

Organizing For Action Case 03-E-0188

Whereas:

- Climate science shows that carbon pollution is the biggest contributor to climate change.
- 97 percent of climate scientists agree that climate change is man-made and real.
- Expanding the Ny-Sun initiative will result in more clean solar energy up and down the state, will help fight climate change, and could mean thousands of clean energy jobs for New York.
- We should be rewarding those who invest in clean energy, not making it harder to make the switch.

I support NYSERDA's petition to expand the NY-Sun program, fight climate change, and bring more solar energy to New York State.

Organizing For Action **Case 03-E-0188**

Whereas:

- Climate science shows that carbon pollution is the biggest contributor to climate change.
- 97 percent of climate scientists agree that climate change is man-made and real.
- Expanding the Ny-Sun initiative will result in more clean solar energy up and down the state, will help fight climate change, and could mean thousands of clean energy jobs for New York.
- We should be rewarding those who invest in clean energy, not making it harder to make the switch.

I support NYSERDA's petition to expand the NY-Sun program, fight climate change, and bring more solar energy to New York State.

Case 03-E-0188

Whereas:

- Climate science shows that carbon pollution is the biggest contributor to climate change.
- 97 percent of climate scientists agree that climate change is man-made and real.
- Expanding the Ny-Sun initiative will result in more clean solar energy up and down the state, will help fight climate change, and could mean thousands of clean energy jobs for New York.
- We should be rewarding those who invest in clean energy, not making it harder to make the switch.

I support NYSERDA's petition to expand the NY-Sun program, fight climate change, and bring more solar energy to New York State.

Case 03-E-0188

Whereas:

- Climate science shows that carbon pollution is the biggest contributor to climate change.
- 97 percent of climate scientists agree that climate change is man-made and real.
- Expanding the Ny-Sun initiative will result in more clean solar energy up and down the state, will help fight climate change, and could mean thousands of clean energy jobs for New York.
- We should be rewarding those who invest in clean energy, not making it harder to make the switch.

I support NYSERDA's petition to expand the NY-Sun program, fight climate change, and bring more solar energy to New York State.

Organizing For Action

Case 03-E-0188

Whereas:

- Climate science shows that carbon pollution is the biggest contributor to climate change.
- 97 percent of climate scientists agree that climate change is man-made and real.
- Expanding the Ny-Sun initiative will result in more clean solar energy up and down the state, will help fight climate change, and could mean thousands of clean energy jobs for New York.
- We should be rewarding those who invest in clean energy, not making it harder to make the switch.

I support NYSERDA's petition to expand the NY-Sun program, fight climate change, and bring more solar energy to New York State.

Signed:
