH may seize, embargo or condemn certain materials.

Subdivision (b), consistent with §17-118 of the Administrative Code, makes it clear that not only is an owner not entitled to compensation when the Department destroys, or otherwise disposes of, property that is dangerous and not capable of being reasonably salvaged, but also that such destruction or disposition can be at the owner's expense.

The Department sometimes encounters dangerous food or other products the source of which needs to be ascertained, or which may have been already distributed commercially within the City. While the department's authority to issue subpoenas and orders is otherwise clearly established in law, subdivision (e) re-emphasizes this authority in order to locate the source or destination of embargoed goods. No other substantive changes have been made.

§3.05. Current §3.05 authorizes the Department to inspect places where services for children under 16 are provided. This section has been repealed, as unnecessarily duplicative of the authority provided in §3.01. The new §3.05, formerly §3.07, now provides for the service of orders issued under subdivision (d) of §3.01. Subsequent §§3.09 and 3.11 are renumbered accordingly without substantive change. Current §3.12 is renumbered as §3.11, and the title of the section is changed.

§3.11. Current §3.12 addresses the monetary limits that may be imposed through compulsory civil enforcement proceedings for violations of this Code or other applicable law. The section has been renumbered and re-titled, and its language simplified without substantive change.

§§3.13 and 3.15. No changes have been made to these sections.

§3.17. Currently, §3.17 only prohibits the destruction or removal of notices of the DOHMH. However, there may be other posted materials, such as informational posters, or materials or notices that are required to be posted that should not be removed or destroyed. The section and its title were amended to broaden the application of the section to prohibit the destruction or removal of all materials or notices posted, or required to be posted, by the Department, unless the DOHMH grants permission to remove the posted materials, or the materials are removed pursuant to the Health Code or other applicable law.

§3.19. Current §3.19 prohibits a person from making a false, untrue or misleading statement or forging the signature of another on a certificate, application, registration, report or other document required to be prepared pursuant to the Health Code or submitted to the Department. Section 3.19 was drafted prior to the use of modern communications media, such as electronic delivery, and prior to the use of electronic and other methods of reproduction and is therefore limited in the scope of its application. The section has accordingly been amended to prohibit submission of false or misleading statements in any form, or medium, paper, electronic or otherwise and to conform this provision to other Code provisions referencing modern communications concepts.

Sections 3.19 and 3.21 have been combined, including the Notes to §3.21, to address false and/or misleading representations in the form of statements, reproductions or alterations, and §3.21 is now subdivision (b) of §3.19, and also reflects use of electronic delivery and electronic reproductions and conforms to other Sections using modernized concepts.

Current §3.21 prohibits the reproduction or alteration of permits, reports, certificates or "other paper" issued by the Commissioner, DOHMH or the Board to evade or violate any provision of the Health Code or other law. The section

has been amended and its scope broadened to prohibit the reproduction or alteration of any documents, paper, electronic or otherwise, issued by the Commissioner, DOHMH or the Board. In addition to documents in electronic form, the section now prohibits reproduction of any materials issued by DOHMH for any purpose.

Current §3.21 makes it unlawful to reproduce or alter DOHMH documents if the purpose of such reproduction or alteration is to evade or violate any provision of the Health Code or any other law. The section has been amended so that it is also unlawful if the effect of such reproduction or alteration is to evade or violate the law, or induce issuance of a license or permit. Providing evidentiary proof of the effect of an act is less difficult than proving that the actor had the intent or purpose to violate the law when reproducing or altering a DOHMH document.

§3.21. Current §3.23 has been renumbered as §3.21, and amended by removing the term "foreign" in reference to other languages, and now allows the Department, in its discretion, to accept non-English documents if they are accurately translated.

In addition, the section has been amended by bifurcating current §3.23 into subdivisions (a) and (b) and moving the clause addressing the use of the other languages in labels or signs in addition to the English language to subdivision (b) thereby separating and creating one subdivision to address materials that must be submitted to the DOHMH and one subdivision to address the use of language in signs, labels and other required writings that may affect the public.

§3.23. Current §3.25 is renumbered §3.23, and its language simplified, retaining its substance, clarifying that documents which are signed or certified by employees of the Department or other governmental agency shall be presumptive evidence of the facts stated therein.

§3.25. Current §3.27 is renumbered and amended to reflect current law and DOHMH policy concerning the inspection of records and proceedings of the DOHMH and the protection of the privacy of persons who are the subjects of such information while providing for the conditions under which information may be disclosed. Subdivision (e) of current §3.27, which currently allows access to the printed indexes of vital statistics records, has been repealed in its entirety. The Department will no longer make such indexes available, since such access can be abused and result in identity theft and attendant security risks. In addition, genealogists and others interested in genealogical research can access appropriate information from the Municipal Archives. While these amendments reflect the policies and practices of the DOHMH, the amended provisions also take into consideration the federal regulations promulgated pursuant to the Health Insurance Portability and Accountability Act (HIPAA). HIPAA represents the federal privacy standard to protect patients' medical records and other health information provided to health plans, doctors, hospitals and other health care providers. Among other things, HIPAA provides for enhanced security and confidentiality of health information, and its final regulations cover health plans, health care clearinghouses, and those health care providers who conduct certain financial and administrative transactions electronically. The new privacy regulations ensure a national floor of privacy protections for patients by limiting the ways that health plans, pharmacies, hospitals and other covered entities can use patients' personal medical information. The regulations protect medical records and other individually identifiable health information, whether maintained in paper, in computers or communicated orally. The HIPAA regulations, however do not apply to traditional public health activities such as surveillance and epidemiological investigations. DOHMH has always recognized the importance of protecting individual privacy and respecting individual dignity to maintaining the quality and integrity of health data. The Notes to §3.25 provide a further discussion of its purpose and rationale.

Repeal current §§3.28 and 3.29. Section 3.28 currently provides a list of fees for searches other than vital statistics records. Rather than defining in the Health Code the various types of searches that may be performed and what fees shall be paid pursuant to the type of search involved, DOHMH believes that these issues should be more appropriately addressed in department regulations. Accordingly, §3.27 has been repealed in its entirety, and the authority to charge a reasonable fee for access to department records has been incorporated in subdivision (d) of §3.25. Current §3.29 has been repealed as unnecessary.

§3.27. This section renumbers current §3.30 as §3.27, simplifies its language without substantive change.

§3.29. Current §3.31 provides that the Health Code is intended to be consistent with applicable Federal and State law and will be construed as consistent whenever necessary to achieve such consistency. Principles of federal preemption and consistency with federal law are beyond the scope of the Health Code and are subject to evolving trends. Accordingly, §3.31 has been renumbered as §3.29 and amended to reflect the language of the City Charter, which requires the Health Code to be consistent with the federal and state constitutions, state law and the Charter itself.

§3.31. Current §3.33 is renumbered as §3.31.

76. Statement of Basis and Purpose in City Record Sept. 25, 2008:

The Board of Health, at its meeting on October 24, 2007, adopted a resolution repealing and reenacting Article 115 of the New York City Health Code (Prescription Formula Preparation Facilities). At the request of the Department's Bureau of Food Safety and Community Sanitation (BFSCS), the Board of Health further amended §115.17(g) and §115.21(f) of the Health Code to enable prepared powdered infant formula to be held in storage at temperatures of 40°F or lower.

The Production and Clinical Services Department of Food and Nutrition, Presbyterian Hospital, brought to the attention of the BFSCS that Article 115's required temperature for holding prepared powdered infant formula at 37°F is lower than that prescribed by the American Dietetic Association's guidelines. The Administrator of Presbyterian's Department of Food and Nutrition wrote that:

Our clinical care practice needs to be evidence based. The major reference we have used is the 2004 publication by the American Dietetic Association Infant Feedings: Guidelines for preparation of formula and Breastmilk in Health care Facilities. This reference states in Chapter 4-Formula Preparation and Handling: Dedicated refrigerators with adequate chill capacity (4°C, 40°F) for infant feedings in the formula room and on the patient care units are recommended. This reference also states: Care should be taken to avoid freezing temperatures (0°C, 32°F) or excessive heat (35°C, 95°F) in stock storage areas. While the code addresses mixed infant formula (not shelf stable products) we have found that attempting to maintain refrigerators at < 37°F has resulted in freezing of the mixed formula in our refrigerators.

Further review by the Department found that both the ADA guidelines and the UN Food and Agriculture Organization and World Health Organization recommendations for cooling and maintaining reconstituted powdered infant formula to prevent infection with certain microorganisms, including, but not limited to, **E.** sakazakii, are to initially cool prepared powdered formula to 35°F to 40°F (2°C to 4°C) within one hour of preparation, and then to store formula under refrigeration at temperatures below 41°F (5°C). Refrigerated storage, at temperatures lower than 41°F (5°C), is sufficient to prevent or slow growth of harmful bacteria.

Currently, Health Code §115.21(f) provides that "prescription infant formula prepared from a powdered food base shall be cooled to 37 degrees Fahrenheit (2.8 degrees Celsius) within one hour of preparation, and maintained at 37 degrees Fahrenheit (2.8 degrees Celsius)." In addition, labeling requirements in Health Code §115.17(g) provide that prescription formula be labeled with information that it be kept "under refrigeration at or below 40 degrees Fahrenheit (4.4 degrees Celsius), except that prescription formula for infants prepared with a powdered food base shall be maintained at temperatures below 37 degrees Fahrenheit (2.8 degrees Celsius) . . ."

Accordingly, to be consistent with WHO and ADA guidelines, and to maintain nutritional quality of prepared formula, the Board of Health amended the required holding temperature for prepared powered formula from 37°F (2.8°C) to 40°F (4°C). The Department believes this amendment will continue to promote a safe and nutritional product.

77. Statement of Basis and Purpose in City Record Sept. 25, 2008:

Introduction

The DOHMH proposed to repeal and reenact Article 11 pursuant to a comprehensive review and revision of the Health Code. Several of the proposed changes are not substantive but the text has been reorganized for clarity and consistency. The revisions reflect current thinking about public health, public health law and the efficacious control of communicable diseases and conditions of public health interest. The revisions also reflect the current practices of the DOHMH, enforcement needs within the Department, advances in science and technology and the continuing concerns regarding new or re-emerging pathogens and potential bioterrorism. Because some of the provisions of Article 11 are substantively connected to provisions of Article 13 (clinical laboratories), the resolution to repeal and reenact Article 11 has been changed to specify that it shall be effective as of February 1, 2009, by which time it is expected that the revisions to Article 13 will also be effective. As a result of this assessment of the Health Code, Article 11 was repealed and re-enacted as set forth in the resolution below. The substance of the salient changes is as follows:

Section 11.01

The DOHMH proposes to modernize certain of the definitions in existing §11.01. The significant changes are described below.

· "Case" is redefined to simplify and make clear that a person with a disease or condition which is reportable pursuant to this Code or any other law, based on clinical, laboratory, and/or epidemiological evidence or other recognized public health criteria, will be recognized as a case. The resolution has been changed to indicate that a "case" may also be an instance of such a disease or condition occurring in an individual.

· The resolution has been changed with regard to the definition of "clinical laboratory" to clarify that the definition applies to the term "laboratory" and that these terms include a blood bank.

· The definition of "child" is added to clarify that a person under the age of 18 will be recognized as a child, in accordance with New York State Law.

· A new term, "condition of public health interest", is added in recognition of the fact that Article 11 requires the reporting, and provides authority for the control, of more than communicable diseases.

· A definition of "contagious disease" is added and would specify that it is a communicable disease which is directly or indirectly transmissible from one individual to another.

· The definition of "directly observed therapy", heretofore applicable specifically to tuberculosis as set forth in former §11.47, is moved to this general definition section. The definition has general applicability both to tuberculosis treatment as well as to any other contagious disease situation as may become necessary.

· The definition of "exclude" is modified to clarify that it applies to attendance at a day care, school, child care setting, worksite or other place specified in the Code or as may be directed by the Department.

· The definition of "household contact" is revised to clarify that a person who has significant exposure to an infected person based on residence in the same household or residential premises so as to have the potential to acquire the infection will be considered a "household contact".

· A definition of "quarantine" is added to acknowledge that it is an available and effective method of contagious disease control, especially in light of the potential for pandemic influenza, bioterrorism and other potentially new or re-emerging contagious diseases.

· A definition of "suspect case" is added to clarify who will be considered a suspect case by the DOHMH.

Subdivision (a) of §11.03

The list of reportable diseases and conditions of public health interest is amended to ensure that it is consistent with

New York State's list of reportable diseases. It should be noted that the list of diseases and conditions which are reportable pursuant to the Health Code is not intended to in any way limit or impact what is reportable to the State Health Department pursuant to state law or regulation. Several new diseases or conditions, including drownings, Lymphocytic choriomeningitis virus, and Ricin poisoning would be added to the list of reportable conditions in New York City. In addition, the disease formerly identified as Ehrlichiosis has been reclassified into two new diseases, Human Granulocytic Anaplasmosis and Human Monocytic Ehrlichiosis. The resolution has been revised to incorporate technical changes, add clarifying language or correct unintended errors. Accordingly, the words "genitourinary and perinatal" have been deleted from the listing for Chlamydia trachomatis infections; the word "virus" has been added to the listing for Herpes simplex; the listing for "Poisoning by drugs or other toxic agents" has been modified to make clear that the poisonings which are required to be reported are not limited to lead, carbon monoxide and pesticide poisonings; the listing for Syphilis has been clarified to indicate that "all stages, including congenital" are reportable; and the listing for Urethritis was eliminated because it had been repealed previously by the Board of Health. Furthermore, the resolution has been changed to indicate that food poisoning occurring in two or more people, as opposed to three or more, is a reportable event in order to comport with CDC recommendations.

Subdivision (b) of §11.03

A new paragraph (b)(1) specifies which of the diseases and conditions set forth in subdivision (a) must be reported to the Department by telephone immediately, both when they are suspected and when they are confirmed. The resolution has been changed to conform the listings for "Influenza" and "Meningococcal" in (b)(1) to the exact wording and spelling set forth in subdivision (a). A new paragraph (b)(2) mandates that all of the other diseases and conditions set forth in subdivision (a) be reported within 24 hours of a confirmed diagnosis.

Subdivision (c) of §11.03

This subdivision (c) is the successor provision to former subdivision (b) and requires that outbreaks or suspected outbreaks of any disease or condition, unusual manifestations of disease or conditions, or unusual diseases -- regardless of whether they are listed in subdivisions (a) or (b) -- be reported to the Department immediately by telephone.

Subdivision (d) of §11.03

Subdivision (d) is added to clarify and reaffirm the Department's authority to conduct syndromic surveillance activities. In connection with this revision, a clarifying note has been added to §11.03 defining "syndromic surveillance." The Department already conducts such activities under its existing duty to exercise due diligence to ascertain the existence of outbreaks. This provision enhances that authority.

Subdivision (e) of §11.03

A new subdivision (e), derived in part from the current §11.03(b), elaborates upon the Department's broad authority to conduct epidemiological investigations to help control the spread of disease and to prevent and mitigate morbidity or mortality. In the course of conducting an investigation to verify diagnosis, or identify additional cases, contacts or carriers, or in attempting to ascertain the sources or causes of infection, injury or illness, the Department may require additional information beyond that which is routinely reported, and may collect or require the submission of clinical and environmental specimens, including isolates from clinical laboratories, for examination.

Section 11.05

Section 11.05 is revised to require additional groups of persons to submit the reports required by §11.03 (including dentists, licensed chiropractors, doctors of osteopathy, physician's assistants, nurse practitioners, persons in charge of hospitals, clinics and laboratories or their designees). By broadening the scope of persons reporting the Department would obtain a more comprehensive monitoring of reportable diseases and conditions. The resolution was changed to cross-reference Article 13 with regard to reporting by clinical laboratories.

Sections 11.07 and 11.09

These sections, providing for the reporting, respectively, of immunizations and blood lead test results and for the establishment of immunization and children's blood lead test registries, are substantially the same as their existing Health Code sections 11.04 and 11.06.

Section 11.11

Section 11.11 (former §11.07) provides for the strict confidentiality of epidemiological and surveillance information which is reported to the Department or which is obtained or generated by DOHMH in the course of its investigations. Subdivision (a) specifies that the disclosure of such information, including an individual's medical or identifying information, cannot be compelled, and that dissemination of such information must be as aggregated statistical data. The resolution has been changed to clarify that such information may be made available to the State Department of Health pursuant to the State Sanitary Code. The resolution has also been changed to delete, as unnecessary, the sentence specifying that such records shall not be deemed public records under the New York State Freedom of Information Law because it did not increase or diminish the confidentiality provided for by this section.

Subdivision (b) allows, to the extent permissible under applicable law, persons who are the subject of epidemiological reports and records to consent to the disclosure of information that is limited to their own patient information.

Subdivision (c), similar to former §11.07(c), allows for the disclosure of minimally necessary identifiable information, notwithstanding subdivisions (a) and (b), when the Department determines that such is necessary for the protection of public health.

Subdivision (d), substantially similar to former §11.07(d), provides for the confidentiality of the immunization and children's lead registries established by sections 11.07 and 11.09, respectively. The resolution has been changed, at paragraph (1) of subdivision (d), to delete language which limited the sharing of children's blood lead registry information with treating providers or public health agencies to only "test results and the dates of such testing". Programmatically, at times it may be necessary to share other information from said registry with a treating provider or a public health agency.

Section 11.13

Section 11.09 is replaced by a new §11.13, which requires physicians to advise not only cases, carriers and contacts, but to also advise a suspect case, of the applicable precautionary requirements necessary to prevent the spread of disease. It would include a reference to quarantine as a possible preventive and protective measure, should such be directed by the DOHMH in a particular case.

Section 11.15

Sections 11.15 and 11.17, which generally relate to exclusion and isolation, respectively, replace a number of disease-specific sections of the former Article 11.

Subdivision (a) of §11.15 requires the persons in charge of institutions to exclude from attendance certain individuals, such as cases, contacts or carriers of specified diseases, who may be food handlers or children under the age of six in a child care setting. These individuals would be excluded until the Department determines that they no longer present a risk to others.

Subdivision (b) makes it a violation of the Code for the owner or person in charge of the institutions specified in §11.15 to knowingly or negligently permit an individual to work in or attend such a place when required to be isolated

or excluded pursuant to Article 11.

Subdivision (c) provides general authority for the Department to issue exclusion orders when necessary to protect the public health. Individuals excluded pursuant to such orders would be provided with an opportunity to be heard in accordance with §11.23(k) of this article.

Section 11.17

Subdivision (a) requires hospitals, clinics, nursing homes or other medical facilities to isolate, in accordance with recognized infection control principles and State Department of Health regulations or guidance, cases, carriers and suspected cases and carriers of listed contagious diseases or of other contagious diseases, which in the opinion of the Commissioner present an imminent and significant threat to the public health. The resolution has been changed to make reference to the State Department of Health regulations or guidelines.

Subdivision (b) requires the person in charge of a shelter, correctional facility or other places providing medical care on site, but which do not have the capability to implement appropriate isolation precautions, to isolate such cases or carriers of contagious disease as directed by the Department until the individual can be transported to an appropriate healthcare facility. The resolution has been changed to delete reference to attending physicians in hospitals, clinics or nursing homes because such facilities are adequately regulated by the State Department of Health in regard to operational standards for isolation.

Subdivision (c) requires institutions such as schools and congregate child care settings to similarly isolate such cases and carriers as directed by the Department until the individual can be safely transported to an appropriate facility.

Subdivision (d) authorizes the Department to issue home isolation or quarantine orders to suspect or confirmed cases, carriers or contacts of contagious disease who are not hospitalized. Such persons would have an opportunity to be heard in accordance with §11.23(k) of this Article.

Section 11.19

Section 11.19 is substantially the same as former §11.49, except that the requirements now apply to both typhoid and paratyphoid fever. It updates the exclusion and control measures applicable to typhoid and paratyphoid fever to reflect more modern terminology and medical practice.

Section 11.21

This renumbered §11.21, providing for the reporting, examination, exclusion, removal and detention of cases and suspected cases of tuberculosis, is substantively the same as former §11.47 of this Article. Subdivision (a) is revised to require the submission of the telephone contact number of the case so as to enable communicating with or contacting the case as may be necessary.

In addition, the definition of "directly observed therapy" is moved to the general definition section (§11.01) of Article 11 and generalized to apply to both tuberculosis and other diseases as may be necessary.

Section 11.23

This new section is derived from former §11.55. The section clarifies that the Commissioner may issue removal and detention orders for individuals or for a group who may present a danger to others because they are or may be infected with a contagious disease, and provides for necessary flexibility with regard to the implementation of such authority.

With respect to subdivision (k) of §11.23, the resolution has been changed to also address the prevention of illnesses other than contagious diseases, such as the danger to others that may be posed by persons who have been

exposed to radiation or chemicals. Included in subdivision (k) are references to the Commissioner's ability to order (1) exclusion; (2) home isolation or quarantine; (3) testing or medical examination of a person who may have been exposed to, infected by or contaminated with a contagious disease or dangerous amounts of radioactive materials or toxic chemicals that may pose a significant risk or danger to others; (4) a person who has been exposed to a contagious disease that poses a significant risk or danger to others to complete an appropriate, prescribed course of preventive medication or vaccination or through directly observed therapy to treat the disease, and follow infection control provisions for the disease, as may be necessary to control the spread of disease; or (5) an individual who has been contaminated with dangerous amounts of radioactive materials or toxic chemicals to undergo decontamination procedures. The Commissioner's right to order a prescribed course of preventive medication, vaccination or directly observed therapy does not mean or suggest that there would be forcible administration of medication against a person's will; a court order would be obtained as necessary. Persons who are the subject of such non-custodial orders would be afforded an opportunity to be heard.

Section 11.25

Section 11.25 is substantially similar to former §11.64 but now includes Rocky Mountain spotted fever and tuberculosis as reportable diseases in animals and it allows for the possibility of reporting by telephone. The resolution has been changed to include salmonellosis as a reportable disease in animals. The resolution has also been changed to prohibit animals infected with any disease which is transmissible to humans and a threat to the public's health from being brought into or kept in the City.

Section 11.27

Section 11.27 is substantially similar to former §11.65 but it includes a new subdivision (h) that allows the Commissioner to modify the application of its provisions in specific instances of undue or unreasonable hardship. With respect to paragraph 2 of subdivision (d) of this section, the resolution has been changed to delete the reference to animals "over four months of age" because there is now at least one vaccine that can be administered as early as eight weeks of age. Such an animal would be considered "actively vaccinated" as defined by this section and therefore the reference to "over four months of age" is unnecessary.

Section 11.29

Section 11.29 is substantially similar to former §11.66 but changes the age at which a dog or a cat must be vaccinated from three to four months of age.

Section 11.31

New §11.31 is substantially similar to former §11.67 but also provides that no person shall intentionally or negligently cause or promote the spread of disease by failing to observe disease control measures including but not limited to isolation, exclusion or treatment.

78. Statement of Basis and Purpose in City Record Sept. 29, 2008:

Chapter 23 (Food Service Establishment Sanitary Inspection Procedures) was added to the rules of the Department of Health and Mental Hygiene (the Department) in 2005 to codify inspection procedures of the Bureau of Food Safety and Community Sanitation (BFSCS) of restaurants and other kinds of food service establishments operating pursuant to Department permits. These procedures establish objective measures of sanitary inspections, assigning point values for sanitary violations of Article 81 of the Health Code and Subpart 14-1 of the New York State Sanitary Code (10 NYCRR Chapter 1).

This rule amends Chapter 23 to include point values for violations of provisions regulating reduced oxygen packaging (ROP) and hazard analysis critical control point (HACCP) plans added to Article 81 of the New York City

Health Code (Health Code) in March 2008.

At that time, the Board of Health added a new subdivision (b) to §81.06 (Prevention of imminent health hazards) authorizing the Department to require that a HACCP plan be prepared by a food service establishment or non retail food service establishment whenever such establishment prepares, processes, cooks, holds, and stores foods, in a manner other than as specified in the Health Code. A new §81.12 (Reduced oxygen packaging; cook chill and **sous vide** processing) was added to establish minimum requirements for safe use of ROP techniques.

The amendments to Chapter 23 include changes to the charts in Appendix 23-A and Appendix 23-B, and add definitions of HACCP and ROP to §23-02 to reflect those in Health Code §81.03.

79. Statement of Basis and Purpose in City Record Dec. 23, 2008:

Introduction

As part of a comprehensive review of the Health Code to assess the efficacy of its articles in protecting the public's health, the Board of Health is repealing and reenacting Article 71, "Food and Drugs," to better reflect practice and the regulatory environment by, for example, explicitly extending the scope and coverage of the Article to cosmetics; assuring that the revised provisions provide adequate legal tools to effectively address the health and safety needs of the public; and by harmonizing such provisions with related provisions of the Federal Food, Drug and Cosmetic Act, the New York Agriculture and Markets Law and the New York Education Law and regulations promulgated thereunder. As part of the revision effort, particular effort has also been focused on clarifying the enforcement authority of the Department. The proposed changes will better enable the Department to take actions to protect the public from contaminated cosmetic products such as litargirio, a lead-containing deodorant powder; mercury-containing skin lightening creams; and herbal medicine products containing hazardous levels of heavy metals. Review and assessment of Article 71 has resulted in amendments to all but one of the sections in the Article, resulting in repeal and reenactment of Article 71 as set forth herein.

§71.01. Scope.

This section now includes cosmetics within the regulatory scope of the Article, which formerly applied only to food and drugs. The regulatory scheme of this Article is intended to be consistent with the regulatory scope of the Federal Food, Drug and Cosmetic Act (the "Act"), which also regulates cosmetics. Because adulterated or misbranded cosmetics may have serious or detrimental health and safety effects, incorporating regulation of cosmetics in this Article will enhance the protection of public health. Violations of this Article with respect to cosmetics will result from issues involving product ingredients, contaminants, processing, packaging, labeling, shipping or handling, that cause a cosmetic to be considered adulterated or misbranded.

§71.03. Definitions.

This section adds, as subdivision (c), a definition of the term "cosmetic," based on the definition in the Act. The definitions of "food" and "drug" similarly track the definitions in the Act. A new subdivision (f) defines label or labeling as having the same meaning as the terms defined in §173.01 of the Code.

§71.05. Adulteration or misbranding prohibited; possession deemed for purpose of sale.

This section is similar to former §71.05 and includes cosmetics.

Subdivision (c) conforms and updates standards for determining whether a food is adulterated in accordance with Federal and State law, clarifying that a food will be deemed adulterated if it bears or contains any added poisonous or added deleterious substance that is unsafe within the meaning of the Act (21 U.S.C. §346), unless such added substance is a pesticide chemical residue in or on a raw agricultural commodity, or as determined by the Commissioner. The

former provision referred only to a pesticide chemical.

Subdivision (d) ("Foods deemed misbranded") is new and provides a comprehensive list of criteria for determining when foods are misbranded, consistent with the Federal Act and State law.

Subdivision (e) ("Drug deemed adulterated") includes additional examples of when a drug will be deemed adulterated, derived from the Act and the New York Education Law. Paragraph (9), although not derived from Federal or State law, would be added to provide further protections.

Subdivision (f) ("Drug deemed misbranded") is new and tracks the provisions of the Act.

New subdivisions (g) ("Cosmetic deemed adulterated") and (h) ("Cosmetic deemed misbranded") reflecting the addition of cosmetics to the Article's regulatory scope, prohibit distribution of cosmetics which are adulterated or misbranded, and establish standards by which DOHMH will determine a cosmetic to be adulterated or misbranded, based on the Act and State Education Law.

§71.06. Labeling requirements.

This new section provides that any required statements and information on the labels for food, drug and cosmetic products appear in the English language in addition to any information or statements appearing in a foreign language to enable consumers to avail themselves of words, statements or other information required to be provided under applicable law.

§71.09 Records; access and confidentiality.

Former §71.09 has been updated to clarify limitations on Department redisclosure of pharmacy records.

§71.11. Embargo or seizure.

This section is unchanged from former §71.11, and adds "cosmetics" as items that may be seized or embargoed.

80. Statement of Basis and Purpose in City Record Dec. 23, 2008:

Introduction

As part of a comprehensive review of the Health Code to assess the efficacy of the articles in protecting public health, the Board of Health is repealing and reenacting Article 89 (Mobile Food Vending), reorganizing and deleting some of its provisions, and adding new ones, to better reflect practice and the regulatory environment, assure that the revised provisions provide adequate legal tools to effectively address the health and safety needs of the public and to harmonize such provisions with related provisions of Title 17 of the New York City Administrative Code ("Administrative Code"), the Department's rules in Chapter 6 of Title 24 of the Rules of the City of New York and the State Sanitary Code (10 NYCRR). As part of the revision effort, particular attention has been placed on food preparation and protection and maintenance of mobile food vending units, as well as on attempting to clarify enforcement procedures. Article 89 has not been substantively modified since it was adopted in 1978 and many of its provisions are obsolete. Pursuant to this review and assessment of the Health Code, the Board of Health has repealed and reenacted Article 89 as provided below.

§89.01 (Scope) is partly derived from current §89.25(a) concerning compliance with the applicable provision of the Health Code, and emphasizes that all mobile food vending, regardless of whether it occurs only in public spaces regulated by §§17-306 et seq. of the Administrative Code, or in private and restricted spaces, is subject to Health Code and State Sanitary Code requirements, as well as the Department's rules in Chapter 6 of Title 24 of the Rules of the City of New York.

§89.03 (Definitions) has been updated, adding new definitions, and clarifying terms used in this Article. The definition of "restricted space" has been added to cover spaces that may be open to the public, but where commercial activity, such as mobile food vending, may only be conducted with the written approval of the owners of the spaces. The definition of "stand" has been deleted, since the Department does not allow a stand to be used as or an adjunct of a mobile food vending unit. "Operation" of a mobile food vending unit has been defined to clarify that all the activities involved in setting up a unit for vending are considered to be part of operating a mobile food vending unit, making vendors responsible for violations that occur during preparation for vending, even though food is not being sold at the time the violations are observed. In response to a public comment, the definition of "material alteration" has been expanded to clarify and provide additional examples of a material alteration, including a change in the size of a mobile food vending unit, and changes in plumbing equipment, such as potable water and waste water tanks and sinks.

§89.05 (Permits and licenses required) and §89.07 (Licenses and badges) update requirements in current §89.03 (Permits, licenses; badges, identifying plates and insignia) to reflect current practice.

§89.09 (Terms of permits and licenses) is new and codifies the terms for all mobile food vending permits and licenses issued by the Commissioner.

§89.11 (Applications for permits and licenses) includes some of the provisions of current §89.03, but has been updated to reflect current practice.

§89.13 (Duties of licensees and permittees) includes many of the provisions of current § 89.07, but adds provisions reflecting current practice.

§89.15 (Prohibitions against transfer of foods) is the same as current §89.11.

§89.17 (Prohibitions against transfer of a license or permit) is new, reflects current practice and attempts to clarify that a license or permit may not be transferred, although the Department does not prohibit the leasing of a mobile food vending unit, to which a decal has been affixed by the Department, by the individual permittee to another licensed vendor. These arrangements are common industry practices. However, neither a permit or license document, nor a cart decal or a vendor badge may be transferred from one person to another. Decals are only affixed to carts that have passed a preoperational Department inspection and are considered fit for food vending. Licenses are issued only to persons who have passed a food protection course. Unregulated transfer of decals and licenses ill serves the public's expectation that foods served by such units are safe to eat.

§89.19 (Food protection and safety) updates current provisions in §§89.33 (Food preparation) and 89.37 (Condiments) and adds requirements similar to those in Article 81 for food protection related to food sources, use of thermometers, and hot and cold holding facilities, including ice. The section also prohibits butchering meat and service of fish products, requires refrigeration for processed fruits and vegetables, establishes vendor hygiene standards and requires that units be serviced and cleaned at least daily.

§89.21 (Water supply) has been expanded and updates requirements in current §89.35 (Potable water).

§89.23 (Equipment and hand wash sinks) retains the requirement for use of single-service articles in current §89.27, and requires that mobile food vending units be equipped to facilitate prevention of food contamination in accordance with Article 81. Physical specifications for various types of mobile food vending units will be incorporated in the Department's rules in Chapter 6 of Title 24 of the Rules of the City of New York.

§89.25. (Garbage, refuse and liquid wastes) has been updated and incorporates provisions requested by the City's Department of Sanitation to clarify the responsibility of mobile food vendors for maintaining cleanliness of street areas surrounding their vending units. It also specifically authorizes various City agencies to enforce its provisions, by issuing orders and writing notices of violation.

§89.27 (Mobile food commissaries) updates requirements of current §89.31 (Cleaning and servicing of mobile food units), eliminating references to "depots", and incorporates many related provisions of the State Sanitary Code. It prohibits using streets and sidewalks for cleaning units, and requires commissaries to maintain records of the mobile food vending units serviced.

§89.29 (Imminent health hazards) is new, and adds provisions from current §81.39 authorizing the Department to order cessation of operations when the Department believes that continuing operation endangers the public health. Permittees, whose carts are very often operated by other mobile food vendors, on notice that they, too, will be accountable for imminent health hazards created by the mobile food vendors, other than the permittee, who are operating the permittee's mobile food vending unit. The Department believes these provisions are necessary to promote more responsible ownership and operation of mobile food vending units. The section authorizes the Department inspector to remove or cover the mobile food vending unit and includes provisions for substantive due process, including timely hearings, for permittees and licensees ordered to cease operations.

§89.31 (Enforcement) includes the provision in current §89.19(c) authorizing seizure of a non-permitted unit in subdivision (a), prohibits vendors from leaving mobile vending food units unattended whenever food is maintained on the unit, and authorizes denial of a license or permit by the Commissioner in accordance with applicable law. Subdivisions (d) and (e) of this section are substantially the same as current §89.19 (Enforcement).

§89.33 (Suspension and revocation of license or permit) continues the four current provisions of §89.13 (Suspension and revocation of license or permit), and adds a new subdivision (e) to provide that a person not authorized to hold a license or permit, who has been issued a license or permit in error, may be notified that the license or permit is void. It also provides that failure to notify the Department of a change of address is not a defense to any proceeding brought by the Department for revocation of a license or permit. Also added to this section are provisions of current §89.15 (Notice; hearings).

§89.35 (Modification) preserves the current authority of the Commissioner in §89.25 (Compliance and modification) to modify any requirements of this article that present practical difficulties or unreasonable hardships, provided that the public health is not compromised. Other provisions of the current section in subdivisions (a) and (c) have been incorporated in other sections.

The following provisions have been deleted in their entirety as either obsolete, or duplicative of provisions of the Administrative Code or the Health Code: §89.09 Restrictions on the placement of mobile food units; §89.21 Seizure of perishable foods; §89.23 Penalties or fines; and §89.39 Identification of individual food servings. §89.09 (Placement of units in public spaces) is entirely subject to provisions of the Administrative Code. Penalties and fines for placement violations in public areas are established in the Administrative Code (public space vending) or Article 3 of the Health Code (restricted or private area violations and all other violations of any Health Code provisions). Seizure of perishable foods by the Department is authorized by Article 3's provisions for seizure or embargo of any article that is found unfit for use. Labeling of packaged foods is currently subject to federal regulation.

81. Statement of Basis and Purpose in City Record Dec. 23, 2008:

Introduction

As part of a comprehensive review of the Health Code to assess the efficacy of its provisions in protecting the public health, Article 13, Clinical Laboratories, has been amended to better reflect practice and the regulatory environment, assure that the revised provisions provide adequate legal tools to effectively ensure the reporting of presumptive and positive laboratory findings for any notifiable disease, condition, outbreak, unusual manifestation of disease or unusual disease listed or referenced in Section 11.03 or in Article 13. Pursuant to this review and assessment of the Health Code, and in response to public comments received, the Board has amended the provisions of Article 13 as provided for below.

Section 13.01

Subdivisions (a) and (c) have been deleted. Instead, a new definition of "laboratory" or "clinical laboratory", which terms are used interchangeably, makes clear that those terms also include a blood bank. The laboratory testing that blood banks in New York State are required to perform must, pursuant to state regulations, be done in state licensed laboratories. Therefore, the reporting and other requirements of Article 13, which are imposed on clinical laboratories, also apply to blood banks. The definition of "clinical laboratory" was amended to make consistent reference to New York City and to the New York State Public Health Law as used in the Health Code.

Section 13.03

Subdivision (a) was amended to clarify that only the laboratory that actually tests a clinical specimen must report positive findings, but that a laboratory that refers a specimen to another laboratory for analysis must provide all the information that the testing laboratory will need to fully comply with the reporting requirements. In response to comments submitted, and in recognition of the practice of blood banks which refer specimens to outside laboratories for testing to submit those specimens anonymously, without individual donor identifying information, DOHMH modified the proposal to require the referring blood bank to comply with the all of the reporting obligations imposed by the Code, instead of the testing laboratory. The subdivision was also amended to clarify that reports of presumptive and positive laboratory findings for all notifiable diseases or conditions, or any other reportable findings, are to be submitted within 24 hours of the clinical laboratory obtaining the results, and that, in addition, reports of presumptive or confirmed laboratory findings for diseases, conditions or occurrences which are urgently reportable pursuant to §11.03(b)(1) or (c) of this Code must be reported immediately by telephone. Subdivision (a) was also amended to provide greater specificity with regard to which data elements must be reported, including the reporting of race, ethnicity and gender if these data elements are known to the laboratory. Pregnancy status was specified as reportable if known and if clinically relevant to a positive laboratory result; for example a positive hepatitis B surface antigen or a positive syphilis test result. It should be noted that the Department has programs in place with regard to both these conditions which offer outreach services to affected women in order to mitigate perinatal and congenital transmission. Subdivision (a) was further amended to specify as reportable quantitative results for any positive or reactive serologic test results related to reportable diseases specified by the Department, and to incorporate the substance of former subdivision (d) of section 11.03 regarding the reporting of antibiotic susceptibility testing results.

Subdivision (b) was revised to add reporting requirements with regard to laboratory tests related to syphilis and hepatitis.

Subdivision (c) was amended to delete an outdated reference to July 1, 2006, and to incorporate the substance of former subdivision (e) of section 11.03 allowing laboratories to report to the Department through an electronic reporting system utilized by the New York State Department of Health.

Section 13.05

Subdivision (a) was amended to update the cross reference to Article 11's confidentiality provision.

Subdivision (b) was amended to clarify that negative direct smears to detect acid fast tuberculosis bacilli are not reportable to the Department, but must be reported to the physician, or other person ordering the test, within 24 hours, and to update laboratory tuberculosis testing and reporting requirements, including a requirement to perform nucleic acid amplification testing.

Section 13.07 (formerly §13.04)

This section, related to hemoglobin A1C reports, was renumbered, and subdivision (a) was amended to clarify that reports are to be submitted within 24 hours of the clinical laboratory obtaining the results.

Subdivision (c) was modified to clarify that the requirements of subdivision (a) of §13.03, as well as the provisions of paragraphs (1) through (6) of that subdivision, are applicable to hemoglobin A1C reports.

Subdivision (d) was amended to allow the disclosure of information to the patient's "treating health care providers" as opposed to "treating medical providers" as is currently set forth in the Code. The term "health care provider" is a more generally recognized term that is defined in the state Public Health Law as encompassing both "health care practitioners" and "health care facilities".

82. Statement of Basis and Purpose in City Record June 23, 2009:

Chapter 23 (Food Service Establishment Sanitary Inspection Procedures) was added to the rules of the Department of Health and Mental Hygiene (the Department) in 2005 to codify inspection procedures of the Bureau of Food Safety and Community Sanitation (BFSCS) of restaurants and other kinds of food service establishments operating pursuant to Department permits. These procedures establish objective measures of sanitary inspections, assigning points and condition values for sanitary violations of Article 81 of the Health Code and Subpart 14-1 of the New York State Sanitary Code (10 NYCRR Chapter 1).

Chapter 23 has been further amended to delete the point and condition values in Appendix 23-A and Appendix 23-B for administrative and documentation violations that had been counted in the scores received by food service establishments on sanitary inspections. The Department believes that these violations should not be counted as sanitary violations for the purpose of calculating the total score on a sanitary inspection, particularly if letter grade posting is to become a requirement. However, the Department may issue notices of violation for such violations and conduct compliance inspections to determine whether such violations have been corrected.

In Appendix 23-A and Appendix 23-B, the following "Administration" violations under the heading "Critical Violations" will not be scored and will be deleted from each worksheet:

1A Current valid permit, registration or other authorization to operate establishment not available.

1B Document issued by the Board of Health, Commissioner or Department unlawfully reproduced or altered.

1C Notice of the Department or Board of Health mutilated, obstructed, or removed.

1D Failure to comply with an Order of the Board of Health, Commissioner, or Department.

1F Failure to report occurrences of suspected food borne illness to the Department.

The only violation in this group that the Department plans to retain as a scored violation is "1E Duties of an officer of the Department interfered with or obstructed," which would be retained as written but renumbered as 7A. The current violation designated as 7A (Administration) would be deleted. This is being retained because a food service establishment that denies access or obstructs an inspection, or whose operator or employees threaten an inspector, is more suspect of having unsanitary conditions.

Under the heading "General Violations," the following "Documentation" violations would not be scored and would be deleted from each worksheet:

11A Permit not conspicuously displayed.

11B Manufacture of frozen dessert not authorized on food service establishment permit.

11C Failure of event sponsor to exclude vendor without a current valid permit or registration.

11D "Choking first aid" poster not posted. "Alcohol and pregnancy" warning sign not posted. "Wash hands" sign

not posted at hand wash facility. Resuscitation equipment: exhaled air resuscitation masks (adult & pediatric), latex gloves, sign not posted. Inspection report sign not posted.

However, part of 11D would be retained as a scored sanitary violation. ' "Wash hands" sign not posted at hand wash facility' is renumbered as 10M, a general violation under "Facility Maintenance."

The removal of administrative and documentation violations from the total inspection score will result in fewer points scored on food service establishment inspections so that the total points recorded for an inspection more accurately reflect sanitary conditions.

The comments received from the Greater New York City chapters of the New York State Restaurant Association representatives supported these changes but argued that even more violations related to facility maintenance and other aspects of operation that are allegedly not related to food safety should not be counted in the scoring. Such violations include citations for "excessive" grease under frying equipment; failure to wear hair restraints while adding milk to coffee; failure of the food protection certificate holder to be present at all times of operation; condition of entry doors at patron toilets; leaky faucets; cracked or missing tiles and holes in walls; unshielded light bulbs and conditions of non-food contact surfaces. The Department believes, however, the control of these conditions constitutes an important component of sanitary operation and affords necessary protection to the public health, and should therefore be kept in the scoring. Accordingly, no changes have been made to the proposal.

83. Statement of Basis and Purpose in City Record June 30, 2009:

The Department has requested that the Board of Health amend Article 45 of the New York City Health Code (General Provisions Governing Schools and Children's Institutions) to eliminate requirements in subdivision (c) of §45.09 (Staff) that every adult who regularly associates with children at a school, and that a person employed by the Department of Parks and Recreation ("DOPR") who regularly associates with children under the age of 16 in a DOPR recreational program be tested for tuberculosis prior to commencing work, and at Department established intervals after commencing work. In 2008, the Board repealed and reenacted Article 47 (Child Care Services), updatng provisions related to the health of children and staff, and eliminated a similar requirement. The Statement of Basis and Purpose accompanying that resolution indicated that "the requirement that new staff hires be tested for tuberculosis infection has been eliminated since this group is at relatively low risk for tuberculosis." The Department believes that the same justification applies to elimination of the requirement for school and DOPR staff and volunteers.

Accordingly, the Department has requested that the Board repeal subdivision (c) in its entirety, and substitute a provision authorizing the Department to require tuberculosis testing whenever necessary for epidemiological investigation.

84. Statement of Basis and Purpose in City Record June 30, 2009:

The Board of Health, at its meeting on March 6, 2008, adopted a resolution repealing and reenacting Article 47 of the New York City Health Code (Child Care Services). The Department of Health and Mental Hygiene (the "Department") has requested that the Board amend various provisions of subdivision (e) and repeal subdivision (f) of §47.31 (Health: medication administration) of the Health Code to enable child care services permittees regulated under Article 47 to administer medications to children with disabilities.

After adoption of the resolution, the American Diabetes Association brought to the Department's attention omission of a provision that would have made it possible for Article 47 permittees operating child care services to administer necessary medications, including injectible insulin, to diabetic children, where the Americans With Disabilities Act may require the child care service to administer such medication in order to reasonably accommodate the child's attendance in the child care service.

Article 47's current provisions allow health care professionals and certified non-professional staff to administer

certain medications, and are based on nearly identical provisions in regulations of the New York State Office of Children and Family Services (OCFS). Through an oversight, however, Article 47 omits provisions that would enable New York City child care services providers to accommodate children with disabilities who may require medication to be administered by injection, vaginally or rectally.

Accordingly, the Board is amending Article 47. The amendment is essentially the same as the applicable OCFS regulation, 18 NYCRR §418-1.11 and is consistent with Guidance issued by OCFS regarding compliance with the Americans with Disabilities Act and OCFS regulations on the administration of medications in child care programs. Two favorable comments were received, including one from the American Diabetes Association. No changes have been made to the proposal.

85. Statement of Basis and Purpose in City Record Sept. 28, 2009:

The Board of Health, at its meeting on June 18, 2008, adopted a resolution repealing and reenacting Article 7 of the New York City Health Code (Administrative Tribunal). Thereafter, the Department requested and the Board further amended §7.09 (Appearances) and §7.11 (Hearings and mail adjudications) of this Article. Subdivision (d) of §7.09 provides that a default may be found if the respondent fails to appear at a hearing of a notice of violation. The hearing examiner, after finding the respondent in default, will then review the allegations in the notice of violation, and may issue a default decision, finding the respondent in violation of the specific law or regulations cited. A respondent is notified of the default decision by certified mail. A respondent may then, within 30 days of the mailing of the notice of decision, request that the Tribunal vacate or reopen the default. The Tribunal has reported that respondents or their representatives often come to the Tribunal and ask for a copy of the default decision in order to expedite reopening of the default. This is usually done because they discover that they can't renew their permits because of an unpaid default penalty, and the Tribunal has been providing copies of default decisions upon request. While §7.09 (d) neither prohibits nor allows this practice, this amendment authorizes and codifies this practice in such instances. The Tribunal has drafted a new Notice of Appearance form and added a box to capture a signature to show personal receipt of the default decision. The amendment further provides that the thirty days for a respondent to request that a default be reopened would start to run from the earlier of the date of certified mailing or the date the copy is provided personally to the respondent or respondent's representative. The amendment does not require the Department to serve notices of decision on default personally, and does not extend the thirty days allowing a respondent to reopen or vacate a default. Subdivision (h) of §7.11 has also been amended to reflect the change in §7.09 (d), authorizing mailing and personally providing a copy of a default decision to a respondent.

86. Statement of Basis and Purpose in City Record Sept. 28, 2009:

The Board of Health, at its meeting on March 6, 2008, adopted a resolution repealing and reenacting Article 47 of the New York City Health Code Child Care Services). At the Department's request the Board has further amended §47.09 (Applications for permits) of the Code to require child care services to maintain e-mail addresses and to provide the Department with e-mail contact information.

The Department sought this amendment to enable it to better and more timely communicate directly to child care services information of public health concern that may affect the health and safety of children. Timely, rapid communication is important, for example, in instances of product recalls or public health or other emergencies, when the Department needs to advise permittees of appropriate protocols and preventive measures.

During the spring 2009 H1N1 influenza outbreak, the Department's Bureau of Child Care attempted to communicate immediately with child care services to inform permittees of preventive measures and reporting protocols. The bureau was able to communicate directly by e-mail with approximately 50% of the 2,000 child care services, but could only use mail and fax for the remaining services, unnecessarily delaying communication efforts.

87. Statement of Basis and Purpose in City Record Dec. 22, 2009:

Introduction

As part of a comprehensive review of the Health Code, the Board of Health has repealed and recodified Article 88 ("Temporary Food Establishments") of the Health Code, and retitled the Article as "Temporary Food Service Establishments." The title change better reflects practice and the regulatory environment. As recodified, Article 88 provides adequate legal tools to effectively address the health and safety needs of the public. Particular attention has been placed on emphasizing the applicability of relevant provisions of Article 81 ("Food Preparation and Food Establishments") to the operation of temporary food service establishments.

In compliance with §1043(b) of the Charter, an initial Notice of Intention to Repeal and Recodify Article 88 ("Temporary Food Service Establishments") was published in the City Record on September 22, 2008, and a public hearing was held on October 24, 2008. Since that time, however, additional changes were proposed in response to comments from agency staff and other City agency personnel. The major change involves an additional category of temporary food service establishments, those which are part of recurring events, and do not occur only on 14 or fewer consecutive days. These events have become more common in the City. For example, weekly flea markets in Fort Greene and at the foot of the Brooklyn Bridge in Brooklyn are scheduled for every Saturday or Sunday, from Spring through the Fall, and food service becomes an important part of the event. In some cases, the food becomes as important an event as the generating activity, such as the food services provided seasonally by the Red Hook Food Vendors Committee ("RHFV") every weekend during local park sports and recreational activities. The press release of the RHFV at the beginning of its 2009 season provides the times and locations of its food services and reads, in pertinent part as follows:

"(Brooklyn, New York)-The Food Vendors Committee of Red Hook Park Inc. (AKA Red Hook Food Vendors; RHFV) is thrilled to announce the kick-off of their 09 season beginning May 2nd, 2009 in Red Hook park, Brooklyn every weekend through the end of October. Extended days of operation will include long holiday weekends, including Memorial Day & Labor Day weekends.

RHFV are also pleased to announce their continued collaboration with the incredibly successful Brooklyn Flea and its new DUMBO market location. RHFV satellite stands will open for business beginning April 18th at The Flea in Fort Greene every Saturday, and at the DUMBO market every Sunday-(For more information, please visit www.brooklynflea.com)."

Article 88 of the Health Code and Subpart 14-2 ("Temporary Food Service Establishments") of the State Sanitary Code §14-2.1 currently define temporary food service establishments ("TFSEs") as those occurring for no more than "14 consecutive days duration" and neither the City nor the State provides for a permit for a TFSE operating for periods greater than 14 consecutive days. As a result, the Department is often attempting to determine whether the food service establishments at such recurring events should be considered mobile food vending or some other kind of food service establishment. Because these food service establishments are set up at recurring events, and may or may not conform to the definitions of "mobile food vending units" contained in Article 89 of the Code, the Department generally attempts, in each case, to modify requirements applicable to mobile food vending in an effort to accommodate such events, and impose additional necessary requirements for protection of public health, as appropriate. Having a category of "recurring event TFSE" makes it possible for these establishments to know in advance what regulations they will be required to comply with in every case, and not rely on modifications of other regulations that are not quite applicable.

In addition, after further discussions with the City agency responsible for permitting street events, the Department has determined that permitting of TFSEs may be conducted in a manner that is more responsive to the needs of their operators, without compromising public health interests, by (1) issuing an annual permit to persons who operate their TFSE at multiple events during the year and (2) not requiring an additional permit to operate a TFSE if the operator of the TFSE also currently holds a permit pursuant to Article 81 to operate a fixed food service establishment in New York City.

The following changes include those previously published and ones that have been made since the original publication for comment.

§88.01 Scope.

This section is new. It reinforces the DOHMH policy of considering temporary food service establishments as a type of food service establishment subject to Article 81 and other pertinent provisions of the Code, to the New York State Sanitary Code (10 NYCRR Chapter 2), and all rules and regulations governing the use of public streets.

§88.03 Definitions.

Definitions in former §88.01 appear in a new § 88.03, and the new section is expanded from two to five definitions. The term "temporary food service establishment" is redefined because these establishments may be found in many public and private, indoor and outdoor settings, and in connection with many different kinds of events and promotions.

A number of exceptions to the definition are listed, including for places where food is prepared by and served exclusively to group members and where the public is not invited, such as a school bake sale operated by a parent-teacher association. This is consistent with the State Sanitary Code §14-1.20, which excludes from the definition of a food service establishment those "food service operations where a distinct group mutually provides, prepares, serves and consumes the food such as a `covered dish supper' limited to a congregation, club or fraternal organization." Further exceptions added are for nutrition education programs and cooking demonstrations, and service of non-potentially hazardous foods and beverages to participants or attendees at meetings or social functions when such "incidental refreshments" are prepared by the organization holding the meeting or function. A note to this section clarifies that when food is served to the public under other circumstances, authorization or a permit from the Department is required. The section defines other terms used in Article 88, including "event," "food," "sponsor," and "operator." The definition of "temporary food processing establishment" was deleted as obsolete. In addition, as noted above, the definition of temporary food service establishment now includes food services that are provided at events that recur at intervals that exceed 14 consecutive days.

§88.05 Permit required.

This section incorporates provisions of former §88.21 ("Responsibility of sponsor") and amends former §88.03 ("Permit, registration") as follows:

1. Permits are required to operate any TFSE serving or distributing food to the public, including food provided by all commercial operators who contract with neighborhood, school, religious, fraternal or other affinity groups sponsoring community events. However, no additional TFSE permit is required for a fixed food service establishment that is currently operating a TFSE with a permit for a food service establishment issued pursuant to Articles 5 and 81 of the Health Code. Proof of an Article 81 permit must be provided, such as a copy of the permit, and the Article 81 permittee will be responsible for compliance with all requirements of Article 88.

2. Permits are required for events that take one day or less or occupy one or more blocks.

3. The distinction between temporary food processing and non-food processing establishments has been eliminated; all are considered TFSEs.

4. An operator of a TFSE who is invited by sponsors of various events to participate in multiple events during a year may apply for a single annual permit.

5. All operators of TFSEs are required to obtain a permit at least 30 days prior to any event in which they participate.

6. All permits shall be made available for inspection on request.

§88.07 Food safety and protection.

This section replaces former §§ 88.05 and 88.09. It requires all permittees operating TFSEs to hold a food protection certificate (required by former §88.19) issued by the Department or a certificate issued by another jurisdiction that is acceptable to the Department. New requirements are added for thermometers to be provided and used to confirm that the establishment is holding potentially hazardous foods at required temperatures, and for using ice safely when holding potentially hazardous foods. However, prohibitions on service of specific potentially hazardous foods without the approval of the Department are eliminated. The Department has concluded that the new requirement that every operator or supervisor of food services at a TFSE hold a food protection certificate will result in increased food safety. Operators and supervisors will be better educated and more aware of the dangers of serving some potentially hazardous foods in event settings where environmental conditions may be difficult or impossible to control.

Subdivision (f) retains the Commissioner's authority to prohibit sales or service of specific potentially hazardous foods or types of foods, including raw fish and shellfish.

Certain provisions originally proposed for inclusion in this section regarding hot and cold holding equipment and thermometers were deleted from this section and have been added to §88.09.

§88.09 Construction, facilities, equipment and utensils.

This section incorporates provisions from former §§88.07 and 88.15, as well as provisions from Article 81 regarding maintenance of food contact surfaces; sanitizing of utensils and equipment; provision of adequate shielded lighting; and the ventilation of steam, condensation, odors and fumes to prevent a nuisance.

Subdivision (h) requires that adequate hand washing facilities be provided, in accordance with Article 81. However, because the Department recognizes that there may be substantial variability in the plumbing facilities available at events and at participating TFSEs, this provision will allow the Department to approve alternative arrangements for hand washing where strict compliance with this Code requirement is not feasible.

A chart has been added to this section (Table 1) to enable a TFSE operator to determine the minimum equipment required, depending upon the food processes used, and whether food being prepared is potentially hazardous or prepackaged. Various subdivisions describe the general requirements for all equipment.

§88.11 Cooking and heating equipment.

This section retains requirements that equipment not create a hazard, and that flammable materials be maintained in accordance with Fire Department regulations and specifications.

§88.13 Water supply.

This section incorporates more rigorous requirements governing the provision and use of potable water for food preparation, and for hand washing and cleaning equipment, to protect food from contamination from untreated water, in accordance with the State Sanitary Code.

§88.15 Toilets and hand wash sinks.

This section is new and requires that sponsors of events provide adequate portable toilets and adjacent hand washing, soap and drying facilities for use of workers and patrons of TFSEs where fixed plumbing facilities are not adequate or available.

§88.17 Single service articles.

This section retains a requirement for use of single service articles, as defined in Article 81.

§88.19 Refuse and trash.

This section is amended to clarify that its provisions for clean up do not apply to events regulated by the Mayor's Office of Citywide Events Coordination and Management, Street Activity Permit Office ("SAPO"). This office, in accordance Mayor's Executive Order 100 (March, 2007) regulates all City public street and sidewalk events, and requires event sponsors to arrange with the New York City Department of Sanitation for the cleaning of streets and sidewalks and the appropriate disposal of wastes generated at such events. For other events, this section requires cleaning and maintenance. At the request of the Department of Sanitation, a provision related to disposal of recyclable materials has been added.

§88.21 Enforcement.

A provision authorizing the closure of a TFSE, formerly in §88.23, has been added to subdivision (b) of the revised §88.21. A new subdivision (a) ("Imminent health hazards") will allow the Department to dispose of food or order the disposal or sealing of unsafe, unclean, damaged or otherwise unsafe equipment that it identifies as an imminent health hazard, as defined in Article 81. Subdivision (c) incorporates a requirement of State Sanitary Code §14-2.17 (d) that access be provided to the Department's inspectors.

§88.23 Modification .

This section retains the authority of the Commissioner to modify requirements when strict compliance with a provision presents practical difficulties or unusual or unreasonable hardship.

Health Code Reg. § 131.00 INTRODUCTORY NOTES

As part of a comprehensive review and revision of the Health Code, a resolution was adopted by the Board of Health on September 22, 2009, repealing Article 131 and Article 135, and recodifying Article 131. The new Article 131 retains some provisions of both articles, adds new provisions, and eliminates provisions that are obsolete or that duplicate provisions of law enforced by the City's Department of Buildings ("DOB"), Department of Housing Preservation and Development ("HPD"), Department of Environmental Protection ("DEP") and the Fire Department ("FDNY"), where such law comprehensively regulates various aspects of commercial and residential buildings' structure and occupancy. **See, e.g**., the State Multiple Dwelling Law and the City Building, Housing Maintenance, Electrical, Plumbing and Fire Prevention Codes in Titles 27 and 28 of the Administrative Code of the City of New York ("Administrative Code"). Provisions that do not duplicate current law, and those related to window guards and nuisance control and abatement, have been retained. New provisions regulate fugitive perchloroethylene emissions from dry cleaning facilities into certain co-located or adjacent occupied buildings.

§131.03 Definitions.

When used in this Article, the following terms shall have the following meanings.

(a) Child-occupied premises shall mean a building or part of a building used as a residence for persons under eighteen (18) years of age, or in which child care or educational services are provided to such persons.

(b) Commercial building shall mean any building or part thereof in which a business, occupation, or trade is conducted but shall not mean a building that is registered with HPD in accordance with §§27-2097ff of the Administrative Code or any successor provision.

(c) Dry cleaning facility shall mean any building or part of a building in which dry cleaning equipment using perchloroethylene is used.

(d) Dust shall mean the solid particles generated by means such as handling, crushing, grinding, and rapid impact

of materials such as rock, metal, and wood.

(e) Fumes shall mean the airborne particles formed from the condensation of a volatilized solid.

(f) Gas shall mean the state of a substance in which it can expand indefinitely and completely fill its container.

(g) Multiple dwelling shall mean a residential building consisting of three or more dwelling units, rooms or apartments.

(h) Nuisance shall mean any condition dangerous to life or detrimental to health, as defined in §17-142 of the Administrative Code or any successor provision.

(i) Vapor shall mean the gaseous form of a substance that is normally in a solid or liquid state at room temperature and pressure.

§131.07 Heating.

(a) Any person who contracts to supply heat to a building or any part thereof shall furnish heat to every occupied portion of such building so that the minimum temperatures prescribed by subdivision (c) of this section are maintained during the times specified therein. The provisions of this section shall not apply to a building used for trades, businesses or occupations in which a lower temperature is essential and unavoidable.

(b) Any owner, agent, lessee, superintendent or janitor of a building who has under her or his control a furnace, boiler or other heating device or equipment in such building shall be deemed to have contracted to supply heat pursuant to subdivision (a) of this section unless otherwise provided by written contract or lease. An owner, agent, lessee, superintendent or janitor who is required by this section to provide heat shall be liable for failure to comply with this section.

(c) Unless otherwise provided by written contract or lease, or as provided by applicable law, including this Code,

the minimum temperatures required by subdivision (a) of this section shall be maintained as follows:

(1) In a dwelling, during the months between October first and May thirty-first between the hours of six a.m. and ten p.m.: a temperature of at least 68 degrees F when the outside temperature falls below 55 degrees F (12.78 degrees C) and during the hours between 10 p.m. and 6 a.m. a temperature of at least 55 degrees F (12.78 degrees C) whenever the outside temperature falls below 40 degrees F (4.44 degrees C); and

(2) In any other building, except for buildings in which educational, nutritional, geriatric, social, mental health, health care or similar services are provided directly to recipients when such services are being provided, a temperature of at least 65 degrees F (18.33 degrees C) shall be maintained when the outside temperature falls below 50 degrees F (10 degrees C) during the usual working hours of the occupants.

(d) The owner, agent, lessee, superintendent or janitor of (l) a one- or two- family home which is occupied in whole or in part by a tenant or tenants and in which there was within the previous year a violation of subdivision (a), (b) or (c) of this section due to a breakdown in the heating system; or (2) a multiple dwelling shall ensure that the furnace, boiler or other heating equipment under her or his control in such building is inspected by a qualified person between May first and October first of each year. In addition to testing the efficiency of the heating system to produce the heat required by this section, the central heating system or water heating appliance and its flues, vents and dampers shall be inspected for escape of carbon monoxide gas. The findings on inspection shall be recorded on forms approved by DOB within 15 days following the inspection and shall be kept on file by the owner for a period of one year. Such inspection reports shall be made available upon request to authorized employees or agents of DOB, HPD and the Department. All defects found upon inspection shall be corrected prior to the fifteenth day of October of the year in which the inspection was conducted.

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 131 BUILDINGS*15

§131.09 Commercial buildings.

Any person whose duty it is to maintain a commercial building in a safe condition shall equip such building as follows and provide the following services:

(a) Lighting. All parts of such building shall be adequately lighted by natural or artificial means so as to enable any activity in such building to be carried on safely and to permit effective inspection and cleaning.

(b) Ventilation. All parts of such building shall be adequately ventilated by natural or artificial means so as to be free from harmful heat, dust, fumes, vapors or gases and, except in refrigerators and hardening rooms, condensate.

(c) Plumbing. Plumbing and plumbing fixtures, including the water supply system, fixture traps, soil, waste, storm water drainage and vent pipes, drains, sewers, and all devices connected thereto within or adjacent to the building storm shall be properly connected, vented, drained, installed and maintained in good repair, and shall not contaminate the

building's potable water supply. Water supply outlets and connections to water supply fixtures or appliances shall be protected from back-flow into the water system.

(d) Water; toilets, hand wash and utility sinks.

(1) Potable water shall be supplied under adequate pressure in quantities sufficient for drinking and sanitary needs of occupants.

(2) A sufficient number of hand wash sinks with running hot and cold water, liquid soap and individual disposable towels or mechanical drying devices shall be provided.

(3) A sufficient number of utility sinks of adequate size, with running water, shall be provided and shall be readily accessible to the areas where they are required for the washing of equipment or the building. Running hot water required for cleaning and sanitation, and when otherwise required by the Department, shall be provided.

(4) A sufficient number of toilet facilities shall be provided for the use of employees. Toilet facilities shall be equipped with the minimum number of water closets, urinals and other plumbing fixtures required by Chapter 4 of the New York City Plumbing Code, Administrative Code §28-PC 403, or successor law. Such toilets shall be properly flushed and trapped, conveniently located, adequately lighted and ventilated, and kept in a sanitary manner and in good repair.

(e) Floors. Floors shall be constructed of smooth, non-slip, hard materials, and kept clean and in good repair. When building use results in wet floors or requires frequent flushing of floors, floors shall be constructed of smooth cement, tile laid in cement, or other hard non-absorbent, watertight material; shall be graded and drained to properly trapped drains; and junctures formed by the wall and floor shall be covered with waterproof material that shall extend to a point at least six inches above the floor.

(f) Walls and ceilings. Walls and ceilings shall be constructed of hard materials, kept clean and in good repair. When uses of the building create steam or vapor, or when required by the Department, walls and ceilings shall be constructed of smooth cement, glazed tile, glazed brick or other non-absorbent material.

(g) Cleanliness and repair. Such buildings shall be regularly cleaned and kept clean and in good repair, and shall not be allowed to become overcrowded so as to impair the safety of operations or effectiveness of cleaning.

(h) Nothing in this section shall be interpreted as interfering with or prohibiting any private contract, lease, agreement or other arrangement between an owner, manager, tenant or occupant concerning their respective obligations to equip a building or provide the services required by this Code.

HISTORICAL NOTE

Section repealed and added City Record Sept. 28, 2009 eff. Oct. 28, 2009. [See Vol. 9 Statements of Basis and Purpose No. 38]

DERIVATION

Former §131.09 Posting of signs on residential buildings became §131.11.

§131.11 Posting signs.

(a) **Owner information in residential rental buildings and units.** Except for the New York City Housing Authority, owners of all residential buildings, and owners of residential rental units in one-and two- family houses, cooperatives and condominiums, who are not required to post certificates of inspection pursuant to the rules of HPD (28 RCNY §25-241, or any successor rule), shall post a sign in each building or individual rental unit owned, as applicable, containing the premises address; name and address of owner or managing agent for such building or unit; and a telephone number which tenants or occupants may call for service and repairs.

(b) **Signs to be maintained.**

(1) Signs required by this section shall be printed on a durable metal or plastic base, and shall be lettered in a size, form and color that is easily readable. When appropriate, such signs shall be translated into languages other than English that will be understood by the majority of tenants and other persons residing in or visiting a building.

(2) Signs shall be replaced when defaced or in disrepair. Except when it is necessary to replace a sign, no person shall remove, mutilate, destroy or obliterate such sign or its lettering.

(3) In addition to employees of the Department, this section may be enforced and notices of violation issued by employees of HPD, DOB, or any successor agencies.

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 131 BUILDINGS*15

§131.13 Control of unsafe conditions.

(a) Contaminants. When activities conducted within a building result in the production of contaminants that the Department determines are harmful to public health, the Department may order the owner or person in control of the building to take such measures that the Department determines are necessary to eliminate or reduce such conditions so that they are no longer harmful to the public health.

(b) Ventilation. When required by the Department mechanical ventilating systems, devices for the control of dust, gases, vapors and fumes, abatement devices, or other means of reducing conditions dangerous to health shall be installed and maintained in a building or surrounding premises by persons in control of such building or premises.

(c) Discarding refrigerators. Every person who discards a refrigerator shall remove the refrigerator door, locking device or hinges before placing the refrigerator on the street for collection by DOS or other waste removal service.

HISTORICAL NOTE

Section repealed and added City Record Sept. 28, 2009 eff. Oct. 28, 2009. [See Vol. 9 Statements of Basis and Purpose No. 38]

DERIVATION

Former §131.13 Flexible gas tubing.

Section in original publication July 1, 1991.

Notes:

A public health nuisance, regardless of whether it is caused by a violation of other applicable law, remains subject to the nuisance abatement powers of the Department. See, e.g., §3.09 of this Code (General standards to protect health and safety; prohibited acts; necessary acts and precautions), which was upheld as constitutional in the predecessor to the Health Code, New York City Sanitary Code §181, in People ex rel. Styler v. Commonwealth Sanitation Co., 107 N.Y.S. 2d 982, 985 (Magistrates Ct. 1951): "The terms used by Section 181 of the Sanitary Code prohibiting careless and negligent acts and acts detrimental to health or dangerous to life, are no more indefinite and uncertain than those used in Sections 43 and 722 of the Penal Law and in many other criminal statutes, whose constitutionality has never been questioned."

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 131 BUILDINGS*15

§131.15 Window guards.

(a) **Window guards required.**

(1) The owner, manager, lessee, agent or other person who manages or controls a multiple dwelling, including, but not limited to, owners of condominium units and the board of directors of a cooperative, shall provide, install, and maintain, a window guard of a type and installation in accordance with the specifications of the Department set forth in Chapter 12 of Title 24 of the Rules of the City of New York, on the windows of each apartment in which a child or children ten (10) years of age and under reside, and on the windows, if any, in the public halls of a multiple dwelling in which such children reside.

(2) This section shall not apply to windows giving access to fire escapes or to a window on the first floor that is a required means of egress from the dwelling unit. It shall be the duty of each such person who manages or controls a multiple dwelling to ascertain whether such a child resides therein, in accordance with the notice requirements of the

Department in Chapter 12 of Title 24 of the Rules of the City of New York.

(b) **No refusal of window guards by occupant.** No tenant or occupant of a multiple dwelling unit, or other person, shall obstruct or interfere with the installation of window guards required by subdivision (a) of this section, nor shall any person remove such window guards.

(c) **No refusal to install by owners.** No owner, manager, lessee or other person who manages or controls a multiple dwelling shall refuse a written request of a tenant or occupant of a multiple dwelling unit, to install window guards regardless of whether such is required by subdivision (a), except that this section shall not apply to windows giving access to fire escapes.

(d) **Declaration of nuisance.**

(1) Failure to install or maintain window guards pursuant to this section is hereby declared to constitute a nuisance and a condition dangerous to life and health, pursuant to §17-145 of the Administrative Code.

(2) Every person obligated to comply with the provisions of subdivision (a) of this section is hereby ordered to abate such nuisance by installing and maintaining required window guards.

(3) Whenever a nuisance or condition is found to exist in violation of this section, the Department may order the person or persons obligated to install and maintain window guards to do so. In the event such order is not complied with within five (5) days after service of such order, the Department may request an agency of the City to execute such order pursuant to the provisions of §17-147 of the Administrative Code and shall be entitled to enforce its rights for reimbursement of expenses incurred thereby, pursuant to the provisions of Chapter 1, Title 17 of the Administrative Code. If such order is executed by HPD, or its successor agency, the expense of execution may be recovered by such agency pursuant to subchapter five of chapter two of Title 27 of the Administrative Code.

(e) **Enforcement by Department of Housing Preservation and Development.** Orders to install or repair window guards in multiple dwellings required by this section and any rules of the Department may be issued by the Commissioner and by HPD or any successor agency on behalf of the Commissioner.

HISTORICAL NOTE

Section repealed and added City Record Sept. 28, 2009 eff. Oct. 28, 2009. [See Vol. 9 Statements of Basis and Purpose No. 38]

DERIVATION

Former §131.15 Window guards.

Section in original publication July 1, 1991.

Subd. (e) added City Record Oct. 30, 2007 eff. Nov. 29, 2007. [See Vol. 9 Statements of Basis and Purpose No. 29]

Notes:

Prior to adoption of this section in 1976, window falls were one of the leading causes of preventable, accidental deaths in children ten (10) years of age. Courts have determined that this section is constitutional and not void for vagueness. See, e.g., People v. Portnoy, 140 Misc. 2d 945, 535 N.Y.S.2d 305 (Crim. Ct. Bronx Cty.1988). Courts have also upheld the strict liability aspect of this section, and, for that matter, the entirety of the Code. In People v. Nemadi, 140 Misc. 2d 712, 531 N.Y.S.2d 693 (Crim. Ct. N.Y. Cty.1988), the court concluded that the City's authority to create strict liability offenses derives not from Public Health Law §12-b (1) but from §558(e) of the New York City Charter and that the City's determination that every violation was a misdemeanor was not arbitrary and was justified by the

densely populated areas of New York City. Indeed, while strict liability offenses are generally disfavored, the legislative power to impose liability without fault is often found valid in cases of public health, safety and welfare, and the hazard sought to be prevented by this section is of the sort traditionally dealt with by means of strict liability offenses. See, e.g., People v. Simon, 148 Misc.2d 845, 562 N.Y.S.2d 369 (Crim. Ct. Bronx Cty. 1990).

24 RCNY Health Code Reg. 139.00

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 139 PUBLIC TRANSPORTATION FACILITIES

Health Code Reg. § 139.00 INTRODUCTORY NOTES

Article 139 is derived from S.C. §§301 through 306. The problem of maintaining subways, airplanes, railroads, ferries, buses and terminal facilities including airports, railroad stations, ferry terminals and subway stations in a clean and sanitary condition is the primary responsibility of those agencies of government owning, operating or regulating these transportation facilities, viz, the Transit Authority which runs the subway system, the Public Service Commission which regulates private railroads and buses, the Port of New York Authority which operates International and LaGuardia Airports and the Brooklyn Port Authority piers, the Department of Marine and Aviation which operates the municipal ferry service and many piers, the Interstate Commerce Commission, United States Public Health Service, and other governmental bodies. The Department of Health nevertheless has an interest in the sanitary condition of public transportation facilities in New York City so as to protect the health of its people. To avoid duplication of effort, the instant article provides a general standard of sanitation for these facilities and imposes restrictions on the public generally as to littering and smoking. Former requirements relating to ventilation, heating and lighting standards are omitted. Also see Article 181 for provisions applicable to public transportation facilities dealing with spitting, use of

common towels and use of common eating and drinking utensils.

PART B CONTROL OF ENVIRONMENT

ARTICLE 139 PUBLIC TRANSPORTATION FACILITIES

§139.01 Definition.

Public transportation facility means any vehicle, airplane, carrier, platform, station, terminal or other structure or premises used for or in connection with the transportation of the public.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is new. The definition of public transportation facility is included as a convenient term of reference encompassing the subway system, ferry service, interstate carriers, bus lines, trackless trolleys and all terminals, platforms and stations relating to such vehicles, airplanes, carriers and vessels.

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 139 PUBLIC TRANSPORTATION FACILITIES

§139.03 Sanitary standards.

A public transportation facility shall be kept in a clean and sanitary manner for the protection of the health of the public and employees. Dry dusting or dry sweeping is prohibited.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §301 but the requirement that the enumerated facilities be cleaned daily is omitted in favor of the more general performance standard. S.C. §§303, 304 and 305, dealing with ventilation, heating and lighting standards are omitted. The N.Y.C. Transit Authority, the Public Service Commission, the Port of New York Authority, the Department of Marine and Aviation, the Interstate Commerce Commission and other agencies of

government owning, operating or supervising public means of transportation and terminal facilities are active in these areas, and detailed provisions here would not serve any useful purpose. The Department of Health will, of course, continue its program of supervision of the sanitation of transportation facilities and will cooperate with these agencies of government in the protection of the health of employees and the public generally.

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 139 PUBLIC TRANSPORTATION FACILITIES

§139.05 Littering prohibited.

No person shall litter or otherwise create a nuisance or insanitary condition in or on a public transportation facility.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is new. Although the language of Article 153 of this Code and §755(3)-2.1 of the Administrative Code prohibits littering in the City generally, the instant provision encompasses any public transportation facility which may not be a "public place" within the meaning of the local law. S.C. §302, carrying soiled or dirty clothing or bedding on public vehicles, is omitted.

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 139.07

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 139 PUBLIC TRANSPORTATION FACILITIES

§139.07 Smoking prohibited.

(a) Except as otherwise provided in subsection (b) of this section, no person shall smoke or carry an open flame or a lighted match, cigar, cigarette or pipe in or on a public transportation facility.

(b) The owner or person in charge of a public transportation facility may designate special areas in which smoking is permitted unless otherwise prohibited by the Fire Department or by other law.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §306. The reference to "lighted match" is new. The former language which

permitted smoking on the "the unenclosed upper deck of... an omnibus" is replaced by the general exception allowing smoking in designated areas. This approach parallels regulations of the Department of Marine and Aviation (§§22 and 23 of Rules and Regulations of Department of Marine and Aviation contained in Ch. 12 of the 1946-52 Supplement of Rules and Regulations of New York City Agencies) and Unconsolidated Laws §§6528 and 6529.

Under New York City Criminal Courts Act §102c, magistrates are empowered to try violations of this section as an offense punishable by a $25 fine or ten days' imprisonment or both.

ARTICLE 141 DRINKING WATER*14

Health Code Reg. § 141.00 INTRODUCTORY NOTES

As part of a comprehensive review of the Health Code to assess the efficacy of these articles in protecting public health, the Board of Health repealed and reenacted Article 141 on June 24, 2009. The section headings and provisions contained in the revised Article have been promulgated to regulate the public health and safety aspects of the New York City water supply for both potable and non-potable usage, to better reflect current practice and the regulatory environment, to assure that the revised provisions provide adequate legal tools to effectively address the public health aspects of public and private water supplies and to harmonize such provisions with related provisions of the New York State Sanitary Code, 10 NYCRR, Subparts 5-1, 5-2 and 5-6.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 141 DRINKING WATER*14

§141.01 Definitions.

ANSI. "ANSI" shall mean American National Standards Institute.

APHP. "APHP" shall mean American Public Health Association.

AWWA. "AWWA" shall mean American Water Works Association.

Bottled Water. "Bottled Water" shall mean any product, including natural spring or well water taken from municipal or private utility systems or other water sources, distilled water, deionized water, or any of the foregoing to which chemicals may be added, which are put into sealed bottles, packages or in other containers, to be sold for human consumption.

Building. "Building" shall mean any enclosed structure occupied or intended for supporting or sheltering any occupancy, including the service equipment therein. The term "building" used herein shall include, where applicable,

any affiliated buildings or structures, such as a building complex.

Bulk Water. "Bulk Water" shall mean water intended for potable purposes which is transported via licensed potable water tankers or trucks or equivalent from one area to another.

Contamination. "Contamination" shall mean the introduction into water of any biological, chemical, physical, or radiological substance, waste or waste water in concentrations that makes water unfit for its intended use.

Department. "Department" shall mean the New York City Department of Health and Mental Hygiene.

Device. "Device" shall mean the mechanical equipment used for the addition of chemicals to the drinking water supply of a building.

Disinfection. "Disinfection" shall mean a process which inactivates pathogenic organisms in water by chemical oxidants or equivalent agents.

Drinking Water. "Drinking Water" shall mean water used for human consumption or used directly or indirectly in connection with the preparation of food for human consumption including the cleaning of utensils used in the preparation of food.

Fluoridation. "Fluoridation" shall mean treatment of water by the adjustment of fluoride ion concentrations to provide the optimum fluoride concentration in water.

Groundwater. "Groundwater" shall mean water at or below the water table.

Licensed Master Plumber. "Licensed Master Plumber" shall mean any person licensed by the Commissioner of Buildings to engage in the business or trade of master plumber to perform plumbing work within New York City.

Municipal Water Supply. "Municipal Water Supply" shall mean all pipes, mains and structures owned and/or maintained by the City, for the conveyance of drinking water to the public for human consumption or any connection to the municipal water supply system.

Non-potable Water. "Non-potable Water" shall mean water which is not treated to the approved drinking water standards, is not suitable and not intended for human consumption (drinking, washing or culinary purposes), but is produced and delivered to users for other purposes such as watering of lawns, washing vehicles and property.

NSF. "NSF" shall mean National Sanitation Foundation.

Parts per million (ppm). "Parts per million (ppm)" shall mean a unit of concentration expressed in parts per million (ppm) and is equivalent to milligrams per liter.

Potable Water. "Potable Water" shall mean drinking water that meets the water quality requirements established in Subpart 5-1 of the State Sanitary Code which is suitable for human consumption or used directly or indirectly in connection with the preparation of food for human consumption, including the cleaning of utensils used in the preparation of food.

State."State" shall mean the New York State Department of Health.

State Sanitary Code. "State Sanitary Code" shall mean Title 10, Chapter 1 of the Codes, Rules and Regulations of the State of New York.

Water Supply Tank. "Water Supply Tank" shall mean any device used to store drinking water used for potable purposes as part of the drinking water supply system in a building.

WEF. "WEF" shall mean Water Environment Federation.

Well. "Well" shall mean any excavation that is drilled, cored, bored, washed, driven, dug, jetted, or otherwise constructed when the intended use of such excavation is for the location or acquisition of ground water.

Well Water. "Well Water" shall mean water taken from below the ground through piping or similar installed device using external force or vacuum.

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 141 DRINKING WATER*14

§141.07 Building Drinking Water Storage Tanks.

(a) **Applicability.** The owner, agent or other person in control of a building which has one or more water tanks used to store potable water which is distributed as part of the building's drinking water supply system shall comply with the provisions of this section. This section does not apply to the domestic hot water system.

(b) **Inspection Requirements.** The owner, agent or other person in control of a building shall have the water tank inspected at least once annually. The inspection shall include the examination of the general condition of the tank, including but not limited to the condition of overflow pipes, access ladders, air vents, roof access hatches and screens. The interior and exterior of the water tank and its sealed edges and seams shall be inspected for evidence of pitting, scaling, blistering or chalking, rusting, corrosion and leakage. Inspection of sanitary conditions, including the presence of sediment, biological growth, floatable debris and insects in the tank and rodent or bird activity on and around the tank, shall be performed. The inspection shall include sampling of the water in the water tank to verify the bacteriological quality of the water supply in compliance with Subpart 5-1 of the State Sanitary Code. Sample results

shall be reported by a State certified laboratory equipped to analyze drinking water, in accordance with the latest edition of the Standard Methods for the Examination of Water and Wastewater, published jointly by the APHA, the AWWA and the WEF.

(c) **Reporting and Record Keeping.** A written report documenting the results of such inspection shall be maintained by the owner, agent or other person in control of a building for at least 5 (five) years from the date of the inspection and such reports shall be made available to the Department upon request within 5 (five) business days. The inspection report shall state whether or not all applicable requirements were met at the time of inspection and provide a description of any non-compliance with those requirements.

(d) **Public Notice.** The owner, agent or other person in control of a building shall post in an easily accessible location to residents in each building served by a potable water tank a notice that inspection results are available upon request. The notice must be placed in a frame with a transparent cover. The public notice shall include the name, address, and phone number where inspection results can be requested. Upon receipt of a request, the owner or manager shall make a copy of the inspection results available within 5 (five) business days.

(e) **Corrective Actions.** When an inspection identifies any unsanitary condition, the owner, agent or other person in control of a building shall take the necessary steps to immediately correct the condition. If water sampling analysis of the water tank finds noncompliance with the bacteriological quality standards as provided in Subpart 5-1 of the State Sanitary Code, this condition shall be reported to the Department within 24 hours. If it is found that the quality of such water is attributed to the sanitary condition of the water tank, the owner, agent or other person in control of a building shall clean the tank in accordance with section §141.09 of this Article. A water tank shall be cleaned whenever directed by the Department to correct an unsanitary condition.

ARTICLE 141 DRINKING WATER*14

§141.09 Building Water Tank Cleaning, Painting and Coating.

(a) **Applicability.** The owner, agent, or other person in control of a building which has one or more water tanks as part of its drinking water supply system shall comply with the provisions of this section.

(b) **Qualification.** No person or entity shall engage or hold themselves out as engaging in the business of cleaning, painting or coating of a water tank of any kind that is part of a building's drinking water supply system without holding a valid permit issued by the Commissioner, unless:

(1) that person is a licensed master plumber, as defined in section 141.01, or

(2) that entity is a corporation or partnership in which one of the officers or partners has the qualifications required by subdivision (b)(1) above.

(c) **Cleaning, Painting or Coating Requirements.** Water tanks that are a part of a building's drinking water

supply system shall be cleaned, painted and coated in accordance with the applicable provisions of the Administrative Code of the City of New York, the State Sanitary Code Part 5-1 and applicable industry standards and recommendations including, but not limited to, AWWA, NSF/ANSI, or other national standards developed by ANSI-accredited organizations. All products related to work performed shall be certified by ANSI-accredited organizations. No paint containing lead in any form or in any amount shall be used on the inside of a water tank. When a tank is cleaned, painted or coated, the water supply connections to and from the tank shall be disconnected or effectively plugged to prevent foreign matter from entering the distribution piping.

(d) **Disinfection.** All water, dirt, and foreign material accumulated during the cleaning and/or painting process shall be discharged from the tank. The tank shall then be disinfected in accordance with the applicable provisions of the Administrative Code of the City of New York and industry standards and recommendations including, but not limited to, AWWA, NSF/ANSI, or other national standards developed by ANSI-accredited organizations. All products related to work performed shall be certified by ANSI-accredited organizations. The drinking water supply tank shall be completely drained and flushed with potable water before refilling for use.

(e) **Sampling.** After painting or treating the interior of the tank, a water sample will be taken to ensure volatile organic compounds are not found at levels greater than that allowed by Subpart 5-1 of the State Sanitary Code. Sample results shall be reported by a State certified laboratory equipped to analyze drinking water, in accordance with the latest edition of the Standard Methods for the Examination of Water and Wastewater, published jointly by the APHA, the AWWA and the WEF.

(f) **Record Keeping.** A record of the date, address and work performed including a list of the cleaning, paints, coating and disinfection products used shall be maintained by the owner, agent or other person in control of a building for at least 5 (five) years from the date of the completed work and such records shall be made available to the Department upon request within 5 (five) business days.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 141 DRINKING WATER*14

§141.11 Chemical Treatment of Building Drinking Water.

(a) **Applicability.** The provisions of this section shall apply to any person proposing to, or engaging in the business of chemical treatment of the drinking water supply system within a building. No owner, agent or other person in control of a building shall add any chemical or other substance to the drinking water supply unless such addition is performed by the holder of a permit issued by the Department. The provisions of this section do not apply to the treatment by addition of chemicals to water not intended for human consumption, however whenever such water is treated, all necessary precautions shall be taken to prevent the treated non-potable water from coming into contact with or contaminating a potable drinking water supply system, including through an accidental inter-connection or cross-connection.

(b) **Certification.** A permit to treat water chemically in a building shall be issued only for anti-corrosion, anti-scaling or disinfection purposes. Such permit shall be issued to:

(1) A person who has a degree with a major in chemistry, chemical engineering, or sanitary engineering from a college or university approved by the Board of Regents of the University of the State of New York and who has at least 5 (five) years experience in the chemistry of water or in closely related work or a water treatment plant operator with a certification issued by the State under Subpart 5-4 of the State Sanitary Code or an equivalent license or certification acceptable to the Department for the appropriate treatment types; or,

(2) A corporation or partnership in which one of the officers or partners has the qualifications required by subdivision (b)(1) of this section and is engaged in the full time supervision of all operations involving the addition of chemicals to drinking water for potable purposes.

