Jaclyn A. Brillling, Secretary
Public Service Commission
Bldg 3, Empire State Plaza
Albany, NY 12223-1350

June 13, 2007

Dear Ms. Brillling-

Given the current understanding of global warming and its effect from coal fired electrical generators, it seems completely against the grain of the future health of the people and planet to cap solar credit sell backs at any amount. We are in a race to turn our dependence away from coal and fossil fuels at every level. Policy makers of all stripes need to advocate for the encouragement of solar and wind powered use and the best way to practically make this possible is by allowing the consumer to sell back its usage at a fair price, which in turn encourages consumers to install solar panels on their private property.

This is an environmental crisis, but also a health care crisis on many fronts. Now is the time for passionate engagement on behalf of your constituents, not on behalf of remote and anonymous power brokers.

Thank you so much for all the work that you do as a public servant and thank you for taking the time to read my concerns about this vital issue-

My very best regards-

Mary Anne Davis
