Central Hudson Gas & Electric Corporation  
for Gas Service

Case 14-G-\_\_\_\_

-----X

**DIRECT TESTIMONY OF THE  
FORECASTING AND RATES PANEL**

July 25, 2014

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. Please state the names of the members of the Forecasting and Rates  
2 (“Panel”).

3 A. We are Glynis Bunt, Darlene Clay and Amy Dittmar.

4 Q. Ms. Bunt, please state your employer and business address.

5 A. I am employed by Central Hudson Gas & Electric Corporation (“Central  
6 Hudson” or the “Company”) and my business address is 284 South  
7 Avenue, Poughkeepsie, New York 12601.

8 Q. Ms. Bunt, in what capacity are you employed by Central Hudson?

9 A. I am employed by Central Hudson as Senior Director of Cost, Rates, and  
10 Forecasts.

11 Q. Ms. Bunt, what is your educational background and professional business  
12 experience?

13 A. I hold an Associate in Science Degree in Business Administration from  
14 Dutchess County Community College, a Bachelor of Science Degree in  
15 Business Administration from the State University of New York at New  
16 Paltz, and a Master of Business Administration Degree with a  
17 concentration in Finance from Marist College. I have been continuously  
18 employed by Central Hudson since June 1987 in positions of increasing  
19 responsibility in the Internal Auditing, Financial Planning, and Cost and  
20 Rate Divisions. I was promoted to Director of Cost, Rates and Forecasts  
21 in September 2002 and to my current position in March 2011.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. Ms. Bunt, have you previously testified before the New York State Public  
2 Service Commission ("Commission")?

3 A. Yes. I have testified before this Commission in Cases 95-G-1034, 05-E-  
4 0934, 05-G-0935, 08-E-0887, 08-G-0888, 09-E-0588, 09-G-0589, 12-M-  
5 0192 and have submitted an affidavit in 07-M-1139.

6 Q. Ms. Clay, please state your employer and business address.

7 A. I am employed by Central Hudson and my business address is 284 South  
8 Avenue, Poughkeepsie, New York 12601.

9 Q. Ms. Clay, in what capacity are you employed by Central Hudson?

10 A. I am employed by Central Hudson as an Associate Cost and Rate Analyst.

11 Q. Ms. Clay, what is your educational background and professional business  
12 experience?

13 A. I hold an Associate in Science Degree in Liberal Arts from Dutchess  
14 County Community College and a Bachelor of Science Degree in  
15 Business Administration with a concentration in Finance from Marist  
16 College. I have been employed by Central Hudson since 2006 in various  
17 positions within the Customer Accounting and Treasury divisions. I was  
18 promoted to the position of Customer Choice Coordinator in October 2011  
19 and was subsequently transferred to my current position of Associate Cost  
20 and Rate Analyst in August 2013. Prior to my employment with Central  
21 Hudson, I was a Branch Manager for M&T Bank Corporation for 10 years.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. Ms. Clay, have you previously testified before the Commission?

2 A. Yes. I have testified before the Commission in Case 12-M-0192.

3 Q. Ms. Dittmar, please state your employer and business address.

4 A. I am employed by Central Hudson and my business address is 284 South  
5 Avenue, Poughkeepsie, New York 12601.

6 Q. Ms. Dittmar, in what capacity are you employed by Central Hudson?

7 A. I am employed by Central Hudson as a Cost and Rate Analyst.

8 Q. Ms. Dittmar, what is your educational background and professional  
9 business experience?

10 A. I received a Bachelor of Science Degree in Financial Economics with a  
11 Business Management adjunct from Binghamton University in 2004 and a  
12 Masters in Business Administration from Marist College in 2013. I was  
13 employed by Central Hudson in February 2006 as an Accounting Clerk in  
14 the Plant Accounting Division. I was then promoted to the position of  
15 Assistant Financial Analyst in May 2006 and was subsequently transferred  
16 to the position of Assistant Cost and Rate Analyst in January 2008. I was  
17 promoted to Associate Cost and Rate Analyst in January 2009 and was  
18 promoted to my current position of Cost and Rate Analyst in March 2014.

19 Q. Ms. Dittmar, have you previously testified before this Commission?

20 A. Yes. I have testified before the Commission in Cases 08-G-0888 and 09-  
21 G-0589.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. What is the purpose of the Panel's testimony in this proceeding?

2 A. The Panel presents projected inflation rates as well as the following with  
3 respect to electric and gas service: 1) historical sales and revenues; 2)  
4 the development of the forecast of electric and gas customers, and sales  
5 and base delivery revenues for all service classes for the period April 1,  
6 2014 through June 30, 2016; 3) the development of the projection of  
7 interruptible gas sales and revenues, and an overview of the current  
8 mechanism for interruptible profit calculation; 4) the interclass revenue  
9 allocation of the Company's proposed electric and gas delivery rate  
10 changes; 5) the proposed changes in the Company's electric and gas  
11 delivery rates and the revenue effect of those changes; 6) the Company's  
12 method for collecting purchased power costs from customers; 7) the  
13 Company's method for collecting natural gas supply costs from customers;  
14 and 8) the electric loss factor. The Panel also addresses the status of the  
15 Company's implementation of applicable management audit  
16 recommendation from Northstar Consulting Group's Final Audit Report,  
17 dated February 28, 2011 in Case 09-M-0764, related to Central Hudson's  
18 electric peak load model.

19 Q. Are you sponsoring any exhibits in support for your testimony?

20 A. Yes, we are sponsoring the following Exhibits:

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Exhibit \_\_ (FRP-1) contains a Statement of Electric and Gas Operating  
2 Revenues.

3 Exhibits \_\_ (FRP-2) and \_\_ (FRP-3) contain a summary of electric and  
4 gas sales, base delivery revenues and customers.

5 Exhibits \_\_ (FRP-4) and \_\_ (FRP-5) contain a summary of electric and  
6 gas model specifications and statistics.

7 Exhibits \_\_ (FRP-6) and \_\_ (FRP-7) contain a summary of the electric and  
8 gas forecast results by forecasting group.

9 Exhibit \_\_ (FRP-8) summarizes cumulative photovoltaic ("PV") net  
10 metered kW installed.

11 Exhibits \_\_ (FRP-9) and \_\_ (FRP-10) summarize the estimated effect of  
12 proposed electric and gas revenue increases.

13 Exhibit \_\_ (FRP-11) reflects a comparison of gas bills under declining  
14 block rates and flat rates based on currently effective rates.

15 Exhibits \_\_ (FRP-12) and \_\_ (FRP-13) reflect a summary of present and  
16 proposed electric and gas rates.

17 Exhibits \_\_ (FRP-14) and \_\_ (FRP-15) reflect a comparison of present and  
18 proposed electric and gas rates.

19 Q. With respect to the subject of inflation, what are the projections of the  
20 inflation rate and how were they developed?

21 A. A Gross Domestic Product ("GDP") implicit price deflator was developed  
22 using the consensus forecast of Blue Chip Economic Indicators included

**DIRECT TESTIMONY OF THE FORECASTING AND RATES PANEL**

1 in the March 10, 2014 publication. An extrapolation from this forecast was  
2 used to develop the forecast for the rate year ending June 30, 2016 (“Rate  
3 Year”) shown below.

<u>GDP Implicit Price Deflator</u>		
<u>Year</u>	<u>Index 2009=100</u>	<u>Annual Percent Change</u>
2013	106.5	1.4 over 2012
12 Months Ended March 2014	106.9	0.4 over 2013
2014	108.3	1.3 over 12 ME March 2014
2015	110.3	3.2 over 12 ME March 2014
Rate Year	111.4	1.1 over 2015

4

5 Q. Turning to the subject of electric and gas service, please begin by  
6 describing your exhibits which summarize sales, revenue and customer  
7 data for recent historical periods and for the forecast period.

8 A. Exhibit \_\_ (FRP-1) consists of Schedules A and B for electric and gas,  
9 respectively. These schedules present, for the calendar years 2011, 2012  
10 and 2013, and the twelve months ended March 31, 2014, the operating  
11 revenues of the Company by prime revenue account, as required by the  
12 Commission's policy statements and rules. These exhibits also show for  
13 each revenue account, the kilowatt hour (“kWh”) or thousand cubic feet  
14 (“Mcf”) of electricity or gas delivered (designated as sales), base delivery  
15 revenue and the average base delivery revenue per kWh or Mcf sold.

16 Exhibit \_\_ (FRP-2) consists of six schedules. Schedule A presents  
17 a summary by customer class of electric sales, base delivery revenues  
18 and customers for the twelve-month periods ended March 31, 2014,

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 December 31, 2014, December 31, 2015, and June 30, 2016. Schedule B  
2 sets forth monthly electric sales, base delivery revenue and customer data  
3 by revenue account for the twelve months ended March 31, 2014.  
4 Schedules C through F contain similar monthly information by service  
5 classification ("S.C.") for the twelve-month periods ended March 31, 2014,  
6 December 31, 2014, December 31, 2015, and June 30, 2016,  
7 respectively.

8 Exhibit \_\_ (FRP-3) sets forth six schedules similar to Exhibit \_\_  
9 (FRP-2), summarizing gas sales, base delivery revenues and customers  
10 for the same time periods.

11 Q. Were sales to full service customers (i.e., those customers continuing to  
12 purchase their energy and/or natural gas requirements from Central  
13 Hudson) addressed differently in your forecast than sales to retail access  
14 and/or transport customers?

15 A. No. In prior Central Hudson general rate proceedings (Cases 00-E-1273  
16 and 00-G-1274) the Commission approved the unbundling of commodity  
17 supply from delivery, resulting in the same base delivery rates for both full  
18 service sales and retail access/transportation customers. Therefore, the  
19 sales forecasts we present reflect total full service and retail access  
20 deliveries.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

**Electric and Gas Sales Forecasts**

1

2 Q. Were the electric and gas forecasts for firm sales both developed in a  
3 similar fashion?

4 A. Yes, they were.

5 Q. Can you please provide an overview of the process by which the forecast  
6 of electric own territory and firm gas sales were developed?

7 A. Customer forecasts were developed for each electric and gas customer  
8 class. For a number of these classes, sales volume forecasts were  
9 developed on a sales per customer basis, with total sales specified as a  
10 function of sales per customer and customer count. Sales forecasts for  
11 the remaining classes were developed on a total class basis.

12 Q. Why were forecasted sales volumes for certain classes developed on a  
13 sales per customer basis?

14 A. Generally, this approach was applied to the classes with relatively large  
15 numbers of customers. Separating total consumption into customer and  
16 sales per customer components recognizes that each component is  
17 influenced by different factors and provides the opportunity to incorporate  
18 more structure into the analysis of total consumption. For instance, total  
19 residential consumption can be influenced by such factors as customer  
20 count (e.g., total number of residential customers), weather, and the  
21 economy. In this example, weather will most likely not influence the  
22 number of customers, but could greatly influence use per customer. As a

**DIRECT TESTIMONY OF THE FORECASTING AND RATES PANEL**

1 result, separating total consumption into components provides the  
2 opportunity to incorporate more structure into the forecast of each  
3 component.

4 Q. What forecasting methodologies were used to forecast or project customer  
5 and sales levels?

6 A. Forecasts of customers and sales were developed utilizing various  
7 econometric or time series models, or trend projections, as summarized in  
8 the table below. The models developed to produce the forecasts were  
9 estimated using actual monthly billed customer and sales data covering  
10 the period January 1997 to March 2014. Estimation periods vary  
11 somewhat for the different classes in order to recognize structural  
12 changes to the billing process and data quality issues that can sometimes  
13 limit data availability. For example, revisions to billing cycles, in terms of  
14 customer composition, and recording of customers' end-use category  
15 (residential, commercial, industrial, etc.) can cause shifts in data requiring  
16 different estimation periods.

17 A summary of the methods utilized to develop each forecast is  
18 provided below, with detail regarding model specifications and statistics  
19 presented on Exhibit \_\_ (FRP-4) for electric forecasts and Exhibit \_\_  
20 (FRP-5) for gas forecasts. Electric forecast results for each class, and in  
21 total, are shown on Exhibit \_\_ (FRP-6). Similarly, gas forecast results for  
22 each class, and in total, are shown on Exhibit \_\_ (FRP-7).

**DIRECT TESTIMONY OF THE FORECASTING AND RATES PANEL**

<b>List of Electric Customer and Sales Forecast Methods</b>		
<u>Class</u>	<u>Customers</u>	<u>Sales</u>
Res. Heat	econometric	econometric (per customer)
Res. Non-Heat	econometric	econometric (per customer)

2

3 Q. Please describe the structures of the models used to develop the electric  
4 customer forecasts.

5 A. Econometric models were constructed to forecast customer levels for the  
6 residential classes. Two types of variables were employed in the

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 specification of these models: economic and binary (or dummy), with the  
2 number of households utilized as the economic variable.

3 Q. Can you please explain what economic and binary variables are?

4 A. For the purposes of the forecast presented here, economic variables  
5 represent measurements of demographic or economic activity including,  
6 but not limited to, such items as population, GDP and household income.  
7 Utilization of binary or “dummy” variables is reflected in many of the  
8 customer and sales models presented here, consistent with standard  
9 modeling practices. In many instances, this type of variable was added as  
10 a switch to turn various parameters on and off, such as differences in  
11 odd/even month billing to reflect bimonthly billing for certain accounts, or  
12 to accommodate a specific data point to reduce model error, while  
13 maintaining a longer estimation period.

14 Q. Please continue with your discussion of the structures of the models used  
15 to develop the electric customer forecasts.

16 A. The customer levels for the commercial and Other Public Authority  
17 (“OPA”) classes were developed utilizing exponential smoothing models.  
18 The exponential smoothing technique was applied to the time series of  
19 monthly billed customers in each of the respective classes. This  
20 technique replicates the underlying trends, placing more emphasis on the  
21 most recent data.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1           The small industrial demand and non-demand customer forecasts  
2 were developed by maintaining the historic year levels.

3           As of March 31, 2014, Central Hudson provided transmission or  
4 substation service to fourteen customers under the provisions of S.C. No.  
5 13. The Company expects to continue providing service to twelve of these  
6 customers with one expected to self-supply under the New York  
7 Independent System Operation's ("NYISO") station service tariff, and one  
8 terminating operations.

9           The Company has experienced diminishing customer growth in  
10 S.C. No. 5 (Area Lighting) and little to no customer growth in S.C. No. 8,  
11 (Street Lighting) in recent years. As a result, overall contraction in area  
12 lighting customers is anticipated for the forecast period, while the street  
13 lighting customer level as of March 31, 2014 was maintained throughout  
14 the forecast period.

15           As approved by the Commission in its Order in Case 00-E-1273,  
16 S.C. No. 9, which provides unmetered service, was closed to new  
17 customers effective November 1, 2001. Customers requiring service for  
18 new traffic signals are now required to take service under S.C. No. 2.  
19 Since the closing of this service class, the Company has experienced a  
20 minor contraction in the customer level for this class. As a result,  
21 continued contraction in customers is anticipated for the forecast period.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. Please describe the structures of the models utilized to develop the gas  
2 customer forecasts.

3 A. Econometric models were constructed to forecast customer levels for the  
4 residential heating class. Two types of variables were employed in the  
5 specification of this model: economic and binary (or dummy). The model  
6 specification for the residential heating class utilizes population. The  
7 residential and commercial heating and non-heating class customer  
8 forecasts reflect utilization of exponential smoothing models.

9 Many schools, hospitals and government offices, which could be  
10 included in the OPA classification, are coded as commercial heating. As a  
11 result, the customer forecast assumes no growth in the forecast period,  
12 reflecting the most recent trend in historic data.

13 Q. Please explain how the industrial customer forecast was developed.

14 A. The industrial customer forecast was developed by applying a linear  
15 regression equation to the rolling twelve-month average customer level.  
16 The resulting forecast customer level for each calendar year was then  
17 allocated to calendar month using the average of the actual odd/even  
18 billing pattern for calendar years 2009 through 2013.

19 Q. Are there any other items you would like to note regarding customer  
20 forecasts?

21 A. As was reflected in the final customer forecasts in Case 09-G-0589, the  
22 Company has continued to include a post-forecast adjustment to account

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 for the difference between the historic aggregate customer counts as  
2 reported by the billing system and the historic customer counts reflected in  
3 the forecasting models.

4 Q. What is the source for the economic data utilized in the Company's  
5 forecast models?

6 A. Economic projections for the region served by the Company were based  
7 on the April 2014 forecast provided by Moody's Economy.com to the  
8 NYISO for statewide forecasting. Composite forecast drivers for the  
9 Central Hudson region were constructed from four data regions included  
10 in the forecast: Albany, Catskills, Dutchess County and Newburgh. The  
11 composite economic forecast drivers were calculated as a weighted sum  
12 of the regional forecasts, where the weights reflect actual average  
13 residential and non-residential sales in the region for calendar years 2011  
14 through 2013.

15 These data were the latest available to the Panel at the time of the  
16 preparation of our analyses. We recommend, later at an appropriate time,  
17 that the data employed by the Company and any party be fully updated,  
18 and models re-specified as appropriate to reflect changes to methodology,  
19 variables, and/or estimation period resulting from this updated data.

20 Q. What forecasting methods were used to project sales volumes?

21 A. As discussed later in our testimony, post-forecast adjustments are made  
22 to reflect the Energy Efficiency Portfolio Standard ("EEPS") in conjunction

**DIRECT TESTIMONY OF THE FORECASTING AND RATES PANEL**

1 with Case 07-M-0548. As a result, modifications were first made to adjust  
2 historic data to reflect the EEPS savings estimated to actually have been  
3 acquired in the historic period. Estimated actual savings reflect  
4 information filed on Company and the New York State Energy Research  
5 and Development Authority (“NYSERDA”) scorecards in Case 07-M-0548  
6 through December 31, 2013, as this was the most up to date information  
7 available at the time of preparation. Econometric models were then  
8 constructed to forecast all electric classes, excluding: 1) S.C. No. 13, 2)  
9 the three lighting classes, and 3) interdepartmental. Econometric models  
10 were also constructed for all firm gas classes, excluding interdepartmental  
11 and S.C. No. 11. Further, the forecasts developed for the electric  
12 residential and commercial classes and all firm gas classes utilize  
13 Statistically Adjusted End-Use (“SAE”) models.

14 Q. What is the SAE model approach?

15 A. The SAE approach integrates structural changes in end-use saturation  
16 and efficiency trends, as well as addresses the interaction of economic  
17 variables through the construction of end-use variables: heating, cooling  
18 and other (base use). These end-use variables include weather, price,  
19 economic drivers and end-use saturation and efficiency trends.  
20 Additionally, the electric end-use variables constructed for the residential  
21 classes reflect changes in housing square footage and thermal shell  
22 integrity.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. What is the goal of this approach?

2 A. The goal of the SAE model approach is the construction of sound  
3 theoretical forecast models through the identification and utilization of  
4 variables that impact energy consumption, including incorporation of  
5 estimated long-term impacts in end-use saturation and appliance  
6 efficiency trends.

7 Q. What is the source for end-use saturation and efficiency data?

8 A. Residential appliance and commercial end-use saturation and efficiency  
9 trends are based on Energy Information Administration estimates for the  
10 Middle Atlantic Census Region as compiled by Itron, Inc. Where possible,  
11 electric estimates are calibrated to Central Hudson's service territory  
12 based on results from the Company's Residential Appliance Saturation  
13 and/or Energy Management surveys.

14 Q. Can you please describe these surveys?

15 A. For the period 1977 through 2006, the Company surveyed its residential  
16 customers eleven times to obtain information about housing stock,  
17 appliance saturation, usage patterns, preferences, and household  
18 characteristics in order to assist in the determination of growth in energy  
19 demand. In 2013, the Company commissioned an energy management  
20 survey of its residential customers to assist in efforts to develop and  
21 promote effective energy efficiency programs.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. What is the basis for the electric price variable?

2 A. We used the latest information available to us at the time of the  
3 preparation of our analyses. The historic price series for each class was  
4 determined as a function of the total bundled revenue (including delivery  
5 and supply) billed to full service customers divided by sales to full service  
6 customers in each class. Monthly forecast prices for each class include  
7 applicable base delivery charges, projected delivery rate increases of  
8 approximately 12 percent effective July 1, 2015 and 3.5 percent annually  
9 thereafter, as well as Merchant Function Charges ("MFC"), the New York  
10 State Assessment ("NYSA"), System Benefits Charges ("SBC"), including  
11 the Renewable Portfolio Standard Charge and EEPS Charge, the  
12 Purchased Power Adjustment ("PPA"), Miscellaneous Charges and the  
13 Market Price Charge ("MPC"). The MPC, or supply price, was forecasted  
14 using monthly regression equations to estimate MPC prices as a function  
15 of the on-peak price forecast for NYISO Zone G as of April 29, 2014 as  
16 obtained from SNL.com. The price variable is expressed as the  
17 Consumer Price Index ("CPI")-indexed twelve-month moving average on a  
18 one-month lag.

19 Q. What is the basis for the gas price variable?

20 A. We used the latest information available to us at the time of the  
21 preparation of our analyses. The historic price series for each class was  
22 determined as a function of the total bundled revenue (including delivery

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 and supply) billed to full service customers divided by sales to full service  
2 customers in each class. Monthly forecast prices for each class include  
3 applicable base delivery charges, and a projected delivery rate increase of  
4 approximately 16 percent effective July 1, 2015, as well as the MFC, the  
5 NYSA, the SBC, the Renewable Portfolio Standard Charge, an estimate  
6 for the EEPS Charge in Case 07-M-0548, and the Gas Supply Charge  
7 (“GSC”). The forecast of the GSC, or supply price, reflects utilization of  
8 assets currently under contract to Central Hudson, including pipeline  
9 transport, storage and commodity supplies, with commodity supply based  
10 on New York Mercantile Exchange (“NYMEX”) natural gas futures prices  
11 as of April 29, 2014. The price variable is expressed as the CPI-indexed  
12 twelve-month moving average on a one-month lag.

13 Q. What economic variables are utilized in the electric sales models?

14 A. The residential class models utilize household income and household  
15 size, while the OPA class models utilize household size. Commercial  
16 models utilize GDP while industrial models utilize manufacturing  
17 employment. As previously noted, these data are part of the forecast  
18 supplied by Moody’s Economy.com and subsequently compiled by Central  
19 Hudson to correspond more precisely to the Company’s service territory.

20 Q. What economic variables are utilized in the gas sales models?

21 A. The residential models utilize household income and household size,  
22 while the commercial, industrial and OPA models utilize GDP.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. How is weather incorporated into the sales models?

2 A. Monthly actual heating degree days (“HDD”) and cooling degree days  
3 (“CDD”) are transformed into billed HDDs to more closely correspond to  
4 the sales billing periods. The sales forecasts are based on normal  
5 weather conditions, where the normal weather is determined by a ten-year  
6 average of monthly HDD or CDD, as applicable and pursuant to the  
7 Commission’s Order in Cases 08-E-0887 and 08-G-0888, based on hourly  
8 temperature readings obtained from the Dutchess County Airport for the  
9 calendar year ending 2013, which is the latest calendar year for which this  
10 information was available at the time the Company prepared its sales  
11 forecast. We recommend that the latest ten-year average ending  
12 December be reflected in the final Rate Year forecasts utilized to  
13 determine the revenue requirement and rate design.

14 Q. Please define a HDD.

15 A. Weather is expressed in terms of degree days measured over an electric  
16 day and a gas day consistent with industry standard definitions of these  
17 days. Electric HDDs are defined as the amount by which 65 degrees  
18 fahrenheit exceeds the average of the high and low temperatures for a  
19 given day as measured midnight to midnight. Gas HDDs are defined as  
20 the amount by which 65 degrees fahrenheit exceeds the twenty-four hour  
21 average of temperatures for a given gas day as measured 10 AM to 10  
22 AM.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. Please define a CDD.

2 A. CDDs are measured for electric only and are defined as the amount by  
3 which the average of the high and low temperatures for a given day, as  
4 measured midnight to midnight, exceed 65 degrees fahrenheit.

5 Q. Do the sales models contain any other assumptions or variables?

6 A. Yes. The electric and gas residential sales models include price, income  
7 and household size elasticity estimates. The electric and gas commercial  
8 and gas OPA and industrial include price and GDP elasticity estimates.

9 Q. Would you please define the electric S.C. No. 13?

10 A. S.C. No. 13 includes customers who require service at transmission  
11 voltage or who have provided all the necessary equipment to take service  
12 directly from a substation.

13 Q. Please discuss the sales forecast development for electric S.C. No. 13.

14 A. The sales forecast for this class has been developed based on  
15 discussions with these customers over the period April – May 2014.  
16 These customers provided the Company with either written or verbal  
17 general forecasts/indications of future electric consumption. The  
18 customers were asked to comment on potential changes in usage,  
19 demand, or operations affecting electric consumption for a period of  
20 several years, including the Rate Year.

21 In the absence of customer provided forecasts/indications, the  
22 Company considered historical customer-specific information including,

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 but not limited to, usage, demand and load factor data in order to develop  
2 customer-specific forecasts.

3 Q. Please describe how the forecast of sales for the street and area lighting  
4 classes were developed.

5 A. Street and area lighting sales were projected by extrapolating inventory  
6 trends for existing fixtures. Sales per existing fixture continue to decrease  
7 as more efficient sodium lamps are installed as replacements. As a result  
8 of the switch to more efficient lighting and no growth in customer level,  
9 overall contraction in sales is anticipated for the forecast period.

10 Q. How were sales under S.C. No. 9 (Traffic Signals) forecast?

11 A. As previously indicated, S.C. No. 9 was closed to new customers effective  
12 November 1, 2001. As a result, this service classification has experienced  
13 a slight contraction in sales, which has continued through the forecast  
14 period.

15 Q. Does the Company have interdepartmental sales and how were those  
16 sales forecasts developed?

17 A. Yes, the Company has such sales. Based on the extremely small volume  
18 of such sales, they were projected by analyzing several years of actual  
19 sales data. The electric forecast is based on the most recent three years  
20 of historic data, while the gas sales forecast was developed using the  
21 most recent two-year average of historic data. Both electric and gas  
22 interdepartmental sales held constant throughout the forecast period.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. Are the forecasting methodologies utilized by the Company in the  
2 preparation of the sales forecasts generally consistent with those  
3 presented by the Company in its last major rate filings?

4 A. All forecasting methodologies are generally consistent with those  
5 presented by the Company in Cases 09-E-0588 and 09-G-0589, although  
6 different methodologies have been applied to different customer classes.

7 Q. Were sales forecasts developed for gas S.C. No.14 or Sales for Resale?

8 A. No. Historic sales to S.C. No. 14 have been fairly erratic and since this  
9 service class is included in the interruptible profit mechanism we discuss  
10 later, a forecast has not been developed for this class. The Company also  
11 did not prepare a forecast of Sales for Resale, which are commodity sales,  
12 since the Company's filing in this proceeding pertains to delivery service.  
13 Historic sales for resale are reflected, but associated historic revenues are  
14 not, as those revenues are addressed within the Gas Cost Adjustment.

15 Q. Were any changes made to the sales forecasts to incorporate sales  
16 reductions identified in the on-going EEPS proceeding in Case 07-M-  
17 0548?

18 A. Yes. The electric sales reductions attributable to the EEPS were  
19 developed by allocating certain annual reductions identified in various  
20 Orders issued by the Commission in Case 07-M-0548 across applicable  
21 customer classes and months based on the pre-adjustment forecast of  
22 sales.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1           The gas sales reductions attributable to the EEPS were developed  
2           by allocating the annual reductions itemized in various Orders issued by  
3           the Commission in Case 07-M-0548 across months based on historic  
4           actual acquired savings.

5           Although no specific targeted reduction values have been identified  
6           by the Commission beyond 2015, annual electric and gas reductions for  
7           EEPS programs were held at 2015 levels in 2016-2019 in anticipation of  
8           EEPS Phase III. The Panel believes this is reasonable because failing to  
9           recognize any additional reductions in out years would not be consistent  
10          with the Commission's longer term support of energy efficiency initiatives.

11 Q.       Were any additional changes made by the Panel to forecasted sales that  
12          are external to the models?

13 A.       Yes. Consistent with the approved forecasts in Cases 08-E-0887 and 09-  
14          E-0588, adjustments were made to the electric sales forecast to reflect  
15          forecasted sales reductions resulting from increased penetration of  
16          residential and non-residential net-metered PV systems.

17 Q.       Why does the forecast reflect sales reductions from increased penetration  
18          of net-metered PV systems?

19 A.       Effective November 1, 2012, the Commission raised the overall net-  
20          metering ceiling for Central Hudson from 12 MW to 36 MW. This action,  
21          together with additional legislation enacted 2012 to expand the net-  
22          metering provisions of Public Service Law §66-j and §66-i (addressed by

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 the Commission in Cases 10-E-0133, 10-E-0406, 10-E-0645, 11-E-0318,  
2 12-E-0043, 12-E-0393 and 13-E-0421) and Central Hudson's continued  
3 active support of solar resources, are expected to produce further sales  
4 reductions as new solar installations are made. As a result, it is necessary  
5 to build into the sales forecast, and ultimately into base rates, a forecast of  
6 sales reductions resulting from the additional PV penetration above the  
7 level currently included in approved rates pursuant to Case 09-E-0588.

8 Q. Please explain how these sales reduction adjustments for PV penetration  
9 were developed.

10 A. In developing sales reductions attributable to increased penetration of net-  
11 metered PV systems, the Company employed the same methodology  
12 approved by the Commission in Case 09-E-0588. The sales reductions  
13 attributable to PV penetration are based on a forecast of net-metered PV  
14 installations developed by applying a polynomial regression to the monthly  
15 cumulative kilowatt ("kW") installed for the period January 2012 through  
16 March 2014, reflecting the most recent response to legislative, regulatory  
17 and Company initiatives. This model is presented on Exhibit \_\_ (FRP-8).

18 Q. Aside from PV, were any additional changes made by the Panel to  
19 forecasted sales that are external to the models?

20 A. Yes. Post forecast adjustments were made to the gas forecast to reflect  
21 the Company's recent franchise territory expansion efforts in both the  
22 Athens area, pursuant to Case 13-G-0336, and the Town of Beekman.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. What do the Company's final electric and gas sales forecasts show?

2 A. While the Company continues to experience growth in the number of  
3 electric and gas customers, overall use per customer has decreased  
4 significantly since 2005. Use per customer is forecast to continue to  
5 decline, with usage reductions due to the EEPS in Case 07-M-0548 and  
6 lost electric sales due to PV net-metering contributing to this decline. As a  
7 result, electric and gas sales are forecast to decrease during the Rate  
8 Year. Electric own territory sales (excluding unbilled) as shown on  
9 Schedule A of Exhibit \_\_ (FRP-2) are forecast to decrease by 73,314  
10 MWh, or 1.5 percent, based on the Rate Year estimate of 4,919,680 MWh  
11 as compared to the calendar year 2014 estimate of 4,992,994 MWh.

12 Gas own territory sales (excluding unbilled, Sales for Resale and  
13 S.C. No. 14) as shown on Schedule A of Exhibit \_\_ (FRP-3) are forecast  
14 to decrease by 687 MMcf, or 4.2 percent, based on the Rate Year  
15 estimate of 15,653 MMcf as compared to the calendar year 2014 estimate  
16 of 16,340 MMcf.

