Honorable Jeff Brown
Assemblyman, 121st District
Room 628
Legislative Office Building
Albany, New York 12248

Dear Assemblyman Brown:

Chairman Flynn has passed along to me your letter of September 6, 2003, containing your comments on the pending proceeding to implement a Renewable Portfolio Standard (RPS) for New York State. I am the Administrative Law Judge presiding over this case. I appreciate your comment that waste to energy has been an important source of energy and solid waste disposal in New York, and your concern that it be included in a renewable portfolio standard.

Your letter has been placed in the official record of this proceeding. I look forward to your ongoing participation in this process.

Sincerely yours,

Eleanor Stein
Administrative Law Judge

ALBANY, N.Y.

William B. Flynn
Chairman
NYS Public Service Commission
3 Empire Plaza
Albany, NY 12233

Dear Chairman Flynn:

I am writing this letter on behalf of the Onondaga County Resource Recovery Agency (OCRRA) regarding the New York State Public Service Commission's proceeding on the Renewable Portfolio Standard.

As you may know, OCRRA has implemented an award-winning, waste-to-energy program that has reduced the volume of waste by 90 percent through combustion. The energy derived from incineration of the waste generates electricity, which is then sold for revenue that is reinvested into Onondaga County recycling projects.

I applaud Governor Pataki's mandate that by 2013, 25 percent of energy must come from renewable resources such as wind, solar energy, and other clean energy initiatives. When evaluating energy sources, I strongly encourage the New York State Public Service Commission to consider waste-to-energy and include it as part of the standard of renewable energy source in the Renewable Portfolio Standard that is currently under consideration by the PSC.

Thank you for your efforts on behalf of my constituents.

Sincerely,

JEFF BROWN
Member of Assembly

Re: Case 03-E-0188 – Proceeding on Motion of the Commission Regarding a Retail Renewable Portfolio Standard.

Dear :

Chairman Flynn has forwarded to me your letter concerning exclusion of trash incineration from the New York Renewable Portfolio Standard. I am the Administrative Law Judge presiding over this case. I appreciate your expression of concern about emissions resulting from trash incineration and your opinion that this technology should not be included in this important renewables project. Let me assure you that this issue is under active consideration in this case.

Your letter will be added to the official record in this proceeding. Thank you for taking the time to let us know your views.

Sincerely,

Eleanor Stein
Administrative Law Judge

An urgent message from a concerned citizen

September 4, 2003

William Flynn
Chair, NY Public Service Comm.
Empire State Plaza
Agency Building 3
Albany, NY 12223-1350

Dear Chairman Flynn,

I am writing to urge you to exclude trash incineration from the New York Renewable Standards Portfolio currently under consideration.

In his State of the State address last January, Governor Pataki promised that by 2013, 25% of the electricity sold in New York would be derived from renewable sources.

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Cathleen Miller

Dear Chairman Flynn,

I am writing to urge you to exclude trash incineration from the New York Renewable Standards Portfolio currently under consideration.

In his State of the State address last January, Governor Pataki promised that by 2013, 25% of the electricity sold in New York would be derived from renewable sources.

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Marie Baker Lee

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

James Taylor

Dear Chairman Flynn,

I am writing to urge you to exclude trash incineration from the New York Renewable Standards Portfolio currently under consideration.

In his State of the State address last January, Governor Pataki promised that by 2013, 25% of the electricity sold in New York would be derived from renewable sources.

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Elizabeth L Cohen

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Beva Eastman

Dear Chairman Flynn,

I am writing to urge you to exclude trash incineration from the New York Renewable Standards Portfolio currently under consideration.

In his State of the State address last January, Governor Pataki promised that by 2013, 25% of the electricity sold in New York would be derived from renewable sources.

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Ginger Grab

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Greer Goodman

Dear Chairman Flynn,

I am writing to urge you to exclude trash incineration from the New York Renewable Standards Portfolio currently under consideration.

In his State of the State address last January, Governor Pataki promised that by 2013, 25% of the electricity sold in New York would be derived from renewable sources.

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Idell Conaway

William Flynn
Chair, NY Public Service Comm.
Empire State Plaza
Agency Building 3
Albany, NY 12223-1350

Dear Chairman Flynn,

I am writing to urge you to exclude trash incineration from the New York Renewable Standards Portfolio currently under consideration.