(c) **Operators Requirement.** The actual addition of chemicals shall be performed only by the permittee or by a representative who is under the direct supervision of the permittee. All personnel involved in the addition of chemicals to the drinking water supply shall have successfully completed the appropriate course approved by the State under Subpart 5-4 of the State Sanitary Code, based on the system treatment complexity, flow and/or service population.

(d) **Product Standards.** The only chemicals, drinking water additives, treatment devices or equipment that may come in direct contact with drinking water for potable purposes must be in compliance with Subpart 5-1 of the State Sanitary Code, applicable industry standards and recommendations including, but not limited to, AWWA and NSF/ANSI 60 Drinking Water Treatment Chemicals-Health Effects and NSF/ANSI 61 Drinking Water System Components-Health Effects

(e) **Cross Connection Control.** To prevent the treated water from entering the municipal water supply system, cross connection control prevention shall be provided by installing a State-approved RPZ (Reduced Pressure Zone) Backflow Prevention Device on the potable water service connection to the building.

(f) **Design, Installation and Maintenance.** The system used to chemically treat the water shall be designed, installed and maintained in accordance with the manufacturer's specifications and applicable industry standards to ensure proper chemical dosage and operation. The system shall be tamper proof. Maximum feed pump capacity shall be adjusted to prevent any overfeed of chemicals above recommended levels. The installation of the device shall be such as to prevent the back-siphoning of chemicals. Sampling taps shall be provided both upstream and down stream of the chemical addition point in order to ensure representative samples.

(g) **Sampling.** Prior to placing the system in operation, the permittee shall confirm that the drinking water supply, after being chemically treated, complies with Subpart 5-1 of the State Sanitary Code. Once the system is operational, the permittee shall take monthly samples of the treated water, to ensure compliance with applicable sections of Subpart 5-1 of the State Sanitary Code. A permittee shall maintain or retain the services of a State certified laboratory equipped to analyze drinking water, in accordance with the latest edition of the Standard Methods for the Examination of Water and Wastewater, published jointly by the APHA, the AWWA and the WEF. Records of water sampling and analysis shall be maintained on file by the permittee for at least 5 (five) years and made available to the Department upon request within 5 (five) business days.

(h) **Water Quality.** A permittee who is operating and/or maintaining a system under this section shall ensure that the system used to chemically treat the water meets the requirements of the State Sanitary Code, Subpart 5-1 relating to Public Water Systems and applicable industry standards and recommendations including, but not limited to, AWWA, NSF/ANSI, or other national standards developed by ANSI-accredited organizations. All products related to work performed shall be certified by ANSI-accredited organizations. The health effects and the maximum dosage shall be monitored and maintained within limits set by the approved product.

(i) **Maintenance Record Keeping.** All personnel who work or maintain the chemical addition device, shall keep records showing the dates and times of service and the amount of each chemical applied to the drinking water supply being treated. Such records shall be maintained on file for at least 5 (five) years and made available to the Department

upon request within 5 (five) business days.

(j) **Chemical Storage.** All chemicals shall be kept only in the original sealable container provided by the supplier and in a secured area without public access acceptable to the Department. Such containers shall be clearly marked to indicate that their contents are to be used only for the treatment of the drinking water supply.

(k) **Termination of Treatment.** When a device is no longer in service, the owner, agent or other person in charge of the building in which it is installed shall cause the device to be completely disconnected from the water supply system and all openings shall be properly sealed.

(l) **Reporting.**

(1) **System Installation and/or Termination.** Within 24 hours after the installation and commencement of treatment or termination of a system, the permittee shall report to the Department the following information:

(A) The owner, name, address, and description of the premises where the device is located;

(B) The date the device was installed and/or terminated and the approval date for the device;

(C) The chemicals to be used with the device; and,

(D) The name and address of the permittee.

(2) **Water Quality.** When the water quality exceeds the standards as defined under subdivision (h) of this section, the permittee shall provide a report to the Department within 24 hours analyzing the cause of the water quality exceedance and any corrective actions that were taken.

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 141 DRINKING WATER*14

§141.17 Groundwater Wells.

(a) **Applicability.** No owner, person, corporation, well driller or partnership shall engage in the installation, drilling, replacement or operation of a water well, water well pump or well pumping equipment as appurtenances supplying water to any building in New York City for water supply purposes without a permit issued by the Department.

(b) **Well Categories and Water Quality Standards.**

(1) **Potable Wells.** Potable well water used for drinking purposes shall meet the bacteriological, chemical and physical water quality standards as prescribed by the State Sanitary Code, Subpart 5-1. No well permit shall be issued for drinking water purposes unless the applicant can establish to the Department's satisfaction that the municipal water supply is not accessible.

(2) **Non-Potable Wells.** Non-potable well water used for purposes other than drinking shall meet the following water quality standards:

(A) Microbiological Standards: Not to exceed 200 Fecal Coliform per 100ml.

(B) All Other Pollutants: Not to exceed any limitation set by the New York City Department of Environmental Protection. The presence of any other substance shall be evaluated as a potential public health hazard to be determined by the Department.

(c) **Application Requirements.** No person shall construct or operate a water well without prior construction authorization and a permit issued by the Department. The application shall include the appropriate fees, application forms and other supplemental information as required by the Department.

(d) **Construction Standards.** No person shall construct or abandon any water well without a permit issued by the Department in accordance with Section 5-2.4 of the State Sanitary Code, nor shall any person use any water well except in accordance with the State Sanitary Code, Subparts 5-1, 5-2 and associated appendices (Appendix 5-A through 5-D). Applicable industry standards and recommendations including, but not limited to, AWWA, NSF/ANSI, or other national standards developed by ANSI-accredited organizations shall apply to wells constructed in New York City. Well water shall not be used for a purpose other than that stated on the permit. The well water supply system shall be free from cross connections as set forth in Section 5-1.31 of the State Sanitary Code and in accordance with the applicable provisions of the Administrative Code of the City of New York.

(e) **Driller Qualifications.** No person shall drill, construct or abandon a well without first registering with the New York State Department of Environmental Conservation pursuant to New York State Environmental Conservation Law §15-1525.

(f) **Signage.** On each pump, tap and outlet connected to a well whose water is not approved for drinking water, a weather-proof sign with the words: "Danger-WATER UNSAFE-This well water is NOT to be used for drinking or domestic purposes." shall be clearly, legibly and prominently displayed. Every pipe and fitting linked to the non-potable water supply system shall be properly identified to prevent any possible cross connection with the drinking water system or the municipal water supply system.

(g) **Well Decommissioning and Abandonment.** If a water well is to be sealed or closed, the owner of the property shall make application of notification to the Department on a form prescribed by the Department. Every decommissioned or abandoned groundwater well shall be sealed or closed so as to protect the aquifer from pollution or contamination, and to prevent a hazard to life or property. The Department may require abandonment of any well which it deems to be contaminated or damaged or which has been constructed or operated improperly.

(h) **Potable Well Water Standards and Disinfection.** A permit to use well water shall not be issued unless the water meets the bacteriological, chemical and physical water quality standards as prescribed by the State Sanitary Code Subpart 5-1. When the Department finds that a well does not comply with the State Sanitary Code or for other reasons, the Department may order such well to discontinue operations; such well shall remain out of service until compliance with appropriate standards can be demonstrated to the satisfaction of the Department. The owner, operator or permittee of a potable well requiring treatment to meet drinking water quality standards shall have the treatment plan approved by the Department, and shall complete acceptable water quality testing by a State certified laboratory to demonstrate compliance with appropriate standards, including those as required in Subpart 5-1 of the State Sanitary Code.

24 RCNY Health Code Reg. 143.00

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 143 DISPOSAL OF SEWAGE

Health Code Reg. § 143.00 INTRODUCTORY NOTES

As part of a comprehensive review of the Code, Article 143 was amended by resolution of the Board on September 22, 2009 to better reflect practice and the regulatory environment, and to harmonize its provisions with related provisions of local law, §143.01 was amended, and §§143.03, 143.05, 143.07, 143.09 and 143.13 were repealed as no longer necessary. In accordance with Local Law 50/1991 and Local Law 65/1996, the New York City Department of Buildings and the New York City Department of Environmental Protection have jurisdiction over the activities formerly regulated by the Department.

Article 143 constitutes a revision of S.C. §§284(part), 285,286,287 and Regulations under §287, and it also replaces S.C. §§235(part), 236 and 237 which were concerned with the contents of privies, cesspools and septic tanks.

The article constitutes one part of the broad area of disposal of wastes. While Article 145, Water Pollution Control, deals with wastes entering the waters of the City, Article 143 is concerned with the specific problem of disposal of

human, household, and commercial liquid wastes which do not involve immediate discharges into the waters of the City. Each of the two articles complements the other and takes cognizance of both the nuisance problem and the pollution problem. Thus, the issuance of a permit under the instant article or under Article 145 will be premised on the overriding goal of controlling sewage and other wastes both locally and at the point of ultimate discharge. The article takes cognizance of the activities and regulations of other public agencies, such as the Departments of Buildings, Water Resources and Highways. Compliance with the provisions of this Article does not waive the requirements of any applicable provision of State or local law or regulation, e.g., a permit to construct a septic tank, when required by the Department of Buildings, must be obtained in addition to complying with the permit requirements of this article.

The article contains a novel requirement that for subdivision realty developments involving 15 or more dwellings, a community private sewage disposal system be built rather than individual systems unless there are special circumstances such as cost or physical or engineering difficulties. This mandatory requirement will reduce the total financial burden to a home owner who is often forced to carry the construction charges for an individual private system, where there are no public systems, only to have to abandon such system when public sewers are later built, and for which he is assessed. Under the new provision, a single temporary system will be built. When the City extends its system, the sewers already installed can be connected to the new public sewers, and the temporary community system abandoned.

It may be noted that for those private sewage disposal systems which involve the discharge of sewage into the waters of New York City, the possibility of dual permits, one under this article, and the other under Article 145 or under State law, is eliminated by a provision in §143.03 that no permit need be obtained under Article 143 when a permit is required to be obtained under Article 12 of the Public Health Law or under Article 145 of this Code. Thus, Articles 143 and 145 of this Code present no problem of overlap because any private sewage disposal system involving discharge of sewage into the waters of the city of New York will be regulated and a permit will be issued under Article 145 rather than under the instant article.

The table of section headings and the introductory notes were amended by resolution adopted on December 18, 1969 to conform to provisions of other amendments of this article adopted by the same resolution intended to clarify the responsibility of the Department of Health for evaluating the site and subsoil for the construction of a private sewage disposal system and for the enforcement of the standards of the Health Commissioner for such system, as distinguished from the construction permit issued by the Department of Buildings and applicable provisions enforced by other Departments.

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 143.01

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 143 DISPOSAL OF SEWAGE

§143.01 Definitions.

When used in this article:

(a) Municipal sewage systems means the series of sanitary, combined and storm sewers, intercepting sewers and intercepting collecting sewers, sewage treatment plants or pollution control facilities, drains and other facilities, connections and equipment for the conveyance, treatment and disposal of sewage and drainage operated by the Departments of the City of New York.

(b) Private sewage disposal system means a water-flushed facility for the disposition of sewage which does not connect either with the municipal sewage disposal system or with a sewer or other facility connecting with such municipal system.

(c) Privy means a permanent facility for urinating or defecating embedded in the subsurface which is not

waterflushed and which does not connect, directly or otherwise, to a private sewage disposal system or the municipal sewage disposal system, and includes a chemical toilet but does not include portable toilets such as those found in transportation facilities or at construction or other street locations.

(d) Sewage means human wastes, liquid kitchen wastes, waste water from wash basins, waste water from bathing facilities including a bathing establishment as defined in §165.01, or liquid wastes resulting from any process of industry, manufacturing, trade or business or from the development or recovery of any natural resources.

(e) Community private sewage disposal system means a private sewage disposal system which services fifteen or more dwellings.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Subd. (c) amended City Record Sept. 28, 2009 eff. Oct. 28, 2009. [See Vol. 9 Statements of Basis and Purpose No. 39]

Subd. (e) added City Record Sept. 28, 2009 eff. Oct. 28, 2009. [See Vol. 9 Statements of Basis and Purpose No. 39]

Notes:

This section is new.

Subsection (a), municipal sewage disposal system, includes in one term all the sewers, sewer connections, pipes, drains and sewage disposal plants operated by the Water Resources Department. The definition is identical with the definition in §145.01(b).

Subsection (b), private sewage disposal system, includes all types of systems in which a sanitary disposition of sewage is made. It does not include a privy, i.e., a system which is not water-flushed and in which wastes are simply permitted to accumulate in one container. A "private sewer or drain" may be built under a permit from the Water Resources Department. This apparently refers to sewage systems privately built which eventually discharge into the waters of the City or connect with the municipal system.

Subdivision (c) was amended and a new subdivision (e) was added by resolution adopted by the Board of Health on September 22, 2009 to redefine "privy" and to add a definition of "privy" and to add a definition of "community private sewage disposal system."

Subsection (c), privy, specifically includes a chemical toilet but does not include a non-flush toilet which connects directly with a sewer, such as is commonly used by workmen on construction projects.

Subsection (d), sewage, includes all human excrement, other liquid wastes resulting from normal cooking and bathing functions, and industrial liquid wastes. Thus, this article is concerned with disposal of sewage not only from dwellings but from commercial and industrial buildings as well.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 143 DISPOSAL OF SEWAGE

§143.11 Community private sewage disposal systems.

(a) No permit shall be issued approving the site and sub-soil for the proposed construction of individual private sewage disposal systems in subdivision realty developments involving 15 or more dwellings, but application shall be made for a permit to construct and maintain a community private sewage disposal system for the disposal of sewage from all of the dwellings within the subdivision development. This provision shall not apply, however, if in the opinion of the Department, it is more practicable to construct individual systems rather than a community system, by reason of physical or engineering difficulties, estimated cost of construction or other pertinent considerations.

(b) No community private sewage disposal system shall be constructed and maintained without a permit issued by the Commissioner. The permit may contain such conditions as the Commissioner may impose for the protection of public health. No permit is required and this article shall not apply if a permit must be obtained for a disposal facility pursuant to §145.03 of this Code or pursuant to Article 12 of the Public Health Law.

(c) Application for a permit to construct and maintain a community private sewage disposal system shall be made by the owner of the subdivision development or his authorized representative, who shall submit a detailed report, including drawings of the proposed system, design data and such other data as will enable the Department to determine all facts relating to the proposed system and its intended operation or use.

(d) The Department may prescribe the number of copies of and the format in which the information required by subsection (b) of this section shall be submitted. Plans, specifications and other information shall contain the signature, seal and address of a professional engineer or architect licensed and registered pursuant to Article 145 or Article 147, respectively, of the Education Law.

(e) If the Department approves such application, a permit to construct and maintain the community private sewage disposal system shall be issued and shall remain valid until revoked, provided construction of the system is instituted within one year after issuance.

(f) No community private sewage disposal system shall be constructed otherwise than in accordance with plans and specifications filed with and approved by the Department and in compliance with all of the applicable provisions of the Building Code of the City of New York.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is new. The mandatory requirement for community systems for subdivision developments in areas of the City where there are no public sewers is an attempt to facilitate the eventual construction of public sewer systems and, meanwhile, relieve the private home owner from unnecessary costs for sewage disposal. At present, if a private sewage system is built because there are no public sewers, the home owner must bear the cost of such construction. Later, when public sewers are built, he must abandon the private sewer and pay an assessment for the construction of the public sewers. Thus, he pays twice: first for his private system, then for public sewer assessment- In requiting community systems, the home owner pays only for his proportionate share of the community system, which, after public sewers are constructed in the area concerned, may be tied in to the public sewer. It is hoped, in this way, to reduce overall cost to the home owner and, at the same time, assure adequate facilities for the disposal of sewage. In those instances where community systems would be impractical, by reason of engineering difficulties, or where, for example, the cost of construction of a community system would be more than the total cost of all the individual private systems in the subdivision development, the provision authorizes the Department to waive the mandatory requirement for a community system. This section was amended by resolution adopted December 18, 1969 to conform its provisions to other amendments adopted by the same resolution and to clearly indicate the Department's primary responsibility for the public health supervision of community private sewage disposal systems.

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 151 RODENTS, INSECTS AND OTHER PESTS*13

Health Code Reg. § 151.00 INTRODUCTORY NOTES

Article 151 was repealed and reenacted by resolution on December 16, 2008, as part of a comprehensive review of the Health Code to assess the efficacy of the Code in protecting the public health, to provide adequate legal tools to effectively address the health and safety needs of the public concerning prevention and control of rodent, insect or other pest infestations. The title of the Article was changed from "Rodents, Insects and Other Pests," to "Pest Prevention and Management," to better reflect practice and the regulatory environment where the emphasis has shifted from use of pesticides to primary prevention of pests and infestations. The article's intent remains unchanged, namely, the prevention of infestations of rodent, insect or other pest life and to keep premises free of conditions conducive to pest infestations through continuous pest management efforts, the elimination of harborages and the institution of property maintenance practices designed to eliminate or severely limit the presence of pest populations. Because pesticide use is comprehensively regulated by state law, this article attempts to promote primary prevention methods of pest control and the secondary prevention of infestations without directly addressing how and by whom pesticides may be employed. The focus on pest management practices incorporates a hierarchy of actions to prevent and eliminate pests, including

structural alterations and repairs, and the elimination of conditions conducive to pest infestations.

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 151 RODENTS, INSECTS AND OTHER PESTS*13

§151.01 Definitions.

When used in this article:

(a) Conditions conducive to pests means conditions of property construction, operation and maintenance in occupied or vacant property that promote or allow for the establishment of pest populations, their feeding, breeding and proliferation, and foster the creation of harborage conditions. Such conditions may include but are not limited to: the presence of weeds or other vegetation that are sources of food or shelter for rodents; accumulation of refuse and other material in or on which pests may find shelter, hide or nest; the presence of cracks, gaps or holes in building exteriors or interiors that enable the free movement of pests; the presence of food or water accessible to, and capable of, sustaining a pest population; or unsanitary conditions that attract pests.

(b) Harborage means any condition that provides shelter or protection for rodents, insects or other pests.

(c) Person in control means the owner, part owner, managing agent or occupant of premises or property, or any other person who has the use or custody of the same or any part thereof.

(d) Pest includes any unwanted member of the Class Insecta, including but not limited to mosquitoes, or of the Order Rodentia, including but not limited to the Norway rat, and any other unwanted plant, animal or fungal life that the Department determines is a pest because it is destructive, annoying or a nuisance.

(e) Pest management means ongoing prevention, monitoring and pest control activities and the elimination of rodents, insects or other pests from any building, lot, premise or vehicle. This includes, but is not limited to, the elimination of conditions conducive to pests and the use of traps and, when necessary, the use of pesticides.

(f) Pesticide means (1) Any substance or mixture of substances intended for preventing, destroying, repelling, or mitigating any pest, and (2) any substance or mixture of substances intended as a plant regulator, defoliant or desiccant, as defined in Environmental Conservation Law §33-0101 (35), or successor law, and the Federal Insecticide, Fungicide and Rodenticide Act (FIFRA), 7 U.S.C. §136.

(g) Premises or property means a commercial, private or public building or structure, including all rooms within the property as well as all public areas, halls, stairs, cellars, roofs, shafts, court yards, alleys and areas surrounding the structure. It shall also include all vacant lots, parks, streets and vehicles.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 151 RODENTS, INSECTS AND OTHER PESTS*13

§151.02 Prevention and pest management measures.

(a) **Properties shall be free of pests.** All premises capable of attracting or supporting rodents, insects and other pests shall be kept free from rodents, insects and other pests, and from any conditions conducive to pests. The person in control of such premises shall take such measures as may be necessary to prevent and control the harborage and free movement of rodents, insects or other pests.

(b) **Waste shall be managed to prevent pests.** All garbage and other waste and recyclable materials shall be deposited in tightly covered, watertight receptacles made of a material type and grade that is resistant to rodents, insects and other pests until such time that garbage and waste materials are moved to an area for a scheduled pickup, at which time they shall be placed in a suitable bag or other container acceptable to the Department, and to the City Departments of Sanitation and Housing Preservation and Development. Receptacles used for liquid waste shall be constructed to hold contents without leakage.

(c) **Pest management plans.** When the Department determines that, because of pest infestation or conditions conducive to pests, a written pest management plan is required, it shall order that a person in control of the premises write such a plan, maintain the plan in effect for such time as the Department shall specify, maintain a copy of the plan on the premises where the infestation or conditions were observed, and make a copy available, upon request, to the Department and, when specified by the Department, to occupants of the premises. In commercial and residential premises, when specified by the Department, the person in control of the premises shall post a sign at the building entrances stating that the pest management plan is in effect and identifying a location on the premises where a copy of the plan may be inspected. The plan shall include the following:

(1) Pest management strategies that will be employed on such premises; (2) A schedule for routine inspections, determined by the person in control, for conditions conducive to pests and the presence of pests;

(3) Actions to be taken when pests are present;

(4) Instructions to premises' occupants, tenants or other users on how to report the presence of pests to person(s) in control of the premises, with a notice conspicuously posted at building entrances indicating that such instructions are available and where occupants may obtain a copy;

(5) The name(s) and contact information for pest management businesses and/or professionals employed or contracted by the persons in control; and

(6) A log of visits by pest management professional(s) and the names of pesticides, if any, applied on each visit.

(d) **Elimination of conditions conducive to pests and to the presence of pests.** When the Department determines that a premises has pests or conditions conducive to pest life, it may order person(s) in control to take such action as be required by the Department, including, but not limited to, the following:

(1) Physically remove pest nests, waste, and other debris by vacuuming, washing surfaces, or otherwise collecting and discarding such debris.

(2) Eliminate existing routes of pest movement by sealing and repairing holes, gaps, and cracks in walls, ceilings, floors, molding, baseboards, around conduits, and around and within cabinets by the use of sealants, plaster, cement, wood or other durable materials.

(3) Eliminate existing harborages for pests by clearing interior and exterior debris and garbage, and clearing dense weeds, shrubs and other vegetation, if necessary.

(4) Remove existing sources of water for pests by draining standing water; repairing drains to prevent further accumulation of water; repairing leaks in faucets and plumbing; and maintaining the impermeability of roofs, ceilings, and exterior and interior walls.

(5) Eliminate existing sources of food for pests by keeping the property free of all types of waste and by regularly cleaning and maintaining areas where waste is stored and/or compacted before its removal.

(e) The use of pesticides shall not substitute for pest management measures required by this section.

24 RCNY Health Code Reg. 153.00

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 153 LITTERING AND DISPOSAL OF REFUSE

Health Code Reg. § 153.00 INTRODUCTORY NOTES

Article 153 constitutes a formal revision of the subject matter contained in S.C. §§53, 233, 234, 243, 244, 246, 251, 252, 253, 315, 316, 317 and 318.

The provisions of this article deal principally with the prevention of littering of streets, public places and vacant lots, and cover the disposal of refuse or waste not covered by other articles of this Code, such as Article 143, Disposal of Sewage, Article 145, Water Pollution Control and Article 155, Butchers' Refuse. The provisions of §§153.01 through 153.19, which are derived from S.C. §§53, 233, 253, 315, 317 and 318, are virtually identical with §755(3)-2.1 of the Administrative Code, added by Local Law 99 (1955). Violation of the Administrative Code provision is "an offense punishable by a fine of not more than twenty-five dollars or by imprisonment not to exceed ten days, or both", while the violation of any of the provisions of this Code constitutes a misdemeanor under the City Charter §558(2) and is punishable by imprisonment up to one year, a fine of not more than five hundred dollars, or both (Penal Law §1937).

§153.17 Handbills, cards and circulars. [Repealed]

HISTORICAL NOTE

Section repealed City Record June 9, 1995 eff. July 9, 1995. [See Vol. 9 Statements of Basis and Purpose No. 4]

Section in original publication July 1, 1991.

Notes:

This section is derived without substantive change from S.C. §318. The prohibition against distribution of commercial or business advertising in the streets has been held not to be violative of the freedom of the press and speech provision of the United States Constitution; it is "clear that the constitution imposes no such restraint on

government as respects purely commercial advertising." **Valentine Police Commissioner of City of New York v. Christensen,** 316 U.S. 52, 62 S. Ct. 920, 86 L. Ed. 1262 (1942). The Supreme Court also held in the same case that the affixing or inclusion in an advertising handbill or leaflet of a protest against official conduct or some other civic appeal, will not bring such leaflet under the freedom of press and speech protection and will not achieve immunity from the law's prohibition against distribution. Such prohibition has also been held not to be violative of due process; a municipality has the right to prohibit the use of its streets for any purpose detrimental to the common good. **People v. Horwitz,** 140 N.Y.S. 437 (Mag. Ct. 1912). A prohibition which is directed solely to commercial or business advertising does not violate the equal protection clause of the constitution by allowing the distribution of other literature. **People ex rel Greenberg v. Heally,** 74 N.Y.S. 2d 102 (Mag. Ct. 1947).

The act of distribution has been held to constitute a complete offense; it is not necessary to show that the objectionable matter was cast away. **People v. Horwitz, supra.** It was also held in the same case that the fact that the advertising leaflets were enclosed in a wrapper or other container or slipped in copies of newspapers was immaterial. The prohibition against "commercial or business matter" was held not to include leaflets distributed by a union, the primary purpose of which was to create additional jobs for its members; inasmuch as labor is not a commodity its espousal does not come, therefore, within the meaning of "commercial advertising" which relates to buying or selling. **People ex rel Greenberg v. Heally, supra.**

Section 153.17 was repealed on May 17, 1995 to eliminate an obsolete provision of the Code prohibiting distribution of advertising handbills.

ARTICLE 153 LITTERING AND DISPOSAL OF REFUSE

§153.21 Removal of dead or diseased animals and offensive materials regulated; use and condition of vehicles.

(a) Every person who has contracted or undertaken to remove any diseased or dead animal, rubbish, garbage, dirt, or any offensive matter, or who is engaged in such removal shall do so promptly. The operation shall be conducted in a clean and sanitary manner and shall not create any hazard to life or health. The offensive matter shall not lie piled up or partially raked together in any street or place before its removal, and the loading or unloading of such matter or its transportation through any street, place or premises shall not consume an unreasonable period of time.

(b) Vehicles used for the carrying or transporting of any offensive matter shall be kept in a sanitary condition. They shall be properly covered at all times except as otherwise required during the loading and unloading operation. Such vehicles shall not be allowed to stand or remain unnecessarily in front of or near any premises. When not in use they shall be stored and kept in a manner so as not to cause any nuisance.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §§243 and 244. The piling up or the partial raking of the offensive matter in any street or public place prior to its removal is absolutely prohibited; the provision in S.C. §243 allowing such practice for "a reasonable time or for four hours" has been omitted. See also Article 155, Butchers' Refuse.

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 153 LITTERING AND DISPOSAL OF REFUSE

§153.23 Filling of land; use of materials.

No person shall fill any land below established grade unless he has received a permit therefor from the department having jurisdiction. No materials shall be used in land filling operations other than clean earth, ashes, dirt, concrete, rock, gravel, stone, slag or sand. The provisions of this section do not apply to land filling operations conducted by a department or agency of the City.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is derived from S.C. §§252 and 315(1) (part). Unlike S.C. §252, this section does not list the materials prohibited in landfills, but rather lists those which may be used in such operation. The same approach is found in the

Department of Sanitation rules and regulations. (Section G.-2.0(c) of the Rules and Regulations Providing For ... Landfill Procedures For Owners of Private Lands and Lands Under Water, adopted Nov. 13, 1957). S.C. §252 Regs. 1 through 15 "Regulations Governing Landfills Conducted by an Official Agency of the City of New York" have been omitted. If any landfill operation conducted by an official agency gives rise to health problems, the matter is normally adjusted without recourse to legal remedies.

As a matter of historical interest, it may be noted that the Regulations referred to arose out of the case of **Catherine Sullivan v. William F. Carey, John L. Rice and The City of New York,** (not reported, Supreme Court, Bronx County, 1939), in which the Commissioners of Health and Sanitation were charged with derelictions in regard to landfills in Queens. Pursuant to stipulation approved by Wasservogel, J., the Surgeon General of the U.S. Public Health Service, Dr. Thomas Parran, appointed a board of experts consisting of Drs. M.J. Rosenau, E.L. Bishop, Huntington Williams, Kenneth F. Maxcy and Mr. R.E. Tabbett, who reported that the landfills involved in the litigation did not represent a health hazard, and went on to make detailed recommendations concerning landfill operations. These recommendations of the "Board to Investigate Landfills Maintained in the Borough of Queens" were adopted almost verbatim in Regs. 1-15 of S.C. §252. Although no longer necessary as a part of the Code since they were aimed at the regulation of other agencies, these regulations are included in this note because of the importance of their source:

"REGULATIONS GOVERNING LANDFILLS

CONDUCTED BY AN OFFICIAL AGENCY

OF THE CITY OF NEW YORK

1. The disposal of wastes by the landfill method shall be planned as an engineering project. General supervision shall be provided by a sanitary engineer in the operation and maintenance of landfills.

2. The face of the working fill shall be kept as narrow as is consistent with proper operation of trucks and equipment in order that the area of waste material exposed during the operating day be minimal.

3. The exposed surface shall be covered with earth as promptly as is consistent with proper operation and at the close of each day's operation both the surface and the face of the fill shall be completely covered, the object being to make a closed cell of each day's deposit.

4. Sufficient standby equipment shall be provided to prevent delay in covering, due to breakdowns or peak loads.

5. Waste building material, concrete or other bulky waste material which may furnish rat harborage shall not be used for the final surface or side slopes, but shall be promptly incorporated within the fill.

6. The final covering for surface and side slopes shall be maintained at a depth of approximately twenty four inches.

7. In case the finished fill has a boundary side slope, the toe of the slope shall terminate in a sand and gravel-filled ditch so as to prevent raveling of the toe with exposure of some of the waste material, the burrowing of rodents, and finally to obviate puddles by permitting seepage from the fill to be absorbed into the ground.

8. Spraying of the exposed waste material and adjacent surfaces shall be used when necessary to allay dust.

9. The layer of refuse shall not exceed an average depth of fifteen feet after initial compacting. Where deeper fills are necessary the filling shall be carried on in stages.

10. Control over the blowing of papers shall be adequately maintained by the use of movable snow fencing.

11. While the maintenance of proper earth covering as hereinbefore required will to a large extent prevent fires,

water under pressure shall be available for fire fighting purposes. If scavengers are tolerated they shall be adequately supervised.

12. All collections or surface water resulting from these landfill operations shall be drained, filled or treated with effective chemicals so as to prevent mosquito production or allay disagreeable odors.

13. Where necessary, effective steps shall be taken to prevent floatage of waste material into open water.

14. Inspection for and control of rodents shall be maintained until the fills are stabilized.

15. After the active period of filling operation is completed a maintenance program shall be continued until the fill has become stabilized so as to insure prompt repair of cracks, depressions and erosion of the surface and side slopes."

Notes:

S.C. §232 and Regulations concerning the opening of landfills has been omitted as unnecessary.

§155.03 Inspection and reinspection; abandonment of application; suspension and revocation of permits.

(a) An applicant or permittee shall produce each vehicle for which a permit is sought, or which is operated under a permit, for inspection or reinspection whenever requested by the Department and at a time and place designated by the Department. Failure to produce a vehicle at such time and place shall constitute an abandonment of the application for a permit or shall automatically suspend the permit for such vehicle until it is produced at such subsequent time and such place as the Department may designate. If the inspection discloses that the vehicle complies with the provisions of this article, the permit may be issued or reinstated.

(b) If the inspection or reinspection of a vehicle for which a permit has been issued discloses that the vehicle does not comply with the provisions of this article, the permit for such vehicle may be suspended either (1) until the vehicle is placed in compliance or (2) until such time as the Department may designate for placing the vehicle in compliance. In the first case, the permittee shall notify the Department when he considers the vehicle to be in compliance, and he shall present it for reinspection at a time and place designated by the Department. In the second case, the vehicle shall be

presented for reinspection at the expiration of the time and at the place designated by the Department. If the reinspection discloses that the vehicle again does not comply, the permit may be revoked.

§155.07 Vehicle body; specifications.

No vehicle shall be used for the purposes specified in §155.01 unless its body is constructed and maintained so that all materials carried may be readily removed, the entire interior or platform may be cleaned and sterilized, and so as to prevent leakage or spillage of materials while the vehicle is in operation. No vehicle shall be used unless it has one of the following types of bodies:

(1) A body which is totally, permanently enclosed, of welded steel or impervious wood construction, having doors for loading and unloading which fit tightly against rubber or other suitable gaskets and supplied with adequate clamps or latches to keep each door tightly closed at all times when not open during loading or unloading, or having hoppers or conveyors of a type approved by the Department. The body floor shall be constructed so as to prevent any leakage of materials loaded, handled or thrown upon the floor. If a sump pit is provided, it shall be so constructed and maintained as to prevent leaking or spilling, and so that it can be readily emptied, cleaned and sterilized; or,

(2) A platform type vehicle body of steel construction

upon which are set and carried welded steel containers supplied with either metal covers fitting tightly against rubber or other suitable gaskets with latches or similar locking devices so constructed and maintained as to keep the covers tight when the container is not being loaded or a heavy tarpaulin cover long enough and wide enough to completely cover the fully loaded containers and to extend down each of the four sides of the containers at least one foot. Such tarpaulin shall have heavy rope, leather or canvas ties at not more than eight inch intervals along the lower edges of the cover, and each container shall have suitable attachments to secure the ties of the tarpaulin cover; or

(3) If a permittee is engaged in chute loading from slaughter houses or transporting large dead animals, he may use, in lieu of a body type specified in subdivisions (1) or (2) of this section, a box open type body, having a heavy tarpaulin cover long enough and wide enough to cover the vehicle body completely when fully loaded and to extend at least one foot down each side and the front and rear end or tailgate. Such tarpaulin shall have heavy rope, leather or canvas ties at not more than two foot intervals along the bottom edge and the body of the vehicle shall have suitable attachments to secure the ties of the tarpaulin cover.

§155.09 Operation of vehicles.

(a) A vehicle shall be loaded at all times in such a manner and by such methods as to prevent the release or discharge of dust and the spilling of materials upon sidewalks, roadways, streets, bridges or ferries. The operator of the vehicle shall remove immediately from sidewalks, roadways, public or open or other places all material spilled, littered or thrown thereon in loading operations or in the handling and return of receptacles or while traveling.

(b) Materials loaded into vehicles shall be dumped or unloaded and disposed of only at points where disposal of the particular material may be made lawfully.

(c) Material loaded in or upon vehicles shall not be reworked, resorted, picked over, or rehandled while the vehicle is on the streets or other public or open places and material shall not be transferred or reloaded from a vehicle while on the streets or other public or open places to or into any other vehicle, except that operators of the totally enclosed walk-in door type of vehicle may sort materials only inside the body, at which time the door or doors of the vehicle may

be kept open. Operators of the vehicle shall not work, sort, pick over, or rehandle any materials after removal from the inside of the premises served and before loading into the vehicle body.

(d) Material shall be carried only within the vehicle body or within containers, if any, on or in the vehicle body.

(e) After materials are dumped for disposal, the vehicle body and each container used shall be emptied thoroughly and cleared of all loose material.

(f) Each vehicle and each container shall be cleaned and washed frequently and thoroughly, inside and outside, so as to present a good appearance and be free of dirt and offensive odors at all times.

(g) Bodies of dead animals shall not be dissected outside of the premises from which removed in the loading process or in the vehicle.

(h) All loading hoppers, doors, covers or other closures of loading openings shall be kept closed and secured at all times, except that an opening then in use may be kept open during actual loading.

(i) Small dead animals shall be carried only within the vehicle body of an enclosed type vehicle, as specified in §155.07(1).

(j) Grease shall be carried only within the body of the vehicle, either in metal containers with individual tight-fitting metal covers, or in built-in, leak-proof covered metal containers or bins. Such containers shall be so constructed and maintained that they can be readily emptied and thoroughly cleaned and sterilized. Grease shall not be carried in a sump pit.

24 RCNY Health Code Reg. 161.00

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 161 ANIMALS

Health Code Reg. § 161.00 INTRODUCTORY NOTES

The Schedule of Section Headings was amended by resolution on December 14, 1998 to reflect the changes in §161.06 and repeal of §161.25.

Article 161 covers the subject matter formerly contained in S.C. §§4, 10(6) and (7), 11, 12, 13, 16, 17(1), 18, 19, 22, 58 and 227. It contains all the provisions of the Code dealing with live animals in New York City which are not covered in §11.65, control of animals affected with disease communicable to man.

A major change is involved in §§161.09(f) and 161.25. S.C. §12 prohibited the keeping of cows in the City without a permit. Under a long standing resolution of the Board of Health, a new permit for the keeping of cows for the production and sale of milk had not been issued for many years; as a result in 1958 there were only six such permits in effect. Because there are few outstanding permits and because there is no longer sufficient space in the City to permit the establishment of new city dairies without the creation of a nuisance, the prior Board resolution is incorporated into

the Code; however, present permittees are allowed to continue to keep cows for the production and sale of milk under the provisions of Sanitary Code sections 12 and 13. Such a provision is constitutional. **Stracquadanio v. Department of Health,** 285 N.Y. 93, 32 N.E. 2d 806 (1941). In order to avoid the necessity of repeating the detailed provisions concerning the physical facilities in and maintenance of cow barns under the regulations of S.C. §12 and the manner in which tuberculin test are made in city dairies under S.C. §13, the provisions of those sections in force at the time of enactment of the revised Code will remain in full force and effect and may be repealed when the last of the city dairies ceases to operate. Permits will no longer be required for the keeping of cows for domestic purposes and the twelve regulations governing that activity under S.C. §12 are repealed; they are no longer a problem in New York City.

Section 161.15(c) contains a new provision prohibiting pet shows from selling diseased dogs or cats.

S.C. §5 providing for the destruction of animals injured or diseased beyond recovery is omitted as completely covered by Code of Criminal Procedure §117d. S.C. §6, requiring reporting and removal of animals injured or diseased beyond recovery is also deleted. Charter §755(2) and Administrative Code §§755(2)-2.0 and 755(2)-6.0 place the responsibility for removal and disposal of dead animals on the Sanitation Department. See §153.21 on removal of dead animals. See also Collection Regulations of Department of Sanitation, §2(c), Supplement to Rules and Regulations of N.Y.C. Agencies, 1946-52. Diseased animals are to be reported to the Commissioner of Agriculture and Markets; see Agriculture and Markets Law §73.

S.C. §§7 and 8 prohibiting interference by unauthorized persons with dead, sick or injured animals and prohibiting the abandonment of such animals is omitted as adequately covered by Penal Law Article 16, Animals, and Code Cr. Proc. §117a.

S.C. §9 requiring dead horses to be tagged when placed in the streets and lighted when not removed before twilight is deleted as obsolete.

S.C. §14 requiring adequate ventilation, food and water for cattle is omitted. Provisions on health and sanitary conditions for cows are found in Agriculture and Markets Law §47 and prohibition of deprivation of food and drink is covered by Penal Law §185.

S.C. §15 dealing with the transportation of cattle is omitted as adequately covered by Penal Law §189.

S.C. §19 Regs. 1-15 of the regulations governing the sale of live rabbits or poultry have been deleted since several of the markets listed are no longer in existence and since live poultry is now sold only at the Queens Terminal Market or at licensed slaughter houses.

Several provisions dealing with certain diseases in animals which are communicable to man, i.e., rabies, anthrax and glanders, are found in §11.65. They include S.C. §§3, 4(part), 10(1)-(5) and 17(2).

This article was amended by resolution adopted on March 1, 1973, to add a new §161.06 to require the deworming of dogs and cats before they are offered for sale, sold or given away for adoption.

The Section Headings for §§161.15 and 161.17 were amended to additionally apply their provisions to training establishments for dogs and other small animals.

The Schedule of Section Headings was amended by resolution adopted on June 16, 1986 to include the Section Heading for new §161.04 as added on the same date.

The Section Heading for §161.04 was amended by resolution adopted on June 26, 1990 to reflect the amendments adopted on the same date.

The Section Heading of §161.07 was repealed and reenacted by resolution adopted on October 30, 1987 to bring

the Schedule of Section Headings into conformance with the repeal and reenactment of said section adopted on the same date.

The Schedule of Section Headings was amended by resolution on March 27, 1989 to include the Section Heading for new §161.08 as added on the same date.

Section 161.08 was added by resolution adopted on March 1989. It was repealed by resolution adopted on May 20, 1991.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 161 ANIMALS

§161.01 Wild animals prohibited.

(a) No person shall sell or give to another person, possess, harbor or keep wild animals identified in subsection (b) of this section or in regulations promulgated by the Commissioner pursuant to subsection (e) of this section other than in:

(1) A zoological park or aquarium operated by the Department of Parks, by the Wildlife Conservation Society, or by the Staten Island Zoological Society; or

(2) A laboratory operated pursuant to §504 of the Public Health Law; or

(3) A circus or native wildlife rehabilitator licensed by federal or state agencies; or

(4) A place which has received the approval of the Department to exhibit or use such animals, and which has protective devices which are adequate to prevent such animal from escaping or injuring the public. The Department may

impose reasonable conditions and time limits on the granting of such approval.

(b) For the purposes of this Code, wild animals are deemed to be any animals which are naturally inclined to do harm and capable of inflicting harm upon human beings and are hereby prohibited pursuant to subsection (a). Such animals shall include: (i) any animals specified by the Commissioner in regulations promulgated pursuant to this section; (ii) any native or exotic wildlife whose possession or sale is prohibited because they are designated as protected or endangered pursuant to any federal, state or local law, regulation, or rule; and (iii) any of the following animals:

(1) All dogs other than domesticated dogs **(Canis familiaris),** including, but not limited to, wolf, fox, coyote, hyaena, dingo, jackal, dhole, fennec, raccoon dog, zorro, bush dog, aardwolf, cape hunting dog and any hybrid offspring of a wild dog and domesticated dog.

(2) All cats other than domesticated cats **(Felis catus),** including, but not limited to, lion, tiger, leopard, ocelot, jaguar, puma, panther, mountain lion, cheetah, wild cat, cougar, bobcat, lynx, serval, caracal, jaguarundi, margay and any hybrid offspring of a wild cat and domesticated cat.

(3) All bears, including polar, grizzly, brown and black bear.

(4) All fur bearing mammals of the family Mustelidae, including, but not limited to, weasel, marten, mink, badger, ermine, skunk, otter, pole cat, zorille, wolverine, stoat and ferret.

(5) All Procyonidae: All raccoon (eastern, desert, ring-tailed cat), kinkajou, cacomistle, cat-bear, panda and coatimundi.

(6) All carnivorous mammals of the family Viverridae, including, but not limited to, civet, mongoose, genet, binturong, fossa, linsang and suricate.

(7) All bats **(Chiroptera).**

(8) All non-human primates, including, but not limited to, monkey, ape, chimpanzee, gorilla and lemur.

(9) All squirrels **(Sciuridae).**

(10) Reptiles **(Reptilia).** All Helodermatidae (gila monster and Mexican beaded lizard); all front-fanged venomous snakes, even if devenomized, including, but not limited to, all Viperidae (viper, pit viper), all Elapidae (cobra, mamba, krait, coral snake), all Atractaspididae (African burrowing asp), all Hydrophiidae (sea snake), all Laticaudidae (sea krait); all venomous, mid-or rear-fanged, Duvernoy-glanded members of the family Colubridae, even if devenomized; any member, or hybrid offspring of the family Boidae, including, but not limited to, the common or green anaconda and yellow anaconda; any member of the family Pythonidae, including but not limited to the African rock python, Indian or Burmese python, Amethystine or scrub python; any member of the family Varanidae, including the white throated monitor, Bosc's or African savannah monitor, Komodo monitor or dragon, Nile monitor, crocodile monitor, water monitor, Bornean earless monitor; any member of the family Iguanidae, including the green or common iguana; any member of the family teiidae, including, but not limited to the golden, common, or black and white tegu; all members of the family Chelydridae, including snapping turtle and alligator snapping turtle; and all members of the order Crocodylia, including, but not limited to alligator, caiman and crocodile.

(11) Birds and Fowl **(Aves):** All predatory or large birds, including, but not limited to, eagle, hawk, falcon, owl, vulture, condor, emu, rhea and ostrich; roosters, geese, ducks and turkeys prohibited or otherwise regulated pursuant to §161.19 of this Code, the Agriculture and Markets Law or applicable federal law.

(12) All venomous insects, including, but not limited to, bee, hornet and wasp.

(13) **Arachnida and Chilopoda:** All venomous spiders, including, but not limited to, tarantula, black widow and

solifugid; scorpion; all venomous arthropods including, but not limited to, centipede.

(14) All large rodents **(Rodentia),** including, but not limited to, gopher, muskrat, paca, woodchuck, marmot, beaver, prairie dog, capybara, sewellel, viscacha, porcupine and hutia.

(15) All even-toed ungulates **(Artiodactyla)** including, but not limited to, deer, antelope, sheep, giraffe and hippopotamus.

(16) All odd-toed ungulates **(Perissodactyla)** other than domesticated horses **(Equus caballus),** including, but not limited to, zebra, rhinoceros and tapir.

(17) All marsupials, including, but not limited to, Tasmanian devil, dasyure, bandicoot, kangaroo, wallaby, opossum, wombat, koala bear, cuscus, numbat and pigmy, sugar and greater glider.

(18) Sea mammals (**Cetacea, Pinnipedia** and **Sirenia**), including, but not limited to, dolphin, whale, seal, sea lion and walrus.

(19) All elephants **(Proboscides).**

(20) All hyrax **(Hyracoidea).**

(21) All pangolin **(Pholidota).**

(22) All sloth and armadillo **(Edentala).**

(23) Insectivorous mammals **(Insectivora):** All aardvark **(Tubulidentata),** anteater, shrew, otter shrew, gymnure, desman, tenrec, mole and hedge hog.

(24) Gliding lemur **(Dermoptera).**

(c) In addition to domesticated dogs and cats, an animal may be kept, possessed, harbored or sold in the City of New York provided that possession of the animal is not otherwise prohibited by law, including federal, state and local laws regulating domestic animals and livestock or protecting wildlife and endangered species. Such animals include, but are not limited to, gerbil, hamster **(Mesocricetus auratus),** guinea pig, domesticated rabbit and fowl or small birds such as parakeet, parrot, canary and finch.

(d) An animal whose possession is prohibited pursuant to this section may be seized by any authorized employee, officer or agent of the Department or of any other agency of the City of New York, and the Commissioner shall provide for such animal's appropriate disposition.

(1) An order issued by the Commissioner pursuant to this section shall contain a notice that the owner of such animal may, within three business days of receipt of the order, request an opportunity to be heard with respect to whether the animal is a prohibited animal and its appropriate disposition. The Commissioner shall provide such an opportunity to be heard as soon as practicable, but no later than 15 days after receipt of such request.

(2) With the written consent of the Department, an owner of any animal whose possession is prohibited pursuant to this section, may remove such animal to another jurisdiction where its possession is not prohibited pursuant to any local or other law.

(e) The Commissioner may promulgate such regulations as may be necessary to add to the list in subsection (b) any animal which the Commissioner determines is naturally inclined to do harm and capable of inflicting bodily harm upon human beings.

(f) If any provision of this section is adjudged invalid by any court of competent jurisdiction, such judgment shall not affect or impair the validity of the remainder of this section.

HISTORICAL NOTE

Section amended City Record July 9, 1999 eff. Aug. 8, 1999. [See Vol. 9 Statements of Basis and

Purpose No. 14]

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

Section 161.01 was amended by resolution adopted on June 29, 1999 to clarify which animals are naturally inclined to do harm and capable of inflicting injury on human beings and should therefore be considered wild and to continue to prohibit their sale or possession with specified exceptions. Although the Department for many years has maintained lists of prohibited wild animals, the lists have not been codified in the Health Code or promulgated as regulations by the Commissioner. The identification of animals prohibited pursuant to this section incorporates the definition of "wild animal" contained in §370 of the Agriculture and Markets Law, as "animals capable of inflicting harm upon human beings," as well as their prior characterization in §161.01(a) of the Health Code as "naturally inclined to do harm." Also prohibited is possession and sale of any animals whose possession or sale is prohibited or regulated by federal, state or local law as a "protected" or "endangered" wildlife species. The section was further amended to authorize the Commissioner to add to the list of prohibited animals through regulations promulgated in accordance with the Citywide Administrative Procedure Act when necessary; to authorize employees, officers and agents of the Department and other City agencies to seize prohibited animals; to authorize the Commissioner to make a determination as to whether a particular animal is a prohibited animal and to order its appropriate disposition, allowing the owner an opportunity to be heard before a final determination is made by the Commissioner, and allowing the owner the alternative of arranging removal of the animal from the City to another jurisdiction where it may be lawfully possessed.

Subsection (a) is derived from S.C. §22. It is intended to prohibit the keeping of an animal as a pet when such animal is of a species which is generally wild even though the owner attempts to domesticate such animal. In effect, this continues the prohibition against even tame lions, bears, wolves and foxes in S.C. §22. The words **domitae naturae** (domestic animals) and **ferae naturae** (wild animals), although used for classification in property law, cannot be used here to establish a distinction between animals which may and which may not be kept because the terms lack precise technical meaning **(Commonwealth v. Flynn,** 285 Mass. 136, 188 N.E. 627 (1934)) and are in fact misleading. **Earl v. VanAlstine,** 8 Barb. 630 (N.Y. 1850). For instance, there are some species of dogs, although usually classified as **domitae naturae,** which are quite savage and ferocious, while the class **offerae naturae** includes many birds and animals which are not at all dangerous. The terms "wild, ferocious, fierce, dangerous or naturally inclined to do harm" are suggested by the **Van Alstine case, supra.**

Penal Law §197 which permits a person to keep a wild animal until it does some harm is not a sufficient protection in a densely populated city such as New York.

Reference to the Department of Licenses is omitted since it does not regulate the keeping of animals used in exhibitions or amusements. The zoological societies and laboratories are new exceptions.

Subdivision (3) of subsection (a) was amended by resolution adopted on June 24, 1965, which added the language "or other place * * * or an". Before the enactment of the amendment anyone had the right to keep a wild animal provided he had protective devices sufficient to restrain such animal. Under the amendment wild animals may only be kept by those institutions and establishments specifically named and a member of the public at large is prohibited from

doing so not withstanding that he has a protective device to restrain the animal.

Subsection (b) is derived from S.C. §22, but is in part new. This specifically prohibits the keeping of poisonous snakes except for the institutions or establishments named. Pet shops, circuses and sideshows may not, therefore, keep poisonous snakes. This section does not prohibit the keeping of non-poisonous snakes under adequate safeguards as required by subsection (a) (3) of this section.

Subsection (b) was added by resolution adopted on June 24, 1965.

Subsection (c) was formerly subsection (b) and was relettered to (c) by resolution adopted on June 24, 1965, which also added the language "a zoological park * * * antivenin."

strongCASE NOTES

#182; 1. The New York City Department of Health has interpreted the prohibition on wild animals to include ferrets. The constitutionality of this interpretation has been upheld. NY.C. Friends of Ferrets v. City of New York, 876 F.Supp. at 532, aff'd 71 F3d 405. However, in 1700 York Assocs. v. Kaskel, N.Y.L.J., June 3, 1999, page 30, col. 4 (Civ.Ct. New York Co.), the court held that the regulation was not enforceable because it was not promulgated under the procedures outlined in the City Administrative Procedures Act (CAPA, City Charter § 1041), which requires notice, opportunity for public comment and a hearing.

¶ 2. It is illegal per se for individuals to have a pet monkey in New York City. It is not necessary for the City to prove that a particular monkey is vicious or dangerous. Flikshtein v. City of New York, 710 N.Y.S.2d 112 (App.Div. 2d Dept. 2000).

ARTICLE 161 ANIMALS

§161.02 Definitions.

When used in this article:

(a) Animal Shelter or shelter for homeless animals means a facility where homeless, stray, abandoned or unwanted animals are received, harbored, maintained or made available for adoption to the general public and which is owned, operated, or maintained by a duly incorporated humane society, animal welfare society, society for the prevention of cruelty to animals, or other organization devoted to the welfare, protection or humane treatment of animals.

(b) Pet shop means a facility other than an animal shelter where live animals are sold, exchanged, bartered, or offered for sale as pet animals to the general public at retail for profit.

(c) Grooming parlor, salon, business, or establishment means a facility where animals are presented by their owners for bathing, dipping, clipping, combing, or cleaning for the purpose of improvement of the animal's appearance

and or well-being in return for a fee.

(d) Boarding kennel, business, or establishment means a facility other than an animal shelter where animals not owned by the proprietor are sheltered, harbored, maintained, groomed, fed, or watered in return for a fee.

(e) Training establishment for small animals means a facility where small animals, whether or not belonging to the owner or employee of such facility, are trained for any purpose in return for a fee.

(f) Stable for horses means a rental, boarding, racing, or private facility where one or more horses are housed and/or maintained.

(g) Pet animal or small animal means any bird, mammal, reptile, amphibian, fish, arthropod or other invertebrates kept as a pet for exhibit, work, companionship, or protection by a person, possession or which is not prohibited by the Commissioner or any Federal, State or local laws, rules or regulations.

(h) Attack or guard dog means a dog which is trained for personal protection, area protection, and/or the apprehension or warding off of an individual by means of barking, threatening gestures, biting, or restraining by the use of its teeth.

HISTORICAL NOTE

Subd. (a) amended City Record Dec. 30, 1998 eff. Jan. 29, 1999. [See Vol. 9 Statements of Basis and Purpose No. 12]

Notes:

Section 161.04 was further amended by resolution adopted on December 10, 2003, adding a new subsection (c) to authorize its enforcement by duly authorized agents and employees of the Department and the Departments of Sanitation and Parks and Recreation.

This section was amended by resolution adopted on June 26, 1990 to establish the Department's authority to issue dog licenses.

Subsection (a) was amended by resolution adopted on December 14, 1998 to delete reference to licenses issued prior to July 1, 1990 by the American Society for the Prevention of Cruelty to Animals, which expired prior to July 1, 1991.

CASE NOTES

¶ 1. In 1989 The American Society for the Prevention of Cruelty to Animals told the City of New York that it would no longer issue dog licenses. Pursuant to NYC Dog License Law §8-c (Agriculture and Markets Law §107) the Mayor designated the Health Department as city agency responsible for dog licensing. The board adopted amendments to the Health Code, 24 RCNY §§161.04, 161.15, implementing this program. The amendments are not inconsistent with State law and are a constitutional delegation of authority. Pet Professionals of NYC v. City of New York, 215 AD2d 742 [1996].

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 161 ANIMALS

§161.05 Dogs to be restrained.

(a) Except as specified in subdivision (b) of this section, a person who owns, possesses or controls a dog shall not permit it to be in any public place or in any open or unfenced area abutting on a public place unless the dog is effectively restrained by a leash or other restraint not more than six feet long.

(b)(1) Dogs within areas and facilities under the jurisdiction and control of the Department of Parks and Recreation ("DOPR"), or successor agency, shall be restrained except as otherwise permitted in accordance with the rules of the DOPR. Such rules shall include provisions that prohibit unrestrained dogs in unenclosed DOPR controlled areas and facilities except during a specified range of time, that shall not begin earlier than 9:00 P.M. and not extend past 9:00 A.M. Such rules shall also specify that persons in control of dogs allowed to be off the leash in such areas and facilities maintain and provide, on demand, proof of current dog licensure and current rabies vaccination when dogs are allowed to be off the leash. In addition, DOPR shall make available to the public, in a manner acceptable to the Department, information concerning rabies vaccination and dog licensure requirements, and the specific locations where and times

when dogs may be allowed off the leash in DOPR areas and facilities.

(2) Notwithstanding the provisions of paragraph (1) of this subdivision, the Department may, based on epidemiologic evidence indicating an increase in preventable off leash dog bites during off leash hours in areas open to off leash use, or a risk of zoonotic disease transmission, limit or eliminate the use of or access to specific areas or facilities, or parts thereof, under DOPR jurisdiction, by unrestrained dogs.

(c) Notices of violation for failure to comply with subdivision (a) of this section may be issued by any authorized employee, officer or agent of the Department, or of the Department of Sanitation or the Department of Parks and Recreation, or successor agencies.

HISTORICAL NOTE

Section amended City Record Dec. 11, 2006 eff. Jan. 10, 2007. [See Vol. 9 Statements of Basis and Purpose No. 26]

Section amended City Record Dec. 17, 2003 eff. Jan. 16, 2004. [See Vol. 9 Statements of Basis and Purpose No. 19]

Section in original publication July 1, 1991.

Notes:

Section 161.05 was amended by resolution adopted on December 10, 2003, adding a new subsection (b) to authorize its enforcement by duly authorized agents and employees of the Department and the Departments of Sanitation and Parks and Recreation.

Section 161.05 was further amended by resolution adopted on December 5, 2006. The substance of the existing provision was relettered as subdivisions (a) and (c) and subdivision (a) was amended to substitute the term "other restraint" for the term "chain," a more humane term. A new subdivision (b) was added to authorize the Department of Parks and Recreation to adopt rules providing for dogs to be off leash in areas and facilities under its jurisdiction and control, and to require persons controlling dogs off the leash to maintain and provide proof of current dog licensure and rabies vaccination, and for DOPR to provide public information about dog licensing, rabies vaccination, and the times when the locations where dogs are allowed to be off leash. Relettered subdivision (c) was amended to change the term "Departments of Sanitation and Parks and Recreation" to "Department of Sanitation or the Department of Parks and Recreation."

This section is derived from S.C. §17(1) without substantive change. A requirement to muzzle dogs, which was upheld in **People ex rel. Knoblauch v. Warden,** 216 N.Y. 154, 110 N.E. 451 (1915), was repealed on August 11, 1942, in favor of a mandatory requirement for the use of a leash.

Under §102c of the New York City Criminal Courts Act, a violation of this section is not a misdemeanor but is punishable by a fine up to $25.00 or imprisonment not to exceed 10 days, or both. However, Penal Law §722a provides: "Any person who suffers any unmuzzled, ferocious or vicious dog to be **at large** in any thoroughfare or public place in the city of New York shall be guilty of disorderly conduct." (emphasis added). When the two laws are read together, the following conclusions are reached: If a dog is kept on a leash it need not be muzzled since it is not "at large". If a dog is muzzled but not on a leash, there is a violation of this section but not of Penal Law §722a; this is not legally inconsistent. **People v. Lewis,** 295 N.Y. 42, 62 N.E. 2d 702 (1945). Finally, if an unmuzzled dog is not on a leash there is a violation of both laws. In such a case, the violation could be prosecuted under this section (and §102c of the New York City Criminal Courts Act would apply) or under Penal Law §722a. In the latter instance, Penal Law §723 provides

that the punishment is imprisonment up to six months or a fine up to $50.00 or both, or by probation up to two years.

Section 32 of the Rules and Regulations Affecting Property Under the Jurisdiction of the Commissioner of Parks, Supplement to Rules and Regulations of New York City Agencies, 1946-52, also prohibits a person from allowing a dog to roam at large in the parks and requires a leash no longer than six feet in length. Violation of this regulation is punishable by up to 30 days imprisonment or by a fine of not more than $50.00 or both.

CASE NOTES

¶ 1. In Juniper Park Civic Assn., Inc. v. City of New York, 14 Misc.3d 1203(A), 2006 WL 3628018 (Sup. Ct. Queens Co.), JPCA, a not-for-profit civic group brought a mandamus proceeding to compel the City to enforce 24 R.C.N.Y. § 161.05 (Leash Law) and 54 R.C.N.Y. § 1-04. Petitioner contended that people using Juniper Valley Park were violating the leash law, which requires that in public places, dog owners must keep them on leashes not more than six feet long. The Parks Department regulations stated that no person owning or possessing any animal shall cause or allow an animal to be unleashed or out of control in the park, except as allowed by the commissioner.

Approximately 20 years ago, the Parks Commissioner had an "unwritten policy" during which time dogs could be unleashed, in specified areas of some parks, between the hours of 9 P.M. and 9 A.M. That policy has been adopted by other Parks Commissioners since that time. since. JPCA contended that the Parks Commissioner did not have authority to enact such a policy in the face of explicit language in the Leash Law, particularly because the Parks Department's own written regulations essentially parrot these provisions.

In deciding the case, the court distinguished between statutes and codes. A statute is a type of law created by a legislative body by a majority vote of elected representatives and is approved by the executive. On the other hand, a code, rule or regulation is customarily created by some regulatory body which has been accorded that power by a legislative body. The regulations in question were created under a grant of legislative authority. The Leash Law was promulgated by the Department of Health under a grant of authority codified in City Charter § 558(b), and the Parks Department regulations were promulgated under a grant of authority in City Charter § 533(9). Both the Health Code and the Parks Department regulations have the force of law, but their promulgation has been authorized by the legislature. Thus, neither the Health Department nor the Parks Department needed any additional grant of authority to enact their regulations. Moreover, as between the Health Code and the Parks Department regulations, neither is inherently superior to the other. The Health Code appears to have a flat prohibition against unleashed dogs. Although the Parks Department regulations have a prohibition against dogs being unleashed in public, there are two important exceptions. Section 1-04[i] of the Parks Dept. rules states that dogs are permitted off-leash inside City parks when within established "dog runs" (see 56 RCNY Sec. 1-05[s][3] and "as permitted by the Commissioner. The court resolved the inconsistency between the regulations, pointing out that the introductory notes to the Health Code acknowledge the Parks Department's concurrent oversight of public health issues as they related to the City parks and recognize the Park's Commissioner's jurisdiction over the management of City parks and duty to promulgate regulations relating to parks. Ultimately, the court held that the Parks Department regulations are valid and that the Parks regulations permitting the Commissioner to allow unleashed dogs in the park, from 9 p.m. to 9 a.m., were controlling. The court also found that there was insufficient evidence that the Commissioner had failed to enforce provisions requiring dogs in parks to be on leashes between the hours of 9 a.m. and 9 p.m. Accordingly, the court dismissed the petition.

¶ 2. In Petrone v. Fernandez, 2008 Slip Op. 6198, 2008 N.Y.App.Div. Lexis 6062 (2d Dept.), a mail carrier alleged that he was injured while trying to evade defendant's unleashed dog, which was chasing him. Court held that the liability could be based on a violation of the Leash Law, even without demonstrating that the dog previously exhibited vicious propensities. Note, however, that the Third Department reached a contrary result in a case based on an upstate municipality's leash law (see Alia v. Fiorino, 39 AD3d 1068, 833 N.Y.S.2d 761 (3d Dept. 2007)). Note also that in Petrone, only the owner of the dog was potentially liable; a co-occupant who did not own the dog and was not even home at the time of the incident was not liable.

PART B CONTROL OF ENVIRONMENT

ARTICLE 161 ANIMALS

§161.06 Dogs and cats to be vaccinated and treated prior to change in ownership.

No person shall offer for sale, sell or give away any dog or cat unless such animal has been vaccinated against rabies in accordance with §11.65 of the Code, and treated for parasites or certified in writing by a duly licensed veterinarian to have been tested and found to be free of parasites.

HISTORICAL NOTE

Section amended City Record Dec. 30, 1998 eff. Jan. 29, 1999. [See Vol. 9 Statements of Basis and Purpose No. 12]

Section in original publication July 1, 1991.

Notes:

This section was amended by resolution adopted on December 14, 1998 to require that prior to sale or adoption of a dog or cat the animal is vaccinated against rabies in accordance with the provisions of §11.65 of the Code, and either treated for or certified by a veterinarian as free of any treatable parasites.

This section is new. It was enacted by resolution adopted on March 1, 1973, to require the deworming of dogs and cats or their certification as being free of intestinal helminths by a licensed veterinarian for the purpose of preventing the potential public health hazard of the diseases caused by toxocara parasites which may be transmitted to humans by infected dogs and cats.

24 RCNY 161.07

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 161 ANIMALS

§161.07 Vicious or dangerous animals.

(a) A "vicious or dangerous animal" shall mean any animal other than one properly registered pursuant to §161.09(k) hereof, which menaces, threatens, attacks or bites a person. A Department record of a report made pursuant to §11.03 shall be prima facie evidence that the animal is vicious or dangerous.

(b) The owner of a dog or other animal which is the subject of a report pursuant to §11.03 or of a complaint of viciousness or dangerousness shall make such animal available for examination by the Department.

(c) If, upon examination of the animal, or consideration of its history of the circumstances of the report made pursuant to §11.03, or the complaint concerning said animal, the Department finds the animal to be vicious or dangerous, it may order:

(1) The animal to be surrendered for the purpose of humane destruction;

(2) The animal to be permanently removed from the City;

(3) The animal to be muzzled whenever the animal is in a public place or in any open or unfenced area abutting on a public place;

(4) Such other action as the Department deems sufficient to insure control of the animal and protection of the public.

(d) Any dog owned, kept, engaged in or trained for dog fighting, or any dog owned, kept or trained to attack persons and not properly registered pursuant to §161.09(k), shall be surrendered to the Department by the person who owns, possesses or controls it, for the purpose of performing an examination and for such other disposition as the Department may order in accordance with subsection (c) hereof.

(e) Whenever the Department finds a dog or other animal to be vicious or dangerous under subsection (c) hereof, it shall be presumed that the owner or keeper trained, caused or permitted such animal to be vicious or dangerous, so as to establish a prima facie maintenance of a nuisance in violation of §3.11 of this Code.

(f) An animal which is vicious or uncontrolled may be impounded by a peace officer or killed if capture is dangerous.

HISTORICAL NOTE

Section amended City Record Dec. 30, 1998 eff. Jan. 29, 1999. [See Vol. 9 Statements of Basis and

Purpose No. 12]

Section in original publication July 1, 1991.

Notes:

Section 161.07 was repealed and reenacted on October 30, 1987. This section was last amended in 1959 when subsection (c) was added.

Subsection (a) was amended by resolution dated December 14, 1998 to correct the cross reference to the provision in Article 161 dealing with guard or attack dogs, which is now renumbered at 161.09(k), and subsection (d) was amended to include within the sanctions applicable under §161.09(c) any dogs owned for the purpose of or engaging in dog fighting.

Subsection (a) is added to clarify the definition of "vicious or dangerous animal."

Subsection (b), authorizes the Department to examine an animal which is the subject of a bite report or complaint.

Subsection (c) authorized the Department, after an examination of the animal, or a consideration of its history, the circumstances of a reported bite or a complaint concerning the animal, to take action appropriate to the circumstances, which may include humane destruction, ordering removal from the City or muzzling, or such other action as will insure control of the animal and public safety.

Subsection (d) requires surrender of certain dogs kept or trained for dog fighting or of unregistered attack or guard dogs for examination.

Subsection (e) establishes the condition of being vicious or dangerous as a prima facie nuisance under §3.11 of the Health Code.

Subsection (f) is identical to the present subsection (c).

CASE NOTES

¶ 1. By evidence of a dog's extreme aggressiveness, including evidence of the dog's numerous attacks on adults and children, the dog was proved to be vicious or dangerous pursuant to paragraph (a) of this section. Department of Health v. Stallone, OATH Index No. 1486/97 (July 16, 1997).

¶ 2. Where a vicious or dangerous dog's owner could not be trusted to muzzle, leash or otherwise restrain the dog, and where the dog was too aggressive toward other dogs to permit placement in a shelter, the only alternative was humane destruction of the dog pursuant to paragraph (c) of this section. Department of Health v. Stallone, OATH Index No. 1486/97 (July 16, 1997).

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 161 ANIMALS

§161.09 Permits to keep certain animals.

(a) No person operate a pet shop, grooming parlor, boarding kennel or training establishment for small animals without a permit issued by the Commissioner.

(b) No person shall construct or operate a shelter for homeless animals without a permit issued by the Commissioner.

(c) No person shall sell or keep for sale live rabbits or live poultry, including chickens, geese, ducks or other fowl, without a permit issued by the Commissioner. Such permit shall not include the right to slaughter rabbits or poultry for sale as food for human consumption for which a permit must be obtained pursuant to Article 93. A permit shall not be issued for the sale or keeping for sale of live roosters, ducks, geese or turkeys in the built-up portions of the City. A permit shall not be issued for the sale or keeping for sale of live rabbits or poultry on the same lot as a multiple dwelling as defined in section 4 of the Multiple Dwelling Law or, unless the consent of the occupants is obtained, on the same lot

as a two-family home. A permit shall not be issued unless the coops or runways are more than 25 feet from an inhabited building other than a one-family home occupied by the applicant and unless the applicant submits to the Department the written consent of the owner of the lot on which the poultry or rabbits are to be kept.

(d) Except on premises abutting upon a slaughter house no person shall yard horses or keep or yard cattle, swine, sheep or goats without a permit issued by the Commissioner. Such permit shall be issued only for unimproved areas of the borough of Richmond used for farming purposes.

(e) No person shall maintain or operate a stable for horses without a permit issued by the Commissioner except that no permit shall be required where a natural person or family owns a horse stable solely for housing and maintaining horses owned and used by the person or family for its exclusive recreational, non-commercial purposes.

(f) No person shall engage in the business of or hold herself or himself out as engaging in the business of importing, or selling, or offering for sale any animal of a species which is wild, ferocious, fierce, dangerous, or naturally inclined to do harm or any venomous snake and no person shall operate a snake farm engaged in the preparation of anti-venom without a permit issued by the Commissioner.

(g) No person who is charged with the supervision of a pet shop or business for the sale or offer for sale of dogs, cats or other small animals, or the boarding or grooming of small animals, or animal training, or similar type of operations, shall engage or be employed in such capacity unless he or she obtains a certificate indicating the successful completion of a course, acceptable to the Department, in the care and handling of such animals.

(h) Such certificate shall be placed in a clean, transparent cover or frame and displayed on the premises where the holder thereof is so engaged or employed in such a manner as to be clearly visible to the public. It shall be available for inspection at all times by the Department. No person shall mutilate, obstruct or tear down such certificate.

(i) The holder of such certificate shall successfully complete a refresher course in the care and handling of such animals when deemed necessary by the Department. The Department may require the holder of such certificate to complete a refresher course acceptable to the Department when the Department finds continuing violations of the Code, or when a zoonotic outbreak implicates animals cared for, treated or held in the establishment she or he supervises, or when the Department requires such course to acquaint him or her with current developments in animal care and handling principles.

(j) The Department may conduct such courses or approve courses conducted by educational institutions. Persons electing to enroll in such courses conducted by the Department may be charged a reasonable enrollment fee to defray all or part of the costs incurred by the Department in their administration.

(k) No person shall own a trained guard or attack dog for use within the City unless she or he has registered such animal with the Department. Any case of loss, theft or transfer of ownership of a trained guard or attack dog shall be reported by the owner to the Department within five (5) days of any such loss, theft or transfer. The Department may charge a reasonable fee to defray all or part of the cost incurred by the Department in the administration of this subsection.

(l) The owner of a trained guard or attack dog shall provide and see to it that such animal wears at all times a tag issued by the Department. Such tag shall have printed or stamped thereon, in clear and legible type, the words: "GUARD DOG" or "ATTACK DOG". Such tag shall be suspended at least three quarters of an inch and not more than one and one half inches from a collar worn by such animal. Lost, stolen or damaged tags shall be reported to the Department and may be replaced by the Department at reasonable cost.

(m) All premises in which a trained guard or attack dog is kept shall be provided with a sign or notice, printed in clear and legible type and conspicuously displayed, warning the public of the presence of such trained guard or attack dog. All establishments used in the business of training, selling or renting guard or attack dogs shall be provided with a

sign or notice, printed in clear and legible type and conspicuously displayed, advising the patrons or consumers of the requirements set forth in this section applicable to the use of such animals in the City, and the person engaged in such business shall provide a written copy of such notice to each of his or her patrons or consumers in a form deemed suitable by the Department.

HISTORICAL NOTE

Subds. (e)-(m) designated and amended City Record Dec. 30, 1998 eff. Jan. 29, 1999. [See Vol. 9

Statements of Basis and Purpose No. 12]

Section in original publication July 1, 1991.

Notes:

This section combines all the permit requirements for the keeping of live animals. See Article 5 for provisions relating to permit applications, expirations, revocations and renewals.

Subsection (a) is derived without substantive change from S.C. §18.

Subsection (a) was amended by resolution adopted on June 24, 1965, which added the phrase "or engage such animals"

Subsection (a) was further amended by resolution adopted on September 21, 1972 to add the words "fish, reptiles" to clearly and specifically indicate that this subsection is ago applicable to the sale or holding for sale of fish and reptiles in pet shops.

Subsection (a) was further amended by resolution adopted on September 18, 1975 to require a permit for engaging in the business of training small animals as an aid in preventing dog bites.

Subsection (a) was amended by resolution adopted on June 25, 1981 in order to conform it to the definitions contained in new §161.02 adopted on the same date.

Subsection (b) is derived without substantive change from S.C. §16.

Subsection (c) is derived from S.C. §19 and Regs. 2, 4 and 7 of the regulations governing the keeping of live rabbits or poultry. There are several important changes. (1) A permit will no longer be required for the keeping of rabbits or poultry not intended for sale, **e.g.,** as pets or for special occasions, such as before Easter or Thanksgiving; or when used for scientific purposes in a laboratory. (2) There is no exemption from the permit requirement, as in S.C. §19 Reg. 1, for unimproved sections of the City used for farming purposes. Although a exemption from the permit will be required for the keeping for sale or sale of live rabbits or poultry anywhere in the City, there is no intention of prohibiting the keeping of rabbits or poultry in unimproved areas. (3) The revision makes it clear that in built-up portions of the City a permit to keep chickens cannot include the right to keep roosters (**see: People v. Filactas**, 257 App. Div. 95, 12 N.Y.S. 2d 175 (1st Dept. 1939)), and the prohibition is extended to ducks, geese and turkeys. Even persons who keep live rabbits or fowl for purposes other than sale and who therefore do not need permits, are prohibited by §161.19(a) from keeping roosters, ducks, geese and turkeys in built-up areas. (4) Permits will no longer be issued for the keeping for sale or sale of live rabbits and poultry on the same lot as a dwelling; under §19 Reg. 2(d) this apparently could be done with the consent of the occupants although S.C. §19 Reg. 2(a) prohibited it.

The power of the Board to require permits for the keeping of poultry was upheld in **People v. Davis,** 78 App. Div. 570, 79 N.Y.S. 747 (2d Dept. 1903).

Subsection (d) is derived from S.C. §11 and Reg. 1. The limitation to the borough of Richmond is new.

Subsection (e) is derived without substantive change from S.C. §58.

Subsection (f) was repealed by resolution adopted on December 14, 1998 because there are no longer any cows kept for the purpose of selling milk in the City, and no current city dairies. As a result of the repeal of subsection (f), existing subsections (g), (h), (i), (j), (k), (l), (m) and (n) have been renumbered accordingly.

The first sentence of subsection (f) is derived from S.C. §12 but is changed so as to require a permit for the keeping of a cow only when it is kept for the sale of milk. Permits for keeping of cows for domestic purposes (there are presently about 30 issued) will no longer be required. The second sentence is new. As of the date of enactment of this Code, there are issued only six permits for the keeping of cows for the production and sale of milk. As a result of a long standing Board resolution which was never incorporated into the Sanitary Code, a new permit for a city dairy has not been issued for approximately 30 years. Thus the limitation of the right to keep cows for the sale of milk to those persons who are presently permittees while allowing the sale of an existing city dairy to a new owner does not change existing policy. Such a limitation is constitutional. **Stracquadanio v. Department of Health**, 285 N.Y. 93, 32 N.E. 2d 806 (1941).

Subsection (g) was added by resolution adopted on June 24, 1965.

This section was amended by resolution adopted on August 21, 1975, which added new subsections (h), (i), (,j) and (k) thereto to respectively require the completion of an approved training course in the care and handling of dogs, cats and other small animals by persons supervising pet shops of businesses for the sale, boarding,grooming of training of such animals or similar operations; the keeping and display of the certificate of completion of such course, on the premises supervised by the holder thereof the completion of refresher courses when deemed necessary by the Department; the conduct of such courses by the Department or approval of courses given by educational institutions; and the charging of a reasonable enrollment fee for courses conducted by the Department. These requirements are intended to aid in the prevention of the sale of sick and dangerous small animals and the inhumane housing and care of such animals.

Subsections (l), (m) and (n) were added by resolution adopted on September 18, 1975 to provide for registration of trained guard or attack dogs and warning to the public of their presence on the premises where they are kept, as aids in the prevention of dog bites.

Subsections (l), (m) and (n) were amended by resolution adopted on August 12, 1976 to additionally require the reporting of any loss, theft or change of ownership of a trained guard or attack dog; to replace the requirement for a red collar, which had proven unfeasible, with the requirement for a suitably labeled tag suspended from such dog's collar; and for the posting and distribution of notices by persons engaged in the business of training, selling or renting such dogs to advise their patrons or consumers of applicable requirements of this section.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 161 ANIMALS

§161.11 Prevention of nuisances; cleaning.

(a) A permit required by §161.09 shall not be issued unless the applicant proves to the satisfaction of the Commissioner that the place for which the application is made does not constitute a nuisance because of its proximity to a residential, business, commercial or public building, and that the place will be maintained so as not to become a nuisance.

(b) The owner, lessee or person in charge of any place where animals are kept pursuant to a permit required by §161.09, shall take all measures for insect and rodent control required by Article 151 and shall conduct such place so as not to create a nuisance by reason of the noise of the animals, the escape of offensive odors, or the maintenance of any condition dangerous or prejudicial to public health.

(c) Every place where animals are kept pursuant to a permit required by §161.09 shall have implements and materials, such as brooms, hoses, hoseconnections, vacuum cleaners where dusty conditions are found, covered metal

receptacles, brushes, disinfectants and detergents, as may be required to maintain sanitary conditions. Such places shall have regularly assigned personnel to maintain sanitary conditions.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

Subsection (a) is derived from S.C. §16 Reg. 1 and S.C. §58 Reg. 1. The specific prohibition against building a shelter for homeless animals within 200 feet of certain buildings is omitted in favor of a more flexible regulation.

Subsection (b) is derived in part from S.C. §16 Reg. 8 and 9, S.C. §18 Reg. 5(part), S.C. §19 Reg. 6 of the regulations governing the keeping of live rabbits or poultry, and S.C. §58 Reg. 13. The reference to Article 151, Rodents, Insects and Other Pests, is new.

Subsection (c) is new. Also see Article 135, Commercial Premises.

ARTICLE 161 ANIMALS

§161.13 Self inspection.

The holder of a permit issued pursuant to §161.09 or the person in charge of the place for which the permit is issued shall inspect or designate a qualified or trained employee to inspect the premises at least once every two months and record the results of the inspection on a form furnished by the Department. Such records shall be kept on file for one year. If an inspection shows a violation of any provisions of this Code, the permittee or person in charge shall promptly correct such condition. A record of self inspection shall be available for inspection by the Department, but shall not be subject to inspection by others, or to subpoena, and shall not be used in, or as the basis for prosecution.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is new in this context. Self inspection was required in wholesale food establishments (S.C. §148 Reg. 36), restaurants (S.C. §149 Reg. 40) and in retail food stores (S.C. §150 Reg. 28).

24 RCNY 161.15

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 161 ANIMALS

§161.15 Keeping of small animals for sale, boarding, grooming, or training.

(a) Dogs, cats, birds or other small animals shall not be sold or held for sale, or boarded, groomed or trained in a room in which a person lives. Such animals shall not be sold or held for sale or kept in the same place where food or drink is sold for human consumption unless necessary precautions are taken to prevent contamination of the food or drink and the creation of a nuisance.

(b) The holder of a permit issued pursuant to §161.09 or the person in charge of the place for which the permit is issued, shall provide any individual seeking to purchase, adopt, groom, train, or board a dog, showing no evidence of licensure, with a dog license application, furnished by the Department, which shall be completed by the individual. The holder of a permit to operate a pet shop or shelter or person in charge thereof, shall not transfer possession, title, ownership, control or custody of any dog to a prospective purchaser or adopter without first requiring the purchaser or adopter to submit a completed application for a dog license and to pay all required license fees unless such purchaser or adopter shall execute and submit to such permittee a written statement that the dog to be purchased or adopted is to be

harbored outside the City. The operator of a shelter issued a permit by the Department shall not release an unlicensed dog to any person unless the person shall complete an application for a license and tender the license fees required by law. Such holder of a permit or person in charge shall forward such completed application and license fees to the Department in such manner as may be specified by the Department, consistent with the New York City Dog License Law enacted by the State legislature (Chapter 115 of the Laws of 1894, as amended). The license shall be issued by the Department.

(c) A holder of a permit to keep small animals for sale or for boarding, grooming or training, or to shelter homeless animals, shall maintain and keep for one year a record of purchases and sales and/or a record of boarding, grooming, training, providing shelter for homeless animals, or adoption services rendered. When a dog or cat is purchased, sold, adopted or kept, the permittee shall make an entry in the record which shall contain the name and address of the person from whom it was purchased and of the person to whom it was sold or given for adoption or of the person who ordered boarding, grooming, or training services for such animals, and a complete description of the animal, including its age, sex and breed. The permittee shall on at least a monthly basis report to the Department on a form furnished by the Department all licensed and unlicensed dogs which have been sold, adopted, groomed, trained, boarded, sheltered, or otherwise served. Such form shall include the name and address of the dog owner and license number of all licensed dogs as well as any other descriptive information regarding such dog as may be required by the Department.

(d) A holder of a permit to keep small animals for sale, boarding, grooming or training shall not sell or hold for sale, boarding, grooming or training a dog or cat which is affected with or which has been exposed to a disease which is communicable among such animals, and shall not keep such animals unless it is under the care of a licensed veterinarian.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Subd. (b) amended City Record Dec. 30, 1998 eff. Jan. 29, 1999. [See Vol. 9 Statements of Basis and Purpose No. 12]

Subd. (b) amended City Record Dec. 30, 1997 eff. Jan. 29, 1998. [See Vol. 9 Statements of Basis and Purpose No. 9]

Notes:

Subsection (a) is derived from S.C. §18 Reg. 6. The complete prohibition against keeping animals in the same room where food or drink is prepared is modified to require precautions to prevent a nuisance or contamination of food. The Department does not issue a permit to keep small animals unless a certificate of occupancy is obtained for the premises from the Department 1 of buildings.

Subsection (b) is derived from S.C. §18 Reg. 7. References to boarding of animals are omitted. The requirement that the record be kept for one year is new. This provision which was originally adopted by the Board on February 11, 1941 is intended as a rabies control measure.

Subsection (b) was amended by resolution adopted on June 25, 1981 to enable the Department to ensure that all permittees are complying with State law.

Subsection (b) was amended by resolution adopted on December 17, 1997 to prohibit the holder of a permit issued to a pet shop or animal shelter pursuant to Section 161.09 or a person in charge of the place for which the permit is issued to surrender a dog to a prospective purchaser without first requiring the purchaser to submit an application for a

dog license and to pay all required fees.

Subsection (b) was amended by resolution adopted on December 14, 1998 to prohibit the release of an unlicensed dog from a shelter to any person, including an owner reclaiming a lost dog, unless the prospective owner completes an application for a dog license and pays all licensing fees.

The portion of subsection (c) prohibiting the keeping of diseased dogs and cats unless under a veterinarian's care is derived from part of S.C. §4. The prohibition of sale of diseased dogs and cats by permittees is new.

This section was amended by resolution adopted on September 18, 1975 to additionally apply its provisions to the business of boarding, grooming or training of small animals.

This Section was amended by resolution adopted on June 26, 1990 to specify procedures to be used by permittees concerning dogs in their establishments.

CASE NOTES

¶ 1. In 1989 The American Society for the Prevention of Cruelty to Animals told the City of New York that it would no longer issue dog licenses. Pursuant to NYC Dog License Law §8-c (Agriculture and Markets Law §107) the Mayor designated the Health Department as city agency responsible for dog licensing. The board adopted amendments to the Health Code, 24 RCNY §§161.04, 161.15, implementing this program. The amendments are not inconsistent with State law and are a constitutional delegation of authority. Pet Professionals of NYC v. City of New York, 215 AD2d 742 [1996].

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 161.17

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 161 ANIMALS

§161.17 Small animals kept for sale, shelters, kennels and training establishments; physical facilities and maintenance.

A place where small animals are kept for sale, a shelter for homeless animals or a kennel or other place where animals are boarded or trained shall meet the requirements of Article 135 governing walls, floors, ventilation, lighting and plumbing. An individual cage shall be provided for the use of each dog or cat three months of age or over except when isolation in a separate cage is medically contraindicated or, as specified in individual cases, animals are caged together for a humane reason. A veterinarian shall provide a written statement and such documentation as the Department may require indicating the reason why more than one animal should be caged together. Such documentation shall be maintained on the premises and be available for inspection. The floors, walls, implements and cages in such place shall be kept clean and in good repair. Cages shall be disinfected when necessary. Nothing in this Code shall prohibit the establishment of canine congregate socialization or play areas in boarding facilities regulated by this Code provided that animals allowed in such areas are certified by a veterinarian as vaccinated against rabies and free of other diseases transmissible to humans or other animals.

HISTORICAL NOTE

Section amended City Record Dec. 30, 1998 eff. Jan. 29, 1999. [See Vol. 9 Statements of Basis and Purpose No. 12]

Section in original publication July 1, 1991.

Notes:

This section was amended by resolution adopted on December 14, 1998 to provide flexibility to veterinarians in allowing more than one animals to be caged together, if it is medically beneficial to the animal(s), or for humane reasons, and to clearly differentiate requirements for caging from canine "play" or other congregate socialization areas.

This section is derived from S.C. §18 Regs. 2, 4(part), and 5 S.C. §16 Regs. 2, 3, 4, and 7(part). This section is applicable to places where animals are held for sale previously regulated under S.C. §18, to shelters for homeless animals previously regulated under S.C. §16 and to kennels or other places where animals are boarded which were formerly unregulated. Instead of setting forth the details found in the regulations of S.C. §§16 and 18, the section requires the physical facilities established for commercial premises in Article 135. The requirement for separate cages, found in S.C. §18 Re was adopted in 1941 as a rabies control measure. The three month delay in separation is included so as to permit full weaning prior to separation.

This section was amended by resolution adopted on September 18, 1975 to additionally apply its provisions to establishments for the training of small animals.

ARTICLE 161 ANIMALS

§161.23 Stables for horses; physical facilities and maintenance.

(a) A stable for horses shall meet the requirements in Article 135 governing walls, floors, ventilation, lighting and plumbing and shall have rodent proofing when required by the Department because of evidence of rat infestation. The Department, under such appropriate conditions as it may require, may allow a stable for racing horses to have in the stalls an impacted earth floor with straw, hay or similar material used for bedding.

(b) All exposed surfaces in a stable for horses shall be kept clean, and the walls, ceilings and exposed woodwork shall be whitewashed when necessary.

(c) Straw, hay or other material used as bedding shall not be placed upon a street, sidewalk or roof of a building.

(d) A horse-watering trough shall be maintained in a clean and sanitary condition and supplied with clean water.

(e) Except in unimproved areas, a stable shall not have or use a manure vault, pit or bin.

(f) All manure and other refuse shall be kept and treated within the stable in a manner satisfactory to the Department so as to minimize odors and prevent the breeding of flies or other annoying or unsanitary conditions. Manure shall either be removed daily or pressed into bales or barrels, adequately protected against flies and otherwise treated in a manner satisfactory to the Department. Manure or other stable refuse shall not be permitted to remain in a stable for more than four days.

(g) Unless special facilities satisfactory to the Department are provided for outside loading, the vehicle in which manure is to be removed shall be completely inside the stable and the stable doors shall be closed when manure is loaded. When barrels are unloaded they shall be cleaned and deodorized inside the stable in a manner satisfactory to the Department so as to prevent the creation of a nuisance.

(h) A stable yard or other area used by animals shall be kept clean, and the surface shall be graded so as to prevent the accumulation of liquids.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

Subsection (a) is derived in part from S.C. §58 Regs. 2, 3, 4, 5, 6 and 7. Instead of setting forth the details found in these regulations, the subsection requires physical facilities required for commercial buildings in Article 135. The specifications for the size of windows, the height of the ceilings and the number of required cubic feet of air space per horse have been omitted. The requirement for rodent proofing when there is evidence of rat infestation is new. The exception for stables used for race horses is new.

Subsection (b) is derived without substantive change from S.C. §58 Reg. 8.

Subsection (c) is derived without substantive change from S.C. §58 Reg. 11.

Subsection (d) is new. Horse-watering troughs were completely prohibited under S.C. §58 Reg. 14.

Subsection (e) is derived without substantive change from S.C. §58 Reg. 9(part).

Subsection (f) is derived from S.C. §58 Reg. 9(part). The provision that prior to removal the manure must be kept and treated in a manner satisfactory to the Department is new. Instead of requiring removal twice a week, this subsection calls for removal at least every four days.

Subsection (g) is derived in part from S.C. §58 Reg. 10. The last sentence is new.

Subsection (h) is derived from S.C. §58 Reg. 12 but is expanded to include all areas used by animals.

ARTICLE 161 ANIMALS

§161.25 Stables for cows; physical facilities and maintenance. [Repealed]

HISTORICAL NOTE

Section repealed City Record Dec. 30, 1998 eff. Jan. 29, 1999. [See Vol. 9 Statements of Basis and Purpose No. 12]

Section in original publication July 1, 1991.

Notes:

Section 161.25 was originally derived from Sanitary Code §§12 and 13 and at the time the Sanitary Code was reenacted as the Health Code, the Board anticipated that when there were no longer any dairies in the City and existing permits for keeping dairy cows for the sale of milk became inactive, keeping cows for the sale of milk in the City would

effectively be prohibited. This section was repealed by resolution adopted on December 14, 1998.

This section provides for the continuation in full force and effect of the following: S.C. §12 and the regulations governing the keeping of cows in the city of New York where milk is produced and prepared for sale within the city of New York, Regs. 1-25; S.C. §13 and Regs. 1-6 governing the tuberculin testing of dairy animals within the city of New York. When the few remaining permits become inactive the Board may repeal S.C. §12 and the regulations thereunder and S.C. §13 and the regulations thereunder, as well as this section of the revised Code. Section 161.09(f) **supra**, provides that new permits for the keeping of cows in the city of New York may be issued. When the last few city dairies will have disappeared, the keeping of cows for the sale of milk in the City will, in effect, be prohibited.

The provisions of S.C. §12, regulations governing the keeping of cows within the city of New York for domestic purposes only, Regs. 1-11 are omitted. Article 135, Commercial Premises, governs the operation of such stables for cows.

24 RCNY Health Code Reg. 163.00

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 163 BARBER SHOPS*6

Health Code Reg. § 163.00 INTRODUCTORY NOTES

Article 163 constitutes a revision of S.C. §335 and Regulations. In addition to this article of the Code, Article 135, Commercial Premises, also relates to barber shops and beauty parlors.

Since 1946, New York State has regulated barbers, hair dressers, cosmetologists and establishments (Articles 27 and 28, General Business Law, added L. 1946, c. 802 and 801 eff. July 1, 1946).

Chapter 32, Article 31 of the Administrative Code under which barbers were formerly licensed was repealed in 1947, L.L. 1947, No. 71, October 31. Department of Licenses regulations, similar to the regulations under S.C. §335, were also repealed. This was in accord with a statement by Governor Thomas E. Dewey when he signed the State legislation: The barbers of New York City should not be regulated by both the City and the State. Before this bill becomes operative the law should be amended to protect them from double control and should exclude either City or State regulation." The provisions of Article 163 have been retained, however, because the State Law contemplates

continued regulation of this filed by the New York City Sanitary Code, as expressed in General Business Law §§406 and 436.

Sec. 406 (Sec. 436) "All beauty parlors (§436 reads: "all barber shops") shall be maintained and operated in accordance with the provisions of the state sanitary code, except in the city of New York where the city sanitary code shall apply, and all licenses or persons employed or engaged therein or in connection therewith shall comply with the provision of such codes."

A license issued by the Secretary of State pursuant to Articles 27 or 28 may be suspended or revoked if there is a violation of "any applicable sanitary code", General Business Law, §409(8) and §441(8). An amendment to the State law would be necessary if dual control of barber shops and beauty parlors by both the State and the City is to be eliminated. Until such legislation is enacted, the quoted sections of the law (406 and 436 of the General Business Law) in effect mandate upon the Board of Health the continuation of some Sanitary Code regulations in this area.

The elimination of archaic requirements, such as the posting of "no-spitting signs" (S.C. §335 Reg. 7), a prohibition against the use of shaving cups or mugs in common (S.C. §335 Reg. 19), and a requirement that every establishment (including beauty parlors!) provide cuspidors (S.C. §335 Reg. 6), should be noted.

Article 163 has been amended to delete references to beauty parlors which are no longer regulated by the New York City Department of Health. A new Article 27 of the General Business Law, entitled Licensing of Nail Specialty, Natural Hair Styling, Esthetics and Cosmetology, which became effective July 5, 1994, pre-empts the New York City Department of Health from regulating and issuing permits to beauty parlors.

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 163 BARBER SHOPS*6

§163.01 Definitions.

When used in this article:

Barber shop means a store, establishment, place or premises in which one or more persons engage in the practice of barbering as defined pursuant to §431(4) of the General Business Law but does not include the practice of medicine, dentistry, optometry, nursing, physiotherapy or osteopathy by a person licensed and registered pursuant to the Education Law.

HISTORICAL NOTE

Section amended City Record June 9, 1995 eff. July 9, 1995. [See Vol. 9 Statements of Basis and

Purpose No. 3]

Section in original publication July 1, 1991.

Notes:

Subsection (a), a barber shop, and subsection (b), beauty parlor, are new and replace the definitions of "public barber shop"", "public hair-dressing establishment", "public manicuring parlor" and "public beauty parlor" in S.C. §335(2). The aim is to correlate the regulation of establishments under this article with the State law, i.e., Article 27 of the General Business Law, Practice of Hair-dressing and Cosmetology, and Article 28 of the General Business Law, Practice of Barbering. The exception for professions regulated by the Education Law is similar to a provision in General Business Law §§414 and 446.

Subsection (b) was deleted on May 17, 1995 to conform Article 163 with recent State law pre-empting local regulation of beauty parlors.

Purpose No. 3]

Notes:

This section is derived from S.C. §335 Regs. 8 and 10. The requirement that the coat or uniform have full length sleeves has been omitted. The section also requires that the hands be washed after use of the toilet. S.C. §335 Reg. 9,

prohibiting an attendant from working if he is "affected with any disease in a communicable form", is here omitted but is covered in §11.63 of this Code. General Business Law §§403(3) and 433(3) authorize the Secretary of State to "require all persons licensed or registered under this article to submit to physical examination by a physician selected by the secretary of state."

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 163 BARBER SHOPS*6

§163.09 Patrons; precautions and procedures.

(a) The headrest of a chair used to serve a patron shall first be covered with a freshly-laundered individual towel or a single-service paper covering.

(b) Alum or other astringent used to stop the flow of blood shall be applied in powdered or liquid form only. The stick form shall not be used.

(c) No powder puff, sponge or neck duster shall be used on any patron.

(d) No cosmetic which is adulterated under §77.01*12 or which is misbranded under §77.03* shall be used on a patron in a barber shop.

(e) No coal-tar hair dye which contains a color from a batch which has not been certified in accordance with the Federal Food, Drug, and Cosmetic Act shall be used on a patron in a barber shop unless a preliminary skin test is first

made in accordance with any directions accompanying the product. If the preliminary test results in redness, burning, itching, blisters or any other skin eruption in the area of the test, such coal-tar hair dye shall not be used. No coal-tar hair dye shall be used on a patron if the scalp or adjacent area shows evidence of abrasion, eruption or skin disease. No cosmetic containing a coal-tar color shall be used in the area surrounding the eyes, that is, the orbital area.

(f) No implement shall be used on or for a patron unless it is clean and sanitary.

HISTORICAL NOTE

Section amended City Record June 9, 1995 eff. July 9, 1995. [See Vol. 9 Statements of Basis and

Purpose No. 3]

Notes:

Subsection (a) is derived without substantive change from S.C. §335 Reg. 15.

Subsection (b) is derived without substantive change from S.C. §335 Reg. 16 but with the addition of the more positive language of Reg. 18 of the State Sanitary Code, Chapter X.

Subsection (c) is derived without substantive change from S.C. §335 Reg. 17.

Subsection (d) is derived without substantive change from part of S.C. §130 (1st para.)

Subsection (d) was amended on May 17, 1995 to delete the reference to beauty parlors.

Subsection (e) is derived from S.C. §131(1) and (1)(d) and S.C. §131(3) and (4). The requirement for the posting of a caution sign in the establishment is omitted.

The subsection requires preliminary tests only when the coal-tar hair dye used is required to bear preliminary test instructions and caution labels pursuant to the parallel requirements of the Federal and State law. Federal Food, Drug, and Cosmetic Act §601(a) and Education Law §681O(1)(a). Hair dyes containing certified coal-tar colors are not required to bear such instructions and caution labels, since they have been certified as "harmless and suitable for use" pursuant to F.F.D.C. Act §604; so-called harmless coal-tar colors in hair dyes also have been held not to require preliminary testing, instruction and caution labels although they are not from certified batches. Food and Drug Administration Trade Correspondence. (T.C.) Number 103, February 29, 1940. The subsection is wholly consistent with Federal and State law in the case of coal-tar dyes and does not raise the problem of inconsistent labeling requirements under Federal law and S.C. §131 which were the subject **of Gorolin Corporation v. City of New York,** 2 CCH Food Drug and Cosmetic Rep. (2d Ed.), Para. 7116 (S.D.N.Y., 1949).

Subsection (e) was amended on May 17, 1995 to delete the reference to beauty parlors.

Subsection (f) is derived without substantive change from S.C. §335 Regs. 12 and 13.

S.C. §335 Reg. 11, infectious diseases of patrons, and Reg. 19, use of shaving cups and finger bowls in common prohibited,

are omitted.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

Health Code Reg. § 165.00 INTRODUCTORY NOTES

This Article was repealed and reenacted by resolution adopted on March 21, 2001 to modernize the law governing bathing establishments and to ensure consistency with the State Sanitary Code. This Article previously underwent a major revision in 1977. Since that time, the understanding of good design, operation and practice has changed, and the changes made are intended to incorporate new standards. Many of the provisions have been revised to clarify their meaning for owners, operators and those who design and build bathing establishments.

On March 24, 2009, the Board of Health amended various provisions (§§ 165.01-165.05, 165.09-165.11, 165.15-165.19, 165.23-165.31, 165.39, 165.43-165.49) of Article 165, and to create a new § 165.42, to primarily maintain consistency with requirements found in Subparts 6-1 (concerning supervision) and 6-3 (concerning spray grounds) of the New York State Sanitary Code.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.01 Applicability.

(a) This Article shall apply to all bathing establishments as defined in §165.03 owned or operated by city agencies, or commercial interests or private entities including, but not limited to, public or private schools, corporations, hotels, motels, camps, apartment houses, condominiums, country clubs, gymnasia and health establishments. The regulations shall apply to all shower and dressing rooms, toilet facilities, filtration, pumping, piping, disinfection and safety equipment provided and maintained in connection with such bathing establishments.

(b) This Article shall not apply to: (1) a pool, spray features/grounds or sauna and steam rooms, within a one or two family dwelling, or a dwelling unit of a multiple dwelling, and solely for the use of the occupants for non-commercial purposes, (2) a float tank or relaxation tank used by one person at a time, (3) pools used only for religious purposes (ritual immersion), (4) spa pools used for prescribed medical therapy or rehabilitation and under medical supervision, or (5) a spray ground that uses water from the municipal water supply or a source of potable water pursuant to §141.01 of this Code without impoundment, reuse or recirculation of the water.

(c) A school, day care facility, or summer day camp regulated under Articles 45, 47 and 48 respectively, of this Code and permitted pursuant to one or more of those Articles shall not require a permit under this Article, but shall comply with all other provisions of this Article.

(d) No alteration or repair or addition shall be made in a bathing establishment unless a written description of the alteration or repair or addition is submitted to the Department for review and approval prior to commencing work. Repair or remodeling of an existing permitted establishment shall be in compliance with design and construction requirements in this Article.

24 RCNY 165.03

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.03 Definitions.

Adequate. "Adequate" means sufficient to accomplish the purposes for which something is intended, and to such a degree that no unreasonable risk to health or safety is presented. An item installed, maintained, designed and assembled, an activity conducted or act performed, in accordance with generally accepted standards, principles or practices applicable to a particular trade, business, occupation or profession, is adequate within the meaning of this Article.

Aquatic supervisory staff. "Aquatic supervisory staff" means an individual possessing the qualifications of Supervision Level II, Supervision Level III, or a supervising lifeguard having Level II qualifications, as provided in §165.15(b).

Bathing establishment. "Bathing establishment" means every indoor or outdoor place where: (1) there is a swimming, wading, spa, or special purpose pool, (2) there is a sauna or steam room with or without a pool, or (3) there is a spray ground with or without a pool, sauna or steam room.

Building code. "Building code" means the Building Code of the City of New York.

Certified pool operator. "Certified pool operator" means an individual possessing a current certification of the successful completion of a course in swimming pool technology administered by the Department.

Combined chlorine. "Combined chlorine" means the part of the total chlorine existing in water in chemical combination with ammonia, nitrogen, or organic compounds, mostly comprised of chloramines. Combined chlorine plus free chlorine equals total chlorine. Combine chlorine is calculated from the results of measuring the free and total chlorine with an appropriate test kit.

Cross connection. "Cross connection" means a physical connection between the potable water system and a non-potable source such as a pool, or physical connection between a bathing establishment water and the sanitary sewer or waste water disposal system such that non-potable water may flow into the potable water system.

Deep water or deep end. "Deep water or deep end" means those areas of a swimming pool where water is more than five feet deep.

Fill and draw pool. "Fill and draw pool" means a pool having no recirculation system. It has as the primary manner of cleaning the complete removal and disposal of the used water and replacement with water at periodic intervals. Public use of a fill and draw pool is prohibited.

Foot Shower. "Foot shower" means a shower head and similar water feature for use in rinsing debris from patrons' feet.

Major alteration, renovation or addition. "Major alteration, renovation or addition" means substantial physical change to the bathing establishment, shape, structure, enclosure, electrical system or other appurtenances, or to the water disinfection or recirculation system, or to the waste water system. It does not include replacement of equipment or piping previously approved by the Department provided that the type of and size of the equipment are not changed, nor does it include normal maintenance or repair.

mg/l. "mg/l" means milligrams per liter and is equivalent to parts per million (ppm).

Movable-bottom pool. "Movable-bottom pool" means a pool with a hydraulic lift arrangement for floor movement and a jet water self-cleaning system, or a movable panel to provide access for a robotic vacuum.

N.S.F. "N.S.F." means National Sanitary Foundation.

Pool. "Pool" means an artificial basin, tank, or chamber constructed of concrete, masonry, metal, or other impervious material which contains water and is operated for the purpose of bathing, wading, swimming, diving, water recreation, or therapy. This does not include bath tubs which are drained between uses.

Physical-therapy pool. "Physical-therapy pool" means a pool not intended for swimming or instruction in swimming. A "physical-therapy pool" is medically administered and specifically designed and constructed for hydro-therapy, medical treatment, physical or muscle relaxation, or reserved for use by persons with physical disabilities or other special purposes deemed appropriate by the Department.

Recirculation. "Recirculation" means the pump, piping, filtration system, chemical feed systems and accessories provided for treating the pool and/or spray pad water to meet the water quality standards in these rules.

Responsible person. "Responsible person" means a competent individual, at least 18 years of age, employed by the owner or operator of the bathing establishment, who shall be present at the bathing area at all times when the facility is officially open and who exercises control over the patrons, is trained in the use of lifesaving and safety equipment, and emergency procedures and the pool safety plan.

Shallow water or shallow end. "Shallow water or shallow end" means those areas of a swimming pool where the water is 5 feet deep or less.

Spa pool. "Spa pool" means a pool, primarily designed for therapeutic use or relaxation, which is normally not drained, cleaned or refilled for each individual. It may include, but is not limited to, hydrojet circulation, hot water, cold water, mineral bath, air induction, bubbles or any combination thereof. Spa pools shall have a maximum water depth of 4 feet at any point and may be equipped with aquatic seats within the perimeter of the pool. A "Spa pool" shall not be used for swimming or diving. "Spa Pool" means and includes "hydrotherapy pool," "whirlpool," "hot spa," or "hot tub."

Spray Pad. "Spray pad" means a specific area consisting of a play surface, spray features, and drains, upon which the bathers stand and are sprayed with water.

Spray Ground(s). "Spray Ground(s)" means an artificially created water jet, features or stream where water is sprayed from a structure or the ground in conjunction with a spray pad in which sprayed water is drained, collected, treated and re-circulated back for reuse purposes.

Spray Features. "Spray features" means the devices and plumbing used to convey the treated water to the spray pad to spray the patrons.

Spray Pad Treatment System. "Spray Pad Treatment System" means the equipment and processes used to filter, disinfect and circulate the water used for the spray pad and spray features.

Spray Pad Treatment Tank. "Spray Pad Treatment Tank" means the vessel to collect the water that has been sprayed on the spray pad and returned through the spray pad drains.

Superchlorination. "Superchlorination" means the addition of a sufficient amount of chlorinating compound to pool water and/or spray pad treatment tank water to remove combined chlorine (chlorine that has reacted with nitrogenous compounds) or destroy unwanted organisms in the pool water and/or spray pad treatment tank water. Generally the level of chlorine added is ten times the level of combined chlorine in the pool water and/or spray pad treatment tank water (in units of ml/l or ppm). Treatment of pool water and spray pad treatment tank water with non-chlorine chemicals to eliminate or suppress combined chlorine is not superchlorination.

Supervisory Staff. "Supervisory Staff " means an individual or individuals responsible for supervising bathers and monitoring the spray ground to ensure compliance with regulations for use, and who is familiar with its equipment and is trained in the operation and maintenance of the spray pad treatment system.

Swimming pool. "Swimming pool" means a pool of three foot depth or greater, designed to be used primarily for swimming or other recreation. This includes white-water slide, wave and movable bottom pools.

Turnover period. "Turnover period" means the time required to recirculate a volume of water equivalent to the water volume of the pool through the filtration system.

Wading pool. "Wading pool" means a pool intended to be used for wading by young children for general recreation or training and has a maximum water depth of 24 inches at any point.

Wave pool. "Wave pool" means a pool of special shape and design, with water-wave making machinery.

White-water slide. "White-water slide" means a facility consisting of a starting platform, one or more flumes, and a plunge pool.

24 RCNY 165.05

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.05 General Requirements for Permit Applications.

No person shall construct or operate a bathing establishment without prior construction authorization and a permit issued by the Department. No bathing establishment shall be constructed nor shall any major alterations or additions be made to any bathing establishment unless a completed application for the construction, alteration or addition is submitted to the Department for review and approval prior to commencement of work. The application shall include appropriate fees, application forms and other supplemental information as required by the specific circumstances. For bathing establishments with pools and/or spray grounds, the application package shall also include detailed engineering plans, specifications and an engineering design report. The permit shall be displayed in a conspicuous place at the facility. The Department may order any bathing establishment operating without a permit to close and remain closed until the facility has obtained and displays a valid permit issued by the Department.

(a) Application for a permit shall be made to the Department at least 30 days before the expiration of a permit or at least 30 days before the opening of any bathing establishment.

(b) **Change in ownership.** Within 30 days of the change in ownership of a bathing establishment, the new owner shall file the application for change in ownership with the Department.

(c) **Engineering plans, specifications and engineering report.** Every owner, personally or through his or her engineer or architect, shall submit to the Department plans and specifications covering construction, alteration or reconstruction of bathing establishments or installation or alteration of their equipment prior to the start of construction or installation. No deviation from the plans and specifications or conditions of approval may be made without prior approval of the Department. Plans, specifications and engineering reports shall be prepared by an engineer or architect licensed to practice in the State of New York, and shall include:

(1) **A scope of work letter.** The letter shall include a description of the facility location and background, including physical aspects of the surrounding environment and structures, land and seasonal ground water table, a detailed discussion of the proposed system and the work to be performed.

(2) **Engineering plans.** Three (3) identical sets of engineering plans each bearing the seal and signature of an engineer or architect licensed to practice in the State of New York, shall be submitted to the Department for review and approval. Detailed scaled and dimensional drawings shall include all of the following:

(A) **Plot plan and general site plan:**

(i) A plot plan or vicinity plan showing the precise location of the proposed bathing establishment and building and existing structures by references to known landmarks such as streets and public buildings.

(ii) Name of the project location, the scale in feet, the north point, and direction of prevailing wind (for outdoor pools).

(B) **Detailed plans:** All detailed plans shall be drawn to a suitable scale and include the following information:

(i) A bathing establishment layout plan showing all the proposed facilities: The locations of the bathing area, spray ground layout, spray pad area, diving boards, ladders, stairs, deck, walkway, walls or fences enclosing the pool, inlets, spray features, spray pad drains, main drains, pool and deck drains, vacuum fittings, drinking fountains, piping, hose bibbs, surface skimmer system, recirculation system and appurtenances, filtration system, disinfection equipment, sewage connections, water main, lighting fixtures and other proposed features related to the operation and safety of the proposed bathing establishment including bathhouse, toilet and shower.

(ii) Surface drainage management for the proposed bathing establishment. (For outdoor pools and spray grounds only.)

(iii) A flow diagram or schematic in elevation views of the water treatment and recirculation system.

(iv) Complete construction details, including dimensions, elevations and appropriate cross-sections.

(v) Piping plan containing the size, type and location of all piping, including elevations.

(vi) Construction notes, schedules, charts and other related data.

(3) **Specifications.** One set of complete specifications for the construction of the proposed bathing establishment, bather preparation facilities, recirculation system, filtration facilities, disinfection equipment and all other appurtenances shown on the detailed plans shall be submitted.

(4) **Engineering design report or calculations.** A summary of the design basis, including information relative to the capacity or patron loading (maximum and average), spray pad area, pool area and volume, hydraulic computation (including head loss in all piping and water treatment), chlorinator and pump sizing calculations, recirculation

equipment, filtration facilities, disinfection equipment, spray pad treatment system design calculations, spray feature flow rates, turnover and filtration rate, filter flow rates, pump curves, capacity of bathhouse and bather preparation facilities and toilet facilities, and all other appurtenances, shall be submitted.

(d) **Supplemental or additional information.** A completed application shall be accompanied by any supplemental information which the Department deems necessary for review. For bathing establishments using water other than the municipal public water supply, the application should also include source, quality, quantity available and characteristics of water supplied to the bathing establishment including alkalinity, pH, iron and manganese.

(e) No change in location or construction of the project shall be made from plans and specifications that have been approved without first submitting details of the proposed changes to the Department and receiving subsequent approval.

24 RCNY 165.11

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.11 Enforcement.

(a) The most recent inspection report shall be readily available for inspection by the Department at the facility.

(b) **Public health hazards and closing criteria.** Where one or more of the following public health hazard conditions exist, the bathing establishment may be immediately closed by the Department and shall remain closed until the hazardous condition(s) are corrected. No person shall use the facility until the violations are corrected in compliance with the provisions of this Article. The facility shall remain closed until the Department has authorized the reopening of the facility. Public health hazard shall mean but shall not be limited to:

(1) **For pools:**

(A) Failure to provide adequate level of supervision, as required by §165.15.

(B) Failure to provide the minimum disinfectant residual levels, as required by §165.23.

(C) Failure to continuously operate the swimming pool's filtration and disinfection equipment.

(D) Use of an unapproved or contaminated water supply source for potable water use.

(E) Overhead electrical wires within 20 feet of the pool, except where covered and secured in a ceiling.

(F) Unprotected electrical circuits or wiring within 10 feet of the pool.

(G) Failure to maintain emergency lighting source.

(H) Inadequate number of lifesaving equipment on pool deck, as required by §165.17.

(I) Pool bottom or main drain grate not visible.

(J) Absence of or improper depth markings at a pool.

(K) Plumbing cross-connections between the drinking water supply and pool water or between sewage system and the pool's filter backwash facilities, or other cross-connections in the pool plumbing.

(L) Failure to provide and maintain an enclosure around the pool area that will prevent access to the pool during the hours in which the pool is not open for use.

(M) Use of unapproved chemicals or the application of chemicals by unapproved methods to the pool water.

(N) Broken, missing or unsecured main drain grates in the pool.

(O) Overcrowding of the pool that results in inability to supervise bathers.

(P) Glass or sharp objects in pool or on deck area.

(Q) Failure to provide pool safety plan approved by the Department.

(R) Spa pool water temperature exceeds 104 degree Fahrenheit.

(S) Any other condition dangerous to life or health.

(2) **For sauna and steam rooms:**

(A) Sauna temperature exceeds 194 degrees Fahrenheit.

(B) Steam temperature exceeds 120 degrees Fahrenheit.

(C) Door not free swinging or does not swing out.

(D) Viewing window not provided.

(E) Monitoring by attendant inadequate, or one hour timer not provided, as required by §165.63.

(F) Alarm not provided, inoperable, inaudible or not operating in correct range. Alarm not installed to cut off heat in sauna or steam room when activated.

(3) **For spray grounds:**

(A) Failure to provide adequate level of supervision of the spray ground as required by §165.15.

(B) Failure to provide the minimum disinfectant residual levels and the minimum ultraviolet light dosage as required by §165.23.

(C) Failure to continuously operate the spray ground filtration and disinfection equipment.

(D) Use of an unapproved or contaminated water supply source for potable water use.

(E) Overhead electrical wires within 20 feet of the spray ground, except where covered and secured in a ceiling.

(F) Unprotected electrical circuits or wiring within 10 feet of the spray pad.

(G) Broken or missing drain grates on the spray pad.

(H) Failure to maintain emergency lighting source.

(I) Plumbing cross-connections between the drinking water supply and spray ground treatment system or between sewage system and the spray pad's filter backwash facilities, or other cross-connections in the plumbing.

(J) Use of unapproved chemicals or the application of chemicals by unapproved methods to the spray ground water.

(K) Glass or sharp objects on spray pad or deck area.

(L) Visible contamination of the spray pad and/or spray pad treatment tank by a potentially toxic chemical or a bacteriological substance that could present a hazard to the public.

(M) Any other condition determined by the Department to be dangerous to life or health.

24 RCNY 165.15

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.15 Certifications, Supervision Coverage and Surveillance Requirements.

(a) All bathing establishments shall be maintained and operated in a safe, clean and sanitary condition at all times.

(b) **Certifications.** All bathing establishments shall be operated and supervised by the required certified personnel. The pool operator shall not hire or retain any person who does not have verifiable aquatic supervisory staff qualifications. Copies of the certificates or other documents showing possession of such qualifications shall be kept on file at the facility and shall be readily available for inspection by the Department.

(1) **Pool operator.** A certified pool operator shall be designated and shall be responsible for the operation of the bathing establishment in compliance with this Article. No person who is charged with the operation of a bathing establishment shall engage in or be employed in such capacity unless the person obtains a certificate indicating successful completion of a course in swimming pool technology administered by the department. A refresher course in swimming pool technology may be required for a licensed pool operator whenever deemed necessary by the

department. The department may require that a refresher course be taken when continuing violations of the Article are found, when a water borne disease outbreak implicates the pool and/or spray ground water or sanitary conditions at the pool and/or spray ground, or when the department requires such a course to acquaint the operator with current developments in pool operation technology.

(2) **Aquatic supervisory staff.** Except in a physical-therapy pool, appropriately certified aquatic supervisory staff shall be present whenever the pool is open. A minimum of one supervising lifeguard is required for pools that require three or more aquatic supervisory staff.

The aquatic supervisory staff shall meet the following minimum requirements:

(A) **Supervision Level II-Pool Lifeguard.**

(1) Shall be at least 16 years old (or 15 years old if a supervisory lifeguard is present), and

(2) Shall possess a current American Red Cross Basic Life Support for the Professional Rescuer Cardiopulmonary Resuscitation (CPR) certificate or equivalent American Heart Association certificate, or an equivalent certificate approved by the New York State Department of Health. Certification period shall not exceed one year, and

(3) Shall possess a current American Red Cross Lifeguard Training Certification, or an equivalent certificate approved by the New York State Department of Health.

(B) **Supervision Level III and IIIA.**

(1) **Level III.**

(i) Shall be at least 18 years old (or 16 years old if certified as Level II Lifeguard); and

(ii) Shall possess a current American Red Cross Community-Cardiopulmonary Resuscitation (CPR) certificate, or equivalent certificate approved by the New York State Department of Health. Certification period shall not exceed one year, except if assisting a lifeguard as specified in §165.15 (b)(2)(B)(2) below; and

(iii) Shall be competent to understand and apply the provisions of this Article and the Safety Plan, evaluate environmental hazards, use lifesaving equipment, and control bathers and crowds.

(2) **Level IIIA.** A supervision Level IIIA staff assists a lifeguard with direct supervision of bathers as specified in §165.15 (c)(1)(C)(6) below. No person shall be qualified under this paragraph unless such person possesses certification in Lifeguard Management issued by the American Red Cross or a certificate issued by a certifying agency determined by the State Commissioner of Health to provide an adequate level of training in aquatic injury prevention and emergency response. Certification shall be valid for the time period specified by the certifying agency but shall not exceed a consecutive three year period from course completion.

(C) **Supervising Lifeguard.**

(1) Supervising lifeguard shall have the qualifications for Supervision Level II.

(2) Supervising lifeguard shall have at least two years adequate life guarding experience.

(c) **Supervision.** For pools, aquatic supervisory staff shall be on the pool deck and shall provide continuous visual supervision and surveillance of the patrons in their assigned or designated area of coverage, without interference or interruption of his/her duties unless additional supervisory staff is provided. The staff shall not be subject to duties that would distract their attention from proper observation of patrons in the pool area, or that would prevent immediate assistance to persons in distress in water. The aquatic supervisory staff shall clear the water of bathers when the pool

area is left without adequate supervision. The following is the minimum number of aquatic supervisory staff required for visual surveillance of the entire pool area(s) that are open to bathing. Additional aquatic supervisory staff may be required by the Department whenever it is necessary for the protection of the patrons. The Department may consider such factors as pool size and shape, diving board use, patron decorum and usage by developmentally disabled patrons.

(1) **Swimming pools:**

(A) Pools with less than 3,400 square feet of surface water area: at least one Supervision Level II Lifeguard on duty for every 75 bathers.

(B) Pools with 3,400 square feet or greater in surface water area:

(1) At least one Supervision Level II Lifeguard shall be provided for each 3,400 square feet of pool surface area or fraction thereof.

(2) When the number of bathers exceeds or is likely to exceed 50 percent of the pool bather capacity based on 25 square feet of pool surface area per bather, at least one additional Supervision Level II Lifeguard shall be provided.

(3) At pools required to provide three or more Aquatic Supervisory Staff, a Supervising lifeguard is required.

(4) When included in the department approved safety plan, the pool operator may limit the portions of the pool open to bathers and provide the required aquatic supervisory staff consistent with the pool area open.

(C) **Use of pool for lap swimming or similar restricted usage:** When included in the department approved safety plan, usage of the pool limited to lap swimming or an organized small group activity, may be supervised by fewer lifeguards than required based solely on surface water area.

(2) **Wading pools:** At least one Level III supervisor shall be on duty.

(3) **Spa pools:** Except for spa pools described in §165.01(b), at least one Level III supervisor shall be on duty and provide periodic supervision at least once every 15 minutes, or as specified in the pool safety plan approved by the department.

(4) **Physical-therapy pools:** Except for spa pools described in §165.01(b), supervision by licensed health care providers such as physicians or therapists, qualified as Level III supervisors is required. Such person shall be in the pool or on the pool deck whenever pool is in use.

(5) **Wave pools:** A minimum of three Supervision Level II lifeguards, two of whom are in lifeguard chairs outfitted with the emergency switch that will immediately stop the wave machine, shall be present whenever the wave machine is in operation.

(6) **Pools in usage during instructional activities:** When instructional activities occur, including but not limited to learn to swim programs, physical education classes and swim team activities, and the required Supervision Level II staff (lifeguards, as per §165.15(b)(2)) provide the instruction, at least one additional staff meeting at least Supervision Level III must be provided for each aquatic supervisory staff engaging in instructional activities. When a Supervision Level IIIA staff is utilized to assist a Supervision Level II (lifeguard) staff with direct supervision of bathers during instruction, the Supervision Level IIIA staff must possess certification in aquatic injury prevention and emergency response as specified in §165.15(b)(2)(B)(2) above. The written Safety Plan must describe the duties, positioning at pool side and interaction between the lifeguard and Level III staff which ensures adequate bather supervision and emergency response. Note: where instructors, in the water or on the deck, supplement the required on-deck lifeguard(s) who do not provide instruction, no extra Level III supervision is required.

(7) **White-water slide:** Supervision by Supervision Level II lifeguards shall be provided in a number determined

by the Department depending on the design of the facility. A proposed supervision staff plan shall be submitted in writing to the department for review and approval.

(d) **Surveillance requirements for sauna and steam rooms:** If a one-hour timer is not provided, as provided for in §165.63, an attendant who meets the definition of responsible person, shall inspect the facility at a minimal interval of 15 minutes during all periods of operation of a sauna and steam room and shall maintain a daily log of inspections.

(e) **Supervision requirements for spray grounds:** At least one Supervisory Staff as defined in §165.03, shall provide periodic supervision of the spray ground.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.17 Lifesaving and Safety Equipment.

Either one commercially prepared 24-unit first aid kit or a minimum supply of band aids, bandage compresses and self-adhering gauze bandages must be provided at the spray ground unless otherwise specified in the safety plan. For facilities with pools, the following minimum equipment shall be kept in good repair and readily accessible near the pool deck at all times when the pool facility is open for use:

(a) **Lifesaving and safety equipment.**

(1) At all pools requiring a Level II lifeguard, the following lifesaving and safety equipment shall be provided:

(A) One rescue tube with an attached line for each lifeguard on duty.

(B) One reaching pole at least 15 feet long.

(C) A full size commercially available spine board (or a spine board 6 feet long and a minimum 16 inches wide) provided with straps and head immobilizer to aid in immobilization of a victim, and handholds.

(D) First aid kit. One commercially prepared 24-unit first aid kit or, a minimum supply of band aids, bandage compresses and self-adhering gauze bandages.

(E) Resuscitation equipment shall be available as specified in the Rules of the Department, Title 24 Rules of the City of New York Chapter 18 (24 R.C.N.Y. Ch. 18).

(F) Two blankets.

(2) At pools requiring a Level III supervisor, the following lifesaving and safety equipment shall be provided:

(A) First aid kit. One commercially prepared 24-unit first aid kit or, a minimum supply of band aids, bandage compresses and self-adhering gauze bandages.

(B) Resuscitation equipment shall be available as specified in the Rules of the Department, Title 24 Rules of the City of New York Chapter 18 (24 R.C.N.Y. Ch. 18).

(C) Two blankets.

(b) **Lifeguard station.** Elevated lifeguard chairs shall be provided at all pools having a surface area greater than 2,000 square feet. One elevated lifeguard chair is required for each 3,400 square feet of pool surface area or fraction thereof. The chairs shall be located so as to provide a clear, unobstructed view of the pool bottom in the pool area under surveillance.

(c) **Emergency telephone and emergency contact list.** A telephone shall be immediately accessible within 300 feet unimpeded distance of the pool water (an unlocked door or gate shall not be considered an impediment) for emergency communications in the bathing establishment. The telephone numbers of local police, emergency medical services, nearest hospital, fire department, and poison control center shall be posted in a conspicuous place near the telephone. The name, address and telephone number of the establishment shall be listed by the telephone.

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.19 Pool Safety Plan.

The operators of pools and/or spray grounds shall develop, maintain and implement a written safety plan which consists of policies and procedures to be followed by the personnel during normal operation and emergencies for protecting the public from accidents and injuries. Safety plans must include procedures for daily bather supervision, injury prevention, reacting to emergencies, injuries and other incidents, providing first aid and summoning help. The safety plan shall be approved by the department and shall be accessible for use and inspection by the department at all times. The owner or pool operator shall review the plan periodically and update the plan whenever a change occurs in the facility. Changes made to the plan shall be submitted to the department for approval before implementation.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.21 Facility Operating Policy.

(a) The operator shall comply with the minimum requirements of this Code governing safety and sanitation and shall enforce such additional policy as may be necessary to protect the health and safety of the public.

(b) Signs required to be posted shall be posted conspicuously pursuant to §165.41(n) and §165.63(h).

(c) **Contagious or infectious disease control.** Any person having any contagious disease shall be excluded from use of the pool. This includes skin disease, sore or inflamed eyes, a cold, ear or nasal discharges and other communicable diseases not readily apparent by a visual inspection.

(d) **Protection against infection.** Persons having any considerable area of exposed subepidermal tissue, open blisters, cuts, boils or other evident skin or other bodily infection shall be excluded from a bathing establishment.

(e) **Wastes and contamination.** Urinating, expectorating or blowing the nose or otherwise introducing human

waste or other contaminants into the pool is prohibited. Children's diapers shall be fully enclosed with impervious material so that liquid and solid wastes are contained therein and do not contaminate the pool water.

(f) **Alcohol.** The pool operator shall not permit persons under the influence of alcohol or who are exhibiting erratic behavior in the pool area.

(g) **Patron control.** Patrons shall be showered and dressed in bathing attire before entering the pool or entering upon walks immediately adjacent to pools.

(h) **Conduct.** The pool operator shall not permit patron conduct within the pool facility that is dangerous or compromises the safety of the patron involved or others in the facility. No boisterous or rough play, except supervised water sports, is permitted.

(i) **Diving.** Diving in water less than eight feet deep is prohibited, except for competitive swimming or training activities appropriately supervised by qualified staff.

(j) **Outdoor pools.** Swimming is prohibited at outdoor swimming pools when lightning is present, including a 15-minute period after the last lightning is observed.

(k) **Spa pools.** The use of oils, body lotions and minerals shall be prohibited.

24 RCNY 165.23

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.23 Water Chemistry and Testing Requirements.

The chemical quality of water in the pool and/or spray ground shall not cause irritation to the eyes or skin of the bathers or have other objectionable physiological effects on patrons. The water shall be chemically balanced to maintain clarity, proper disinfection, total alkalinity, and pH levels as specified below:

(a) **Disinfectant residual.** All pools and/or spray grounds in use shall be automatically and continuously disinfected by means of equipment that is in compliance with the provisions of this Article and that uses a disinfectant which is approved by the department. Silver/copper ion generators, ozone and other disinfectants may be used only as a supplement to chlorine or bromine.

(1) **Chlorine residual.**

(A) **Pools.** Where chlorine is used as a disinfectant, and the pool water pH is less than or equal to 7.8, the dosage of

chlorine or chlorine compound shall be sufficient to maintain a concentration of at least 0.6 mg/l free chlorine throughout the pool. When pH is between 7.8 and 8.2, a concentration of at least 1.5 mg/l free chlorine residual shall be maintained. During use, pool water shall not exceed a free chlorine residual of 5.0 mg/l or a pH of 8.2. The pH of water in the spa pool shall be maintained between 7.2 and 7.8, and a minimum free residual chlorine of 1.5 mg/l shall be provided. Spa pools shall be chlorinated to 10 mg/l (shock treatment) at least once a week at end of daily usage period.

(B) **Spray Grounds.** When calcium hypochlorite or sodium hypochlorite are used to disinfect a spray pad and the spray pad treatment tank, the dose of chlorine or chlorine compound shall be sufficient to maintain a concentration of at least 2.0 mg/l free chlorine throughout the system including the treatment tank and water emanating from the spray features. A free chlorine residual of 10.0 mg/l shall not be exceeded in any spray pad treatment tank during use. Spray pad treatment tank water pH shall be maintained between 7.2 and 7.8.

(2) **Superchlorination and superoxidation.** When combined chlorine (chloramines) in excess of 0.5 mg/l is detected in pool and/or spray ground treatment tank water, the water shall be superchlorinated to attain a free chlorine concentration of at least 10 times the combined chlorine concentration, or oxidized by other means to eliminate the combined chlorine. Hand feeding of chemicals directly into the pool and/or spray ground treatment tank is permitted for purposes of superchlorination or superoxidation when the pool and/or spray ground is closed to the public.

(3) **Bromine.**

(A) When bromine is used as a disinfectant, the pH of water shall be maintained between 7.2 and 7.8, and a minimum bromine residual of 1.5 mg/l shall be provided. Spa pools shall be maintained at a bromine residual between 3 mg/l and 6 mg/l. A maximum of 6 mg/l bromine residual shall be permitted in any pool during use.

(B) The pH of the spray pad treatment tank water and water emanating from the spray features shall be maintained throughout the system between 7.2 and 7.8 and a minimum bromine residual of 4.4 mg/l shall be provided.

(4) **Silver/copper.** When silver/copper or copper ion generators are authorized, the concentration of copper shall not exceed 1.3 mg/l and the concentration of silver shall not exceed 0.05 mg/l.

(5) **Ozone.** When ozone is authorized, ozone concentration in pool water shall not exceed 0.1 mg/l and the ambient air zone concentration shall be less than 0.1 mg/l at all times either in the vicinity of the ozonator or at the pool water surface.

(6) **Ultraviolet Light.** The light intensity meter reading of the ultraviolet unit shall be monitored and recorded at least two times daily. The light intensity shall be maintained at the manufacturer's specified level for the flow rate. When the output intensity falls below the setpoint intensity, conditions causing decreased ultraviolet light intensity at the sensor shall be evaluated and corrected. The ultraviolet lamp(s) shall be replaced when the decreased ultraviolet light intensity is due to lamp failure.

(7) **Other disinfectants.** Use of cyanuric acid-based chlorine (or any other chlorine stabilizer) is prohibited. Pools found using or containing any cyanuric compound shall be closed, drained and refilled prior to continued use. Disinfectants other than those listed in §165.45(l) may be used only if approved by the department and the New York State Department of Health.

(b) **Total alkalinity.** The total alkalinity of the pool water shall be maintained within the range of 80 to 120 mg/l.

(c) **Testing kits.** Each pool or spray ground facility shall have functional colorimetric water testing equipment for free chlorine and combined chlorine, or total bromine; pH; total alkalinity; calcium hardness; copper concentration when silver/copper or copper ion generator is used; and ozone concentration when ozone generating equipment is used. FAS-DPD test kits are acceptable. A supply of appropriate reagents for making each type of test shall be maintained on site, shall be stored in their original labeled containers and shall be replaced every six months or as recommended by the

manufacturer. When colorimetric tests are used, color standards shall be furnished for each of the tests, that allow an accurate comparison of the sample to be tested from standpoint of color and density, and shall be reasonably permanent and no fading. Electronic residual and pH monitoring devices may be used in addition to the test kit.

(1) Water testing equipment for the disinfectant used in the water shall be maintained on site. The equipment for determining pH shall include at least five increments with a range of pH 6.8 to 8.2, accurate to the nearest 0.2 pH unit.

(2) Where chlorine is used as a disinfectant, a DPD (Diethyl-P-Phenylene Diamine) test kit with at least ten chlorine color standards with the following increments: 0.2, 0.4, 0.6, 0.8, 1.0, 1.5, 2.0, 3.0, 5.0 and 10 mg/l as minimum. If other halogens are used, an appropriate scale shall be provided.

(3) When bromine is used as a disinfectant, a colorimetric test kit for determining free bromine residual and pH shall be available. The test kit shall include at least seven bromine standards covering a range of 1.0 to 7.0 mg/l.

(4) Standard testing equipment for determining total alkalinity and calcium hardness, and saturation index. [See paragraph (e), Saturation Index, below.]

(5) When silver/copper or copper ion generator is authorized, a test kit for determining the concentration of copper shall be available.

(6) When ozone generating equipment is authorized, a test kit or equipment for determining the concentration of ozone in water shall be available.

(d) **Records and testing.** A bathing establishment operation record including all test results shall be maintained on a daily basis by the establishment. Whenever tests indicate that an inadequate disinfectant level, inadequate ultraviolet light intensity or inappropriate pH value are present, immediate action shall be taken to reestablish an appropriate disinfectant level and pH value. Pool water shall be manually tested and results recorded as indicated below, including pool water systems equipped with an automatic monitoring device to control pH and disinfectant residual in water:

(1) For pH, free chlorine or bromine residual the water shall be tested at least three times. Tests shall be at the beginning of the day, during the day's peak bather load, and at the end of the day; or more frequently, as needed, throughout each day to maintain the standards required by this Article.

(2) For combined chlorine the water shall be tested at least twice a week.

(3) Total alkalinity and calcium hardness or saturation index shall be tested at least once a month. [See paragraph (e), Saturation Index, below.]

(4) Copper concentration (when silver/copper or copper ion generator is used) shall be tested at least once a month.

(5) Ozone concentration (where ozone is used) shall be tested in accordance with the manufacturer's specifications or at least once a day.

(6) The ultraviolet light intensity meter reading of the ultraviolet light unit shall be monitored and recorded at least two times a day.

(e) **Saturation index.** For the purposes of this Article the saturation index shall be used to determine chemical balance of the water, and whether the water is corrosive (undersaturated) or scale forming (oversaturated). The Department may require that the bathing establishment determine the saturation index monthly or at any other frequency required to maintain water clarity, proper disinfection, alkalinity and pH levels.

S.I. = pH + TF + CF + AF - 12.1 Where: pH = actual reading Where: 12.1 = constant Where: TF = Temperature Factor (Table 1) Where: CF = Calcium Hardness Factor (Table 1) Where: AF = Total Alkalinity Factor (Table 1)

When saturation index is between -0.5 and +0.5, the water is balanced and within tolerance limits. The optimum saturation index is zero.

When saturation index is above +0.5, the water is super-saturated with $CaCO_3$ which may deposit a coating or scale in the pipeline, particularly metal filters, valves and pumps.

When saturation index is below -0.5, water will dissolve $CaCO_3$ and may be corrosive.

Table 1: Numerical Values for Saturation Index Formula

TemperatureF° (C°)	TF	CalciumHardness	CF	TotalAlkalinity	AF
32 (0)	0.0	5	0.3	5	0.7
37 (3)	0.1	25	1.0	25	1.4
46 (8)	0.2	50	1.3	50	1.7
53 (12)	0.3	75	1.5	75	1.9
60 (16)	0.4	100	1.6	100	2.0
66 (19)	0.5	150	1.8	150	2.2
76 (24)	0.6	200	1.9	200	2.3
84 (29)	0.7	300	2.1	300	2.5
94 (34)	0.8	400	2.2	400	2.6
105 (40)	0.9	800	2.5	800	2.9
128 (53)	1.0	1,000	2.6	1,000	3.0

Example: Given temperature 68 degrees, total hardness 200 mg/l, total alkalinity 20 mg/l, $CaCO_3$ and pH = 7.8

S.I. = pH + TF + CF + AF - 12.1 *(Calcium hardness = 0.70 × 200 = 140 mg/l)

S.I. = 7.8 + 0.52 + 1.76 + 1.22 - 12.1 = (-) 0.8 Therefore, the water is corrosive.

Note: Saturation index is best maintained slightly on the positive side within the tolerance limits.

Normal Control Levels: pH = 7.4 - 7.8

Temperature: 78 - 80 degrees (indoors)

Total alkalinity: 80 - 120/mg/l

Free chlorine: 0.6 (minimum) saturation index (-) 0.5 - (+)

0.5 calcium hardness: 180 - 250 mg/l

Alkalinity Control: To increase-$1\frac{1}{2}$ lb of sodium bicarbonate $NaHCO_3$ baking soda will raise the alkalinity of 10,000 gallons of water by 10 mg/l.

To lower-add no more than one pint ($\frac{1}{8}$ gallon) of muriatic acid per 5,000 gallons of pool water (or 1.25 lb of sodium bisulfate). Addition of such compounds may be added by hand into the water while the pool is closed. This will lower alkalinity by 12 mg/l.

pH: To increase-use soda ash.

To decrease-muriatic acid or sodium bisulfate.

Hardness Control: Calcium hardness is assumed to be 70% of total hardness. To increase-1 lb of calcium chloride will raise the calcium hardness of 10,000 gallons of water by 11 mg/l. It should be added in small amounts by hand into the water while the pool is closed. To lower, dilute with soft water.

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.25 Water Quality Standards.

The water in the pool and/or spray pad treatment tank shall meet the following water quality standards:

(a) **Water temperature.** The maximum water temperature for all spa pools shall not exceed 104 degrees Fahrenheit. A thermostatic control for water shall be provided. An audible alarm system shall be installed and maintained to warn of any temperature over 104 degrees Fahrenheit.

(b) **Water clarity and turbidity.**

(1) For pools, the water in a pool shall be sufficiently clear for a black and white object, four inches in diameter (known as Secchi disk), placed at any location on the bottom of the pool, to be readily visible when viewed from the pool deck. The water clarity test shall be performed as frequently as necessary throughout each day to maintain the standards required by this Article.

(2) **Spray Grounds.** The turbidity in the spray pad treatment tank shall not exceed 3 nephelometric turbidity units (NTU) at any time during use. If this turbidity level is exceeded, the spray pad shall be closed for use until the spray pad treatment system reduces the turbidity to less than 3 NTU.

(c) **Water physical quality.** The bottom and sidewalls of pool shall be kept free of sediment and visible soil, and the pool water surface and/or spray pad treatment tank water surface shall be kept free of visible floating matter.

(d) **Water bacteriological quality.** Samples of water may be collected by the department for microbiological analysis by a laboratory approved by the New York State Department of Health, for evaluating pool and spray pad water quality. The coliform bacteria level shall not exceed 4 colonies per 100 milliliters in more than one sample examined each month. When the membrane filter technique is used, or when the fermentation tube method is used, coliform bacteria shall not be present in more than 10 percent of portions analyzed in any month; and total bacteria shall not exceed 200 colonies per milliliter.

***** Current through December 2009 ****

24 RCNY 165.27

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.27 Sanitation and Safety.

(a) **Pool and pool area.** (1) **General.** The pool shall be maintained free from sediment, lint, dirt and hair. The pool walls and bottom shall be vacuumed or brushed daily or as needed to remove visible material when pool is closed. The walls, floors, ceilings and equipment shall be maintained so that they are protected from deterioration.

(2) Pool and/or spray ground enclosures or fencing and gates shall be maintained in a manner consistent with §§165.41(i)(l) and/or165.42(g)

(3) Depth markings and safety lines for pools shall be provided and maintained in accordance with the provisions of §165.41(o) and be clearly visible and readable.

(4) Safety signs for pools shall be maintained in a manner consistent with §165.41(u).

(5) **Decks, Spray Pad and Features.**

(A) **General.** Pool and/or spray decks shall be rinsed daily to remove any materials or contaminates on the surface of the pool deck and/or surface of the spray pad. The deck shall be kept clean and free of puddled water. Cracks in the spray pad and/or pool decks shall be repaired when they may be a potential for leakage, present a tripping hazard, a potential cause of lacerations, or impact the ability to properly clean and maintain the pool and/or spray pad area.

(B) **Pools.** Indoor pool decks shall be disinfected at least weekly. The walks, overflow gutters, counters, lockers, equipment, furniture, interior partitions and walls shall be kept in good repair, clean and sanitary. The deck shall be kept free of obstructions and tripping hazards for at least a five-foot (5') width walkway around the entire pool.

(C) **Spray Pad and Features.** The water must be flushed to waste and not discharged into the spray pad treatment tank. Flushing may be accomplished by use of a hose supplied with potable water or by operation of the spray features providing it adequately flushes the entire pad surface and is discharged to waste. The spray pad and features shall be kept free of sediment and visible soil.

(6) **Spa pools.** Spa pools shall be drained and cleaned when needed, and not less than once every two weeks. Placement of chairs or other furniture shall be prohibited within three feet of the edge of any spa pool.

(7) **Food and drinks.** Glass and sharp objects are prohibited in the pool and on spray pad and all deck areas.

(8) For pools, ladders, handrails, diving equipment, lifeguard chairs, slides and other deck equipment shall be kept firmly secured to the deck and maintained in good repair.

(9) Floats or tubes not in use shall be removed from pool.

(10) **Safety ropes (for pools).** Safety ropes shall be kept in place except when pool is being used exclusively for lap swimming or competition.

(11) **Starting blocks (for pools).** Starting blocks shall only be used during supervised practices or swim meets, otherwise the starting blocks shall be removed or secured to prevent use by an untrained person.

(12) **Deck slides (for pools).** Deck slides shall be installed and maintained in accordance with the provisions of §165.41(q).

(13) **Rolling bulkheads (for pools).** Rolling bulkheads, when used, shall be provided with traction wheels running on the pool floor or alternatively in the overflow gutter. When not in use these should be stored in a safe manner.

(14) **Hosing.** A minimum length of 50 feet of hosing shall be provided and available to flush the entire deck area. Hose bibbs shall have antisiphonage devices. The hosing unit shall not be used to fill make-up water into the pool.

(15) **Water level for diving (for pools).** The water level in the pool shall be maintained to provide the required depths in areas for diving as provided below:

(A) Swimming pools equipped with diving boards prior to March 30, 1988, shall meet the minimum water depth and swimming pool and diving board dimensions shown in Columns (1) to (4) in Table 2. The minimum water depth requirement for one meter boards used only for competitive use and training or used in physical education instruction at schools shall meet criteria in Columns 2, 3 and 4 for 26"-30" boards listed in Table 2.

(B) Swimming pools equipped with diving boards after March 30, 1988, shall meet the criteria shown in Table 3. Minimum dimensions for pools with diving equipment are shown in Table 3 of §165.41.

(C) Head-first diving from the pool deck is prohibited in water depths less than eight feet except during competitive swimming or swimmer training activities.

Table 2: Minimum Water Depth Requirement

Board Heightabove Water	(1) Minimum-Board Over-hangover Water	(2) MinimumWater Depthin Diving Area	(3) Minimum DivingArea for-ward ofBoard TipWidth	Length	(4) MaximumSlope to 5'Water Depth
Up to 24"	2'6"	8'	4'	13'6"	1:3
> 24" - 26"	2'6"	8'	81/2'	10'	1:3
> 26" - 30"	3'	9'	16'	10'	1:3
> 30"	4'	11'	16'	20'	1:2
1 meter	4'	11'	16'	16'	1:3
> 1 meter	6'	12'	20'	20'	1:2

(b) **Bather loads.** The number of patrons within a pool enclosure shall not exceed the maximum permissible loading established by §165.41(m). The bather load shall be posted at entrance or at a location where it can be seen by all patrons. The certified pool operator shall be responsible for controlling the number of bathers so that the maximum capacity is not exceeded.

(c) **Bathhouse and bather preparation facilities.** All facilities shall be ventilated and maintained. The floors, walls, fixtures, showers, and toilets shall be kept clean, free of dirt and debris and in good condition. Floors shall be maintained in a slip-resistant condition. Soap dispensers shall be filled and operable. A supply of toilet paper shall be provided at each toilet at all times. All lavatories shall be provided with soap, paper towels or electrical-drying units, and covered waste and sanitary napkin receptacles where appropriate. Showers, when provided, shall be supplied with water at a temperature no more than 110°F Thermostatic, and tempering or mixing valves shall be kept in good operation to prevent scalding of the users. Shower curtains shall be kept clean. Foot showers, if used, shall be kept clean and free of puddled water. The use of foot baths is prohibited.

(d) **Care of suits and towels.** All swimming suits and towels used by the public and maintained for public use shall be washed with a detergent in hot water, rinsed and thoroughly dried after each use.

(e) **Security.** All doors or gates into the bathing area shall be maintained and checked for proper operation. They shall be kept closed and locked when the facility is closed.

(f) **Noise.** If the noise is excessive such that instructions cannot be heard, corrective action shall be taken.

(g) **Pools temporarily out of service or abandoned.** Pools temporarily not in use or not intended for use shall either be covered securely, or emptied, or secured in a manner approved by the department, by the owner of the property upon which the pool is constructed, or the bathing establishment operator or owner. Water shall not be permitted to accumulate around the pool or on pool covers so as to provide a breeding area for mosquitoes or other insects.

(h) **Sauna and steam rooms.** All sauna and steam rooms shall be maintained pursuant to manufacturers' instruction and operated in a safe, clean and sanitary condition which shall include compliance with the following requirements:

(1) Saunas shall be inspected regularly for the required maintenance to heater, controls and benches. Wood surfaces showing any signs of deterioration shall be replaced.

(2) Pouring water on heater or heating elements is prohibited during operating hours.

(3) Flammable materials such as gasoline, thinners, or paints, shall not be kept at the steam generator area.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.29 Operation and Maintenance of Mechanical Equipment.

(a) **Manual.** A manual for operation of the pools and/or spray grounds shall be provided, maintained and available to the certified pool operator. It shall include instructions for each filter, pump or other piece of equipment, drawings, illustrations, charts, operating instructions and parts list, to permit installation, operation, winterization and maintenance. All valve operating procedures and schedules shall be provided in the equipment room for each mode of operation (recirculation, filtration, backwashing) with piping labeling and flow directions. The mechanical equipment shall be inspected and maintained in accordance with the manufacturers' recommendations and to ensure proper operation.

(b) Pumps, filters, ultraviolet disinfection system, disinfectant or chemical feeders, flow meters, gauges, and all related components of the pool water and/or spray pad treatment tank recirculation system shall be kept in continuous operation 24 hours a day to provide water quality consistent with §165.23 and §165.25. The water level in the spray pad treatment tank shall be maintained continuously by an automatic level control system. The spray pad treatment tank

shall be completely drained and cleaned at a frequency necessary to maintain water quality. Pool and/or spray ground equipment and appurtenances shall be operated and maintained in accordance with approved plans and specifications. They shall not be altered or modified in any way unless approved by the Department.

(c) **Inlet fittings.** (1) For pools, inlets shall be checked frequently to ensure that the rate of flow through each inlet establishes a uniform circulation of water and facilitates the maintenance of a uniform disinfectant residual throughout the pool.

(2) For spray grounds, inlets shall be adjusted to produce uniform circulation of water and to facilitate the maintenance of a uniform disinfectant residual throughout the spray pad treatment tank.

(d) **Main drains and deck drains.** Main drain and deck drain grates shall be secured in place at all times. Broken or missing main drain grates shall be repaired or replaced before the pool and/or spray pad is used.

(e) **Vacuum cleaners (for pools).** Vacuum cleaning shall not be conducted when pool is in use.

(f) **Filtration.** The filtration flow rate shall not exceed the maximum filtration design flow rate specified by the filter manufacturers' specifications and in accordance with N.S.F. standards.

(1) **Sand filters.**

(A) The flow rate shall not exceed fifteen gallons per minute per square foot (15 gpm/ft^2) of filter area for high-rate sand filters, and shall not exceed three gallons per minute per square foot (3 gpm/ft^2) for other sand filters.

(B) Filter air release valve shall be opened daily or more frequently as necessary to remove air which collects in the filter.

(C) Sand filter shall be backwashed at a flow rate of twelve to fifteen gallons per minute per square foot (12 to 15 gpm/ft^2) or at the design rate specified by the manu- facturers.

(2) **Diatomaceous earth filters.** Diatomaceous earth filters shall be properly maintained and operated according to the manufacturers' instructions and at a filter rate not exceeding two gallons per minute per square foot (2 gpm/ft^2) with body feed or 1.5 gpm/ft^2 without body feed. The backwash water should be managed and disposed of as required by §165.33(b) and §165.43(b)(2).

(3) **Cartridge filters.**

(A) Cartridge filters shall be operated at a filter rate not to exceed the design or a maximum of 0.375 gallons per minute per square foot (0.375 gpm/ft^2) for cartridge filters.

(B) Cleaning of the cartridges shall be accomplished according to manufacturers' instruction either in place or by cartridge removal, depending on the type of unit installed.

(C) One complete spare set of cartridges shall be available for replacement at all times to facilitate cleaning.

(g) **Surface skimmer system (for pools).** The perimeter overflow systems or automatic surface skimmers shall be clean and free of debris which would restrict flow. Skimming weirs shall be maintained and operated in accordance with §165.45(h)(2)(D). The strainer baskets for skimmers shall be cleaned daily to prevent clogging of suction line and cavitation. One spare strainer or screen shall be readily available for replacement. Broken or missing strainers or screens shall be replaced. The flow through each skimmer shall be adjusted as often as necessary to maintain a vigorous skimming action which will remove all floating matter from surface of the water. The skimmer covers shall be securely fastened. The pool water shall be maintained at an elevation such that effective surface skimming of entire pool surface is accomplished. For pools with perimeter overflow systems, adequate surge storage capacity shall be maintained so that

flooding of the perimeter overflow system does not occur during periods of peak usage. The flow returning from the pool shall be balanced or valved such that the majority of flow is returned through the perimeter overflow or skimmer system.

(h) **Chemical feeders.** All chemical feeders shall be periodically inspected and serviced in accordance with the manufacturers' instructions.

(i) **Flow meters.** All flow meters shall be maintained in accurate operating condition and the glass and connecting tubes shall be kept clean.

(j) **Piping.** All exposed piping and valves shall be properly color coded pursuant to §165.45(c)(3).

(k) **Lighting and electrical equipment.**

(1) All lighting and electrical equipment shall be maintained in good repair and in good operating condition. Defects in the electrical system, including but not limited to wiring, pumps, underwater lights, overhead lights or their respective lenses, shall be immediately repaired.

(2) Portable AC electrical devices, such as announcing systems and radios within the reach of patrons, shall be prohibited.

(3) Windows and lighting equipment shall be adjusted to prevent glare and excessive reflection on the pool surface. Illumination levels shall be maintained in accordance with the provisions in §165.47.

(4) No overhead electrical wiring shall pass within 20 feet of the pool and/or spray pad except where covered and secured in a ceiling.

(5) When underwater lighting is not provided and night swimming is permitted, surface lighting shall be adequate to allow an observer on the deck to clearly see the pool bottom. Emergency lighting shall be maintained as required by §165.47(a)(7).

(6) At all indoor spray pads and spray pads used at night, surface lighting shall be adequate to allow an observer to clearly see the spray pad and deck.

(7) Defects in the electrical system, including overhead lights and the respective lenses, shall be immediately repaired.

(l) **Ventilation and heating.** Ventilation, heating and exhaust equipment shall be maintained and operated to provide air movement and temperature pursuant to §165.47(b) and (c).

(m) **Utraviolet light or equivalent treatment process.** Ultraviolet light disinfection or equivalent treatment process shall be provided and maintained to disinfect water provided to the spray pad in accordance with §165.45(l)(9). The ultraviolet light units shall be cleaned in accordance with the manufacturer's specifications. When the output intensity falls below the setpoint intensity, conditions causing decreased ultraviolet light intensity at the sensor shall be evaluated and corrected. When the decreased ultraviolet light intensity is due to lamp failure, the ultraviolet lamp(s) shall be replaced in accordance with manufacturer's recommendations.

(n) **Sauna.** Installation of the heating unit, maintenance of and other electrical installation shall be performed by a qualified licensed electrician.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.31 Chemical Handling and Storage.

(a) **General requirements.** All chemicals used in pools and/or spray grounds shall be handled and stored in accordance with manufacturers' recommendations and applicable law. Only chemicals used by the United States Environmental Protection Agency, specified as food additives by the United States Food and Drug Adminstration as potable use approved by NSF, or by the State Commissioner of Health, shall be used. Each chemical shall be kept covered and stored in the original, labeled container with the identity of the chemical and appropriate hazard warnings clearly labeled, away from flame and heat sources, and in a clean, dry, well-ventilated place which prevents unauthorized access to the chemicals. The facility shall maintain the manufacturer's instructions for all chemicals in the facility.

(b) **Mixing.** When mixing a chemical solution the pool operator shall mix the chemical in water. Each chemical or chemical solution shall be separately applied. Chemicals shall not be combined or mixed together prior to application. Clean inert materials shall be used for container and mixing tools, and mixing shall be done by pouring the chemical

into water. Mixing shall not be accomplished by pouring water into the chemical.

(c) **Method.** The method for addition of pool water treatment chemicals shall be specified in the pool safety plan. The method of chemical addition shall protect the patron from contact with concentrated chemicals. The method shall provide adequate distribution of the chemical throughout the pool and distribution shall be verified by pool water testing prior to bather exposure.

(d) **Smoking.** Smoking shall be prohibited in the chemical storage area or by anyone who is handling chemicals.

(e) **Carbon dioxide (CO_2).** CO_2 cylinders should be stored in a protective enclosure at the exterior of occupied structures. CO_2 cylinders used in the interior of occupied structures shall be placed only in a ventilated enclosure pursuant to §165.47.

(f) **Hypochlorite.** Hypochlorite shall be used with extreme caution during handling or mixing. When using calcium hypochlorite, the pool operator shall not mix or contaminate the hypochlorite with organic matter or any foreign material (such as household products, soap products, ammonia, paint products, solvents, acids, vinegar, or dirty rags) which may result in fire or decomposition explosion.

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.33 Water Supply and Waste Water Disposal.

(a) **Water supply.** The water supply serving all plumbing fixtures, including drinking water fountains, lavatories and showers shall meet the provisions of §165.43.

(b) **Waste water disposal.** All waste water from a bathing establishment shall be discharged in such manner that waste water cannot be siphoned, flooded or otherwise discharged into the pool. The sanitary sewer serving the bathing establishment shall be discharged to a municipal sewer system or other approved disposal system. Wash or backwash water shall not be discharged to the ground surface.

(c) **Diatomaceous earth filter wash.** Diatomaceous earth filter wash or backwash water shall first pass through a separation tank designed for removal of the diatomaceous earth and suspended solids before discharging to an approved sanitary sewer system. The separation tank sludge shall be disposed of or treated as a solid waste material in accordance with applicable law.

§165.37 Drowning and Injury or Illness Incident Notification and Reporting.

(a) **Twenty-four hour notification.** All drownings, injuries, or illness in a bathing establishment shall be reported by the owner or operator to the Department within 24 hours of occurrence. A report as specified in paragraph (b) below shall be made to the Department whenever an incident occurs that:

(1) Results in death

(2) Requires resuscitation

(3) Requires referral to a hospital or other facilities for medical attention

(4) Involves illnesses associated with the water quality

(b) **Reporting.** The written incident report referred to in paragraph (a) above shall be completed and submitted to

the department within seven days. The incident shall be recorded in the log book and shall include:

(1) Name of the aquatic supervisory staff or operator

(2) The date, time and type of incident

(3) Cause of the injuries

(4) The extent of injuries, if any

(5) Actions taken by persons at the site

(6) Witnesses statements

(7) Lifesaving and safety equipment used.

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.39 Record Keeping.

(a) **Pools.** The owner or person in charge of a pool shall maintain daily operational records and log book which shall include the following information: number of bathers; quantity of water added; length of time pumps and filters are in operation; time when each filter is backwashed or cleaned; quantity of each chemical added; time when the bottom and sides of the pool are cleaned; the results of all tests for hydrogen ion and residual chlorine; and other information the Department may require to demonstrate compliance with this Code. A copy of the daily operational records shall be forwarded to the Department at monthly intervals. Copies of the records shall also be kept at the bathing establishment for inspection by the Department for a period of six months from the date of the creation of the record.

(b) **Sauna and steam rooms.** The person in charge of a sauna or steam room shall maintain a daily log of quarter-hour inspections, unless a one-hour timer is provided pursuant to §§165.15(c) and 165.63(c). Copies of the records shall be readily available for inspection by the department at the facility for a period of six months from the date

of the creation of the record.

(c) **Spray Grounds.** The owner or person in charge of a spray ground shall maintain a daily operational record and log book which shall include the following information: quantity of water added; length of time pumps and filters are in operation; time when each filter is backwashed or cleaned; quantity of each chemical added; time when the spray pad and treatment tank are cleaned; the results of all tests for hydrogen ion and residual chlorine; dates and type of light cleaning maintenance and lamp replacement work for ultraviolet light system and other information the Department may require to demonstrate compliance with this Code. A copy of the daily operational records shall be forwarded to the Department at monthly intervals. Copies of the records shall also be kept at the bathing establishment for inspection by the Department for a period of twelve months from the date of the creation of the record.

24 RCNY 165.41

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.41 General Requirements for Pools.

(a) **General.** All bathing establishments with pools shall be designed and constructed in accordance with the requirements contained in this code. All bathing establishments with pools shall be located at a site conducive to good operation, maintenance, and public safety and free from contamination. The site shall have sufficient drainage and be separated from environmentally sensitive areas (for example, subsurface sewage disposal systems, open bodies of freshwater, groundwater wells).

(b) **Structural stability.** The designing architect or engineer shall certify the structural stability and safety of the bathing establishment. All bathing establishments shall be designed and constructed to withstand all anticipated loading for both full and empty conditions, and hydrostatic and earth pressures involved in each case. The strength of the assembled and installed components and accessories to be used in and around the pools should be such that no structural failure of any component part shall cause the failure of any other component part.

(c) **Construction material finishes.** (1) **Materials.** Pools shall be constructed of materials which are inert, stable, nontoxic, watertight and enduring. Sand or earth bottoms or unlined wooden tubs are prohibited. The materials of components and accessories used in and around the pools shall be compatible with human occupancy and the environment in which they are installed. Materials shall be capable of fulfilling the design, installation, and intended use requirements.

(2) **Finish.** The pool bottom and sides shall be white or a light color with a smooth and easily cleanable surface.

(3) **Corners.** All corners formed by intersection of pool walls and bottom shall be rounded.

(d) **Accessibility.** (1) **Entrance.** For pools receiving construction authorization from the department after the effective date of this Article, entrance to the pool area shall be at a point adjacent to the shallow end of the pool.

(2) An emergency exit from the pool room shall be provided. All exits should be clearly marked.

(e) **Equipment.** All equipment used or proposed for use in pools shall be tested and listed by N.S.F. or another testing laboratory under standards promulgated by N.S.F. Equipment that is experimental or not N.S.F. approved shall be submitted to the Department for review. The experimental equipment shall be tested as follows:

(1) Use-tested in New York or another state in at least 10 pools of comparable design for a period of at least 60 days, with engineering reports on results of use submitted; or

(2) Pilot-plant testing of at least 90 days, with formal submission of an operational report prepared by the design engineer or architect; or

(3) A combination of use and testing or a trial use period approved by the Department and the New York State Commissioner of Health.

(f) **Size and shape.** Dimensional limits are not specified for the length, width, or shape of pools. The size and shape shall be selected based on competitive requirements, bather demand, and space available for a particular establishment. The shape of any pool shall be such that the circulation of pool water and control of bathers' safety are not impaired. There shall be no underwater or overhead projections or obstructions which would endanger patron safety or interfere with pool operation.

(g) **Minimum water depth.** The minimum depth of water in the pool shall be three feet except for wading pools and wave pools.

(h) **Bottom slope.** The bottom of the pool shall slope downward toward the main drains. The slope in shallow areas (depths less than 5') shall not exceed one foot (1') vertical in twelve feet (12') horizontal. In portions of the pool with depth greater than five feet, the slope shall not be steeper than one foot in three feet.

(i) **Pool walls.** The walls of a pool shall be either:

(1) Vertical for a distance of at least six feet (6'); or

(2) Vertical for a distance of at least three feet (3') below the water level; below which the wall may be curved to the bottom with a radius not greater than the difference between the depth at that point and three feet (3'); provided that vertical is interpreted to permit slopes not greater than one foot (1') horizontal for each five feet (5') of depth of sidewall (11 degrees from vertical).

(j) **Safety ledges.** Ledges shall not extend into the pool unless they are essential for support of the upper wall construction.

(k) **Decks and walkways.** (1) **General.** A continuous deck at least five feet (5') wide shall extend completely around the pool. For spa and wading pools, two contiguous sides of decking equal to fifty percent (50%) or more of the perimeter shall be provided. The deck shall be of a uniform, easily cleaned, impervious material with a slip-resistant surface.

(A) **Deck capacity.** Additional deck space beyond the required five feet wide clear walkway may be constructed based on a minimum ratio of fifty square feet (50 ft^2) of pool deck area per bather.

(B) Where diving boards, slides, or any other deck equipment are installed at the pool, a clear deck of not less than five feet of constructed deck shall be provided behind the diving boards, slides, lifeguard chair or other deck equipment.

(2) **Deck covering.** Porous, non-fibrous deck covering which contains a label indicating it complies with the N.S.F. or other material approved by the department may be used for deck covering. An approved material shall meet the following criteria:

(A) The covering shall allow drainage so that the covering and the deck underneath it do not remain wet or retain moisture.

(B) The covering is inert and will not support bacterial growth.

(C) The covering provides a slip-resistant surface.

(D) The covering is durable and cleanable.

(3) **Slope.** The deck shall be sloped at least one-fourth inch per foot ($^1/_4$ in/ft) to deck drains or grades.

(4) **Drainage.** Deck drains, when used, shall be spaced and arranged so that not more than four hundred square feet (400 ft^2) of area is tributary to each drain, and drains shall not be spaced more than twenty-five feet (25 ft) apart. There shall be no direct connection between the pool deck drains and the pool gutter or recirculation system. The deck of outdoor pools shall be sloped away from the pool or to the deck drains to prevent surface runoff from entering the pool.

(5) **Roll-out and deck level gutters.** If the pool is equipped with deck level gutters, not more than five feet of deck shall be sloped toward the gutters.

(6) **Hose bibbs.** At least one hose bibb shall be provided to facilitate flushing of the deck area and each bibb shall be provided with an anti-siphonage device.

(7) **Rinse showers.** Adjacent recreational areas shall be separated from the bathing area by a suitable fence or barrier. If bathers are permitted free access between the deck and an adjacent recreational area without having to pass through a bathhouse or bather preparation facilities, a rinse shower area shall be installed so that bathers shall pass through the rinse shower area when going from the recreational area to the deck. Minimum requirements for a rinse shower shall include:

(A) water for the rinse shower(s),

(B) have sufficient drainage so that there is no standing water,

(C) a foot surface that is impervious and slip-resistant.

(l) **Pool enclosures.** All pools shall be protected by a fence, wall, building, or other solid barrier, or any combination thereof. A wall of a building may serve as part of the enclosure, provided that there is no direct access from the wall to the pool. Pools located on a roof, where there is no access to the roof except through doors where access can be prevented when the pool is unsupervised, do not require additional enclosure. All pools shall be provided with an

enclosure which shall comply with the following:

(1) No external handholds or footholds.

(2) Materials which are durable.

(3) At least six feet (6') in height, except for wading pools at four foot (4') minimum (see §165.51).

(4) Have a maximum vertical clearance above grade of two inches (2").

(5) The entrance into the pool enclosure shall be equipped with a door or gate that is self-closing and has a positive self-latching closure mechanism at least forty inches (40") above grade. Doors and gates at all entrances shall be equipped with hardware that permits secure locking of the entrance and prevents access when the pool is not supervised.

(6) Where a chain-link fence is provided, the openings between links shall not exceed $2\frac{3}{8}$ inches and chain link twists shall extend above the upper horizontal bar. The enclosure shall have railings and posts within the enclosure, which shall be capable of resisting a minimum lateral load of one hundred fifty pounds (150 lb) applied midway between posts and at top of posts, respectively. Enclosures, fence material or fabric shall be capable of withstanding a concentrated lateral load of fifty pounds (50 lb) applied anywhere between supports on an area twelve square inches (12 in^2), without failure or permanent deformation.

(7) Where a picket-type fence is provided, space between pickets shall not exceed 4 inches and pickets shall extend above the upper horizontal bar.

(m) **Pool capacities and patron loading.** The maximum permissible number of bathers allowed in the pool at one time is as follows:

(1) **Pools (except spa and wading pools):** Twenty-five square feet (25 ft^2) of water surface area shall be provided for each patron.

(2) **Diving area:** Three hundred square feet (300 ft^2) of pool water surface area shall be reserved around each diving board or diving platform, and this area shall not be included in computing the permissible patron use.

(3) **Spa pools:** Ten square feet (10 ft^2) of pool water surface area shall be provided for each patron.

(4) **Wading pools:** Fifteen square feet (15 ft^2) of pool water surface area shall be provided for each patron.

(n) **Spectator areas and visitor galleries.** There shall be an effective separation between spectator areas and bather areas so as to prevent contamination of the pool. Galleries for spectators shall not overhang any portion of the pool surface. The floor and foot rail of the gallery shall be of tight construction to prevent dirt from being tracked into the pool.

(o) **Depth markings and safety lines.** (1) **Depth markings.** Depth markings shall be numercial with numbers of four inch (4") minimum height, followed by the words "feet deep" or "foot depth", and with colors contrasting with the background. Depth of water shall be plainly marked at or above the water surface on the vertical pool wall and on the edge of the deck next to the pool. Depth markers shall indicate the actual pool depth. Water depth shall be measured at a point three feet (3') from the pool wall. Depth markers shall be spaced at not more than twenty-five foot (25') intervals along the pool perimeter. Where depth markings cannot be placed on the vertical walls above the water level, other means shall be used so that the markings will be plainly visible to persons in the pool. Markings shall be on both sides and ends of the pool placed at the following locations:

(A) At the points of maximum and minimum depth and at all points of change of slope.

(B) At break between the deep and shallow portions.

(C) At intermediate two foot (2') increments of depth.

(2) **Depth markers of irregularly shaped pools.** Depth markers of irregularly shaped pools shall specify depth at intervals of 25 feet measured along the perimeter of the pool.

(3) **Safety lines.** The boundary line between the shallow and deep areas where it exists, shall be marked at the five foot depth with a four inch stripe of contrasting color on the floor and walls of the pool and by a safety rope and floats equipped with float keepers. Where there is no break in slope the boundary shall be set at the five foot (5') depth, where it is ten feet (10') or more from the nearest end of the pool. Ledges and step edges shall also be marked with a four inch (4") stripe of contrasting color, two inches (2") on the tread and two inches (2") on the riser.

(p) **Diving area.**

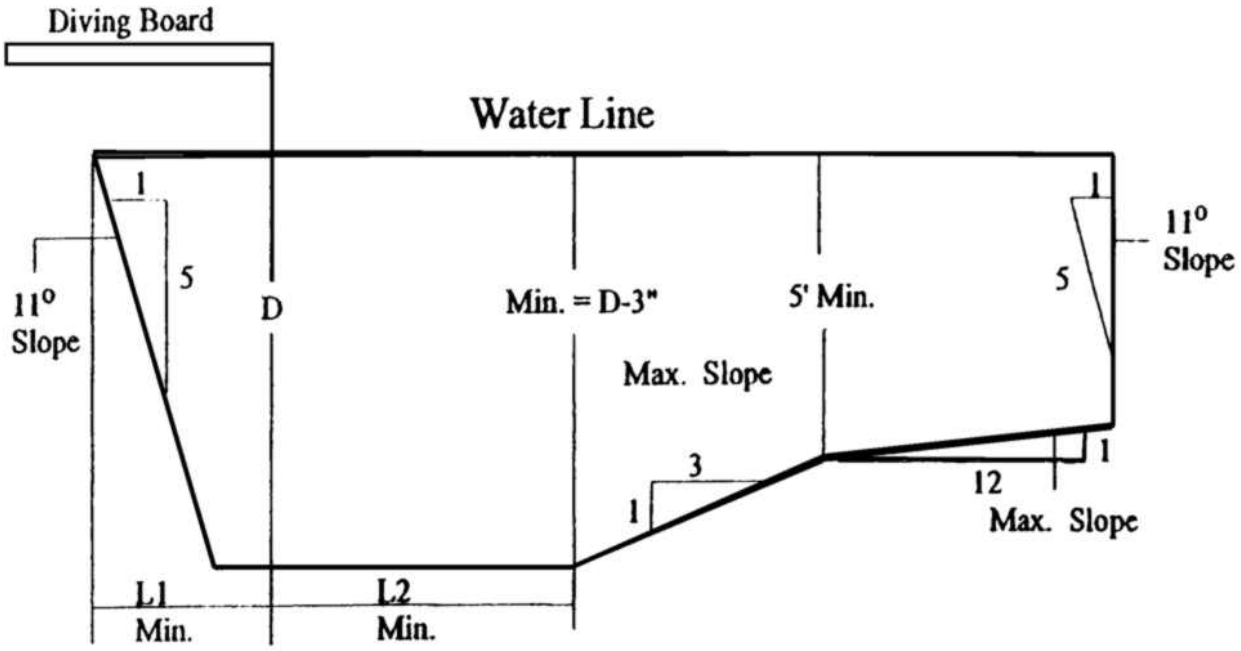
(1) The minimum dimensions of the swimming pool and appurtenances in the diving area shall conform to Table 3. The minimum dimensions for diving portion of swimming pools designed for competitive diving, may upon application to, and approval by, the department, utilize nationally recognized competitive design standards. For diving boards in excess of 3 meters in height over water, the design criteria, including pool dimensions shall be adjusted in accordance with good engineering practice.

(2) **Headroom.** There shall be a completely unobstructed clear distance of sixteen feet (16') above the diving board, measured from the center of the front end of the board. This area shall extend at least eight feet (8') behind, eight feet to each side, and sixteen feet (16') ahead of the measuring point.

(3) **Diving boards and platforms.** Diving boards and platforms in excess of three meters in height shall be designed and constructed or selected such that they are adequate to sustain expected static and dynamic loading with appropriate design safety factors.

(4) **Steps and guardrails for diving boards.** Supports, platforms and steps for diving boards shall be of adequate design and construction and of sufficient structural strength with appropriate design safety factors to safely carry the maximum anticipated loads. Steps shall be of corrosion-resistant material, easily cleanable and of nonslip design. Handrails shall be provided at all steps and ladders leading to diving boards one meter or more above the water. The guardrails shall be thirty inches (30") high, extending at least to the edge of the water.

Table 3. Minimum Dimensions for Diving Portion of Swimming Pool



Note: Minimum depth of five feet shall be maintained when a wall terminates at the pool area opposite diving boards. Otherwise, the specified shallow area floor slope may be used to shallow end.

Minimum Dimensions

Max. board heightover water	Max. diving boardlength	D	L(1)	L(2)	Poolwidth
26" (2/3 meter)	10'	8'-6"	2'-6"	10'-0"	20'-0"
30" (3/4 meter)	12'	9'-0"	3'-0"	10'-0"	20'-0"
1 meter	16'	11'-0"	4'-0"	20'-0"	20'-0"
3 meters	16'	12'-0"	6'-0"	20'-0"	24'-0"

Board placement shall be in compliance with the following. For multiple-board installations, minimum pool widths shall be increased accordingly.

1 meter or less-Board to pool side 10'0" 3 meters-Board to pool side 12'0" Distance between adjacent boards 10'0"

(q) **Deck slides.** All deck slides which may be installed at a swimming pool shall be labeled to indicate compliance with the requirements of the U.S. Consumer Product Safety Commission or other generally acceptable standard that provides equivalent and adequate safety. The bottom of any slide shall discharge into a minimum water depth of four feet.

(r) **Rolling bulkheads.** Rolling bulkheads which may be provided at a pool, shall be equipped with traction wheels running on the pool floor or alternatively in the overflow gutter. The design shall be such that the patrons cannot be entrapped under the bulkhead.

(s) **Starting blocks.** Starting blocks when provided, shall be designed according to recognized competitive design

standards. Starting blocks shall be installed over a minimum water depth of six feet (6').

(t) **Ladders, recessed steps, stairs and handrails.** Except in a wading pool, physical-therapy pool, wave pool, white-water slide or movable-bottom pool, steps or ladders shall be provided to serve the shallow and deep portion of the pool, and if the pool is over thirty fet wide, such steps or ladders shall be installed on each end and on opposite sides. Stairs, ladders, and recessed steps shall be located so as not to interfere with racing lanes or with diving. If recessed steps are used, at least one additional non-recessed stairway or one conventional ladder shall be provided.

(1) **Ladders.** Pool ladders shall be corrosion-resistant and shall be equipped with nonslip treads. All ladders shall be so designed as to provide a handhold and shall be rigidly installed. There shall be a clearance of not more than six inches (6") nor less than three inches (3") between any ladder and the pool wall.

(2) **Recessed steps.** Recessed steps shall be readily cleanable and shall be arranged to drain into the pool to prevent the accumulation of dirt. Recessed steps shall have a minimum breadth of five inches (5") and a minimum width of fourteen inches (14").

(3) **Stairs.** Where stairs are provided they shall be located diagonally in a corner of the pool or be recessed. They shall be equipped with a handrail. Stairs shall be of nonslip design, have a minimum tread of twelve inches (12") and a maximum rise of ten inches (10").

(4) **Handrails.** Where ladders, recessed steps and stairs are provided within the pool, there shall be a handrail at the top of each side thereof extending over the coping or edge of the deck.

(u) **Safety and warning signs.** (1) **"No diving" markers.** "No diving" markers at least four inches (4") high shall be located at not more than twenty-five foot (25') intervals around the pool perimeter, where the water depth is less than eight feet deep.

(2) **Warning signs.** A sign or signs shall be securely posted in a conspicuous place or places in the pool area and bather preparation facility and shall provide the following information:

(A) Maximum number of persons permitted in pool at any time.

(B) Maximum number of persons permitted on deck at any time.

(C) Maximum number of persons permitted in the pool area.

(D) The hours that pool is open.

(E) The hours that pool use is prohibited.

(F) "No person having any contagious disease or infectious condition such as sores or inflamed eyes, a cold, nasal or ear discharge, cuts, boils or other evident skin or other bodily infection shall enter the pool."

(G) "Urinating, expectorating or blowing the nose, or allowing human waste in any pool is prohibited."

(H) "Persons not dressed for bathing shall not enter upon walks immediately adjacent to pools, and bathers shall not enter places provided for spectators."

(I) "No person under the influence of alcohol or exhibiting erratic behavior shall enter the pool or the pool deck."

(J) "Emergency telephone number for police, fire, and hospital is 911."

(3) **Deck slides.** In pools equipped with a deck slide, the warning sign shall include the words: "No sliding in water

less than four feet deep and no sliding exept in a feet-first position."

(4) **Starting platforms and blocks.** In pools equipped with starting blocks, the warning sign shall include: "Starting blocks shall not be used for any purpose other than competitive swimming or swimmer-training activities."

(5) **White-water slides:** In facilities with white water slides, warnings shall be posted on a sign at the entrance to the slide tower containing the following:

(A) "Keep your hands inside of the flume."

(B) "No standing, kneeling, rotating, chain-riding, or stopping in flumes."

(C) "Sliding shall be performed only in a feet-first position."

(6) **Warm water spas:** In addition to the contents of paragraph (2), the following warning sign, with an area of at least three square feet, preceded by the word "CAUTION" shall be conspicuously posted in the vicinity of the pool at eye level:

(A) "Elderly persons and persons suffering from heart disease, diabetes, high or low blood pressure, shall not use the spa pool without medical consultation."

(B) "Unsupervised use by children is prohibited."

(C) "Do not use the spa pool while under the influence of alcohol. Persons using medications such as anticoagulants, antihistamines, vasoconstrictors, vasodilators, stimulants, hypnotics, narcotics or tranquilizers should not use the spa pool without medical consultation."

(D) "Do not use the spa pool if you are alone and the spa pool is unattended by pool staff."

(E) "Observe a reasonable time limit (e.g., 15 minutes), then shower, cool down and, if you wish, return for another brief stay. Long exposure may result in nausea, dizziness or fainting."

(F) "Emergency help can be obtained by using the telephone-dial 911."

(v) **Safety equipment.** The pool shall provide the safety equipment as required by §165.17.

(w) **First aid room.** Pools with a surface area in excess of four thousand square feet (4000 ft^2) shall have a readily accessible room or area designated and equipped for emergency care.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.42 General Requirements for Spray Grounds.

(a) **General.** All bathing establishments with a spray ground shall be designed and constructed in accordance with the requirements contained in this Code. All spray grounds shall be located at a site free from contamination and conducive to good operation, maintenance, and public safety. The designing architect or engineer shall certify the structural stability and safety of the spray grounds. The strength of the assembled and installed components and accessories to be used in and around the pools spray grounds should be such that no structural failure of any component part shall cause the failure of any other component part.

All spray grounds shall further comply with all of the following provisions:

(b) **Construction materials and finishes.**

(1) **Construction materials.** Spray pads shall be constructed of materials which are inert, stable, nontoxic,

watertight and enduring. Sand or earth bottoms are prohibited.

(2) **Finish.** Spray pad surface must be slip resistant and easily cleanable surface.

(c) **Spray Pad.**

(1) **Slope.** The spray pad shall be sloped to drain. The slope shall be sufficient to prevent water collecting on the pad.

(2) **Drainage.** The size, number and locations of the spray pad drains shall be determined and specified so as to assure water does not accumulate on the spray pads. Flow through the drains to the spray pad treatment tank shall be under gravity; direct suction outlets from the spray pad are prohibited.

(3) **Valves and Piping.** Valves and piping shall be provided in the spray pad drainage system to allow for discharging spray pad water to waste prior to returning to the spray pad treatment tank.

(4) **Grating.** Openings in the grates covering the drains shall not be over one-half inch wide. Gratings shall not be removable without the use of tools.

(d) **Decks.**

(1) A continuous deck at least five feet (5') wide shall extend completely around the entire spray pad perimeter. The deck shall be of a uniform, easily cleaned, impervious material with a slip-resistant surface.

(2) **Slope.** The deck shall be sloped at least one-fourth inch per foot ($^1/_4$ in/ft) to deck drains or grades.

(3) **Drainage.** Deck drains, when used, shall be spaced and arranged so that not more than four hundred square feet (400 ft^2) of area is tributary to each drain, and drains shall not be spaced more than twenty-five feet (25 ft) apart. There shall be no direct connection between the spray pad deck drains and the sanitary sewer system or treatment tank, or between the treatment tank and recirculation system. The deck for outdoor spray ground shall be sloped away from the spray pad or to the deck drains to prevent surface runoff from entering the spray pad.

(4) **Carpeting.** Carpeting shall not be permitted on the spray pad or desk.

(5) **Hose bibbs.** At least one hose bibb shall be provided to facilitate flushing of the spray pad and deck areas and each bibb shall be provided with an anti-siphon device.

(e) **Spray Features.** Spray features should be designed and installed so as not to pose a tripping hazard, a hazard to due water velocity from the spray features, or other possible safety hazards.

(f) **Foot Showers.** Showers shall be provided at the entry to the spray pad to allow for rinsing debris from patrons' feet prior to entering the spray pad, except such showers are not required at indoor spray grounds or those within the enclosure of an aquatic amusement park. The use of foot baths is prohibited. Wastewater from the foot showers shall be discharged to an approved waste disposal system to prevent standing water on the ground surface, and/or contamination of spray ground and adjacent areas. The foot shower area shall be free of puddle water.

(g) **Spray Ground Enclosures.** All spray grounds shall be protected by a fence, wall, building, other solid barrier, or any combination thereof. A wall of a building may serve as part of the enclosure, provided that there is no direct access from the wall to the spray ground. A spray ground located on a roof, where there is no access to the roof except through doors where access can be prevented when the spray ground is unsupervised, does not require additional enclosure. All spray grounds shall be provided with an enclosure which shall have the following characteristics: (1) No external handholds or footholds.

(2) Made of materials which are durable.

(3) At least four feet (4') in height,

(4) Maximum vertical clearance above grade of two inches (2").

(5) The entrance into the spray ground enclosure shall be equipped with a door or gate that is self-closing and has a positive self-latching closure mechanism at least forty inches (40") above grade. Doors and gates at all entrances shall be equipped with hardware that permits secure locking of the entrance and prevents access when the spray ground is not supervised.

(6) Where a chain-link fence is provided, the openings between links shall not exceed $2^{3}/_{8}$ inches and chain link twists shall extend above the upper horizontal bar. The enclosure shall have railings and posts within the enclosure, which shall be capable of resisting a minimum lateral load of one hundred fifty pounds (150 lb) applied midway between posts and at top of posts, respectively. Enclosures, fence material or fabric shall be capable of withstanding a concentrated lateral load of fifty pounds (50 lb) applied anywhere between supports on an area twelve square inches (12 in^2), without failure or permanent deformation.

(7) Where a picket-type fence is provided, space between pickets shall not exceed 4 inches and pickets shall extend above the upper horizontal bar.

(h) **Warning Signs.** A durable plate bearing the following wording in 24-point type (letters 0.25 inches in height) or more permanently marked thereon in colors contrasting with the background, shall be prominently affixed at spray pad or enclosure/entrance and in the bathhouse or bather preparation facilities at eye level containing the following:

(1) The hours that spray pad is open.

(2) The hours that spray pad use is prohibited.

(3) Individuals with diarrhea shall not use the spray pad.

(4) Spray features use recirculated water-do not drink.

(5) Children who are not toilet trained must wear a swim diaper covered by rubber pants.

(6) No animals allowed on or near spray pad.

(7) Pollution of the spray pad area is prohibited. Urinating, discharge of fecal matter, expectorating or nose blowing in any spray pad area is prohibited.

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.43 Water Supply, Waste Water, and Sewer Connections.

(a) **Water supply.** (1) The source and quality of the water supplied to the pool and/or spray ground and all plumbing fixtures, including drinking fountains, lavatories and showers, shall be obtained from the municipal water supply or a source of potable water pursuant to §141.01 of this Code.

(2) **Cross-connection control.** The potable water supply shall be protected against inter-connection or cross-connection to any potential source of contamination, including but not limited to backflow and back-siphonage. Water introduced into the pool and/or spray pad, either directly or to the recirculation system, shall be supplied through an air gap of at least 6 inches or two times the pipe diameter, whichever is greater. In pools and/or spray pad where it is not possible to provide an air gap, the pool and/or spray water shall be protected by an approved backflow prevention device.

(3) **Drinking water fountains.** Drinking fountains shall be of a slanting jet-type with a surrounding guard and

nonsubmersible opening. They shall be accessible by patrons at the pool and be supplied with adequate water pressure.

(4) **Fill spout.** When a fill spout is used to introduce water into the pool, it shall be covered so as not to create a hazard to the patrons. The open end of the fill spout shall have no sharp edges, shall not protrude more than two inches beyond the edge of the pool and shall be at least six inches above the deck level. The fill spout shall be located under the diving board when the pool is equipped with a diving board.

(b) **Waste water disposal.** (1) The sanitary sewer system shall have sufficient capacity to serve the facility, including the bathhouse, locker rooms and related accommodations. The building drains and sewer system shall have adequate capacity to carry filter backwash flows without surcharging or flooding. Sanitary sewage and pool and/or spray pad waste water shall be discharged to the municipal sanitary sewer system whenever possible. The establishment shall obtain the waste water discharge permit or approval from the appropriate regulatory agency (for example, the New York City Department of Environmental Protection) prior to discharge. When no such sewer is available, the connection shall be made to a suitable private subsurface disposal system or other system approved by the department and such agencies having jurisdiction.

(2) The pool and/or spray pad waste water shall be discharged to the sanitary sewer system through an air gap of at least six inches (6") or two times the pipe diameter, whichever is greater, so as to preclude the possibility of backup of sewage or waste water into the pool and/or spray pad piping system.

(c) **Potable water treatment and sewage treatment facilities.** Plans for any potable water treatment or sewage treatment facilities to be constructed on-site at the bathing establishment shall be submitted for approval by the department prior to construction of such facilities.

24 RCNY 165.45

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.45 Water Treatment System.

(a) **General.** A water treatment system consisting of pumps, piping, filters, water conditioning and disinfection equipment, and other accessory equipment, shall be provided which will clarify, chemically balance and disinfect the pool water and/or spray pad water. The system shall be designed for a recirculation flow rate that will result in a turnover period in each pool and/or spray ground not exceeding those specified below. Construction shall comply with all other provisions of this Code regarding water and waste water.

(1) **Pools.** Each pool shall have a separate water treatment system. Pools with an approved design rate of less than those specified below shall be operated at the design rate. Construction of fill and draw pools is prohibited.

Types of Pool	Turnover Period Shall Not Exceed
Swimming Pool	6 hours
Physical-Therapy Pool	4 hours
Moveable Bottom Pool	4 hours

Wading Pool	2 hours
Wave Pool	2 hours
White Water Slides	1 hour
Spa Pool	30 minutes; and shall be capable of returning the spa water to a turbidity of less than 0.50 N.T.U. (Nephelometric Turbidity Units) measured within four hours following the peak bather load.

Pools constructed prior to March 31, 1973 may have an eight-hour turnover rate.

(2) **Spray Grounds.** All water provided to the spray pad shall be treated with ultraviolet light as specified in 165.45(l)(9) during spray pad operation. The spray pad treatment system shall comply with the following requirements:

(A) The water from the spray pad treatment system can only be combined/circulated with water from other pool(s) if:

(1) All the water from the spray pad is treated by ultraviolet (uv) light disinfection prior to combining/circulating with water from the other pool(s) or;

(2) UV light disinfection are provided to treat all of the water in the other pool(s). The larger flow rate resulting from the two calculations below shall be the minimum flow rate used for the treatment system design. All recirculated water must pass through both the ultraviolet light unit(s) and filters. The minimum flow rate through the treatment system shall be calculated using the two methods described below:

(i) Minimum flow rate (For ultraviolet disinfection):

$$Q = \left(\frac{14.8 - \ln(V)}{12 \times 60} \right) V$$

Q: Minimum flow rate through the ultraviolet disinfection/filtration system (in gallons per minute) V: Pool volume (in gallons). ln(V): Natural log of the volume. 14.8-ln(V): Number of turnovers

(ii) Minimum filtration flow rate (for combined pool/spray pad system): The minimum filtration rate for a pool that shares water with a spray pad is specified in section 165.45(a)(2)(C)(iii). The minimum filtration flow rate shall be at least the sum of the flow rate for the pool type specified in §165.45(a)(1) and one third of the spray feature flow rate.

(B) When water supplying the spray features is removed from the spray pad treatment tank by a pump separate from the filtration/recirculation pump system, the ratio of the flow rate of water supplied to the spray features directly from the treatment tank must not exceed 3 times the design filtered water flow rate.

(C) **Turnover Rate.** (i) When water is supplied to the spray features by a pump which removes water directly from the spray pad treatment tank independent from the spray pad treatment tank filter pump, the turnover rate for filtration shall be determined by the feature flow rate. The filtration flow rate for the spray pad treatment tank must be at least one-third of the design spray feature flow rate.

(ii) When all of the water supplied to the spray features is filtered upon removal from the spray pad treatment tank before being supplied to the spray features, a reduced pumping rate for filtration/treatment of the spray pad treatment

tank water can be used when the spray features are not in operation. However, a minimum 4-hour turnover rate shall be provided.

(iii) The minimum flow rate through the filtration system for combined pool/spray pad systems shall be equal to or greater than the sum of the flow rate for the specific type pool as required by §165.45(a)(1), plus one third of the spray feature flow rate.

(b) **Equipment and storage area.** All the pumps, filters, chemical feeders and other mechanical equipment and chemicals shall be secured and protected by an appropriate enclosure or room, separate and apart from the pool. The size of the equipment room shall provide working space to perform routine operations. Clearance shall be provided for all equipment as prescribed by the manufacturers to allow normal maintenance operation and removal without disturbing other piping or equipment. Operating instructions and a schematic drawing for all equipment shall be provided in the equipment enclosure room. Adequate storage area shall be provided for chemicals and supplementary equipment. A dry above ground storage area shall be provided for facilities using calcium hypochlorite as a disinfectant. Equipment rooms shall not be used for storage of chemicals emitting corrosive fumes or for storage of other items to the extent that entrance to the room for inspection or operation of the equipment is impaired.

(c) **Hydraulics and piping system.** (1) Materials. The recirculating piping and fittings shall be of nontoxic material, resistant to corrosion, and able to withstand operating pressures. Acceptable materials for recirculation systems are polyvinylchloride (PVC), copper, stainless steel, aluminum, cast iron or other material suitable for water supply applications.

(2) **Size.** All pipes, fittings and valves of the recirculation system shall be designed to reduce friction losses to a minimum and to carry the required quantity of water at a maximum velocity not to exceed six feet per second (6 ft/s) under suction, ten feet per second (10 ft/s) under pressure and three feet per second (3 ft/s) in gravity flow.

(3) **Plumbing color coding.** All exposed piping and valves should be identified by color code in accordance with Table 4. Where two colors do not have sufficient contrast to easily differentiate between them, a six inch band of contrasting color should be painted on one pipe at approximately thirty inch (30") intervals. The name of the liquid or gas and arrows indicating direction of flow should be shown on the pipe.

Table 4: Plumbing Color Coding Schedule

Category	Color Code
Piping	
Potable water lines	Dark blue
Filtered water	Aqua
Skimmer or gutter return	Olive green
Main drain	Black
Alum	Orange
Chlorine (gas/solution)	Yellow
Soda ash	White
Acid	Pink
Waste lines	
Backwash waste	Dark brown
Sewer	Dark gray
Deck drains	Light brown
Other	
Compressed air	Dark green
Gas	Red

(4) **Installation and draining of pipes.** All equipment and piping shall be designed and fabricated to drain completely by use of drain plugs, drain valves or other means. All piping shall be supported continuously or at sufficiently close intervals to prevent sagging. All suction piping shall be sloped in one direction, preferably toward the pump. All supply and return pipelines to the pool and/or spray pad shall be provided with valves or other means to allow the piping to be drained to a point below the frost line. Provision shall be made for expansion and contraction of pipes.

(d) **Selection of recirculation pumps.** The recirculation pump shall have adequate capacity (flow rate and pressure) to meet the design requirements of the pool and/or spray pad treatment tank, including filter backwashing and turnover rate. It shall be of a self-priming type if installed above the hydraulic gradient. A gauge which indicates both pressure and vacuum shall be installed on the pump suction header and a pressure gauge shall be installed on the pump discharge line. Gauges shall be installed as near to the pump inlet as possible.

(e) **Strainers and screens.** The recirculation system shall include suitable strainer(s) or screen(s) to prevent hair, lint, and other debris from reaching the pump and filters. The strainers shall be of rigid construction, fabricated of corrosion-resistant material and of adequate strength to withstand maximum anticipated loading including pressure. The openings shall be no greater than one-eighth inch in any dimension. The total clear area of all openings shall be at least four times the area of the connecting pipe. The strainer shall have a quick-opening cover. One spare strainer basket shall be provided for each strainer. In systems where the filter is located on the suction side of the pump, strainers are not required.

(f) **Inlets (for pools).** Wall or floor inlets shall be provided for all pools and shall be located and directed to provide distribution of treated water to facilitate the maintenance of a uniform disinfectant residual throughout the entire pool.

(1) **Number.** Wall inlets shall be spaced at a distance of no greater than twenty feet (20') apart, with one inlet within five feet (5') of each corner of the pool and one in each recessed step area or other space where water circulation might be impaired.

(2) **Location.** Wall inlets shall be located at least twelve inches (12") below the design water surface. Bottom inlets shall be uniformly spaced with a separation distance of no greater than twenty feet (20') and with rows of inlets within fifteen feet (15') of each side wall. In any pool over sixty feet (60') in width, floor inlets should be provided. These shall be flush with the floor.

(3) **Type.** Inlet fittings shall be of the adjustable rate-of-flow type. Directional flow inlets shall be used with skimmer type pools. Inlets shall not extend from the floor or wall to create a hazard.

(4) **Testing.** Dye testing (crystal violet or equivalent) should be performed to determine and adjust the recirculation pattern.

(g) **Main drains (for pools).** Every pool constructed after July 15, 1998, shall have at least two hydraulically balanced main drains to the pool filter system installed in the pool floor at the deepest point. The minimum distance between the main drains shall be three feet (3') measured from center to center of the drains. If the floor of a spa pool is insufficient for a separation distance of three feet (3'), then the separation distance shall be as great as possible. The main drains shall be connected to a single main suction pipe by branch lines and the branch lines shall not be valved so as to be capable of operating independently. Pools constructed before July 15, 1998, shall have at least one main drain installed in the pool floor at the deepest point.

(1) **Location.** The main drains shall not be spaced at more than twenty feet (20') on centers and fifteen feet (15') from side walls and shall be connected in parallel.

(2) **Grating.** The main drain shall be protected by gratings or other approved covers having an opening sufficient

to restrict water velocity to less than $1^1/_2$ feet per second through the grating. The maximum width of grate opening shall be one-half inch. Gratings or drain covers shall not be removable without the use of tools.

(3) **Piping.** Each main drain shall be connected to the recirculation system. The branch pipe from each main drain shall be designed to carry at least one hundred percent (100%) of the design recirculation flow rate. The single main suction pipe to the pump shall be equipped with a valve to control total main drain flow. The suction velocity in the pipe shall not exceed six feet per second (6 ft/s).

(4) **Minimum flow.** At least thirty percent (30%) of the total recirculation rate should flow through the main drains.

(5) A hydrostatic relief valve shall be provided at each main drain for in-ground pools.

(h) **Surface skimmer systems (for pools).** A surface skimmer system, perimeter overflow system or recessed automatic surface skimmers, shall be provided on all pools and shall be designed and installed to continuously remove all floating material, surface dirt and waste water. A perimeter overflow system shall be required on all pools which have a pool width exceeding thirty feet (30'), or a surface area of over one thousand six hundred square feet (1,600 ft^2). Pools having a width of thirty feet (30') or less, or a surface area of one thousand six hundred square feet (1,600 ft^2) or less shall be provided either with perimeter overflows or skimmers. A combination of perimeter overflow systems and skimmers may also be used when approved by the department. All overflow systems and skimmers shall be capable of continuously removing all floating material, surface dirt and waste water.

(1) **Perimeter overflow systems.** All pools shall be designed to provide continuous skimming from the pool's surface at a rate of at least one hundred percent (100%) of recirculation rate. In pools where perimeter overflow systems are provided, the following shall be met:

(A) **Design.** The perimeter overflow systems shall extend completely around the pool, except at steps or recessed ladders in the shallow portion and shall be level to a tolerance of one-eighth inch ($^1/_8$"). The gutter shall be capable of continuously removing one hundred percent (100%) of the recirculation water and return it to the filter.

(B) **Size and shape.** The gutters, drains and return piping to the surge tank shall be designed to rapidly remove overflow water caused by recirculation displacement, wave action or other causes produced from the maximum pool bathing load. Make-up water supply equipment shall be provided to maintain continuous skimming.

(C) The gutter shall be designed to serve as a handgrip and to prevent entrapment of bather's arms, legs and feet. It shall permit ready inspection, cleaning and repair.

(D) The overflow gutter outlets shall be provided with outlet pipes at least two inches (2") in diameter. The outlet fittings shall have a clean opening in the grating at least equal to 1.5 times the cross-sectional area of the outlet pipe.

(E) Drainage shall be sufficient to minimize flooding and prevent backflow of skimmed water into the pool.

(F) **Surge capacity.** All overflow systems shall be designed with an effective surge capacity of not less than one gallon for each square foot of pool surface area. Surge shall be provided within a surge tank, in the gutter or filter above the normal flow line, or elsewhere in the system. Surge tanks, gutters and filter tanks should have overflow pipes to convey excess water to waste. Surge tanks shall be provided with means for complete draining.

(2) **Skimmers.** Skimmers shall be designed and installed to prevent electrical hazards or short circuiting. Recessed automatic surface skimmers are permitted on pools where the width does not exceed thirty feet (30') and a water surface area is less than one thousand six hundred square feet (1,600 ft^2). In pools where skimmers are provided, the following shall be met:

(A) **Number.** One skimmer for each four hundred square feet (400 ft^2) of water surface area or fraction thereof shall be provided. Additional skimmers may be required to achieve effective skimming.

(B) **Location.** Skimmers shall be so located to optimize skimming of the entire water surface with minimum interference and placed so as to prevent short circuiting. Prevailing wind direction and the pool outline shall be considered in the selection of skimmer locations and the location of skimmers shall be such that the interference of adjacent inlets and skimmers is minimized.

(C) **Capacity.** The piping and other pertinent components of skimmers shall be designed for a total capacity of one hundred percent (100%) of the required filter flow of the recirculation system and no skimmer shall be designed for a flowthrough rate less than thirty gallons per minute per foot (30 gpm/ft) of weir length.

(D) **Control.** Skimmers shall have weirs that adjust automatically and operate freely and continuously with variations of at least four inches in water level. All skimmed water shall pass through an easily removable and cleanable basket or screen before encountering control valves or entering the pump suction line. Each skimmer shall be equipped with a device to control flow.

(E) **Relief line.** Skimmers shall include a device to prevent an air lock in the suction line. If equalizer pipes are used, they shall pass an adequate amount of water to meet pump suction requirements should pool water drop below the weir level. The equalizer pipes shall be located at least one foot below the lowest overflow level of the skimmer. A valve or equivalent device that will remain tightly closed under normal operating conditions, but automatically open when the water level drops below the minimum operating level of the skimmer, shall be provided on each equalizer pipe.

(F) **Construction.** Skimmers shall be installed in the pool walls, be sturdy and be constructed of corrosion-resistant materials.

(G) **Handgrips.** Rounded coping not more than two inches (2") thick or other handgrip adjacent to the pool wall shall be provided. The handgrip shall not be more than nine inches above the minimum skimmer operating level. When the handgrip is formed by the pool deck, it shall slope away from the pool with a one-inch (1") drop in a one-foot (1') distance.

(H) **Testing.** Flotation testing should be performed to determine and adjust the recirculation system for optimum skimming.

(i) **Filtration.** The filtration system shall be designed to maintain the required pool and/or spray pad water quality. A water treatment system shall have one or more filters. Filters shall be installed with adequate clearance and facilities for ready and safe inspection, maintenance, disassembly and repair.

(1) **Sand filters.** The design filtration rate of rapid sand filters shall not exceed three gallons per minute per square foot (3 gpm/ft^2) of bed area at time of maximum head loss with sufficient area to meet the design rate of flow by the prescribed turnover rate. High-rate sand filters (pressure or vacuum) shall not exceed a filtration rate of fifteen gallons per minute per square foot (15 gpm/ft^2) of bed area. For multiple-cell rapid sand filters, the rate of filtration shall not exceed three gallons per minute per square foot (3 gpm/ft^2) of filter area. For multi-cell high-rate sand filters, filtration rate shall not exceed five gallons per minute per square foot (5 gpm/ft^2) of filter area. The sand filter system shall be equipped to backwash each filter at a rate of twelve to fifteen gallons per minute per square foot (12 to 15 gpm/ft^2) of filter bed area, or as recommended by the manufacturer. The backwash water shall be discharged to waste through a suitable air gap.

(A) **Filter media.** Sand or other media shall be carefully graded and meet the manufacturers' recommendation for pool use.

(B) **Accessories.** Influent pressure gauge, effluent pressure gauge, backwash sight glass and air relief valve shall be provided on all sand filters. Where multiple filter tanks are used a separate gauge panel shall be provided for each filter tank.

(2) **Diatomaceous earth filters.** The design filtration rate for pressure or vacuum type filters shall be no greater than 1.5 gallons per minute per square foot of effective filter area, except that a maximum filtration rate of two gallons per minute per square foot (2gpm/ft^2) may be allowed where continuous application of filter material is provided ("body slurry feed," see below). The filter and all component parts shall be of such materials, design and construction to withstand normal continuous use without significant deformation, deterioration, corrosion or wear which could adversely affect filter operation.

(A) **Precoating.** Provision shall be made to introduce a precoat of diatomaceous filter aid to evenly cover the filter elements upon placing the equipment into initial operation and after cleaning. For pressure-type filters, the amount of filter aid shall be selected to provide at least the same protection to the filter element as that afforded by no less than 0.1 pound of diatomaceous earth filter aid per square foot of filter area.

(B) **Backwash and precoating.** Whenever the filter is backwashed or precoated, the filter piping shall be installed to permit continued recirculation of the water from the effluent back to the influent until a satisfactory clear effluent is produced prior to admitting the water into the pool, or to be discharged as waste water as an alternative.

(C) **Body or slurry feeding.** Where provided, the body feeding equipment designed for feed of filter aid to the filter influent shall be capable of applying not less than 0.1 pound of diatomaceous earth per square foot of filter area per 24 hours.

(D) **Regenerative-type filters.** Regenerative type of filters shall meet the same standards as pressure filters. Pumping by air or manual means shall be provided for and provision for visual inspection of elements shall be provided.

(E) **Accessories for pressure-type filters.** Each pressure-type filter requires a backwash sight glass, effluent pressure gauge, influent pressure gauge and air relief valve.

(F) **Accessories for vacuum-type filters.** A compound gauge which will indicate both positive and negative head shall be installed on the suction side of the pump. An adjustable high vacuum switch should be provided to prevent damage to the pump by cavitation.

(3) **Cartridge filters.** The design filtration rate for cartridge filters of depth type shall be less than three gallons per minute per square foot (3 gpm/ft^2) of cartridge cylinder surface area. For surface type, the design filtration rate for cartridge filters shall not exceed 0.375 gallon per minute per square foot (0.375 gpm/ft^2) of the pleated area of the cartridge. Influent pressure gauge, effluent pressure gauge and air relief valve shall be provided on all the filters. One complete extra set of filter cartridges shall be on hand at the facility's location.

(j) **Flow measurement and control.** (1) **Flow measurement.** A means of continuously measuring rate of flow shall be provided in the recirculation system. For sand filters, the flow-measuring equipment shall be located where the backwash flow rate can also be determined. The indicator shall be capable of measuring at least $1^1/_2$ times the design flow rate and shall be accurate within ten percent (10%) of true flow. The indicator shall have a range of readings appropriate for the anticipated flow rates, and be installed where it is readily accessible for reading and maintenance, and with straight pipe upstream and downstream of any fitting or restriction in accordance with the manufacturer's recommendation.

(2) **Flow regulation.** Where multiple pumps or filters are provided, each unit shall have a flow-regulating device installed. For spray grounds, automatic devices shall be provided for regulating the rate of flow through the filtration system and flow to the spray features.

(k) **Water heater and thermometer (pools).** A water heater shall be installed at all indoor pools. Heaters shall be installed in accordance with the standards contained in the Building Code and the manufacturer's recommendations. Heating coil, pipe or steam hose shall not be installed in a pool. Pools equipped with heaters shall have a fixed thermometer in the recirculation line downstream of the heater and another near the outlet of the pool.

(l) **Disinfection and chemical feeders.** Pools and/or spray pad treatment shall be designed to provide for continuous disinfection of the pool and/or spray pad water with a chemical which is an effective disinfectant and which imparts an easily measured, active residual. The pools and/or spray pad shall be equipped with a chlorinator, hypochlorinator, or other disinfectant feeder or feeders. An automatic controller shall be provided for continuous monitoring and adjusting the level of free residual disinfectant in the spray pad treatment tank. An automatic device shall be provided to deactivate chemical feeders when there is not flow in the spray pad treatment recirculation system. The feeder shall be automatic, easily disassembled for cleaning and maintenance, and capable of providing the required chemical residuals which meet the following requirements:

(1) **Design specifications.** The feeder shall be of sturdy construction and materials which will withstand wear, corrosion or attack by disinfectant solutions or vapors, and which are not adversely affected by repeated, regular adjustments or other normal use conditions. The feeder shall not allow flow of unintended chemicals or those containing foreign materials into the pool and/or spray pad treatment. The feeders shall incorporate anti-siphon safeguards so that the disinfectant cannot continue to feed into the pool and/or spray pad treatment tank, the pool piping system, the pool enclosure, spray pad treatment tank, the spray piping system or the spray pad enclosure if any type of failure of the equipment occurs.

(2) **Point of addition of disinfectant.** All chemicals shall be fed into the return line after the pump, filter and heater unless the feeder is otherwise designed and specified by the manufacturer, and approved by N.S.F. and the department.

(3) **Equipment capacity.** Feeders shall be capable of supplying disinfectant to the pool and/or spray pad treatment in a range of chlorine demand of up to 10 mg/l or equivalent.

(4) **Disinfection with bromine or solid forms of chlorine.** Where bromine or chlorine in stick or pellet form is used as a disinfectant, equipment shall be provided for feeding on continuous feed.

(5) **Disinfection with ozone.** Ozone generating equipment (OGE) is acceptable only as a supplement to chlorine or bromine disinfection system. OGE and its components shall be listed by N.S.F. or other listings that are approved by the department and meet the following design standards:

(A) The ozone concentration in the pool water shall be less than 0.10 mg/l. Off-gassing of ozone shall not result in ozone levels exceeding 0.10 mg/l in the equipment room or in the pool area. When the OGE is installed and annually thereafter, the air space within six inches (6") of the pool water level and air in the equipment room shall be tested to determine compliance with this requirement.

(B) All corona discharge OGE systems shall be vacuum systems.

(C) Backflow of pool water into OGE shall not occur.

(6) **Hypochlorinators (positive displacement pumps).** Where positive displacement pumps are used to inject the disinfectant solution into the recirculation line, the following requirements shall apply:

(A) **Feed.** Feed shall be continuous at the proper addition rate under all conditions of pressure in the recirculation system without constriction of the recirculation pump suction.

(B) **Solution tanks.** If granular calcium hypochlorite is used, two solution tanks, each with minimum capacity of

one-day supply, should be provided. All chemical containers including those used with chemical feeders shall be clearly labeled regarding their contents.

(7) **Gas chlorination.** Gas chlorination is prohibited. Chlorine gas shall not be used or stored except under permit from the Fire Department and in accordance with Building Code reference standards and as approved by the Department.

(8) **Copper/silver and copper ion generators.** All copper/silver and copper ion generators shall be approved by N.S.F. or equivalent which are approved by the department and are acceptable only as a supplement to chlorine or bromine disinfection system.

(9) **Ultraviolet light disinfection units.** All spray pad treatment systems shall provide ultraviolet light disinfection systems unless the provision of an alternative treatment process has been approved by the New York State Department of Health to be capable of providing the equivalent level of reduction of cryptosporidium as the ultraviolet light disinfection system specified in this article. The ultraviolet light unit shall be located between the spray pad treatment tank pump discharge and the spray features or as approved in accordance with §165.45(a)(2)(A). The following requirement for ultraviolet light shall apply:

(A) All ultraviolet light units must be validated with dosage by an independent agency with dosage. The validation process must determine the ultraviolet light unit's disinfection performance by indicating that a dose of 40mJ/cm^2 (at end of lamp life) is achieved at a flow rate equal to or greater than the design flow rate at the setpoint intensity. The validation procedure used must have been determined by the State Department of Health to be capable of demonstrating the disinfection performance described above.

(B) For systems utilizing quartz sleeves to separate the water passing through the chamber from the ultraviolet source, the system shall be designed to permit cleaning of the lamp jackets and the sensor window or lens without mechanical disassembly. For systems utilizing polytetrafluoroethylene (PTFE) surface materials to separate the water that flows through the ultraviolet chamber from the lamps, the ultraviolet unit shall be designed to be readily accessible to the interior and exterior of the PTFE. The ultraviolet unit shall be designed to permit use of either physical or chemical cleaning methods.

(C) An accurately calibrated ultraviolet light intensity meter, properly filtered to restrict its sensitivity to the disinfection spectrum shall be installed in the wall of the disinfection chamber at the point of greatest water depth from the tube or tubes.

(D) An automatic system shall be installed to prevent flow to the features in the event the ultraviolet light intensity decreases below the validated set point.

(E) An automatic, audible alarm shall be installed to warn of ultraviolet light disinfection system malfunction or impending shutdown.

(F) The unit shall be designed to protect the operator against electrical shock or excessive radiation.

(G) Installation of the unit shall be in a protected enclosure not subject to extremes of temperature.

(H) A spare ultraviolet lamp and other necessary equipment to effect prompt repair by qualified personnel properly instructed in the operation and maintenance of the equipment shall be provided on-site.

(m) **pH control.** Mechanical feed equipment for the purpose of adding a chemical for pH adjustment shall be provided for all pools and spray grounds built. An automatic controller shall be provided for continuously monitoring and adjusting the level of pH in the spray pad treatment tank. The method of chemical addition shall protect the bather from contact with concentrated chemicals. Soda ash, caustic soda, sodium bisulfate, carbon dioxide gas, muriatic acid,

or other chemicals approved for water supply use by the United States Environmental Protection Agency, as food additives by the United States Food and Drug Administration, or by the Department, shall be used to raise or lower pool water pH. The method shall provide adequate distribution of the chemical throughout the pool and distribution shall be verified by pool water testing prior to bather exposure. Where carbon dioxide (CO_2) is used as a method of pH control, the following features shall be provided:

(1) CO_2 shall be injected into the recirculation pipe at the same point where pH adjustment solutions (i.e., acid) would normally be added. The recirculation pipe shall be of sufficient size and length to provide a minimum of five seconds contact time prior to bather contact.

(2) CO_2 cylinders shall be anchored to prevent damage. Cylinders shall be inaccessible to the general public.

(3) The manufacturers' instructions shall be followed for installation and operation of cylinders. The units shall be operated by the pool operator as specified in the pool safety plan.

(4) CO_2 cylinders shall be stored in a protective enclosure at the exterior of occupied structures. If CO_2 cylinders are provided in the interior of occupied structures, they shall be placed in a ventilated enclosure.

(n) An automatic device shall be provided to deactivate chemical feeders when there is no flow in the recirculation system.

(o) **Pool vacuum system and cleaning system (for pools).** A cleaning system should be provided to remove sludge, sediment and other accumulations from the bottom of the pool. When a vacuum system is used as an integral part of the recirculation system, hose connections shall be located in the walls of the pool at least eight inches (8") below the waterline, and at such points that the floor of the pool can be cleaned with not more than fifty feet of suction hose.

(p) **Spray Pad Treatment Tank (for spray grounds only).** The spray pad treatment tank that receives the effluent water from the spray pad shall conform to the following specifications:

(1) **Material.** The spray pad treatment tank shall be constructed of materials which are inert, corrosion resistant, nontoxic, and watertight such as concrete, fiberglass, stainless steel, etc., which can withstand all anticipated loadings under full and empty conditions.

(2) **Volume.** The volume of the water in the spray pad treatment tank shall be sufficient to assure continuous operation of the filtration system. The capacity shall be measured from six inches above the uppermost pump inlet to the bottom of the overflow waste outlet.

(3) **Controller.** An automatic water level controller shall be provided for the spray pad treatment tank.

(4) **Ready Access.** The spray pad treatment tank must be designed to provide ready access for cleaning and inspections, and be capable of complete draining. An overflow pipe to convey excess water to waste through a suitable air gap must be provided.

(5) **Backflow Prevention.** The makeup water shall be introduced into the spray pad treatment tank through an air gap or by another method which will prevent back flow and back-siphonage.

(6) **Screen.** A screen or similar device shall be provided through which all water from the spray pad shall pass before entering the spray pad treatment tank or another method/process described to provide for removal of debris on the surface layer of the spray pad treatment tank water.

(7) **Filtered/Treated Water Inlets.** An adequate number of filtered or treated water inlets shall be provided and located for complete mixing and circulation of treated water within the spray pad treatment tank.

(8) **Drain.** At least one main drain suction outlet supplying water to the spray pad treatment tank filtration system shall be provided at the deepest point in the spray pad treatment tank.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.47 Lighting and Electrical Installation, Ventilation and Heating Require- ments.

(a) **Lighting and electrical installation.** Artificial lighting shall be provided for all bathing establishments which are to be used at night, or which do not have adequate natural lighting. The light and electrical installation shall be provided in accordance with the following:

(1) All new electrical wiring shall conform with Chapter 3 of Title 27 of the Administrative Code of the City of New York, entitled the "Electrical Code" and the National Electrical Code of the National Underwriters Laboratory, or any successor regulation or code.

(2) **Underwater.** When underwater lighting is used, not less than 8.35 lumens or 0.5 watt per square foot of pool water area shall be provided. Such lights shall be spaced to provide illumination so that all portions of the pool including the bottom, may be readily seen without glare. Overhead illumination on the water surface shall be a minimum of 30 foot-candles.

(3) If underwater lights are not provided, a minimum illumination of 50 foot-candles on the water surface and the deck shall be provided.

(4) **Decks.** A minimum of 50 foot-candles should be provided at deck area and/or spray pad.

(5) The illumination level in indoor pools and/or spray grounds shall be so designed to limit glare and excessive reflection.

(6) No overhead electrical wiring, except when secured within a ceiling, shall pass within twenty feet (20') of the pool enclosure and/or spray pad.

(7) **Emergency lighting.** All indoor pools where night swimming is permitted, and indoor pools where no natural light is present shall be provided with an adequate emergency lighting service. For outdoor pools, a portable battery powered light source is acceptable and shall be adequate and maintained to facilitate pool evacuation.

(8) **Electrical outlets.** Lighting or other electrical outlets in the deck, spray pad, shower room, and the water treatment areas shall have properly installed ground fault circuit interrupters (GFCI) at the outlet.

(9) Each underwater light shall be individually grounded by means of an adequate ground-wire with a screwed or bolted connection to the metal junction box from which the branch circuit to the individual light proceeds. Such junction boxes shall not be located in the pool deck within four feet of the pool wall.

(10) **Equipment room and storage area.** All pool equipment and chemical storage rooms shall be provided with artificial lighting sufficient to illuminate all equipment and supplies.

(11) **Sauna and steam rooms.** All electrical installation shall be in accordance with manufacturer's instruction and §165.47(a)(1).

(b) **Ventilation.** (1) **General.** All indoor pools and/or spray grounds shall be adequately ventilated, either by natural or mechanical means. Indoor portions of a bathing establishment, including indoor pools and/or spray grounds, dressing rooms, mechanical equipment rooms, storage areas, bathhouses, shower rooms and lavatories shall be ventilated pursuant to Article 12 of the Building Code or any successor law or regulation. The ventilation system for indoor pools and dressing rooms shall be designed so the bathers are not subjected to drafts and shall minimize condensation. A minimum of two air changes per hour shall be provided for indoor pool and/or spray ground areas. Any heating units shall be kept from contact with swimmers. Fuel burning heating equipment shall be installed and vented to the outdoors in accordance with the Building Code.

(2) **Carbon dioxide.** For facilities using carbon dioxide (CO_2) as the method of pH control, where cylinders are provided in the interior of occupied structures they shall be placed in a ventilated enclosure. A louvered fresh air intake shall be provided near the ceiling. Mechanical exhaust ventilation shall be provided at the rate of one air change every three minutes and take suction near the floor as far as practical from the door and fresh air intake. Exhausted air shall be ducted to the exterior of the building through a continuous pipe of at least $1^1/_2$ inches in diameter with the point of discharge so located as not to contaminate air inlets to any rooms or structures.

(c) **Heating.** A heating apparatus of sufficient capacity to heat the rooms to 75 degrees Fahrenheit shall be provided in dressing rooms, shower rooms, lavatories and pool areas used at times other than the summer months and shall be operated so as to maintain a minimum of 70 degrees Fahrenheit whenever the rooms are in use. Any heating apparatus used to heat the air in indoor portions of a bathing establishment shall be equipped with adequate protective guards and venting.

24 RCNY 165.49

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.49 Bathhouse and Bather Preparation Facilities.

(a) **General.** All bathing establishments shall have toilet facilities for each gender (as appropriate) within 300 feet and no more than one floor level above or below the bathing facility. Except where the bathing establishment is intended to serve as living units (such as hotel, motel, apartments, condominium and residents' institutions), there shall be a bathhouse and bather preparation facility for each gender provided with lockers, showers and toilets.

(b) **Location.** For all pools, the bather preparation facility shall be located so that the patrons shall pass through the bather preparation facilities to enter the pool. The layout of the preparation facilities shall be such that the patrons on leaving the dressing room pass the toilets and then the showers en route to the pool. For spray grounds, the bather preparation facility shall be conveniently located.

(c) **Materials.** Floors of the facility shall be of smooth-finished material with nonslip surfaces, impervious to moisture, easily cleanable and sloped at least one-fourth inch per foot ($^1/_4$"/ft) to drains. Carpeting shall not be

permitted in shower and toilet areas. Junctions between walls and floors shall be curved and of smooth, impervious materials, free from cracks or open joints. Partitions between toilets and in dressing rooms shall be at least ten inches (10") off the floor or shall be placed on continuous raised masonry or concrete bases at least four inches high, and constructed of impervious, easily cleanable material.

(d) **Design requirements.** All bathing establishments shall have an adequate number of toilets in properly ventilated compartments. The number of toilets to be provided shall be based upon the maximum number of persons, both adults and children, who can be accommodated in a bathing establishment at any one time. A bathing establishment shall have at least one toilet for every 40 female bathers, at least one toilet and one urinal for every 60 male bathers and at least one wash basin adjacent to the toilets for every 60 persons. A minimum of two toilets for female bathers shall be provided at every facility.

(e) **Shower room.** The number of shower heads to be provided shall be based upon the maximum number of persons, both adults and children, who can be accommodated in a bathing establishment at any one time. In no case shall there be fewer than two showers. A bathing establishment with indoor bathing facilities shall have at least one shower for every 40 persons of each sex. A bathing establishment with outdoor bathing facilities shall have at least one shower for every 80 persons of each sex. Showers in all bathing establishments shall have hot and cold running water. Showers shall be supplied with water at a temperature of at least ninety degrees Fahrenheit (90 °F) and no more than one hundred and ten degrees Fahrenheit (110 °F) and at a minimum rate of 1.5 gallons per minute and a maximum rate of 2.5 gallons per minute per shower. If shower curtains are used, they shall be of plastic or other impervious material and shall be kept clean. Heavy duty wall mounted soap dispensers (glass prohibited) shall be provided at each individual shower stall or at a rate of one dispenser per two shower heads in a common shower room containing more than one shower head.

(f) **Lavatories.** All lavatories shall be provided with liquid soap in an acceptable dispenser, paper towels or other individual towels or electrical hand-drying units and covered waste receptacles. Common use of bar soap or cloth towels shall not be permitted. Suitable sanitary napkin receptacles shall be provided in female toilet rooms. For spray grounds, a diaper changing area shall also be provided.

(g) **Lockers.** Lockers shall be set either on solid masonry or concrete bases at least four inches above the floor. Lockers shall be vented.

(h) **Hose bibbs.** Hose bibbs shall be provided within the bathhouse to enable the entire area to be flushed with a fifty foot (50') hose. Hose bibbs shall be provided with an anti-siphonage device.

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.51 Additional Requirements for Wading Pools.

(a) Wading pools shall comply with the additional provisions of this section:

(1) **Maximum depth.** The maximum water depth for wading pools shall be twenty-four inches (24") at any point.

(2) **Enclosure.** Except for pools constructed before March 24, 1959, a fence or other effective barrier at least four feet (4') in height, to separate the wading pool from other pools, shall totally enclose the wading pool and have a gate or door with a self-closing and self-latching mechanism.

(3) After the effective date of this article, where a wading pool is constructed in proximity to a swimming or wave pool, the wading pool shall be at the shallow end of the adjacent pool.

HISTORICAL NOTE

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.53 Additional Requirements for Spa Pools.

Spa pools shall comply with the additional provisions of this section:

(a) **Maximum depth.** The maximum water depth shall be four feet (4') measured from the waterline. The maximum submerged depth of any seat or sitting bench shall be two feet measured from the water line.

(b) **Location.** After the effective date of this Article, where a spa pool is constructed in proximity to a swimming or wave pool, the spa pool shall be at the shallow end of the adjacent pool with a minimum distance of five feet (5') between the pools.

(c) **Handholds.** All spas shall have one (1) or more suitable, slip-resistant handhold(s) around the perimeter, located no further than four feet (4') apart and not over twelve inches (12") above the water line. The handhold(s) may consist of rounded coping, ledge or decks along the immediate top edge of the spa; ladders, steps or seat ledges; and

ropes or railings.

(d) **Steps.** Design of steps shall conform to the following:

(1) Step treads shall have a minimum unobstructed horizontal tread depth of 10 inches for a minimum continuous width of twelve inches (12").

(2) Riser height shall not be less than seven inches (7") nor greater than twelve inches (12"). When the bottom tread serves as a bench or seat, the bottom riser may be a maximum of fourteen inches (14").

(3) Step treads shall have slip-resistant tread surfaces.

(4) Each set of steps shall be provided with at least one handrail to fully serve all treads and risers.

(5) Seats or benches may be provided as part of the steps.

(e) **Overflow system.** An overflow system shall be provided. It shall be designed and constructed so that the water level of the spa is at the operating level of the rim or weir device during use and non-use of the spa. When surface skimmers are used, one surface skimmer shall be provided for each one hundred square feet (100 ft^2) or fraction thereof of spa surface area. Recirculation through the skimmer shall be at least 30 gpm/skimmer. When two or more skimmers are used in a spa, they shall be located to maintain effective skimming action over the entire surface area of the spa. Skimmers shall conform to §165.45.

(f) **Air induction systems.** An air induction system shall be designed to prevent water backup that could cause electrical shock hazards. Air intake sources shall not permit the introduction of toxic fumes or other contaminants.

(g) **Heater and temperature requirements.** The maximum temperature of the spa water shall not exceed 104 degrees Fahrenheit. A thermostatic control for the water shall be required. An alarm system set to ring a bell or buzzer shall be installed to warn of any temperature over 104 degrees Fahrenheit. The alarm shall ring in the spa area as well as at the attendant's normal work station. The alarm system shall turn off the heat when the alarm sounds, and not allow the heater to be reset until the water temperature has cooled below the maximum level. A manual timer shall be installed that will require resetting after 15 minutes. This timer shall be set to ring a warning bell and may control the agitation pump. The heater shall be designed pursuant to §165.45 (k). Existing pools requiring modification to comply with this paragraph shall be in compliance on and after September 1, 2001.

(h) **Emergency switch.** For all spa pools, a clearly labeled emergency shutoff or control switch for the purpose of stopping the motor(s) that provide power to the recirculation system and jet system shall be installed readily accessible to the bathers at least five feet away, adjacent to, and within sight of the spa. Existing pools requiring modification to comply with this paragraph shall be in compliance on and after September 1, 2001.

§165.55 Additional Requirements for Physical-Therapy Pools.

Physical-Therapy pools shall comply with the additional provisions of this Section:

(a) **General.** Facilities for persons with physical disabilities shall be designed to provide safe entry and exit from the bathing establishment. Facilities for parking, path of travel, walks, ramps, drinking fountains, telephones, toilets and showers shall comply with the requirements of the Building Code.

(b) **Pool entry.** Access for persons with physical disabilities shall be at the shallow end of the pool. Pool entry shall be an eighteen inch (18") high block of steps followed by a normal set of pool steps. As an alternate, hoists or ramps are acceptable. Where removable ramps or steps are provided, the area beneath the ramp or steps shall be protected to prevent access to swimmers.

(c) **Steps and handrails.** Stair steps should have risers $5\frac{3}{4}$ inches high and a tread 12 to 18 inches wide to allow

for sitting. A handrail thirty-two inches (32") high, extending eighteen inches (18") beyond top and bottom steps, shall be provided. A twenty-two inch (22") handrail shall be provided for children. A six inch (6") handrail shall aid entry for those who cannot stand.

(d) **Wheelchairs.** Wheelchairs, if immersed in a pool, shall be safe, waterproof and designed for use in the pool environment.

§165.57 Additional Requirements for Movable-Bottom Pools.

Movable-Bottom pools shall comply with the additional provisions of this section:

(a) **Design.** Hydraulic lift swimming pool floors where provided, shall be safe and maintenance-free.

(b) **Inlets.** A jet-water self-cleaning system should be provided so that the entire pool is self-cleaning. Two sets of return inlets located at two different heights should be provided to obtain adequate mixing at all times when the pool is shallow or deep.

(c) **Floor movement.** Floor movement shall be designed to minimize turbulence and provide safe entry and exit by persons with physical disabilities.

(d) **Depth signs.** A sign for pool water depth in use shall be provided and clearly lit and visible. "NO DIVING" sign shall also be provided. The control panel for changing water depth shall be located in a safe place which is

accessible only to aquatic supervisory staff or pool operator.

(e) **Diving boards.** For depths other than design diving depth, the diving board shall be in an upright position and chained or secured to prevent use.

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.59 Additional Requirements for White-Water Slides.

Pools with white-water slides shall comply with the additional provisions of this section:

(a) **General.** All slides shall be designed and constructed in accordance with the manufacturers' instruction to carry the anticipated load. All curves, turns and tunnels on the path of flume shall be designed and constructed in accordance with manufacturers' instruction.

(b) **Water slide landing area.** The landing area for a water slide flume shall comply with the following:

(1) The minimum plunge pool operating water depth shall be three feet (3'). This depth should be maintained in front of the flume for a distance of at least twenty feet (20').

(2) If the water slide flume shall end in a swimming pool, the landing area shall be divided from the rest of the swimming pool by a float line or as approved by the department.

(c) **Slide position.** The slide flume shall be perpendicular to the plunge pool back wall for a distance of at least ten feet (10') from the exit end of slide. The flume shall terminate between a depth six inches below to two inches above the pool water surface level. The distance between the side of a flume exit and a plunge pool side wall should be at least five feet (5'). The distance between sides of adjacent terminuses should be at least six feet (6').

(d) **Pump reservoir.** A pump reservoir shall be provided for the slide pump intakes. It shall be connected to the plunge pool by a weir. The minimum reservoir volume shall be equal to twice the combined flow rate in gallons per minute of all filters and slide pumps.

(e) The flume shall be designed to prevent users from becoming airborne while in the ride.

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.61 Additional Requirements for Wave Pools.

Wave pools shall comply with the additional provisions of this section:

(a) **Perimeter overflow.** A perimeter overflow gutter system shall be provided. The gutter may be interrupted in the area where the water is less than two feet deep. The total capacity of the gutter shall be designed to carry one hundred percent (100%) of recirculation rate.

(b) **Entrapment prevention.** Any opening or connection between the wave pool and wave generator system shall be designed and constructed to prevent entrapment of bathers.

(c) **Lifeguard chairs.** Two lifeguard chairs shall be located along the deck edge on each side of wave pool where water depth is 3 feet or greater.

(d) **Emergency switches.** Switches which will stop the wave action shall be provided at each lifeguard chair.

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 165 BATHING ESTABLISHMENTS*5 GENERAL PROVISIONS

§165.63 Sauna and Steam Rooms.

All sauna and steam rooms shall be designed and constructed in accordance with the following requirements:

(a) **Temperature control.** A sauna or steam room temperature shall be thermostatically controlled and shall not exceed 194 degrees Fahrenheit for a sauna room and 120 degrees Fahrenheit for steam room as measured at eye height.

(b) **Doors and windows.** A sauna or steam room shall be equipped with a free swinging type door or a door that swings outward freely and a window to facilitate viewing the interior of the room.

(c) **Safety.** The facility shall provide a one-hour timer to automatically disconnect all heating elements from the supply source at the end of one hour, or an attendant (meeting the definition of responsible person) who inspects the facility at a minimal interval of 15 minutes during all periods of operation of a sauna or steam room pursuant to §165.15(c), if the timer is not provided.

(d) **Timing device and temperature indicator.** A time and temperature indicator shall be provided in each sauna or steam room and shall be so installed as to be clearly visible to the patron in the sauna or steam room.

(e) **Alarm system.** An alarm system acceptable to the department shall be provided to indicate to the attendant and user any malfunction of the automatic temperature regulating control or of an electrical overloading of the equipment. The alarm system shall turn off the heat when the alarm sounds, and not allow it to be reset until the temperature has cooled to below the maximum allowable level. The operator shall be able to demonstrate the functioning of the alarm system to the department during an inspection. The alarm shall be tamper-proof. Patrons shall not be able to prevent the alarm from sounding, nor to prevent the heat from being cut off, nor to change the temperature set-point of the alarm.

(f) **Heater.** (1) The heater unit used in a sauna room shall be approved by Underwriters Laboratories, Inc., or be equipped with equivalent control and safety features acceptable to the department, provided that the installation or any alteration of such unit has been approved by the Department of Buildings.

(2) If the unit is a gas-fired system, no door openings (either metal or otherwise) to the gas heater are to be located within the enclosure of the sauna.

(g) **Steam generator.** The size of the steam generator shall be adequate for the design capacity. There shall be adequate free space for access to the generator for maintenance.

(h) **Warning signs.** A durable plate bearing the following wording, in 24 point type (letters 0.25 inches in height) or more, permanently marked thereon in colors contrasting with the background, shall be prominently affixed outside the doors of the sauna or steam room at eye level containing the following:

"Use of steam room or sauna should not exceed 30 minutes. Excessive exposure can be harmful to health. The Department of Health and Mental Hygiene recommends that persons who:

-have poor health; or

-have high blood pressure or a heart or circulatory disease; or

-are using prescription medication; or

-are pregnant

not use this facility before consulting their physician. Persons under the influence of alcohol or drugs should not use this facility."

HISTORICAL NOTE

Section added City Record Apr. 3, 2001 eff. May 3, 2001. [See Vol. 9 Statements of Basis and Purpose No. 17]

Subd. (h) amended City Record Jan. 14, 2003 eff. Feb. 13, 2003. [See Vol. 9 Statements of Basis and Purpose No. 18-A]

Notes:

Subsection (h) was amended by resolution adopted on December 12, 2002 following amendment of Chapter 22 of the New York City Charter by the electorate in the November 6, 2001 general election, which merged the Departments of Health and Mental Health, Mental Retardation and Alcoholism Services, and enactment of Local Law of 2002, which

further amended the Charter and changed the name of the merged agency to Department of Health and Mental Hygiene.

24 RCNY 167.03

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 167 BATHING BEACHES*7 GENERAL PROVISIONS

§167.03 Definitions.

(a) "Adequate" means sufficient to accomplish the purpose for which something is intended, and to such a degree that no unreasonable risk to health or safety is presented. An item installed, maintained, designed and assembled, an activity conducted or act performed, in accordance with generally accepted standards, principles or practices applicable to a particular trade, business, occupation or profession, is adequate within the meaning of this Article.

(b) "Approval" means an authorization, permit, certification or equivalent determination issued pursuant to requirements promulgated by the Department.

(c) "Aquatic Supervisory Staff" means an individual possessing the qualifications of Supervision Level I, Supervision Level IIb, or a supervising lifeguard, as defined in §167.19(c) of this Article.

(d) "Bathing" means recreational activities where any part of the human body may come in direct contact with

water to the point of complete body submergence. Bathing includes, but is not limited to, swimming, diving, and wading. Bathing does not include any activities where contact with the water is minimal and where ingestion of the water is not probable, such as fishing and boating.

(e) "Bathing Beach" means any waterfront area of the City with associated bathing beach facilities not specifically restricted by the by the provisions contained in §167.05(d), where bathing is permitted regardless of whether it is recommended in accordance with the classifications given in §167.17. Bathing beach facilities include, but are not limited to, buildings, equipment, lavatories, toilets and showers or dressing facilities containing toilets and showers, if any, and the land areas used in connection therewith.

(f) "City" means the City of New York.

(g) "Department" means the New York City Department of Health and Mental Hygiene.

(h) **"E. coli"** means **Escherichia coli** a bacteria species which is a member of the family enterobacteriaceae which are the predominant facultative anaerobes in humans and warm blooded animal fecal material.

(i) "Enterococci" means enterococci bacteria, a subgroup of fecal streptococci that includes **Enterococcus faecalis, Enterococcus. faecium, Enterococcus avium,** and their variants. Enterococci bacteria are commonly found in the feces of humans and other warm-blooded animals. Although some strains are ubiquitous and not related to fecal pollution, the presence of enterococci in water is an indication of fecal pollution and the possible presence of enteric pathogens.

(j) "Fresh Water" in the City means any pond, lake or river in the City, including the Hudson River.

(k) "Geometric Mean" means the antilog of the summation of the logarithms of the values for samples examined divided by the number of samples.

(l) "Major Alteration, Renovation or Modification" means substantial physical changes to the bathing beach structure, enclosure, and electrical system or to the wastewater system. It does not include normal maintenance or repair.

(m) "Marine Water" means ocean and estuary water bodies. In the City, it means water bodies immediate to The Long Island Sound, Atlantic Ocean, and The New York Bight.

(n) "Preemptive Standards-New York City Wet Weather Advisory." A preemptive standard is a threshold level of precipitation that, when exceeded, can cause combined stormwater and sewage runoff to bypass the waste water treatment plants and overflow onto nearby receiving beach water bodies and may pose a public health threat. Based on hydraulic modeling of City waters, the Department issues Wet Weather Advisories each year for those bathing beaches directly impacted by wet weather.

(o) "Public Health Hazard" is any condition which poses an imminent threat to the health or safety of the public.

(p) "Qualified Lifeguard" means an individual possessing the qualifications of Supervision Level I and IIb as defined in §167.19(c) of this Article.

(q) "Responsible Person" means a competent individual, at least 18 years of age, employed by the owner or operator of the bathing beach, who is capable of exercising control over the patrons and is trained in the use of lifesaving and safety equipment, in emergency procedures and the Beach Safety Plan.

(r) "Standard Method" means the most recent edition of the publication entitled Standard Methods for the Examination of Water and Wastewater, as published by the American Public Health Association, the American Water Works Association, and the Water Environment Federation.

HISTORICAL NOTE

Section repealed and added City Record Mar. 24, 2004 eff. Apr. 23, 2004. [See Vol. 9 Statements of Basis and Purpose No. 20]

Subd. (o) added City Record Dec. 11, 2006 eff. Jan. 10, 2007. [See Vol. 9 Statements of Basis and Purpose No. 27]

Subds. (p)-(r) renumbered (former (o)-(q)) City Record Dec. 11, 2006 eff. Jan. 10, 2007. [See Vol. 9 Statements of Basis and Purpose No. 27]

Notes:

Section 167.03 was amended on December 5, 2006, to include a definition of "public health hazard" as a new subdivision (o) and to re-letter subsequent subdivisions, in order to provide greater clarity to bathing beach operators and the public. Further, this definition is derived from New York State Department of Health guidance.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 167 BATHING BEACHES*7 GENERAL PROVISIONS

§167.05 Permit Applications.

(a) No person, group of persons, firm, corporation, association, organization or institution shall construct, operate, modify, maintain or grant permission for the use of any bathing beach without a permit issued by the Department. No bathing establishment shall be constructed nor shall any major renovation or modification be made to any bathing establishment unless a completed application for construction, alteration or addition is submitted to the Department for review and approval prior to commencement of work. The permit shall be posted conspicuously at the facility. The Department may order any bathing beach operating without a permit to close and remain closed until the bathing beach has obtained and displays a valid permit issued by the Department.

(b) **Application.** Application for a permit shall be made to the Department at least 30 days prior to the opening of any bathing beach. The application shall include appropriate fees, application forms and other supplemental information as required by the specific circumstances.

(c) **Renewal.** A bathing beach permit shall be renewed at least 30 days before reopening for the season. A bathing beach may be closed by the Department for failure to renew a bathing beach operating permit before reopening.

(d) **Restriction.** No person shall operate, construct or maintain and no permit shall be issued for a bathing beach within 750 feet of the point of discharge of the outlet of any sanitary sewer, the flow of which would contribute in any way to the pollution of the waters used by the bathers, and located outside the boundary delineated for primary contact recreation as defined by applicable regulations of the New York State Department of Environmental Conservation (see 6 NYCRR §700.1; see also, 6 NYCRR Parts 890, 891). "Primary contact recreation" shall mean recreational activities where the human body may come in direct contact with raw water to the point of complete body submergence. Primary contact recreation includes, but is not limited to, swimming, diving, water skiing, skin diving and surfing.

(e) **Requirements for Permit Approval.** All bathing beaches shall be designed, constructed and completed in accordance with the requirements of this Article. For permit applications for new bathing beaches, the following must be submitted to the Department:

(1) A completed and approved Beach Safety Plan, as required by §167.23.

(2) Certificate of Occupancy for the bathing beaches from the City Department of Buildings including certificate of inspection for electrical work and plumbing.

(3) Copies of Aquatic Supervisory Certificates, as required by §167.19.

(f) **Change in Ownership.** In the event of change in ownership of any bathing beaches permitted under this Article, the owner shall file an application with the Department for a change in ownership within 30 days after such change has occurred.

(g) **Exemption.** No permit is required for operation of a bathing beach or for the construction or maintenance of a bathing beach facility by a State or Federal agency.

HISTORICAL NOTE

Section repealed and added City Record Mar. 24, 2004 eff. Apr. 23, 2004. [See Vol. 9 Statements

of Basis and Purpose No. 20]

Subd. (d) amended City Record Mar. 27, 2009 eff. Apr. 26, 2009. [See Vol. 9 Statements of Basis

and Purpose No. 34]

Notes:

On March 24, 2009, the Board of Health amended language in §167.05(d) of the Health Code to maintain consistency with New York State Department of Environmental Conservation regulations concerning surface water classifications and primary contact recreation for New York City waters.

24 RCNY 167.07

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 167 BATHING BEACHES*7 GENERAL PROVISIONS

§167.07 New Construction, Major Renovation or Modification.

No major alteration, renovation or modification shall be made in a bathing beach unless a written description of the alteration or repair or addition is submitted to and approved by the Department in writing prior to commencing work. Repair or remodeling of an existing permitted bathing beach shall be in compliance with the design and construction requirements in this Article. Prior to adapting a water body for use by siting or constructing a public bathing beach, and prior to major renovation or modification of a existing bathing beach, the Department shall review and approve the following:

(a) **Engineering Plans, Specifications and Engineering Reports.** Every owner, personally or through his or her engineer or architect, shall submit to the Department engineering plans, specifications and engineer's report covering construction, major alteration or modification of the bathing beach prior to the start of construction. Plans, specifications, and reports shall be prepared by an engineer or architect licensed to practice in the State of New York, and shall include at least the following:

(1) **A Scope of Work Letter.** The letter shall ionclude a detailed discussion of the proposed work to be performed;

(2) **Engineering plans.** Three identical sets of engineering plans each bearing the seal and signature of an engineer or architect licensed to practice in the State of New York. The plans shall include the layout of the bathing beach, including, but not limited to: dimensions, bathhouses, access roads, parking, building, water supplies, sanitary and storm sewers, electrical and telephone services; and

(3) **Specifications.** One set of complete specifications for the construction of the bathing beach.

(b) **Supplemental Information.** An application shall be accompanied by any supplemental information, evidence, or documentation that the Department deems necessary.

(c) **Proposed Bathing Beaches.** In addition to the requirements set forth in subsections (a) and (b) of this section, an application to locate and/or construct a public bathing beach shall include, but not be limited to, the following:

(1) **Site Assessment.** A site assessment must include the following information: (A) **Watershed Map.** A detailed map depicting the waterbody and watershed, including but not limited to existing wastewater treatment plant discharge points, combined sewer overflow discharges, septic systems, storm sewer outfalls, agricultural runoff, landfills, commercial or industrial drainage, or other facilities that may have an impact on water quality, adjacent land use and major physical contour, highways, etc. The extent of the watershed to be mapped should be based upon knowledge of the characteristics of the watershed. All potential sources of pollution and wastewater discharge points must be shown on the map.

(B) **Plot Map.** A map drawn to scale, showing bathing beach location, dimensions, contours, existing land use and wastewater discharge points within 10,000 feet of the proposed beach unless otherwise required by the Department.

(C) **Water Level.** Seasonal or anticipated water level variation. If auxiliary water to augment low flow is planned, source, location and flowrate shall be described.

(D) **Sources of Contamination.** Evaluation of: (i) type and size of existing and potential sources of contamination, volume, occurrence and concentration level of materials in the effluent that may be of potential hazard to the bathers, and (ii) the potential for additional contamination after a significant rainfall event.

(E) **Weather and Topographical Influences.** Prevailing wind direction during the bathing season, rainfall, topography, or environmental factors including current measurements.

(F) **Water Quality.** A history of the bacteriological quality, pH, and the turbidity of the proposed body of water shall be researched from all possible sources. The results of at least one set of representative bacterial samples, each week for a period of eight weeks shall be included. Eight sets of samples shall include at least one set after heavy rains consisting of daily samples for a five-day period.

(G) **Physical and Chemical.** The physical and chemical quality of bathing water, including color, odor, floatable debris, oils and greases, high turbidity and other substances that can potentially present a public health threat. Except at ocean beaches, it shall be possible to see an eight inch black-and-white disk in four feet of water. Clarity tests should be performed at four-foot depth in the bathing area at a minimum of three different locations. A map depicting test locations, dates of sampling, and current conditions should be submitted.

(H) **Biological.** The biological quality of the bathing water, including vegetation types, infectious snails, bird nesting areas, and poisonous or dangerous aquatic organisms.

(I) **Fishing, Boating and Canoeing.** Location and level of boat traffic, number of vessels with marine sanitation devices, marinas or boat dockage areas, and any canoeing activity or fishing.

(2) **Bathymetry.** Bathing area boundaries, bottom slopes and material including high and low tide lines, and depth lines at mean high tide on a 5-foot contour.

(3) **Emergency Services.** Location relative to service facilities, such as medical, fire and police protection and communication.

(4) **Capacity.** Maximum and average bathing loads.

(5) Any other information that may impact the health or safety of bathers.

(d) **Certification.** Prior to operation of a new facility or equipment, the applicant must submit to the Department a construction compliance certificate prepared and signed by a professional engineer or architect licensed to practice in New York State. This certificate must include a written statement that the bathing beach and the building(s) and all appurtenances have been constructed in accordance with plans and specifications approved by the Department.

(e) **Construction Compliance Inspection.** The applicant shall notify the Department of the completion of construction, modification, alteration or addition in order to schedule a required compliance inspection. Approval for a construction compliance inspection will be granted when all of the required items are completed to the Department's satisfaction.

(f) **Permit Conditions.** Approval certificates or permits from other permit issuing agencies, if applicable or required by the Department.

§167.09 Enforcement.

(a) **Public Health Hazards and Closing Criteria.** Where a public health hazard condition exists, including one or more of the following, and said hazard(s) is(are) not immediately corrected, the bathing beach may be immediately closed in whole or in part by the Department and shall remain closed until such conditions are corrected to the satisfaction of the Department and in accordance with the provisions of this Article. The bathing beach in whole or in part shall remain closed until the Department has authorized reopening. Public health hazards shall include, but not be limited to, any of the following:

(1) Failure to provide adequate supervision of the beach as prescribed in §167.19;

(2) Failure to provide all lifesaving and safety equipment as prescribed in §167.21;

(3) Water quality inadequate as specified in §167.17(c);

(4) Failure to post public notification signs or advisories as prescribed in §167.27 indicating a potential health hazard or hazardous conditions, when water quality exceeds prescribed standards, in the event of sewage spills and pollution events, or when medical waste/hazardous materials are observed;

(5) Failure to provide adequate signs indicating that swimming and bathing are prohibited when lifeguards are not on active duty as prescribed in §167.19(a)(4), or when the bathing beach is closed;

(6) Medical waste, sewage, petroleum or other hazardous materials observed in beach area as prescribed in §167.13(a)(2);

(7) Use of unapproved or contaminated water supply sources for potable water use as prescribed in §167.31(f);

(8) Overhead electrical wire within 20 feet horizontally of the bathing beach as prescribed in §167.37(g)(2);

(9) Operating a bathing beach without a valid permit issued by the Department as prescribed in §167.05(a), (c);

(10) Operating without an approved Beach Safety Plan as prescribed in §167.23(a);

(11) Failure to provide depth markings, safety lines and diving requirements as prescribed in §167.29(b)(4), (5);

(12) Failure to provide appropriate safety and warning signs as prescribed in §167.37(f)(1), (f)(2)(B), (C); and,

(13) Any other condition determined to be a public health hazard by the Department.

(b) **Inspection availability.** The most recent inspection report shall be available at the facility at all times and shall be presented for inspection upon request by the Department.

PART B CONTROL OF ENVIRONMENT

ARTICLE 167 BATHING BEACHES*7 GENERAL PROVISIONS

§167.13 Water Quality Standards.

(a) All bathing beaches shall meet the following water quality standards:

(1) **Bacteriological.** The water quality in a bathing beach shall be determined through the collection and analysis of water samples for the presence of Enterococci and/or **E. coli** bacteria using the Standard Methods for the determination of Enterococci bacteria and **E. coli** approved for bathing beaches. The bacteriological water quality of bathing beaches shall meet the following standards:

(A) For marine water beaches

Enterococci geometric mean shall not exceed 35 per 100 ml for a series of five or more samples collected during a 30-day period.

(B) For freshwater beaches

Enterococci geometric mean shall not exceed 33 per 100 ml for a series of five or more samples collected during a 30-day period.

-OR-

E. coli geometric mean shall not exceed 126 per 100 ml for a series of five or more samples collected during a 30-day period.

(2) **Chemical and Physical Quality.** The water shall be free of deposits, floatable debris, growths, oils and greases, or any foreign substances that may potentially present a public health threat. The water in bathing beaches shall be considered to exceed the chemical and/or physical quality standards when the Department determines that any substance is being discharged or may be discharged into the water that is or may be hazardous to the health of persons using the bathing beach.

(b) **Preemptive Standards-New York City Wet Weather Advisory.** The bathing beach operator shall post public notifications as prescribed in §167.27(a).

ARTICLE 167 BATHING BEACHES*7 GENERAL PROVISIONS

§167.17 Classifications.

The Department shall assign to each bathing beach one of the classifications listed below based on the evaluation and evidence of information provided by water quality data, sanitary and safety survey, site condition or historical information.

(a) **Class A: Open for Swimming and Bathing.** All of the following conditions shall be considered in order for a beach to be classified as open and approved for swimming and bathing:

(1) Bathing beach water quality standards are in accordance with §167.13.

(2) Sanitary and safety surveys conducted pursuant to §167.25 are satisfactory to the Department; and

(3) The epidemiological history is satisfactory to the Department. No repeated complaints/reports of illness/injury received from the public or from owners/operators of bathing beaches.

(b) **Class B: Under Advisory-Not Recommended for Swimming and Bathing.** When any of the following conditions is present, a bathing beach/facility shall be under advisory, notifying the public of the likelihood of polluted water and recommending that the public avoid swimming in the water to prevent contracting a swimming related illness:

(1) Rainfall intensities exceed the preemptive standards/threshold of New York City Wet Weather Advisories, as issued by the Department before each bathing season.

(2) A sanitary and safety survey or investigation reveals the presence of floatable debris, medical/infectious waste, toxic contaminants, petroleum products and/or other contamination on the beach or evidence of sewage and wastewater discharge, which may constitute a potential public health hazard.

(c) **Class C: Closed-Temporarily Restricted for Swimming and Bathing.** When one or a combination of any of the following conditions exist, the beach may be closed for bathing.

(1) Water quality standards exceed the standards set forth in §167.13; or

(2) Epidemiological data indicates a significant incidence of related illnesses or repeated complaints/reports of illness/injury received from beach patrons; or

(3) Sanitary and Safety Survey/Investigation: A sanitary and safety survey or an investigation reveals the presence of floatable debris, medical/infectious waste, toxic contaminants, petroleum products or other contamination on the beach, or there is evidence of sewage and wastewater discharge in sufficient quantities that will adversely affect the quality of the beach water; or

(4) Presence of public health hazards as illustrated in §167.09.

If a bathing beach is closed due to unsatisfactory water quality sampling data, the beach shall remain closed to the public until appropriate sampling shows that the water quality meets the standards prescribed in §167.13(a). When a bathing beach is closed pursuant to §167.17(c), no one shall be allowed in the water and the beach must not be reopened without the express written permission of the Department. If a beach operator temporarily closes a beach voluntarily, the operator may reopen the beach when the conditions that led to the closing have been corrected.

24 RCNY 167.19

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 167 BATHING BEACHES*7 GENERAL PROVISIONS

§167.19 Supervision and Certification.

(a) **Supervision.** Aquatic Supervisory Staff defined under §167.19(c) shall be on duty at the waterside at all times when a bathing beach is used by the bather(s) and shall provide continuous visual supervision and surveillance of the bathers in their assigned or designated area of coverage, without interference or interruption of his/her duties unless additional qualified staff is provided. The staff shall not be subject to duties that will divert their attention from the safety of the bather(s), or that will prevent immediate assistance to persons in distress in the water.

(1) **Minimum Supervision Requirement.** At least one aquatic supervisory staff person having at least the required supervisory level required under §169.19(c) shall be provided at all times for continuous visual surveillance for each 50 yards of beachfront or fraction thereorf. Sufficient aquatic supervisory staff must be provided for visual surveillance of the entire bathing area(s) open for swimming or bathing.

(2) **Additional Supervision.** The Department may require additional aquatic supervisory staff whenever it is

necessary for the protection of the bathers. Factors for additional aquatic supervision requirement may include, but are not limited to: bather loads, currents, tides, and any other conditions which may cause changes in water conditions; size and configuration of beach shape; diving board use; and other bather activities.

(3) **Area without Supervision.** Legible signs stating "No Swimming or Bathing" must be posted at areas not permitted/approved for bathing on property adjoining the designated bathing area that is owned or under control of the permit holder.

(4) **Lifeguard Not on Duty.** When no lifeguard is on duty at a beach, legible signs stating "No Lifeguard on Duty-Bathing and Swimming Prohibited", or language to that effect, shall be posted at every entrance to the bathing area. The sign must be at least 36" × 24" in size, with letters at least two inches high.

(b) **Operator.** All bathing beach and beach facilities shall be maintained and supervised by a responsible person who, as the operator, shall maintain the beach in compliance with the provisions of this Article. The operator of the bathing facility shall be accountable for, but not be limited to, the following responsibilities:

(1) Controlling decorum and activities at the bathing site;

(2) Hiring and retaining adequate and qualified supervisory personnel;

(3) Reporting injuries and deaths to the Department;

(4) Public notification for potential contamination, confirmed contamination or public health hazards;

(5) Monitoring weather, and other environmental conditions, that impact the beach; and

(6) Maintaining the physical facilities as required by this Article.

(c) **Certifications.** All bathing beaches shall be supervised by the required certified personnel. Copies of certificates or other documents showing possession of such qualifications shall be kept at the facility at all times and shall be presented for inspection by the Department upon request.

(1) **Lifeguards.** Appropriately certified lifeguards shall be present whenever the beach is open. A minimum of one supervising lifeguard is required for bathing beaches that require three or more lifeguards. The lifeguard shall meet the following minimum requirements:

(A) **Ocean Surf Beach: Supervision Level I-Surf Lifeguards**

(i) Shall be at least 16 years old; and

(ii) Shall possess a current American Red Cross Basic Life Support for the Professional Rescuer Cardiopulmonary Resuscitation ("CPR") certificate or American Heart Association Course "C" CPR certificate, or an equivalent certificate approved by the New York State Department of Health. Certification period must not exceed one year; and

(iii) Must possess a current Municipal Lifeguard Certification, or accepted equivalent certificate having successfully completed a minimum 20-hour (24-hour if first aid skills are included) surf lifeguard training courses acceptable to The New York State Department of Health. All training and ocean testing must be satisfactorily completed prior to assignment at ocean front. The certification period must not exceed three years.

(B) **Non-Surf Beach: Supervision Level IIb-Beach Lifeguard**

(i) Shall be at least 16 years old (or 15 years old if supervisory lifeguard is present); and

(ii) Shall possess a current American Red Cross Basic Life Support for the Professional Rescuer CPR certificate or American Heart Association Course "C" CPR certificate, or an equivalent certificate approved by the New York State Department of Health. Certification period must not exceed one year; and

(iii) Shall successfully complete a minimum 20-hour (24-hour if first aid skills are included) lifeguard training course (including a beach module) acceptable to the New York State Department of Health and possess a current certificate thereof. Certification period must not exceed three years.

(C) **Supervision Level III**

(i) Shall be at least 18 years old (or 16 years old if certified as Level II Lifeguard);

(ii) Shall possess a current American Red Cross Community-CPR certificate, or equivalent approved by the New York State Department of Health. Certification period shall not exceed one year; and

(iii) Shall be competent to:

(a) understand and apply the rules and regulations of this Article and implement the safety plan;

(b) evaluate environmental hazards;

(c) use lifesaving equipment; and

(d) undertake bather/crowd control.

(D) **Supervising Lifeguard.** Beaches that require Supervision Levels I and IIb aquatic supervisory staff shall provide a supervising lifeguard when the facility is required to provide three or more aquatic supervisory staff.

(i) Shall have the lifeguard qualifications specified in §167.19(c)(1)(A) for Ocean Surf Beach or §167.19(c)(1)(B) for Non-Surf Beach, as appropriate for the beach; and

(ii) Shall have at least two seasons of adequate lifeguard experience.

PART B CONTROL OF ENVIRONMENT

ARTICLE 167 BATHING BEACHES*7 GENERAL PROVISIONS

§167.21 Lifesaving and Safety Equipment.

(a) Lifesaving equipment shall be kept in good repair, have its function plainly marked, be kept in ready-to-use condition, and be readily accessible at bathing beaches at all times. At a minimum, the following equipment shall be maintained at all times:

(1) One rescue tube or torpedo buoy with attached line and a pocket face mask or face shield with a one way valve to assist with CPR for each lifeguard required by this Article, and

(2) One rescue board or lifeboat including sterned lifeboat, a catamaran surfboat or other suitable surfboat. The lifeboat or surfboat shall have hanging ropes on each side so that bathers may readily hold on and obtain support. The lifeboat or surfboat shall also be equipped with at least one ring buoy or life preserver with 60 feet or 18 meters of line attached, and

(3) One spine board, minimum of 6 feet long and 16 inches wide, provided with straps and head immobilizater to aid immobilization of victim, and 10 handholds, and

(4) One First Aid kit, which may be any commercially prepared 24-unit kit, or a supply of bandaids, bandage compresses and self-adhesive bandages.

(b) At least one set of the items listed in (2), (3) and (4) above shall be provided for each 500 feet of beachfront or fraction thereof, or as specified in the approved Beach Safety Plan, and shall be readily accessible to the lifeguards therein.

(c) **Lifeguard Station**

(1) **Elevated Chair.** There should be one elevated lifeguard chair for each 50 yards of beach front, or at locations provided in the approved safety plan. Elevated lifeguard chairs or towers shall be high enough to provide a completely unobstructed view of the bathing area under surveillance.

(2) **Lifeguard Apparatus.** Each lifeguard chair shall be equipped with a whistle or megaphone, and an umbrella or sunshade.

(d) **Telephone and Emergency Contact List.** A telephone, radio, or other suitable means of communication shall be readily accessible to the lifeguards for emergency communications at the bathing beach. A telephone list of local police, emergency medical services, nearest hospital and other entities shall be posted in a conspicuous place. At beaches with multiple lifeguard chairs, at least one radio and telephone shall be readily available from a lifeguard station building.

(e) **Emergency Care/First Aid Room.** Every bathing beach capable of accommodating 500 bathers shall have a readily accessible room or area designated and equipped for emergency care. The room shall be equipped with at least the following:

(1) Running potable water;

(2) A cot or bed with blankets and sheets;

(3) Advanced first aid supplies at least equivalent to 24 units; and

(4) Resuscitation equipment.

HISTORICAL NOTE

Section added City Record Mar. 24, 2004 eff. Apr. 23, 2004. [See Vol. 9 Statements of Basis and

Purpose No. 20]

Subd. (b) amended City Record Dec. 11, 2006 eff. Jan. 10, 2007. [See Vol. 9 Statements of Basis and

Purpose No. 27]

Notes:

Section 167.21(b) was amended on December 5, 2006, to correct a descriptive technical unit error from "yards" to "feet", in order to be consistent with the intent of the New York State Sanitary Code (see 10 NYCRR §6-2.17(b)(1)). Also, by alternatively allowing for the provision of safety equipment per each approved Beach Safety Plan, the Department believes this language change will continue to promote public safety, while properly accounting for each

individual beach's water conditions, topography, crowd size, deportment and infrastructure.

PART B CONTROL OF ENVIRONMENT

ARTICLE 167 BATHING BEACHES*7 GENERAL PROVISIONS

§167.23 Beach Safety Plan.

(a) The operator of a bathing beach shall develop, maintain, and implement a written Beach Safety Plan that consists of health and safety procedures to be followed by beach personnel during normal operations and in emergency situations. The plan shall include daily procedures and protocols for bather supervision, coverage and surveillance, responsibility and organization of all personnel, injury prevention, reacting to potential incidents, injuries and emergency situations, a list of emergency telephone numbers, location of first aid and rescue equipment, providing first aid and summoning help, and such other information, evidence, or documentation as the Department may require. The safety plan must be approved by the Department in writing before implementation. The safety plan must be kept at the beach facility at all times and be presented for inspection by the Department upon request.

(b) **Revisions.** The owner, lessee or operator shall submit to the Department revisions to the Beach Safety Plan whenever a change occurs in the facility, or at the direction of the Department. Revisions to the Beach Safety Plan shall not be implemented without written approval from the Department.

PART B CONTROL OF ENVIRONMENT

ARTICLE 167 BATHING BEACHES*7 GENERAL PROVISIONS

§167.25 Sanitary and Safety Survey.

Prior to opening the bathing beach for operation, the operator or aquatic supervisory staff shall conduct a daily sanitary and safety survey. A sanitary and safety survey shall include, but not be limited to, a visual inspection for untreated sewage discharge, petroleum oil slick, floatable debris, medical/infectious materials or other sources of contamination as per §167.13(a)(2). All refuse (especially items such as syringes and medical refuse), garbage, and debris left on the beach or floating nearby, shall be removed and disposed of properly. The waterfront area of the beach shall be free of potholes, loose rocks, debris, glass containers, and other dangerous objects. If pollution which may potentially present a public health threat is observed, as described in §167.13(a)(2), the operator shall close the beach immediately and notify the Department for further instructions.

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 167 BATHING BEACHES*7 GENERAL PROVISIONS

§167.27 Public Notification.

Bathing beach operators shall notify bathers of potential contamination, confirmed contamination, or public health hazards, as classified in §§167.17(b) and (c), by posting signs as prescribed by the Department in a conspicuous and visible place. Signs shall be posted by the bathing beach facility in areas visible to bathers including, but not limited to, beach entrances, bulletin boards, or in the general vicinity of the common bathing areas.

(a) **Class B: Under Advisory-Not Recommended For Swimming and Bathing.**

(1) **Preemptive Standards-New York City Wet Weather Advisory.** The bathing beaches covered under the Wet Weather Advisories, as defined under §167.03(n), shall post a "permanent" advisory at their beach operation, in an area visible and accessible to the public, during the entire bathing season, notifying the public of possible water quality standard exceedances and the potential of contracting bathing related illnesses. The operator is responsible for monitoring the rainfall intensities in the area. When the rainfall intensity exceeds the thresholds of the Preemptive

Standards-New York City Wet Weather Advisories, as issued by the Department, the operator shall post additional signs approved by the Department indicating that the Wet Weather Advisory is in effect until the required time period has elapsed.

(2) **Preemptive Swimming and Bathing Advisory.** The operator is responsible for posting signs indicating a Preemptive Swimming and Bathing Advisory when instructed by the Department. The sign must be posted and maintained until further notice from the Department.

(b) **Class C: Closed-Temporarily Restricted for Swimming and Bathing.**

(1) The bathing beach shall be closed for swimming and bathing by the operator when notified by the Department and must remain closed until the Department authorizes reopening. The operator is responsible for restricting bathers from entering the water and for posting beach closure signs as required by the Department.

(2) If the operator or any aquatic supervisory staff on duty determines that adverse weather or other environmental conditions pose a threat to the health and safety of the public, the operator must close the beach and beach closure signs must be posted.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 167 BATHING BEACHES*7 GENERAL PROVISIONS

§167.29 Control of Beach and Water Use.

(a) Each bathing beach shall be under the supervision of a competent operator who shall require the careful observance of sanitary regulations prescribed in this Article and the requirements of the permit issued for such bathing beach.

(b) **Waterfront Use.**

(1) **Bather Loading.** The number of bathers permitted in the bathing water of a bathing beach shall not exceed the maximum permissible loading established by §167.37(c). The operator shall be responsible for restricting usage so that the maximum capacity is not exceeded.

(2) **Surrounding Property.** All areas of an owner's, lessee's, or operator's property that are adjacent to the designated beach and are accessible to the public for entry into the water for bathing shall be supervised or patrolled

during hours of operation. Bathing is prohibited in areas where there is not lifeguard supervision.

(3) **Safety Signs or Public Advisory.** Signs to be posted shall be maintained and posted conspicuously in manner consistent with the requirements of this Article.

(4) Depth markings and safety lines shall be provided and maintained in accordance with the provisions of §167.37(e) and be clearly visible and readable.

(5) **Diving.** Diving shall not be permitted unless minimum depths in accordance with provisions contained in §167.37(d)(2) of this Article are provided.

(6) Bathing at 150 feet or more from shore is prohibited.

(7) **Motorized Vehicle.** No motorized vehicles shall be permitted on the beach, except emergency and maintenance vehicles operated by the aquatic supervisory staff, lifeguards, or operators.

(8) **Water Sports.** No boating, water skiing, fishing, scuba diving, or surfboarding shall be permitted in a bathing area when bathing is allowed. Floating lines, buoys, or signs may designate separate areas for the above activities.

(9) Swimming and bathing are prohibited outside of established hours, at night, during lightning or a thunderstorm, or in dangerous or unauthorized areas.

(10) **Fishing.** Where allowed at a bathing beach during bathing season, fishing shall be permitted only in areas where bathing has been temporarily prohibited.

(11) **Electrical Devices.** All plug-in electrical devices, such as portable announcing systems and radios, are prohibited within 20 feet of the water.

(12) **Glass.** Glass containers shall not be permitted on the beach.

(13) **Refuse.** During bathing season, all refuse, garbage and debris, whether water borne or produced in connection with the normal operation of the bathing beach, must be removed, stored, and disposed of in a sanitary manner to prevent harborage of rodents, insect attraction or breeding, odors, public health hazards, and environmental pollution.

ARTICLE 167 BATHING BEACHES*7 GENERAL PROVISIONS

§167.31 Facility Use and Maintenance.

(a) All bathing beach facilities shall be properly lighted, ventilated, and maintained and operated in a safe, clean, and sanitary condition at all times. The floors, fixtures, showers, and toilets shall be kept clean, free of dirt and debris, and in good condition. Floors shall be maintained in a slip-resistant condition. A supply of toilet paper shall be provided at each toilet at all times.

(b) **Toilet.** Toilet and shower facilities shall be provided and maintained at all bathing beaches in accordance with §167.39.

(c) **Hosing.** A minimum length of 50 feet of hosing shall be provided and available within the bathhouse to flush the entire area. Vacuum breakers shall be attached to all hose bibbs.

(d) **Lavatories.** All lavatories shall be provided with liquid soap in an acceptable dispenser, paper towels or other

individual towels or electrical hand-drying units, and a covered waste receptacle. Common use of bar soap or cloth towels shall not be permitted.

(e) **Structural Condition.** Walls and floors of the bathing beach facility shall be free from cracks or open joints. The floors must be well drained.

(f) **Drinking Water.** Water supply serving all plumbing fixtures, including drinking fountains, lavatories and showers, shall use the City water supply or shall meet the applicable drinking water quality standards for all sources of water supply in New York state. All facilities shall be provided with drinking water through a drinking fountain or served by disposable single-service drinking cups.

24 RCNY 167.37

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 167 BATHING BEACHES*7 GENERAL PROVISIONS

§167.37 General Requirements.

(a) All bathing beaches shall be designed and constructed in accordance with the requirements contained in this Code. These standards are applicable to the design of new or modified bathing beaches regulated by this Article. The designing architect or engineer shall certify the structural stability and safety of the facility.

(b) **Pre-Qualifications for Proposed Beach.** A proposed bathing beach shall meet the following pre-qualification requirements for establishing a beach:

(1) **Site Assessment.** A satisfactory approval by the Department for site assessment contained in §167.07(c);

(2) **Water Surface Area.** The water surface where the beach is to be developed shall be at least one acre. In the event that the area is less than four acres with natural flow-through below 100 gallons per bather per day, a source of dilution water of at least 100 gallons per bather per day must be provided in accordance to the water quality

requirements prescribed in §167.13;

(3) **Land Area.** At least 35 square feet of land area per bather shall be provided;

(4) **Bottom Slope.** For depths up to four feet, the slope shall be uniform and not exceed 1:10 for greater depths, the slope should not exceed 1:3;

(5) **Bottom Material.** The bottom up to a water depth of six feet shall consist of sand, pea gravel or other similar material;

(6) **Sewage Discharge.** Wastewater discharges from sewage treatment plants, combined sewers or other sources shall be prohibited within 750 feet of the bathing beach;

(7) **Water Currents.** Water currents in the bathing area shall not exceed three feet per second; and

(8) **Water Quality.** Bathing beaches shall meet the water quality standards for bacteriological, physical and chemical quality contained in §167.13.

(c) **Maximum Permissible Loading.** Maximum Bathers. The maximum number of bathers permitted in the shallow water (four feet or less) of a bathing beach shall not exceed one bather per 25 square feet of water surface. In areas of water depth greater than four feet, at least 75 square feet per bather shall be provided.

(d) **Diving.**

(1) **Diving Platforms.** Floating diving piers and fixed platforms shall be constructed with a visible 12-inch air space under maximum feasible load. There shall be as little underwater construction as is consistent with adequate support. All braces and struts shall be designed to prevent entrapment of bathers. For solid flotation devices such as foam blocks, no air space is required.

(2) **Depth.** Diving from rafts, piers or other platforms shall be prohibited, unless a minimum water depth at mean low tide of eight feet is provided and maintained for a distance of at least 10 feet forward of the diving direction. For a diving board or other device three or less feet above the water, the depth at the end of it, and for 12 feet beyond it, shall be 10 feet. For heights above water greater than three feet, the depth at those locations shall be 12 feet and 20 feet beyond it. No diving device more than 10 feet above water shall be installed.

(e) **Depth Markers and Safety.** Except ocean beaches, marker lines with buoys shall be provided at all beaches to designate the perimeter, the shallow and deep-end areas at a depth of three to four feet, the diving area, drop-offs, and radical changes in slopes or underwater obstructions. A separate wading area up to two feet deep, designated by lines, shall be provided. Lines shall have floats at five-foot intervals and be securely anchored, and have buoys no more than 25 feet apart and at point whre lines are joined.

(f) **Safety and Warning Signs.**

(1) **"No Diving" Markers.** Clearly visible depth markers shall be provided at all the diving boards, platforms piers, floats and similar facilities, together with warning signs indicating "No Diving" where depth is less than eight feet.

(2) **Warning Signs.** A sign or signs shall be securely posted in a conspicuous place or places at the bathing facility and shall provide the following information:

(A) Maximum number of persons permitted at the bathing beach at any time; (B) The hours during which public bathing is allowed, and that entry into water at other times is prohibited; and

(C) **Beach Closed.** "No Swimming and Bathing" signs shall be placed up in areas adjacent to the beach but not open for swimming and bathing, and on the beach during the closed season.

(g) **Electrical Requirements.**

(1) All electrical wiring shall conform to Chapter 3 of Title 27 of the Administrative Code of the City of New York, entitled the "Electrical Code" and the National Electrical Code of the National Fire Protection Association, or any successor regulation or code.

(2) **Overhead Clearance.** No overhead electrical wiring, including lights, or plug-in electrical devices, such as portable announcing systems and radios, shall pass within 20 feet horizontally of the bathing beach high water line.

(h) **Safety Equipment.** The bathing beach shall provide the lifesaving and safety equipment identified in §§167.21(a), (b) and (c).

(j) **Emergency Care/First Aid Room.** Every bathing beach capable of accommodating 500 bathers shall have a readily accessible room or area designated and equipped for emergency care. The room shall contain the equipment identified in §167.21(d).

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 167 BATHING BEACHES*7 GENERAL PROVISIONS

§167.39 Bathhouses.

(a) **Materials.** Floors of the facility shall be of smooth-finished material with non-slip surfaces, impervious to moisture, cleanable and sloped at least one-fourth inch per foot to drains. Carpeting shall not be permitted in shower and toilet areas or other areas receiving bathers. Junctions between walls and floors shall be coved. Walls and partitions shall be of smooth, impervious materials, free from cracks or open joints. Partitions between dressing cubicles shall maintain at least 10 inches of open space from the floor or shall be placed on continuous raised masonry or concrete bases at least four inches high or on legs with bottom of locker at least 10 inches above the floor.

(b) **Toilets, Washbasins and Showers.** All bathing beach facilities shall be provided with an adequate number of toilets and handwashing facilities.

(1) A facility shall provide properly lighted, ventilated and maintained toilets and handwashing sinks and an adequate number of showers or a dressing facility containing toilets and showers.

(2) Separate toilet facilities shall be provided for each sex. All toilet facilities shall be provided with soap, paper towels or electrical hand drying units, and covered waste receptables. Suitable sanitary napkin receptacles shall be provided in toilet facilities used by females.

(3) Where showers are provided, they shall be supplied with water at a temperature of at least 90 degrees Fahrenheit and no more than 110 degrees Fahrenheit at a rate of at least 1.5 gallons per minute per showerhead. Thermostatic, tempering or mixing valves shall be kept in good operation to prevent scalding of bathers.

(c) **Drinking Water Fountains.** Where drinking fountains are provided, at least one drinking fountain for each 500 feet distance or for every 1,000 users shall be provided.

(1) Fountains shall be of slanting jet type with surrounding guard and non-submersible opening.

(2) Fountains shall be supplied with a minimum water pressure of 20 pounds per square inch.

(d) **Suits and Towels.** Where swimming suits and/or towels are provided, these items shall be properly stored and sanitized.

(e) **Lockers.** Lockers, where provided, shall be constructed on solid masonry or concrete bases at least four inches high or on legs with bottom of lockers 10 inches above the floor. Lockers shall be vented.

24 RCNY Health Code Reg. 173.00

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 173 HAZARDOUS SUBSTANCES

Health Code Reg. § 173.00 INTRODUCTORY NOTES

This article was further amended by resolution adopted on June 22, 2004, effective August 2, 2004, repealing and re-enacting §173.14, and repealing §173.15 (Unsafe lead based paint work practices) and including its substantive provisions in §173.14.

Article 173 constitutes a revision of S.C. §122, §123, §222(4), (6), (7) and (8), §222a, §230a, §230c and §230d. The article deals primarily with the labeling and sale of hazardous substances. The use of hazardous insecticides, rodenticides and fumigants is covered by Article 171, Fumigation and Extermination. Regulation of ionizing radiation is found in Article 175, Radiological Hazards.

This article provides for informative labeling of hazardous substances so as to warn the public against the dangers involved in the use of the substances in order that users may take necessary and proper precautions against risk of bodily harm. It also regulates the conditions of sale of rodenticides and insecticides containing sodium fluoride, sodium

fluoroacetate, thallium, or live micro-organisms, fire extinguishers containing methyl bromide, paints containing lead, products containing lye in a concentration of ten percent or more and certain types of plastic bags.

Many substantive changes have been made. The definition of hazardous substance is new (§173.01(a)). The word "toxic" is defined on the basis of laboratory animal tests (§173.01(b)). Strong sensitizers are defined and regulated (§§173.01(g) and 173.05(e)). Labeling is defined and certain information is required to appear thereon (§§173.01(i) and 173.05(a), (b), (c) and (h). Advertisement is defined and false or misleading advertising or labeling is prohibited (§§173.01(j) and 173.07). Transfer of hazardous substances from one container to another without appropriate labeling is prohibited (§173.03(a)). Use of containers which may readily be mistaken for food, drug or cosmetic containers or reuse of food, drug or cosmetic containers with original labels or imprints is prohibited for a hazardous substance (§173.03(b)). The requirements for the use of signal words on labels are specified in §173.05(b)(3). Two new requirements are added on labeling of substances in retail packages and containers (§§173.05(b) (8) and (9)). The chart of suggested labels in S.C. 230c(7) is omitted. The class of substances which must bear the word "Poison" is required to be determined on the basis of tests on laboratory animals (§173.05(c)). Exemption from the labeling requirements of §173.05 is made for substances labeled in compliance with applicable State or Federal law (§173.05(a)), except for products containing lye (§173.15(a)). Rodenticides or insecticides containing sodium fluoroacetate or more than one percent thallium cannot be sold to persons other than permittees under §171.19 (section 173.09(c) and (d)). Products with one percent or less of thallium cannot be sold as exterminants unless they are in a safe form and in a container approved by the Department. Children's toys or furniture with a paint containing more than one percent lead cannot be manufactured or sold in the City one year after the effective date of the Code (§173.13(b)). The Department is given power to order removal of lead paint and to order recovering (§173.13(d)). After the effective date of the Code, lead paint is prohibited on inside walls in dwellings (§173.13(c)). Additional controls are provided for substances containing lye in a concentration of ten percent or more (§173.15). Plastic bags of a thickness of one mil or less are required to bear a warning label (§173.17).

The following portions of the Sanitary Code which provided for specific labels on certain products are omitted as covered by the broad requirements of section 173.05: S.C. §122, labeling of poisons; S C. §123, labeling of methyl alcohol; S.C. §222(4), label for poisonous rodenticides or exterminators; S.C. §222a, label for carbon tetrachloride and S.C. 223, label for finely spun glass. S.C. §230b, seizure and condemnation of products, is omitted here because it is covered by the provision in section 3.03 of this Code which gives the Department power to seize products and devices which are not properly labeled or which bear false or misleading labeling.

The table of section headings was amended on November 16, 1993 to reflect the addition of a new section 173.14 adopted on the same day.

The table of section headings was further amended on December 13, 1999 to reflect the renumbering of §173.15 as §173.16 and the addition of a new §173.15.

As part of a comprehensive review of the Code to assess the efficacy of its provisions in protecting the public health, Article 173 was amended on December 16, 2008 to better reflect practice and the regulatory environment, assure that the revised provisions provide adequate legal tools to effectively address the health and safety needs of the public and to harmonize such provisions with related provisions of federal and state law. As a result of this review, §§173.051, 173.06, 173.08, 173.09, 173.11 and 173.16 were repealed; §173.01 was repealed and reenacted, and §173.05 was amended, to reflect current federal law; §173.13 was amended to authorize the Commissioner to order remediation of leaded soil in properties used by children under six years of age; and §173.14 was amended to reference provisions in a new Article 43 and a repealed and reenacted Article 47.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 173 HAZARDOUS SUBSTANCES

§173.01 Definitions.

When used in this article the following terms shall have the following meanings:

(a) Advertisement means all representations disseminated in any manner or by any means, other than by labeling, for the purpose of inducing, or which are likely to induce, directly or indirectly, the purchase or use of a hazardous substance.

(b) Art material means any substance marketed or represented by the producer or repackager as suitable for use in any phase of the creation of any work of visual or graphic art of any medium. The term does not include substances subject to the Federal Insecticide, Fungicide, and Rodenticide Act, as amended, or drugs, devices, or cosmetics subject to Article 71 of the Code.

(c) Combustible means having a flashpoint at or above 100 degrees Fahrenheit (37.8 degrees Celsius) to and

including 150 degrees Fahrenheit (65.6 degrees Celsius) as determined by the test method described at 16 C.F.R. §1500.43a or successor regulation.

(d) Corrosive means capable of causing destruction of living tissue by chemical action when placed in contact with such tissue but shall not refer to action on inanimate surfaces.

(e) Electrical hazard means an article that in normal use or when subjected to reasonably foreseeable damage or abuse may cause personal injury or illness by electric shock due to its design or manufacture.

(f) Extremely flammable means that a substance has a flashpoint at or below 20 degrees Fahrenheit (-6.7 degrees Celsius) as determined by the test method described at 16 CFR § 1500.43a, or successor regulation.

(g) Flammable means that a substance has a flashpoint above 20 degrees Fahrenheit (-6.7 degrees Celsius) and below 100 degrees Fahrenheit (37.8 degrees Celsius), as determined by the method described at 16 C.F.R. §1500.43a or successor regulation.

(h) Flashpoint means the lowest temperature of a product at standard conditions at which the product's vapors will ignite momentarily when subjected to a flame. Flashpoint temperatures shall be determined pursuant to the procedures set forth in 16 C.F.R. §1500.43a or successor regu- lations.

(i) Hazardous substance means:

(1) Any substance or mixture of substances which is combustible, corrosive, extremely flammable, flammable, highly toxic, an irritant, a strong sensitizer, toxic, or generates pressure through decomposition, heat, or other means, if such substance or mixture of substances may cause or has caused substantial personal injury or substantial illness during or as a proximate result of any customary or reasonably foreseeable handling or use, including reasonably foreseeable ingestion by children;

(2) Any substance which the Federal Consumer Product Safety Commission determines meets the requirements of section 2(f)(1)(A) of the Federal Hazardous Substances Act;

(3) Any radioactive substance if, with respect to such substance as used in a particular class of article or as packaged the Federal Consumer Product Safety Commission determines by regulation that the substance is sufficiently hazardous to require labeling to protect the public health; and

(4) Any toy or other article which the Federal Consumer Product Safety Commission or the Commissioner determines presents an electrical hazard, mechanical hazard, or thermal hazard.

(5) Hazardous substance shall not mean pesticides subject to the Federal Insecticide, Fungicide, and Rodenticide Act or State Environmental Conservation Law; substances intended for use as fuels when stored in containers and used in the heating, cooking, or refrigeration system of a house; and source material, special nuclear material, or byproduct materials defined and regulated in applicable federal, state and local law.

(j) Highly toxic means any substance which falls within the definition or description set forth in 16 CFR §1500.3 or successor regulation. If, pursuant to 16 CFR §1500.4 or successor regulation, available data on human experience with any substance indicates results different from those obtained on animals in the dosages and concentrations specified, human data shall take precedence.

(k) Human experience or data shall mean a report or evidence of exposure of one or more persons to a hazardous substance resulting in an adverse effect.

(l) Irritant means a substance that is not corrosive which on immediate, prolonged or repeated contact with normal living tissue will induce a local inflammatory reaction.

(m) Label or labeling means a display of written, printed, or graphic matter upon the immediate container of any hazardous substance or, in the cases of an article which is unpackaged or is not packaged in an immediate container intended or suitable for delivery to the ultimate consumer, a display of such matter directly upon the article involved or upon a tag or other suitable material affixed thereto. A requirement of federal, State or local law that any word, statement, or other information appear on the label shall not be considered to be complied with unless such word, statement, or other information also appears (i) on the outside container or wrapper, if any there be, unless it is easily legible through the outside container or wrapper and (ii) on all accompanying literature where there are directions for use, written or otherwise.

(n) Mechanical hazard means an article that in normal use or when subjected to reasonably foreseeable damage or abuse presents an unreasonable risk of personal injury or illness due to its design or manufacture: (1) From fracture, fragmentation, or disassembly of the article;

(2) From propulsion of the article (or any part or accessory thereof);

(3) From points or other protrusions, surfaces, edges, openings, or closures;

(4) From moving parts;

(5) From lack or insufficiency of controls to reduce or stop motion;

(6) As a result of self-adhering characteristics of the article;

(7) Because the article (or any part or accessory thereof) may be aspirated or ingested;

(8) Because of instability; or

(9) Because of any other aspect of the article's design or manufacture.

(o) Strong sensitizer means a substance that will cause a hypersensitivity-type reaction through an immunologically-mediated (allergic) response, including allergic photosensitivity, which offers a significant potential for causing injury and where the allergic reaction typically becomes evident upon reexposure to the same substance.

(p) Thermal hazard means an article or thing that in normal use or when subjected to reasonably foreseeable damage or abuse, presents an unreasonable risk of personal injury or illness because of heat as from heated parts, substances, or surfaces due to its design or manufacture.

(q) Toxic means a substance, other than a radioactive substance, that

(1) Has the capacity to produce personal injury or illness to man through ingestion, inhalation, or absorption through any body surface or any substance deemed to be toxic pursuant to the procedures as set forth in 16 C.F.R.§1500.3 or successor regulation;.

(2) Is toxic (but not highly toxic) on the basis of human experience; or

(3) Presents a chronic hazard, if it is or contains a known or probable: (A) Human carcinogen;

(B) Human neurotoxin; or

(C) Human developmental or reproductive toxicant.

HISTORICAL NOTE

Section repealed and added City Record Dec. 23, 2008 eff. Jan. 22, 2009.

[See Vol. 9 Statements of Basis and Purpose No. 31]

Section in original publication July 1, 1991.

Notes:

Section 173.01 was repealed and reenacted by resolution adopted on December 16, 2008 as part of a comprehensive revision of the Health Code, to reflect current concepts and applicable law. Many definitions are derived from the Federal Hazardous Substances Act and the definition of labeling is similar to that found in Federal Food, Drug, and Cosmetic Act §321(m), Education Law §6802 and Agriculture and Markets Law §198.

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 173 HAZARDOUS SUBSTANCES

§173.03 Transfer of hazardous substances; use of food, drug and cosmetic con- tainers.

(a) No person shall transfer a hazardous substance from one container to another without affixing to the new container the labeling required by this article.

(b) No person shall use, possess, hold for sale, sell, give away or leave in any place a hazardous substance in a container which, whether or not previously used as a food, drug or cosmetic container, bears a food, drug or cosmetic label or imprint, or reuse a container which may be mistaken for a food, drug or cosmetic container because of its characteristic shape, impression or closure.

HISTORICAL NOTE

Section in original publication July 1, 1991.

Notes:

This section is new. Subsection (b) applies to reuse of food, drug or cosmetic containers for hazardous original use or reuse of containers which bear labels or imprints improperly identifying them as food, drug or cosmetic containers.

24 RCNY 173.05

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 173 HAZARDOUS SUBSTANCES

§173.05 Labeling.

(a) **Label required.** No person shall sell, hold for sale, transport, or give away a hazardous substance unless the labeling complies with this article. When a hazardous substance is labeled in compliance with applicable State or Federal law, this section shall not apply, except that if the Commissioner finds that the labeling of the substance is inadequate to protect the public health, the labeling of the substance shall, upon the order of the Commissioner and written notice to the manufacturer or distributor, contain such additional matter as may be required by this section.

(b) **Label contents.** The label of a package or container of a hazardous substance shall bear the following information:

(1) The name and place of business of the manufacturer, packer, distributor or seller;

(2) The common or usual name, or if there is no common or usual name, the chemical name, or if there is no

common or usual name and if the chemical name is unknown or complex, the recognized nonprotected name (not trade name only) of the hazardous substance or of each component which contributes substantially to its hazard, unless the United States Consumer Product Safety Commission by regulation permits or requires the use of a recognized generic name;

(3) The signal word "Danger," "Warning" or "Caution" to indicate the degree of hazard. The signal word "Danger" shall be used for substances which are extremely flammable, corrosive, or highly toxic. The signal word "Warning" or "Caution" shall be used for all other hazardous substances;

(4) An affirmative statement of the principal hazard or hazards of the substance such as "Flammable," "Extremely Flammable," "Vapor Harmful," "Causes Burns," "Absorbed through Skin" or similar words descriptive of the hazard;

(5) Precautionary measures describing the action to be followed or avoided;

(6) Instructions for first-aid treatment, if available;

(7) Instructions for handling or storage on packages or containers requiring special care in handling or storage;

(8) Instructions for final disposal of containers on retail packages or containers requiring special care in disposal; and,

(9) The statement "Keep Out of the Reach of Children" or its practical equivalent on retail packages or containers offered for household use.

(c) **Poisons.** In addition to the words, statements or other information required by subdivision (b) of this section, a hazardous substance shall bear on its label the word "Poison," a skull and crossbones symbol, directions to call a physician upon ingestion and, if available, an antidote, if such hazardous substance is highly toxic as defined in this Article.

(d) **Art materials.** All art materials shall be labeled in a manner as required pursuant to the Federal Hazardous Substances Act, as amended, and related regulations.

(e) **Other substances to be labeled.** When the Commissioner finds that any substance is dangerous or detrimental to the health and safety of the public, the Commissioner may require the substance to be labeled pursuant to subdivisions (b) or (c) of this section.

(f) **Strong sensitizers.** When the Department determines that a substance is a strong sensitizer, it may order the manufacturer, distributor or seller to label the substance pursuant to subdivision (b) of this section.

(g) **Experimental substances.** Subdivisions (b) and (c) of this section shall not apply to a substance still in the development stage when it is used solely for experimental purposes and when it is known that no specific hazard exists but the potential hazard is not identified, if it bears the following label or its practical equivalent: "Important! The properties of this substance have not been fully investigated and its handling or use may be hazardous. Exercise due care."

(h) **Wrapper labels.** The words, statements or other information required by this article to be borne on the label or labeling of a hazardous substance shall also appear on the outside container or wrapper, if any, of the retail package of the substance, unless the required word, statement or other information is easily legible through the outside container or wrapper, and on each place of the labeling of a hazardous substance where there are directions for use, whether written or otherwise.

(i) **Labeling to be conspicuous.** All words, statements or other information required on the label or labeling shall appear in a prominent place in the English language and in conspicuous and legible type which is contrasted by

typography, layout or color from other printed matter on the label, container or wrapper. If the label or labeling contains any representation in a foreign language, all words, statements or other information required to appear on the label, container or wrapper shall also appear thereon in the foreign language.

HISTORICAL NOTE

Section amended City Record Dec. 23, 2008 eff. Jan. 22, 2009. [See Vol. 9

Statements of Basis and Purpose No. 31]

Section in original publication July 1, 1991.

Section 173.05 was amended by resolution adopted on December 16, 2008. Subdivision (a) was amended to delete the exemption for substances regulated pursuant to Articles 71, 75 or 77.

Subdivision (b) was amended by adding to paragraph (2) reference to US Consumer Product Safety Commissioner regulations. Paragraph (3), instead of permitting a free choice of the signal word to indicate the degree of hazard, requires the word "Danger" on the most hazardous substances, and either "Warning" or "Caution" on those presenting a lesser hazard, and is consistent with the Federal Hazardous Substances Act and related regulations. See 15 USCA § 1261 et seq. and 16 C.F.R. Part 1500.

Subdivision (c) was amended by deleting specific references to dose-related sequelae, and substituting a reference to when a hazardous substance is highly toxic as defined in this Article.

Subdivision (d) was deleted and a new subdivision (d) was added to require art materials to be labeled in accordance with the Federal Hazardous Substances Act and related federal regulations to protect the health and safety of persons using art materials.

Subdivision (e) was deleted and a new subdivision (e) was added, authorizing the Commissioner to order labeling where the Department determines that the warning signals on existing labels are inadequate.

Subdivision (f) is new and refers to labeling required for substances that are strong sensitizers.

Former subdivision (f) was relettered as subdivision (g), and former subdivision (g) which authorized abbreviating or omitting information was deleted.

Subdivision (i) was amended to add the term "conspicuous" to the label display.

Notes:

Subsection (a), which is in part derived from S.C. §230c(2), provides the scope of this article. The article applies to all hazardous substances, as did S.C. §230c, and not only retail packages intended for household use. The exemption for drugs and cosmetics which may be hazardous substances as defined in §173.01(a) is added since they are adequately covered by Articles 71, 75 and 77. The last sentence is also new and is similar to the exemption contained in State Sanitary Code, Ch. 9-A Reg. 6(a). A hazardous substance which bears a label or labeling which is in compliance with the applicable laws of the state of New York or the Federal government is not required to be relabeled pursuant to this section, unless the Commissioner so orders upon finding that the label or labeling is inadequate to protect the public health. If the Department finds that a large percentage of the hazardous substances labeled under other applicable laws are inadequately labeled, it may recommend amendment of this exemption so as to require certain additional labeling in all cases. There is no exemption from the requirements of §173.05 for products containing lye (see §173.15 and revisors' notes thereto). The provisions of the State Sanitary Code, Ch. 9-A, also dealing with labeling of hazardous substances, are not applicable in the city of New York.

Subsection (b) is derived in part from S.C. §230c(3) with some changes.

Subdivision (1) is derived without substantive change from S.C. §230c(3)(a). It is similar to the requirements of the regulations promulgated pursuant to the Federal Insecticide, Fungicide and Rodenticide Act (7 C.F.R. §362.6) and the Federal Caustic Poisons Act §2(b)(2) and 21 C.F.R. §285.5.

Subdivision (2) is derived with some changes from S.C. §230c(3)(b) where a free choice was given on the use of the chemical, common or recognized generic name. This subdivision is similar to the requirements of the regulation promulgated pursuant to the Federal Insecticide, Fungicide and Rodenticide Act (7 C.F.R. §362.7(b)). The latter regulation describes the "recognized non-protected name" as an appropriate new or coined name other than a trademark or trade name except when it has become a common name. Only the chemicals contributing substantially to the hazard are required on the label.

Subdivision (3) is new. Instead of permitting a free choice of the signal word to indicate the degree of hazard, this provision requires the word "Danger" on the most hazardous substances, and either "Warning" or "Caution" on those presenting a lesser hazard. The Board has not been convinced that "Warning" has any greater impact on the consumer who reads the labeling than the word "Caution" and the words are therefore made interchangeable; their significance to the consumer will be studied further. The determination of the signal word which is to appear on toxic substances is based on the amount which will produce death upon ingestion, inhalation or skin absorption. In addition, the Commissioner is given authority to require the signal word "Warning" or "Caution" to appear on substances which, although they do not meet the definition of toxic in §173.01(b), are detrimental to public health if not so labeled.

Subdivision (4) is derived from S.C. §230c(3)(d). The words "Extremely Flammable" are new.

Subdivision (5) is derived without substantive change from S.C. §230c(3)(e).

Subdivision (6) is derived without substantive change from S.C. §230c(3)(f).

Subdivision (7) is derived without substantive change from S.C. §230c(3)(h).

Subdivision (8) is new. It applies only to retail packages or containers requiring special care in disposal.

Subdivision (9) is new. It applies only to retail packages or containers offered for household use.

Subsection (c) is in part new and is in part derived from S.C. §230c(3)(g) and the footnote to the table following S.C. §230c(7). S.C. §230c(1)(c) is omitted. Although the word "Poison" is required on the highly toxic substances specified in subdivisions (1), (2) and (3) of the subsection, a definition of poison is avoided since it would only add to the many existing, inconsistent definitions to which toxicologists have properly taken exception. This is solely a labeling provision and is not intended as a standard for any other purpose. See the regulations under the Federal Insecticide, Fungicide and Rodenticide Act (7 C.F.R. §162.8) for a definition of economic poisons "highly toxic to man". Similar labeling is required under 7 C.F.R. §§362.6 and 362.9 and Agriculture and Markets Law §149(3).

Subsection (d) is new. In recognition of the fact that animals and humans sometimes react differently to a substance, the Commissioner is given authority to require a substance which does not fall into any of the three categories under subsection (c) to be labeled pursuant to that subsection, or to exempt a substance which falls into one of those categories, depending upon the available data on human experience.

The Manufacturing Chemists' Association publication entitled **Warning Labels Manual L-1, A Guide For the Preparation of Warning Labeling for Hazardous Chemicals,** contains material which can be of great value in preparing the labeling required by subsections (b) and (c), particularly section 173.05(b)(4), (5), (6) and (7). Since the definition of poison as adopted by the M.C.A. Labels and Precautionary Information Committee is similar to the categories specified in §173.05(c) (except for the length of observation, i.e.: 48 hours as compared with 14 days), the

M.C.A. manual can also be helpful in determining when a poison label is required. Although the M.C.A. manual uses the signal words required by §173.05(b)(3) in a diminishing order of severity of hazard, the same standard for selection is not employed, and the signal words, suggested in the manual, in some instances, may not be in accordance with the requirement of section 173.05(b)(3); also note that the latter permits interchangeability of "Warning" and "Caution". Finally, the manual can be of assistance in the selection of the name of the chemical under §173.05(b) (2), although it is noted that in the case of products containing lye, this Code (§173.15) requires the word "lye" to appear whereas the manual refers to "sodium hydroxide (Caustic Soda)".

Subsection (e) is new. Strong sensitizer is defined in §173.01(g). In recognition of the fact that (except for known sensitizers) it may be difficult for a manufacturer to know before marketing his product that it will produce hypersensitivity to reapplication, strong sensitizers are treated in a different manner from other hazardous substances. Only upon the order of the Commissioner is labeling required. Except upon non-compliance with a labeling order issued by the Commissioner, this subsection is not intended to change the existing incidence of product liability for unlabeled products which prove to be strong sensitizers.

Subsection (f) is derived from S.C. §230c(6). An additional limitation is that in order to be exempted it must be a substance for which no specific hazard is known but which has an unidentified potential hazard.

Subsection (g) is derived from S.C. §230c(4). The material required by subsections (b)(7) and (b)(8) cannot be omitted without the approval of the Department.

Subsection (h) is new. This is an addition to the requirement, previously stated in §173.05(b) and (c), that certain words, statements and other information appear on the label. The statements must appear on accompanying literature when it contains directions for use.

Subsection (i) is derived in part from S.C. §230c(5). The last sentence is new and is found in §71.07(b) for foods, drugs and cosmetics (derived from S.C. §133(10), in 21 C.F.R. §1.103(c) for food, drugs and devices in 21 C.F.R. §1.9(c) for food and in 21 C.F.R. §1.203(b) for cosmetics.

§173.07 False or misleading advertising or labeling.

(a) No manufacturer, packer, distributor or seller of a hazardous substance shall disseminate or cause to be disseminated an advertisement concerning such hazardous substance that is false or misleading in regard to its safety or use.

(b) No person shall sell or hold for sale any hazardous substance the labeling of which is false or misleading in regard to its safety of use.

(c) In determining whether the labeling of, or an advertisement concerning, a hazardous substance is false or misleading, the Department shall consider the representations made or suggested by the label's statement, word, picture, design or emblem and the extent to which the labeling or advertisement fails to reveal material facts about the substance.

HISTORICAL NOTE

Section amended City Record Dec. 23, 2008 eff. Jan. 22, 2009. [See Vol. 9

Statements of Basis and Purpose No. 31]

Section in original publication July 1, 1991.

Notes:

This section was amended by resolution adopted on December 16, 2008 to delete references to pressurized products and to clarify how the Department will determine if labels are false or misleading.

Subsection (a) is new. It is similar to Agriculture and Markets Law §202a and Education Law §6821(5) and §6823(4) and S.C. §133(12). The section is concerned with control of the produce or seller and not the communications medium that carries the offending advertisement. A similar provision is found in §§75.31 and 77.07 for drugs and devices and cosmetics respectively.

Subsection (b) is new. A similar provision is found in §75.05(1) for drugs and devices and §77.03(1) for cosmetics where false or misleading labeling results in misbranding of such products.

Subsection (c) is new. A similar provision is found in §75.33 for drugs and devices and in §77.09 for cosmetics. Unwarranted or misleading claims of safety on the labeling of, or in the advertisements concerning a hazardous substance, whether made directly or by implication, or failure to reveal dangers involved in the use of the product, will result in a finding that the labeling or advertisement is misleading and in violation of this section.

This section was amended by resolution adopted on October 22, 1963 which made the section applicable to pressurized products in addition to hazardous substances.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 173 HAZARDOUS SUBSTANCES

§173.13 Lead Paint.

(a)(1) **Lead-based paint prohibited.** No person shall possess, sell, hold for sale or give away paint or other similar surface-coating material which is intended or packaged in a form suitable for use in or around the household or otherwise for consumer use within the meaning of 15 U.S.C. Section 2057 et seq. and 16 Code of Federal Regulations (C.F.R.) Part 1303 or its successor regulations, containing more than 0.06 percent of metallic lead, based upon the total non-volatile content of the paint or other similar surface-coating material.

(2) **Notice that dry sanding and scraping are prohibited.** Any place where paint and paint removal products are sold, or where sanding equipment is sold or rented for use in the City of New York, shall prominently post, or otherwise distribute to purchasers and renters of paint removal and sanding equipment, a notice, in a form provided or approved by the Department, warning that dry sanding and scraping is prohibited as a method of removal of lead-based paint or paint of unknown lead content in any dwelling, day care center or school, and is a public nuisance pursuant to §17-181 of the Administrative Code of the City of New York.

(3) **Enforcement by Department of Consumer Affairs.** The provisions of paragraph (2) of this subdivision may be enforced by agents and employees of the Department and the Department of Consumer Affairs, or successor agency. Any violation of paragraph (2) issued by the Department of Consumer Affairs may be adjudicated at any tribunal authorized to hear such agency's violations.

(b) No person shall manufacture, sell, hold for sale, give away or leave toys, children's furniture or any other articles or things intended for use by children which have a paint or other similar surface-coating material containing more than 0.06 percent of metallic lead based on the total non-volatile content of the paint or other similar surface-coating material.

(c) No person shall use a paint or other similar surface-coating material containing more than 0.06 percent of metallic lead, based on the total non-volatile content of the paint or other similar surface-coating material on the interior or exterior surfaces of a dwelling. As used in this section, dwelling means any building or structure or portion thereof, including the property occupied by and appurtenant to such dwelling, which is occupied in whole or in part as the home, residence or sleeping place of one or more human beings. This subsection shall also apply to places where children reside, or are boarded, or where they receive regular care and/or education, such as day care services, schools and children's institutions.

(d) **Orders for abatement or remediation.**

(1) **Generally.** When the Department finds that there is lead-based paint, or dust with a lead content in excess of the clearance levels specified in §173.14(e) of this Code, on the interior of any dwelling, or concentrations of lead in the paint on the exterior of a dwelling, that may be creating a danger to health, it may in such cases as it deems essential, order the abatement or remediation of any such condition in a manner and under such safety conditions as it may specify. The Department may also order the removal or covering of soil appurtenant to any dwelling or other premises, including but not limited to, child care services, schools, and recreational facilities primarily used or occupied by children under the age of six years when it determines that there are concentrations of lead in such soil which exceed allowable limits of the U.S. Environmental Protection Agency found in 40 C.F.R. Part 745, or successor regulations, and further determines that such concentrations may be dangerous to health.

(2) **In a dwelling where a child with an elevated blood lead level resides.** When the Department finds that there is a child under 18 years of age with a blood lead level of fifteen (15) micrograms per deciliter or higher residing in any dwelling and further finds that the interior of such dwelling has lead-based paint that is (a) peeling, (b) on a friction, impact or chewable surface or (c) on any surface of the dwelling that, in the Department's determination, is a lead-based paint hazard because of its condition, location or accessibility to children, the Department shall order the abatement of any such condition in a manner and under such safety conditions as it may specify.

(3) **Objections to Department orders.** An owner or other person to whom an order issued pursuant to this subdivision is directed shall notify the Department that he or she objects to such order no later than three (3) days after service of the order. In deciding whether objections to an order issued pursuant to §173.13(d)(2) have merit, the Department may rely on the results of its lead-based paint sampling, provided such results are obtained in accordance with the methodology identified within the definition of "lead-based paint" in §173.14(b) of this Code and the Department has a reasonable belief that such reliance will be more protective of the health of a child with an elevated blood lead level.

(4) **Failure to comply with Department orders.** In the event that the Department determines that the owner or other person having the duty or liability to comply with an order issued pursuant to this subdivision fails to substantially comply therewith within five (5) days after service thereof, the Department shall in accordance with §27-2056.14 of the Administrative Code, request the Department of Housing Preservation and Development to execute such order pursuant to the provisions of §17-147 of the Administrative Code.

(5) **Definitions.** Except as otherwise provided, all terms used in this section shall have the same meanings as the terms defined in §173.14 of this Code.

HISTORICAL NOTE

Section amended City Record Oct. 2, 1996 eff. Nov. 1, 1996. [See Vol. 9 Statements of Basis and Purpose No. 6]

Section in original publication July 1, 1991.

Subd. (a) amended City Record July 30, 2004 eff. July 30, 2004. [See Vol. 9 Statements of Basis and Purpose No. 20-A]

Subd. (d) amended City Record July 30, 2004 eff. July 30, 2004. [See Vol. 9 Statements of Basis and Purpose No. 20-A]

Subd. (d) par (1) amended City Record Dec. 23, 2008 eff. Jan. 22, 2009. [See Vol. 9 Statements of Basis and Purpose No. 31]

Notes:

Subsection (a) is derived from S.C. §230d(1) and (3). The provisions of S.C. §230d(4) are deleted as no longer necessary and the requirement of S.C. §230d(2) is found in §173.05(i) and therefore is not duplicated here.

Subsection (a) was amended on September 24, 1996 to comply with Federal and State laws and regulations on the sale and usage of lead based paint. Effective Jan. 1, 1997.

Subdivision (a) was amended by resolution adopted July 22, 2004, effective August 2, 2004, by renumbering former subdivision (a) as paragraph (1). Paragraphs (2) and (3) require notices in certain businesses and authorize agents and employees of the City's Department of Consumer Affairs to enforce the placement of such notices, with respect to the prohibition of dry sanding and scraping as a method of removal of lead-based paint in §17-181 of the Administrative Code.

Subsection (b) is new.

Subsection (b) was amended on September 24, 1996 to comply with Federal and State laws and regulations on the manufacture, sale, holding for sale or giving away of articles with lead based paint intended for use by children. Effective Jan. 1, 1997.

Subsection (c) is new. It is the most effective means of reducing deaths and injuries to children from lead poisoning since the vast majority of incidents result from ingestion of paint on fallen pieces of plaster and paint on window sills. The definition of dwelling is identical to the definition contained in Multiple Dwelling Law §4(4).

Subsection (c) was amended on September 24, 1996 to comply with Federal and State laws and regulations on the use of lead based paint in or on the interior or exterior surfaces of dwellings, including places where children reside, are boarded, or receive regular care and/or education. The definition of "dwelling" was expanded to include "the property occupied by and appurtenant to such dwelling", for example fire escapes. Effective Jan. 1, 1997.

Subsection (d) is new. It is possible for the Commissioner to order removal of lead paint under section 131.01 of this Code, which pertains to removal of dangerous conditions, but the Commissioner would not then have the power to

order repainting. Here the Board specifically declares lead paint to be a dangerous condition, which, under certain circumstances, the Commissioner can order removed.

Subsection (d) was amended by resolution adopted on January 15, 1970 to authorize the Department to permit, as an alternate to removal of the lead paint from interior surfaces, the covering of such surfaces with materials and by methods prescribed by the Department. This will overcome the problems faced under the former provision occasioned by the hazards of existing paint removal methods. Such subsection was further amended to mandate the Department to order the removal of the lead paint or the covering of interior surfaces containing lead paint in those instances where a resident of the apartment is found to have a blood-lead level of 0.06 milligrams percent or higher, and when the person responsible for removal or covering of the lead paint fails to do so within five days after service of such order upon him, to request the Housing Development Administration to execute such order.

Subsection (d) was further amended by resolution adopted on November 21, 1974 to lower the allowable blood-lead level found in apartment dwellers from 0.06 milligrams percent or higher, to 0.04 milligrams percent or higher, required for the prevention of lead poisoning in urban children.

Subdivision (d) was amended by resolution adopted on December 16, 2008 by adding to paragraph (1) a provision authorizing the Department to order the removal of leaded soil from areas surrounding children's homes, and other places used by children, such as grounds of child care services and schools.

Subsection (d)(1) was repealed and reenacted by resolution adopted on April 2, 1981 to bring the provisions into compliance with the Center for Disease Control Guidelines for determination of what constitutes undue lead absorption, and to provide for the use of x-ray fluorometers to detect elevated levels of lead.

Subdivision (1) of subsection (d) was amended on September 24, 1996 to incorporate by reference the amended definition of "lead based paint" in Section 173.14(b)(16) and to clarify language. Subdivision (2) of subsection (d) was amended on September 24, 1996 to clarify the specific instances in which the Department is empowered to order a lead paint abatement. Effective Jan. 1, 1997.

Subdivisions (1) and (2) of section (d) were amended, a new subdivision (3) was adopted, and a portion of former subdivision (2) was renumbered as subdivision (4) by resolution adopted on July 22, 2004, effective August 2, 2004. The amendments to subdivision (2) incorporate a provision of Local Law 1 of 2004, which further reduces the Department's "action level" or environmental intervention blood lead level to 15 micrograms per deciliter of blood. A provision of former paragraph (2) of subdivision (d) which affords the Department discretion to issue orders to abate or remediate lead hazards when a child with a blood lead level of 15 to 19 micrograms resides in a dwelling unit has been repealed, since the Department already has that authority pursuant to subdivision (c) of this section. Paragraph (3) of subdivision (d), concerning Department review of challenges to Department orders to correct lead hazards, is new. It incorporates in the Health Code the Department's practice, reviewed in **601 Realty Corp. v. City of New York Department of Health,** 269 AD2d 268, 703 NYS2d 458 (AD 1 Dept. 2000) of providing owners with an opportunity to object to an order to abate a lead nuisance but declining to accept an owner's findings of allegedly lower values of lead in paint in contestation of the Department's findings where there is a child with an elevated blood lead level. **601 Realty** held that the Department was not being arbitrary and capricious or denying due process to owners who contest orders to abate lead nuisances. If the Department uses appropriate equipment and methodology to measure lead in paint at the home of a child with an elevated blood lead level it may properly rely on its own findings since it is attempting to be more protective of the health of such a child. A new paragraph (5) indicates that terms used in the section have the same meaning as terms in §173.14 of this Code.

Paragraph (2) of subsection (d) was further amended on January 16, 1975 by adding the phrase "and the erythrocyte porphyrin of whole blood or higher".

Subdivision 2 of subsection (d) was amended by resolution adopted on June 16, 1986 to reduce the level at which

lead is considered toxic in blood to a point consistent with current guidelines issued by the Centers for Disease Control of the federal Department of Health and Human Services.

Subdivision (d)(2) was further amended on October 6, 1992 to eliminate references to free erythrocyte porphyrin as a necessary element of poisoning and to reduce the level at which lead is considered toxic in blood to a point consistent with current guidelines issued by the Centers for Disease Control of the United States Department of Health and Human Services.

This section was amended by resolution adopted on December 20, 1973 to conform its provisions with §191.9 of Title 21, Subchapter D (Hazardous Substances), Part 191 of the Code of Federal Regulations which declares as a banned hazardous substance any paint or other similar surface coating material intended or packaged in a form suitable for use in or around the household and containing lead content in excess of 0.5 percent of the total weight of the contained solids or dried paint film.

CASE NOTES

¶ 1. Administrative Code §27-2013(h)(1) clearly prohibits the presence of lead paint in any multiple dwelling where children under six are likely to reside, regardless of the level of blood found in the child's blood. This personal injury action involves a five year old who ingested lead paint chips. The court dismissed the NYC housing authority argument that paint chips taken from the apartment were below the maximum permissible amount of lead in paint. This argument was based on NYC Health Code §173.13 which makes it unlawful to sell or use paint that contains more than 0.5% metallic lead on interiors of residences accessible to children under seven years of age. Colon v. NYC HA, 165 Misc. 2d 348 [1995].

¶ 2. The Department of Health is charged with a statutory duty to investigate violations involving lead paint levels in housing units, and any shortcoming in the conduct of that investigation is attributable to that agency. That factor entered into the decision of the court to permit the service of a late notice of claim in a lead poisoning case arising from the infant's residence in a City owned building. Holmes v. City of New York, 189 A.D.2d 676, 592 N.Y.S.2d 371 (1st Dept. 1993).

¶ 3. The enforcement activities of the New York City Department of Health (DOH) or Department of Housing Preservation and Development (HPD) do not render the City liable in negligence to a child allegedly injured by ingesting lead in the subject building. There is no liability in the absence of a special relationship between the municipal agency and the injured plaintiff, the court said. Thus, 24 RCNY Section 173.13 protects the general public rather than particular citizens who are injured by lead. Moreover, even if a "special duty" were found to exist, there would be no liability because the statute does not provide for a private right of action. Lindsay v. New York City Housing Authority, 1999 Westlaw 104599 (E.D.N.Y.).

¶ 4. Section 173.13 does not create a statutory duty on the part of the City to abate a lead hazard found in a building. However, where a muncipality allegedly assumed a duty by, for example, promising to repair a lead condition or making representations to the infant's parents regarding a lead condition, the municipality may be liable. Valencia v. Lee, 55 F.Supp.2d 122 (E.D.N.Y. 1999). Moreover, in Valdez v. MGS Realty & Management Corp., 2000 WL 511024 (U.S. Dist.Ct. S.D.N.Y), the City was held potentially liable on the basis of an assumption of a duty of care. A city public health advisor had visited the premises on several occasions and had advised the infant plaintiff's parents on how to protect against lead poisoning. In Valdez, although the city advisor discussed the hazards of lead poisoning, the parents were not warned that the suggested protective measures were not always effective and that the better course of action was for them to vacate the premises until the lead condition had been abated.

¶ 5. A landlord brought an Article 78 proceeding seeking to vacate a city health department nuisance abatement order. In denying the petition, the court noted that the agency is given wide latitude to rely on its inspection reports as a basis for ordering the owner to abate a lead condition, where it is undisputed that a young child resides in the subject

apartment. The court rejected an owner's claim that the odds were unfairly stacked against property owners. 601 Realty Corp. v. City of New York, 269 A.D.2d 268, 703 N.Y.S.2d 458 (1st Dept. 2000).

¶ 6. This regulation was enacted for the benefit of the general public, and does not create a special duty owing from the City to children allegedly injured by reason of ingestion of lead based paint. Gibbs v. Paine, 720 NY.S.2d 184 (App.Div. 2d Dept 2001).

¶ 7. This section was enacted for the benefit of the public and does not impose upon the City a duty towards any particular person. Moreover, the fact that the City advised the infant plaintiff's mother on nutrition and hygiene did not give rise to a duty beyond the duty imposed by statute. Harris v. Llewellyn, 298 A.D.2d 556, 748 N.Y.S.2d 676 (2d Dept. 2002).

¶ 8. Section 173.13 is an internal administrative regulation, intended to coordinate the regulatory functions of two mayoral agencies. It neither sets forth a tort standard of care nor imposes a duty in tort running to any member of the public. Accordingly, there is no private right of action arising out of the City's alleged failure to comply with the regulation. Miah v. New York City Housing Auth., 193 Misc.2d 601, 748 N.Y.S.2d 913 (Sup.Ct. New York Co. 2002)

(g) Declaration pursuant to Administrative Code §17-145

(h) Modification by the Commissioner

(a) **Purpose, scope and applicability.** This section establishes work practices and safety standards for abatement and other reduction of lead-based paint hazards, and other work that disturbs surfaces covered with lead-based paint, or paint of unknown lead content, and the minimum qualifications of persons who conduct such activities, in premises where children younger than six years of age reside, receive child care services, or attend pre-kindergarten or kindergarten classes, and is intended to reduce the exposure of such children to the lead-based paint hazards associated with such work.

(b) **Definitions**. When used in this Article, or in §43.23 or §47.63 of this Code, the following terms shall have the following meanings:

Abatement. "Abatement" shall mean any set of measures designed to permanently eliminate lead-based paint or lead-based paint hazards. Abatement includes: (i) the removal of lead-based paint hazards, the permanent enclosure of encapsulation of lead-based paint, and the replacement of components or fixtures painted with lead-based paint; and (ii) all preparation, cleanup, disposal and post-abatement clearance testing associated with such measures. Abatement shall not include renovation, remodeling, landscaping or other activities, when such activities are not designed to permanently eliminate lead-based paint hazards, but, instead, are designed to repair, restore, or remodel a given structure or dwelling, even though these activities may incidentally result in a reduction or elimination of lead-based paint hazards. Furthermore, abatement shall not include interim controls, operations and maintenance activities, or other measures and activities designed to temporarily, but not permanently, reduce lead-based paint hazards.

Administrative Code. "Administrative Code" shall mean the Administrative Code of the City of New York.

CFR. "CFR" shall mean this Code of Federal Regulations.

Chewable surface. "Chewable surface" shall mean a protruding interior window sill (i) in a dwelling unit in a multiple dwelling where a child under six years of age resides, which is readily accessible to such child, or (ii) such surface in a day care service, or kindergarten in an elementary school, that is readily accessible to a child under six years of age. "Chewable surface" shall also mean any other type of interior edge or protrusion in a dwelling unit in a multiple dwelling, day care service or kindergarten, such as a rail or stair, (i) where there is evidence that such other edge or protrusion has been chewed and where an occupant of the dwelling unit has notified the owner that a child under six years of age resides in that multiple dwelling, or (ii) where the operator of a day care service or kindergarten has observed that a child under six years of age has mouthed or chewed such edge or protrusion.

Child of applicable age. When used in Article 13 of Subchapter 2 of Chapter 2 of Title 27 of the Administrative Code, the term "child of applicable age" shall mean a child who is less than six years of age.

Common area. "Common area" shall mean a portion of a multiple dwelling that is not within a dwelling unit and is regularly used by occupants for access to and egress from any dwelling unit within such multiple dwelling.

Contractor. "Contractor" shall mean any person or firm engaged to perform work that disturbs lead-based paint pursuant to this section.

Deteriorated subsurface. "Deteriorated subsurface" shall mean an unstable or unsound painted subsurface, an indication of which can be observed through a visual inspection, including, but not limited to, rotted or decayed wood, or wood or plaster that has been subject to moisture or disturbance.

Disturb. "Disturb" shall mean any action taken, which breaks down, alters or changes lead-based paint. Lead-based paint disturbances shall include, but not be limited to wet sanding or scraping or routine painting and maintenance activities.

Dwelling. "Dwelling" shall mean any building or structure or portion thereof, which is occupied in whole or in part as the home, residence or sleeping place of one or more human beings. For the purpose of investigations and orders issued by the Commissioner pursuant to §173.13 of this Code, dwelling shall include exteriors, yards or other areas of the building, and shall also include any structure in which a child with a blood lead level equal to or in excess of 15 micrograms per deciliter spends more than five hours per week.

Dwelling unit. "Dwelling unit" shall mean any residential accommodation in multiple dwelling or private dwelling.

Encapsulation. "Encapsulation" shall mean the application of a covering or coating that acts as a barrier between the lead-based paint and the environment and that relies for its durability on adhesion between the encapsulant and the painted surface, and on the integrity of the existing bonds between paint layers and between the paint and the substrate. Encapsulation may be used as a method of abatement if it is designed and performed so as to be permanent. Only

encapsulants approved by the New York State Department of Health, or by another federal or state agency or jurisdiction which the Department or HPD has designated as acceptable may be used for performing encapsulation.

Enclosure. "Enclosure" shall mean the use of rigid, durable construction materials that are mechanically fastened to the substrate in order to act as a barrier between lead-based paint and the environment.

EPA. "EPA" shall mean the U.S. Environmental Protection Agency or successor agency.

Firm. "Firm" shall mean a company, partnership, corporation, sole proprietorship, association, or other business entity that performs lead-based paint activities to which EPA has issued a certificate of approval pursuant to 40 CFR 745.226(f) or successor regulation.

Friction surface. "Friction surface" shall mean any painted surface that touches or is in contact with another surface, such that the two surfaces are capable of relative motion and abrade, scrape, or bind when in relative motion. Friction surfaces shall include, but not be limited to, window frames and jambs, doors, and hinges.

HEPA vacuum. "HEPA vacuum" shall mean a vacuum cleaner device equipped with a high efficiency particulate air filter capable of filtering out monodispersive particles of 0.3 microns or greater in diameter from a body of air at 99.97 percent efficiency or greater.

HPD. "HPD" shall mean the Department of Housing Preservation and Development of the City of New York.

HUD. "HUD" shall mean the U.S. Department of Housing and Urban Development.

Impact surface. "Impact surface" shall mean any interior painted surface that shows evidence, such as marking, denting, or chipping, that it is subject to damage by repeated sudden force, such as certain parts of door frames, moldings, or baseboards.

Lead-based paint. "Lead-based paint" for the purpose of this Code, shall mean paint or other similar surface coating material containing 1.0 milligram of lead per square centimeter (mg/cm^2) or greater as determined by laboratory analysis, or by an x-ray fluorescence (XRF) analyzer. If an XRF analyzer is used, readings shall be corrected for substrate bias when necessary as specified by the Performance Characteristic Sheets (PCS) published by the United States Environmental Protection Agency (EPA) for the specific XRF instrument used. XRF readings shall be classified as positive, negative or inconclusive in accordance with the United States Department of Housing and Urban Development (HUD) "Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing" (June 1995, revised 1997), and the PCS published by the EPA and HUD for the specific XRF instrument used. XRF results which fall within the inconclusive zone, as determined by the PCS shall be confirmed by laboratory analysis of paint chips, results shall be reported in mg/cm^2 and the measure of such laboratory analysis shall be definitive. If laboratory analysis is used to determine lead content, results shall be reported in mg/cm^2. Where the surface area of a paint chip sample cannot be accurately measured or if an accurately measured paint chip sample cannot be removed, laboratory analysis may be reported in percent by weight. In such case, lead-based paint shall mean any paint or other similar surface coating material containing more than 0.5% of metallic lead, based on the non-volatile content of the paint or other similar surface coating material. In the absence of a PCS for a specific XRF instrument or a particular function of such instrument, substrate correction, classification of XRF readings, and determinations of inconclusive readings shall be performed in accordance with the manufacturer's instructions for the specific XRF instrument used.

Lead-based paint hazard. "Lead-based paint hazard" shall mean any condition in a dwelling or dwelling unit that causes exposure to lead from lead-contaminated dust, from lead-based paint that is peeling, or from lead-based paint that is present on chewable surfaces, deteriorated subsurfaces, friction surfaces, or impact surfaces that would result in adverse human health effects.

Lead-contaminated clearance dust test. "Lead-contaminated clearance dust test" shall mean a test for

lead-contaminated dust on floors, window wells, and window sills in a dwelling, that is made in accordance with this Code or §27-2056.11 of the Administrative Code.

Owner. "Owner" shall mean the owner, operator, managing agent or other person in control of the premises, dwelling, or dwelling unit subject to this section.

Peeling. "Peeling" shall mean that the paint or other surface-coating material is curling, cracking, scaling, flaking, blistering, chipping, chalking or loose in any manner, such that a space or pocket of air is behind a portion thereof or such that the paint is not completely adhered to the underlying surface.

Permanent. "Permanent" shall mean an expected design life of at least 20 years.

Remediation. "Remediation" shall mean the reduction or elimination of a lead-based paint hazard through the wet scraping and repainting, removal, encapsulation, enclosure, or replacement of lead-based paint, or other method approved by the Department.

Removal. "Removal" shall mean a method of abatement that completely eliminates lead-based paint from surfaces.

Replacement. "Replacement" shall mean a strategy or method of abatement that entails the removal of building components that have surfaces coated with lead-based paint and the installation of new components free of lead-based paint.

Stabilization. "Stabilization" shall mean repairing any physical defect in the substrate of a painted surface that is causing paint deterioration, removing loose paint and other material from the surface to be treated and applying a new protective coating or paint.

Substrate. "Substrate" shall mean the material directly beneath the painted surface out of which the components are constructed, including wood, drywall, plaster, concrete, brick or metal.

Turnover. "Turnover" shall mean the occupancy of a dwelling unit subsequent to the termination of a tenancy and the vacatur by a prior tenant of such dwelling.

Underlying defect. "Underlying defect" shall mean a physical condition in a dwelling or dwelling unit that is causing or has caused paint to peel or a painted surface to deteriorate or fail, such as a structural or plumbing failure that allows water to intrude into a dwelling or dwelling unit.

Wet sanding or wet scraping. "Wet sanding" or "wet scraping" shall mean a process of removing loose paint in which the painted surface to be sanded or scraped is kept wet to minimize the dispersal of paint chips and airborne dust.

Work. "Work" shall mean any activity that disturbs paint in accordance with Article 14 of subchapter 2 of Title 27 of the Administrative Code or as otherwise ordered by the Department to remediate lead-based paint hazards.

Work area. "Work area" shall mean that part of a building where lead-based paint or paint of unknown lead content is being disturbed.

(c) **Administrative requirements.**

(1) **Filing procedures.**

(A) **Time for filing.** No less than twenty-four and no more than ninety-six hours prior to the commencement of work ordered by the Commissioner and not less than ten days prior to commencement of work that will disturb lead-based paint pursuant to §27-2056.11(a)(2)(ii) of the Administrative Code, an owner shall file with the Department a notice of the commencement of the work. Such notice shall be signed by the owner or by a representative of the firm

performing the work. Where work is required to commence in a lesser period of time than that specified herein for the filing of a notice of commencement of work, then such filing shall be made as soon as practicable but prior to the commencement of work.

(B) **Content of notice.** Such notice shall be in a form satisfactory to or prescribed by the Department and shall set forth at a minimum the following information:

(i) The address of the building and the specific location of the lead-based paint work within the building.

(ii) The name, address and telephone number of the owner of the premises in which the lead based paint work is to be performed.

(iii) The name, address, telephone number and EPA certification number of the firm that will be responsible for performing the work.

(iv) The date and time of commencement of the work, working or shift hours, and the expected date of completion.

(v) A complete description and identification of the surfaces and structures, and surface areas, subject to the work.

(vi) Any changes in the information contained in the notice required by this section, shall be filed with the Department prior to commencement of work, or if work has already commenced, within twenty-four hours of any change.

(2) **Training and certification.**

(A) **Abatement.** All work conducted as part of an abatement as defined in this section shall be performed by firms and workers certified to perform lead-based paint activities in accordance with regulations issued by EPA at subpart L of 40 CFR Part 745, or successor rule, for the abatement of lead-based paint hazards.

(B) **Other than abatement work.**

(i) **Other work to remediate lead-based paint hazards that is ordered by the Department or HPD, or work that disturbs large amounts of lead-based paint.** All work ordered by the Department, or by the HPD in accordance with § 27-2056.11(a)(1) of the Administrative Code, or work that disturbs over 100 square feet per room conducted in accordance with §17-911 of the Administrative Code, or §43.23 or §47.63 of this Code, or § 27-2056.11 (a)(2)(ii) of the Administrative Code, shall be performed by firms and trained workers meeting the following requirements:

(aa) Firm requirements. Firms conducting such work shall be certified to perform lead abatement by the EPA in accordance with subpart L of 40 CFR Part 745, or successor rule, for the abatement of lead hazards.

(bb) Worker requirements. Workers conducting such work shall be trained, at a minimum, in accordance with the regulations issued by HUD at 24 CFR 35.1330(a)(4), or successor rule.

(cc) Clearance dust testing requirements. No person shall perform a lead-contaminated dust clearance test in relation to such work unless such person is a third-party, who is independent of the owner and any individual or firm that performs the work. All personnel performing lead-contaminated clearance dust testing upon completion of work shall be trained, at a minimum, in accordance with regulations issued by HUD at 24 CFR 35. 1340(b)(1), or successor rule.

(ii) **Work not ordered by the Department or HPD that disturbs a small amount of paint in a multiple dwelling or in a child care facility or a kindergarten.** Work which is not ordered by the Department and disturbs between two and 100 square feet per room, which is performed in accordance with §17-911 or §27-2056.11(a)(2)(i) of the Administrative Code, or §43.23 or §47.63 of this Code, shall be performed by workers trained in accordance with

the following requirements:

(aa) Worker requirements. Workers conducting such work shall be trained under regulations issued by HUD at 24 CFR 35.1330(a)(4), or successor rule.

(bb) Clearance dust testing requirements. No person shall perform a lead-contaminated dust clearance test in relation to such work unless such person is a third-party, who is independent of the owner and any individual or firm that performs the work. Personnel performing lead-contaminated clearance dust testing after completion of work performed in accordance with §27-2056.11(a)(2)(i) of the Administrative Code shall be trained in accordance with regulations issued by HUD at 24 CFR 35.1340(b)(1), or successor rule.

(iii) **Work not ordered by the Department or HPD, which is performed in a dwelling unit upon turnover.** No person shall perform a lead-contaminated dust clearance test in relation to such work unless such person is a third-party, who is independent of the owner and any individual or firm that performs the work. Personnel performing lead-contaminated clearance dust testing after completion of work performed on turnover in accordance §27-2056.8 of the Administrative Code shall be trained in accordance with regulations issued by HUD at 24 CFR 35.1340(b)(1), or successor rule.

(3) **Recordkeeping.**

(A) **Records to be kept.** An owner shall keep a record of the following information for all lead-based paint remediation work subject to the provisions of this Code or Title 27 of the Administrative Code:

(i) The name, address, and telephone number of the person or entity who performed the work; the start date and completion date for the work.

(ii) A copy of all training certificates, required pursuant to subsection (c)(2) of this section, for the firms and personnel who performed work and clearance dust testing.

(iii) The location of the work performed in each room including a description of such work and invoices for payment for such work.

(iv) Results of lead-contaminated dust clearance tests analyzed by an independent laboratory certified by the state of New York.

(v) Checklists completed pursuant to §173.14(e)(1)(J) and (e)(2)(F) when occupants are allowed temporary access to a work area.

(B) **Time to maintain records.** Such records shall be maintained by an owner for a period of ten years from the date of completion of such work or transferred to a subsequent owner and maintained by such subsequent owner during such time period, and made available to the Department upon request.

(d) **Work methods and occupant relocation.**

(1) **Minimizing dust dispersion.**

(A) Work to remediate or that disturbs lead-based paint shall be conducted in such a manner as to minimize the penetration or dispersal of lead contaminants or lead-contaminated materials from the work area to other areas of the dwelling unit and building or adjacent outdoor areas.

(B) Areas designated as a clean changing area shall be segregated from the work area by a physical barrier to prevent the penetration or dispersal of lead contaminants or lead-contaminated materials from the work area to other areas of the dwelling unit and building and to prevent occupant exposure to materials containing lead.

(2) **Prohibited methods.** The following methods shall not be used while performing work that disturbs lead-based paint in accordance with this section:

(A) Open flame burning or torching.

(B) Machine sanding or grinding without HEPA local exhaust control.

(C) Abrasive blasting or sandblasting without HEPA local ehaust control.

(D) Heat guns operating above 1100 degrees Fahrenheit or charring the paint.

(E) Dry sanding or dry scraping.

(F) Paint stripping in a poorly ventilated space using a volatile stripper that is a hazardous substance in accordance with regulations of the United States Consumer Product Safety Commission at 16 CFR 1500.3, and/or a hazardous chemical in accordance with the United States Occupational Safety and Health Administration regulations at 29 CFR 1910.1200 or 1926.59, as applicable to the work.

(3) **Work practices and surface finishing.**

(A) **Tools and materials.** All tools and materials used when disturbing paint shall be used in accordance with the manufacturer's instructions. Wet sanding, wet scraping, removal, encapsulation, enclosure, replacement and other maintenance and repair activities shall be performed using standard construction and treatment methods.

(B) **Seal surfaces.** All surfaces where paint has been disturbed shall be sealed and finished with appropriate materials. Underlying substrates shall be dry and protected from future moisture before applying a new protective coating or paint, and all paints and coatings shall be applied in accordance with the manufacturer's recommendations.

(C) **Repair underlying conditions.** Violations or conditions that cause or may cause paint to peel and which are readily observable and identifiable as to source, including but not limited to water leaks, shall be corrected as part of any lead-based paint remediation work.

(D) **Adjust painted doors and windows.** All painted windows and painted doors in the work area, including cabinet doors, shall be adjusted to ensure that they are properly hung, so that no painted surfaces bind or stick in a manner that movement of such windows and doors causes abrasion or friction of the surfaces.

(E) **Work area preparation completed before commencing remediation.** Work intended to remediate lead-based paint hazards shall not commence until work area preparation required by this section has been completed.

(4) **Relocation.** An owner shall request that an occupant temporarily relocate from a unit pending completion of work where it appears that work cannot be performed safely with occupants in residence. The owner shall offer a suitable, decent, safe and similarly accessible dwelling unit that does not have lead-based paint hazards to such occupants for temporary relocation. Unreasonable refusal by such occupants to relocate pursuant to such offer shall constitute a refusal of access pursuant to §§27-2009 and 27-2056.4(b) of the Administrative Code and, where applicable, 9 NYCRR §2524.3(e). Relocation shall not be required provided that the work can be done safely with occupants in residence, and provided further that at the end of each day of work, the work area is properly cleaned as specified in §173.14(e)(1)(I)(i); occupants have safe access to areas adequate for sleeping, use of bathroom and kitchen facilities and safe access to entry-/egress pathways; and the work does not create other safety hazards, as specified herein.

(e) **Occupant protection.**

(1) **Work ordered by the Department, or work that disturbs over 100 square feet of lead-based paint per**

room, regardless of whether such work is ordered by the Department, which is conducted in a child care service or kindergarten pursuant to §47.63 or §43.23 of this Code or §17-911 of the Administrative Code, or work ordered by HPD in accordance with §27-2056.11(a)(1) of the Administrative Code, or work performed pursuant to §27-2056.11 (a)(2)(ii) of the Administrative Code:

(A) **Postings.** The following information shall be conspicuously posted no later than twenty-four hours prior to beginning work and shall remain in place until the work area has been cleared for re-occupancy:

(i) **Notice of commencement of work.** Information on the notice submitted to the Department pursuant to subparagraph (1) of subdivision (c) of this section shall be posted at the entrance to the dwelling and at the entrance to the dwelling unit.

(ii) **Warning sign.** A warning sign of at least 8-1/2" by 11" reading in letters at least one inch high, as follows: WARNING: LEAD WORK AREA-POISON-NO SMOKING OR EATING. Such information shall be posted adjacent to the work area.

(B) **Pre-cleaning and protecting movable items.** All floors, movable furniture, draperies, carpets, or other objects in the work area shall be HEPA-vacuumed or washed; all movable items shall then be moved out of the work area or otherwise covered with two layers of six-mil disposable polyethylene sheeting before work begins. Such sheeting shall be taped together with waterproof tape, and taped to the floors or bottom of the walls or baseboards, so as to form a continuous barrier to the penetration of dust.

(C) **Sealing vents.** Forced-air systems within the room where work that disturbs lead-based paint is occurring shall be turned off and covered with two layers of six-mil polyethylene sheeting and waterproof tape to prevent lead contamination and lead dispersal to other areas.

(D) **Affixing doorway entrance flap.** After all movable objects have been removed, the work area shall be sealed off from non-work areas by taping with waterproof tape, two layers of disposable, six-mil polyethylene sheeting over every entrance or doorway to the work area, as follows: To deter the dispersal of lead dust one sheet shall be taped along all sides of the doorway and a slit shall be cut down the middle of the sheeting, leaving intact at least six inches of sheeting on the top and six inches of sheeting on the bottom of the doorway. A second sheet of polyethylene large enough to cover the doorway, shall be attached to the top of the doorway in the room or area where work is being conducted and shall act as a flap opening into the work area.

(E) **Covering floors.** The floor of the work area shall be covered with at least two sheets of disposable six-mil polyethylene sheeting. Such sheeting shall be taped together with waterproof tape, and taped to the bottom of the walls or baseboard, so as to form a continuous barrier to the penetration of dust to the floor. The furniture and non-movable furnishings, such as counters, cabinets, and radiators in the work area shall be removed or covered with such taped sheeting.

(F) **Sealing openings.** All openings, including windows, except those required to be open for ventilation, not sealed off or covered in accordance with §173.14(e)(1)(C) of this Code, shall be sealed with two layers of six-mil polyethylene sheeting and waterproof tape to prevent the penetration or dispersal of lead contaminants or lead-contaminated material.

(G) **Instructing occupants.** Occupants shall be instructed by the owner and contractor to avoid entering work areas in which work is ongoing until final clearance levels have been achieved.

(H) **Hazardous materials.** All paints, thinners, solvents, chemical strippers or other flammable materials shall be delivered to the building and maintained during the course of the work in their original containers bearing the manufacturer's labels, and all material safety data sheets, as may be required by law, shall be on-site and shall be made available upon request to the occupants of the dwelling unit.

(I) **Clean-up and lead-contaminated dust clearance testing procedures.**

(i) **Daily clean-up.** At the completion of work each day, the work area shall be thoroughly wet-mopped or HEPA vacuumed. No polyethylene sheeting, drop cloths, or other materials that are potentially hazardous to young children or infants shall be accessible outside the work area. In addition, any work area and other adjoining area exposed to lead or lead contaminated materials shall be cleaned as follows:

(aa) Large debris. Large demolition-type debris (e.g., door, windows, trim) shall be wrapped in six-mil polyethylene, sealed with waterproof tape, and moved to the area designated for trash storage on the property to be properly disposed of in a lawful manner.

(bb) Small debris. Small debris shall be HEPA-vacuumed or wet swept and collected. Before wet sweeping occurs, the affected surfaces shall be sprayed with a fine mist of water to keep surface dust from becoming airborne. Dry sweeping is prohibited. The swept debris and all disposable clothing and equipment shall be placed in double four-mil or single six-mil plastic bags which shall be sealed and stored along with other contaminated debris in the work area and shall be properly disposed of in a lawful manner.

(cc) Clean-up adjacent to the work area. On a daily basis, as well as during final clean-up, the area adjacent and exterior to the work area shall be examined visually to ensure that no lead debris has escaped containment. Any such debris shall be wet swept and HEPA vacuumed, collected and disposed of as described above.

(dd) Supply storage. Upon finishing work for the day, all rags, cloths and other supplies used in conjunction with chemical strippers or other flammable materials, or materials contaminated with lead dust or paint shall be stored at the end of each work day in sealed containers or removed from the premises, in a lawful manner.

(ii) **Final clean-up.** Final cleaning shall be conducted as follows, in the following sequence:

(aa) The final cleaning process shall start no sooner than one (1) hour after lead-based paint disturbance activities have been completed, but before repainting, if necessary.

(bb) First, all polyethylene sheeting shall be sprayed with water mist and swept prior to removal. Polyethylene sheeting shall be removed by starting with upper-level polyethylene, such as that on windows, cabinets and counters, folding the corners, ends to the middle, and placing in double four-mil or single six-mil plastic bags. Plastic bags shall be sealed and properly disposed of in a lawful manner.

(cc) Second, all surfaces in the work area shall be HEPA vacuumed. Vacuuming shall begin with ceilings and proceed down the walls to the floors and include furniture and carpets.

(dd) Third, all surfaces in the work area shall be washed with a detergent solution. Washing shall begin with the ceiling and proceed down the walls to the floor. Wash water shall be properly disposed of in a lawful manner.

(ee) Fourth, all surfaces exposed to lead dust generated by the lead-based paint disturbance process shall be HEPA vacuumed again. Vacuuming shall begin with ceilings and proceed down the walls to the floors and include furniture and carpets.

(ff) Fifth, all surfaces shall be inspected to ensure that all surfaces have been cleaned and all visible dust and debris have been removed. If all visible dust and debris have not been removed, affected surfaces shall be re-cleaned.

(iii) **Final inspection.** After final clean-up, and re-painting if necessary, has been completed, a final inspection shall be made by a third party retained by the owner who is independent of the owner and the contractor. The final clearance evaluation shall take place at least one (1) hour after the final cleaning and shall include a visual inspection and surface dust testing. Three wipe samples shall be collected and tested from each room or area where work has been

conducted; one wipe sample each shall be taken from a window well, a window sill and the floor. In addition, wipe samples shall be collected and tested from the floor in rooms or areas immediately adjacent to the work area.

(iv) **Clearance for permanent re-occupancy after completion of work.** Dust lead levels in excess of the following constitute contamination and require repetition of the clean-up and testing process in all areas where such levels are found. Areas where every sample result if below the following dust lead levels may be cleared for permanent re-occupancy:

Floors: 40 micrograms of lead per square foot.

Window Sills: 250 micrograms of lead per square foot.

Window Wells: 400 micrograms of lead per square foot.

Only upon receipt of laboratory test results showing that the above dust lead levels are not exceeded in the dwelling may the work area be cleared for permanent re-occupancy. However, temporary access to work areas may be allowed, provided that clean-up is completed, and dust test samples have been collected, in compliance with §173.14(e)(1)(I)(i),(ii) and (iii). The owner shall provide a copy of all lead-contaminated dust clearance test results to the occupants of the dwelling or dwelling unit. Copies of lead-contaminated dust wipe clearance test results shall be submitted to the Department whenever abatement or remediation of lead-based paint hazards has been ordered by the Department or Commissioner.

(J) **Temporary access to work areas when occupants not relocated.** When occupants are not relocated, temporary access may be allowed to areas in which work is in progress after work has ceased for the day provided that at the end of each work day:

(i) Any work area to be accessed is to be properly cleaned as specified in the daily clean-up requirements of §173.14(e)(1)(I)(i) and the final clean-up requirements of §173.14(e)(1)(I)(ii)**(bb)** through **(dd)** and **(ff)**;

(ii) There are no safety hazards (including, but not limited to, exposed electric wiring or holes in floor) or covered vents;

(iii) Floor coverings containing leaded dust and debris and hazardous materials are removed;

(iv) Floors in the work area are re-covered with a non-skid floor covering securely taped to the floor;

(v) Work areas are prepared in accordance with the requirements above when work recommences; and

(vi) At the end of each workday, and before access is permitted, a checklist indicating compliance with these conditions is completed and signed, in accordance with §3.19 of this Code, by the person responsible for overseeing the work.

(vii) Temporary access in accordance with these provisions may be allowed for no longer than five days. If work has not resumed within five days, temporary access may continue only if the person responsible for overseeing the work has repeated the work required by clauses (i)-(vi). Nothing herein shall extend the time for compliance with any order issued pursuant to this Code or for correction of any violation of the Administrative Code.

(2) **Work that disturbs between two (2) and 100 square feet of lead-based paint per room that is being performed in accordance with §§17-911 and 27-2056.11(a)(2)(i) of the Administrative Code, or §43.23 or §47.63 of the Health Code.**

(A) **Postings and warning sign.** A warning sign shall be posted in accordance with subparagraph (1)(A)(ii) of subdivision (e) of this section and caution tape shall be placed across the entrance to the work area.

(B) **Pre-cleaning and protecting movable items.** All floors, movable furniture, draperies, carpets, or other objects in the work area shall be HEPA-vacuumed or washed; all movable items shall then be moved out of the work area or otherwise covered with polyethylene plastic or equivalent sheeting. All plastic or equivalent sheeting used during the performance of the work shall be of sufficient thickness and durability to prevent tearing during the performance of the work. Such sheeting shall be of sufficient length and width to prevent dust and other debris generated by the work from spreading to areas unprotected by such sheeting. Such sheeting must be adequately secured to prevent movement of the sheeting during the performance of the work.

(C) **Covering floors.** The floor of the work area shall be covered with polyethylene plastic or equivalent sheeting. All plastic or equivalent sheeting used during the performance of the work shall be of sufficient thickness and durability to prevent tearing during the performance of the work. Such sheeting shall be of sufficient length and width to prevent dust and other debris generated by the work from spreading to areas unprotected by such sheeting. Such sheeting must be adequately secured to prevent movement of the sheeting during the performance of the work. Multiple layers of polyethylene sheeting shall be used as needed to prevent dust from contaminating the floor.

(D) **Sealing openings.** Where applicable, forced air systems in the work area shall be turned off and any openings in the work area shall be sealed with polyethylene or equivalent sheeting to prevent the penetration or dispersal of lead contaminants or lead-contaminated material.

(E) **Instructing occupants.** Occupants shall be instructed by the owner and contractor to avoid entering the work area until final clean-up has been completed. The owner shall provide temporary relocation of the occupants of a dwelling or a dwelling unit to appropriate housing when work cannot be performed safely.

(F) **Hazardous materials.** All paints, thinners, solvents, chemical strippers or other flammable materials shall be delivered to the building and maintained during the course of the work in their original containers bearing the manufacturer's labels, and all material safety data sheets, as may be required by law, shall be on-site and shall be made available upon request to the occupants of the dwelling unit.

(G) **Clean-up and lead-contaminated clearance dust testing.** Clean-up and lead-contaminated dust clearance testing shall be conducted in accordance with §173.14(e)(1)(I) of this Code.

(H) **Temporary access to work areas when occupants not relocated.** When occupants are not relocated, temporary access may be allowed to areas in which work is in progress after work has ceased for the day provided that at the end of each work day:

(i) Any work area to be accessed is to be properly cleaned as specified in the daily clean-up requirements of §173.14(e)(1)(I)(i) and the final clean-up requirements of §173.14(e)(1)(I)(ii)**(bb)** through **(dd)** and **(ff)**;

(ii) There are no safety hazards (including, but not limited to, exposed electric wiring or holes in the floor) or covered vents;

(iii) Floor coverings containing leaded dust and debris and hazardous materials are removed;

(iv) Floors in the work area are re-covered with a non-skid floor covering securely taped to the floor;

(v) Work areas are prepared in accordance with the requirements above when work recommences; and

(vi) At the end of each workday, and before access is permitted, a checklist indicating compliance with these conditions is completed and signed, in accordance with §3.19 of this Code, by the person responsible for overseeing the work.

(vii) Temporary access in accordance with these provisions may be allowed for no longer than five days. If work

has not resumed within five days, temporary access may continue only if the person responsible for overseeing the work has repeated the work required by clauses (i)-(vi). Nothing herein shall extend the time for compliance with any order issued pursuant to this Code or for correction of any violation of the Administrative Code.

(3) **Work performed to remediate lead-based paint hazards on turnover in accordance with §27-2056.8 of the Administrative Code.**

(A) **Preparation and work.** The procedures described in §173.14(e)(2)(A) through (D) of this Code shall be followed.

(B) **Clean-up.** At the completion of work, the work area shall be thoroughly wet-mopped or HEPA vacuumed and a visual examination shall be conducted in the work area and the area adjacent and exterior to the work area. Any noted lead-contaminated dust or debris shall be wet-mopped or HEPA vacuumed. All rags, cloths and other supplies used in conjunction with chemical strippers or other flammable materials, or materials contaminated with lead dust or paint shall be stored at the end of each work day in sealed containers or removed from the premises, in a lawful manner.

(C) **Clearance dust testing.** Clearance testing for lead-contaminated dust shall be conducted in accordance with §173.14(e)(1)(I) of this Code.

(f) **Investigation of unsafe lead work practices by the Department.**

(1) **Authority to inspect.** The Department may inspect any premises where work that is subject to this section is in progress or has been completed.

(2) **Scope of authority.** Such inspection may include but not be limited to premises where abatement or remediation of lead-based paint hazards is being conducted, where any work which may disturb lead-based paint or paint of unknown lead content is being conducted, or which is the subject of a complaint to the Department pursuant to §17-185 of the Administrative Code, and any areas affected by the emission or release of leaded dust or debris.

(3) **Actions authorized.** If the Department determines that such work is not being conducted in accordance with the provisions of this section, or other applicable law, the Department may order that such work be stopped immediately; that the premises be cleared of uncontained leaded dust and debris; that the conditions or work practices constituting a departure from the provisions of this section be corrected; and that the owner and any persons performing such work submit a work plan prior to resuming work, to demonstrate their ability and willingness to comply with the provisions of this Code or other applicable law.

(g) **Declaration pursuant to Administrative Code §17-145.** The existence of a lead-based paint condition or lead-based paint hazard pursuant to §173.13 of this Code, or a failure to comply with this section is hereby declared to constitute a public nuisance and a condition dangerous to life and health, pursuant to §17-145 of the Administrative Code. Every person obligated to comply with the provisions of this section or §173.13 of this Code is hereby ordered to abate or remediate such nuisance by complying with any order or direction issued by the Department.

(h) **Modification by the Commissioner.** When the strict application of any provision of this section or §173.13 of this Code presents practical difficulties or unusual hardships, the Commissioner or designee may modify the application of such provision consistent with the general purposes of this sections. When granting a modification the Commissioner or designee may impose such conditions as are necessary in the opinion of the Commissioner or designee to prevent lead contamination and to protect the health and safety of any persons likely to be exposed to lead as a consequence of such modification.

Notes:

The Table of Contents and subdivisions (a) (Purpose, scope and applicability), (b) (Definitions), (c) (Administrative requirements) and (e) (Occupant protection) were amended by resolution adopted on December 16, 2008 to update cross references for lead-based paint hazard control in Article 47 (Child Care Services) and a new Article 43 (School-Based Programs for Children Ages Three through Five).

Section 173.14 was repealed and re-enacted by recolution adopted on July 22, 2004, effective August 2, 2004, to harmonize lead-based paint hazard remediation safety standards with Local Law 1 of 2004 (the New York City Childhood Lead Poisoning Prevention Act of 2003) and the rules of the City's Department of Housing Preservation and Development. See, Article 14 of Subchapter 2 of Chapter 2 of Title 27 of the Administrative Code, and Chapter 11 of Title 28 of the Rules of the City of New York.

Subdivision (b) of §173.14 was amended by resolution adopted on March 16, 2006 to define the term "child of applicable age," in accordance with §27-5056.18 of the Administrative Code, and the definition of "chewable surface" was amended accordingly. The Board of Health made these amendments effective October 1, 2006, to enable the Department and the Department of Housing Preservation and Development time to phase in the new definition.

This section is new. It was added on November 16, 1993 to establish safety precautions and standards for various lead paint abatement methods whenever such abatement is ordered or directed by the Department or the Department of Housing Preservation and Development.

Subdivision (1) of subsection (a) was amended; new subdivisions (2) and (3) of subsection (a) were adopted; former subdivision (2) of subsection (a) was renumbered as subdivision (4) and amended; and former subdivisions (3) and (4) of subsection (a) were repealed on December 13, 1999 to harmonize the safety standards with provisions of Local Law 38 of 1999 for lead poisoning prevention and control, and to rescind authority of the Departments of Housing Preservation and Development and Environmental Protection to enforce these safety standards.

