Jaclyn A. Brillling, Secretary  
Public Service Commission  
Bldg 3, Empire State Plaza  
Albany, NY 12223-1350

2007 JUN 18 PM 2: 04

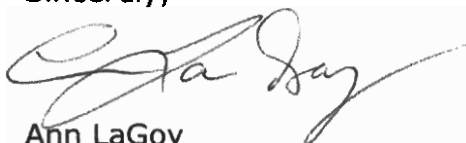

Dear Ms. Brillling,

At a time when renewable energy has peaked so many consumers' interest, it is tragic to limit the return financial benefit for those willing to invest in better ways to supply energy to their homes and businesses. So much debate surrounds wind turbine, nuclear energy, and electric. Here, with solar energy, we are given opportunity to harness a clean, natural, and low impact energy source. By allowing individuals to sell their solar-powered electricity back into the grid, this proves a great incentive to make the initial investment.

I am a New York State, Hudson Valley business owner who is considering a budget to include solar panels on my warehouse. The news of the cap already being reached for net metering gives me pause. Part of the appeal - above the obvious one of clean energy - is the return financial incentive offered to offset the large investment.

I write to urge the Public Service Commission to continue its progressive policies regarding renewable energy by increasing the net metering limit from 1.2 MW to 3.0 MW when it reviews Case # PSC-18-07-00011-P, and to make certain that this case is reviewed at the Commission's next meeting.

Sincerely,

Ann LaGoy