17 Q. Do you have any additional comments to make regarding the topic of  
18 sales forecasts?

19 A. Yes. The models and methods that we have described incorporate a  
20 number of assumptions regarding economic activity, prices and  
21 consumption patterns, including load factor. To the extent that activity in  
22 our service territory, in terms of the level of customers, changes

**DIRECT TESTIMONY OF THE FORECASTING AND RATES PANEL**

1 dramatically or customers change their consumption habits in response to  
2 changes in economic/price conditions, these changes should be reflected  
3 in the final Rate Year forecasts utilized to determine the revenue  
4 requirement and rate design.

5 Q. How were the revenues associated with the sales forecast for 2014, 2015  
6 and the Rate Year developed?

7 A. Monthly electric sales were based on an annual historical distribution to  
8 allocate revenue account sales to a service class or sub-class basis.  
9 Billing demands were projected based on historical load factor trends.  
10 The forecasted billing parameters derived were priced at present rates as  
11 filed by the Company in compliance with Cases 09-E-0588 and 09-G-  
12 0589.

13 Monthly gas sales, by forecasting group, were allocated between  
14 heating and non-heating sub-classes, for the purposes of billing block  
15 distribution. The resulting gas sales were spread between blocks based  
16 on an O-Give analysis of the actual bill distribution for calendar years 2012  
17 and 2013. An O-Give analysis reflects a curve fitting process, which  
18 proportions actual billing blocks and billing block volumes to the forecast  
19 use per customer pursuant to the methodology proposed by New York  
20 State Department of Public Service Staff ("Staff") in its testimony in Case  
21 08-G-0888 and subsequently utilized in Case 09-G-0589. The monthly  
22 distributions were priced at present rates, effective July 1, 2012 as

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 described above, with the exception of S.C. No. 11 which was priced at  
2 rates effective July 1, 2013, to obtain total base revenue.

3 Electric and gas other operating revenues were estimated by  
4 extrapolating recent experience and adjusting for known changes.

5 Q. Were electric S.C. No. 14 revenues excluded from the forecast?

6 A. No. Historical customers and sales for this service classification were  
7 included in the appropriate revenue group forecasts as previously  
8 detailed. Due to minimal activity under this service classification,  
9 forecasted customers and sales were allocated to the respective parent  
10 service classifications as previously detailed.

11 Q. What assumptions were made with respect to interruptible gas sales and  
12 transport service (S.C. Nos. 8 and 9)?

13 A. Forecasts of sales/deliveries to these customers have been estimated  
14 based on historic usage patterns over the 24 months ended March 31,  
15 2014. The forecasts were included on the assumption that these  
16 customers will continue to take service under the service classification for  
17 which they were billed as of March 31, 2014 through the forecast period.

18 Currently, both the Company's base delivery rates and Gas Cost  
19 Adjustment factor include credits derived from the net of fuel revenues  
20 received from interruptible sales (S.C. Nos. 8 and 9) and sales to  
21 generating facilities (S.C. No. 14). Pursuant to the Order in Case 09-G-  
22 0589 issued September 17, 2010, current base delivery rates include a

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 profit imputation of \$2.4 million estimated to be received from such sales.

2 As a result, the Company is permitted to retain the first \$2.4 million in net

3 of fuel revenue in each rate year that it may receive from interruptible

4 service and service to generating facilities. If the net of fuel revenue, or

5 profit, is less than \$2.4 million in any rate year, the Company is authorized

6 to surcharge firm customers for 90 percent of the shortfall. If the margin

7 exceeds \$2.4 million in any rate year, the Company will credit to

8 ratepayers 90 percent of the excess. Any such surcharges or credits are

9 applied through the Gas Cost Adjustment factor as detailed below.

10 Q. Please elaborate on the process used to determine interruptible profit and  
11 apply the interruptible ratemaking mechanism.

12 A. This is a two-step process. Step one involves determining the profit (or  
13 net of fuel revenue, excluding all penalties) derived from interruptible  
14 service and service to electric generators. The profit is calculated as  
15 revenue less revenue tax and fuel cost.

16 In step two, the imputation is applied by subtracting \$2.4 million  
17 from the profit as determined in step one. Ninety percent of the resulting  
18 shortfall or excess is collected from or returned to customers.

19 Q. Is the Company proposing any changes to this interruptible profit  
20 mechanism?

21 A. No.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

**Revenue Allocation**

1

2 Q. With respect to the subject of revenue allocation, please describe the  
3 criteria Central Hudson applied in allocating revenues and designing rates.

4 A. For both electric and gas, the Company has historically sought to bring the  
5 rates of return of the various service classifications to within 15 percent of  
6 the system average rate of return. In this filing, in order to mitigate  
7 impacts on those customer classes earning less than 85 percent of the  
8 system average rate of return, the maximum increase allocated to all  
9 electric and gas service classifications is 1.25 times the overall applicable  
10 system increase. The minimum increase allocated to customer classes  
11 earning more than 115 percent of the system average rate of return is  
12 0.75 times the overall applicable system increase.

13 Q. What was the source of the constraints utilized for allocating the electric  
14 and gas revenue increases?

15 A. The constraints utilized for allocating the electric and gas revenue  
16 increases were based on the constraints most recently utilized and  
17 approved in Case 09-E-0588 and 09-G-0589. The Company is proposing  
18 to maintain these constraints for all electric and gas service classifications.

19 Q. Were any changes made to forecasted revenues for purposes of revenue  
20 allocation and rate design?

21 A. No.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. Please explain Exhibits \_\_ (FRP-9) and \_\_ (FRP-10), relating to the  
2 estimated effect of the proposed revenue increases.

3 A. Exhibit \_\_ (FRP-9) for electric and Exhibit \_\_ (FRP-10) for gas each  
4 consist of two schedules that present the details of the proposed interclass  
5 revenue allocation. Schedule A details the methodology used to allocate  
6 the revenue increases among the various service classifications.  
7 Schedule B combines the allocated revenue increases from Schedule A  
8 with revenues at present rates to determine total filed base rate revenue  
9 by service classification for the Rate Year.

10 Q. What revenue requirement was used in developing the proposed rate  
11 revisions?

12 A. Electric own territory operating revenue must be increased by  
13 \$40,121,000 in the Rate Year in order to meet the Company's costs of  
14 providing service. The rate increase is to be obtained from S.C. Nos. 1, 2,  
15 3, 5, 6, 8, 9 and 13 rates as explained below.

16 Gas own territory operating revenue must be increased by  
17 \$5,897,000 in the Rate Year in order to meet the Company's costs of  
18 providing service. The increase of \$5,897,000, plus \$2,400,000 that is  
19 offset through imputation to S.C. Nos. 1, 2, 6, 12 and 13 in the rate design  
20 process, or a total of \$8,297,000, is to be obtained from S.C. Nos. 1, 2, 6,  
21 12 and 13 rates as explained below.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. Please describe your procedure for allocating the Company's proposed  
2 revenue increase among the various service classifications.

3 A. The Company has allocated both the electric and gas proposed increases  
4 with reference to the results of the Historic 2012 and Pro-Forma Rate Year  
5 Embedded Cost of Service Studies ("ECOSS"), which are contained in  
6 Exhibits \_\_ (COSP-1) and \_\_ (COSP-2), Schedules A and B and  
7 supported by the testimony of the Cost of Service Panel ("COSP").  
8 Pursuant to the methodology utilized in the Joint Proposal adopted in  
9 Cases 09-E-0588 and 09-G-0589, if the results of the ECOSS indicated  
10 varying results in the unitized rate of return for a service class, that class  
11 received an allocation of the incremental revenue requirement using the  
12 overall system average. If the results of the ECOSS did not indicate  
13 varying results in the unitized rate of return for a service class, those  
14 classes with a unitized rate of return less than 85 percent of the system  
15 average received 1.25 times the overall system average and those  
16 classes with a unitized rate of return more than 115 percent of the system  
17 average received 0.75 times the over system average. The revenue  
18 allocation methodology is a three-step process.

19 Q. Please elaborate on the three step process.

20 A. The first step is to use results from the ECOSS for the historic period and  
21 the Rate Year to determine what revenue adjustment is necessary for

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 each class utilizing its unitized rate of return as shown in columns 1-6 of  
2 Exhibits \_\_ (FRP-9), Schedule A and \_\_ (FRP-10), Schedule A.

3 The second step is to allocate the proposed revenue increase  
4 based on total delivery service revenue, under the constraints as  
5 previously described. The results of step two are shown in columns 7 and  
6 8 of Exhibits \_\_ (FRP-9), Schedule A and \_\_ (FRP-10), Schedule A. The  
7 third step then determines the resulting adjustment that must be allocated  
8 to each as a result of the previously described constraints, as shown in  
9 column 9 of these two exhibits.

10 Q. What were the results you obtained by applying the revenue allocation  
11 methodology to the proposed electric revenue increase?

12 A. For S.C. Nos. 2 (Non-Demand), 5, and 13 (Transmission), for which the  
13 rate of return fell below the lower tolerance level of 85 percent of the  
14 system average, the maximum permissible increase of 1.25 times the  
15 average overall increase was utilized.

16 For S.C. Nos. 2 (Secondary and Primary), 3, 6 and 8, for which the  
17 rates of return exceeded the upper tolerance level of 115 percent of the  
18 system average, the minimum increase of 0.75 times the average overall  
19 increase was utilized.

20 For all other rate classes, which include S.C. Nos. 1, 9, and 13  
21 (Substation), the unitized rate of return varied among the Historic and Pro  
22 Forma Rate Year ECOSS. As a result, these classes received an

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 allocation of the incremental revenue requirement using the overall system  
2 average.

3 Application of these increases produced a revenue shortfall as  
4 compared to the rate increase revenue. This revenue shortfall was then  
5 allocated pro-rata among the service classes. The resulting increases are  
6 shown in columns 9 and 10 of Exhibit \_\_ (FRP-9), Schedule A.

7 Q. What were the results you obtained by applying the revenue allocation  
8 methodology to the proposed gas revenue increase?

9 A. For S.C. Nos. 1 and 12, S.C. Nos. 2, 6 and 13 as well as S.C. No. 11  
10 (Distribution), the rates of return in the ECOSS produced differing results.  
11 As such, the average overall system increase was utilized pursuant to the  
12 methodology described above.

13 For S.C. No. 11 (Transmission) and S.C. No. 11 (Distribution Large  
14 Mains ("DLM")), for which the rates of return exceeded the upper tolerance  
15 level of 115 percent of the system average, the minimum permissible  
16 increase of 0.75 times the average overall increase was utilized.