Subdivision (1) of subsection (b) was amended on December 13, 1999 to provide that the definition of the word "abatement" was applicable to orders of the Commissioner issued pursuant to §173.13 of the Health Code, and when otherwise made applicable pursuant to §27-2056.2(b) or §27-2056.5(c) or (d) of the Administrative Code of the City of New York.

Subdivisions (1) and (2) of subsection (a) were amended on September 24, 1996 to comply with Federal regulations regarding what constitutes a lead based paint violation. Effective Jan. 1, 1997.

Subsection (b). Subdivision (4) and subdivision (8) of subsection (b) were amended by resolution adopted on

December 12, 2002 following amendment of Chapter 22 of the New York City Charter by the electorate in the November 6, 2001 general election, which merged the Departments of Health and Mental Health, Mental Retardation and Alcoholism Services, and enactment of Local Law of 2002, which further amended the Charter and changed the name of the merged agency to Department of Health and Mental Hygiene, and the Commissioner to Commissioner of the Department of Health and Mental Hygiene.

Subdivision (5) of subsection (b) was amended on December 13, 1999 to provide that the definition of the words "deleader" or "deleader-contractor" was applicable to performance of abatements subject to this section.

Subdivision (11) of subsection (b) was amended on December 13, 1999 to substitute the word "fungi" as the plural form of the word "fungus."

Subdivision (16) of subsection (b) was amended on December 13, 1999 to harmonize the definition of lead based paint contained in paragraph (aa) with the definition in Article 14 of subchapter 2 of chapter 2 of the Administrative Code of the City of New York, as amended by Local Law 38 of 1999, and to reflect the correct reference section of the Administrative Code in paragraph (bb).

Subdivision (16) of subsection (b) was amended on September 24, 1996 to be consistent with the updated definition of "lead based paint" in the "Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing" issued by the United States Department of Housing and Urban Development and to recognize the different definition of "lead based paint" used by the Department of Housing Preservation and Development. Effective Jan. 1, 1997.

Subdivision (19) of subsection (b) was amended on December 13, 1999 to add the term "chalking" as a descriptive term for deterioration of paint and to harmonize the definition of "peeling" paint with that contained in Article 14 of subchapter 2 of chapter 2 of the Administrative Code of the City of New York, as amended by Local Law 38 of 1999.

Paragraphs (aa), (cc) and (dd) of subdivision (1) of subsection (c) were amended on December 13, 1999 to delete references to inspections by the Department of Environmental Protection and to authorize the Department to take certain immediate actions when abatements are not conducted pursuant to the provisions of this section.

Subdivision (2) of subsection (c) was amended on December 13, 1999 to establish qualifications in new paragraphs (bb), (cc) and (dd) for performing the surface dust testing mandated by Article 14 of subchapter 2 of chapter 2 of Title 27 of the Administrative Code, as amended by Local Law 38 of 1999. These qualifications and requirements are consistent with other certification programs administered by the Department.

Paragraph (cc) of subdivision (2) of subsection (c) was further amended by resolution on March 21, 2001 to clarify that organizations other than those specified in paragraph (bb) may provide training for dust sampling if approved by the Department, and to authorize the Department to issue a certificate to persons enrolled in a dust wipe training course offered by organizations other than the Department, and to charge a fee for such certificate as well as for issuance of a replacement certificate.

Paragraph (cc) of subdivision (3) of subsection (c) was amended on December 13, 1999 to delete references to inspections by employees of the Department of Environmental Protection.

Paragraph (cc) of subdivision (3) of subsection (c) was amended on September 24, 1996 to adjust record keeping requirements to allow for the retention of abatement records for seven years after the date of completion of the abatement, or for such other time period as may be required by law or regulation. Effective Jan. 1, 1997.

The opening paragraph of subsection (d) was further amended on December 13, 1999 to harmonize the Health Code with the provisions of Local Law 38 of 1999, by deleting references to "abatements" ordered by the Department of Housing Preservation and Development, and to indicate which provisions of this section apply to correction of lead

based paint hazards as specified in Article 14 of subchapter 2 of chapter 2 of Title 27 of the Administrative Code of the City of New York.

Subsection (d) and paragraph (aa) of subdivision (1) of subsection (d) were amended on September 24, 1996 to limit abatement methods to those specified in the abatement orders and to simplify language. Effective Jan. 1, 1997.

Paragraphs (aa) and (ee) of subdivision (3) of subsection (d) were amended on September 24, 1996 to simplify language and to clarify the activities involved in the process of enclosure. Effective Jan. 1, 1997.

Paragraph (ee) of subdivision (4) of subsection (d) was added on September 24, 1996 to limit the use of encapsulation as an abatement method to cases in which such method is authorized by the Department or the Department of Housing Preservation and Development. Effective Jan. 1, 1997.

Subdivision (5) of subsection (d) was amended on September 24, 1996 to simplify the reference to subsection (e)(2) which outlines the steps to be taken when performing replacement on certain surfaces. Effective Jan. 1, 1997.

New subparagraph (vi) of paragraph (aa) of subdivision (2) of subsection (e) was adopted; and subparagraphs (vi) and (vii) were renumbered as subparagraphs (vii) and (viii) on December 13, 1999 to harmonize the safety standards with provisions of Local Law 38 of 1999 for lead poisoning prevention and control and regulations of the Department of Housing Preservation and Development.

Subparagraphs (ii) and (iii) of paragraph (aa) of subdivision (2) of subsection (e) were amended on September 24, 1996 to include HEPA-vacuuming and washing of movable furniture, draperies, carpets, or other objects, in the process of abatement area preparation. Further, the amendments provide for added protection against the penetration of dust during abatement area preparation. Effective Jan. 1, 1997.

Subparagraphs (iv), (v) and (vi) of subdivision (2) of subsection (e) were renumbered to be subparagraphs (v), (vi) and (vii) and new subparagraph (iv) was added on September 24, 1996 to outline requirements for the isolation of forced-air systems to prevent the penetration or dispersal of lead contaminants or lead-contaminated material to other areas during abatement. Effective Jan. 1, 1997.

Subparagraph (i) of paragraph (bb) of subdivision (2) of subsection (e) was amended on December 13, 1999 to harmonize the safety standards with provisions of Local Law 38 of 1999 for lead poisoning prevention and control and regulations of the Department of Housing Preservation and Development.

Subparagraphs (ii) and (v) of paragraph (bb) of subdivision (2) of subsection (e) were amended on September 24, 1996 to make it consistent with amendments to subsection (e)(2)(aa) and to clarify language. Effective Jan. 1, 1997.

Subparagraph (iii) of paragraph (bb) of subdivision (2) of subsection (e) was amended on September 6, 2001, incorporating recommendations in Chapter 8 of the HUD **Guidelines for the Evaluation and Control of Lead-Based Paint Hazards in Housing** (1995) to more effectively control the dispersal of both airborne and floor leaded dust from abatement areas.

Paragraphs (aa) and (cc) of subdivision (3) of subsection (e) were amended on September 24, 1996 to clarify language. Effective Jan. 1, 1997.

Subdivision (4) of subsection (e) was amended on September 24, 1996 to outline clean-up procedures for all abatements of surfaces exceeding two (2) square feet per room, for all abatements of radiators, door frames, window frames and window sills and for all abatements ordered by the Department in relation to a child who is determined to be lead poisoned. Subparagraphs (i), (ii) and (iii) of paragraph (aa) of subdivision (4) of subsection (e) was amended on September 24, 1996 to clarify language. Subparagraphs (i), (ii) and (iii) of paragraph (bb) of subdivision (4) of subsection (e) was amended on September 24, 1996 to specify that the final cleaning process should start no sooner than

one hour after the completion of abatement activities, but before re-painting, if necessary, to allow for dust to settle and to specify that final clean-up should be performed on all polyethylene sheeting used, and on all surfaces in the abatement area. Paragraph (cc) of subdivision (4) of subsection (e) was amended to specify a one-hour time frame within which final clearance evaluation should take place after the final cleaning. Subparagraph numbering (i) and (ii) was added to paragraph (cc) of subdivision (4) of subsection (e) to divide already existing language into two parts to facilitate a reference in the new subsection (e)(5). Paragraph (dd) of subdivision (4) of subsection (e) was amended on September 24, 1996 to lower the post abatement clearance for bare floors from 200 to 100 micrograms of lead dust per square foot in keeping with HUD Guidelines. Effective Jan. 1, 1997.

Paragraph (dd) of subdivision (4) of subsection (e) was amended on September 6, 2001 to lower the post abatement re-occupancy dust lead clearance levels for floors, window sills and window wells in accordance with EPA's recently effective regulations, codified at 40 CFR §745.227(e)(8)(viii).

Subdivision (5) of subsection (e) was renumbered subdivision (6), subdivision (6) was renumbered subdivision (7) and new subdivision (5) was adopted on September 24, 1996 to outline clean-up procedures for all abatements of surfaces not exceeding two (2) square feet per room, except for abatements of radiators, door frames, window frames and sills and abatements ordered in relation to a child who is determined to be lead poisoned. Effective Jan. 1, 1997.

Subsection (f) was amended on December 13, 1999 to eliminate references to orders or directions of the Departments of Housing Preservation and Development and Environmental Protection.

Subsection (g) was amended on December 13, 1999 to repeal authority of the Department of Environmental Protection to grant requests for modification of any provision of this section.

ARTICLE 173 HAZARDOUS SUBSTANCES

§173.15 Unsafe lead based paint work practices. [Repealed]

HISTORICAL NOTE

Section repealed City Record July 30, 2004 eff. July 30, 2004. [See Vol. 9 Statements of Basis and Purpose No. 20-A]

Section added City Record Dec. 17, 1999 eff. Jan. 16, 2000. [See Vol. 9 Statements of Basis and Purpose No. 15]

Notes:

Section 173.15 was repealed by resolution adopted July 22, 2004, effective August 2, 2004. Its provisions for

responding to complaints regarding unsafe lead-based paint work practices have been incorporated in §173.14(f) of the Health Code.

This section was added by resolution adopted on December 13, 1999 to incorporate in the Health Code and provide notice of the Department's procedures for responding to complaints of unsafe lead based paint work practices made pursuant to §17-179(b) of the Administrative Code. These procedures are consistent with the Department's practices in investigating other environmental complaints and with the provisions of §173.14(c)(1)(cc) of the Health Code, as amended, for enforcement of lead based paint abatement safety practices when abatement is ordered by the Commissioner pursuant to §173.13 of the Health Code.

§173.16 Lye intended for household use. [Repealed]

HISTORICAL NOTE

Section repealed City Record Dec. 23, 2008 eff. Jan. 22, 2009. [See Vol. 9
Statements of Basis and Purpose No. 31]

Section renumbered City Record Dec. 17, 1999 eff. Jan. 16, 2000. (Formerly §173.15) [See Vol. 9
Statements of Basis and Purpose No. 15]

Section in original publication July 1, 1991.

Notes:

Section 173.15 was renumbered on December 13, 1999 when a new §173.15 was added.

This section is new. Under S.C. §230c and the State Caustic Poison Law, Agriculture and Markets Law, Art. 14A, lye has been labeled with the words "Poison" and "Danger", a skull and crossbones symbol, and numerous directions covering its various uses and antidotes. The labeling of lye is also regulated by the Federal Caustic Poisons Act. Unfortunately this labeling has not been sufficiently effective in eliminating the large number of poisonings caused by the ingestion of lye. Over a period of less than 34 months, from March 9, 1955 to December 31, 1957, there were 203 lye poisonings reported to the Poison Control Center. Of these, 145 cases or 71% were under 10 years of age, 7 cases or 3 1/2% were between 10 years and 19 years of age, 47 cases or 23% were 19 years of age and over, and 4 cases or 2 1/2% were of unknown age. Five cases resulted in death. Four of the five fatalities were 19 years of age or over, the fifth being a three year old child. Although these figures do not distinguish between the accidental ingestions and the attempted suicides, (such figures are not available) it can be seen from the fact that 71% were below age 10 that the vast majority of cases resulted from preventable accidents.

The Department has considered recommending to the Board the adoption of a provision prohibiting the sale of lye for household use as a means of completely eliminating injuries due to the misuse of the product, particularly by children. The Board has, however, adopted this section which regulates more strictly the labeling of the product and which empowers the Commissioner to prohibit the sale of unsafe packages or containers. It is hoped that rigorous enforcement of this section by the Department, self policing of labeling by the lye industry, development of safer packaging, and more consumer education will substantially reduce the accidents involving products containing lye. In the event that favorable results are not achieved under these regulations by 1960, the Department plans to propose a review of this section to the Board of Health, and to renew its recommendation of a complete ban of lye for household use.

Subsection (a) provides the scope of this section. It applies to all lye products intended for household use, whether or not sold in interstate commerce, including those labeled pursuant to other State or Federal laws, e.g.: Federal Caustic Poisons Act and Agriculture and Markets Law, Art. 14A. See §173.05(a) which provides for exemptions from 173.05 for products labeled in accordance with applicable State and Federal laws; this subsection makes it clear that exemptions from any provision of this article do not apply to lye products sold for household use. A household package or container of lye must be labeled pursuant to §173.05 and subsection (c) of this section and in the places required by §173.05(h). Under §173.07 false and misleading labeling or advertising is prohibited including the use of statements, names, instructions or pictures which indicate or imply safety of use.

Subsection (b) contains a definition of lye and specifies that it includes both sodium hydroxide and potassium hydroxide in a concentration of ten percent or more. Also see Federal Caustic Poisons Act §§2(a)(9) and (19), where sodium hydroxide and potassium hydroxide are similarly defined.

Subsection (c) contains the labeling requirements which are in addition to the requirements of §173.05 (b) and (c).

Subdivision (1) requires "Lye" or "Contains Lye" to appear on all products containing lye as defined in subsection (b) of this section. No other words satisfy this requirement.

Subdivision (2) is similar to the requirement of the Federal Caustic Poisons Act §2(b)(3).

Subdivisions (3) and (4) specify the wording required under §173.05(b)(3), (4), (5) and (8).

Subdivision (5) specifies the wording required under §§173.05(b)(6) and 173.05(c). It is similar to the requirements of the regulations promulgated pursuant to the Federal Caustic Poisons Act, (21 C.F.R. §2851 et seq).

Subdivision (5) of Subsection (c) was repealed and reenacted by resolution adopted on July 6, 1982 to conform with good medical practice.

Subdivision (6) requires notice on the front panel of the container to read the precautionary labeling.

Subdivision (7) specifies the directions and warnings required under §173.05(b)(7).

Subdivision (8) specifies additional matter required under §173.05(b)(7).

Subsection (d) empowers the Commissioner to prohibit the sale of packages and containers of lye for household use when its closures are inadequate. Safe, single use, disposable containers will be encouraged.

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 173 HAZARDOUS SUBSTANCES

§173.17 Plastic bags.

(a) No person shall sell, offer for sale, or deliver, or offer for delivery, or give away any plastic bag or partial plastic bag intended for domestic or household use, or for packaging articles intended for domestic or household use, or which is so designed or decorated so as to encourage its use as a toy, the length and width of which when added together totals twenty-five inches or more and the opening side of which is seven inches or more and the material of which is less than one mil (1/1000 inch) in thickness; unless such plastic bag bears the following warning statement, or a warning statement which the Commissioner has approved as the equivalent thereof:

"WARNING: To avoid danger of suffocation, keep this plastic bag away from babies and children. Do not use this bag in cribs, beds, carriages or play pens."

(b) Such warning statement shall be imprinted in a prominent place on the plastic bag or shall appear on a label securely attached to the bag in a prominent place, and shall be printed in legible type which shall be contrasted by

typography, layout or color from the contents of the bag and from other printed matter on the bag, if any. The size of the print of such statement shall be as follows:

Total length and width of bag		Size of print
60 inches or more	at least	24 point
40-59 inches	at least	18 point
30-59 inches	at least	14 point
25-20 inches	at least	10 point

HISTORICAL NOTE

Section in original publication July 1, 1991.

Subd. (a) amended City Record Jan. 14, 2003 eff. Feb. 13, 2003. [See Vol. 9 Statements of Basis and

Purpose No. 18-A]

Notes:

This section was added by resolution of June 15, 1959, filed with the City Clerk June 17, 1959 (also adopted as S.C. §230e). Since 1957, a total of 44 deaths, reportedly due to suffocation by plastic bags or other form of thin plastic film, came to the attention of the United States Public Health Service, 27 of them in the first half of 1959.

The section is designed to provide a continuing strong warning to alert users to the potential hazard of large size, thin plastic film bags. It is intended to encompass especially the thin plastic bag (under one mil) commonly used for covering clothes delivered by dry cleaning establishments and as covers in the delivery of pillows, mattresses and other similar large size objects.

It was amended by resolution adopted by the Board of Health on April 15, 1960 to conform with Chapter XII Regulation 8 of the New York State Sanitary Code, enacted by the Public Health Council on February 25, 1960.

Subsection (a) was amended by resolution adopted on December 12, 2002 following amendment of Chapter 22 of the New York City Charter by the electorate in the November 6, 2001 general election, which merged the Departments of Health and Mental Health, Mental Retardation and Alcoholism Services, and enactment of Local Law of 2002, which further amended the Charter and changed the name of the merged agency to Department of Health and Mental Hygiene, and the Commissioner to Commissioner of the Department of Health and Mental Hygiene.

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 173 HAZARDOUS SUBSTANCES

§173.19 Glues and cements containing volatile solvents.

(a) Except as other-wise provided in subsection (b), no person shall sell, offer for sale, deliver or give away to any individual under the age of 18 years any glue or cement commonly known as plastic cement, household cement, cement, or any other similar substance, if such glue or cement contains one or more of the following volatile solvents: 1. Toluol

2. Hexane

3. Trichlorethylene

4. Acetone

5. Toluene

6. Ethyl Acetate

7. Methyl Ethyl Ketone

8. Trichloroethane

9. Isopropanol

10. Methyl Isobutyl Ketone

11. Methyl Cellosolve Acetate

12. Cyclohexanone

13. Any other substance which the Commissioner from time to time determines to be similar to such solvents. The determination of the Commissioner shall be published in the **City Record.**

(b) This section shall not apply:

(1) To any glue or cement which has been certified by the Department that it contains a substance which makes such glue or cement malodorous or causes such glue or cement to induce sneezing, or

(2) Where the glue or cement is sold, delivered or given away simultaneously with and as part of a kit used for construction of model airplanes, model boats, model automobiles, model trains or other similar models, or

(3) Where the person to whom the glue or cement is sold, delivered or given is a member of a hobby association and who properly identifies himself as such by an official membership card or other means of identification issued by such association. For the purposes of this section, the term hobby association means a group of persons (1) whose principal function is the construction of model airplanes, model boats, model automobiles, model trains or other similar objects, (2) which is composed of 25 or more members, and (3) is approved by the Department. The Department shall from time to time cause to be published in the **City Record** a list of approved hobby associations.

24 RCNY Health Code Reg. 175.00

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 175 RADIATION CONTROL General Provisions

Health Code Reg. § 175.00 INTRODUCTORY NOTES

Article 175 applies to all radiation equipment and radioactive material within the jurisdiction of the New York City Department of Health. Sections of Article 175 set forth under the heading, "Radiation Equipment," contain provisions for all radiation equipment and general and additional radiation control requirements applicable to specific radiation equipment. Sections of Article 175 set forth under the heading, "Radioactive Materials," contain provisions for all radioactive materials and general and additional radiation control requirements applicable to specific radioactive materials. Article 175 aims to protect the public generally, as well as workers in certain radiation installations, from the hazards inherent in the use of ionizing radiation. The Article is intended to serve as a framework for coordination of radiation control activities with the U.S. Atomic Energy Commission, the U.S. Food and Drug Administration, the N.Y. State Department of Labor, the N.Y. State Department of Health, the N.Y. State Atomic Energy Council, the N.Y. State Department of Environmental Conservation, and with other state and federal agencies, as well as with other N.Y. City agencies.

The present version of Article 175 follows the format of Part 16 of the New York Sanitary Code, relating to ionizing radiation, and is intended to be consistent with the standards included in Part 16 with certain standards deemed to be necessarily more restrictive. Article 175 is also intended to be compatible with safety standards of the U.S. Atomic Energy Commission in Title 10. Code of Federal Regulations; identical to standards established by the U.S. Food and Drug Administration in Title 21, Part 1020, of the Code of Federal Regulations; as well as consistent with corresponding standards for radiation control in the N.Y. State Industrial Code.

The present version of Article 175 continues many of the provisions which have been in such Articles since March 23, 1959, particularly the emphasis on the role of the radiation safety officer, safety standards identical with national recommendations, and information requirements for the location and use of all radiation sources. Article 175 now replaces the former registration on radiation equipment, such as medical x-ray units, with a permit system. Most of the former Notes in the previous Article 175 have been included within the text of the various sections. Reliance upon the recommendations in specific reports of the National Council on Radiation Protection and Measurements has been eliminated, with specific standards being included in appropriate sections of the Article. Such recommendations are to be used in complying with the requirements in Article 175, where appropriate. Guidelines to provide interpretations of several sections of Article 175 are to be issued by the Commissioner of Health after publication in The City Record.

Article 175 was first adopted in 1959, completely amended in 1962, and thereafter amended several times since. The present extensively revised version was adopted by the Board of Health on June 19, 1973 to provide greater uniformity with State and Federal requirements and was again repealed and reenacted on June 29, 1973 to incorporate necessary further amendments and revisions. Under the present Article 175, all radiation sources in the City must be obtained under either a permit or license or be specifically exempt. General licensing of small quantities of radioactive material is also provided for. However, the Department will be fully and currently informed of all radiation hazards within the City through its enforcement of the present Article 175.

This Article was amended by resolution adopted on June 19, 1975, to add a new table six (6) to Section Heading 175.117.

Article 175 was further amended by resolution adopted on September 18, 1975 which added a new section 175.70 to regulate equipment and procedures in the use of mammographic radiography for the detection of breast cancer and to prevent radiation hazards both to the person operating the applicable x-ray equipment and to the patient.

Article 175 was further amended by resolution adopted on December 6, 1976 to add new sections 175.118 through 175.124 which provide microwave radiation safety requirements designed to prevent the biologically deleterious effects of such radiation from improperly constructed, serviced or used microwave ovens. Such sections were intended to provide uniformity with applicable Federal performance standards governing microwave ovens contained in Section 1030.10 of Part 1030 of Subchapter J-"Radiological Health" of Chapter 1 of Title 21 of the Federal Code of Rules and Regulations (21 CFR Section 1030.10) promulgated pursuant to the applicable provisions of the Radiation Control for Health and Safety Act of 1968 (42 U.S.C. 263f, 263g, and 263n). Such sections were not intended to institute a regular program of inspection of microwave ovens used in homes.

The Section Headings for Section 175.09 and 175.10 were amended by resolution adopted on December 15, 1977 to conform them with the provisions contained in such sections as amended by resolution of the same date.

The Table of Section Headings was amended by resolution adopted on February 26, 1981 to conform them with the provisions contained in such sections as added or amended by resolution of the same date.

The Section Heading of Section 175.104 was amended by resolution adopted in October 23, 1986 to have the heading conform to changes made in the Section itself on the same date.

Section 175.13 was repealed by resolution adopted on June 26, 1990 to remove a maximum fee that is no longer imposed by New York State.

The repeal and reenactment of Article 175 was adopted by resolution by the Board of Health on June 7, 1994 to incorporate updated basic radiation protection standards as codified in federal regulations in all applicable provisions of the Article, to remove redundant language, inconsistencies and outdated provisions, to ensure a consistent numbering format, incorporate the use of metric and Systeme Internationale units, provide gender neutral references and to incorporate other provisions to maintain compatibility with federal regulations.

§175.01 Applicability and inapplicability, communications.

(a) **Applicability.** (1) Except as provided in §175.01(b), this Code applies to any person who sells, transfers, assembles, receives, produces, possesses, or uses any radiation source in this City.

(b) **Inapplicability.** (1) This Code does not apply to any person with respect to any radiation source subject to regulation, as provided for by law, by the New York State Department of Labor. This exclusion does not apply to:

(A) the use of such sources in places where the general public may be exposed; or

(B) to persons with respect to radiation sources used at industrial or commercial establishments for the application of radiation to human beings.

(2) This Code does not apply to any common or contract carrier or any shipper operating within this City to the extent that such carrier or shipper is subject to regulation as provided for by law by the U.S. Department of

Transportation or other agencies of the United States or agencies of the State or City of New York, except for compliance with provisions relating to transportation of radioactive materials set forth in §175.105.

(c) **Communications.** (1) Except as otherwise provided for in this Code, or as authorized by the Department, all applications, notifications, reports or other communications filed pursuant to this Code shall be addressed to the Department at:

Bureau of Radiological Health

2 Lafayette Street, 11th Floor

New York, New York 10007

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 175 RADIATION CONTROL General Provisions

§175.02 Definitions.

(a) As used in this Code, the following definitions shall apply:

(1) "A_1" means the maximum activity of special form radioactive material permitted in a Type A package. "A_2" means the maximum activity of radioactive material, other than special form, LSA and SCO material, permitted in a Type A package. These values are either listed in Table A-1, Appendix A of §175.105 of this Code or may be derived in accordance with the procedure prescribed in such Appendix A.

(2) "Absorbed dose" means the energy imparted by ionizing radiation per unit mass of irradiated material. The units of absorbed dose are the gray (Gy) and the rad.

(3) "Accelerator" means any machine capable of accelerating electrons, protons, deuterons, or other charged particles in a vacuum and of discharging the resultant particulate or other radiation into a medium at energies usually in

excess of 1 MeV. For purposes of this definition, "particle accelerator" is an equivalent term.

(4) "Accelerator-produced material" means any material made radioactive by a particle accelerator.

(5) "Accessible surface" means the external surface of the enclosure or housing provided by the manufacturer.

(6) "Activity" means the rate of disintegration or transformation or decay of radioactive material. The units of activity are the becquerel (Bq) and the curie (Ci).

(7) "Added filtration" means any filtration which is in addition to the inherent filtration.

(8) "Adult" means an individual 18 or more years of age.

(9) "Agreement State" means any State with which the U.S. Nuclear Regulatory Commission or the U.S. Atomic Energy Commission has entered into an effective agreement under subsection 274b. of the Atomic Energy Act of 1954, as amended (73 Stat. 689).

(10) "Airborne radioactive material" means any radioactive material dispersed in the air in the form of dusts, fumes, particulates, mists, vapors, or gases.

(11) "Airborne radioactivity area" means a room, enclosure, or area in which airborne radioactive materials exist in concentrations:

(i) in excess of the derived air concentrations (DACs) specified in Table 1, Appendix B of §175.03 of this Code, or

(ii) to such a degree that an individual present in the area without respiratory protective equipment could exceed, during the hours an individual is present in a week, an intake of 0.6 percent of the annual limit on intake (ALI) or 12 DAC-hours.

(12) "Aluminum equivalent" means the thickness of aluminum (type 1100 alloy) affording the same attenuation, under specified conditions, as the material in question. The nominal chemical composition of type 1100 aluminum alloy is 99.00 percent minimum aluminum, 0.12 percent copper.

(13) "Annual limit on intake" (ALI) means the derived limit for the amount of radioactive material taken into the body of an adult worker by inhalation or ingestion in a year. ALI is the smaller value of intake of a given radionuclide in a year by the reference man that would result in a committed effective dose equivalent of 0.05 Sv (5 rem) or a committed dose equivalent of 0.5 Sv (50 rem) to any individual organ or tissue. ALI values for intake by ingestion and by inhalation of selected radionuclides are given in Table 1, Columns 1 and 2, of Appendix B of §175.03 of this Code.

(14) "Area of use" means a portion of a physical structure, or a specified out-of-doors location, that has been set aside for the purpose of receiving, producing, using, or storing radioactive material.

(15) "As low as is reasonably achievable" (ALARA) means making every reasonable effort to maintain exposures to radiation as far below the dose limits in this Code as is practical, consistent with the purpose for which the licensed or registered activity is undertaken, taking into account the state of technology, the economics of improvements in relation to state of technology, the economics of improvements in relation to benefits to the public health and safety, and other societal and socioeconomic considerations, and in relation to utilization of nuclear energy and licensed or registered sources of radiation in the public interest.

(16) "Assembler" means any person engaged in the business of assembling, replacing, or installing one or more components into an x-ray system or subsystem. The term includes the owner of an x-ray system or such person's employee or agent who assembles components into an x-ray system that is subsequently used to provide professional or commercial services.

(17) "Attenuation block" means a block or stack, having dimensions 20 centimeters by 20 centimeters by 3.8 centimeters (8 inches by 8 inches by 1.5 inches), of type 1100 aluminum alloy or other materials having equivalent attenuation.

(18) "Authorized user" means an individual who is identified as an authorized user on a Department, Agreement State, or U.S. Nuclear Regulatory Commission license that authorizes the use of radioactive material or who is named as an authorized user on a certified registration issued by the Department.

(19) "Automatic exposure control" means a device which automatically controls one or more technique factors in order to obtain a required quantity of radiation at a preselected location(s).

(20) "Background radiation" means radiation from cosmic sources; naturally occurring radioactive material, including radon (except as a decay product of source or special nuclear material); and global fallout as it exists in the environment from the testing of nuclear explosive devices or from past nuclear accidents such as Chernobyl that contribute to background radiation and are not under the control of the licensee. "Background radiation" does not include radiation from any regulated sources of radiation.

(21) "Barrier" [see "Protective Barrier"].

(22) "Beam axis" means a line from the source through the centers of the x-ray fields.

(23) "Beam-limiting device" means a device which provides a means to restrict the dimensions of the x-ray beam.

(24) "Beam monitoring system" means a system designed to detect and measure the radiation present in the useful beam.

(25) "Becquerel" (Bq) means the SI unit of activity. One becquerel is equal to 1 disintegration (d) or transformation (t) per second ($d\text{-}s^{-1}$ or $t\text{-}s^{-1}$).

(26) "Bioassay" means the determination of kinds, quantities or concentrations, and, in some cases, the locations of radioactive material in the human body, whether by direct measurement, **in vivo** counting, or by analysis and evaluation of materials excreted or removed from the human body. For purposes of this Code, "radiobioassay" is an equivalent term.

(27) "Brachytherapy" means a method of radiation therapy in which sealed sources are utilized to deliver a radiation dose at a distance of up to a few centimeters, by surface, intracavitary, or interstitial application. Brachytherapy includes radiation therapy using electronic remote after-loading devices.

(28) "Breast equivalent phantom" means a device which contains test objects of various specified dimensions as speck sets, masses and fibers representing low density areas and microcalcifications related to the imaging of breast lesions and which can be imaged by a mammographic x-ray system to visualize such test objects.

(29) "Byproduct material" means:

(i) Any radioactive material, except special nuclear material, yielded in or made radioactive by exposure to the radiation incident to the process of producing or utilizing special nuclear material; and

(ii) The tailings or wastes produced by the extraction or concentration of uranium or thorium from ore processed primarily for its source material content, including discrete surface wastes resulting from uranium or thorium solution extraction processes. Underground ore bodies depleted by these solution extraction operations do not constitute "byproduct material" within this definition.

(30) "Calendar quarter" means not less than 12 consecutive weeks nor more than 14 consecutive weeks. The first

calendar quarter of each year shall begin in January and subsequent calendar quarters shall be so arranged such that no day is included in more than one calendar quarter and no day in any one year is omitted from inclusion within a calendar quarter. No licensee or registrant shall change the method observed by him/her of determining calendar quarters for purposes of this Code except at the beginning of a year.

(31) "Calibration" means the determination of:

(i) the response or reading of an instrument relative to a series of known radiation values over the range of the instrument, or

(ii) the strength of a source of radiation relative to a standard.

(32) "C-arm x-ray system" means an x-ray system in which the image receptor and x-ray tube housing assembly are connected by a common mechanical support system in order to maintain a desired spatial relationship. This system is designed to allow a change in the projection of the beam through the patient without a change in the position of the patient.

(33) "Carrier" means a person engaged in the transportation of passengers or property by land or water as a common, contract, or private carrier, or by civil aircraft.

(34) "Certified components" means components of x-ray systems which are subject to regulations promulgated under Public Law 90-602, the Radiation Control for Health and Safety Act of 1968.

(35) "Certified registration" means a registration for any therapeutic radiation machine issued by the Department upon review and approval of an application submitted pursuant to this Code.

(36) "Certified system" means any x-ray system which has one or more certified components.

(37) "Certified Radiation Equipment Safety Officer" means an individual who holds an unexpired certificate as a radiation equipment safety officer issued by the New York State Department of Health.

(38) "CFR" means Code of Federal Regulations.

(39) "Chelating agent" means amine polycarboxylic acids, hydroxycarboxylic acids, gluconic acid, and polycarboxylic acids.

(40) "City" means the City of New York.

(41) "Class" means a classification scheme for inhaled material according to its rate of clearance from the pulmonary region of the lung. Materials are classified as D, W, or Y, which applies to a range of clearance half-times: for Class D, Days, of less than 10 days; for Class W, Weeks, from 10 to 100 days; and for Class Y, Years, of greater than 100 days. For purposes of this Code, "lung class" and "inhalation class" are equivalent terms.

(42) "Coefficient of Variation," or "C" means the ratio of the standard deviation to the mean value of a population

$$C = \frac{s}{X} = \frac{1}{X}\left[\sum_{i=1} \frac{(X_i - X)^2}{(n-1)}\right]^{1/2}$$

where

s = estimated standard deviation of the population.

X = mean value of observations in sample.

X_i = $\mathbf{i}^{th}$ observation in sample.

n = number of observations in sample.

(43) "Collective dose" means the sum of the individual doses received in a given period of time by a specified population from exposure to a specified source of radiation.

(44) "Collimator " means a device by which a radiation beam is restricted in size.

(45) "Commissioner" means the Commissioner of Health and Mental Hygiene of the City of New York.

(46) "Committed dose equivalent" ($H_{T,50}$) means the dose equivalent to organs or tissues of reference (T) that will be received from an intake of radioactive material by an individual during the 50-year period following the intake.

(47) "Committed effective dose equivalent" ($H_{E,50}$) is the sum of the products of the weighting factors applicable to each of the body organs or tissues that are irradiated and the committed dose equivalent to each of these organs or tissues ($H_{E,50} = S\ w_T, H_{T,50}$).

(48) "Computed tomography" or "CT" means the production of a tomogram by the acquisition and computer processing of x-ray transmission data.

(49) "Cone" means a device used to indicate beam direction and to establish a minimum source-surface distance. It may or may not incorporate a collimator.

(50) "Contamination" means the presence in or on any animal, food, water supply, building or premises, body of water, municipal sewage disposal system, chattel or thing of a solid, liquid or gas emitting ionizing radiation which may constitute a danger to human beings.

(51) "Control panel" means that part of radiation equipment upon which is mounted the switches, knobs, pushbuttons, and other hardware necessary for manually setting the technique factors.

(52) "Conveyance" means: (i) "For transport by public highway or rail" any transport vehicle or large freight container;

(ii) "For transport by water" any vessel, or any hold, compartment, or defined deck area of a vessel including any transport vehicle on board the vessel; and

(iii) "For transport by aircraft" any aircraft.

(53) "Cooling curve" means the graphical relationship between heat units stored and cooling time.

(54) "Critical Group" means the group of individuals reasonably expected to receive the greatest exposure to residual radioactivity for any applicable set of circumstances.

(55) "Curie" means a unit of activity. One curie (Ci) is that quantity of radioactive material which decays at the rate of 3.7E10 transformations per second ($t\text{-}s^{-1}$).

(56) "Dead-man switch" means a switch so constructed that a circuit closing contact can be maintained only by continuous pressure on the switch by the operator.

(57) "Declared pregnant woman" means a woman who has voluntarily informed her employer, in writing, of her pregnancy and the estimated date of conception.

(58) "Decommission" means to remove a facility or site safely from service and reduce residual radioactivity to a level that permits-

(i) Release of the property for unrestricted use and termination of the license; or

(ii) Release of the property under restricted conditions and the termination of the license.

(59) "Dedicated check source" means a radiation source that is used to assure the constant operation of a radiation detection or measurement device over several months or years.

(60) "Deep dose equivalent" (H_d), which applies to external whole body exposure, means the dose equivalent at a tissue depth of 1 centimeter (1000 mg/cm^2).

(61) "Department" means the New York City Department of Health and Mental Hygiene.

(62) "Depleted uranium" means the source material uranium in which the isotope uranium-235 is less than 0.711 weight percent of the total uranium present.

(63) "Derived air concentration" (DAC) means the concentration of a given radionuclide in air which, if breathed by the reference man for a working year of 2,000 hours under conditions of light work, results in an intake of one ALI. For purposes of this Code, the condition of light work is an inhalation rate of 1.2 cubic meters of air per hour for 2,000 hours in a year. DAC values are given in Table 1, Column 3, of Appendix B of §175.03 of this Code.

(64) "Derived air concentration-hour" (DAC-hour) means the product of the concentration of radioactive material in air, expressed as a fraction or multiple of the derived air concentration for each radionuclide, and the time of exposure to that radionuclide, in hours. A licensee or registrant may take 2,000 DAC-hours to represent one ALI, equivalent to a committed effective dose equivalent of 0.05 Sv (5 rem).

(65) "Deterministic effect" [see "Nonstochastic effect"].

(66) "Diagnostic source assembly" means the tube housing assembly with a beam-limiting device attached.

(67) "Diagnostic type protective tube housing" means an x-ray tube housing so constructed that the leakage radiation at a distance of one meter from the tube housing does not exceed 2.58 E-5 $C\text{-}kg^{-1}$ (100 milliroentgens) in one

hour with a beam-limiting device attached and the tube operated at its leakage technique factors as specified by the manufacturer. Measurements may be averaged over an area of 100 cm^2 with no linear dimensions greater than 20 centimeters (8 inches).

(68) "Diagnostic x-ray system" means an x-ray system designed for irradiation of any part of the human body for the purpose of diagnosis or visualization.

(69) "Diaphragm" means a device or mechanism by which the radiation beam is restricted in size.

(70) "Distinguishable from background" means that the detectable concentration of a radionuclide is statistically different from the background concentration of that radionuclide in the vicinity of the site or, in the case of structures, in similar materials using adequate measurement technology, survey, and statistical techniques.

(71) "Dose" is a generic term that means absorbed dose, dose equivalent, effective dose equivalent, committed dose equivalent, committed effective dose equivalent, total organ dose equivalent, or total effective dose equivalent. For purposes of this Code, "radiation dose" is an equivalent term.

(72) "Dose equivalent (H_T)" means the product of the absorbed dose in tissue, quality factor, and all other necessary modifying factors at the location of interest. The units of dose equivalent are the sievert (Sv) and rem.

(73) "Dose limits" means the permissible upper bounds of radiation doses established in accordance with this Code. For purposes of this Code, "limits" is an equivalent term.

(74) "Dose monitor unit" [See "Monitor unit".]

(75) "Dosimetry processor" means an individual or an organization that processes and evaluates individual monitoring devices in order to determine the radiation dose delivered to the monitoring devices.

(76) "Effective dose equivalent (H_E)" means the sum of the products of the dose equivalent to each organ or tissue (H_T) and the weighting factor (w_T) applicable to each of the body organs or tissues that are irradiated ($H_E = S\ w_T H_T$).

(77) "Embryo/fetus" means the developing human organism from conception until the time of birth.

(78) "Entrance or access point" means any opening through which an individual or extremity of an individual could gain access to radiation areas or to licensed or registered radioactive materials. This includes entry or exit portals of sufficient size to permit human entry, irrespective of their intended use.

(79) "Entrance exposure rate" means the exposure per unit time at the point where the center of the useful beam enters the patient. For the purposes of this definition, "exposure" is defined in §175.02(a)(80)(ii).

(80) "Equipment" means x-ray equipment.

(81) "Exclusive use" (also referred to in other regulations as "sole use" or "full load") means the sole use of a conveyance by a single consignor for which all initial, intermediate, and final loading and unloading are carried out in accordance with the direction of the consignor or consignee. The consignor and the carrier must ensure that any loading or unloading is performed by personnel having radiological training and resources appropriate for safe handling of the consignment. The consignor must issue specific instructions, in writing, for maintenance of exclusive use shipment controls, and include them with the shipping paper information provided to the carrier by the consignor.

(82) "Explosive material" means any chemical compound, mixture, or device which produces a substantial instantaneous release of gas and heat spontaneously or by contact with sparks or flame.

(83) "Exposure" means either:

(i) being exposed to ionizing radiation or to radioactive material; or

(ii) the quotient of dQ divided by dm where "dQ" is the absolute value of the total charge of the ions of one sign produced in air when all the electrons (negatrons and positrons) liberated by photons in a volume element of air having mass "dm" are completely stopped in air. The units of exposure are the coulomb per kilogram ($C\text{-}kg^{-1}$) and the roentgen.

(84) "Exposure rate" means the exposure per unit of time.

(85) "External beam radiation therapy" means a method of radiation therapy utilized to deliver a radiation dose in which the source (sources) of radiation is (are) at a distance from the body. For the purposes of this Code "teletherapy" is an equivalent term.

(86) "External dose" means that portion of the dose equivalent received from any source of radiation outside the body.

(87) "Extremity" means hand, elbow, arm below the elbow, foot, knee, and leg below the knee.

(88) "Eye dose equivalent" means the external dose equivalent to the lens of the eye at a tissue depth of 0.3 centimeter ($300\ mg/cm^2$).

(89) "Field emission equipment" means equipment which uses an x-ray tube in which electron emission from the cathode is due solely to the action of an electric field.

(90) "Filter" means material placed in the useful beam to absorb preferentially selected radiations.

(91) [Reserved]

(92) "Fissile material" means plutonium-239, plutonium-241, uranium-233, uranium-235 or any combination of these radionuclides. Fissile material means the fissile nuclides themselves, not material containing fissile nuclides. Unirradiated natural uranium and depleted uranium, and natural uranium or depleted uranium that has been irradiated in thermal reactors only are not included in this definition. Certain exclusions from fissile material controls are provided in 10 CFR 71.15

(93) "Fluoroscopic imaging assembly" means a subsystem in which x-ray photons produce a fluoroscopic image. It includes the image receptor(s) such as the image intensifier and spot-film device, electrical interlocks, if any, and structural material providing linkage between the image receptor and diagnostic source assembly.

(94) "Former U.S. Atomic Energy Commission (AEC) or U.S. Nuclear Regulatory Commission (NRC) licensed facilities" means nuclear reactors, nuclear fuel reprocessing plants, uranium enrichment plants, or critical mass experimental facilities where AEC or NRC licenses have been terminated.

(95) "Gantry" means that part of a radiation therapy system supporting and allowing movements of the radiation head about a center of rotation.

(96) "General purpose radiographic x-ray system" means any radiographic x-ray system which, by design, is not limited to radiographic examination of specific anatomical regions.

(97) "Generally applicable environmental radiation standards" means standards issued by the U.S. Environmental Protection Agency (EPA) under the authority of the Atomic Energy Act of 1954, as amended, that impose limits on radiation exposures or levels, or concentrations or quantities of radioactive material, in the general environment outside the boundaries of locations under the control of persons possessing or using radioactive material.

(98) "Gonad or gonadal shield" means a protective barrier for the ovaries or testes.

(99) "Gray" (Gy) means the SI unit of absorbed dose. One gray is equal to an absorbed dose of 1 joule per kilogram. One gray is equal to 100 rads.

(100) "Half-value layer (HVL)" means the thickness of specified material which, when introduced into the beam of a given path of radiation, reduces the exposure rate by one-half. In this definition, the contribution of all scattered radiation, other than any which might be present initially in the beam concerned, is deemed to be excluded.

(101) "Hazardous waste" means those wastes designated as hazardous by U.S. Environmental Protection Agency regulations in 40 CFR Part 261.

(102) "High radiation area" means an area, accessible to individuals, in which radiation levels could result in an individual receiving a dose equivalent in excess of 1 mSv (0.1 rem) in 1 hour at 30 centimeters (12 inches) from any source of radiation or from any surface that the radiation penetrates. For the purposes of this Code, rooms or areas in which diagnostic x-ray systems are used for healing arts purposes are not considered high radiation areas.

(103) "Human use" [see "Medical use"].

(104) "Image receptor" means any device, such as a fluorescent input phosphor or radiographic film, which transforms incident x-ray photons either into a visible image or into another form which can be made into a visible image by further transformation.

(105) "Individual" means any human being.

(106) "Individual monitoring" means the assessment of:

(i) dose equivalent

(A) by the use of individual monitoring devices, or

(B) by the use of survey data; or

(ii) committed effective dose equivalent

(A) by bioassay, or

(B) by determination of the time-weighted air concentrations to which an individual has been exposed, that is, DAC-hours.

(107) "Individual monitoring devices" means devices designed to be worn by a single individual for the assessment of dose equivalent. For purposes of this Code, "personnel dosimeter" and "dosimeter" are equivalent terms. Examples of individual monitoring devices are film badges, thermoluminescent dosimeters (TLDs), pocket ionization chambers, and personal air sampling devices.

(108) "Inhalation class" [see "Class"].

(109) "Inherent filtration" means the filtration of the useful beam provided by the permanently installed components of the tube housing assembly.

(110) "Inspection" means an official examination or observation including, but not limited to, tests, surveys, and monitoring to determine compliance with rules, regulations, orders, requirements, and conditions of the Department.

(111) "Interlock" means a device arranged or connected such that the occurrence of an event or condition is

required before a second event or condition can occur or continue to occur.

(112) "Internal dose" means that portion of the dose equivalent received from radioactive material taken into the body.

(113) "Kilo electron volt (keV)" means the energy equal to that acquired by a particle with one electron charge in passing through a potential difference of one thousand volts in a vacuum.

(114) "Kilovolt peak (kVp)" means the maximum value in kilovolts of the potential difference of a pulsating generator. When only one-half of the wave is used, the value refers to the useful half of the wave.

(115) "Lead equivalent" means the thickness of lead affording the same attenuation, under specified conditions, as the material in question.

(116) "Leakage radiation" means radiation emanating from the diagnostic source assembly except for:

(i) the useful beam, and

(ii) radiation produced when the exposure switch or timer is not activated.

(117) "Leakage technique factors" means the technique factors associated with the diagnostic or therapeutic source assembly which are used in measuring leakage radiation. They are defined as follows:

(i) for diagnostic source assemblies intended for capacitor energy storage equipment, the maximum-rated peak tube potential and the maximum-rated number of exposures in an hour for operation at the maximum-rated peak tube potential with the quantity of charge per exposure being 10 millicoulombs, **i.e.,** 10 milliampere seconds, or the minimum obtainable from the unit, whichever is larger.

(ii) for diagnostic source assemblies intended for field emission equipment rated for pulsed operation, the maximum-rated peak tube potential and the maximum-rated number of x-ray pulses in an hour for operation at the maximum-rated peak tube potential.

(iii) for all other diagnostic or therapeutic source assemblies, the maximum-rated peak tube potential and the maximum-rated continuous tube current for the maximum-rated peak tube potential.

(118) "License" means a radioactive materials license issued by the Department for the transfer, receipt, production, possession or use of radioactive materials pursuant to this Code. There are two types of licenses: general and specific. A "general license" means a license to transfer, receive, possess, or use radioactive material in certain forms or quantities which is issued pursuant to the terms and conditions of this Code. General licenses are effective without the filing of an application with or the issuance of a license document by the Department. A "specific license" means a license evidenced by a license document issued by the Department to a licensee upon review and approval of an application submitted pursuant to this Code or a license similarly issued by the New York State Department of Health, the New York State Department of Labor, the U.S. Nuclear Regulatory Commission or any agreement state. Unless otherwise specified, the type of license referred to in this Code shall be a specific license.

(119) "Licensed material" means byproduct, source, or special nuclear material received, possessed, produced, used, transferred or disposed of under a general or specific license issued by the Department or any radioactive material which is subject to the licensure requirement of this Code.

(120) "Licensee" means any person who is licensed by the Department in accordance with this Code or any person who possesses radioactive material which is subject to the licensure requirements of this Code.

(121) "Limits" [See "Dose limits"].

(122) "Light field" means the area illuminated by visible light, simulating the radiation field.

(123) "Linear accelerator" [See "Accelerator"]. For the purposes of this Code, "linac" is an equivalent term.

(124) "Line-voltage regulation" means the difference between the no-load line potentials expressed as a percent of the load line potential; that is,

Percent line-voltage regulation = 100 ($\mathbf{V}_n$ - $\mathbf{V}_1$)

$\mathbf{V}_1$

where:

V_n = No-load line potential and

V_1 = Line load potential.

(125) "Lost or missing licensed material" means licensed radioactive material whose location is unknown. This definition includes licensed material that has been shipped but has not reached its planned destination and whose location cannot be readily traced in the transportation system.

(126) "Low specific activity (LSA) material" means radioactive material with limited specific activity which is nonfissile or is excepted under §175.105(b)(2) that satisfies the descriptions and limits set forth below. Shielding materials surrounding the LSA material may not be considered in determining the estimated average specific activity of the package contents. LSA material must be in one of three groups:

(1) LSA-I.

(i) Uranium and thorium ores, concentrates of uranium and thorium ores, and other ores containing naturally occurring radioactive radionuclides that are not intended to be processed for the use of these radionuclides; or

(ii) Solid unirradiated natural uranium or depleted uranium or natural thorium or their solid or liquid compounds or mixtures; or

(iii) Radioactive material, other than fissile material, for which the A_2 value is unlimited; or

(iv) Mill tailings, contaminated earth, concerete, rubble, other debris, and activated material in which the radioactive material is essentially uniformly distributed, and the average specific activity does not exceed 10^{-6} A_2/g.

(2) **LSA-II.**

(i) Water with tritium concentration up to 0.8 TBq/liter (20.0 Ci/liter); or

(ii) Material in which the radioactive material is essentially uniformly distributed, and the average specific activity does not exceed 10^{-4} A_2/g for solids and gases, and 10^{-5} A_2/g for liquids.

(3) **LSA-III.** Solids (e.g., consolidated wastes, activated materials) excluding powders, that satisfy the requirements of §71.77 in which:

(i) The radioactive material is essentially uniformly distributed throughout a solid or a collection of solid objects, or is essentially uniformly distributed in a solid compact binding agent (such as concrete, bitumen, ceramic, etc.);

(ii) The radioactive material is relatively insoluble, or it is intrinsically contained in a relatively insoluble material, so that, even under loss of packaging, the loss of radioactive material per package by leaching, when placed in water for

7 days, would not exceed 0.1 A_2; and

(iii) The estimated average specific activity of the solid does not exceed 2×10^{-3} A_2/g.

(127) "Lung class" [see "Class"].

(128) "Major processor" means a user processing, handling, or manufacturing radioactive material exceeding Type A quantities as unsealed sources or material, or exceeding 4 times Type B quantities as sealed sources, but does not include nuclear medicine programs, universities, industrial radiographers, or small industrial programs.

(129) "Management" means the chief executive officer or that individual's designee or designees.

(130) "Maximum line current" means the root-mean-square current in the supply line of an x-ray machine operating at its maximum rating.

(131) "Medical institution" means a facility as defined in Article 28 of the New York State Public Health Law.

(132) "Medical misadministration" means the administration of:

(i) a radiopharmaceutical, radiobiologic or radiation from a source other than the one ordered;

(ii) a radiopharmaceutical, radiobiologic or radiation to the wrong person;

(iii) a radiopharmaceutical, radiobiologic or radiation by a route of administration, or to a part of the body, other than that in the order of the prescribing physician;

(iv) an activity of a diagnostic radiopharmaceutical or radiobiologic differing from the prescribed activity by more than 50 percent;

(v) an activity of a therapeutic radiopharmaceutical or radiobiologic differing from the prescribed activity by more than 10 percent;

(vi) a therapeutic radiation dose from any source other than a radiopharmaceutical, radiobiologic or brachytherapy source such that errors in computation, calibration, time of exposure, treatment geometry or equipment malfunction result in a calculated total treatment dose differing from the final prescribed total treatment dose ordered by more than 10 percent;

(vii) a therapeutic radiation dose from a brachytherapy source such that errors in computation, calibration, treatment time, source activity, source placement or equipment malfunction result in a calculated total treatment dose differing from the final total treatment dose ordered by more than 10 percent; or

(viii) a therapeutic radiation dose in any fraction of a fractionated treatment such that the administered dose in the individual treatment or fraction differs from the dose ordered for that individual treatment or fraction by more than 50 percent.

(133) "Medical use" means the intentional internal or external administration of radiation to humans in the practice of the healing arts in accordance with a license issued by a State or Territory of the United States, the District of Columbia, or the Commonwealth of Puerto Rico. For the purposes of this Code, "human use" is an equivalent term.

(134) "Mega electron volt (MeV)" means the energy equal to that acquired by a particle with one electron charge passing through a potential difference of one million volts in a vacuum.

(135) "Member of the public" means any individual, except when that individual is receiving an occupational dose.

(136) "Minor" means an individual less than 18 years of age.

(137) "Monitor unit" means a unit response from the beam monitoring system from which the absorbed dose can be calculated. For the purposes of this Code, "Dose monitor unit" is an equivalent term.

(138) "Monitoring" means the measurement of radiation, radioactive material concentrations, surface area activities or quantities of radioactive material and the use of the results of these measurements to evaluate potential exposures and doses. For purposes of this Code, "radiation monitoring" and "radiation protection monitoring" are equivalent terms.

(139) "NARM" means any naturally occurring or accelerator-produced radioactive material. It does not include byproduct, source, or special nuclear material.

(140) "Natural radioactivity" means radioactivity of naturally occurring nuclides.

(141) "Nonstochastic effect" means a health effect, the severity of which varies with the dose and for which a threshold is believed to exist. Radiation-induced cataract formation is an example of a nonstochastic effect. For purposes of this Code, "deterministic effect" is an equivalent term.

(142) "Normal form radioactive material" means radioactive material which has not been demonstrated to qualify as special form radioactive material.

(143) "Nuclear Regulatory Commission" (NRC) means the U.S. Nuclear Regulatory Commission or its duly authorized representatives.

(144) "Occupational dose" means the dose received by an individual in the course of employment in which the individual's assigned duties involve exposure to radiation or to radioactive material from licensed and unlicensed sources of radiation, whether in the possession of the licensee, registrant, or other person. Occupational dose does not include doses received from background radiation, from any medical administration the individual has received, from exposure to individuals administered radioactive material and released under §175.103(c)(9), from voluntary participation in medical research programs, or as a member of the public.

(145) "Operator" means any person conducting the business or activities carried on within a radiation installation or having by law the administrative control of a radiation source whether as owner, lessee, contractor, user or otherwise.

(146) "Output" means the exposure rate, dose rate, or a quantity related in a known manner to these rates of ionizing radiation from an external beam therapy unit for a specified set of exposure conditions.

(147) "Package" means the packaging together with its radioactive contents as presented for transport.

(i) "Fissile material package" or Type AF package, Type BF package, Type B(U)F package, or Type B(M)F package means a fissile material packaging together with its fissile material contents.

(2) Type A package means a Type A packaging together with its radioactive contents. A Type A package is defined and must comply with DOT regulations in 49 CFR Part 173.

(ii) "Type B package" means a Type B packaging together with its radioactive contents. On approval by the NRC, a Type B package design is designated by NRC as B(U) unless the package has a maximum normal operating pressure of more than 700 kPa (100 lb/in^2) gauge or a pressure relief device that would allow the release of radioactive material to the environment under the tests specified in 10 CFR 71.73 (hypothetical accident conditions), in which case it will receive a designation B(M). B(U) refers to the need for unilateral approval of international shipments; B(M) refers to the need for multilateral approval of international shipments. There is no distinction made in how packages with these designations may be used in domestic transportation. To determine their distinction for international transportation, see

USDOT regulations in 49 CFR Part 173. A Type B package approved before September 6, 1983, was designated only as Type B. Limitations on its use are specified in 10 CFR 71.13.

(148) "Packaging" means the assembly of components necessary to ensure compliance with the packaging requirements of 10 CFR Part 71. It may consist of one or more receptacles, absorbent materials, spacing structures, thermal insulation, radiation shielding, and devices for cooling or absorbing mechanical shocks. The vehicle, tie-down system, and auxiliary equipment may be designated as part of the packaging.

(149) "Particle accelerator" [See "Accelerator"].

(150) "Peak tube potential" means the maximum value of the potential difference across the x-ray tube during an exposure.

(151) "Person" means any individual, corporation, partnership, firm, association, trust, estate, public or private institution, group, agency, public authority or political subdivision of this State, any other State of the United States or political subdivision or agency thereof, and any legal successor, representative, agent or agency of the foregoing, but shall not include federal government agencies.

(152) "Personnel monitoring equipment" [See "Individual monitoring devices"].

(153) "Phantom" means an object behaving in essentially the same manner as tissue with respect to absorption or scattering of the ionizing radiation in question.

(154) "Planned special exposure" means an infrequent exposure to radiation, separate from and in addition to the annual occupational dose limits.

(155) "Position indicating device (PID)" means a device on dental x-ray equipment used to indicate the beam position and to establish a definite source-surface (skin) distance.

(156) "Positive collimating device" means a device which is permanently affixed to the x-ray tube housing and is intended to confine the emerging x-ray beam to the image receptor or area of clinical interest, whichever is smaller.

(157) "Primary protective barrier" [See "Protective barrier "].

(158) "Probabilistic effect" [See "Stochastic effect"].

(159) "Professional practice" means the practice of medicine, dentistry, podiatry, osteopathy, chiropractic or veterinary medicine.

(160) "Professional practitioner" means any person licensed or otherwise authorized under the New York State Education Law to practice a professional practice.

(161) "Protective apron" means an apron made of radiation attenuating material(s), used to reduce radiation exposure.

(162) "Protective barrier" means a barrier of radiation absorbing material(s) used to reduce radiation exposure. The types of protective barriers are as follows:

(i) "Primary protective barrier" means the material, excluding filters, placed in the useful beam, for protection purposes, to reduce the radiation exposure.

(ii) "Secondary protective barrier" means a barrier sufficient to attenuate the stray radiation to the required degree.

(163) "Protective glove" means a glove made of radiation attenuating material(s) used to reduce radiation exposure.

(164) "Public dose" means the dose received by a member of the public from exposure to sources of radiation. It does not include occupational dose, dose received from background radiation, exposure to individuals administered radioactive material and released under §175.103(c)(9), dose received as a patient from medical practices, or dose from voluntary participation in medical research programs.

(165) "Pyrophoric liquid" means any liquid that ignites spontaneously in dry or moist air at or below 54.4°C (130°F). A pyrophoric solid is any solid material, other than one classed as an explosive, which under normal conditions is liable to cause fires through friction, retained heat from manufacturing or processing, or which can be ignited readily and, when ignited, burns so vigorously and persistently as to create a serious transportation, handling, or disposal hazard. Included are spontaneously combustible and water-reactive materials.

(166) "Qualified expert" means an individual having the knowledge and training to measure ionizing radiation, to evaluate safety techniques, and to advise regarding radiation protection needs, **e.g.,** individuals certified in the appropriate field by the American Board of Radiology or the American Board of Health Physics, or those having equivalent qualifications. With reference to the calibration of radiation therapy equipment, an individual having, in addition to the above qualifications, training and experience in the clinical applications of radiation physics to radiation therapy, **e.g.,** individuals certified by the American Board of Medical Physics or in therapeutic Radiological Physics or X-Ray and Radium Physics by the American Board of Radiology.

(167) "Quality factor" (Q) means the modifying factor that is used to derive dose equivalent from absorbed dose.

(i) As used in this Code, the quality factors for converting absorbed dose to dose equivalent are shown in Table 1.

Table 1

Quality Factors and Absorbed Dose Equivalents

Type of Radiation	Quality Factor (Q)	Absorbed Dose Equal to a Unit Dose Equivalent*	
X, gamma, or beta radiation and high-speed electrons		1	1
Alpha particles, multiple-charged particles, fission fragments and heavy particles of unknown charge		20	0.05
Neutrons of unknown energy		10	0.1
High-energy protons		10	0.1

*Absorbed dose in gray equal to 1 Sv or the absorbed dose in rad equal to 1 rem.

(ii) If it is more convenient to measure the neutron fluence rate than to determine the neutron dose equivalent rate in sievert per hour or rem per hour, as provided in Table 1, 0.01 Sv (1 rem) of neutron radiation of unknown energies may, for purposes of this Code, be assumed to result from a total fluence of 25 million neutrons per square centimeter incident upon the body. If sufficient information exists to estimate the approximate energy distribution of the neutrons, the licensee or registrant may use the fluence rate per unit dose equivalent or the appropriate Q value from Table 2 to convert a measured tissue dose in gray or rad to dose equivalent in sievert or rem.

Table 2

Mean Quality Factors, Q, and Fluence per Unit Dose

Equivalent for Monoenergetic Neutrons

Neutron Energy (MeV)	Quality Factora (Q)	Fluence per Unit Dose Equivalentb (neutrons cm-2 rem-1)	Fluence per Unit Dose Equivalentb (neutrons cm-2 Sv-1)

(thermal)	2.5E-8	2	980E6	980E8
	1E-7	2	980E6	980E8
	1E-6	2	810E6	810E8
	1E-5	2	810E6	810E8
	1E-4	2	840E6	840E8
	1E-3	2	980E6	980E8
	1E-2	2.5	1010E6	1010E8
	1E-1	7.5	170E6	170E8
	5E-1	11	39E6	39E8
	1	11	27E6	27E8
	2.5	9	29E6	29E8
	5	8	23E6	23E8
	7	7	24E6	24E8
	10	6.5	24E6	24E8
	14	7.5	17E6	17E8
	20	8	16E6	16E8
	40	7	14E6	14E8
	60	5.5	16E6	16E8
	1E2	4	20E6	20E8
	2E2	3.5	19E6	19E8
	3E2	3.5	16E6	16E8
	4E2	3.5	14E6	14E8

[a]Value of quality factor (Q) at the point where the dose equivalent is maximum in a 30-centimeter diameter cylinder tissue-equivalent phantom.

[b]Monoenergetic neutrons incident normally on a 30-centimeter diameter cylinder tissue-equivalent phantom.

(168) "Quarter" [See "Calendar quarter"].

(169) "Rad" means the special unit of absorbed dose. One rad is equal to an absorbed dose of 100 ergs per gram or 0.01 joule per kilogram (0.01 gray).

(170) "Radiation" means alpha particles, beta particles, gamma rays, x rays, neutrons, high-speed electrons, high-speed protons, and other particles capable of producing ions. For purposes of this Code, ionizing radiation is an equivalent term. Radiation, as used in this Code, does not include non-ionizing radiation, such as radiowaves or microwaves, visible, infrared, or ultraviolet light.

(171) "Radiation area" means any area, accessible to individuals, in which radiation levels could result in an individual receiving a dose equivalent in excess of 0.05 mSv (0.005 rem) in 1 hour at 30 centimeters (12 inches) from the source of radiation or from any surface that the radiation penetrates.

(172) "Radiation detector" means a device which in the presence of radiation provides a signal or other indication suitable for use in measuring one or more quantities of incident radiation.

(173) "Radiation dose" [See "Dose"].

(174) "Radiation equipment" means any equipment or device which can emit radiation by virtue of the application thereto of high voltage.

(175) "Radiation installation" means any place or facility, including vehicles such as a van or truck, where:

(i) radiation equipment, in operable condition or assembles and intended to be used, is located or used; or

(ii) radioactive material is transferred, received, produced, possessed or used.

Such installation shall include generally a hospital; medical, dental, chiropractic, osteopathic, podiatric, or veterinarian institution, clinic or office; van or truck providing services at non-permanent locations; educational institution; commercial, private or research laboratory performing diagnostic procedures or handling equipment or material for medical use; or any trucking, storage, messenger or delivery service establishment. Radiation installation shall include, whether or not it is specifically stated above, any place, facility or vehicle such as a van or truck where radiation is applied intentionally to a human. The limits of the radiation installation shall be as designated by the operator.

(176) "Radiation machine" means any device capable of producing radiation except those devices with radioactive material as the only source of radiation.

(177) "Radiation safety officer" means an individual who, under the authorization of the operator of a radiation installation, administers a radiation protection program in accordance with §175.03 of this Code and who is qualified by training and experience in radiological health to evaluate the radiation hazards of such installation and administer such radiation protection program.

(178) "Radiation source" means any radioactive material or any radiation equipment.

(179) "Radiation therapy physicist" means the individual identified as the qualified radiation therapy physicist on a Department license or certified registration.

(180) "Radiation therapy simulation system" means a radiographic or fluoroscopic x-ray system intended for localizing the volume to be exposed during radiation therapy and confirming the position and size of the therapeutic irradiation field.

(181) "Radioactive material" means any solid, liquid, or gas which emits radiation spontaneously.

(182) "Radioactive material site" means a location, or contiguous and adjacent locations, under a single license in which radioactive materials are authorized to be received, produced, used, possessed (stored), or transferred and in which a specific use of said radioactive materials may be evaluated by a single set of Departmental inspection criteria concerning the procedures, equipment or shielding utilized by the licensee.

(183) "Radioactivity" means the transformation of unstable atomic nuclei by the emission of radiation.

(184) "Radiobioassay" [See "Bioassay"].

(185) "Rated line voltage" means the range of potentials, in volts, of the supply line specified by the manufacturer at which the x-ray machine is designed to operate.

(186) "Rated output current" means the maximum allowable load current of the x-ray high-voltage generator.

(187) "Rated output voltage" means the allowable peak potential, in volts, at the output terminals of the x-ray high-voltage generator.

(188) "Rating" means the operating limits specified by the manufacturer.

(189) "Recording" means producing a permanent form of an image resulting from x-ray photons (**e.g.,** film, video tape).

(190) "Reference Man" means a hypothetical aggregation of human physical and physiological characteristics determined by international consensus. These characteristics may be used by researchers and public health workers to standardize results of experiments and to relate biological insult to a common base.

(191) "Registrant" means any person who is registered with the Department or who is legally obligated to register with the Department pursuant to this Code.

(192) "Registration" means registration with the Department in accordance with this Code.

(193) "Rem" means the special unit of any of the quantities expressed as dose equivalent. The dose equivalent in rem is equal to the absorbed dose in rad multiplied by the quality factor. One rem is equal to 0.01 sievert.

(194) "Research and development" means:

(i) theoretical analysis, exploration, or experimentation; or

(ii) the extension of investigative findings and theories of a scientific or technical nature into practical application for experimental and demonstration purposes, including the experimental production and testing of models, devices, equipment, materials, and processes.

Research and development does not include the internal or external administration of radiation or radioactive material to human beings.

(195) "Residual radioactivity" means radioactivity in structures, materials, soils, groundwater, and other media at a site resulting from activities under the licensee's control. This includes radioactivity from all licensed and unlicensed sources used by the licensee, but excludes background radiation. It also includes radioactive materials remaining at the site as a result of routine or accidental releases of radioactive material at the site and previous burials at the site, even if those burials were made in accordance with the provisions of 10 CFR Part 20.

(196) "Respiratory protective equipment" means an apparatus, such as a respirator, used to reduce an individual's intake of airborne radioactive materials.

(197) "Response time" means the time required for an instrument system to reach 90 percent of its final reading when the radiation-sensitive volume of the instrument system is exposed to a step change in radiation flux from zero sufficient to provide a steady state midscale reading.

(198) "Restricted area" means an area, access to which is limited by the licensee or registrant for the purpose of protecting individuals against undue risks from exposure to sources of radiation. A restricted area does not include any area used as residential quarters, but separate rooms in a residential building may be set apart as a restricted area.

(199) "Roentgen" means the special unit of exposure. One roentgen (R) equals 2.58E-4 coulomb per kilogram of air (see "Exposure").

(200) "Sanitary sewerage" means a system of public sewers for carrying off waste water and refuse, but excluding sewage treatment facilities, septic tanks, and leach fields owned or operated by the licensee or registrant.

(201) "Scattered radiation" means radiation that, during passage through matter, has been deviated in direction. (The radiation also may have been modified by a decrease in energy.)

(202) "Sealed source" means radioactive material that is permanently bonded or fixed in a capsule or matrix designed to prevent release and dispersal of the radioactive material under the most severe conditions which are likely to be encountered in normal use and handling.

(203) "Secondary protective barrier" [See "Protective barrier"].

(204) "Shallow dose equivalent" (H_S), which applies to the external exposure of the skin of the whole body or the skin of an extremity, means the dose equivalent at a tissue depth of 0.007 centimeter (7 mg/cm^2).

(205) "Shutter" means a device attached to the tube housing assembly which can totally intercept the useful beam and which has a lead equivalency not less than that of the tube housing assembly.

(206) "SI" means the abbreviation for the International System of Units (Systeme Internationale).

(207) "Sievert" means the SI unit of any of the quantities expressed as dose equivalent. The dose equivalent in sievert is equal to the absorbed dose in gray multiplied by the quality factor. One sievert is equal to 100 rem.

(208) "Site boundary" means that line beyond which the land or property is not owned, leased, or otherwise controlled by the licensee or registrant.

(209) "Source" means, for the purposes of radiation equipment, the focal spot of the x-ray tube.

(210) "Source-image receptor distance (SID)" means the distance from the source to the center of the input surface of the image receptor.

(211) "Source material" means:

(i) Uranium or thorium, or any combination thereof, in any physical or chemical form; or

(ii) Ores that contain by weight one-twentieth of 1 percent (0.05 percent) or more of uranium, thorium or any combination of uranium and thorium. Source material does not include special nuclear material.

(212) "Source material milling" means any activity that results in the production of byproduct material as defined in §175.02(a)(29)(ii).

(213) "Source of radiation" means any radioactive material or any device or equipment emitting, or capable of producing, radiation.

(214) "Source-skin distance or source-surface distance (SSD)" means the distance measured along the central ray from the center of the front surface of the source of the x-ray focal spot or sealed radioactive source to the surface of the irradiated object.

(215) "Special form radioactive material" means radioactive material which satisfies the following conditions:

(i) it is either a single solid piece or is contained in a sealed capsule that can be opened only by destroying the capsule;

(ii) the piece or capsule has at least one dimension not less than 5 mm (0.2 inch); and

(iii) it satisfies the requirements of 10 CFR 71.75. A special form encapsulation designed in accordance with the requirements of 10 CFR 71.4 in effect on June 30, 1983, (see 10 CFR Part 71, revised as of January 1, 1983), and constructed prior to July 1, 1985, and a special form encapsulation designed in accordance with the requirements of 10 CFR 71.4 in effect on March 31, 1996, (see 10 CFR Part 71, revised as of January 1, 1983), and constructed before April 1, 1998, may continue to be used. Any other special form encapsulation must meet the specifications of this definition.

(216) "Special nuclear material" means:

(i) Plutonium, uranium-233, uranium enriched in the isotope 233 or in the isotope 235, and any other material that the U.S. Nuclear Regulatory Commission, pursuant to the provisions of section 51 of the Atomic Energy Act of 1954, as amended, determines to be special nuclear material, but does not include source material; or

(ii) Any material artificially enriched by any of the foregoing, but does not include source material.

(217) "Special nuclear material in quantities not sufficient to form a critical mass" means uranium enriched in the isotope U-235 in quantities not exceeding 350 grams of contained U-235; uranium-233 in quantities not exceeding 200 grams; plutonium in quantities not exceeding 200 grams; or any combination of them in accordance with the following formula: For each kind of special nuclear material, determine the ratio between the quantity of that special nuclear material and the quantity specified above for the same kind of special nuclear material. The sum of such ratios for all of the kinds of special nuclear material in combination shall not exceed 1. For example, the following quantities in combination would not exceed the limitation and are within the formula:

$$\frac{\text{175 (grams contained U-235)}}{\text{350}} + \frac{\text{50 (grams U-233)}}{\text{200}} + \frac{\text{50 (grams Pu)}}{\text{200}} = 1$$

(218) "Specific activity" of a radionuclide means the radioactivity of a radionuclide per unit mass of that nuclide. The specific activity of a material in which the radionuclide is essentially uniformly distributed is the radioactivity per unit mass of the material.

(219) "State" means the State of New York, unless the context of this Code clearly indicates that a different meaning is intended.

(220) "Stochastic effect" means a health effect that occurs randomly and for which the probability of the effect occurring, rather than its severity, is assumed to be a linear function of dose without threshold. Hereditary effects and cancer incidence are examples of stochastic effects. For purposes of this Code, "probabilistic effect" is an equivalent term.

(221) "Stray radiation" means the sum of leakage and scattered radiation.

(222) "Supervision" means:

(i) for radioactive materials licenses which do not authorize human use, the training of persons in the use of radioactive materials in other than medical procedures. Such training shall include at least thirty (30) hours of instruction in the principles and practices of radiation protection, radioactivity measurement, standardization and monitoring techniques and instruments, mathematics and calculations basic to the use and measurement of radioactivity, and biological effects of radiation; and

(ii) for radioactive materials licenses which do authorize human use, the training of a physician in the use of radioactive materials in the clinical treatment or diagnosis of disease. Such training shall provide that specified in §175.102(j), as applicable.

(223) "Survey" means an evaluation of the radiological conditions and potential hazards incident to the production, use, transfer, release, disposal, or presence of sources of radiation. When appropriate, such evaluation includes, but is not limited to, tests, physical examinations, and measurements of levels of radiation or concentrations of radioactive material present.

(224) "Technique factors" means the conditions of operation of radiation equipment. They are specified as follows:

(i) For capacitor energy storage equipment, peak tube potential in kV and quantity of charge in mAs.

(ii) For field emission equipment rated for pulsed operation, peak tube potential in kV and number of x-ray pulses.

(iii) For CT x-ray systems designed for pulsed operation, peak tube potential in kV, scan time in seconds, and either tube current in mA, x-ray pulse width in seconds, and the number of x-ray pulses per scan, or the product of tube current, x-ray pulse width, and the number of x-ray pulses in mAs;

(iv) For CT x-ray systems not designed for pulsed operation, peak tube potential in kV, and either tube current in mA and scan time in seconds, or the product of tube current and exposure time in mAs and the scan time when the scan time and exposure time are equivalent; and

(v) For all other equipment, peak tube potential in kV, and either tube current in mA and exposure time in seconds, or the product of tube current and exposure time in mAs.

(225) "Teletherapy" means a method of radiation therapy utilized to deliver a radiation dose in which the source (sources) of radiation is (are) at a distance from the body. For the purposes of this Code "external beam radiation therapy" is an equivalent term.

(226) "Test" means the process of verifying compliance with an applicable regulation.

(227) "Therapeutic-type protective tube housing" means:

(i) for x-ray therapy equipment not capable of operating at 500 kVp or above, the following definition applies: An x-ray tube housing so constructed that the leakage radiation averaged over any 100 cm^2 (15.5 $inches^2$) at a distance of 1 meter (3 feet) from the source does not exceed 2.58 E-4 $C\text{-}kg^{-1}$ (1 roentgen) in an hour when the tube is operated at its maximum rated continuous current for the maximum rated tube potential.

(ii) For x-ray therapy equipment capable of operation at 500 kVp or above, the following definition applies: An x-ray tube housing so constructed that the leakage radiation averaged over an 100 cm^2 (15.5 $inches^2$) area at a distance of 1 meter (3 feet) from the source does not exceed 0.10 percent of the useful beam dose rate at 1 meter (3 feet) from the source for any of its operating conditions.

(228) "This Code" means Article 175 and all other parts of the New York City Health Code applicable to licensees and registrants or other persons subject to the provisions of Article 175.

(229) "Total effective dose equivalent" (TEDE) means the sum of the deep dose equivalent for external exposures and the committed effective dose equivalent for internal exposures.

(230) "Total organ dose equivalent" (TODE) means the sum of the deep dose equivalent and the committed dose equivalent to the organ receiving the highest dose as described in §175.03(k)(7)(i)(F) of this Code.

(231) "Traceable to a national standard" means that a quantity or a measurement has been compared to a national standard directly or indirectly through one or more intermediate steps and that all comparisons have been documented.

(232) "Transport index (TI)" means the dimensionless number, rounded up to the next tenth, placed on the label of a package to designate the degree of control to be exercised by the carrier during transportation. The transport index is determined by multiplying the maximum radiation level in millisievert (mSv) per hour at 1 meter (3.3ft) from the external surface of the package by 100 (equivalent to the maximum radiation level in millirem per hour at 1 meter (3.3 ft)).

(233) "Tube housing assembly" means the tube housing with tube installed. It includes high-voltage and/or filament transformers and other appropriate elements when they are contained within the tube housing.

(234) "Tube rating chart" means the set of curves which specify the rated limits of operation of the tube in terms of

the technique factors.

(235) "Type A package" means a packaging that, together with its radioactive contents limited to A_1 or A_2 as appropriate, meets the requirements of U.S. DOT 49 CFR 173.410 and 173.412 and is designed to retain the integrity of containment and shielding required by this part under normal conditions of transport as demonstrated by the tests set forth in 49 CFR 173.465 or 173.466, as appropriate.

(236) "Type A quantity" means a quantity of radioactive material, the aggregate radioactivity of which does not exceed A_1 for special form radioactive material or A_2 for normal form radioactive material. A_1 and A_2 are given in Appendix A of §175.105 or may be determined by procedures described in such Appendix A.

(237) [Reserved]

(238) [Reserved]

(239) "Type B quantity" means a quantity of radioactive material greater than a Type A quantity.

(240) "U.S. Department of Energy" means the Department of Energy established by Public Law 95-91, August 4, 1977, 91 Stat. 565, 42 U.S.C. 7101 **et seq.,** to the extent that the Department exercises functions formerly vested in the U.S. Atomic Energy Commission, its Chairman, members, officers and components and transferred to the U.S. Energy Research and Development Administration and to the Administrator thereof pursuant to sections 104(b), (c) and (d) of the Energy Reorganization Act of 1974 (Public Law 93-438, October 11, 1974, 88 Stat. 1233 at 1237, 42 U.S.C. 5814, effective January 19, 1975) and retransferred to the Secretary of Energy pursuant to section 301(a) of the Department of Energy Organization Act (Public Law 95-91, August 4, 1977, 91 Stat. 565 at 577-578, 42 U.S.C. 7151, effective October 1, 1977.)

(241) "Unrefined and unprocessed ore" means ore in its natural form prior to any processing, such as grinding, roasting, beneficiating, or refining.

(242) "Unrestricted area" means an area, access to which is not controlled by the licensee or registrant for purposes of radiation protection.

(243) "Use" as used in radioactive materials licenses means to employ or apply radioactive materials for the licensed purpose. It shall include instruction of, and responsibility for, technical and support staff members. It does not include training others in the techniques of use of radioactive materials for the purpose of qualifying for licensure.

In licenses authorizing medical use of radioactive materials, "use" shall also include:

(i) ordering or directing the administration of radiation or radioactive materials to humans, including the method or route of administration;

(ii) actual use of, or direction of technologists or other paramedical personnel in the use of, radioactive material;

(iii) interpretation of results of diagnostic procedures; and

(iv) regular review of the progress of patients receiving therapy and modification of the originally prescribed dose as warranted by the patient's reaction to radiation therapy.

(244) "Useful beam" means the radiation emanating from the tube housing port or the radiation head and passing through the aperture of the beam limiting device when the exposure controls are in a mode to cause the system to produce radiation.

(245) "Variable-aperture beam-limiting device" means a beam-limiting device which has capacity for stepless

adjustment of the x-ray field size at a given SID.

(246) "Very high radiation area" means an area, accessible to individuals, in which radiation levels could result in an individual receiving an absorbed dose in excess of 5 Gy (500 rad) in 1 hour at 1 meter (3 feet) from a source of radiation or from any surface that the radiation penetrates. At very high doses received at high dose rates, units of absorbed dose (gray and rad) are appropriate, rather than units of dose equivalent (sievert and rem).

(247) "Visible area" means that portion of the input surface of the image receptor over which incident x-ray photons produce a visible image.

(248) "Waste" means those low-level radioactive wastes that are acceptable for disposal in a land disposal facility. For the purposes of this definition, low-level waste has the same meaning as in the Low-Level Radioactive Waste Policy Act, P.L. 96-573, as amended by P.L. 99-240, effective January 15, 1986; that is, radioactive waste (a) not classified as high-level radioactive waste, spent nuclear fuel, or byproduct material as defined in Section lle.(2) of the Atomic Energy Act (uranium or thorium tailings and waste) and (b) classified as low-level radioactive waste consistent with existing law and in accordance with (a) by the U.S. Nuclear Regulatory Commission.

(249) "Waste handling licensees" mean persons licensed to receive and store radioactive wastes prior to disposal and/or persons licensed to dispose of radioactive waste.

(250) "Week" means 7 consecutive days starting on Sunday.

(251) "Weighting factor" w_T for an organ or tissue (T) means the proportion of the risk of stochastic effects resulting from irradiation of that organ or tissue to the total risk of stochastic effects when the whole body is irradiated uniformly. For calculating the effective dose equivalent, the values of W_T are:

Organ Dose Weighting Factors

Organ or Tissue	WT
Gonads	0.25
Breast	0.15
Red bone marrow	0.12
Lung	0.12
Thyroid	0.03
Bone surfaces	0.03
Remainder	0.30a
Whole Body	1.00b

[a] 0.30 results from 0.06 for each of 5 "remainder" organs, excluding the skin and the lens of the eye, that receive the highest doses.

[b] For the purpose of weighting the external whole body dose, for adding it to the internal dose, a single weighting factor, $w_T = 1.0$, has been specified. The use of other weighting factors for external exposure will be approved on a case-by-case basis until such time as specific guidance is issued.

(252) "Whole body" means, for purposes of external exposure, head, trunk (including male gonads), arms above the elbow, or legs above the knee.

(253) "Worker" means an individual engaged in work under a license or registration issued by the Department and controlled by a licensee or registrant, but does not include the licensee or registrant.

(254) "Working level" (WL) means any combination of short-lived radon daughters in 1 liter of air that will result in the ultimate emission of 1.3E5 MeV of potential alpha particle energy. The short-lived radon daughters are:

(i) for radon-222: polonium-218, lead-214, bismuth-214, and polonium-214; and

(ii) for radon-220: polonium-216, lead-212, bismuth-212, and polonium-212.

(255) "Working level month" (WLM) means an exposure to 1 working level for 170 hours (2,000 working hours per year divided by 12 months per year is approximately equal to 170 hours per month).

(256) "X-ray control" means a device which controls input power to the x-ray high-voltage generator and/or the x-ray tube. It includes equipment such as timers, phototimers, automatic brightness stabilizers, and similar devices, which control the technique factors of an x-ray exposure.

(257) "X-ray equipment" means an x-ray system, subsystem, or component thereof. Types of x-ray equipment are as follows:

(i) "Mobile x-ray equipment" means x-ray equipment mounted on a permanent base with wheels and/or casters for moving while completely assembled.

(ii) "Portable x-ray equipment" means x-ray equipment designed to be hand carried.

(iii) "Stationary x-ray equipment" means x-ray equipment which is installed in a fixed location.

(258) "X-ray field" means that area of the intersection of the useful beam and any one of the set of planes parallel to and including the plane of the image receptor, whose perimeter is the locus of points at which the exposure rate is one-fourth of the maximum in the intersection.

(259) "X-ray high-voltage generator" means a device which transforms electrical energy from the potential supplied by the x-ray control to the tube operating potential. The device may also include means for transforming alternating current to direct current, filament transformers for the x-ray tube(s), high-voltage switches, electrical protective devices, and other appropriate elements.

(260) "X-ray system" means an assemblage of components for the controlled production of x-rays. It includes minimally an x-ray high-voltage generator, an x-ray control, a tube housing assembly, a beam-limiting device, and the necessary supporting structures. Additional components which function with the system are considered integral parts of the system.

(261) "X-ray subsystem" means any combination of two or more components of an x-ray system for which there are requirements specified in this Article.

(262) "X-ray tube" means any electron tube which is designed for the conversion of electrical energy into x-ray energy. For the purposes of permit fee requirements in Article 5 of this Code, an x-ray tube means any electrical device which produces x-rays of intensity exceeding 1.29 E-4 $C\text{-}kg^{-1}$ (0.5 milliroentgen) per hour when measured 5 centimeters (2 inches) from any accessible surface thereof, and averaged over an area of 10 cm^2 (1.55 square inches).

(263) "Year" means the period of time beginning in January used to determine compliance with the provisions of this Code. The licensee or registrant may change the starting date of the year used to determine compliance by the licensee or registrant provided that the change is made at the beginning of the year and that no day is omitted or duplicated in consecutive years.

Notes:

Paragraphs (141) and (161) of subsection (a) of §175.02 of the New York City Health Code was amended on March 10, 2005 to reflect 10 CFR §20.1003, which provides definitions for 10 CFR Part 20.

Subdivision (a) of §175.02 was amended on September 26, 2006, to modify the definition of "shallow dose equivalent" to ensure compatibility with the revised NRC definition as published in the Federal Register, dated April 5, 2002, titled "Revision of the Skin Dose Limit", 67 FR 16298, that became effective April 5, 2002 (amending 10 CFR §§20.1003; 20.1201).

HISTORICAL NOTE

Section repealed and added City Record June 27, 1994 eff. July 27, 1994.

Notes:

A number of definitions in §175.02(a) in Article 175 of the NYC Health Code were added and/or amended on June 14, 2007 in order to assure compatibility with applicable federal U.S. Nuclear Regulatory Commission regulations on radioactive materials and licenses.

Paragraphs (141) and (161) of subsection (a) of §175.02 of the New York City Health Code was amended on March 10, 2005 to reflect 10 CFR §20.1003, which provides definitions for 10 CFR Part 20.

Subdivision (a) of §175.02 was amended on September 26, 2006, to modify the definition of "shallow dose equivalent" to ensure compatibility with the revised NRC definition as published in the Federal Register, dated April 5, 2002, titled "Revision of the Skin Dose Limit", 67 FR 16298, that became effective April 5, 2002 (amending 10 CFR §§20.1003; 20.1201).

Subdivisions (1), (52), (78), (89), (116), (123), (144), (228) and (231) of subsection (a) were amended and subdivisions (88), (233) and (234) of subsection (a) were repealed April 26, 1999 to conform to definitions in 10 CFR Part 71 to ensure compatibility with the NRC. In addition, the definition of "Licensed Material" was clarified to include radioactive material that requires a license even if one has not been obtained as well as radioactive material that is the subject of a general or specific license.

Subdivisions (45) and (59) of subsection (a) were amended by resolution adopted on December 12, 2002 following amendment of Chapter 22 of the New York City Charter by the electorate in the November 6, 2001 general election,

which merged the Departments of Health and Mental Health, Mental Retardation and Alcoholism Services, and enactment of Local Law of 2002, which further amended the Charter and changed the name of the merged agency to Department of Health and Mental Hygiene, and the Commissioner to Commissioner of the Department of Health and Mental Hygiene.

Paragraphs (141) and (161) of subsection (a) of §175.02 of the New York City Health Code was amended on March 10, 2005 to reflect 10 CFR §20.1003, which provides definitions for 10 CFR Part 20.

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 175.03

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 175 RADIATION CONTROL General Provisions

§175.03 Standards for protection against radiation.

(a) **General provisions.** (1) **Purpose.** (i) This section establishes standards for protection against ionizing radiation resulting from activities conducted pursuant to licenses, certified registrations and/or registrations issued by the Department.

(ii) The requirements of this Code are designed to control the receipt, production, possession, use, transfer, and disposal of sources of radiation by any licensee or registrant so the total dose to an individual, including doses resulting from all sources of radiation other than background radiation, does not exceed the standards for protection against radiation prescribed in this section. However, nothing in this section shall be construed as limiting actions that may be necessary to protect health and safety.

(2) **Scope.** Except as specifically provided otherwise by this Code, this section applies to persons subject to licensure, certified registration or registration by the Department to receive, produce, possess, use, transfer, or dispose

of sources of radiation. The limits in this section do not apply to doses due to background radiation, to exposure of patients to radiation for the purpose of medical diagnosis or therapy, or to voluntary participation in medical research programs.

(3) **Implementation.** (i) Any existing license, certified registration or registration condition that is more restrictive than the provisions in this section remains in force until there is an amendment or renewal of the license, certified registration or registration.

(ii) If a license, certified registration or registration condition exempts a licensee or registrant from a provision of this Code in effect on or before the effective date of this Code, it also exempts the licensee or registrant from the corresponding provision of this section.

(iii) If a license, certified registration or registration condition cites provisions of this Code in effect prior to the effective date of this Code, which do not correspond to any provisions of this section, the license, certified registration or registration condition remains in force until there is an amendment or renewal of the license, certified registration or registration that modifies or removes this condition.

(b) **Radiation protection programs.** (1) **Radiation Protection Programs.** Each person who operates or permits the operation of a radiation installation or who operates, transfers, receives, produces, possesses or uses, or permits the operation, transfer, receipt, production, possession or use of any radiation source shall:

(i) use, to the extent practicable, procedures and engineering controls based upon sound radiation protection principles to achieve occupational doses and public doses that are as low as reasonably achievable (ALARA) below the limits specified in this Code;

(ii) develop, document, and implement a radiation protection program commensurate with the scope and extent of the program and sufficient to ensure compliance with the provisions of this Code;

(iii) provide a radiation safety officer pursuant to §175.03(b)(2) who shall be delegated authority to ensure the implementation of this radiation protection program. For licensed radioactive materials installations the radiation safety officer, or an authorized user designated to act as the radiation safety officer in the radiation safety officer's absence, shall be present on the premises at least 50 percent of the time that radioactive material is being handled or equipment containing radioactive material is being operated;

(iv) provide for a radiation safety committee to administer the radiation protection program in medical centers, hospitals and institutions of higher education. The committee shall include the facility operator or a person with the authority to act on behalf of the facility operator, and representation from departments within the facility where radiation sources are used. The committee shall oversee all uses of radiation-producing equipment and radioactive materials within the facility, shall review the activities of the radiation safety officer, and shall review the radiation safety program at least annually. The committee, or a subcommittee, shall oversee the administration of a quality assurance program as required by §175.03(b)(1)(v);

(v) provide a quality assurance program for diagnostic and therapeutic uses of radiation-producing equipment and radioactive materials pursuant to §175.07 and other applicable provisions of this Code;

(vi) ensure that all personnel involved in planning for or administering radiation doses to humans, or in the use of radiation-producing equipment or radioactive materials for other purposes, are supervised, are instructed as described in §175.04(c) and are competent to safely use such radiation sources and services;

(vii) ensure that radiation equipment is used only for those procedures for which it is designed;

(viii) ensure that acceptance testing, by an individual competent to perform such testing, is performed on all

medical and chiropractic diagnostic equipment and radiation therapy treatment and planning equipment before the first use of such equipment on humans; and

(ix) review the radiation protection program content and implementation at intervals not to exceed twelve months.

(2) **Radiation safety officer.** The radiation safety officer specified in §175.03(b)(1)(iii) shall be:

(i) For human use radiation equipment installations:

(A) a physicist certified by the American Board of Health Physics, the American Board of Radiology or the American Board of Medical Physics in a branch of physics related to the type of use of radiation sources in the installation; or

(B) a person satisfying the radiation safety officer qualifications set forth in §175.103(j) of this Code; or

(C) a professional practitioner as defined in §175.02(a)(157), practicing within such person's professional practice as defined in §175.02(a)(156).

(ii) For human use radiation equipment installations requiring a certified registration pursuant to §175.64:

(A) a physicist certified by the American Board of Health Physics, the American Board of Radiology or the American Board of Medical Physics in a branch of physics related to the type of use of radiation sources in the installation; or

(B) a person satisfying the radiation safety officer qualifications set forth in §175.103(j) of this Code; or

(C) an authorized user named on the facility's certified registration issued by the Department.

(iii) For non-human use radiation equipment installations:

(A) a veterinarian for veterinary installations; or

(B) a physicist certified by the American Board of Health Physics, the American Board of Radiology or the American Board of Medical Physics; or

(C) a person with equivalent training and experience as determined by the Department; or

(D) a researcher determined by the institution as qualified by training and experience for installations using only x-ray diffraction and fluorescence analysis equipment.

(iv) For non-human use radioactive materials installations:

(A) a physicist certified by the American Board of Health Physics, the American Board of Radiology or the American Board of Medical Physics in a branch of physics related to the type and use of radioactive material in the installation; or

(B) a person with equivalent training and experience as determined by the Department; or

(C) an authorized user named on the radioactive materials license issued by the Department.

(c) **Occupational dose limits.** (1) **Occupational dose limits for adults.**

(i) Except for planned special exposures pursuant to §175.03(c)(6), the licensee or registrant shall control the occupational dose to any individual adult from licensed or registered activities to ensure that such dose does not exceed:

(A) an annual limit, which is the lesser of:

(a) a total effective dose equivalent of 0.05 Sv (5 rem); or

(b) the sum of the deep dose equivalent and the committed dose equivalent to any individual organ or tissue, other than the lens of the eye, equal to 0.5 Sv (50 rem); and

(B) annual limits to the lens of the eye, to the skin of the whole body, and to the skin of the extremities of:

(a) an eye dose equivalent of 0.15 Sv (15 rem), and

(b) a shallow dose equivalent of 0.5 Sv (50 rem) to the skin of the whole body or to the skin of any extremity.

(ii) Doses received in excess of the annual limits, including doses received during accidents, emergencies, and planned special exposures, shall be subtracted from the limits for planned special exposures that the individual may receive during the current year and during the individual's lifetime.

(iii) The assigned deep dose equivalent must be for the part of the body receiving the highest exposure. The assigned shallow dose equivalent must be the dose averaged over the contiguous 10 square centimeters of skin receiving the highest exposure:

(A) the deep dose equivalent, eye dose equivalent and shallow dose equivalent may be assessed from surveys or other radiation measurements for the purpose of demonstrating compliance with the occupational dose limits, if the individual monitoring device was not in the region of highest potential exposure, or the results of individual monitoring are unavailable; or

(B) when a protective apron is worn during x-ray fluoroscopic procedures to be in compliance with §175.62(i) of this Code and monitoring is conducted as specified in §175.03(f)(2)(ii), the effective dose equivalent for external radiation may be determined for these individuals as follows:

(a) when only one individual monitoring device is used and it is located at the neck outside the protective apron, the reported deep dose equivalent value multiplied by 0.3 shall be the effective dose equivalent for external radiation; or

(b) when individual monitoring devices are worn, both under the protective apron at the waist and outside the protective apron at the neck, the effective dose equivalent for external radiation shall be assigned the value of the sum of the deep dose equivalent reported for the individual monitoring device located at the waist under the protective apron multiplied by 1.5 and the deep dose equivalent reported for the individual monitoring device located at the neck outside the protective apron multiplied by 0.04.

(iv) Derived air concentration (DAC) and annual limit on intake (ALI) values are presented in Table 1 of Appendix B of this section and may be used to determine the individual's dose and to demonstrate compliance with the occupational dose limits.

(v) Notwithstanding the annual dose limits, the licensee shall limit the soluble uranium intake by an individual to 10 milligrams in a week.

(vi) The licensee or registrant shall reduce the dose that an individual may be allowed to receive in the current year by the amount of occupational dose received while employed by any other person.

(2) **Requirements for summation of external and internal doses.** (i) If the licensee or registrant is required to monitor pursuant to both §175.03(f)(2)(i) and (v), the licensee or registrant shall demonstrate compliance with the dose limits by summing external and internal doses. If the licensee or registrant is required to monitor only pursuant to §175.03(f)(2)(i) or only pursuant to §175.03(f)(2)(v), then summation is not required to demonstrate compliance with

the dose limits. The licensee or registrant may demonstrate compliance with the requirements for summation of external and internal doses pursuant to §175.03(c)(2)(ii), (iii) and (iv). The dose equivalents for the lens of the eye, the skin, and the extremities are not included in the summation, but are subject to separate limits.

(ii) **Intake by inhalation.** If the only intake of radionuclides is by inhalation, the total effective dose equivalent limit is not exceeded if the sum of the deep dose equivalent divided by the total effective dose equivalent limit, and one of the following, does not exceed unity:

(A) the sum of the fractions of the inhalation ALI for each radionuclide, or

(B) the total number of derived air concentration-hours (DAC-hours) for all radionuclides divided by 2,000, or

(C) the sum of the calculated committed effective dose equivalents to all significantly irradiated organs or tissues (T) calculated from bioassay data using appropriate biological models and expressed as a fraction of the annual limit. For purposes of this requirement, an organ or tissue is deemed to be significantly irradiated if, for that organ or tissue, the product of the weighting factors, w_T, and the committed dose equivalent, $H_{T,50}$, per unit intake is greater than 10 percent of the maximum weighted value of H_{50}, that is, $w_T H_{T,50}$, per unit intake for any organ or tissue.

(iii) **Intake by oral ingestion.** If the occupationally exposed individual also receives an intake of radionuclides by oral ingestion greater than 10 percent of the applicable oral ALI, the licensee or registrant shall account for this intake and include it in demonstrating compliance with the limits.

(iv) **Intake through wounds or absorption through skin.** The licensee or registrant shall evaluate and account for intakes through wounds or skin absorption. The intake through intact skin has been included in the calculation of DAC for hydrogen-3 and does not need to be evaluated or accounted for separately pursuant to §175.03(c)(2)(iv).

(3) **Determination of external dose from airborne radioactive material.**

(i) Licensees, when determining the dose from airborne radioactive material, shall include the contribution to the deep dose equivalent, eye dose equivalent, and shallow dose equivalent from external exposure to the radioactive cloud. (See Appendix B of this section, footnotes 1 and 2.)

(ii) Airborne radioactivity measurements and DAC values shall not be used as the primary means to assess the deep dose equivalent when the airborne radioactive material includes radionuclides other than noble gases or if the cloud of airborne radioactive material is not relatively uniform. The determination of the deep dose equivalent to an individual shall be based upon measurements using instruments or individual monitoring devices.

(4) **Determination of internal exposure.** (i) For purposes of assessing dose used to determine compliance with occupational dose equivalent limits, the licensee shall, when required pursuant to §175.03(f)(2) take suitable and timely measurements of:

(A) concentrations of radioactive materials in air in work areas; or

(B) quantities of radionuclides in the body; or

(C) quantities of radionuclides excreted from the body; or

(D) combinations of these measurements.

(ii) Unless respiratory protective equipment is used, as provided in §175.03(h)(3), or the assessment of intake is based on bioassays, the licensee shall assume that an individual inhales radioactive material at the airborne concentration in which the individual is present.

(iii) When specific information on the physical and biochemical properties of the radionuclides taken into the body or the behavior of the material in an individual is known, the licensee may:

(A) use that information to calculate the committed effective dose equivalent, and, if used, the licensee or registrant shall document that information in the individual's record; and

(B) upon prior approval of the Department, adjust the DAC or ALI values to reflect the actual physical and chemical characteristics of airborne radioactive material, for example, aerosol size distribution or density; and

(C) separately assess the contribution of fractional intakes of Class D, W, or Y compounds of a given radionuclide to the committed effective dose equivalent. (See Appendix B of this section.)

(iv) If the licensee chooses to assess intakes of Class Y material using the measurements given in §175.03(c)(4)(i)(B) or (C), the licensee may delay the recording and reporting of the assessments for periods up to 7 months, unless otherwise required by §175.03(l)(2) or (3). This delay permits the licensee to make additional measurements basic to the assessments.

(v) If the identity and concentration of each radionuclide in a mixture are known, the fraction of the DAC applicable to the mixture for use in calculating DAC-hours shall be either:

(A) the sum of the ratios of the concentration to the appropriate DAC value, that is, D, W, or Y, from Appendix B for each radionuclide in the mixture; or

(B) the ratio of the total concentration for all radionuclides in the mixture to the most restrictive DAC value for any radionuclide in the mixture.

(vi) If the identity of each radionuclide in a mixture is known, but the concentration of one or more of the radionuclides in the mixture is not known, the DAC for the mixture shall be the most restrictive DAC of any radionuclide in the mixture.

(vii) When a mixture of radionuclides in air exists, a licensee may disregard certain radionuclides in the mixture if:

(A) the licensee uses the total activity of the mixture in demonstrating compliance with the dose limits in §175.03(c) and in complying with the monitoring requirements in §175.03(f)(2)(v), and

(B) the concentration of any radionuclide disregarded is less than 10 percent of its DAC, and

(C) the sum of these percentages for all of the radionuclides disregarded in the mixture does not exceed 30 percent.

(viii) When determining the committed effective dose equivalent, the following information may be considered:

(A) In order to calculate the committed effective dose equivalent, the licensee or registrant may assume that the inhalation of one ALI, or an exposure of 2,000 DAC-hours, results in a committed effective dose equivalent of 0.05 Sv (5 rem) for radionuclides that have their ALIs or DACs based on the committed effective dose equivalent.

(B) For an ALI and the associated DAC determined by the nonstochastic organ dose limit of 0.5 Sv (50 rem), the intake of radionuclides that would result in a committed effective dose equivalent of 0.05 Sv (5 rem), that is, the stochastic ALI, is listed in parentheses in Table 1 of Appendix B of this section. The licensee may, as a simplifying assumption, use the stochastic ALI to determine committed effective dose equivalent. However, if the licensee or registrant uses the stochastic ALI, the licensee or registrant shall also demonstrate that the limit in §175.03(c)(1)(i)(A) is met.

(5) **Determination of prior occupational dose.** (i) For each individual who may enter the licensee's or registrant's

restricted area and is likely to receive, in a year, an occupational dose requiring monitoring pursuant to §175.03(f)(2), the licensee or registrant shall:

(A) determine the occupational radiation dose received during the current year; and

(B) request, in writing, the records of lifetime cumulative occupational radiation dose.

(ii) Prior to permitting an individual to participate in a planned special exposure, the licensee or registrant shall determine:

(A) the internal and external doses from all previous planned special exposures; and

(B) all doses in excess of the limits, including doses received during accidents and emergencies, received during the lifetime of the individual; and

(C) all lifetime cumulative occupational radiation doses.

(iii) In complying with the requirements of §175.03(c)(5)(i), a licensee or registrant may:

(A) accept, as a record of the occupational dose that the individual received during the current year, a written signed statement from the individual, or from the individual's most recent employer for work involving radiation exposure, that discloses the nature and the amount of any occupational dose that the individual received during the current year; and

(B) accept, as the record of lifetime cumulative radiation dose, an up-to-date form RAD-4, "Cumulative Occupational Radiation Exposure History," or equivalent, signed by the individual and countersigned by an appropriate official of the most recent employer for work involving radiation exposure, or the individual's current employer, if the individual is not employed by the licensee or registrant; and

(C) obtain reports of the individual's dose equivalent from the most recent employer for work involving radiation exposure, or the individual's current employer, if the individual is not employed by the licensee or registrant, by telephone, telegram, facsimile, or letter. The licensee or registrant shall request a written verification of the dose data if the authenticity of the transmitted report cannot be established.

(iv) (A) The licensee or registrant shall record the exposure history, as required by §175.03(d)(5)(i), on form RAD-4, "Cumulative Occupational Radiation Exposure History," or other clear and legible record, of all the information required on that form. The form or record shall show each period in which the individual received occupational exposure to radiation or radioactive material and shall be signed by the individual who received the exposure. For each period for which the licensee or registrant obtains reports, the licensee or registrant shall use the dose shown in the report in preparing form RAD-4 or equivalent. For any period in which the licensee or registrant does not obtain a report, the licensee or registrant shall place a notation on form RAD-4 or equivalent indicating the periods of time for which data are not available.

(B) Licensees or registrants are not required to reevaluate the separate external dose equivalents and internal committed dose equivalents or intakes of radionuclides assessed pursuant to this Code in effect before January 1, 1994. Further, occupational exposure histories obtained and recorded on form RAD-4 or equivalent before the effective date of this Code, would not have included effective dose equivalent, but may be used in the absence of specific information on the intake of radionuclides by the individual.

(v) If the licensee or registrant is unable to obtain a complete record of an individual's current and previously accumulated occupational dose, the licensee or registrant:

(A) in establishing administrative controls pursuant to §175.03(c)(1) for the current year, shall assume that the

allowable dose limit for the individual is reduced by 12.5 mSv (1.25 rem) for each quarter for which records were unavailable and the individual was engaged in activities that could have resulted in occupational radiation exposure; and

(B) shall not authorize the individual to receive any planned special exposures.

(vi) The licensee or registrant shall retain the records on form RAD-4, "Cumulative Occupational Radiation Exposure History," or equivalent until the Department authorizes their disposition. The licensee or registrant shall retain records used in preparing form RAD-4 or equivalent for 3 years after the record is made.

(6) **Planned special exposures.** A licensee or registrant may authorize an adult worker to receive doses in addition to, and accounted for separately from, the doses received under the limits specified in §175.03(c)(1) provided that each of the following conditions is satisfied:

(i) The licensee or registrant authorizes a planned special exposure only in an exceptional situation when alternatives that might avoid the higher exposure are unavailable or impractical.

(ii) Before the exposure occurs, the licensee or registrant, and employer if the employer is not the licensee or registrant, specifically authorizes the planned special exposure in writing.

(iii) Before a planned special exposure, the licensee or registrant ensures that each individual involved is:

(A) informed of the purpose of the planned operation; and

(B) informed of the estimated doses and associated potential risks and specific radiation levels or other conditions that might be involved in performing the task; and

(C) instructed in the measures to be taken to keep the dose ALARA considering other risks that may be present.

(iv) Prior to permitting an individual to participate in a planned special exposure, the licensee or registrant shall ascertain prior doses as required by §175.03(c)(5)(ii) during the lifetime of the individual for each individual involved.

(v) Subject to §175.03(c)(1)(ii), the licensee or registrant shall not authorize a planned special exposure that would cause an individual to receive a dose from all planned special exposures and all doses in excess of the limits to exceed:

(A) the numerical values of any of the dose limits in §175.03(c)(1)(i) in any year; and

(B) five times the annual dose limits in §175.03(c)(1)(i) during the individual's lifetime.

(vi) The licensee or registrant maintains records of the conduct of a planned special exposure in accordance with §175.03(k)(7) and submits a written report in accordance with §175.03(l)(4).

(vii) The licensee or registrant records the best estimate of the dose resulting from the planned special exposure in the individual's record and informs the individual, in writing, of the dose within 30 days from the date of the planned special exposure. The dose from planned special exposures shall not be considered in controlling future occupational dose of the individual pursuant to §175.03(c)(1)(i) but shall be included in evaluations required by §175.03(c)(6)(iv) and (v).

(7) **Occupational dose limits for minors.** The annual occupational dose limits for minors are 10 percent of the annual occupational dose limits specified for adult workers in §175.03(c)(1).

(8) **Dose to an embryo/fetus.** (i) The licensee or registrant shall ensure that the dose to an embryo/fetus during the entire pregnancy, due to occupational exposure of a declared pregnant woman, does not exceed 5 mSv (0.5 rem). (See §175.03(k)(8) for recordkeeping requirements.)

(ii) The licensee or registrant shall review exposure history and adjust working conditions so as to avoid a monthly exposure of more than 0.5 mSv (50 mrem) to a declared pregnant woman.

(iii) The dose to an embryo/fetus shall be taken as the sum of:

(A) the deep dose equivalent to the declared pregnant woman; and

(B) the dose to the embryo/fetus from radionuclides in the embryo/fetus and radionuclides in the declared pregnant woman.

(iv) If, by the time the woman declares pregnancy to the licensee or registrant, the dose to the embryo/fetus has exceeded 4.5 mSv (0.45 rem), the licensee or registrant shall be deemed to be in compliance with §175.03(c)(8)(i) if the additional dose to the embryo/fetus does not exceed 0.5 mSv (0.05 rem) during the remainder of the pregnancy.

(d) **Radiation dose limits for individual members of the public.**

(1) **Dose limits for individual members of the public.** (i) Each licensee or registrant shall conduct operations so that:

(A) the dose in any unrestricted area from external sources does not exceed 0.02 mSv (0.002 rem) in any one hour; and

(B) the total effective dose equivalent to individual members of the public from the licensed or registered operation, exclusive of the dose contribution from the licensee's or registrant's disposal of radioactive material into sanitary sewerage in accordance with §175.104 of this Code, does not exceed 1 mSv (0.1 rem) in a year.

(ii) Notwithstanding the provisions of §175.03(d)(1)(i)(B), where structural modification to the physical plant or equipment is required to meet the 1 mSv (0.1 rem) per year limit at facilities with radiation equipment installed before the effective date of these requirements and neither the use nor the physical components or structure of the facility are changed after the effective date of these requirements, the total effective dose equivalent to a member of the general public shall not exceed 5 mSv (0.5 rem) in a year. However, any such change occurring after the effective date of these requirements shall require the licensee or registrant to comply with the provisions of §175.03(d)(1)(i)(B).

(iii) The Department may impose additional restrictions on radiation levels in any unrestricted area and on the total quantity of radionuclides that a licensee may release in effluents in order to assure that the limits set forth in this Code are not exceeded.

(2) **Compliance with dose limits for individual members of the public.**

(i) The licensee or registrant shall make or cause to be made surveys of radiation levels in unrestricted areas and radioactive materials in effluents released to unrestricted areas to demonstrate compliance with the dose limits for individual members of the public in §175.03(d)(1).

(ii) A licensee or registrant shall show compliance with the annual dose limit in §175.03(d)(1) by:

(A) demonstrating by measurement or calculation that the total effective dose equivalent to the individual likely to receive the highest dose from the licensed or registered operation does not exceed the annual dose limit; or

(B) demonstrating that:

(a) the annual average concentrations of radioactive material released in gaseous and liquid effluents at the boundary of the unrestricted area do not exceed the values specified in Table 2 of Appendix B of this section; and

(b) if an individual were continually present in an unrestricted area, the dose from external sources would not exceed 0.02 mSv (0.002 rem) in an hour and 0.5 mSv (0.05 rem) in a year.

(iii) Upon approval from the Department, the licensee or registrant may adjust the effluent concentration values in Table 2, Appendix B of this section, for members of the public, to take into account the actual physical and chemical characteristics of the effluents, such as, aerosol size distribution, solubility, density, radioactive decay equilibrium, and chemical form.

(e) **Testing for leakage or contamination of sealed sources.**

(1) **Testing for leakage or contamination of sealed sources.** (i) The licensee or registrant in possession of any sealed source shall assure that:

(A) each sealed source, except as specified in §175.03(e)(1)(ii), is tested for leakage or contamination and the test results are received before the sealed source is put into use unless the licensee or registrant has a certificate from the transferor indicating that the sealed source was tested within 6 months before transfer to the licensee or registrant; and

(B) each sealed source that is not designed to emit alpha particles is tested for leakage or contamination at intervals not to exceed 6 months; and

(C) each sealed source that is designed to emit alpha particles is tested for leakage or contamination at intervals not to exceed 3 months; and

(D) for each sealed source that is required to be tested for leakage or contamination, at any other time there is reason to suspect that the sealed source might have been damaged or might be leaking, the licensee or registrant shall assure that the sealed source is tested for leakage or contamination before further use; and

(E) tests for leakage for all sealed sources, except brachytherapy sources manufactured to contain radium, shall be capable of detecting the presence of 185 Bq (0.005 mCi) of radioactive material on a test sample. Test samples shall be taken from the sealed source or from the surfaces of the container in which the sealed source is stored or mounted on which one might expect contamination to accumulate. For a sealed source contained in a device, test samples are obtained when the source is in the "off" position; and

(F) the test for leakage for brachytherapy sources manufactured to contain radium shall be capable of detecting an absolute leakage rate of 37 Bq (0.001 mCi) of radon-222 in a 24 hour period when the collection efficiency for radon-222 and its daughters has been determined with respect to collection method, volume and time; and

(G) tests for contamination from radium daughters shall be taken on the interior surface of brachytherapy source storage containers and shall be capable of detecting the presence of 185 Bq (0.005 mCi) of a radium daughter which has a half-life greater than four (4) days; and

(H) the test for leakage for sealed sources containing iodine-125 shall be capable of detecting an absolute leakage rate of 185 Bq (0.005 mCi) in a 24 hour period.

(ii) A licensee or registrant need not perform tests for leakage or contamination on the following:

(A) sealed sources containing only radioactive material with a half-life of less than 30 days; (B) sealed sources containing only radioactive material as a gas;

(C) sealed sources containing 3.7 MBq (100 mCi) or less of beta or photon-emitting material or 370 kBq (10 mCi) or less of alpha-emitting material;

(D) sealed sources containing only hydrogen-3;

(E) seeds of iridium-192 encased in nylon ribbon; and

(F) sealed sources, except teletherapy and brachytherapy sources, which are stored, not being used and identified as in storage. The licensee or registrant shall, however, test each such sealed source for leakage or contamination and receive the test results before any use or transfer unless it has been tested for leakage or contamination within 6 months before the date of use or transfer.

(iii) Tests for leakage or contamination from sealed sources shall be performed by persons specifically authorized by the Department to perform such services.

(iv) Test results shall be kept in units of becquerels (or microcuries) and maintained for inspection by the Department.

(v) The following shall be considered evidence that a sealed source is leaking:

(A) The presence of 185 Bq (0.005 mCi) or more of removable contamination on any test sample.

(B) Leakage of 37 Bq (0.001 mCi) of radon-222 per 24 hours for brachytherapy sources manufactured to contain radium.

(C) The presence of removable contamination resulting from the decay of 185 Bq (0.005 mCi) or more of radium.

(D) Leakage of 185 Bq (0.005 mCi) of iodine-125 per 24 hours for sealed sources containing iodine-125.

(vi) The licensee or registrant shall immediately withdraw a leaking sealed source from use and shall take action to prevent the spread of contamination. The leaking sealed source shall be repaired or disposed of in accordance with this Code.

(vii) Reports of test results for leaking or contaminated sealed sources shall be made pursuant to §175.03(l)(7).

(f) **Surveys and monitoring.** (1) **General.** (i) Each licensee or registrant shall make, or cause to be made, surveys that:

(A) are necessary for the licensee or registrant to comply with this Code; and

(B) are necessary under the circumstances to evaluate:

(a) radiation levels; and

(b) concentrations or quantities of radioactive material; and

(c) the potential radiological hazards that could be present.

(ii) The licensee or registrant shall ensure that instruments and equipment used for quantitative radiation measurements, for example, dose rate and effluent monitoring, are calibrated at intervals not to exceed 12 months for the radiation measured.

(2) **Personnel monitoring.** (i) **External radiation sources.** Each person who possesses any radiation source shall supply and require the proper use of appropriate, calibrated and operable individual monitoring devices by:

(A) adults likely to receive, in 1 year from sources external to the body, a dose in excess of 10 percent of the limits in §175.03(c)(1)(i) and

(B) minors and declared pregnant women likely to receive, in 1 year from sources external to the body, a dose in

excess of 10 percent of any of the applicable limits in §175.03(c)(7) or §175.03(c)(8); and

(C) individuals entering a high or very high radiation area.

(ii) A person supplying personnel monitoring devices to individuals pursuant to §175.03(f)(2)(i) shall ensure that the individuals wear such devices as follows:

(A) An individual monitoring device used for monitoring the dose to the whole body shall be worn at the unshielded location of the whole body likely to receive the highest exposure.

(B) An individual monitoring device used for monitoring the dose to an embryo/fetus of a declared pregnant woman pursuant to §175.03(c)(8) shall be located at the waist under any protective apron worn by the woman.

(C) An individual monitoring device used for monitoring the eye dose equivalent shall be located at the neck outside any protective apron worn by the individual, or at an unshielded location closer to the eye.

(D) An individual monitoring device used for monitoring the dose to the extremities shall be worn on the extremity likely to receive the highest exposure. The device shall be oriented to measure the highest dose to the extremity being monitored.

(iii) All personnel dosimeters, except for direct and indirect reading pocket ionization chambers and those dosimeters used to measure the dose to any extremity, that require processing to determine the radiation dose and that are used by licensees and registrants to comply with §175.03(c)(1), with other applicable provisions of this Code, or with conditions specified in a license, certified registration or registration shall be processed and evaluated by a dosimetry processor:

(A) holding current personnel dosimetry accreditation from the National Voluntary Laboratory Accreditation Program (NVLAP) of the National Institute of Standards and Technology; and

(B) approved in this accreditation process for the type of radiation or radiations included in the NVLAP program that most closely approximates the type of radiation or radiations for which the individual wearing the dosimeter is monitored.

(iv) The licensee or registrant shall ensure that adequate precautions are taken to prevent a deceptive exposure of an individual monitoring device.

(A) No licensee or registrant shall remove an exposure from an individual's exposure record without prior authorization from the Department.

(v) Each licensee or registrant shall monitor, to determine compliance with §175.03(c)(4), the occupational intake of radioactive material by and assess the committed effective dose equivalent to:

(A) adults likely to receive, in 1 year, an intake in excess of 10 percent of the applicable ALI in Table 1, Columns 1 and 2, of Appendix B of this section; and

(B) minors and declared pregnant women likely to receive, in 1 year, a committed effective dose equivalent in excess of 0.5 mSv (0.05 rem).

(vi) The licensee or registrant shall submit the dosimeter for processing with due diligence and in no event in excess of the time period specified by the manufacturer of the dosimeter.

(g) **Control of exposure from external sources in restricted areas.** (1) **Control of access to high radiation areas.** (i) The licensee or registrant shall ensure that each entrance or access point to a high radiation area has one or

more of the following features:

(A) a control device that, upon entry into the area, causes the level of radiation to be reduced below that level at which an individual might receive a deep dose equivalent of 1 mSv (0.1 rem) in 1 hour at 30 cm (12 in.) from the source of radiation or from any surface that the radiation penetrates; or

(B) a control device that energizes a conspicuous visible or audible alarm signal so that the individual entering the high radiation area and the supervisor of the activity are made aware of the entry; or

(C) entryways that are locked, except during periods when access to the areas is required, with positive control over each individual entry.

(ii) In place of the controls required by §175.03(g)(1)(i) for a high radiation area, the licensee or registrant may substitute continuous direct or electronic surveillance that is capable of preventing unauthorized entry.

(iii) The licensee or registrant may apply to the Department for approval of alternative methods for controlling access to high radiation areas.

(iv) The licensee or registrant shall establish the controls required by §175.03(g)(1)(i), (ii) or (iii) in a way that does not prevent individuals from leaving a high radiation area.

(v) The licensee or registrant is not required to control each entrance or access point to a room or other area that is a high radiation area solely because of the presence of radioactive materials prepared for transport and packaged and labeled in accordance with the regulations of the U.S. Department of Transportation provided that:

(A) the packages do not remain in the area longer than 3 days; and

(B) the dose rate at 1 m (3 ft) from the external surface of any package does not exceed 0.1 mSv (0.01 rem) per hour.

(vi) The licensee or registrant is not required to control entrance or access to rooms or other areas in hospitals solely because of the presence of patients containing radioactive material, provided that there are personnel in attendance who are taking the necessary precautions to prevent the exposure of individuals to radiation or radioactive material in excess of the established limits in this section and to operate within the ALARA provisions of the licensee's or registrant's radiation protection program.

(vii) The registrant is not required to control entrance or access to rooms or other areas containing sources of radiation capable of producing a high radiation area as described in §175.03(g)(1) if the registrant has met all the specific requirements for access and control specified in other applicable sections of this Code.

(2) **Control of access to very high radiation areas.** (i) In addition to the requirements in §175.03(g)(1), the licensee or registrant shall institute measures to ensure that an individual is not able to gain unauthorized or inadvertent access to areas in which radiation levels could be encountered at 5 Gy (500 rad) or more in 1 hour at 1 m (3 ft) from a source of radiation or any surface through which the radiation penetrates. This requirement does not apply to rooms or areas in which diagnostic x-ray systems are the only source of radiation, or to non-self-shielded irradiators.

(ii) The registrant is not required to control entrance or access to rooms or other areas containing sources of radiation capable of producing a very high radiation area as described in §175.03(g)(2)(i) if the registrant has met all the specific requirements for access and control specified in other applicable sections of this Code.

(3) **Control of access to very high radiation areas-irradiators.** (i) This subdivision applies to licensees or registrants with sources of radiation in non-self-shielded irradiators. Section 175.03(g)(3) does not apply to sources of radiation that are used in teletherapy, in industrial radiography, or in completely self-shielded irradiators in which the

source of radiation is both stored and operated within the same shielding radiation barrier and, in the designed configuration of the irradiator, is always physically inaccessible to any individual and cannot create high levels of radiation in an area that is accessible to any individual.

(ii) Each area in which there may exist radiation levels in excess of 5 Gy (500 rad) in 1 hour at 1 m (3 ft) from a source of radiation that is used to irradiate materials shall meet the following requirements:

(A) Each entrance or access point shall be equipped with entry control devices which: **(a)** function automatically to prevent any individual from inadvertently entering a very high radiation area; and

(b) permit deliberate entry into the area only after a control device is actuated that causes the radiation level within the area, from the source of radiation, to be reduced below that at which it would be possible for an individual to receive a deep dose equivalent in excess of 1 mSv (0.1 rem) in 1 hour; and

(c) prevent operation of the source of radiation if it would produce radiation levels in the area that could result in a deep dose equivalent to an individual in excess of 1 mSv (0.1 rem) in 1 hour.

(B) Additional control devices shall be provided so that, upon failure of the entry control devices to function as required by §175.03(g)(3)(ii)(A):

(a) the radiation level within the area, from the source of radiation, is reduced below that at which it would be possible for an individual to receive a deep dose equivalent in excess of 1 mSv (0.1 rem) in 1 hour; and

(b) conspicuous visible and audible alarm signals are generated to make an individual attempting to enter the area aware of the hazard and at least one other authorized individual, who is physically present, familiar with the activity, and prepared to render or summon assistance, aware of the failure of the entry control devices.

(C) The licensee or registrant shall provide control devices so that, upon failure or removal of physical radiation barriers other than the sealed source's shielded storage container:

(a) the radiation level from the source of radiation is reduced below that at which it would be possible for an individual to receive a deep dose equivalent in excess of 1 mSv (0.1 rem) in 1 hour; and

(b) conspicuous visible and audible alarm signals are generated to make potentially affected individuals aware of the hazard and the licensee or registrant or at least one other individual, who is familiar with the activity and prepared to render or summon assistance, aware of the failure or removal of the physical barrier.

(D) When the shield for stored sealed sources is a liquid, the licensee or registrant shall provide means to monitor the integrity of the shield and to signal, automatically, loss of adequate shielding.

(E) Physical radiation barriers that comprise permanent structural components, such as walls, that have no credible probability of failure or removal in ordinary circumstances need not meet the requirements of §175.03(g)(3)(ii)(C) and (D).

(F) Each area shall be equipped with devices that will automatically generate conspicuous visible and audible alarm signals to alert personnel in the area before the source of radiation can be put into operation and in time for any individual in the area to operate a clearly identified control device, which must be installed in the area and which can prevent the source of radiation from being put into operation.

(G) Each area shall be controlled by use of such administrative procedures and such devices as are necessary to ensure that the area is cleared of personnel prior to each use of the source of radiation.

(H) Each area shall be checked by a radiation measurement to ensure that, prior to the first individual's entry into

the area after any use of the source of radiation, the radiation level from the source of radiation in the area is below that at which it would be possible for an individual to receive a deep dose equivalent in excess of 1 mSv (0.1 rem) in 1 hour.

(I) The entry control devices required in §175.03(g)(3)(ii)(A) shall be tested for proper functioning. (See §175.03(k)(10) for recordkeeping requirements.)

(a) Testing shall be conducted prior to initial operation with the source of radiation on any day, unless operations were continued uninterrupted from the previous day; and

(b) testing shall be conducted prior to resumption of operation of the source of radiation after any unintentional interruption; and

(c) the licensee or registrant shall submit and adhere to a schedule for periodic tests of the entry control and warning systems.

(J) The licensee or registrant shall not conduct operations, other than those necessary to place the source of radiation in safe condition or to effect repairs on controls, unless control devices are functioning properly.

(K) Entry and exit portals that are used in transporting materials to and from the irradiation area, and that are not intended for use by individuals, shall be controlled by such devices and administrative procedures as are necessary to physically protect and warn against inadvertent entry by any individual through these portals. Exit portals for irradiated materials shall be equipped to detect and signal the presence of any loose radioactive material that is carried toward such an exit and automatically to prevent loose radioactive material from being carried out of the area.

(iii) Licensees, registrants, or applicants for licenses or registrations for sources of radiation within the purview of §175.03(g)(3)(ii) which will be used in a variety of positions or in locations, such as open fields or forests, that make it impracticable to comply with certain requirements of §175.03(g)(3)(ii), such as those for the automatic control of radiation levels, may apply to the Department for approval of alternative safety measures. Alternative safety measures shall provide personnel protection at least equivalent to those specified in §175.03(g)(3)(ii). At least one of the alternative measures shall include an entry-preventing interlock control based on a measurement of the radiation that ensures the absence of high radiation levels before an individual can gain access to the area where such sources of radiation are used.

(iv) The entry control devices required by §175.03(g)(3)(ii) and (iii) shall be established in such a way that no individual will be prevented from leaving the area.

(h) **Respiratory protection and controls to restrict internal exposure in restricted areas.** (1) **Use of process or other engineering controls.** The licensee or registrant shall use to the extent practicable, process or other engineering controls, such as containment, decontamination, or ventilation, to control the concentrations of radioactive material in air.

(2) Use of other controls. When it is not practicable to apply process or other engineering controls to control the concentrations of radioactive material in air to values below those that define an airborne radioactivity area, the licensee or registrant shall, consistent with maintaining the total effective dose equivalent ALARA, increase monitoring and limit intakes by one or more of the following means:

(i) control of access; or

(ii) limitation of exposure times; or

(iii) use of respiratory protection equipment; or

(iv) other controls.

If the licensee performs an ALARA analysis to determine whether or not respirators should be used, the licensee may consider safety factors other than radiological factors. The licensee should also consider the impact of respirator use on workers' industrial health and safety.

(3) Use of individual respiratory protection equipment. (i) If the licensee or registrant uses respiratory protection equipment to limit intakes pursuant to §175.03(h)(2):

(A) except as provided in §175.03(h)(3)(i)(B), the licensee or registrant shall use only respiratory protection equipment that is tested and certified or had certification extended by the National Institute for Occupational Safety and Health and the Mine Safety and Health Administration.

(B) If the licensee or registrant wishes to use equipment that has not been tested or certified by the National Institute for Occupational Safety and Health and the Mine Safety and Health Administration or has not had certification extended by the National Institute for Occupational Safety and Health and the Mine Safety and Health Administration, or for which there is no schedule for testing or certification, the licensee or registrant shall submit an application to the Department for authorized use of that equipment. The application must include a demonstration by licensee testing or a demonstration on the basis of reliable test information, that the material and performance characteristics of the equipment are capable of providing the proposed degree of protection under anticipated conditions of use.

(C) The licensee or registrant shall implement and maintain a respiratory protection program that includes:

(a) air sampling sufficient to identify the potential hazard, permit proper equipment selection, and estimate doses; and

(b) surveys and bioassays, as necessary, to evaluate actual intakes; and

(c) testing of respirators for operability (user seal check for face sealing devices and functional check for others) immediately prior to each use; and

(d) written procedures regarding respirator selection; fit testing; inventory and control, storage, issuance; maintenance, repair and testing of respirators, including testing for operability immediately prior to each use; supervision and training of respirator users; monitoring, including air sampling and bioassays, and breathing air quality; and quality assurance and recordkeeping; and

(e) determination by a physician that the individual user is medically fit to use the respiratory protection equipment prior to initial fitting of a face sealing respirator; before the first field use of non-face sealing respirators and either every 12 months thereafter, or periodically at a frequency determined by a physician.

(f) Fit testing, with a fit factor 10 times the APF for negative pressure devices, and a fit factor greater than or equal to 500 for any positive pressure, continuous flow, and pressure demand devices, before the first field use of tight fitting, face sealing respirators and periodically thereafter at a frequency of at least once per year. Fit testing must be performed with the face-piece operating in the negative pressure mode.

(D) The licensee or registrant shall issue a written policy statement on respirator usage covering:

(a) the use of process or other engineering controls, instead of respirators; and

(b) the routine, nonroutine, and emergency use of respirators; and

(c) limitations on periods of respirator use and relief from respirator use.

(E) The licensee or registrant shall advise each respirator user that the user may leave the area at any time for relief from respirator use in the event of equipment malfunction, physical or psychological distress, procedural or

communication failure, significant deterioration of operating conditions, or any other conditions that might require such relief.

(F) The licensee or registrant shall use respiratory protection equipment within the equipment manufacturer's expressed limitations for type and mode of use. When selecting respiratory devices, the licensee shall provide for low temperature work environments, and the concurrent use of other safety or radiological protection equipment or skin protection, when needed. The licensee shall use equipment in such a way as not to interfere with the proper operation of the respirator.

(ii) When estimating exposure of individuals to airborne radioactive materials, the licensee or registrant may make allowance for respiratory protection equipment used to limit intakes pursuant to §175.03(h)(2), provided that the following conditions, in addition to those in §175.03(h)(3)(i), are satisfied:

(A) the licensee or registrant selects respiratory protection equipment that provides a protection factor, specified in Appendix A of this section, greater than the multiple by which peak concentrations of airborne radioactive materials in the working area are expected to exceed the values specified in Table 1, Column 3 of Appendix B of this section. However, if the selection of respiratory protection equipment with a protection factor greater than this multiple of peak concentration is inconsistent with the goal specified in §175.03(h)(2) of keeping the total effective dose equivalent ALARA, the licensee or registrant may select respiratory protection equipment with a lower protection factor provided that such a selection would result in a total effective dose equivalent that is ALARA. In estimating the dose to individuals from intake of airborne radioactive materials, the concentration of radioactive material in the air that is inhaled when respirators are worn is initially assumed to be the ambient concentration in air without respiratory protection, divided by the assigned protection factor. If the dose is later found to be greater than the initially estimated dose, the corrected value must be used. If the dose is later found to be less than the initially estimated dose, the corrected value may be used.

(B) The licensee or registrant shall obtain authorization from the Department before using assigned protection factors in excess of those specified in Appendix A of this section. The Department may authorize a licensee or registrant to use higher protection factors on receipt of an application that:

(a) describes the situation for which a need exists for higher protection factors, and

(b) demonstrates that the respiratory protection equipment provides these higher protection factors under the proposed conditions of use.

(iii) In an emergency, the licensee or registrant shall use as emergency equipment only respiratory protection equipment that has been specifically certified or had certification extended for emergency use by the National Institute for Occupational Safety and Health and the Mine Safety and Health Administration.

(iv) The licensee or registrant shall notify the Department in writing at least 30 days before the date that respiratory protection equipment is first used pursuant to either §175.03(h)(3)(i) or (ii).

(4) **Further restrictions on the use of respiratory protection equipment.** The Department may impose restrictions, in addition to those in §175.03(h)(2), §175.03(h)(3) and in Appendix A to §175.03 to:

(i) ensure that the respiratory protection program of the licensee is adequate to limit doses to individuals from intakes of airborne radioactive materials consistent with maintaining total effective dose equivalent ALARA; and

(ii) limit the extent to which a licensee may use respiratory protection equipment instead of process or other engineering controls.

(i) **Storage and control of licensed or registered sources of radiation.** (1) **Security of stored sources of**

radiation. The licensee or registrant shall secure from unauthorized removal or access licensed or registered sources of radiation that are stored in unrestricted areas.

(2) Radioactive materials shall not be stored with either food or beverages.

(3) Control of sources of radiation not in storage.

(i) The licensee or registrant shall control and maintain constant surveillance of licensed radioactive material that is in an unrestricted area and that is not in storage or in a patient.

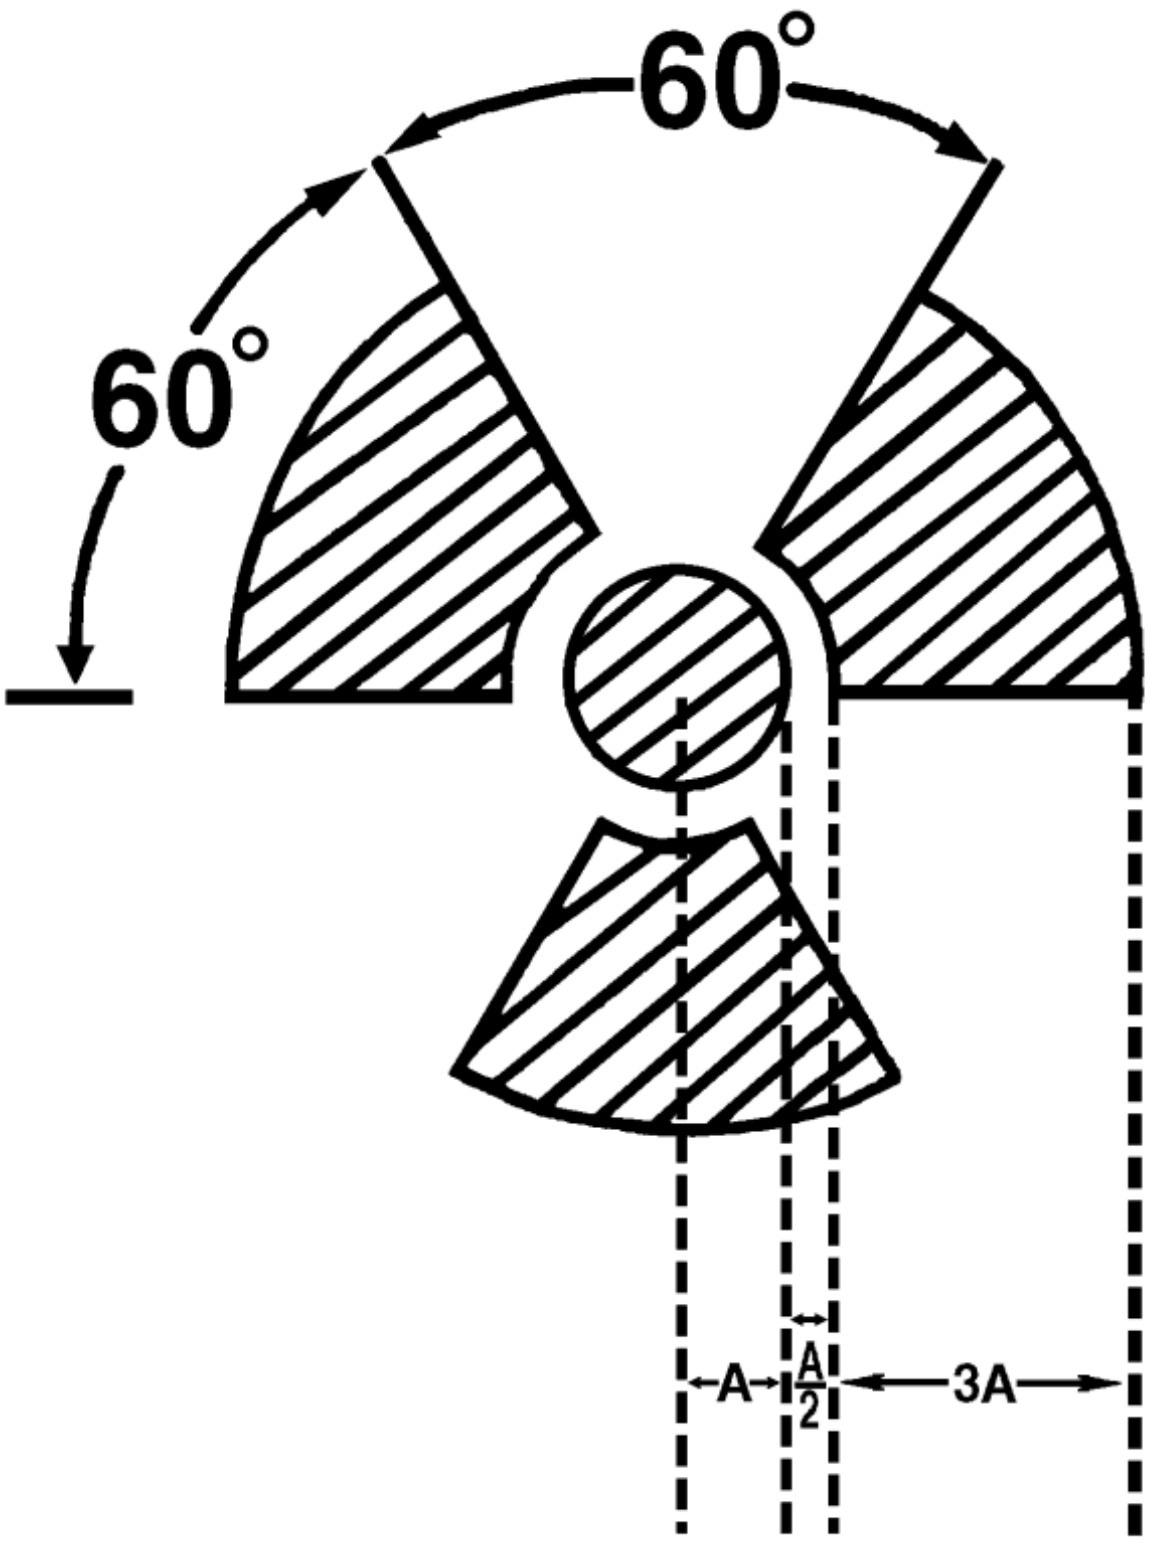
(ii) The registrant shall maintain control of radiation machines that are in an unrestricted area and that are not in storage.

(j) **Precautionary procedures.** (1) **Caution Signs.** (i) Standard radiation symbol. Unless otherwise authorized by the Department, the symbol prescribed herein shall use the colors magenta, or purple, or black on yellow background. The symbol prescribed is the three-bladed design as follows:

RADIATION SYMBOL

(A) Cross-hatched area is to be magenta, or purple, or black, and

(B) the background is to be yellow.



(ii) **Exception to color requirements for standard radiation symbol.** Notwithstanding the requirements of

§175.03(j)(1)(i), licensees or registrants are authorized to label sources, source holders, or device components containing sources of radiation that are subjected to high temperatures, with conspicuously etched or stamped radiation caution symbols and without a color requirement.

(iii) **Additional information on signs and labels.** In addition to the contents of signs and labels prescribed in this section, the licensee or registrant shall provide, on or near the required signs and labels, additional information, as appropriate, to make individuals aware of potential radiation exposures and to minimize the exposures.

(2) Posting requirements. (i) **Posting of radiation areas.** The licensee or registrant shall post each radiation area with a conspicuous sign or signs bearing the radiation symbol and the words "CAUTION, RADIATION AREA."

(ii) **Posting of high radiation areas.** The licensee or registrant shall post each high radiation area with a conspicuous sign or signs bearing the radiation symbol and the words "CAUTION, HIGH RADIATION AREA" or "DANGER, HIGH RADIATION AREA."

(iii) **Posting of very high radiation areas.** The licensee or registrant shall post each very high radiation area with a conspicuous sign or signs bearing the radiation symbol and words "GRAVE DANGER, VERY HIGH RADIATION AREA."

(iv) **Posting of airborne radioactivity areas.** The licensee or registrant shall post each airborne radioactivity area with a conspicuous sign or signs bearing the radiation symbol and the words "CAUTION, AIRBORNE RADIOACTIVITY AREA" or "DANGER, AIRBORNE RADIOACTIVITY AREA."

(v) **Posting of areas or rooms in which licensed radioactive material is used or stored.** The licensee shall post each area or room in which there is used or stored an amount of licensed material exceeding 10 times the quantity of such material specified in Appendix C of this section with a conspicuous sign or signs bearing the radiation symbol and the words "CAUTION, RADIOACTIVE MATERIAL(S)" or "DANGER, RADIOACTIVE MATERIAL(S)."

(vi) Such cautionary postings shall not be used except as required by this Code.

(3) **Exceptions to posting requirements.** (i) A licensee or registrant is not required to post caution signs in areas or rooms containing sources of radiation for periods of less than 8 hours, if each of the following conditions is met:

(A) the sources of radiation are constantly attended during these periods by an individual who takes the precautions necessary to prevent the exposure of individuals to sources of radiation in excess of the limits established in this section; and

(B) the area or room is subject to the licensee's or registrant's control.

(ii) Rooms or other areas in hospitals that are occupied by patients are not required to be posted with caution signs pursuant to §175.03(j)(2) provided that the patient could be released from confinement pursuant to §175.103(c)(9) of this Code.

(iii) A room or area is not required to be posted with a caution sign because of the presence of a sealed source provided the radiation level at 30 cm (12 in.) from the surface of the sealed source container or housing does not exceed 0.05 mSv (0.005 rem) per hour.

(iv) A room or area is not required to be posted with a caution sign because of the presence of radiation machines used solely for diagnosis in the healing arts.

(4) **Labeling containers and radiation machines.** (i) The licensee or registrant shall ensure that each container of licensed radioactive material bears a durable, clearly visible label bearing the radiation symbol and the words "CAUTION, RADIOACTIVE MATERIAL" or "DANGER, RADIOACTIVE MATERIAL." The label shall also

provide information, such as the radionuclides present, an estimate of the quantity of radioactivity, the date for which the activity is estimated, radiation levels, kinds of materials, and mass enrichment, to permit individuals handling or using the containers, or working in the vicinity of the containers, to take precautions to avoid or minimize exposures.

(ii) Each licensee shall, prior to removal or disposal of empty uncontaminated containers to unrestricted areas, remove or deface the radioactive material label or otherwise clearly indicate that the container no longer contains radioactive materials.

(iii) Each registrant shall ensure that each radiation machine is labeled in a conspicuous manner which cautions individuals that radiation is produced when it is ener- gized.

(iv) Such cautionary labels shall not be used except as required by this Code.

(5) **Exemptions to labeling requirements.** A licensee or registrant is not required to label: (i) containers holding licensed radioactive material in quantities less than the quantities listed in Appendix C of this section; or

(ii) containers holding licensed radioactive material in concentrations less than those specified in Table 3 of Appendix B of this section; or

(iii) containers attended by an individual who takes the precautions necessary to prevent the exposure of individuals in excess of the limits established by this section; or

(iv) containers when they are in transport and packaged and labeled in accordance with the regulations of the U.S. Department of Transportation; or

(v) containers that are accessible only to individuals authorized to handle or use them, or to work in the vicinity of the containers, if the contents are identified to these individuals by a readily available written record. Examples of containers of this type are containers in locations such as water-filled canals, storage vaults, or hot cells. The record shall be retained as long as the containers are in use for the purpose indicated on the record; or

(vi) installed manufacturing or process equipment, such as piping and tanks.

(6) **Procedures for receiving and opening packages.** (i) Each licensee who expects to receive a package containing quantities of radioactive material in excess of a Type A quantity, as defined in §175.02(a)(232) and Appendix A of §175.105 of this Code, shall make arrangements to receive:

(A) the package when the carrier offers it for delivery; or

(B) notification of the arrival of the package at the carrier's terminal and to take possession of the package expeditiously.

(ii) Each licensee shall:

(A) monitor the external surfaces of a package labeled with a U.S. Department of Transportation specified radioactive White I, Yellow II or Yellow III label for radioactive contamination unless the package contains only radioactive material in the form of gas or in special form as defined in §175.02(a)(211) of this Code; and

(B) monitor the external surfaces of a package labeled with a U.S. Department of Transportation specified radioactive White I, Yellow II or Yellow III label for radiation levels unless the package contains quantities of radioactive material that are less than or equal to the Type A quantity, as defined in §175.02(a)(232) and Appendix A of §175.105 of this Code; and

(C) monitor all packages known to contain radioactive material for radioactive contamination and radiation levels

if there is evidence of degradation of package integrity, such as packages that are crushed, wet, or damaged.

(iii) The licensee or registrant shall perform the monitoring required by §175.03 (j)(6)(ii) as soon as practicable after receipt of the package, but not later than 3 hours after the package is received at the licensee's or registrant's facility if it is received during the licensee's or registrant's normal working hours, or not later than 3 hours from the beginning of the next working day if it is received after working hours.

(iv) The licensee or registrant shall immediately notify the final delivery carrier and, by telephone and telegram, mailgram, or facsimile, the Department when:

(A) removable radioactive surface contamination exceeds the limits specified in §175.105 of the Code; or

(B) external radiation levels exceed the limits specified in §175.105 of this Code.

(v) Each licensee or registrant shall:

(A) establish, maintain, and retain written procedures for safely opening packages in which radioactive material is received; and

(B) ensure that the procedures are followed and that due consideration is given to special instructions for the type of package being opened.

(vi) Licensees or registrants transferring special form sources in vehicles owned or operated by the licensee or registrant to and from a work site are exempt from the contamination monitoring requirements of §175.03(j)(6)(ii), but are not exempt from the monitoring requirement in §175.03(j)(6)(ii)(B) for measuring radiation levels that ensures that the source is still properly lodged in its shield.

(k) **Records.** (1) **General provisions.** (i) Each licensee or registrant shall use SI units (becquerel, gray, sievert and coulomb per kilogram) or special units (curie, rad, rem and roentgen) including multiples and subdivisions, and shall clearly indicate the units of all quantities on records required by this Code.

(ii) The licensee or registrant shall make a clear distinction between the quantities entered on the records required by this section, such as, total effective dose equivalent, total organ dose equivalent, shallow dose equivalent, eye dose equivalent, deep dose equivalent, or committed effective dose equivalent.

(2) **Records of radiation protection programs.** (i) Each licensee or registrant shall maintain records of the radiation protection program, including:

(A) the provisions of the program; and

(B) audits and other reviews of program content and implementation.

(ii) The licensee or registrant shall retain the records required by §175.03(k)(2)(i)(A) until the Department terminates each pertinent license, certified registration or registration requiring the record. The licensee or registrant shall retain the records required by §175.03(k)(2)(i)(B) for 3 years after the record is made.

(3) **Records of receipt, use and disposition of radioactive material.** (i) Each licensee shall maintain records of the receipt, use and disposition of radioactive material in units of becquerels or microcuries and shall include from whom such materials were received and the ultimate disposition.

(ii) The licensee shall retain the records required by §175.03(k)(3)(i) for 3 years after the record is made.

(4) **Records of surveys.** (i) Each licensee or registrant shall maintain records showing the results of surveys and

calibrations required by §175.03(f) and §175.03(j)(6)(ii). The licensee or registrant shall retain these records for 3 years after the record is made.

(ii) The licensee or registrant shall retain each of the following records until the Department authorizes the disposition of these records:

(A) records of the results of surveys to determine the dose from external sources of radiation used, in the absence of or in combination with individual monitoring data, in the assessment of individual dose equivalents; and

(B) records of the results of measurements and calculations used to determine individual intakes of radioactive material and used in the assessment of internal dose; and

(C) records showing the results of air sampling, surveys, and bioassays required pursuant to §175.03(h)(3)(i)(C)**(a)** and **(b)**; and

(D) records of the results of measurements and calculations used to evaluate the release of radioactive effluents to the environment.

(5) **Records of tests for leakage or contamination of sealed sources.** Records of tests for leakage or contamination of sealed sources required by §175.03(e)(1) shall be kept in units of becquerel or microcurie and maintained for inspection by the Department for 5 years after the records are made.

(6) **Records of prior occupational dose.** (i) The licensee or registrant shall retain the records of prior occupational dose and exposure history as specified in §175.03(c)(5) on form RAD-4, "Cumulative Occupational Radiation Exposure History" or equivalent, and the records used in preparing form RAD-4 until the Department authorizes their disposition.

(ii) Upon termination of the license or registration, the licensee or registrant shall permanently store records on form RAD-4, "Cumulative Occupational Radiation Exposure History," or equivalent, or shall make provision with the Department for transfer to the Department.

(7) **Records of planned special exposures.** (i) For each use of the provisions of §175.03(c)(6) for planned special exposures, the licensee or registrant shall maintain records that describe:

(A) the exceptional circumstances requiring the use of a planned special exposure; and

(B) the name of the management official who authorized the planned special exposure and a copy of the signed authorization; and

(C) what actions were necessary; and

(D) why the actions were necessary; and

(E) what precautions were taken to assure that doses were main-

tained ALARA; and

(F) what individual and collective doses were expected to result; and

(G) the doses actually received in the planned special exposure.

(ii) The licensee or registrant shall retain the records until the Department authorizes their disposition.

(iii) Upon termination of the license or registration, the licensee or registrant shall permanently store records on form RAD-4, "Cumulative Occupational Radiation Exposure History," or until disposition is authorized by the

Department.

(8) **Records of individual monitoring results.** (i) Recordkeeping Requirement. Each licensee or registrant shall maintain records of doses received by all individuals for whom monitoring was required pursuant to §175.03(f)(2), and records of doses received during planned special exposures, accidents, and emergency conditions. Assessments of dose equivalent and records made using units in effect before the effective date of these requirements need not be changed. These records shall include, when applicable:

(A) the deep dose equivalent to the whole body, eye dose equivalent, shallow dose equivalent to the skin, and shallow dose equivalent to the extremities; and

(B) the estimated intake or body burden of radionuclides (see §175.03(c)(2)); and

(C) the committed effective dose equivalent assigned to the intake or body burden of radionuclides; and

(D) the specific information used to calculate the committed effective dose equivalent pursuant to §175.03(c)(4)(iii); and

(E) the total effective dose equivalent when required by §175(c)(2); and

(F) the total of the deep dose equivalent and the committed dose to the organ receiving the highest total dose.

(ii) **Recordkeeping frequency.** The licensee or registrant shall make entries of the records specified in §175.03(k)(8)(i) at intervals not to exceed 1 year.

(iii) **Recordkeeping format.** The licensee or registrant shall maintain the records specified in §175.03(k)(8)(i) on form RAD-5, in accordance with the instructions for form RAD-5, or in clear and legible records containing all the information required by form RAD-5.

(iv) The licensee or registrant shall maintain the records of dose to an embryo/fetus with the records of dose to the declared pregnant woman. The declaration of pregnancy, including the estimated date of conception, shall also be kept on file, but may be maintained separately from the dose records.

(v) The licensee or registrant shall retain each required form or record until the Department authorizes disposition.

(vi) Upon termination of the license or registration, the licensee or registrant shall permanently store records on form RAD-4 or equivalent, or shall make provision with the Department for transfer to the Department.

(9) **Records of dose to individual members of the public.** (i) Each licensee or registrant shall maintain records sufficient to demonstrate compliance with the dose limit for individual members of the public as specified in §175.03(d).

(ii) The licensee or registrant shall retain the records required by §175.03(k)(9)(i) until the Department terminates each pertinent license, certified registration or registration requiring the record.

(10) **Records of testing entry control devices for very high radiation areas.**

(i) Each licensee or registrant shall maintain records of tests made pursuant to §175.03(g)(3)(ii)(I) on entry control devices for very high radiation areas. These records must include the date, time, and results of each such test of function.

(ii) The licensee or registrant shall retain the records required by §175.03(k)(10)(i) for 3 years after the record is made.

(11) **Form of records.** (i) Each record required by this section shall be legible throughout the specified retention period. The record shall be the original or a reproduced copy or a microform, provided that the copy or microform is authenticated by authorized personnel and that the microform is capable of producing a clear copy throughout the required retention period. The record may also be stored in electronic media with the capability for producing legible, accurate, and complete records during the required retention period. Records, such as letters, drawings, and specifications, shall include all pertinent information, such as stamps, initials, and signatures.

(ii) The licensee shall maintain adequate safeguards against tampering with and loss of records.

(iii) The discontinuance or curtailment of activities does not relieve any person who possesses any radiation source of responsibility for retaining all records required by this Code.

(l) **Reports.** (1) **Reports of stolen, lost, or missing licensed or registered sources of radiation.** (i) **Telephone reports.** Each licensee or registrant shall report to the Department by telephone as follows:

(A) immediately after its occurrence becomes known to the licensee or registrant, stolen, lost, or missing licensed or registered radioactive material in an aggregate quantity equal to or greater than 1,000 times the quantity specified in Appendix C of this section under such circumstances that it appears to the licensee or registrant that an exposure could result to individuals in unrestricted areas; or

(B) within 30 days after its occurrence becomes known to the licensee or registrant, lost, stolen, or missing licensed or registered radioactive material in an aggregate quantity greater than 10 times the quantity specified in Appendix C of this section that is still missing.

(C) immediately after its occurrence becomes known to the registrant, a stolen, lost, or missing radiation machine.

(ii) **Written reports.** Each licensee or registrant required to make a report pursuant to §175.03(l)(1)(i) shall, within thirty (30) days after making the telephone report, make a written report to the Department setting forth the following information:

(A) a description of the licensed or registered source of radiation involved, including, for radioactive material, the kind, quantity, and chemical and physical form; and, for radiation machines, the manufacturer, model and serial number, type and maximum energy of radiation emitted;

(B) a description of the circumstances under which the loss or theft occurred; and

(C) a statement of disposition, or probable disposition, of the licensed or registered source of radiation involved; and

(D) exposures of individuals to radiation, circumstances under which the exposures occurred, and the possible total effective dose equivalent to persons in unrestricted areas; and

(E) actions that have been taken, or will be taken, to recover the source of radiation; and

(F) procedures or measures that have been, or will be, adopted to ensure against a recurrence of the loss or theft of licensed or registered sources of radiation.

(iii) Subsequent to filing the written report, the licensee or registrant shall also report additional substantive information on the loss or theft within thirty (30) days after the licensee or registrant learns of such information.

(iv) The licensee or registrant shall prepare any report filed with the Department pursuant to §175.03(l)(1)(ii) so that names of individuals who may have received exposure to radiation are stated in a separate and detachable portion of the report.

(2) **Notification of incidents.** (i) **Immediate notification.** Notwithstanding other requirements for notification, each licensee or registrant shall immediately report each event involving a source of radiation possessed by the licensee or registrant that may have caused or threatens to cause any of the following conditions:

(A) an individual to receive:

(a) a total effective dose equivalent of 0.25 Sv (25 rem) or more; or

(b) an eye dose equivalent of 0.75 Sv (75 rem) or more; or

(c) a shallow dose equivalent to the skin or extremities or a total organ dose equivalent of 2.5 Gy (250 rad) or more; or

(B) the release of radioactive material, inside or outside of a restricted area, so that, had an individual been present for 24 hours, the individual could have received an intake five (5) times the occupational ALI. This provision does not apply to locations where personnel are not normally stationed during routine operations, such as hot-cells or process enclosures.

(ii) **Twenty-four hour notification.** Each licensee or registrant shall, within 24 hours of discovery of the event, report to the Department each event involving loss of control of a licensed or registered source of radiation possessed by the licensee or registrant that may have caused, or threatens to cause, any of the following conditions:

(A) an individual to receive, in a period of 24 hours:

(a) a total effective dose equivalent exceeding 0.05 Sv (5 rem); or

(b) an eye dose equivalent exceeding 0.15 Sv (15 rem); or

(c) a shallow dose equivalent to the skin or extremities or a total organ dose equivalent exceeding 0.5 Sv (50 rem); or

(B) the release of radioactive material, inside or outside of a restricted area, so that, had an individual been present for 24 hours, the individual could have received an intake in excess of one occupational ALI. This provision does not apply to locations where personnel are not normally stationed during routine operations, such as hot-cells or process enclosures.

(iii) The licensee or registrant shall prepare each report filed with the Department pursuant to §175.03(l)(2) so that names of individuals who have received exposure to sources of radiation are stated in a separate and detachable portion of the report.

(iv) Licensees or registrants shall make the reports required by §175.03(l)(2)(i) and (ii) to the Department by telephone, telegram, mailgram, or facsimile.

(v) The provisions of §175.03(l)(2) do not apply to doses that result from planned special exposures, provided such doses are within the limits for planned special exposures and are reported pursuant to §175.03(l)(4).

(3) **Reports of exposures, radiation levels, and concentrations of radioactive material exceeding the limits.** (i) **Reportable events.** In addition to the notification required by §175.03(l)(2), each licensee or registrant shall submit a written report within thirty (30) days after learning of any of the following occurrences:

(A) incidents for which notification is required by §175.03(l)(2); or

(B) doses in excess of any of the following:

(a) the occupational dose limits for adults in §175.03(c)(1); or

(b) the occupational dose limits for a minor in §175.03(c)(7); or

(c) the limits for an embryo/fetus of a declared pregnant woman in §175.03(c)(8); or

(d) the limits for an individual member of the public in §175.03(d)(1); or

(e) any applicable limit in the license or registration; or

(C) levels of radiation or concentrations of radioactive material in:

(a) a restricted area in excess of applicable limits in the license or registration; or

(b) an unrestricted area in excess of 10 times the applicable limit set forth in this Code or in the license or registration, whether or not involving exposure of any individual in excess of the limits in §175.03(d)(1).

(ii) **Contents of reports.** (A) Each report required by §175.03(l)(3)(i) shall describe the extent of exposure of individuals to radiation and radioactive material, including, as appropriate:

(a) estimates of each individual's dose; and

(b) the levels of radiation and concentrations of radioactive material involved; and

(c) the cause of the elevated exposures, dose rates, or concentrations; and

(d) corrective steps taken or planned to ensure against a recurrence, including the schedule for achieving conformance with applicable limits, generally applicable environmental standards, and associated license or registration conditions.

(B) Each report filed pursuant to §175.03(l)(3)(i) shall include for each individual exposed: the name, social security account number, and date of birth. With respect to the limit for the embryo/fetus in §175.03(c)(8), the identifiers should be those of the declared pregnant woman. The report shall be prepared so that this information is stated in a separate and detachable portion of the report.

(iii) All licensees or registrants who make reports pursuant to §175.03(l)(3)(i) shall submit the report in writing to the Department.

(4) **Reports of planned special exposures.** The licensee or registrant shall submit a written report to the Department within 30 days following any planned special exposure conducted in accordance with §175.03(c)(6), informing the Department that a planned special exposure was conducted and indicating the date the planned special exposure occurred and the information required by §175.03(k)(7).

(5) **Reports of individual monitoring.** (i) This section applies to each person licensed or registered by the Department to:

(A) possess or use at any time, for processing or manufacturing for distribution pursuant to this Code, radioactive material in quantities exceeding any one of the following quantities:

Radionuclide	Activitya	
	Ci	GBq

Cesium-137	1	37
Cobalt-60	1	37
Gold-198	100	3,700
Iodine-131	1	37
Iridium-192	10	370
Krypton-85	1,000	37,000
Promethium-147	10	370
Technetium-99m	1,000	37,000

[a] The Department may require as a license condition, or by rule, regulation, or order pursuant to §175.03(n)(1), reports from licensees or registrants who are licensed or registered to use radionuclides not on this list, in quantities sufficient to cause comparable radiation levels.

(ii) Each licensee or registrant in a category listed in §175.03(l)(5)(i) shall submit an annual report of the results of individual monitoring carried out by the licensee or registrant for each individual for whom monitoring was required by §175.03(f)(2) during that year. The licensee or registrant may include additional data for individuals for whom monitoring was provided but not required. The licensee or registrant shall use form RAD-5 or equivalent or electronic media containing all the information required by form RAD-5.

(iii) The licensee or registrant shall file the report required by §175.03(l)(5)(ii), covering the preceding year, on or before April 30 of each year. The licensee or registrant shall submit the report to the Department.

(6) **Notifications and reports to individuals.** (i) Requirements for notification and reports to individuals of exposure to radiation or radioactive material are specified in §175.04 of this Code.

(ii) When a licensee or registrant is required pursuant to §175.03(l)(3) to report to the Department any exposure of an individual to radiation or radioactive material, the licensee or registrant shall also notify the individual. Such notice shall be transmitted at a time not later than the transmittal to the Department, and shall comply with the provisions of §175.04 of this Code.

(7) **Reports of leaking or contaminated sealed sources.** The licensee or registrant shall file a report within five (5) days with the Department if the test for leakage or contamination required pursuant to §175.03(e)(1) indicates a sealed source is leaking or contaminated. The report shall include the equipment involved, the test results and the corrective action taken.

(8) **Event reporting.** (i) **Immediate report.** Each licensee or registrant shall notify the Department as soon as possible, but not later than four (4) hours, after the discovery of an event that prevents immediate preventive actions necessary to avoid exposures to radiation or radioactive material that could exceed regulatory limits or releases of licensed material that could exceed regulatory limits (events may include fires, explosions, toxic gas releases, **etc.**).

(ii) **Twenty-four hour report.** Each licensee or registrant shall notify the Department within twenty-four (24) hours after the discovery of any of the following events involving regulated sources of radiation:

(A) An unplanned contamination event that:

(a) requires access to the contaminated area, by workers or the public, to be restricted for more than 24 hours by imposing additional radiological controls or by prohibiting entry into the area;

(b) involves a quantity of material greater than five (5) times the lowest annual limit on intake specified in Appendix B of §175.03 of this Code for the material; and

(c) has access to the area restricted for a reason other than to allow isotopes with a half-life of less than 24 hours to

decay prior to decontamination.

(B) An event in which equipment is disabled or fails to function as designed when:

(a) the equipment is required by regulation or license condition to prevent releases exceeding regulatory limits, or to mitigate the consequences of an accident;

(b) the equipment is required to be available and operable when it is disabled or fails to function; and

(c) no redundant equipment is available and operable to perform the required safety function.

(C) An event that requires unplanned medical treatment at a medical facility of an individual with spreadable radioactive contamination on the individual's clothing or body.

(D) An unplanned fire or explosion damaging any regulated radiation source or any device, container or equipment containing licensed material when:

(a) the quantity of material involved is greater than five (5) times the lowest annual limit on intake specified in Appendix B of §175.03 for the material; and

(b) the damage affects the integrity of the licensed material or its container.

(iii) **Preparation and submission of reports.** Reports made by licensees in response to requirements of §175.03(l)(9)(i) and (ii) must be made as follows:

(A) **Licensees shall make reports required by §175.03(l)(9)(i) and (ii) by telephone to the Department.** To the extent that the information is available at the time of notification, the information provided in these reports must include:

(a) the caller's name and call back telephone number;

(b) a description of the event, including date and time;

(c) the exact location of the event;

(d) the isotopes, quantities, and chemical and physical form of the licensed material involved; and

(e) any personnel radiation exposure data available.

(B) **Written report.** Each licensee or registrant who makes a report required by §175.03(l)(9)(i) or (ii) shall submit a written follow up report to the Department within thirty (30) days of the initial report. The reports must include the following:

(a) a description of the event, including the probable cause and the manufacturer and model number, if applicable, of any equipment that failed or malfunctioned;

(b) the isotopes, quantities and chemical and physical form of the licensed material involved;

(c) corrective actions taken or planned and the results of any evaluations or assessments; and

(d) the extent of exposure of individuals to radiation or to radioactive materials without identification of individuals by name.

(m) **Exemptions and variances.** The Department may grant, upon either its own initiative or an application by an

interested person, an exemption or variance from any requirement in this Code when the Department finds that such exemption or variance will not result in an undue danger to life or property from radiation hazards.

(n) **Additional requirements.** (1) Notwithstanding any exemptions set forth in this Code:

(i) The Department may, by rule, regulation or order, impose upon any person who sells, transfers, assembles, repairs, receives, produces, possesses, or uses any radiation source, such requirements, in addition to those set forth in this Code, as it deems appropriate or necessary to protect the public health and safety and to minimize danger to life or property from radiation hazards.

(ii) The Department may suspend, revoke, or amend any license, certified registration or registration issued pursuant to this Code when it finds that any person is not in compliance with this Code, or other laws, ordinances, rules, or regulations of the Department or this City.

(iii) The Department may order the owner, person in charge or the radiation safety officer of an installation, or any other person owning or responsible for a radiation source, to take such additional precautions or procedures as it may determine are necessary to prevent contamination or the over-exposure of persons to ionizing radiation or to otherwise protect the public health and safety. Except where the public health requires immediate action, no such order shall be issued until the person to be ordered is notified by any effective means of communication and is given an opportunity to be heard by such personnel of the Department as the Commissioner may designate.

(2) **Vacating premises.** Each specific licensee or registrant shall notify the Department in writing of intent to vacate not less than 30 days before vacating or relinquishing possession or control of premises which may have been contaminated with radioactive material as a result of licensed or registered activities. When deemed necessary by the Department, the licensee shall decontaminate the premises to such levels as the Department may specify.

(3) The Department may by order require the removal through an authorized person, or the surrender to the Department, of any radiation source by any person who:

(i) does not hold, or continue to hold, a valid license, certified registration or registration issued by the Department;

(ii) is not able or equipped, or who fails to observe with regard to such radiation source those radiation protection standards as are established by the Department or who uses such radiation source in violation of law, this Code, order of the Department, or as set forth in a license, certified registration or registration issued therefor by the Department. Such person shall decontaminate any premises which may have been contaminated with radioactive material as a result of licensed or registered activities to such radiation levels as the Department may specify. The expenses incidental to such transfer, surrender, and/or decontamination shall be borne by such person responsible for the source.

(4) When necessary or desirable in order to aid in determining the extent of any individual's exposure to radiation subsequent to any radiation accident, contamination, theft or loss, the licensee or registrant shall comply with all orders of the Department directing such licensee or registrant to make available to such individual appropriate medical evaluation services or appropriate tests and to furnish to the Department a copy of the reports of such evaluation or test.

HISTORICAL NOTE

Section repealed and added City Record June 27, 1994 eff. July 27, 1994.

Section in original publication July 1, 1991.

Subd. (b) par (2) amended City Record July 15, 1997 eff. Aug. 14, 1997. [See Vol. 9 Statements of

Basis and Purpose No. 8]

Subd. (c) par (1) subpar (i) amended City Record Sept. 29, 2006 eff. Oct. 29, 2006. [See Vol. 9 Statements of Basis and Purpose No. 25]

Subd. (c) par (1) subpar (iii) amended City Record Sept. 29, 2006 eff. Oct. 29, 2006. [See Vol. 9 Statements of Basis and Purpose No. 25]

Subd. (f) par (2) subpar (vi) added City Record Apr. 3, 2001 eff. May 3, 2001. [See Vol. 9 Statements of Basis and Purpose No. 16]

Subd. (h) amended in part City Record Sept. 29, 2006 eff. Oct. 29, 2006. [See Vol. 9 Statements of Basis and Purpose No. 25]

Subd. (j) par (6) subpar (iv) amended City Record June 30, 1999 eff. July 30, 1999. [See Vol. 9 Statements of Basis and Purpose No. 13]

Notes:

Subdivisions (c) and (h) and Appendix A of §175.03 were amended on September 26, 2006, to maintain compatibility with NRC requirements as published in the Federal Register, dated October 7, 1999, titled, "Respiratory Protection and Controls to Restrict Internal Exposures", 64 FR 54543; 64 FR 55524, dated October 13, 1999, that became effective February 2, 2000 (amending 10 CFR §§20.1003; 20.1701-.1704; adding 20.1705 and amending Appendix A to Part 20).

Section 175.03(b)(2)(i)(B) was relettered to (C) and new (B) was adopted; Section 170.03(b)(2)(ii)(B) was relettered to (C) and new (B) was adopted; Section 175.03(b)(2)(iii)(C) was relettered to (D) and new (C) was adopted and Section 175.03(b)(2)(iv)(B) was relettered to (C) and new (B) was adopted on June 30, 1997 to authorize individuals with the appropriate training and experience to become radiation safety officers even though they are not board certified. The amendment recognizes an option existing in Section 175.03(j) of the Health Code, 10 N.Y.C.R.R. Section 16.2(a)(99) and federal regulations codified at 10 C.F.R. Section 35.900.

In addition, Section 175.03(b)(2)(iv) was amended to clarify its applicability to non-human use radioactive materials.

Subparagraph (vi) of paragraph (2) of subsection (f) was added on March 21, 2001 to address the need for timely processing of personnel radiation monitoring devices.

Subparagraphs (A) and (B) of paragraph (iv) of subdivision (6) of subsection (j) were amended on April 26, 1999 to reflect the reenacted §175.105.

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY APPENDIX A

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 175 RADIATION CONTROL General Provisions

APPENDIX A

APPENDIX A

[See tabular material in printed version]

Footnotes:

1. For use in the selection of respiratory protective equipment to be used only where the contaminants have been identified and the concentrations, or possible concentrations, are known.

2. The licensee shall ensure that no objects, materials or substances, such as facial hair, or any conditions that interfere with the face, face-piece seal or valve function, and that are under the control of the respirator wearer, are present between the skin of the wearer's face and the sealing surface of a tightfitting respirator face-piece. Hoods and

suits are excepted.

3. The mode symbols are defined as follows:

3. CF = continuous flow

3. D = demand

3. NP = negative pressure, that is, negative phase during inhalation

3. PD = pressure demand, that is, always positive pressure

3. PP = positive pressure

3. RD = demand, recirculating or closed circuit

3. RP = pressure demand, recirculating or closed circuit

4. a. The protection factor is a measure of the degree of protection afforded by a respirator, defined as the ratio of the concentration of airborne radioactive material outside the respiratory protective equipment to that inside the equipment, usually inside the facepiece, under conditions of use. It is applied to the ambient airborne concentration to estimate the concentrations inhaled by the wearer according to the following formula:

Concentration inhaled = Ambient airborne concentration

Protection factor

b. The protection factors apply:

(i) Only for individuals trained in using respirators and wearing properly fitted respirators that are used and maintained under supervision in a well-planned respiratory protective program.

(ii) For air-purifying respirators only when high efficiency particulate filters, above 99.97% removal efficiency by thermally generated 0.3 mm dioctylphthalate (DOP) test or equivalent, are used in atmospheres not deficient in oxygen and not containing radioactive gas or vapor respiratory hazards.

(iii) No adjustment is to be made for the use of sorbents against radioactive material in the form of gases or vapors.

(iv) For atmosphere-supplying respirators only when supplied with adequate respirable air. Respirable air shall be provided of the quality and quantity required in accordance with the National Institute for Occupational Safety and Health and the Mine Safety and Health Administration certification described in 30 CFR 11. Oxygen and air shall not be used in the same apparatus.

5. Excluding radioactive contaminants that present an absorption or submersion hazard. For tritium oxide, approximately one-third of the intake occurs by absorption through the skin so that an overall protection factor of less than 2 is appropriate when atmosphere-supplying respirators are used to protect against tritium oxide. If the protection factor for respiratory protective equipment is 5, the effective protection factor for tritium is about 1.4; with protection factors of 10, the effective factor for tritium oxide is about 1.7; and with protection factors of 100 or more, the effective factor for tritium oxide is about 1.9. Air-purifying respirators are not suitable for protection against tritium oxide. See also footnote 9 concerning supplied-air suits.

6. Canisters and cartridges shall not be used beyond service-life limitations.

7. Under-chin type only. This type of respirator is not satisfactory for use where it might be possible, such as, if an

accident or emergency were to occur, for the ambient airborne concentrations to reach instantaneous values greater than 10 times the pertinent values in Table 1, Column 3 of Appendix B of §175.03. This type of respirator is not suitable for protection against plutonium or other high-toxicity materials. The mask is to be tested for fit prior to use, each time it is donned.

8. a. Equipment shall be operated in a manner that ensures that proper air flow-rates are maintained. A protection factor of no more than 1000 may be utilized for tested-and-certified supplied-air hoods when a minimum air flow of 6 cubic feet per minute (0.17 m^3/min) is maintained and calibrated air line pressure gauges or flow measuring devices are used. A protection factor of up to 2000 may be used for tested and certified hoods only when the air flow is maintained at the manufacturer's recommended maximum rate for the equipment, this rate is greater than 6 cubic feet per minute (0.17 m^3/min) and calibrated air line pressure gauges or flow measuring devices are used.

b. The design of the supplied-air hood or helmet, with a minimum flow of 6 cubic feet per minute (0.17 m^3/min) of air, may determine its overall efficiency and the protection it provides. For example, some hoods aspirate contaminated air into the breathing zone when the wearer works with hands-over-head. This aspiration may be overcome if a short cape-like extension to the hood is worn under a coat or overalls. Other limitations specified by the approval agency shall be considered before using a hood in certain types of atmospheres. See footnote 9.

9. Appropriate protection factors shall be determined, taking into account the design of the suit and its permeability to the contaminant under conditions of use. Standby rescue persons are required whenever one piece atmosphere-supplying suits, or any combination of supplied air respiratory protection device and personnel protective equipment are used from which an unaided individual would have difficulty extricating himself or herself. The standby persons must be equipped with communications devices and respiratory protection devices or other apparatus appropriate for the potential hazards. The standby rescue persons shall observe or otherwise maintain continuous communication with the workers (visual, voice, signal line, telephone, radio, or other suitable means), and be immediately available to assist them in case of a failure of the air supply or for any other reason that requires relief from distress. A sufficient number of standby rescue persons must be immediately available to assist all users of this type of equipment and to provide effective emergency rescue if needed.