In his State of the State address last January, Governor Pataki promised that by 2013, 25% of the electricity sold in New York would be derived from renewable sources.

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Rebecca A Hutcheson

Albany, NY 12223-1350

Dear Chairman Flynn,

I am writing to urge you to exclude trash incineration from the New York Renewable Standards Portfolio currently under consideration.

In his State of the State address last January, Governor Pataki promised that by 2013, 25% of the electricity sold in New York would be derived from renewable sources.

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

John Hussey

Dear Chairman Flynn,

I am writing to urge you to exclude trash incineration from the New York Renewable Standards Portfolio currently under consideration.

In his State of the State address last January, Governor Pataki promised that by 2013, 25% of the electricity sold in New York would be derived from renewable sources.

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Janet Gannon

Dear Chairman Flynn,

I am writing to urge you to exclude trash incineration from the New York Renewable Standards Portfolio currently under consideration.

In his State of the State address last January, Governor Pataki promised that by 2013, 25% of the electricity sold in New York would be derived from renewable sources.

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Gary Sevitsky

In his State of the State address last January, Governor Pataki promised that by 2013, 25% of the electricity sold in New York would be derived from renewable sources.

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Kristin A Hawes

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Dorothy B Anderson

Dear Chairman Flynn,

I am writing to urge you to exclude trash incineration from the New York Renewable Standards Portfolio currently under consideration.

In his State of the State address last January, Governor Pataki promised that by 2013, 25% of the electricity sold in New York would be derived from renewable sources.

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Michael Brocci

An urgent message from a concerned citizen

August 29, 2003

William Flynn
Chair, NY Public Service Comm.
Empire State Plaza
Agency Building 3
Albany, NY 12223-1350

Dear Chairman Flynn,

I am writing to urge you to exclude trash incineration from the New York Renewable Standards Portfolio currently under consideration.

In his State of the State address last January, Governor Pataki promised that by 2013, 25% of the electricity sold in New York would be derived from renewable sources.

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Karen Gleeson

Albany, NY 12223-1350

Dear Chairman Flynn,

I am writing to urge you to exclude trash incineration from the New York Renewable Standards Portfolio currently under consideration.

In his State of the State address last January, Governor Pataki promised that by 2013, 25% of the electricity sold in New York would be derived from renewable sources.

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Margaret F Nichols

I am writing to urge you to exclude trash incineration from the New York Renewable Standards Portfolio currently under consideration.

In his State of the State address last January, Governor Pataki promised that by 2013, 25% of the electricity sold in New York would be derived from renewable sources.

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Ronald S Lewis

I am writing to urge you to exclude trash incineration from the New York Renewable Standards Portfolio currently under consideration.

In his State of the State address last January, Governor Pataki promised that by 2013, 25% of the electricity sold in New York would be derived from renewable sources.

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

A Jacobson Leong

I am writing to urge you to exclude trash incineration from the New York Renewable Standards Portfolio currently under consideration.

In his State of the State address last January, Governor Pataki promised that by 2013, 25% of the electricity sold in New York would be derived from renewable sources.

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Cusie Pfeifer

I am writing to urge you to exclude trash incineration from the New York Renewable Standards Portfolio currently under consideration.

In his State of the State address last January, Governor Pataki promised that by 2013, 25% of the electricity sold in New York would be derived from renewable sources.

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Domingo Nuno

I am writing to urge you to exclude trash incineration from the New York Renewable Standards Portfolio currently under consideration.

In his State of the State address last January, Governor Pataki promised that by 2013, 25% of the electricity sold in New York would be derived from renewable sources.

Hearing this, most New Yorkers would never expect that one of those renewable sources would be trash incineration. Yet that's just what industry has proposed to New York's Public Service Commission (PSC) as it works out the many complex details of meeting the governor's 25% commitment.

But unlike truly clean energy sources like wind, solar and geothermal, trash incineration produces greenhouse gases and other pollutants. The New York State Department of Environmental Conservation estimates that in the year 2000, facilities generating energy from burned trash spewed over half a ton of mercury into the air.

I urge you to exclude trash incineration from the Renewable Standards Portfolio. Please tell me how you will address this issue.

Sincerely,

Curtis Cates