17 Application of this increase methodology produced a revenue  
18 shortfall as compared to the rate increase revenue. This revenue shortfall  
19 was then allocated pro-rata among the service classes. The resulting  
20 increases are shown in column 10 of Exhibit \_\_ (FRP-10), Schedule A.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. Were any adjustments made to the final electric and gas base revenue  
2 increases?

3 A. Yes. For each class, the base revenue increase was adjusted by the  
4 estimated difference in revenue to be collected through the redesigned  
5 MFCs for that class calculated as: 1) redesigned base MFC rates  
6 developed in the Pro Forma Rate Year ECOSS, multiplied by 2) class total  
7 deliveries. These adjustments are presented on Schedule A of Exhibits  
8 \_\_ (FRP-9) and \_\_ (FRP-10).

9 **Rate Design**

10 Q. Please explain Schedule B of Exhibits \_\_ (FRP-9) and \_\_ (FRP-10),  
11 regarding the effects of the proposed electric and gas rates.

12 A. Schedule B of both exhibits sets forth, by service classification, present  
13 base rate delivery revenues, the proposed revenue increase, total  
14 proposed delivery revenue and the net effect of the proposed revenue  
15 increase.

16 Q. Are you proposing any structural changes to gas rate design?

17 A. Yes. The Company is proposing to eliminate the gas S.C. Nos. 1, 2, 6, 12  
18 and 13 block rate differentials.

19 Q. Please explain the current and proposed rate structures for S.C. Nos. 1, 2,  
20 6, 12 and 13.

21 A. Pursuant to the current rate structure provided in S.C. No. 12 (Gas),  
22 customers served under gas S.C. Nos. 1, 2, 6, 12 and 13 are subject to

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 declining block gas base delivery rates. Under S.C. Nos. 1 and 12,  
2 separate declining rates are applied to Ccf usage based on three usage  
3 blocks: 1) the first 2 Ccf; 2) the next 48 Ccf; and 3) any additional Ccf.  
4 Under S.C. Nos. 6, 12 and 13, separate declining rates are applied to Ccf  
5 usage based on four usage blocks: 1) the first 2 Ccf; 2) the next 98 Ccf;  
6 3) the next 4900 Ccf; and 4) any additional Ccf. The Company proposes  
7 to eliminate the declining block rate structure in favor of flat rates. The  
8 rate structure for S.C. Nos. 1, 2, 6, 12 and 13 would continue to include  
9 the first 2 Ccf in the customer charge, however all remaining Ccf billed  
10 would be at the same class-specific rates.

11 Q. Why has the Company proposed to eliminate this rate differential?

12 A. The proposal to eliminate declining block rates is consistent with the  
13 Commission's goal to promote energy efficiency. Declining block rates  
14 reward customers with a lower rate for greater usage, sending the wrong  
15 price signals. Customers are in a sense encouraged to increase rather  
16 than decrease consumption under the notion that the Company can  
17 provide additional power at lower costs. This is supported by a  
18 comparison of the marginal rate developed in Case 09-G-0589 to the  
19 approved tail blocks in that case, indicating the marginal rate as exceeding  
20 the tail block rates.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. Is there any Commission precedent or support for this proposed change?

2 A. In Con Edison's Case 09-E-0428, the Commission found that the  
3 elimination of Con Edison's existing electric declining block rates and a  
4 move toward a flat rate structure would promote the state's long-term  
5 energy efficiency policy by removing any incentive for customers to benefit  
6 from decreased rates for increased usage. Similarly, the Commission, in  
7 its Order issued and effective on June 17, 2011 in Case 10-E-0362,  
8 directed Orange and Rockland Utilities, Inc. ("O&R") to make a proposal in  
9 its next base rate case to replace the declining block rates charged to its  
10 electric customers receiving service under S.C. No. 2 and 3 with flat rates.  
11 O&R subsequently filed an analysis of the impacts of eliminating declining  
12 block usage rates in Case 11-E-0408. In its Order Adopting Terms of  
13 Joint Proposal, With Modification, And Establishing Electric Rate Plan  
14 issued and effective June 15, 2012 in Case 11-E-0408, the Commission  
15 approved the rate structure changes for S.C. No. 2 and S.C. No. 3.

16 Q. How will this change affect customers?

17 A. The Company understands that the elimination of declining block rates will  
18 result in some customers experiencing decreases while others experience  
19 increases in typical bills. To understand bill impacts, the Company  
20 redesigned Case 09-G-0589 Rate Year 3 rates to reflect a flat rate design.  
21 To achieve revenue neutrality, customer charges were kept at the levels  
22 agreed upon in Case 09-E-0589. The currently effective block rates and

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 the re-designed flat rates were then used to analyze typical bill impacts.  
2 Exhibit \_\_ (FRP-11) provides comparisons of charges for typical usages  
3 under S.C. Nos. 1/12 and 2/6/13 at Case 09-G-0589 Rate Year 3 declining  
4 block rates and at re-designed flat rates to demonstrate the impacts on  
5 bills to customers at various levels of consumption.

6 Q. Please describe some of the more important findings of the bill impact  
7 calculations.

8 A. As can be seen in Exhibit \_\_ (FRP-11), Schedules A and B even at the  
9 actual sales per customer levels for the twelve months ending March 31,  
10 2014 which were higher than normal given colder than average winter  
11 weather, an average residential and commercial heat customer would  
12 have experienced minor or favorable bill impacts at flat rates. Although  
13 the Company's largest numbers of customers are served under S.C. 1, the  
14 largest use per customer is attributed to S.C. 6 customers. Average use  
15 per customer for the S.C. 6 customer class as a whole for the twelve  
16 months ended March 31, 2014 was 9,175 Mcf. As shown on Exhibit \_\_  
17 (FRP-11), Schedule B the resulting bill impact would be an increase of  
18 approximately 3.22 percent. Customers taking service under S.C. 6 who  
19 have an annual consumption of 50,000 Ccf or greater are subject to  
20 pricing only at the tail block rate. For the twelve months ended March 31,  
21 2014, there were approximately 85 high volume S.C. 6 customers who  
22 average use of 138,450 Ccf. The resulting bill impact on these customers

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 would be an increase of approximately 4.30 percent, as shown on Exhibit  
2 \_\_ (FRP-11), Schedule B. However, in order to retain these customers on  
3 firm service, the Company is proposing that a discount rate be developed  
4 for high volume S.C. 6 customers consistent with the magnitude of the  
5 current tail block discount.

6 Q. Are you proposing any changes to electric rate design?

7 A. Yes. The Company currently offers three different types of service under  
8 Service Classification No. 8 (Public Street and Highway Lighting): 1) Rate  
9 A wherein the Company owns and maintains the fixtures; 2) Rate B  
10 wherein the Company maintains customer-owned fixtures; and 3) Rate C  
11 wherein the Company provides delivery service to customer-owned and  
12 maintained fixtures. Central Hudson proposes to close Rate B to new  
13 installations while grandfathering existing installations.

14 Q. Why is the Company making this proposal?

15 A. Recently, the Company proposed to eliminate several underutilized  
16 lighting options from its tariff in order to create a more uniform asset profile  
17 resulting in a more streamlined maintenance process. These tariff  
18 changes, designated as Case 14-E-0059, were approved by the  
19 Commission at its session on May 8, 2014 to become effective June 1,  
20 2014. The current proposal to close Rate B to new installations is another  
21 step in the process to create a more uniform asset profile. While this will  
22 limit the number of fixture types for which the Company provides

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 maintenance service, Rate C continues to provide customers with the  
2 flexibility to choose any type of facility that will serve their needs.

3 Q. Are there any other electric rate design issues that you would like to  
4 address?

5 A. Yes. In 2011 the Company filed tariff amendments to modify the  
6 Commission's Order Establishing Rate Plan in Case 09-E-0588 by  
7 maintaining the S.C. No. 6 (Residential Time-of-Use ("TOU") Service) on-  
8 peak and off-peak delivery rates, adjusted for the rate increase effective  
9 July 1, 2012. The Company proposed this approach rather than  
10 implementing the single delivery rate that was scheduled to become  
11 effective July 1, 2012 as a result of the phase-out of the on-peak/off-peak  
12 delivery rate differential approved in Case 09-E-0588. At that time, the  
13 Company believed that the then current on-peak and off-peak delivery  
14 rates might be beneficial for residential customers acquiring plug-in hybrid  
15 vehicles and desiring to charge these vehicles during off-peak hours. In  
16 late 2013 Central Hudson agreed to be a utility partner in an analysis of  
17 electricity pricing strategies to facilitate electric vehicle adoption in New  
18 York led by M.J. Bradley & Associates LLC, the firm selected by  
19 NYSERDA to address two of the focus areas of Program Opportunity  
20 Notice 2755. The Company believes that the result of this analysis, which  
21 is not yet available, may provide viable alternative pricing structures to  
22 current TOU rates. As a result, the Company proposes to maintain the

**DIRECT TESTIMONY OF THE FORECASTING AND RATES PANEL**

1 current TOU on-peak and off-peak delivery rate structure, reverting to the  
2 pre-phase out on-peak/off-peak delivery rate differential ratio of 3:1.

3 Q. Is the Company proposing any changes to its unbundled rate structure?

4 A. No. The Company is proposing to continue to maintain the unbundled  
5 rate structure approved by the Commission in the Company's most recent  
6 general rate proceeding, Cases 09-E-0588 and 09-G-0589, including  
7 recovery of net lost revenues related to MFCs. However, the Company  
8 proposes to update certain rate elements to reflect the results of the  
9 ECOSS. The update to base rates (excluding lost revenue) for the MFC  
10 Administration Charge and the MFC Supply Charge as reflected on  
11 Schedule A of Exhibits \_\_ (FRP-12) and \_\_ (FRP-13) as well as the  
12 update to the billing services credit are based on the results of the  
13 ECOSS, as contained in Exhibits \_\_ (COSP-1) and \_\_ (COSP-2),  
14 Schedule C. The proposed updates to the billing services credit are  
15 shown below.

<b>Per Bill Billing Services Credit</b>	<b>Current</b>	<b>Proposed</b>
Electric	\$1.38	\$1.37
Gas	\$1.02	\$0.95

16

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. After allocating the proposed electric revenue increase between various  
2 service classifications, how did you proceed to design the proposed  
3 charges for S.C. Nos. 1 (Residential) and 6 (Residential TOU)?