10. No approval schedules are currently available for this equipment. Equipment is to be evaluated by testing or on the basis of reliable test information.

11. This type of respirator may provide greater protection and be used as an emergency device in unknown concentrations for protection against inhalation hazards. External radiation hazards and other limitations to permitted exposure, such as skin absorption, must be taken into account in such circumstances.

12. Quantitative fit testing shall be performed on each individual, and no more than 0.02% leakage is allowed with this type of apparatus. Perceptible outward leakage of gas from this or any positive pressure self-contained breathing apparatus is unacceptable because service life will be reduced substantially. Special training in the use of this type of apparatus shall be provided to the wearer.

Note 1:

Protection factors for respirators approved by the U.S. Bureau of Mines and the National Institute for Occupational Safety and Health, according to applicable approvals for respirators for type and mode of use to protect against airborne radionuclides, may be used to the extent that they do not exceed the protection factors listed in this table. The protection factors listed in this table may not be appropriate to circumstances where chemical or other respiratory hazards exist in addition to radioactive hazards. The selection and use of respirators for such circumstances should take into account applicable approvals of the U.S. Bureau of Mines and the National Institute for Occupational Safety and Health.

Note 2:

Radioactive contaminants, for which the concentration values in Table 1, Column 3 of Appendix B of §175.03 are based on internal dose due to inhalation, may present external exposure hazards at higher concentrations. Under these circumstances, limitations on occupancy may have to be governed by external dose limits.

Definitions:

"Airpurifying respirator" means a respirator with an air purifying filter, cartridge, or canister that removes specific air contaminants by passing ambient air through the air purifying element.

"Assigned protection factor" or "APF" means the expected workplace level of respiratory protection that would be provided by a properly functioning respirator or a class of respirators to properly fitted and trained users. Operationally, the inhaled concentration can be estimated by dividing the ambient airborne concentration by the APF.

"Atmosphere-supplying respirator" means a respirator that supplies the respirator user with breathing air from a source independent of the ambient atmosphere, and includes supplied air respirators (SARs) and self-contained breathing apparatus (SCBA) units.

"Demand respirator" means an atmosphere-supplying respirator that admits breathing air to the face-piece only when a negative pressure is created inside the face-piece by inhalation.

"Disposable respirator" means a respirator for which maintenance is not intended and that is designed to be discarded after excessive breathing resistance, sorbent exhaustion, physical damage, or end of service-life renders it unsuitable for use. Examples of this type of respirator are a disposable halfmask respirator or a disposable escape-only self contained breathing apparatus (SCBA).

"Filtering face-piece" or "dust mask" means a negative pressure particulate respirator with a filter as an integral part of the face-piece or with the entire face-piece composed of the filtering medium, not equipped with elastomeric sealing surfaces and adjustable straps.

"Fit factor" means a quantitative estimate of the fit of a particular respirator to a specific individual, and typically estimates the ratio of the concentration of a substance in ambient air to its concentration inside the respirator when worn.

"Fit test" means the use of a protocol to qualitatively or quantitatively evaluate the fit of a respirator on an individual.

"Helmet" means a rigid respiratory inlet covering that also provides head protection against impact and penetration.

"Hood" means a respiratory inlet covering that completely covers the head and neck and may also cover portions of the shoulders and torso.

"Loosefitting face-piece" means a respiratory inlet covering that is designed to form a partial seal with the face.

"Negative pressure respirator" or "tight fitting respirator" means a respirator in which the air pressure inside the face-piece is negative during inhalation with respect to the ambient air pressure outside the respirator.

"Positive pressure respirator" means a respirator in which the pressure inside the respiratory inlet covering exceeds the ambient air pressure outside the respirator.

"Powered air purifying respirator" or "PAPR" means an air-purifying respirator that uses a blower to force the ambient air through air purifying elements to the inlet covering.

"Pressure demand respirator" means a positive pressure atmosphere-supplying respirator that admits breathing air to the face-piece when the positive pressure is reduced inside the face-piece by inhalation.

"Qualitative fit test" or "QLFT" means a pass/fail fit test to assess the adequacy of respirator fit that relies on the individual's response to the test agent.

"Quantitative fit test" "QNFT" means an assessment of the adequacy of respirator fit by numerically measuring the amount of leakage into the respirator.

"Self-contained breathing apparatus" or "SCBA" means an atmosphere-supplying respirator for which the breathing air source is designed to be carried by the user.

"Supplied air respirator" or "SAR" or "airline respirator" means an atmosphere-supplying respirator for which the source of breathing air is not designed to be carried by the user.

"Tight-fitting face-piece" means a respiratory inlet covering that forms a complete seal with the face.

"User seal check" or "fit check" means an action conducted by the respirator user to determine if the respirator is properly sealed to the face. Examples include negative pressure check, positive pressure check, irritant smoke check, or isoamylacetate check.

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 175 RADIATION CONTROL General Provisions

APPENDIX B ANNUAL LIMITS ON INTAKE (ALI) AND DERIVED AIR CONCENTRATIONS (DAC) OF RADIONUCLIDES FOR OCCUPATIONAL EXPOSURE; EFFLUENT CONCENTRATIONS; CONCENTRATIONS FOR RELEASE TO SANITARY SEWERAGE

APPENDIX B ANNUAL LIMITS ON INTAKE (ALI) AND DERIVED AIR CONCENTRATIONS (DAC) OF RADIONUCLIDES FOR OCCUPATIONAL EXPOSURE; EFFLUENT CONCENTRATIONS; CONCENTRATIONS FOR RELEASE TO SANITARY SEWERAGE

Introduction

For each radionuclide, Table I indicates the chemical form which is to be used for selecting the appropriate ALI or DAC value. The ALIs and DACs for inhalation are given for an aerosol with an activity median aerodynamic diameter (AMAD) of 1 mm, micron, and for three classes (D,W,Y) of radioactive material, which refer to their retention

(approximately days, weeks or years) in the pulmonary region of the lung. This classification applies to a range of clearance half-times for D if less than 10 days, for W from 10 to 100 days, and for Y greater than 100 days. Table 2 provides concentration limits for airborne and liquid effluents released to the general environment. Table 3 provides concentration limits for discharges to sanitary sewerage.

Note: The values in Tables 1, 2, and 3 are presented in the computer "E" notation. In this notation a value of 6E-02 represents a value of 6×10^{-2} or 0.06, 6E2 represents 6×10^{2} or 600, and 6E0 represents 6×10^{0} or 6.

Table 1 "Occupational Values"

Note that the columns in Table I of this appendix captioned "Oral Ingestion ALI," "Inhalation ALI," and "DAC," are applicable to occupational exposure to radioactive material.

The ALIs in this appendix are the annual intakes of given radionuclide by "Reference Man" which would result in either (1) a committed effective dose equivalent of 0.05 Sv (5 rem), stochastic ALI, or (2) a committed dose equivalent of 0.5 Sv (50 rem) to an organ or tissue, non-stochastic ALI. The stochastic ALIs were derived to result in a risk, due to irradiation of organs and tissues, comparable to the risk associated with deep dose equivalent to the whole body of 0.05 Sv (5 rem). The derivation includes multiplying the committed dose equivalent to an organ or tissue by a weighting factor, w_T. This weighting factor is the proportion of the risk of stochastic effects resulting from irradiation of the organ or tissue, T, to the total risk of stochastic effects when the whole body is irradiated uniformly. The values of w_T are listed under the definition of weighting factor in §175.02(a)(247). The non-stochastic ALIs were derived to avoid non-stochastic effects, such as prompt damage to tissue or reduction in organ function.

A value of $w_T = 0.06$ is applicable to each of the five organs or tissues in the "remainder" category receiving the highest dose equivalents, and the dose equivalents of all other remaining tissues may be disregarded. The following portions of the gastrointestinal tract-stomach, small intestine, upper large intestine, and lower large intestine-are to be treated as four separate organs.

Note that the dose equivalents for an extremity, skin and lens of the eye are not considered in computing the committed effective dose equivalent, but are subject to limits that must be met separately.

When an ALI is defined by the stochastic dose limit, this value alone is given. When an ALI is determined by the non-stochastic dose limit to an organ, the organ or tissue to which the limit applies is shown, and the ALI for the stochastic limit is shown in parentheses. Abbreviated organ or tissue designations are used:

LLI wall = lower large intestine wall;

St wall = stomach wall;

Blad wall = bladder wall; and

Bone surf = bone surface.

The use of the ALIs listed first, the more limiting of the stochastic and non-stochastic ALIs, will ensure that non-stochastic effects are avoided and that the risk of stochastic effects is limited to an acceptably low value. If, in a particular situation involving a radionuclide for which the non-stochastic ALI is limiting, use of that non-stochastic ALI is considered unduly conservative, the licensee may use the stochastic ALI to determine the committed effective dose equivalent. However, the licensee shall also ensure that the 0.5 Sv (50 rem) dose equivalent limit for any organ or tissue is not exceeded by the sum of the external deep dose equivalent plus the internal committed dose equivalent to that organ, not the effective dose. For the case where there is no external dose contribution, this would be demonstrated if the sum of the fractions of the non-stochastic ALIs (ALI_{ns}) that contribute to the committed dose equivalent to the organ receiving the highest dose does not exceed unity, that is, S (intake (in mCi) of each radionuclide/ALI_{ns}) # 1.0. If

there is an external deep dose equivalent contribution of H_d, then this sum must be less than 1-(H_d/50), instead of 1.0.

Note that the dose equivalents for an extremity, skin, and lens of the eye are not considered in computing the committed effective dose equivalent, but are subject to limits that must be met separately.

The derived air concentration (DAC) values are derived limits intended to control chronic occupational exposures. The relationship between the DAC and the ALI is given by:

DAC = ALI (in mCi)/(2000 hr-working yr-1 x 60 min-hr-1 x 2 x 104 ml-min-1)

=[ALI/2.4 x 109]mCi/ml,

where 2 x 10^4 Ml is the volume of air breathed per minute at work by Reference Man under working conditions of light work.

The DAC values relate to one of two modes of exposure: either external submersion or the internal committed dose equivalents resulting from inhalation of radioactive materials. DACs based upon submersion are for immersion in a semi-infinite cloud of uniform concentration and apply to each radionuclide separately.

The ALI and DAC values include contributions to exposure by the single radionuclide named and any in-growth of daughter radionuclides produced in the body by decay of the parent. However, intakes that include both the parent and daughter radionuclides should be treated by the general method appropriate for mixtures.

The values of ALI and DAC do not apply directly when the individual both ingests and inhales a radionuclide, when the individual is exposed to a mixture of radionuclides by either inhalation or ingestion or both, or when the individual is exposed to both internal and external irradiation. See §175.03(c)(2). When an individual is exposed to radioactive materials which fall under several of the translocation classifications of the same radionuclide, such as, Class D, Class W, or Class Y, the exposure may be evaluated as if it were a mixture of different radionuclides.

It should be noted that the classification of a compound as Class D, W, or Y is based on the chemical form of the compound and does not take into account the radiological half-life of different radionuclides. For this reason, values are given for Class D, W, and Y compounds, even for very short-lived radionuclides.

Table 2 "Effluent Concentrations"

The columns in Table 2 of this appendix captioned "Effluents," "Air" and "Water" are applicable to the assessment and control of dose to the public, particularly in the implementation of the provisions of §175.03(d)(2). The concentration values given in Columns 1 and 2 of Table 2 are equivalent to the radionuclide concentrations which, if inhaled or ingested continuously over the course of a year, would produce a total effective dose equivalent of 0.5 mSv (0.05 rem).

Consideration of non-stochastic limits has not been included in deriving the air and water effluent concentration limits because non-stochastic effects are presumed not to occur at or below the dose levels established for individual members of the public. For radionuclides, where the non-stochastic limit was governing in deriving the occupational DAC, the stochastic ALI was used in deriving the corresponding airborne effluent limit in Table 2. For this reason, the DAC and airborne effluent limits are not always proportional as they were in the previous version of the New York City Health Code in Table 4 of §175.117.

The air concentration values listed in Table 2, Column 1 were derived by one of two methods. For those radionuclides for which the stochastic limit is governing, the occupational stochastic inhalation ALI was divided by 2.4 x 10^9, relating the inhalation ALI to the DAC, as explained above, and then divided by a factor of 300. The factor of 300 includes the following components: a factor of 50 to relate the 0.05 Sv (5 rem) annual occupational dose limit to the 0.1 rem limit for members of the public, a factor of 3 to adjust for the difference in exposure time and the inhalation rate

for a worker and that for members of the public; and a factor of 2 to adjust the occupational values, derived for adults, so that they are applicable to other age groups.

For those radionuclides for which submersion, that is external dose, is limiting, the occupational DAC in Table 1, Column 3 was divided by 219. The factor of 219 is composed of a factor of 50, as described above, and a factor of 4.38 relating occupational exposure for 2,000 hours per year to full-time exposure (8,760 hours per year). Note that an additional factor of 2 for age considerations is not warranted in the submersion case.

The water concentrations were derived by taking the most restrictive occupational stochastic oral ingestion ALI and dividing by 7.3×10^7 . The factor of 7.3×10^7 (ml) includes the following components: the factors of 50 and 2 described above and a factor of 7.3×10^5 (ml) which is the annual water intake of Reference Man.

Note 2 of this appendix provides groupings of radionuclides which are applicable to unknown mixtures of radionuclides. These groupings, including occupational inhalation ALIs and DACs, air and water effluent concentrations and releases to sewer, require demonstrating that the most limiting radionuclides in successive classes are absent. The limit for the unknown mixture is defined when the presence of one of the listed radionuclides cannot be definitely excluded as being present either from knowledge of the radionuclide composition of the source or from actual measurements.

Table 3 "Releases to Sewers"

The monthly average concentrations for release to sanitary sewerage are applicable to the provisions in §175.104(c). The concentration values were derived by taking the most restrictive occupational stochastic oral ingestion ALI and dividing by 7.3×10^6 (ml). The factor of 7.3×10^6 (ml) is composed of a factor of 7.3×10^5 (ml), the annual water intake by Reference Man, and a factor of 10, such that the concentrations, if the sewage released by the licensee were the only source of water ingested by a Reference Man during a year, would result in a committed effective dose equivalent of 5 mSv (0.5 rem).

-	Any single radionuclide not listed above with decay mode other than alpha emission or spontaneous fission and with radioactive half-life less than 2 hours Submersion1	-	2E2	1E-7	1E-9	-	-	
-	Any single radionuclide not listed above with decay mode other than alpha emission or spontaneous fission and with radioactive half-life greater than 2 hours	-	2E-1	1E-10	1E-12	1E-8	1E-7	
-	Any single radionuclide not listed above that decays by alpha emission or spontaneous fission, or any mixture for which either the identity or the concentration of any radionuclide in the mixture is not known	-	4E-4	2E-13	1E-15	2E-9	2E-8	

Footnotes:

1 "Submersion" means that values given are for submersion in a hemispherical semi-infinite cloud of airborne material.

2 These radionuclides have radiological half-lives of less than 2 hours. The total effective dose equivalent received during operations with these radionuclides might include a significant contribution from external exposure. The DAC values for all radionuclides, other than those designated Class "Submersion," are based upon the committed effective dose equivalent due to the intake of the radionuclide into the body and do NOT include potentially significant contributions to dose equivalent from external exposures. The licensee may substitute 1E-7 mCi/ml for the listed DAC to account for the submersion dose prospectively, but should use individual monitoring devices or other radiation measuring instruments that measure external exposure to demonstrate compliance with the limits. See §175.03(c)(3).

3 For soluble mixtures of U-238, U-234, and U-235 in air, chemical toxicity may be the limiting factor (see §175.03(c)(1)(v)). If the percent by weight (enrichment) of U-235 is not greater than 5, the concentration value for a 40-hour workweek is 0.2 milligrams uranium per cubic meter of air average. For any enrichment, the product of the average concentration and time of exposure during a 40-hour workweek shall not exceed 8E-3 (SA) mCi-hr/ml, where SA is the specific activity of the uranium inhaled. The specific activity for natural uranium is 6.77E-7 curies per gram U. The specific activity for other mixtures of U-238, U-235, and U-234, if not known, shall be:
SA = 3.6E-7 curies/gram U U-depleted SA = [0.4 0.38 (enrichment) 0.0034 (enrichment)2] E-6, enrichment > 0.72

3 where enrichment is the percentage by weight of U-235, expressed as percent.

Notes:

1. If the identity of each radionuclide in a mixture is known but the concentration of one or more of the radionuclides in the mixture is not known, the DAC for the mixture shall be the most restrictive DAC of any radionuclide in the mixture.

2. If the identity of each radionuclide in the mixture is not known, but it is known that certain radionuclides specified in this appendix are not present in the mixture, the inhalation ALI, DAC, and effluent and sewage concentrations for the mixture are the lowest values specified in this appendix for any radionuclide that is not known to be absent from the mixture; or

If it is known that Ac-227-D, W, Y, Th-229-W, Y, Th-232-W, Y, Pa-231-W, Y, Cm-248-W, and, Cm-250-W are not present	-	-	-	1E-14	-	-
If, in addition, it is known that Sm-146-W, Gd-148-D, W, Gd-152-D, Th-228-W, Y, Th-230-W, Y, U-232-Y, U-233-Y, U-234-Y, U-235-Y, U-236-Y, U-238-Y, U-Nat-Y, Np-236-W, Np-237-W, Pu-236-W, Y, Pu-238-W, Y, Pu-239-W, Y, Pu-240-W, Y, Pu-242-W, Y, Pu-244-W, Y, Am-241-W, Am-242m-W, Am-243-W, Cm-243-W, Cm-244-W, Cm-245-W, Cm-246-W, Cm-247-W, Bk-247-W, Cf-249-W, Y, Cf-250-W, Y, Cf-251-W, Y, Cf-252-W, Y, and Cf-254-W, Y are not present	-	-	-	1E-13	-	-
If, in addition, it is known that Sm-147-W, Gd-152-W, Pb-210-D, Bi-210m-W, Po-210-D, W, Ra-223-W, Ra-225-W, Ra-226-W, Ac-225-D, W, Y, Th-227-W, Y, U-230-D, W, Y, U-232-D, W, U-Nat-W, Pu-241-W, Cm-240-W, Cm-242-W, Cf-248-W, Y, Es-254-W, Fm-257-W, and Md-258-W are not present	-	-	-	1E-12	-	-
If, in addition, it is known that Fe-60, Sr-90, Cd-113m, Cd-113, In-115, I-129, Cs-134, Sm-145, Sm-147, Gd-148, Gd-152, Hg-194 (organic), Bi-210m, Ra-223, Ra-224, Ra-225, Ac-225, Th-228, Th-230, U-233, U-234, U-235, U-236, U-238, U-Nat, Cm-242, Cf-248, Es-254, Fm-257, and Md-258 are not present	-	-	-	-	1E-6	1E-5

3. If a mixture of radionuclides consists of uranium and its daughters in ore dust (10 mm AMAD particle distribution assumed) prior to chemical separation of the uranium from the ore, the following values may be used for the DAC of the mixture: 6E-11 mCi of gross alpha activity from uranium-238, uranium-234, thorium-230, and radium-226 per milliliter of air; 3E-11 mCi of natural uranium per milliliter of air; or 45 micrograms of natural uranium per cubic meter of air.

4. If the identity and concentration of each radionuclide in a mixture are known, the limiting values should be derived as follows: determine, for each radionuclide in the mixture, the ratio between the concentration present in the mixture and the concentration otherwise established in Appendix B for the specific radionuclide when not in a mixture. The sum of such ratios for all of the radionuclides in the mixture may not exceed "1" (i.e., "unity").

Example: If radionuclides "A," "B," and "C" are present in concentrations C_A, C_B, and C_C, and if the applicable DACs are DAC_A, DAC_B, and DAC_C, respectively, then the concentrations shall be limited so that the following relationship exists:

$$\frac{C_A}{DAC_A} + \frac{C_B}{DAC_B} + \frac{C_C}{DAC_C} \leq 1$$

Any alpha-emitting radionuclide not listed above or mistures of alpha emitters of unknown composition	0.001	Any radionuclide other than alpha-emitting radionuclides not listed above, or mixtures of beta emitters of unknown composition	0.01

NOTE: For purposes of §175.03(j)(2)(v), §175.03(j)(5)(i) and §175.03(l)(1)(i) where there is involved a combination of radionuclides in known amounts, the limit for the combination shall be derived as follows: determine, for each radionuclide in the combination, the ratio between the quantity present in the combination and the limit otherwise established for the specific radionuclide when not in combination. The sum of such ratios for all radionuclides in the combination may not exceed "1"-that is, unity.

FOOTNOTES:

* The quantities listed above were derived by taking 1/10th of the most restrictive ALI listed in Table I, Columns 1 and 2, of Appendix B to §175.03, rounding to the nearest factor of 10, and constraining the values listed between 37 Bq and 37 MBq (0.001 and 1,000 mCi). Values of 3.7 MBq (100 mCi) have been assigned for radionuclides having a radioactive half-life in excess of E9 years, except rhenium, 37 MBq (1,000 mCi), to take into account their low specific activity.

** To convert mCi to kBq, multiply the mCi value by 37.

APPENDIX D

RADIOACTIVE SURFACE CONTAMINATION LIMITS

Application	Alpha (dpm/100cm2)		Beta/Gamma1	
	Total	Removable	Total (mR/hr)	Removable (dpm/100cm2)

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 175 RADIATION CONTROL General Provisions

§175.04 Notices, instructions and reports to workers; inspections.

(a) **Purpose and scope.** (1) This section establishes requirements for notices, instructions and reports by licensees and registrants to individuals engaged in activities under a license or registration and options available to such individuals in connection with Department inspections of licensees or registrants to ascertain compliance with the provisions of all applicable regulations and conditions stated on the license or registration regarding radiological working conditions. The regulations in this section apply to all persons who receive, possess, produce, use, own or transfer sources of radiation registered with or licensed by the Department or are otherwise subject to this Code.

(b) **Posting of notices to workers.** (1) Each licensee and/or registrant shall post current copies of the following documents:

(i) this Code;

(ii) the radioactive materials license and the conditions or documents incorporated by reference into the license and any amendments thereto;

(iii) the certified registration and the conditions or documents incorporated by reference into the certified registration and any amendments thereto;

(iv) the certificate of registration;

(v) the operating procedures applicable to the work under the license, registration and/or certified registration;

(vi) any notice of violation involving radiological working conditions, any proposed imposition of civil penalty or order issued pursuant to this Code and any response from the licensee and/or registrant.

(2) If posting of a document specified in §175.04(b)(1)(i), (ii), (iii) or (v) is not practicable, the licensee and/or registrant may post a notice which describes the document and states where it may be examined.

(3) A current copy of the "Notice to Employees" prescribed by the Department shall be posted by each licensee and/or registrant wherever individuals work in or frequent any portion of a restricted area.

(4) Documents, notices, or forms posted pursuant to this Code shall appear in a sufficient number of places to permit individuals engaged in work under the license, certified registration and/or registration to observe them on the way to or from any particular work location to which the document applies, shall be conspicuous, and shall be replaced if defaced or altered.

(5) Department documents posted pursuant to §175.04(b)(1)(vi) shall be posted within two (2) working days after receipt of the documents from the Department; the licensee's and/or registrant's response, if any, shall be posted within two (2) working days after dispatch from the licensee and/or registrant. Such documents shall remain posted for a minimum of five (5) working days or until action correcting the violation has been completed, whichever is later.

(c) **Instructions to workers.** (1) All individuals working in or frequenting any portion of a restricted area:

(i) shall be kept informed of the storage, transfer, or use of radioactive material, of radiation producing equipment or of radiation in such portions of the restricted area;

(ii) shall be instructed in the operating procedures applicable to work under the license, registration or certified registration and in the health protection problems associated with exposure to such radioactive material or radiation, in precautions or procedures to minimize exposure, in the purposes and functions of protective devices employed, and shall be required to demonstrate familiarity with such precautions, procedures and devices;

(iii) shall be instructed in, and instructed to observe, to the extent within the worker's control, the applicable provisions of this Code, licenses, certified registrations and registrations for the protection of personnel from exposures to radiation or radioactive material occurring in such areas;

(iv) shall be instructed of their responsibility to report promptly to the licensee and/or registrant any condition which may lead to or cause a violation of this Code, licenses and registrations or unnecessary exposure to radiation or radioactive material;

(v) shall be instructed in the appropriate response to warnings made in the event of any unusual occurrence or malfunction that may involve exposure to radiation or radioactive material; and

(vi) shall be advised as to the radiation exposure reports which workers must be given or may request pursuant to §175.04(d).

(2) The extent of these instructions shall be commensurate with potential radiological health protection problems in the restricted area.

(3) Instruction shall be given before an individual begins work in a restricted area and at least annually thereafter.

(4) Records documenting individual worker instruction shall be maintained for inspection by the Department for a period of three (3) years.

(d) **Notification and reports to workers.** (1) Radiation exposure data for an individual and the results of any measurements, analyses, and calculations of radioactive material deposited or retained in the body of an individual shall be reported to the individual as specified herein. The information reported shall include data and results obtained pursuant to this Code or license or certified registration conditions as shown in records maintained by the licensee and/or registrant pursuant to §175.03(k)(8) of this Code. Each notification and report shall:

(i) be in writing;

(ii) include appropriate identifying data such as the name of the licensee and/or registrant, the name of the individual and the individual's social security number;

(iii) include the individual's exposure information; and

(iv) contain the following statement: "This report is furnished to you under the provisions of §175.04 of the New York City Health Code. You should preserve this report for further reference."

(2) Each licensee and/or registrant shall advise each worker annually of the worker's exposure to radiation or radioactive material as shown in records maintained by the licensee and/or registrant pursuant to §175.03(k)(8).

(3) Each licensee and/or registrant shall furnish a report of the worker's exposure to sources of radiation at the request of the worker formerly engaged in activities controlled by the licensee or registrant. The report shall include the dose record for each year the worker was required to be monitored pursuant to §175.03(f)(2) of this Code, or the equivalent provisions of previous versions. Such report shall be furnished within thirty (30) days from the date of the request, or within thirty (30) days after the dose of the individual has been determined by the licensee or registrant, whichever is later. The report shall cover the period of time that the worker's activities involved exposure to sources of radiation and shall include the dates and locations of licensed or registered (including certified registrations) activities.

(4) When a licensee and/or registrant is required pursuant to §175.03(l)(3) to report to the Department any exposure of an individual to radiation or radioactive material, the licensee and/or registrant shall also provide the individual a report on the exposure data included therein. Such reports shall be transmitted at a time not later than the transmittal to the Department.

(5) At the request of a worker who is terminating employment with the licensee and/or registrant in work involving exposure to radiation or radioactive material, during the current year, each licensee and/or registrant shall provide at termination to each such worker, or to the worker's designee, a written report regarding the radiation dose received by that worker from operations of the licensee or registrant during the current year or fraction thereof. If the most recent individual monitoring results are not available at that time, a written estimate of the dose shall be provided together with a clear indication that this is an estimate.

(e) **Presence of representatives of licensees and/or registrants and workers during inspections.** (1) Each licensee and/or registrant shall afford the Department at all reasonable times opportunity to perform an inspection of materials, machines, activities, facilities, premises and records pursuant to this Code.

(2) During an inspection, Department inspectors may consult privately with workers as specified in §175.04(f).

The licensee and/or registrant, or that person's representative, may accompany the Department inspectors during other phases of an inspection.

(3) If, at the time of inspection, an individual has been authorized by the workers to represent them during Department inspections, the licensee and/or registrant shall notify the inspectors of such authorization and shall give the workers' representatives an opportunity to accompany the inspectors during the inspection of physical working conditions.

(4) Each workers' representative shall be routinely engaged in work under control of the licensee and/or registrant and shall have received instructions as specified in §175.04(c).

(5) Different representatives of licensees or registrants and workers may accompany the inspectors during different phases of an inspection if there is no resulting interference with the conduct of the inspection. However, only one workers' representative at a time may accompany the inspectors.

(6) With the approval of the licensee and/or registrant and the workers' representative, an individual who is not routinely engaged in work under control of the licensee and/or registrant, for example a consultant to the licensee and/or registrant or to the workers' representative, shall be afforded the opportunity to accompany inspectors during the inspection of physical working conditions.

(7) Notwithstanding the other provisions of §175.04(e), Department inspectors are authorized to refuse to permit accompaniment by any individual who deliberately interferes with a fair and orderly inspection. With regard to any area containing proprietary information, the workers' representative for that area shall be an individual previously authorized by the licensee and/or registrant to enter that area.

(f) **Consultation with workers during inspections.** (1) Department inspectors may consult privately with workers concerning matters of occupational radiation protection and other matters related to applicable provisions of this Code, licenses, certified registrations and registrations to the extent the inspectors deem necessary for the conduct of an effective and thorough inspection.

(2) During the course of an inspection any worker may bring privately to the attention of the inspectors, either orally or in writing, any past or present condition which the worker has reason to believe may have contributed to or caused any violations of this Code, license condition, certified registration condition or registration, or any unnecessary exposure of any individual to radiation from sources of radiation under the licensee's and/or registrant's control. Any such notices in writing shall comply with the requirements of §175.04(g)(1).

(3) The provisions of §175.04(f)(2) shall not be interpreted as authorization to disregard instructions pursuant to §175.04(c).

(g) **Requests by workers for inspections.** (1) Any worker or representative of workers who believes that a violation of this Code, registration, certified registration or license conditions exists or has occurred in work under a license and/or certificate of registration with regard to radiological working conditions in which the worker is engaged, may request an inspection by giving notice of the alleged violation to the Bureau of Radiological Health. Any such notice shall be in writing, shall set forth the specific grounds for the notice, and shall be signed by the worker or representative of the workers. A copy shall be provided to the licensee and/or registrant by the Bureau of Radiological Health no later than at the time of inspection except that, upon the request of the worker giving such notice, such worker's name and the name of individuals referred to therein shall not appear in such copy or any record published, released, or made available by the Department, except for good cause shown.

(2) If, upon receipt of such notice, the Bureau of Radiological Health determines that the complaint meets the requirements set forth in §175.04(g)(1), and that there are reasonable grounds to believe that the alleged violation exists or has occurred, an inspection shall be made as soon as practicable, to determine if such alleged violation exists or has

occurred. Inspections performed pursuant to §175.04(g) need not be limited to matters referred to in the complaint.

(3) No licensee, registrant, or contractor or subcontractor of a licensee or registrant shall discharge or in any manner discriminate against any worker because such worker has filed any complaint or instituted or caused to be instituted any proceeding under this Code or has testified or is about to testify in any such proceeding or because of the exercise by such worker on behalf of such worker or others of any option afforded by this Code.

(h) **Inspections not warranted; informal review.** (1) If the Bureau of Radiological Health determines, with respect to a complaint under §175.04(g), that an inspection is not warranted because there are no reasonable grounds to believe that a violation exists or has occurred, the Bureau of Radiological Health shall notify the complainant in writing of such determination. The complainant may obtain review of such determination by submitting a written statement of position with the Deputy Commissioner for Environmental Health Services, who will provide the licensee and/or registrant with a copy of such statement by certified mail, excluding, at the request of the complainant, the name of the complainant. The licensee or registrant may submit an opposing written statement of position with the Deputy Commissioner of Environmental Health Services who will provide the complainant with a copy of such statement by certified mail.

(2) Upon the request of the complainant, the Deputy Commissioner for Environmental Health Services may hold an informal conference in which the complainant and the licensee and/or registrant may orally present their views. An informal conference may also be held at the request of the licensee and/or registrant, but disclosure of the identity of the complaint will be made only following receipt of written authorization from the complainant. After considering all written or oral views presented, the Deputy Commissioner for Environmental Health Services shall affirm, modify, or reverse the determination of the Bureau of Radiological Health and furnish the complainant and the licensee and/or registrant a written notification of the decision and the reason therefor.

(3) If the Bureau of Radiological Health determines that an inspection is not warranted because the requirements of §175.04(g)(1) have not been met, the complainant shall be notified in writing of such determination. Such determination shall be without prejudice to the filing of a new complaint meeting the requirements of §175.04(g)(1).

§175.05 Fees.

(a) **Inspection fees.** Notwithstanding any other provision of this Code, the Department is authorized to charge the following inspection fees pursuant to Section 225 of the Public Health Law and the regulations promulgated thereunder:

(1) For radiation equipment facilities required to have quality assurance programs pursuant to §175.07 of this Code, the following inspection fees apply:

(i) Annually inspected facilities:

(A) Large hospital (more than 40 tubes) base fee: $1960.00

(B) Medium hospital (21-40 tubes) base fee: $1585.00

(C) Small hospital (1-20 tubes) base fee: $1290.00

(D) Large (more than 2500 examinations per year, excluding mammography) non-hospital base fee: $670.00

(E) Small (less than 2500 examinations per year, excluding mammography) non-hospital base fee: $375.00

(ii) Biennially inspected facilities:

(A) Large (more than 2500 examinations per year) facility base fee: $670.00

(B) Small (less than 2500 examinations per year) facility base fee: $375.00

(iii) For each tube inspected at annually or biennially inspected facilities, the following inspection fees apply in addition to the base fee:

(A) Radiographic: $120.00

(B) Fluoroscopic: $175.00

(C) Mammographic: $295.00

(D) Dental: $60.00

(E) All other: $60.00

(iv) For radiation equipment facilities not required to have quality assurance programs pursuant to §175.07 of this Code, the following inspection fees apply:

(A) First tube: $170.00

(B) Each additional tube: $60.00

(2) For linear accelerator facilities, the following fee applies:

(i) Base fee: $715.00

(3) For facilities licensed to possess and use radioactive materials, the following inspection fees apply:

(i) Specific licenses authorizing teletherapy

(A) Base fee: $320.00

(ii) Specific licenses of limited scope authorizing medical use (except for teletherapy)

(A) Base fee: $610.00

(B) Per site fee: $140.00

(iii) Specific licenses of limited scope authorizing non-human use

(A) Base fee: $385.00

(B) Per site fee: $160.00

(iv) Specific licenses of broad scope authorizing medical use (except for teletherapy)

(A) Base fee: $3515.00

(B) Per site fee: $140.00

(v) Specific license of broad scope authorizing research and development (non-human use)

(A) Base fee: $2450.00

(B) Per site fee: $160.00

(b) **Due date for inspection fees.** (1) Payment for inspection fees is due and payable thirty (30) days from the billing date.

(2) Failure to pay any inspection fee may result in the suspension or revocation of a registration, certified registration or radioactive materials license.

24 RCNY 175.06

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 175 RADIATION CONTROL General Provisions

§175.06 Professional practitioners and related provisions.

(a) Nothing in these regulations shall limit any human use of radiation in diagnostic and therapeutic procedures pursuant to sections below, provided that with respect to human use of radioactive materials, such use is in accordance with a specific license issued pursuant to these regulations, or an exemption therefrom, or under a license issued by the New York State Department of Health or the U.S. Nuclear Regulatory Com- mission.

(b) Each professional practitioner who treats or diagnoses any alleged or proven case of radiation illness or radiation injury to any individual, except that which can be expected in the normal course of radiation therapy, shall report to the Commissioner in writing within seven (7) days such treatment or diagnosis, the fact thereof and the full name, address, social security number, and age of such individual.

(c) No person other than a professional practitioner shall direct or order the application of radiation to a human being; nor shall any person other than a professional practitioner, or a person working under the direction, order, or

direct supervision of a professional practitioner apply radiation to a human being. Such direction, order to apply, application of, or administration of radiation shall be in the course of the practitioner's professional practice and shall comply with the following:

(1) The provisions of the license or other authorization of the professional practitioner under the Education Law of the State of New York, or any successor law or regulation, and all regulations pertinent thereto, including, but not limited to provisions as to those parts of the human body and those persons which the professional practitioner may diagnose, analyze or treat or to which he may direct or order the application of, or apply, radiation, and provisions as to the type of radiation which the professional practitioner may use and the purpose for which the professional practitioner may use it; and

(2) The applicable provisions of Part 89 of Title 10 of the Codes, Rules and Regulations of the State of New York and Article 35 of the Public Health Law of the State of New York, or any successor law or regulation, relating to the practice of radiologic technology including licensure requirements and the limitations under which radiologic technologists and other persons, other than professional practitioners, may apply x-rays to human beings and all regulations pertinent thereto.

(3) A professional practitioner shall be responsible for the supervision of any radiation employee who administers radiation to human beings to assure that each exposure is given consistent with expected medical benefit and in accordance with any standards or requirements relating to the practice for which he/she is licensed.

(d) A radiologic technologist shall be responsible for complying with the requirements of such technologist's license and the limitations established by the New York State Department of Health, Bureau of Radiologic Technology. Each activity carried out as a radiologic technologist shall be such as to assure the maximum medical benefit with the minimum radiation exposure to patients and employees.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 175 RADIATION CONTROL General Provisions

§175.07 Quality assurance programs and misadministration records and reports.

(a) **Purpose and scope.** This section establishes requirements for the use of machine-produced radiation, radioactive materials or the radiation therefrom for diagnostic and therapeutic uses in the healing arts. These requirements and provisions provide for the protection of the public health and safety and are in addition to, and not in substitution for, others in this Code. The requirements of this section apply to all applicants, licensees and registrants subject to this Code.

(b) **Diagnostic facilities.** A quality assurance program is a system of plans, actions, reviews, reports and records, the purpose of which is to ensure that diagnostic facilities achieve consistent high quality imaging and other diagnostic results, while maintaining radiation output and personnel doses within limits prescribed by the Department.

(1) Each radiation installation performing diagnostic x-ray and/or radioactive materials procedures, except dental, podiatric or veterinary facilities, shall implement a quality assurance program including at a minimum:

(i) the adoption of a manual containing written policies and procedures for radiation protection and describing the facility's quality assurance program. Policies and procedures must be consistent with the types of equipment and services provided including, but not limited to, identification of patients, use of gonadal or scoliosis shielding, personnel monitoring, protection of pregnant workers and patients, and holding of patients. The quality assurance manual must describe the various processing, generator and systems quality control tests appropriate for the types of equipment and services provided in sufficient detail to ensure that they will be performed properly;

(ii) the performance of quality control tests and the correction of deficiencies as specified in the quality assurance manual;

(iii) the maintenance of equipment records for each diagnostic imaging system, containing test results, records of equipment repairs and other pertinent information;

(iv) the provisions of a formalized in-service training program for employees including, but not limited to, quality assurance and radiation safety procedures;

(v) the determination of radiation output at the point of skin entry for common x-ray examinations;

(vi) the measurement of the amount of activity of each dose of a radiopharmaceutical/radiobiologic administered to each patient;

(vii) the calculated absorbed dose for diagnostic procedures involving radioactive materials;

(viii) the provision of the information described in §175.07(b)(1)(v), (vi) and (vii) to any patient upon request;

(ix) the performance of an ongoing program of analysis of repeated, rejected or misadministered diagnostic studies which is designed to identify and correct problems and to optimize quality; and

(x) the performance of an ongoing film processing quality assurance (sensitometry) program, including the use of sensitometry tools (densitometer, sensitometer and thermometer), the determination and plotting of daily sensitometry data, and corrective action when sensitometry values exceed tolerance limits.

(2) Each licensee or registrant shall maintain written records documenting processing quality assurance and audit activities for review by the Department. Such records shall be maintained by the licensee or registrant until after the next scheduled inspection is completed by the Department.

(c) **External beam and brachytherapy.** A quality assurance program for external beam therapy and brachytherapy is a system of plans, actions, reviews, reports and records, the purpose of which is to ensure a consistent and safe fulfillment of the dose prescription to the target volume, with minimal dose to normal tissue.

(1) Each licensee or registrant who uses external beam therapy and/or brachytherapy in humans shall implement a quality assurance program which includes at a minimum: (i) the adoption of a quality assurance manual containing written policies and procedures designed to ensure effective supervision, safety, proper performance of equipment, effective communication and quality control. These must include policies and procedures to ensure that:

(A) each patient's evaluation and intended treatment is documented in the patient's record;

(B) a written, signed and dated order for medical use of radiation or radioactive material is made for each patient in accordance with §175.06 of this Code;

(C) each patient is positively identified;

(D) all orders and other treatment records are clear and legible;

(E) staff will be instructed to obtain clarification before treating a patient if any element of the order or other record is confusing, ambiguous or suspected of being erroneous;

(F) each patient's response to treatment is assessed by an authorized user physician, or a physician under the supervision of an authorized user physician, for external beam therapy and/or brachytherapy, as appropriate, and that unusual responses are evaluated as possible indications of treatment errors;

(G) complete treatment records containing data recorded at the time of each treatment are maintained;

(H) the treatment charts of patients undergoing fractionated treatment are checked for completeness and accuracy at weekly intervals;

(I) final plans of treatment and related calculations are checked for accuracy before 25 percent of the prescribed dose for external beam therapy or 50 percent of the prescribed dose for brachytherapy is administered. If a treatment plan and related calculations were originally prepared by a radiation therapy physicist possessing the qualifications specified in §175.64(c)(2) or §175.103(j)(10), it may be checked by the same person using a different calculational method. Treatment plans and related calculations prepared by all other personnel must be checked by a second person using procedures specified in the treatment planning procedures manual required pursuant to §175.07(c)(2), and who has received training in the use of such manual;

(J) there is quality control for all physical components of radiation therapy such as: equipment function and safety (including treatment planning equipment), treatment planning procedures and computer codes, treatment application procedures, dosimetry and personnel radiation safety;

(K) that the quality control tests to be performed are documented, including:

(a) detailed procedures for performing each test;

(b) the frequency of each test;

(c) acceptable results for each test;

(d) corrective actions to be taken; and

(e) recordkeeping and reporting procedures for test results.

(2) Each licensee or registrant shall ensure that a radiation therapy physicist possessing the qualifications specified in §175.64(c)(2) or §175.103(j)(10), prepares a procedures manual describing how radiation therapy treatment planning is to be performed at the licensee's or registrant's facility. The treatment planning manual may be part of the quality assurance manual required by §175.07(c)(1) and shall include the calculation methods and formulas to be used at the facility, including the methods for performing the checks of treatment plans and related calculations as required by §175.07(c)(1). The treatment planning manual shall be reviewed annually by a radiation therapy physicist and shall be included in training given pursuant to §175.04(c) of this Code to facility staff who will participate in treatment planning.

(3) Each licensee or registrant shall ensure that all equipment used in planning and administering radiation therapy is properly functioning and is designed and used for the intended purpose and is maintained in accordance with the manufacturer's instructions and the quality assurance program described in the licensee's or registrant's quality assurance manual. Such equipment shall be calibrated prior to use on patients, at least annually thereafter and following any change, repair or replacement of any component which may alter the radiation output.

(4) Each licensee or registrant shall implement procedures for auditing the effectiveness of the radiation therapy quality assurance program as specified below. Audit procedures must specify either that:

(i) external audits will be conducted at intervals not to exceed twelve (12) months by radiation therapy physicists possessing the qualifications specified in §175.64(c)(2) or §175.103(j)(10) and by physicians who are active in the practice of the type of radiation therapy conducted by the licensee or registrant. These shall be individuals who are not involved in the therapy program being audited; and

(A) the individuals who conduct the audit will prepare and deliver to the licensee or registrant a written report which contains an assessment of the effectiveness of the quality assurance program and makes recommendations for any needed modifications or improvements; and

(B) the licensee or registrant shall promptly review the audit findings, address the need for modifications or improvements and document actions taken. If recommendations are not acted on, the reasons for this also shall be documented; or

(ii) internal audits will be conducted at intervals not to exceed twelve (12) months by program staff who will prepare and deliver to the licensee or registrant a written report as specified in §175.07(c)(4)(i)(A), and external audits will be conducted at intervals not to exceed five (5) years by an organized review program supervised by the American College of Radiology, or a program found to be equivalent by the Department based on the scope of the audit and the experience of the sponsoring organization in performing such audits; and

(A) the licensee or registrant shall promptly review the audit findings, address the need for modifications or improvements and document actions taken. If recommendations are not acted on, the reasons for this also shall be documented.

(5) Each licensee or registrant shall maintain written records documenting quality assurance and audit activities for review by the Department.

(d) **Therapy with radiopharmaceuticals and/or radiobiologics.** A quality assurance program for radiopharmaceutical/radiobiologic therapy is a system of plans, actions, reviews, reports and records, the purpose of which is to ensure a consistent and safe fulfillment of the dose prescription.

(1) Each licensee who uses radiopharmaceuticals and/or radiobiologics for therapy in humans shall implement a quality assurance program which includes at a minimum: (i) the adoption of a manual containing written policies and procedures designed to assure effective supervision, safety, proper performance of equipment, effective communication and quality control. These must include procedures to assure that:

(A) each patient's evaluation and intended treatment is documented in the patient's record;

(B) a written, signed and dated order for medical use of radioactive material is made in accordance with §175.06 of this Code;

(C) each patient is positively identified;

(D) all orders and other treatment records are clear and legible;

(E) staff will be instructed to obtain clarification before treating a patient if any element of the order or other record is confusing, ambiguous or suspected of being erroneous;

(F) each patient's response to treatment is assessed by an authorized user physician, or a physician under the supervision of an authorized user physician, for radiopharmaceutical/radiobiologic therapy and that unusual responses are evaluated as possible indications of treatment errors; and

(G) complete treatment records containing data recorded at the time of each treatment are maintained.

(2) Each licensee shall ensure that all equipment used in planning and administering radiopharmaceutical/radiobiologic therapy is designed and used for the intended purpose and is properly functioning, is properly calibrated and is maintained in accordance with the manufacturer's instructions and the quality assurance program described in the licensee's or registrant's quality assurance manual.

(3) Each licensee shall audit the radiopharmaceutical/radiobiologic quality assurance program at intervals not to exceed twelve (12) months to assess the effectiveness of the program, document the audit and any modifications or improvements found to be needed and institute corrective actions and improvements as indicated by the audit findings.

(e) **Records and reports of misadministrations.** (1) **Diagnostic misadministrations.**

(i) Records of misadministrations as defined in §175.02(a)(129) of this Code which involve diagnostic procedures and the corrective actions taken pursuant to §175.07(b)(1)(ix) shall be retained for three (3) years; and

(ii) if such a misadministration results in a dose to the patient exceeding 50 millisieverts (5 rem) to the whole body or 500 millisieverts (50 rem) to any individual organ, or involves the administration of iodine-125 or iodine-131 in the form of iodide in a quantity greater than 1 megabecquerel (30 microcuries), the licensee or registrant shall notify the Department in writing within fifteen (15) days and make and retain a record pursuant to §175.07(e)(3).

(2) **Therapy misadministrations.** (i) When a misadministration described in §175.02(a) (129)(v), (vi) or (vii), in which the percentage of error is equal to or less than 20 percent is discovered, the licensee or registrant shall immediately investigate the cause and take corrective action; and

(A) the licensee or registrant shall make and retain a record of all therapy misadministrations described in §175.07(e)(2). The record shall contain all the information required by §175.07(e)(3) and shall be retained for six (6) years.

(ii) When a therapy misadministration described in §175.02(a)(129)(i), (ii), (iii) or (viii) is discovered, or when a misadministration described in §175.02(a)(129)(v), (vi) or (vii) is discovered in which the percentage of error is greater than 20 percent, the licensee or registrant shall notify the Department by telephone within 24 hours. The licensee or registrant shall also notify the referring physician of the affected patient and the patient of any therapy misadministration described herein, with the exception of the misadministration defined in §175.02(a)(129)(viii). When it is not medically advisable to give such information to the patient, the information shall be made available to the patient's responsible relative or guardian on the patient's behalf. These notifications must be made within 24 hours after the misadministration is discovered. If the referring physician, patient or the patient's responsible relative or guardian cannot be reached within 24 hours, the licensee or registrant shall notify them as soon as practicable. It is not required that the patient be notified without first consulting the referring physician; however, medical care for the patient shall not be delayed because of this.

(iii) Within seven (7) days after an initial therapy misadministration report, the licensee or registrant shall send a written report to the Department. The written report must contain the name of the licensee or registrant, the information required by §175.07(e)(3) and whether the licensee or registrant notified the patient or the patient's responsible relative or guardian. This reporting requirement may be satisfied by submitting to the Department a copy of the incident report filed with the New York State Department of Health pursuant to 10 NYCRR Part 405 provided, however, that such report contains all information required by this Code.

(3) Each licensee or registrant shall maintain a record of each reportable diagnostic misadministration and each therapy misadministration for six (6) years. The record shall contain the names of all individuals involved in the event (including the treating physician, allied health personnel, the patient and the patient's referring physician), the patient's social security number or identification number if one has been assigned, a description of the event, the effect on the patient (including sequelae, prognosis and follow-up actions) and actions taken to prevent recurrence.

(4) Within seven (7) days after an initial therapy misadministration report made pursuant to §175.07(e)(2)(ii), the licensee or registrant shall provide the patient a written report, with a copy to the patient's referring physician. The report shall contain a brief description of the event, the effect on the patient including any change in the patient's health status which resulted from or could result from the misadministration, and recommendations for the appropriate course of treatment or follow-up. If it is not medically advisable to give such information to the patient, the report shall be made available to the patient's responsible relative or guardian on the patient's behalf. Such action shall be documented in the patient's treatment record.

HISTORICAL NOTE

Section repealed and added City Record June 27, 1994 eff. July 27, 1994.

Section in original publication July 1, 1991.

Subd. (b) par (1) subpars (viii), (ix) amended City Record Apr. 3, 2001 eff. May 3, 2001. [See

Vol. 9 Statements of Basis and Purpose No. 16]

Subd. (b) par (1) subpar (x) added City Record Apr. 3, 2001 eff. May 3, 2001. [See Vol. 9

Statements of Basis and Purpose No. 16]

Subd. (e) par (1) subpar (ii) amended City Record Apr. 3, 2001 eff. May 3, 2001. [See Vol. 9

Statements of Basis and Purpose No. 16]

Notes:

Subparagraphs (viii) and (ix) of paragraph (1) of subsection (b) were amended and subparagraph (x) of paragraph (1) and paragraph (2) of subsection (b) were adopted on March 21, 2001 to provide additional quality assurance requirements for the processing of radiographic film after the x-ray film has been produced and to insure the proper maintenance of records.

Subparagraph (ii) of paragraph (1) of subsection (e) was amended on March 21, 2001 to delete the reference to iodine 123 to make the regulation consistent with state and federal regulations which have been amended owing to the lesser potency of iodine 123.

Radiation Equipment

Rules of the City of New York

***** Current through December 2009 ****

24 RCNY 175.51

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 175 RADIATION CONTROL General Provisions

§175.51 Registration and inspection of installations with radiation equipment; other permitted activities.

(a) **Applicability.** The provisions of this section apply to all radiation installations using any radiation equipment, and to those persons who sell, assemble and install such equipment as applicable. However, those facilities possessing equipment subject to the requirements of §175.64(b) of this Code are required to obtain a certified registration for that equipment. If such facility has additional radiation equipment not subject to the requirements of §175.64(b) of this Code, such equipment shall be registered pursuant to this section.

(b) **Registration required.** (1) Prior to establishing, maintaining or operating any radiation installation at which is located any radiation equipment in operable condition, or prior to installing such equipment which is intended to be used, the owner or operator of such installation shall have obtained a current certificate of registration or, for a therapeutic radiation machine subject to the requirements of §175.64(b) of this Code, a certified registration from the Department.

(2) For professional practitioners in private practice, registrations shall not be issued to anyone other than natural persons who shall be responsible for the use and operation of the equipment and shall be liable for violations of the conditions of the registration or the provisions of this Code.

(c) Application for a certificate of registration as described in §175.51(b)(1) shall be made to the Department on a written form and in a manner prescribed by the Department.

(d) Facilities at which either the operator or location will be changed shall apply for a new registration at least thirty (30) days prior to such change.

(1) Facilities without a current certificate of registration shall apply as follows:

No registrant shall apply x-rays to treat or diagnose any patient's medical condition at a facility that does not possess a current, non-expired Certificate of Registration from the Department. This shall not prohibit the installation of radiation-producing equipment by a registrant at a facility solely for testing purposes by medical physicists.

(i) All new facilities possessing radiation-producing equipment, excluding dental, podiatric, and veterinary facilities, shall apply for a certificate of registration at least thirty (30) days prior to the `expected start date' for clinical operation of the facility.

(ii) The applicant for registration shall submit the following information:

(A) a completed application form; and

(B) a medical physicist report detailing the results of initial quality control tests conducted on all radiation-producing equipment in the facility. In this context, the initial quality control tests shall be the sum of all quality control tests mandated to be conducted for the facility type at daily, weekly, monthly, semiannual, annual and biennial frequencies. In addition, a radiation protection survey shall be conducted for each room housing a radiographic unit. In this context, a medical physicist shall be an individual possessing a current, non-expired CRESO certification in New York State, or a license to practice the specialty of diagnostic medical physics in New York State.

(iii) The Department has the right to refuse to grant a facility's registration until such time as the facility's physicist report contains all quality control mandated tests as submitted by an individual licensed in New York State or possessing a CRESO certification in New York State.

(iv) Upon completion of the review process for the submitted quality control tests by the facility, if reasons exist to refuse authorization to register the facility's radiation-producing equipment for clinical usage, the facility shall be notified of the reasons for such a decision by the Department in writing.

(2) All new dental, podiatric, and veterinary facilities without a current certificate of registration shall apply for a new registration at least thirty (30) days before establishing the installation and/or installing the x-ray equipment. All new dental, podiatric, and veterinary facilities shall be prohibited from commencing diagnostic clinical examinations until such time that the facility has complied with items (i) and (ii) below:

(i) New facilities shall file a completed application form with the Department; and

(ii) Prior to any clinical usage of radiation-producing equipment, all such new facilities shall be inspected by the Department and shall correct all deficiencies noted at the time of such inspection.

(iii) The Department shall have the right to refuse to issue a certificate of registration to any facility that refuses to allow the Department to conduct an inspection of all of the facility's x-ray equipment and/or refuses to correct any violations of the Health Code noted during the inspection provided for in subparagraph (ii).

(e) **Renewal registrations.** Facilities with current, valid certificates of registration shall apply for renewal at least thirty (30) days prior to the expiration of such certificate of registration unless such certificate of registration is revoked or unless the installation is discontinued on or before the expiration of the certificate of registration.

(f) Fees for each registration shall be paid pursuant to §5.09(j). For certified registrations, fees shall be paid pursuant to §175.05.

(g) **Suspension and revocation of registrations.** (1) A registration may be denied, suspended or revoked pursuant to §5.17 of this Code or if the Commissioner finds that:

(i) the information submitted in the application is incorrect or incomplete; or

(ii) the installation is, has been or will be established, maintained, or operated in violation of this Code or any other applicable law, rule, regulation, or order; or

(iii) the certificate of registration has not been issued correctly; or

(iv) the fees for registration have not been paid as required.

(h) A certificate of registration shall be issued for a limited period of time extending from the date of issuance to the date of expiration as specified on the certificate of registration. The length of such period of time shall not exceed two years except that the Department may issue a certificate of registration for a longer period of time in order to stagger expiration dates for administrative purposes and may charge a proportionate increase in fees therefor.

(i) **Expiration of registrations.** (1) The registration issued for a radiation installation to the operator thereof shall expire and may be required to be surrendered to the Department upon:

(i) the expiration date specified on the certificate of registration; or

(ii) revocation by the Commissioner; or

(iii) a change of the person to whom the certificate of registration is issued; or

(iv) a change in address of the radiation installation if it is not a mobile unit; or

(v) a change in the name of the installation; or

(vi) the discontinuance of the installation.

(j) A certificate of registration shall not be transferable or assignable.

(k) A certificate of registration issued for a radiation installation shall be posted in accordance with the provisions of §5.15 of this Code.

(l) The registration shall not imply endorsement or approval by the Department and shall not be used to advertise or promote business.

(m) The operator of a radiation installation shall keep correct registration by reporting to the Department within ten (10) days any change affecting such information.

(n) **Inspections.** (1) Any radiation installation subject to the registration requirements of this section or the certified registration requirements of §175.64 of this Code shall be inspected periodically to assure compliance with the provisions of this Code and the maintenance of radiation exposures as far below the limits set forth in this Code as practicable.

(2) Except as otherwise provided in §175.51(n)(3), such inspections shall be made at a frequency specified herein, with the first inspection to be made at the time of the beginning of operation.

(A) Hospitals, clinics, radiologists and any other type of facility as specified by the Department shall be inspected annually.

(B) Dental, podiatric, veterinary installations shall be inspected triennially.

(C) All other facilities shall be inspected biennially.

(D) Reinspections or other appropriate follow-up activities shall be made at intervals of sixty (60) days or less to ensure correction of any violation found during an initial inspection and remaining uncorrected at the conclusion thereof.

(E) The inspections shall be made by the Department or, as the Department shall direct for dental and podiatric installations, by Certified Radiation Equipment Safety Officers approved by the Department, to use the New York City Health Code, including Article 175 thereof, for compliance purposes.

(i) Certified Radiation Equipment Safety Officers shall furnish an inspection report, in a form prescribed by the Department, signed by the person who made the inspection to the operator of the installation and a copy thereof to the Department in accordance with the instructions of the prescribed form.

(ii) Certified Radiation Equipment Safety Officers shall not charge or propose to charge a fee for an inspection in excess of a fair and reasonable amount as determined by the New York State Department of Health.

(3) The Department may establish inspection frequencies of any installation different from those specified in §175.51(n)(2).

(o) **Other activities requiring a permit.** (1) No person shall engage in the business of selling new or used radiation equipment to, or assembling, installing, or repairing such equipment for, professional practitioners or any other holder of a registration to operate a radiation installation in the City without a permit therefor issued by the Department. Application for such permit shall be made to the Department on a written form in a manner prescribed by the Department and fees paid pursuant to §5.07 of this Code.

(2) Each person who is engaged in the business of selling new or used radiation equipment to, or assembling, installing, or repairing such equipment for professional practitioners or any other person holding a registration to operate a radiation installation in the City shall comply with the reporting requirements in this Code.

(3) Any person who sells, assembles, installs or repairs new or used radiation equipment shall file a report with the Department pursuant to 21 CFR 1020.30(d), or any successor law or regulation, within fifteen (15) days of the completion of the activity.

HISTORICAL NOTE

Section repealed and added City Record June 27, 1994 eff. July 27, 1994.

Section in original publication July 1, 1991.

Subd. (d) amended City Record Sept. 29, 2006 eff. Oct. 29, 2006. [See Vol. 9 Statements of Basis

and Purpose No. 25]

Subd. (n) par (2) subpar (E) added City Record July 30, 2004 eff. Aug. 29, 2004. [See Vol. 9

Statements of Basis and Purpose No. 21]

Notes:

Subdivision (d) of §175.51 was amended on September 26, 2006, in order to implement a NYS Comptroller's Audit Report (2001-N-9) recommendation that all new x-ray facilities be inspected by the Department prior to initiating clinical x-ray exams.

Paragraph (2) of subdivision (n) of §175.51 was added on July 22, 2004 to authorize the Department to also utilize Certified Radiation Equipment Safety Officers for the inspections of dental and podiatric installations to assure timely inspections for such installations.

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 175 RADIATION CONTROL General Provisions

§175.52 Exemptions of radiation equipment.

(a) The provisions of these regulations shall not apply to:

(1) radiation equipment constructed so that it cannot emit radiation at a level greater than 1.3 E-7 C/kg (0.5 milliroentgen) per hour, measured 5 cm (2 in.) from any accessible surface thereof, and averaged over an area of 10 cm^2 (1.55 in^2) provided, however, that such exemption shall not apply to the testing or servicing of such equipment during its production; or

(2) radiation equipment during its storage, shipment, retail sale or other similar use (but not including installation) during which such equipment is not connected to a voltage source and does not emit radiation, provided however, that such equipment is not exempt from the labeling requirement of §175.56(d).

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 175 RADIATION CONTROL General Provisions

§175.53 Prohibited uses and activities.

(a) **Prohibited uses.**

(1) Hand-held fluoroscopic screens shall not be used.

(2) Shoe-fitting fluoroscopic devices shall not be used.

(3) Intraoral fluoroscopy in dental examinations shall not be used.

(4) Photofluorographic equipment shall not be used.

(5) Equipment employing bare overhead or uninsulated conductors shall not be used.

(6) Non-image intensified fluoroscopes shall not be used.

(b) **Prohibited activities.** (1) Individuals shall not operate x-ray equipment such that the useful beam is applied to human beings unless such individual is a professional practitioner or is otherwise authorized to operate x-ray equipment pursuant to New York State law.

(2) The sale, lease, transfer or loan of x-ray or fluoroscopic equipment or the supplies appertaining thereto, except to persons engaged in an occupation where such use is permitted or to institutions where such use is permitted, is prohibited. However, this restriction shall not apply to persons intending to use x-ray or fluoroscopic equipment and supplies solely for the application of radiation to other than human beings, nor to the acquisition of such equipment or supplies by wholesalers, distributors or retailers in the regular course of their trade or business.

(3) No person shall sell, lease, transfer, lend or install any radiation-producing equipment, or the supplies used in connection with such equipment, unless such supplies or equipment when properly placed into operation or properly used will meet the requirements of this Code. A person who undertakes to repair such equipment shall repair the same properly so that when it is placed in operation or properly used after the repair the equipment will meet the requirements of this Code for radiation protection and safety generally.

24 RCNY 175.54

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 175 RADIATION CONTROL General Provisions

§175.54 Surveys, shielding requirements and operator protection for diagnostic radiation machines.

(a) When appropriate, the Department may require the applicant for a certificate of registration to utilize the services of a qualified expert in shielding design to determine the shielding requirements prior to installation of radiation equipment. The shielding requirements shall be submitted to the Department for review.

(b) When appropriate, the Department may require that the continuity and adequacy of any protective barriers be verified by a protection survey performed by a qualified expert or a Certified Radiation Equipment Safety Officer. The findings shall be submitted to the Department for review, and shall be maintained by the owner or operator as part of the installation's radiation records and reports. (If the Department finds that the radiation surveys and reports of any qualified expert or Certified Radiation Equipment Safety Officer employed in this City are inadequate to assess radiation exposures, the Department may require the registrants and licensees to have such surveys and reports performed by other qualified experts or Certified Radiation Equipment Safety Officers and may notify the appropriate certifying agency of such action.

(c) **Operator protection.** (1) Fixed radiographic installations (except dental, mobile, portable, podiatric or mammographic systems or spot-film devices as defined in 21 CFR Section 1020.30(b)).

(i) The operator of radiographic equipment shall initiate x-ray exposures from a control console that satisfies the following requirements:

(A) the control console shall be located within a structure so constructed that

(a) radiation has to be scattered at least twice before entering the structure; or

(b) the structure shall be provided with a protective door that is interlocked to prevent an x-ray exposure unless the door is closed and which door shall have sufficient shielding to ensure compliance with the requirements of §175.03; and

(c) any walls of the structure shall be permanently fixed barriers of at least 2.13 m (7 ft) in height and shall provide sufficient shielding to ensure compliance with the requirements of §175.03; and

(B) the operator shall be provided with a viewing system to observe the patient during any exposure and which has been so placed that the operator can view any entry into the radiographic room; and

(C) the operator shall be provided with a means of communication with the patient from the operator's position at the control console; and

(D) the operator shall be allotted unobstructed floor space at the control console; and

(E) for control consoles located in structures without an interlocked door, the x-ray exposure control shall be fixed in the structure and placed at least 1.02 m (40 in.) from any open edge of the structure where radiation may enter.

(2) **Mobile, portable, podiatric and dental radiographic installations, excluding mammographic systems.** (i) Mobile, portable, podiatric and dental x-ray equipment shall be provided with the means to allow an operator to stand at least 2 m (6 ft) from the patient or behind a protective barrier and not in the path of the primary x-ray beam whenever an x-ray exposure is initiated.

(ii) Mobile and portable x-ray systems, excluding dental and podiatric systems, that are used continuously for greater than one week in the same location shall be deemed a fixed radiographic installation and shall meet the operator protection standards of either §175.54(c)(1)(i)(A) or (B).

(iii) Each operator of a mobile or portable radiographic x-ray unit, excluding dental and podiatric units, shall be provided with personnel monitoring as provided in §175.03 and shall wear a protective apron of at least 0.25 mm lead equivalent.

(3) **Mammographic installations.** (i) The operator of the mammographic equipment shall initiate x-ray exposures from the control console of the mammographic equipment such that:

(A) protective shielding is provided for the operator that meets the following criteria: **(a)** the shielding shall be provided to a height of 2m (6 ft) from the floor, with the lower edge not more than 7.5 cm (3 in.) from the floor. Such shielding shall be permanently attached to the mammographic x-ray unit in such a manner that an air gap does not exist between the shield and the mammographic unit or shall be constructed as a permanent operator shield such that the operator is able to stand completely within the shielded area during the exposure; and

(b) the exposure control shall be permanently fixed on the mammographic control console; and

(c) the operator shall be able to communicate with and view the patient from the operator's protected position

during the exposure.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 175 RADIATION CONTROL General Provisions

§175.56 General requirements for radiation equipment.

(a) In addition to the requirements set forth in this section, all radiation equipment shall meet all applicable specific provisions of the sections of this Code set forth under the heading "Radiation Equipment" and all possession and use thereof shall comply with the requirements set forth in the sections of this Code set forth under the heading "General Provisions" and with any other applicable requirement deemed necessary by the Department.

(b) Radiation equipment which is not intended to be used must be made inoperable to the satisfaction of the Department by dismantling or sealing with an official Department seal or other suitable method, and shall not be unsealed or restored to operable condition without prior authorization by the Department.

(c) All radiation equipment, except equipment used solely in research and development, installed in a radiation installation shall, where applicable, be listed by the Underwriters' Laboratories, Inc., or shall comply with the National Electrical Code of the National Fire Protection Association or an equivalent safety standard.

(d) **Labels.** (1) The control panel for radiation equipment used for diagnostic or therapeutic radiology shall be clearly labeled with the words "CAUTION-THIS EQUIPMENT PRODUCES X-RAYS WHEN ENERGIZED" or other cautionary wording as specified in applicable performance standards established by the United States Department of Health and Human Services, Food and Drug Administration.

(2) Such cautionary labels shall not be used except as required by this Code.

(e) **Equipment accessories.** Film processing materials and techniques shall be those recommended by the x-ray film manufacturer or those otherwise tested to ensure maximum information content of the developed x-ray film and quality control methods shall be employed to ensure optimum results as specified in §175.07 of this Code. X-ray film shall not be used past the manufacturer's expiration date.

(f) **Beam quality-half-value layer.** (1) The half-value layer (HVL) of the useful beam for a given x-ray tube potential shall not be less than the appropriate value shown in Table 1 below under "Specified dental systems" for any dental system designed for use with intraoral image receptors and manufactured after December 1, 1980, and under "Other x-ray systems" for all other x-ray systems subject to this Code. If it is necessary to determine such half-value layer at an x-ray tube potential which is not listed in Table 1, linear interpolation or extrapolation may be made.

(2) Positive means shall be provided to insure that at least the minimum filtration needed to achieve the beam quality requirements specified in §175.56(f)(1) is in the useful beam during each exposure.

Table 1

X-ray tube voltage (kilovolt peak) Designed operating range	Minimum HVL (mm of Al) Measured operating potential	Specified dental systems	Other x-ray systems
Below 50	30		0.3
	40		0.4
	49		0.5
50 to 70	50	1.5	1.2
	60	1.5	1.3
	70	1.5	1.5
Above 70	71	2.1	2.1
	80	2.3	2.3
	90	2.5	2.5
	100	2.7	2.7
	110	3.0	3.0
	120	3.2	3.2
	130	3.5	3.5
	140	3.8	3.8
	150	4.1	4.1

(g) **Radiographic protective tube housings and diaphragm protection.**

(1) All radiographic protective tube housings shall be of the diagnostic type.

(2) All diaphragms, collimators, cones, shutters or other devices used to define the useful beam shall provide the same degree of attenuation as that required of the tube housing.

(h) The tube head shall remain stationary when placed in any exposure position and during the exposure.

(i) **Additional requirements.** In addition to other applicable requirements of this Code, diagnostic x-ray equipment manufactured after August 1, 1974, shall meet the following requirements:

(1) Aluminum equivalent of material between patient and image receptor. The aluminum equivalent of each of the items listed in Table 2 below, which are used between the patient and image receptor, shall not exceed the indicated limits. Compliance shall be determined by x-ray measurements made at a potential of 100 kVp and with an x-ray beam which has a half-value layer of 2.7 mm of aluminum. This requirement is applicable to front panel(s) of cassette holders and film changers provided by the manufacturer for purposes of patient support and/or to prevent foreign object intrusions. It does not apply to such items as a screen and its associated mechanical support panel or grids.

Table 2

Item	Aluminum equivalent (in mm)
Front panel(s) of cassette holder (total of all)	1.0
Front panel(s) of film changer (total of all)	1.0
Stationary tabletop	1.0
Moveable tabletop (including stationary subtop)	1.5
Cradle	2.0

(2) On battery-powered generators, visual means shall be provided on the control panel to indicate whether the battery is in a state of charge adequate for proper operation.

(j) The x-ray equipment, and all related items, including all individual components, whether related to the setting of exposure technique factors, the taking of the x-ray or post-exposure processing of the x-ray film, shall be maintained in proper working order. This includes, but is not limited to, dials, buttons, indicators, switches, controls and meters.

(k) All x-ray producing equipment shall be provided with a light, or other visual indication, which functions whenever x-rays are produced. This indication shall be visible at the operator's protected position.

HISTORICAL NOTE

Section repealed and added City Record June 27, 1994 eff. July 27, 1994.

Section in original publication July 1, 1991.

Subd. (e) amended City Record Apr. 3, 2001 eff. May 3, 2001. [See Vol. 9 Statements of Basis and Purpose No. 16]

Subd. (j), (k) added City Record Apr. 3, 2001 eff. May 3, 2001. [See Vol. 9 Statements of Basis and Purpose No. 16]

Notes:

Subsection (e) was amended on March 21, 2001 to prohibit the use of outdated x-ray film. In addition, the reference to paragraph (I) was deleted as unnecessary.

Subsections (j) and (k) were added on March 21, 2001 to include additional requirements for x-ray producing equipment.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 175 RADIATION CONTROL General Provisions

§175.57 Diagnostic radiography (other than veterinary).

(a) **Applicability.** The provisions of this section apply to equipment for the recording of images.

(b) **Control and indication of technique factors.** (1) **Visual indication.** The technique factors to be used during an exposure shall be indicated before the exposure begins, except when automatic exposure controls are used, in which case the technique factors which are set prior to the exposure shall be indicated. On equipment having fixed technique factors, this requirement may be met by permanent markings. Indication of technique factors shall be visible from the operator's position except in the case of spot films made by the fluoroscopist.

(2) **Timers.** Means shall be provided to terminate the exposure at a preset time interval, a preset product of current and time, a present number of pulses, or a preset radiation exposure to the image receptor.

(i) Except during serial radiography, the operator shall be able to terminate the exposure at any time during an

exposure of greater than one-half section. Termination of exposure shall cause automatic resetting of the timer to its initial setting or zero. It shall not be possible to make an exposure when the timer is set to a zero or off position if either position is provided.

(ii) During serial radiography, the operator shall be able to terminate the x-ray exposure(s) at any time, but means may be provided to permit completion of any single exposure of the series in progress.

(3) **Automatic exposure controls.** When an automatic exposure control is provided:

(i) indication shall be made on the control panel when this mode of operation is selected;

(ii) when the x-ray tube potential is equal to or greater than 51 kVp, the minimum exposure time for field emission equipment rated for pulsed operation shall be equal to or less than a time interval equivalent to two pulses and the minimum exposure time for all other equipment shall be equal to or less than 1/60 second or a time interval required to deliver 5 mAs, whichever is greater;

(iii) either the product of peak x-ray tube potential, current and exposure time shall be limited to not more than 60 kWs per exposure or the product of x-ray tube current and exposure time shall be limited to not more than 600 mAs per exposure except when the x-ray tube potential is less than 51 kVp in which case the product of x-ray tube current and exposure time shall be limited to not more than 2,000 mAs per exposure; and

(iv) a visible signal shall indicate when an exposure has been terminated at the limits described in §175.57(a)(3)(iii) and manual resetting shall be required before further automatically timed exposures can be made.

(c) **Accuracy.** Deviation of technique factors from indicated values shall not exceed the limits given in the information provided by the manufacturer in accordance with applicable Federal standards (21 CFR Part 1020, or any successor law or regulation).

(d) **Reproducibility.** The following requirements shall apply when the equipment is operated on an adequate power supply as specified by the manufacturer in accordance with the requirements of applicable Federal standards (21 CFR Part 1020, or any successor law or regulation):

(1) **Coefficient of variation.** For any specific combination of selected technique factors, the estimated coefficient of variation of radiation exposures shall be no greater than 0.05.

(e) **Linearity.** The following requirements apply when the equipment is operated on a power supply as specified by the manufacturer in accordance with the requirements of applicable Federal standards (21 CFR Part 1020 or any successor law or regulation) for any fixed x-ray tube potential within the range of 40 percent to 100 percent of the maximum rated.

(1) **Equipment having independent selection of x-ray tube current (mA).** The average ratios of exposure to the indicated milliampere-seconds product, C-kg^{-1}/mAs (mR/mAs), obtained at any two consecutive tube current settings shall not differ by more than 0.10 times their sum. This is:

$$' X_1 - X_2 ' \# 0.10 (X_1 X_2)$$

where X_1 and X_2 are the average C-kg^{-1}/mAs (or mR/mAs) values obtained at each of two consecutive tube current settings or at two settings differing by no more than a factor of 2 when the tube current selection is continuous.

(2) Equipment having selection of x-ray tube current-exposure time product (mAs). For equipment manufactured after May 3, 1994, the average ratios of exposure to the indicated milliampere-seconds product, C-kg^{-1}/mAs (mR/mAs), obtained at any two consecutive mAs selector settings shall not differ by more than 0.10 times their sum. This is: $' X_1 - X_2 ' \# 0.10 (X_1 X_2)$

where X_1 and X_2 are the average C-kg^{-1}/mAs (or mR/mAs) values obtained at each of two consecutive mAs selector settings or at two settings differing by no more than a factor of 2 where the mAs selector provides continuous selection.

(f) **Field limitation and alignment for mobile and stationary general purpose x-ray systems.** Except where spot-film devices are used, mobile and stationary general purpose radiographic x-ray systems shall meet the following requirements:

(1) **Variable x-ray field limitation.** A means for stepless adjustment of the size of the x-ray field shall be provided. Each dimension of the minimum field size at an SID of 100 cm shall be equal to or less than 5 cm.

(2) Visual definition:

(i) **Means for visually defining the perimeter of the x-ray field shall be provided.** The total misalignment of the edges of the visually defined field with the respective edges of the x-ray field along either the length or width of the visually defined field shall not exceed 2 percent of the distance from the source of the center of the visually defined field when the surface upon which it appears is perpendicular to the axis of the x-ray beam.

(ii) When a light localizer is used to define the x-ray field, it shall provide an average illuminance of not less than 160 lux (15 footcandles) at 100 cm or at the maximum SID, whichever is less. The average illuminance shall be based upon measurements made in the approximate center of each quadrant of the light field. Radiation therapy simulation systems are exempt from this requirement.

(iii) The edge of the light field at 100 cm or at the maximum SID, whichever is less, shall have a contrast ratio, corrected for ambient lighting, of not less than 4 in the case of beam-limiting devices designed for use on stationary equipment, and a contrast ratio of not less than 3 in case of beam-limiting devices designed for use on mobile equipment. The contrast ratio is defined as I_1/I_2 where I_1 is the illuminance 3 mm from the edge of the light field toward the center of the field and I_2 is the illuminance 3 mm from the edge of the light field away from the center of the field.

(g) **Field indication and alignment on stationary general purpose x-ray equipment.** Except when spot-film devices are used, stationary general purpose x-ray systems shall meet the following requirements in addition to those prescribed in §175.57(e):

(1) Means shall be provided to indicate when the axis of the x-ray beam is perpendicular to the plane of the image receptor, to align the center of the x-ray field with respect to the center of the image receptor to within 2 percent of the SID, and to indicate the SID to within 2 percent;

(2) The beam-limiting device shall numerically indicate the field size in the plane of the image receptor to which it is adjusted;

(3) Indication of field size dimensions and SIDs shall be specified in centimeters and/or inches, and shall be such that aperture adjustments result in x-ray field dimensions in the plane of the image receptor which correspond to those indicated by the beam-limiting device to within 2 percent of the SID when the beam axis is indicated to be perpendicular to the plane of the image receptor; and

(h) **Field limitation on radiographic x-ray equipment other than general purpose radiographic systems.** (1) X-ray systems designed for one image receptor size. Radiographic equipment designed for only one image receptor size at a fixed SID shall be provided with means to limit the field at the plane of the image receptor to dimensions no greater than those of the image receptor, and to align the center of the x-ray field with the center of the image receptor to within 2 percent of the SID or shall be provided with means to both size and align the x-ray field such that the x-ray field at the plane of the image receptor does not extend beyond any edge of the image receptor.

(2) **Other x-ray systems.** Radiographic systems not specifically covered in §175.57(f), (g), (h)(1), and (j) and systems covered in §175.58(b), which are also designed for use with extraoral image receptors and when used with an extraoral image receptor, shall be provided with means to limit the x-ray field in the plane of the image receptor so that such field does not exceed each dimension of the image receptor by more than 2 percent of the SID, when the axis of the x-ray beam is perpendicular to the plane of the image receptor. In addition, means shall be provided to align the center of the x-ray field such that the x-ray field at the plane of the image receptor does not extend beyond any edge of the image receptor. These requirements may be met with:

(i) a system which performs in accordance with §175.57(f) and (g); or, when alignment means are also provided, may be met with either:

(ii) an assortment of removable fixed-aperture, beam-limiting devices sufficient to meet the requirement for each combination of image receptor size and SID for which the unit is designed. Each such device shall have clear and permanent markings to indicate the image receptor size and SID for which it is designed; or

(iii) a beam-limiting device having multiple fixed apertures sufficient to meet the requirement for each combination of image receptor size and SID for which the unit is designed. Permanent, clearly legible markings shall indicate the image receptor size and SID for which each aperture is designed and shall indicate which aperture is in position for use.

(i) **Positive beam limitation (PBL).** These requirements apply to radiographic systems which contain PBL.

(1) **Field size.** When a PBL system is provided, it shall prevent x-ray production when: (i) either the length or width of the x-ray field in the plane of the image receptor differs from the corresponding image receptor dimension by more than 3 percent of the SID; or

(ii) the sum of the length and width differences as stated in §175.57(i)(1)(i), without regard to sign exceeds 4 percent of the SID.

(iii) The beam limiting device is at an SID for which PBL is not designed for sizing.

(2) **Conditions for PBL.** When provided, the PBL system shall function as described in §175.57(i)(1) whenever all the following conditions are met:

(i) the image receptor is inserted into a permanently mounted cassette holder;

(ii) the image receptor length and width are less than 50 cm;

(iii) the x-ray beam axis is within ± 3 degrees of vertical and the SID is 90 cm to 130 cm inclusive, or the x-ray beam is within ± 3 degrees of horizontal and the SID is 90 cm to 205 cm inclusive;

(iv) the x-ray beam axis is perpendicular to the plane of the image receptor to within ± 3 degrees; and

(v) neither tomographic nor stereoscopic radiography is being performed.

(3) **Operator initiated undersizing.** The PBL system shall be capable of operation such that, at the discretion of the operator, the size of the field may be made smaller than the size of the image receptor through stepless adjustment of the field size. Each dimension of the minimum field size at an SID of 100 cm shall be equal to, or less than, 5 cm. Return to PBL function as described in §175.57(i)(1) shall occur automatically upon any change of image receptor size or SID.

(4) **Override of PBL.** A capability may be provided for overriding PBL in case of system failure and for servicing the system. This override may be for all SIDs and image receptor sizes. A key shall be required for any override

capability that is accessible to the operator. It shall not be possible to remove the key while PBL is overridden. Each such key switch or key shall be clearly and durably labeled as follows:

For X-Ray Field Limitation System Failure

The override capability is considered accessible to the operator if it is referenced in the operator's manual or in other material intended for the operator or if its location is such that the operator would consider it part of the operational controls.

(j) **Field limitation and alignment for spot-film devices.** The following requirements shall apply to spot-film devices, except when the spot-film device is provided for use with a radiation therapy simulation system:

(1) Means shall be provided between the source and the patient for adjustment of the x-ray field size in the plane of the image receptor to the size of that portion of the image receptor which has been selected on the spot-film selector. Such adjustment shall be accomplished automatically when the x-ray field size in the plane of the image receptor is greater than the selected portion of the image receptor. If the x-ray field size is less than the size of the selected portion of the image receptor, the field size shall not open automatically to the size of the selected portion of the image receptor unless the operator has selected that mode of operation.

(2) Neither the length nor the width of the x-ray field in the plane of the image receptor shall differ from the corresponding dimensions of the selected portion of the image receptor by more than 3 percent of the SID when adjusted for full coverage of the selected portion of the image receptor. The sum, without regard to sign, of the length and width differences shall not exceed 4 percent of the SID. On spot-film devices manufactured after February 25, 1978, if the angle between the plane of the image receptor and beam axis is variable, means shall be provided to indicate when the axis of the x-ray beam is perpendicular to the plane of the image receptor, and compliance shall be determined with the beam axis indicated to be perpendicular to the plane of the image receptor.

(3) The center of the x-ray field in the plane of the image receptor shall be aligned with the center of the selected portion of the image receptor to within 2 percent of the SID.

(4) Means shall be provided to reduce the x-ray field size in the plane of the image receptor to a size smaller than the selection portion of the image receptor such that:

(i) for spot-film devices used on fixed-SID fluoroscopic systems which are not required to, and do not, provide stepless adjustment of the x-ray field, the minimum field size, at the greatest SID, does not exceed 125 cm^2; or

(ii) for spot-film devices used on fluoroscopic systems that have a variable SID and/or stepless adjustment of the field size, the minimum field size, at the greatest SID, shall be containable in a square of 5 cm by 5 cm.

(5) A capability may be provided for overriding the automatic x-ray field size adjustment in case of a system failure. If it is so provided, a signal visible at the fluoroscopist's position shall indicate whenever the automatic x-ray field size adjustment override is engaged. Each such system failure override switch shall be clearly labeled as follows:

For X-Ray Field Limitation System Failure.

(k) **Source-skin distance.** Mobile and portable x-ray systems other than dental shall be provided with means to limit the source-skin distance to not less than 30 cm.

(l) **Beam-on indicators.** The x-ray control shall provide visual indication whenever x-rays are produced. In addition, a signal audible to the operator shall indicate that the exposure has terminated.

(m) **Multiple tubes.** Where two or more radiographic tubes are controlled by one exposure switch, the tube or tubes which have been selected shall be clearly indicated before initiation of the exposure. This indication shall be both

on the x-ray control and at or near the tube housing assembly which has been selected.

(n) **Radiation from capacitor energy storage equipment.** Radiation emitted from the x-ray tube shall not exceed:

(1) 8.6 E -9 C-kg^{-1} (0.03 mR) in one minute at 5 cm from any accessible surface of the diagnostic source assembly, with the beam-limiting device fully open, the system fully charged, and the exposure switch, timer, or any discharge mechanism not activated. Compliance shall be determined by measurements averaged over an area of 100 cm2, with no linear dimension greater than 20 cm; and

(2) 2.58 E -5 C-kg^{-1} (100 mR) in one (1) hour at 100 cm from the x-ray source, with the beam-limiting device fully open, when the system is discharged through the x-ray tube either manually or automatically by use of a discharge switch or deactivation of the input power. Compliance shall be determined by measurement of the maximum exposure per discharge multiplied by the total number of discharges in one (1) hour (duty cycle). The measurements shall be averaged over an area of 100 cm^2 with no linear dimension greater than 20 cm.

RULES OF THE CITY OF NEW YORK

Title 24 Department of Health and Mental Hygiene

Health Code of the City of New York

TITLE IV ENVIRONMENTAL SANITATION

PART B CONTROL OF ENVIRONMENT

ARTICLE 175 RADIATION CONTROL General Provisions

§175.58 Dental radiography.

(a) The requirements of this section apply specifically to x-ray equipment and associated facilities used for dental radiography and are in addition to, and not in substitution for, other requirements of this Code.

(b) Non-certified dental units shall meet the equipment and use conditions outlined in §175.58(b)(1) through (8), with exceptions as noted. Certified equipment shall meet the conditions in §175.58(b)(1) through (9).

(1) **Source-to-skin distance.** X-ray systems designed for use with an intraoral image receptor shall be provided with means to limit source-to-skin distance to not less than 17.8 cm (7 in.) or 10.2 cm (4 in.) for equipment operating at 50 kVp.

(2) **Field limitation.** (i) Radiographic systems designed for use with an intraoral image receptor shall be provided with means to limit the x-ray field such that the x-ray field at the minimum SSD shall be containable in a circle having a

diameter of not more than 7 cm (2.75 in.), except dental x-ray units manufactured before August 1, 1974 in which the x-ray beam shall not exceed 7.6 cm (3 in.) at the minimum SSD.

(ii) The operator shall position the end of the position indicating device (PID) within 1 cm (0.4 in.) of the skin of the patient, if such device is routinely used in conducting dental radiography.

(3) **Radiation exposure control.** (i) **Exposure initiation.**

(A) A device shall be provided to terminate the radiation exposure after a preset time interval or exposure. The exposure switch shall be of the dead-man type, and where protective barriers are required shall be so arranged that it cannot be operated outside the shielded area.

(B) An x-ray control shall be incorporated into each x-ray system such that an exposure can be terminated by the operator at any time, except for exposures of 0.5 sec or less.

(C) Termination of an exposure shall cause automatic resetting of the timer to its initial setting or to "zero."

(D) A timer setting beyond the necessary exposure time shall not be used.

(ii) **Exposure indication.** The x-ray control shall provide visual indication observable at or from the operator's protected position whenever x-rays are produced. A signal audible to the operator shall indicate that the exposure has terminated on dental x-ray units manufactured after August 1, 1974.