4 A. For S.C. No. 1, the monthly customer charge was increased from \$24.00  
5 to \$30.00. The monthly customer charge for S.C. No. 6 was increased by  
6 approximately the same percentage, from \$27.00 to \$34.00. These  
7 changes are intended to bring the customer charge closer to the  
8 embedded costs shown on Schedule C of Exhibit \_\_ (COSP-1), and  
9 supported by the testimony of the COSP. A flat delivery rate of \$0.05409  
10 per kWh was developed to produce the remainder of the S.C. No. 1  
11 revenue requirement.

12 The on-peak and off-peak delivery rate differential for S.C. No. 6  
13 was reinstated with a rate differential ratio of 3:1, as previously discussed.  
14 This resulted in on-peak and off-peak delivery rates of \$0.08964 and  
15 \$0.02988 per kWh, respectively, to produce the remainder of the S.C. No.  
16 6 revenue requirement.

17 Q. Please describe how the charges to S.C. No. 2 (General Service) were  
18 developed.

19 A. The monthly customer charge for non-demand service was increased from  
20 \$35.00 to \$42.00 to bring the customer charge closer to the embedded  
21 costs of service. The monthly customer charges for secondary and  
22 primary service were left unchanged, with Secondary Demand at \$84.00

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 and Primary Demand at \$310.00. For the Non-Demand class, a flat  
2 delivery rate of \$0.00642 per kWh was developed to produce the  
3 remainder of the requirement.

4 Base delivery revenue from the secondary class is primarily driven  
5 by demand revenue, which currently represents approximately 64 percent  
6 of secondary revenue while the volumetric rate contributes only 14 percent  
7 of the revenue. A flat demand charge of \$9.30 per kW and a flat delivery  
8 rate of \$0.00622 per kWh were developed for the secondary class by  
9 increasing each by approximately 15 percent to produce the remainder of  
10 the revenue requirement.

11 Similarly, demand revenue for the primary class currently  
12 represents approximately 80 percent of base revenue while the volumetric  
13 rate contributes only about 7 percent of the revenue. Therefore, the  
14 energy delivery charge and the demand charge for the primary class were  
15 each increased by approximately 13 percent to produce the remainder of  
16 the revenue requirement. This resulted in a flat delivery rate of \$0.00166  
17 per kWh and a flat demand charge of \$7.52 per kW/per month.

18 Q. Please describe how the charges to S.C. Nos. 3 and 13 were developed.

19 A. The monthly customer charge for S.C. No. 3 was left unchanged at  
20 \$1,400.00, while the monthly customer charges for S.C. No. 13  
21 (Substation and Transmission) were increased from \$2,040.00 and  
22 \$3,810.00 to \$3,740.00 and \$4,640.00, respectively. These latter changes

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 are intended to bring the customer charge closer to the embedded costs  
2 shown on Schedule C of Exhibit \_\_ (COSP-1), supported by the testimony  
3 of the COSP.

4 The overall increase in the customer charge does not produce a  
5 significant customer bill impact for either S.C. No. 3, because of the 500  
6 kW minimum bill provision in this service classification, or S.C. No. 13, due  
7 to the size of these customers.

8 A flat demand rate of \$9.88 per kW was developed to produce the  
9 remainder of the S.C. No. 3 revenue requirement while maintaining the  
10 reactive demand charge approved by the Commission in Case 08-E-0887  
11 and continued in Case 09-E-0588. S.C. No. 13 (Substation and  
12 Transmission) flat demand rates of \$7.32 per kW and \$4.38 per kW,  
13 respectively, were developed to produce the remainder of the revenue  
14 requirement for this class while maintaining the reactive demand charge  
15 approved by the Commission in Case 08-E-0887 and continued in Case  
16 09-E-0588.

17 Q. To what extent do the proposed changes to customer charges move the  
18 Company closer to costs reflected in the ECOSS?

19 A. Since the Company fully supports movement toward the costs reflected in  
20 ECOSS, the Company is proposing increases to those customer classes  
21 with the greatest number of customers. The table below shows, for  
22 customer classes with the greatest number of customers, the extent to

**DIRECT TESTIMONY OF THE FORECASTING AND RATES PANEL**

1 which the current customer charges fall below the indicated costs of  
2 service and the movements towards costs proposed by the Company:

Electric Customer Charges					
S.C. No.	Current	Proposed	ECOSS	Current vs ECOSS	Proposed vs ECOSS
1 – Nht	\$24.00	\$30.00	\$38.75	-38%	-23%
2 – ND	\$35.00	\$42.00	\$42.83	-18%	-2%

3

4

Gas Customer Charges					
S.C. No.	Current	Proposed	ECOSS	Current vs ECOSS	Proposed vs ECOSS
1 & 12 Ht	\$23.00	\$29.00	\$43.47	-47%	-33%
2, 6 & 13 Ht	\$37.00	\$46.00	\$65.30	-43%	-30%

5

6

7

8 Q. How were proposed charges to S.C. Nos. 5 (Area Lighting) and 8 (Street  
9 Lighting) developed?

10 A. These charges were developed by applying the class increase to each  
11 offering across the classes.

12 Q. Are there any electric service classifications for which the Company is  
13 proposing no change at this time?

14 A. Yes. The Company currently offers standby service under S.C. No. 14.  
15 As there is minimal activity under this service classification with respect to  
16 the tariff rates, and these rates follow the parent service classification  
17 rates/cost of service, the Company believes that any rate design changes  
18 required to this service classification should be made at a later stage in  
19 this proceeding consistent with the determination of the final revenue  
20 requirement.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. Are there any other electric and gas rates for which the Company is  
2 proposing no change at this time?

3 A. Yes. Pursuant to Case 11-M-0542, the Company currently offers specific  
4 delivery rates for electric and gas Excelsior Jobs Program participants.  
5 The rates for these provisions are required to reflect the marginal cost of  
6 providing service. As explained by the Company's COSP, Central Hudson  
7 proposes to submit marginal cost of service studies on or before  
8 September 15, 2014 in this proceeding. As a result, the Company  
9 proposes that any rate design changes to these rates be made at a later  
10 stage in this proceeding.

11 We are also proposing to maintain the current level of the electric  
12 contract demand charges for S.C. No. 10 until such time as the marginal  
13 cost of service study is submitted. The underlying customer charges for  
14 this service classification, however, are being updated with the customer  
15 charges proposed for electric S.C. Nos. 2 (Primary), 3 and 13.

16 Q. After allocating the proposed gas revenue increase between various  
17 service classifications, how did you proceed to design the proposed  
18 residential rates (S.C. Nos. 1 and 12)?

19 A. In designing rates for residential customers, the initial goal was to increase  
20 the customer charge to be more in line with the customer charge indicated  
21 by the ECOSS. To accomplish this, the minimum charge for the first 200

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 cubic feet or less was increased from \$23.00 to \$29.00 per month. The  
2 remaining increase was then allocated to the volumetric delivery charge.

3 Q. Please describe how the charges to S.C. Nos. 2, 6 and 13 were  
4 developed.

5 A. The primary goals in designing the rates for these classes were to  
6 increase the customer charge to be more in line with the customer charge  
7 indicated by the ECROSS and to maintain a similar increase in the  
8 customer charge in comparison to the residential customer classes.

9 The first step in the rate design was to increase the minimum  
10 charge from \$37.00 to \$46.00, moving this charge closer to the  
11 percentage increase allocated to S.C. Nos. 1 and 12. The next step was  
12 to allocate the remaining increase to the volumetric delivery charge.

13 Q. Please describe how the discount applicable to High Volume S.C. No. 6  
14 customers was developed.

15 A. First, a composite rate was calculated to reflect high volume usage priced  
16 out at currently effective block rates. The usage was calculated as 18  
17 percent of the S.C. Nos. 2, 6 and 13 sales forecasted for the Rate Year as  
18 the average 2009 to 2013 high volume sales accounted for approximately  
19 eighteen percent of actual total S.C. Nos. 2, 6 and 13 sales. The  
20 composite rate was then compared to the current tail block rate to  
21 determine the current percentage discount. This percentage discount,  
22 which is approximately 9.44 percent, was then applied to proposed rates.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 While high volume tail block customers will experience larger rate  
2 increases than non-high volume customers as a result of the approved  
3 rate design in Case 09-G-0589 where rate increases were not allocated to  
4 the tail block, the aforementioned method continues to maintain a 9.44  
5 percent discount from standard rates for these customers.

6 Q. Should this discount also be utilized for S.C. Nos. 2 and 13 gas air  
7 conditioning customers?

8 A. As of June 30, 2014, the Company did not serve any customers under this  
9 S.C. No. 2 or S.C. No. 13 Special Provision. However, as current tariff  
10 provisions provide the same tail block discount for gas air conditioning  
11 customers as is reflected for high volume S.C. No. 6 customers, the  
12 Company is proposing to maintain the same discounted rate for both.

13 Q. Please describe how the charges for S.C. No. 11 (Transmission,  
14 Distribution and DLM) were developed.

15 A. The monthly customer charge for each subclass was increased from  
16 \$1,200 to \$1,400. Due to the limited number of customers taking service  
17 under S.C. No. 11, this proposed increase does not generate a significant  
18 amount of revenue. The remaining increase was allocated to the  
19 Maximum Daily Quantity ("MDQ") charge. The MDQ is the maximum  
20 volume of gas the Company is obligated to accept on behalf of a  
21 transportation customer during a 24 hour period beginning at 10 AM  
22 Eastern Standard Time each day.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. Is the Company proposing any changes to the MDQ structure currently in  
2 place for S.C. No. 11 customers?

3 A. No.

4 Q. Did the Commission direct the Company to explain its treatment of the  
5 MDQ structure in this rate case?

6 A. Yes. In an Order issued and effective February 24, 2014 in Case 13-G-  
7 0531, the Commission directed Central Hudson to submit testimony in its  
8 next gas rate filing to explain: 1) why S.C. No. 11 customers should  
9 continue to be billed using the MDQ (fixed volume) delivery rates with a  
10 tariff provision to raise and lower the MDQ; or 2) why delivery rates should  
11 be replaced with a volumetric rate design, where benefits from employed  
12 energy efficiency measures are immediately realized by the customers.

13 Q. What is the Company's position on changing the MDQ-based rates?

14 A. A change from MDQ-based rates is not warranted. MDQ-based rates  
15 were proposed in Case 92-G-1056 by Alan Rosenberg on behalf of  
16 Multiple Intervenors who indicated that "because this is a firm  
17 transportation rate, it is reasonable to require these customers to  
18 nominate a MDQ, which forms the basis for not only their delivery  
19 entitlement but also the rate." Since the gas system is built to meet peak  
20 period demand, the Company's costs to serve these customers are  
21 essentially fixed. As a result, an MDQ-based rate better matches revenue  
22 recovery with cost causation. A volumetric rate could jeopardize the

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Company's full recovery of costs to serve these customers due to volume  
2 fluctuations. Additionally, the aforementioned testimony filed by Mr.  
3 Rosenberg states "customers desire stable, predictable prices" which  
4 MDQ-based rates provide compared to volumetric rates. Finally, even  
5 with delivery rates on an MDQ basis, benefits from employed energy  
6 efficiency measures are immediately realized by customers through lower  
7 total commodity costs resulting from reduced volumes.

8 Q. Are there any other gas service classifications for which the Company is  
9 proposing revised rates?

10 A. No. The Company does not currently serve any customers under S.C.  
11 Nos. 15 and 16 (Distributed Generation ("DG") – Commercial and  
12 Industrial and DG – Residential), respectively. Therefore the Company  
13 recommends that any rate design changes required to this service  
14 classification be made at a later stage in this proceeding consistent with  
15 the determination of the final revenue requirement.

16 Q. Is the Company proposing any new delivery rates?

17 A. Yes. The Company is proposing a new Electric Bill Credit and a new Gas  
18 Bill Credit. These bill credits would serve as rate moderators as discussed  
19 in the testimony of Company Witness Mosher, returning half of the  
20 proposed base rate increase, or approximately \$20.1 and \$2.95 million to  
21 electric and gas customers, respectively, over the Rate Year. The credits  
22 were allocated based on the adjusted base rate increase as a percentage

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 of system, which is the same methodology utilized for the Electric Bill  
2 Credit approved in both Cases 08-E-0887 and 09-E-0588. The new  
3 Electric Bill Credit is reflected on Schedule B of Exhibit \_\_ (FRP-12). The  
4 new Gas Bill Credit is reflected on Schedule C of Exhibit \_\_ (FRP-13).

5 Q. Are there any other rate items for which the Company is proposing a  
6 change?

7 A. Yes. The Company is proposing to update the electric and gas  
8 reconnection charges. The Company last updated the re-connection  
9 charges in November 2001 in compliance with the Order Establishing  
10 Rates issued October 25, 2001 in Case 00-G-1274. As the re-connection  
11 charge reflects the labor, vehicle and materials costs related to performing  
12 the re-connections, the Company believes it is reasonable to update these  
13 rates to reflect more recent information in order to more accurately  
14 allocate costs to those customers for whom those costs are incurred.

15 Q. Please describe how the re-connection charge rates were developed.

16 A. The re-connection charge was designed to reflect hours of work required  
17 for re-connection at appropriate labor costs for collectors, commercial  
18 representatives, line crews and gas crews. The Company also included  
19 call center and dispatch labor costs. Finally, the re-connection charge  
20 rates reflect vehicle expense related to travel and material costs related to  
21 performing the re-connection.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1        **Exhibits**

2        Q.     Please explain Exhibits \_\_ (FRP-12) and \_\_ (FRP-13), which set forth a  
3                summary of present and proposed rates.

4        A.     Exhibit \_\_ (FRP-12) consists of ten schedules. Schedule A and Schedule  
5                B set forth the present and proposed MFC Charges, and the proposed  
6                Electric Bill Credit, respectively, as previously discussed. Each of the  
7                remaining schedules sets forth a comparison of the provisions of a present  
8                service classification and the proposed superseding service classification.

9                        Exhibit \_\_ (FRP-13) consists of three schedules. As previously  
10                        noted, Schedule A sets forth present and proposed base MFC charges.  
11                        Schedule B sets forth a comparison of the provisions of present S.C. Nos.  
12                        1, 2, 6, 11, 12 and 13 and the proposed superseding service  
13                        classifications. Schedule C sets forth proposed Gas Bill Credit rates.

14        Q.     Please explain Exhibits \_\_ (FRP-14) and \_\_ (FRP-15) regarding  
15                comparative bills.

16        A.     Exhibit \_\_ (FRP-14) provides comparisons of charges for typical usages  
17                under S.C. Nos. 1 and 2 at present and proposed rates.

18                        Exhibit \_\_ (FRP-15) provides comparisons of charges for typical  
19                        usages under S.C. Nos. 1/12 and 2/6/13 at present and proposed rates.

20                        These comparisons were prepared using the monthly Energy Cost  
21                        Adjustment Mechanism (“ECAM”) factors effective July 14, 2014 and the  
22                        monthly GSC factors effective July 2, 2014, respectively, in order to

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 develop estimates of full service bills to allow for a more accurate estimate  
2 of the utility bill impacts of the proposed rate changes.

3 Q. Has the Panel provided additional information for annual periods beyond  
4 June 30, 2016?

5 A. Yes, the Panel has included additional schedules similar to Schedule F of  
6 Exhibits \_\_ (FRP-2) and \_\_ (FRP-3) for the twelve month periods ending  
7 June 30, 2017 and 2018. These schedules have been provided as  
8 additional information to the letter transmitting the Company's filing.

9 **Other Rate Provisions**

10 Q. How are the Company's energy supply costs recovered from full service  
11 customers?

12 A. From November 2001 to May 1, 2005, all energy costs incurred on behalf  
13 of full service customers were fully recovered through the MPC and MPA  
14 components of the Company's ECAM or through the Hourly Pricing  
15 Provision ("HPP") for S.C. Nos. 2, 3 and 13 customers electing to take  
16 service under the terms of the HPP. Effective May 1, 2005, S.C. Nos. 3  
17 and 13 customers continuing to purchase their energy supply  
18 requirements from Central Hudson were required to do so under the HPP.  
19 Effective October 1, 2011, S.C. No. 2 customers with demand exceeding  
20 500 kW in any two of the previous twelve months continuing to purchase  
21 their energy supply requirements from Central Hudson were also required  
22 to do so under the HPP. Effective October 1, 2012, HPP was further

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 required for all full service S.C. No. 2 customers with demand exceeding  
2 300 kW in any two of the previous twelve months.

3 Q. Please describe the ECAM.

4 A. The ECAM consists of four components: the MPC, MPA, the  
5 Miscellaneous Charges (“MISC”) and PPA.

6 Q. Please describe the MPC and MPA components of ECAM.

7 A. The MPC and MPA factors are applicable to all service classifications  
8 excluding S.C. Nos. 2, 3 and 13 HPP as previously noted. The MPC  
9 charge recovers the Company’s cost of electricity supply related  
10 purchases, including firm energy, capacity, ancillary charges, risk  
11 management fees, and other charges imposed by the NYISO. The MPC  
12 also includes working capital carrying charges and an uncollectible  
13 allowance. Energy and capacity purchased under mandatory Independent  
14 Power Producer (“IPP”) contracts and the Company’s retained generation  
15 is priced at the monthly average of NYISO day-ahead market prices. The  
16 MPC charge is calculated on a monthly basis for each MPC group based  
17 on actual costs incurred during the previous month allocated over  
18 projected deliveries for the collection period. The MPA is the  
19 reconciliation mechanism for the MPC. It is also calculated on a monthly  
20 basis by MPC group and reconciles actual MPC recoveries with MPC  
21 costs.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. Please describe the MISC component of the ECAM.

2 A. The MISC factor recovers the cost or benefit of non-avoidable, variable  
3 energy-related revenues or costs associated with the Company's retained  
4 generating facilities and from mandatory IPP purchases. The MISC also  
5 includes working capital carrying charges and an uncollectible allowance.  
6 The MISC charge or credit is calculated on a monthly basis by dividing the  
7 previous month's benefit or cost by estimated deliveries and is applicable  
8 to all energy deliveries as a uniform factor. The Company reconciles  
9 MISC recoveries with actual costs or benefits on a three-month lag.

10 Q. Please describe the PPA component of ECAM.

11 A. The PPA factor is also applicable to all energy deliveries as service class  
12 and sub-class specific PPA factors. Prior to December 1, 2011, these  
13 factors recovered the cost or benefit of the Company's PPA with  
14 Constellation Energy for energy and capacity from Nine Mile Point 2  
15 ("NMP2"). Effective December 1, 2011, the PPA reflects the Revenue  
16 Sharing Agreement ("RSA") with Constellation. Under the RSA,  
17 Constellation is required to pay 80 percent of the net cumulative positive  
18 spread, if any, between the actual revenues per MWh earned by NMP2  
19 and the floor price per MWh for the period as set forth in the RSA. The  
20 PPA factors also include an allowance for uncollectibles and are subject to  
21 reconciliation similar to the MISC.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. Please provide a brief explanation of the Company's other supply recovery  
2 mechanism, the HPP.

3 A. Since May 1, 2005, the HPP has been the only commodity pricing option  
4 available to S.C. Nos. 3 and 13 customers that continue to elect to  
5 purchase their energy supply requirements from Central Hudson. In Case  
6 08-E-0887, the Company was required to expand HPP to all S.C. No. 2  
7 customers exceeding 500 kW in any two months in a twelve month period.  
8 Under the HPP, the Company recovers its costs by charging customers  
9 for their hourly supply requirements at the NYISO Zone G day-ahead  
10 market price, increased to reflect the applicable factor of adjustment.  
11 Customers under the HPP plan are also subject to the HPP charge which  
12 recovers costs for energy balancing ancillary services, allowances for  
13 working capital and uncollectibles, as well as the HPP unforced capacity  
14 ("UCAP") charge which recovers capacity charges.

15 Q. Is the Company proposing any structural changes to the way it recovers  
16 purchased electricity costs?

17 A. No, the Company seeks to continue to fully recover the costs of electricity  
18 purchased for full service customers through the continued application of  
19 the provisions of the ECAM and HPP. Continued application of these  
20 mechanisms entails the continued use of deferral accounting, as  
21 necessary, to recognize the timing differences that occur between the

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 actual purchases of energy requirements and the collection of costs from  
2 customers.

3 Despite the sale of the Company's fossil and nuclear generating  
4 facilities, the unbundling of the supply and delivery function, the  
5 implementation of MFCs and the establishment of a mature wholesale  
6 electricity market, the Company continues to bear the obligation to  
7 forecast, procure, and manage the electricity supply obligation for the  
8 great majority of its customers. The Company continues to source and  
9 contract for cost effective supply on behalf of those customers that choose  
10 to purchase their supply from the Company. Full recovery of these  
11 purchase costs is essential to the financial health and stability of the  
12 Company, given the absence of the ability to control generation and  
13 wholesale market costs.

14 Q. How are the Company's natural gas supply costs recovered from full  
15 service customers?

16 A. Gas supply expense (demand and commodity) incurred by the Company  
17 to serve full service customers taking service under S.C. Nos. 1 and 2 is  
18 recovered through the GSC. The GSC is determined monthly and  
19 reconciled annually, for the twelve-month period ending August 31, in  
20 accordance with 16 NYCRR §720-6. The GSC is equal to the sum of the  
21 average demand cost of gas and the average commodity cost of gas,  
22 multiplied by the factor of adjustment and adjusted for the annual

**DIRECT TESTIMONY OF THE FORECASTING AND RATES PANEL**

1 reconciliation of gas expense, gas supplier refunds, interruptible sales  
 2 credits, capacity release credits, and all other adjustments as approved by  
 3 the Commission.

4 Q. Is the Company proposing to revise the electric factor of adjustment?

5 A. Yes. Currently, the system factor of adjustment is 1.046 based on the 36  
 6 month average ending May 2010, and is allocated to service and/or sub-  
 7 class based on the methodology initially approved in Case 08-E-0887.

8 The Company proposes to utilize a system factor of adjustment of 1.0485  
 9 based on the 36 months ended March 2014 and the same allocation  
 10 methodology updated to reflect the results of the loss study submitted to  
 11 the Commission on January 21, 2010 pursuant to the Order in Case 08-E-  
 12 0887. The resulting service class/sub-class factors of adjustment are  
 13 provided in the table below.

	<u>RY 1 Sales (MWh)</u>	<u>% Sales</u>	<u>Adjusted FOA</u>	<u>Weighted FOA</u>
15 <b>S.C. No. 1</b>	2,005,320	40.761%	1.0586	0.431513
16 <b>S.C. No. 2 - ND</b>	157,996	3.212%	1.0586	0.033998

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. Is the Company proposing to revise the gas factor of adjustment?

2 A. Yes. The COSP will address this item.

3 Q. Have Revenue Decoupling Mechanisms (“RDMs”) been implemented for  
4 the Company’s electric and gas operations?

5 A. Yes. In its Order Adopting Recommended Decision with Modifications  
6 issued and effective June 22, 2009 in Case 08-E-0887 and Case 08-G-  
7 0888, the Commission adopted RDMs for both the electric and gas  
8 operations of the Company. The RDMs were subsequently continued,  
9 with minor revisions, in accordance with the Commission’s Order  
10 Establishing Rate Plan issued and effective June 18, 2010 in Case 09-E-  
11 0588 and Case 09-G-0589.

12 Q. Please describe the electric RDM currently in place.

13 A. The electric RDM is a revenue per class model applicable to S.C. Nos. 1,  
14 2ND, 2PD, 2SD, 6, and 14. Pursuant to the RDM, actual delivery revenue  
15 by service class or sub-class for RDM eligible classes is compared, on a  
16 monthly basis, to a delivery revenue target. If the monthly actual delivery  
17 revenue exceeds the delivery revenue target, the delivery revenue excess  
18 is accrued for refund to customers at the end of the annual RDM period  
19 (twelve months ending June). Likewise, if the monthly actual delivery  
20 revenue is less than the delivery revenue target, the delivery revenue  
21 shortfall is accrued for recovery from customers at the end of the annual  
22 RDM period.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1           At the end of an annual RDM period, total delivery revenue  
2 excess/shortfalls are refunded/surcharged to customers through service  
3 class or sub-class specific RDM adjustments applicable during a  
4 corresponding RDM adjustment period (twelve months beginning August 1  
5 immediately following the annual RDM period).

6 Q.    Does the electric RDM address interim adjustments?

7 A.    If at any time during an annual RDM period the total of the cumulative  
8 delivery revenue excess/shortfalls for all service classes and sub-classes  
9 subject to the RDM exceeds \$4 million, the Company is required to  
10 implement interim RDM adjustments. RDM adjustments are determined  
11 by dividing the amount to be refunded/surcharged to customers in each  
12 respective RDM eligible service class or sub-class by the estimated kWh  
13 deliveries to the customers in the respective service class or sub-class  
14 over the RDM adjustment period.

15 Q.    Please describe the gas RDM currently in place.

16 A.    The gas RDM is a unit per customer (“UPC”) model and is applicable to  
17 S.C. Nos. 1 and 12 combined and S.C. Nos. 2, 6 and 13 combined. The  
18 RDM provides for a monthly comparison, by billing block, of actual UPC as  
19 adjusted by the Weather Normalization Adjustment (“WNA”), to UPC  
20 targets, with any revenue excess/shortfall refunded to/recovered from  
21 customers over a twelve-month period commencing August 1. If,  
22 however, during the Rate Year, the cumulative delivery revenue

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 excess/shortfall exceeds \$2 million, the Company is authorized to begin  
2 refund/recovery of such excess/shortfall over a twelve-month period.

3 The UPC structure of the gas RDM is continued per the  
4 Commission's Order in Case 08-G-0888. However, revenues earned as a  
5 result of customer months in excess of those used to determine the UPC  
6 targets, but only up to the upper limit of customer months as approved by  
7 the Commission in Case 09-G-0589, are now also deferred monthly, with  
8 interest at the Commission's rate for other customer provided capital, for  
9 refund to customers. The Company retains revenues earned as a result  
10 of customer months in excess of the upper limit. These provisions  
11 currently only apply to residential customers.

12 Q. Are there any issues you would like to address with respect to the current  
13 RDM mechanisms?

14 A. Yes. Since inception the Company has effectuated six electric RDM  
15 statements and five gas RDM statements to recover various under/over  
16 collections and reconciliations. The tables below show when each  
17 statement went into effect as well as what each statement was intended to  
18 recover/refund.

19  
20  
21  
22

**DIRECT TESTIMONY OF THE FORECASTING AND RATES PANEL**

<u>Electric Statement</u>	<u>Effective Date</u>	<u>Refund/Surcharge</u>
RDM 1	10/1/2009	Trigger – 7/2009-8/2009
RDM 2	8/1/2010	Remaining RY – 09/2009-6/2010
RDM 3	8/1/2011	RY – 7/2010-6/2011 and RDM 1 Reconciliation
RDM 4	Not Effective	
RDM 5	Not Effective	
RDM 6	4/1/2012	Trigger – 7/2011-2/2012
RDM 7	10/1/2012	Remaining RY – 3/2012-6/2012 and RDM 2 Reconciliation
RDM 8	8/1/2013	RY – 7/2012-6/2013 and RDM 3 Reconciliation

<u>Gas Statement</u>	<u>Effective Date</u>	<u>Refund / Surcharge</u>
RDM 1	8/1/2010	RY – 7/2009-6/2010
RDM 2	6/1/2011	Trigger – 7/2010-4/2011
RDM 3	8/1/2012	RY – 7/2011-6/2012 and RDM 1 Reconciliation
RDM 4	5/1/2013	Trigger – 7/2012-3/2013
RDM 5	4/1/2014	Trigger 7/2013-2/2014 and Remaining RY 5/2011-6/2011 and Remaining RY 4/2013-6/2013 and RDM 2 Reconciliation

As can be seen above, the nature of the mechanisms has resulted in various effective dates and timing delays in regards to when over/under deferrals are refunded/surcharged. Additionally, the tracking of RDM over/under collection deferrals and RDM collections has become administratively burdensome.

Q. Is the Company proposing any changes to the electric and gas RDMs currently in place?

A. Yes. The Company proposes that the RDMs be revised to replace the interim adjustment process with two routine semi-annual factor updates on February 1 and August 1 of each year in place of the current annual RDM adjustment period. The over/under deferrals recorded for July 1 through

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 December 31 would be collected/refunded over the six-month period  
2 commencing February 1 and the over/under deferrals recorded for  
3 January 1 through June 30 would be collected/refunded over the six-  
4 month period commencing August 1.

5 Q. Is this consistent with the operation of RDMs at other utilities?

6 A. Yes. In conjunction with Case 13-E-0030, Con Edison made a tariff filing  
7 to change the RDM adjustment in a similar manner.

8 Q. Is the Company proposing any other changes specific to the RDM?

9 A. Yes. The Company is proposing that the electric RDM be applicable to  
10 S.C. Nos. 3 and 13 and the gas RDM be applicable to S.C. No. 11  
11 (Transmission), S.C. No. 11 (Distribution) and S.C. No. 11 (DLM).  
12 NYSERDA administers energy efficiency programs directed to large  
13 customers. Moreover, in Case 13-G-0531, the provision for downward  
14 revisions to S.C. 11 MDQs was expanded to apply to all S.C. 11  
15 customers. As energy efficiency measures taken by S.C. 11 customers  
16 can now be reflected in downward revisions to MDQ, the Company  
17 believes it is appropriate to reflect this class of customers in the RDM,  
18 which is designed to offset conservation-related revenue losses.

19 The Company also proposes that the customer related calculation  
20 included in the gas RDM, which was implemented as a result of the  
21 approved Joint Proposal in Case 09-G-0589 and as detailed above, be  
22 eliminated.

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 Q. Is the Company's gas business subject to a WNA?

2 A. Yes. Pursuant to the Commission's Order in Case 08-G-0888, a WNA  
3 was implemented for all heating customers taking service under S.C. Nos.  
4 1, 2, 6, 12 and 13.

5 Q. Is the Company proposing any changes to the WNA currently in place?

6 A. No. However, if the Company's proposal to eliminate the gas block rate  
7 structure is approved, a conforming change to the WNA will be required to  
8 revise the definition of "pure base rate" from the tail block delivery charge  
9 to the volumetric delivery charge.

10 **Management Audit**

11 Q. Please provide an update of the status on the implementation of the  
12 applicable management audit recommendation related to the Company's  
13 electric peak load model.

14 A. As provided in greater detail in the testimony of Company Witness Lewis,  
15 a management audit conducted during 2009 reviewed among other things  
16 the Company's electric peak load model and recommended that the  
17 Company re-evaluate the variables utilized in the annual peak demand  
18 model to determine if additional economic variables would provide a better  
19 statistical fit. In addition to reviewing model specification, including  
20 identification of economic forecast drivers and weather variables, the  
21 Company also re-evaluated its normalization process which is utilized to  
22 weather adjust the actual electric peak experienced to current design

**DIRECT TESTIMONY OF THE FORECASTING AND  
RATES PANEL**

1 conditions for comparison to the forecast peak. As a result, the Company  
2 has implemented a modeling process that reflects the specification of two  
3 models based on two different economic drivers (GDP and residential  
4 non-heat customer level) as well as a revised normalization process that  
5 more closely follows the process utilized during the annual weather  
6 normalization incorporated in the installed capacity (“ICAP”) forecast as  
7 coordinated and prepared by the NYISO. This implementation has been  
8 accepted by Staff.

9 Q. Does this conclude your direct testimony at this time?

10 A. Yes, it does.
